If the rice be mildewed, if wild rice or weeds appear in the paddy fields, or murrain among the herds, if hail strikes the green crops, or the weevil spoils the mangoes—all these are the work of those malignant spirits. Many means are adopted to overcome their dangerous influence. Some Brāhmans, not those of the highest class, supply magical formulæ (*mantra*); Musalmān teachers prepare copper amulets, each containing a sentence from the Qur'ān; the wandering Bairāgī furnishes charms, such as a bone, tooth, or scale of a fish, a seed, or a fragment of wood.

22. The evil eye.—Closely allied to beliefs of this class is the evil eye superstition. To avert this danger the field or garden is protected by a black pot painted with a white cross or the mystic symbol, the *swastika*. See EVIL EYE.

23. Disease exorcism.—Disease, in particular, is seldom supposed to be the result of natural causes; it is almost invariably ascribed to *bhūtas*, or evil spirits.

'Even an educated gentleman, acting under female dictation, calls in the aid of magicians to cast out the devil haunting his house, or tormenting his child. Infants and pregnant women are especially subject to the malign influence of a Bhūta; but all convulsive diseases, the delirium of fever, and raving madness, are referred to possession by an evil spirit' (Wise, *op. cit.* 132).

In such cases, the *ojhā*, or exorcist, takes the place of the *kabirāj*, or physician, and magic the place of medicine. Beliefs of this kind are common throughout the Dravidian area. One form of this belief to which there is no exact parallel in other parts of India—the propitiation of Ghenṭū, the spirit which presides over itch—may be given as an example. A broken earthenware pot, its bottom blackened by constant use in cooking, daubed white with lime interspersed with a few streaks of turmeric, a branch or two of the *ghenṭū* plant (*Clerodendron infortunatum*) used as a febrifuge and anthelmintic, and, last though not least, a broomstick of palmyra or coco-nut tree, represent the evil spirit. The mistress of the family in whose house the malady appears acts as priestess. A few doggerel verses are recited, the pot is broken into fragments, and these are collected by the children, who sing songs about the itch-god. This rite is believed to be effective in removing the disease (*Calcutta Review*, xviii. 68).

24. Shamanism.—Rites like these, with the object of expelling disease or other evils caused by malignant spirits, are often accompanied by a form of shamanism, in which the officiant becomes possessed by the deity which he has invoked, and, letting his hair loose, falls into a frenzy of religious excitement, in the course of which he pours forth incoherent cries which are believed to be oracular. This form of frenzy often appears among non-Aryan races like the Santāls. Their *baigā*, or priest, assembles the people to assist him in the invocation.

'Musical instruments are produced, dancing commences, and the invocation to the spirits is chanted until one or more of the performers manifest possession by wild rolling of the eyes and involuntary spasmodic action of the muscles. The affection appears contagious, and old women and others who have not been dancing become influenced by it in a manner that is horrible to contemplate. Captain Samuells, who frequently witnessed the incantation, is confident that no deception whatever is practised. . . . "The affection," says Captain Samuells, "comes on like a fit of ague, lasting sometimes for a quarter of an hour, the patient or possessed person writhing and trembling with intense violence, especially at the commencement of the paroxysm. Then he is seen to spring from the ground into the air, and a succession of leaps follows, all executed as though he were shot at by unseen agency. During this stage of the seizure he is supposed to be quite unconscious, and rolls into the fire, if there be one, or under the feet of the dancers, without sustaining injury from the heat or the pressure. This lasts for a few minutes only, and is followed by the spasmodic stage. With hands and knees on the ground and hair loosened, the body is convulsed, and the head shakes violently, while from the mouth issues a hissing or gurgling noise. The patient next evincing an inclination to stand on his legs, the bystanders assist him and place a stick in his hands, with the aid of which he hops about, the spas-

modic action of the body still continuing, and the head performing by jerks a fatiguing circular movement." The Baigā is then supposed to identify the spirit which has possessed the patient. He implores it to desist, and by degrees, after being anointed with butter, the patient becomes calm and conscious, and when restored to his normal state is said to feel no fatigue or other ill effects from the attack' (Dalton, *op. cit.* 232 f.).

In Eastern Bengal the shaman prepares for the performance by fasting * for a whole day, drinking or smoking intoxicating preparations of the hemp-plant, and quaffing the freshly-drawn blood of a goat or other animal sacrificed on the occasion. Practices such as these are found among both Hindus and Muhammadans in that part of the Province (Wise, *op. cit.* 128).

25. Worship of individual bhūtas. — Besides the general worship of evil spirits, some members of this class are worshipped, or rather propitiated, because they are specially feared. Such spirits are usually malignant on account of the tragical circumstances of their death.

(*a*) *Deified Brāhmans.*—Many of this kind of evil spirits are deified Brāhmans. Such is Harśū Pānṛē, or Harśū Bābā, the local godling of Chayanpur, near Sasarām, in the Shāhābād district. He is of the class known as Brahm, Barham, or Brāhman ghosts. He was, according to the current legend, one of the Kanaujiyā division of Brāhmans, and family priest of Rājā Sālivāhanā, the ruler of that country. The Rānī disliked the Brāhman, and induced her husband to believe that the priest was conspiring to deprive him of his kingdom. Accordingly the Rājā caused the house of the Brāhman to be demolished, and resumed the lands which he had previously conferred upon him. The enraged Brāhman did *dharṇā*, in other words, fasted till he died of starvation at the gate of the palace. So he became a Brahm, and is now worshipped with the fire-sacrifice (*haoma*) and offerings of Brāhmanical cords. If any one obtains his desire through Harśū's intercession, he makes an offering of a golden cord, and feeds Brāhmans in his honour. Harśū's speciality is, if rightly approached, to cure disease by expelling the evil spirits to which it is due. His worship is rapidly spreading beyond Bengal westward into the adjoining districts of the United Provinces (*PR* i. 191 f.). Deified spirits of this class are very common. They are sometimes represented by a headless trunk, with an eye staring from the breast; they inhabit large trees on the banks of rivers or in some lonely place, whence they throw stones at belated travellers, and lead them astray on dark nights. Woe betide the unfortunate person who gives one of them cause of offence, as, for instance, by unwittingly felling the tree in which the Brahm has taken up his abode, or who has been in any way responsible for his death.

'He can escape the evil consequences only by making the Barham his family deity, and worshipping him regularly. In Bihār he often becomes the *dihwār*, or tutelary deity of the whole village. The worship is usually performed under the tree, usually a banyan, which he is supposed to frequent. The trunk is painted vermilion, and a mound of earth is erected, on which are placed clay figures of horses or elephants, and offerings are made of flowers, betel-nuts, and the like. The worship is conducted by a special priest called the *bhaktā*, who is not necessarily a Brāhman, and occasionally he is inspired by the spirit and utters prophecies, which are implicitly believed in by the devotees' (Gait, *op. cit.* i. 198 f.).

The same writer gives a catalogue of numerous deified Brāhmans. In many cases they are ghosts of members of the priestly order who have committed suicide on account of some insult or the deprivation of some privilege (*PR* i. 191 ff.). In one Bengal case a Rājput having no offspring consulted his family priest.

'The latter told him to stand next morning at a certain cross road and to behead the first person whom he might meet. To his horror and surprise, Mahi [the priest] himself appeared. He would have drawn back, but the Brāhman told him not to hesitate to carry out his advice, and merely stipulated that he should be installed as his family god. The Rājput then killed him, and he has ever since been worshipped by the clan' (Gait, *op. cit.* i. 199).

(*b*) *Low-caste bhūtas.*—The lower castes have many deified spirits of this kind. The malignant ghost of a sweeper is specially feared, and in many places the higher castes insist that a member of that caste shall be buried face downwards, or that the grave shall be filled with thorns, to prevent the ghost from 'walking.'

26. The Churel.—Another class of evil spirit widely feared is the Churel, or Kichin, the spirit of a woman who dies in childbirth or in a state of ceremonial impurity. She is regarded as specially malignant, because fate has snatched her from this world just at the time when she was about to attain the happiness of becoming a mother, or in a state of impurity which would cling to her in the other world.

This belief is widely spread. We find it in China (*FL* i. 360 f.), in Japan (*ib.* xiii. 276), among the Malays (Skeat, *Malay Magic*, 818, 327), in New Caledonia (*FL* xiv. 258), New Britain (*JAI* xvii. 292), Papuan Gulf (*ib.* xxxii. 423), Borneo (Roth, *Natives of Sarawak*, i. 100, 140, 167, 219), Fiji (*JAI* x. 145). In Central America the spirits of women who died in their first childbirth were supposed to dwell with the dead warriors in the house of the Sun. At certain times they descended to earth, wandering through the pueblos and bringing deadly disease to those women and children who crossed their path (Payne, *Hist. of New World*, ii. 334). If the child lives it is generally believed that the mother returns to seek it. Hence in West Africa when a woman dies in childbirth her child is buried with her (Ellis, *Tshi-Speaking Peoples*, 234). In Melanesia it is supposed that a woman who has died in childbirth cannot go to Panoi, or Deadland, if her child lives, because she cannot leave it behind. They therefore deceive her ghost by packing up a piece of banana trunk in leaves, and laying it on her breast when she is buried. Then, as she departs, she imagines that she is carrying her child with her (Codrington, *Melanesians*, 275). For other instances of the belief in India, see *PR* i. 269 ff. It prevails in Burma (*Report 9th Oriental Congress*, i. 185), in Manipur (*JAI* xvi. 355), among the Nāgas (*ib.* xxvi. 200), and among the Vellalars of Madras Pres. (Thurston, *Bulletin Madras Museum*, II. ii. 165).

The Churel usually appears as a woman who has no mouth, who haunts filthy places, and whose feet are turned backwards. This last is a characteristic of demons in many parts of the world (Tylor, i. 307). Again, she often assumes the form of a beautiful young woman, and at night seduces youths, especially those who are good-looking. She carries them off to a kingdom of her own, where she kills them by a slow process of emaciation, or keeps them until they lose all their manly vigour, and then sends them back to the world in the shape of grey-haired old men, who find all their friends long dead. The Churel superstition is probably derived from the demonolatry of the non-Aryan races. It is found fully developed among the Orāons, who imagine the Churel to be a woman clad in robes of white, her face fair and lovely, her back black as charcoal, and her feet inverted (*FL* xvii. 131 ff.). She hovers over gravestones, lays hold of passers-by, wrestles with them or tickles them, and he who is thus caught is lucky if he escapes injury. Often he is found next morning senseless, with his neck twisted, and the services of a sorcerer or medicine-man are necessary to set him right again (Dalton, *op. cit.* 258). The methods of getting rid of such a spirit are twofold—either by propitiation or by exorcism. The Bhuiyās of Keonjhar, if a woman should die before delivery, extract the embryo from the corpse and burn the bodies at opposite sides of a hill stream. As no spirit can cross water, and the mother cannot become a witch unless united to her child, this precaution is believed to render her harmless (Gait, *op. cit.* i. 199).

* For fasting and other means of producing ecstasy and other forms of morbid exaltation for religious ends, see Tylor, ii. 410 ff. It prevails widely in modern Lāmaism, which owes much to the Tantrik cultus (Waddell, *Buddhism of Tibet*, 34), and in South India (Burnell, 'Devil Worship of the Tulavas,' *IA*, 1894; Caldwell, *Dravidian Grammar*², 579 ff.).

27. Animism the basis of modern Hinduism.—The Hinduism, and much of the Muhammadanism, of modern Bengal is thus in a large measure the result of the fusion of these non-Aryan animistic beliefs with the foreign faiths—first, the Brāhmanism of North-Western India, which gradually worked its way from the Holy Land of the Hindus in the eastern Panjāb, down the valley of the Ganges; and second, Islām, which advanced by the same route at a much later period. These animistic beliefs are to such a large extent the foundation of modern Hinduism in Bengal that it is impossible to draw a line of demarcation between the two, or to say where one ends and the other begins. Hinduism, in fact, is such a vague term as not to admit of definition.

'The term in its modern acceptation denotes neither a creed nor a race, neither a church nor a people, but is a general expression devoid of precision, and embracing alike the most punctilious disciple of pure Vedantism, the Agnostic youth who is the product of Western education, and the semi-barbarous hillman, who eats without scruple anything that he can procure, and is as ignorant of the Hindu theology as the stone which he worships in times of danger or sickness' (Bourdillon, *Census Rep. Bengal*, 1881, i. 71).

28. Totemism.—Totemism, which in other countries seems to have produced important results in moulding the national faith, appears in Bengal rather as a social than as a religious force. Here we find it chiefly in connexion with the exogamous septs of the non-Aryan tribes, each of which bears the name of some animal, tree, plant, or material object, natural or artificial, which the members of that sept are prohibited from killing, eating, cutting, burning, carrying, using, etc. Thus, among the Orāons, we find septs designated by names meaning 'young mice,' 'tortoise,' 'hyæna,' 'eel,' 'squirrel,' 'rat'; and among the Santāls 'wild goose,' 'hawk,' 'betel-palm,' 'conch-shell,' etc. One curious fact about these Orāon 'totems' is that they are not whole animals, but parts of animals, as the head of a tortoise, the stomach of a pig, which special parts the tribesmen are forbidden to eat (Risley, *op. cit.* i., Introd. 43; Dalton, *op. cit.* 189, 254).

The respect for the totem is shown in various ways. The Bāorī totem is the heron, and they are forbidden to eat its flesh (Dalton, *op. cit.* 327). The Kumhārs of Orissa abstain from eating, and go so far as to worship, the *sāl* fish, because the rings on its scales resemble the wheel which is the symbol of their craft. The Khattyā branch of the same tribe have only one section, Kaśyapā, which in Skr. means 'tortoise,' and is also the name of a famous *rishi*, or saint, with whom they claim connexion. But as they venerate the tortoise, Risley suggests (*op. cit.* i., Introd. 48) that the name of the saint has been substituted for the original totemistic name derived from the animal. The Parheyās of Palamāu have a tradition that their tribe formerly held sheep and deer sacred, and used the dung of these animals to plaster the floors of their huts, as they now use cow-dung; the Khariās do not eat the flesh of sheep, and may not use a woollen rug—tabus the observance of which is now becoming relaxed (Dalton, *op. cit.* 131; Ball, *Jungle Life*, 89; Risley, *op. cit.* i. 466). Some Kandhs refused to carry a basket containing the skin of a young leopard which Ball had shot, because, as far as he could ascertain, 'the animal was the totem, or sacred beast of the tribe' (*op. cit.* 600). Many instances of similar belief have been collected by Dalton and Risley. The Asurās have thirteen totemistic sections; a man may not marry a woman belonging to the same section as himself, nor may he eat, cut, or injure the plant or animal whose name his section bears (Risley, *op. cit.* i. 25). The Koirīs have as sections the *nāga*, or snake, and the *kaśyapā*, or tortoise, and will not molest either animal. The Kaśyapā branch carry their reverence for the tortoise to such an extent that, if one be caught, they smear its shell with oil and vermilion, and put it back into the water (*ib.* i. 501). The Mahilī Mundās regard the pig as their totem, and will not eat pork (*ib.* ii. 40). The Pāns have a host of totems, including among animals the tiger, buffalo, monkey, tortoise, cobra, mongoose, owl, king-crow, peacock, centipede, and among plants the wild fig, wild plum, and many others (*ib.* ii. 156).

Many of the non-Aryan tribes, again, claim descent from animals. The Cheros say that they are descended from the *nāga*, or dragon (Dalton, *op. cit.* 126, 162, 165 f.); the Santāls have as one of their totems the wild goose, from the eggs of which they assert that their ancestors were created (*ib.* 209); the Ho creation-legend seems to connect the various tribes—Kols, Bhūmij, Brāhmans, Kṣatriyas, Śūdras, Bhuiyās—and even the English with animals selected by each after their creation by Otē Borām and Sing Bongā, who were self-created.

Another proof of the existence of totemism in Bengal has been traced in the reluctance to mention animals by their real names, and the preference for a descriptive epithet (Frazer, *Totemism*, 15). Thus, the Kharwārs call the hare 'the four-footed one'; and the Paṭāris call the bear 'the hairy creature,' and the elephant 'he with the tusks' (Crooke, *Tribes and Castes*, iii. 249; *PR* ii. 54, 142). But in his later examination of tabus of this kind Frazer seems to have abandoned the idea that they can be traced to totemism.

The evidence for the existence of totemism as a force affecting religious beliefs is thus very dubious, and many of the examples given above can be explained by animal- or plant-worship.

29. Hinduism.—Nearly two-thirds of the present population of the Province are Hindus, and rather less than one-third Muhammadans, the followers of other creeds being in small numbers. The diagrams prepared by Gait (*op. cit.* i. 154, 156) show clearly the geographical distribution of these, the two main religions of the Province. What may be called the most conservative parts of the country, those which were settled at the earliest period, continued to be the seats of an historic civilization, and what were centres of Buddhism are now districts in which Hinduism is predominant. These are the sub-provinces of Bihār and Orissa, and the line of districts along the eastern edge of the Chotā Nāgpur plateau and the western fringe of Bengal Proper, which link these two tracts together. The south-western hill region, the home of the Mundā or Dravidian tribes, is the domain of pure Animism, which in the plain region is overlaid by Hinduism or Islām. Muhammadanism, again, is predominant to the east, in that portion of the Province which has now been formed into a separate Administration.

30. The sects of Hindus.—No attempt was made at the last Census to obtain a record of the multitudinous sects of Hindus. Of these the two most important are the Śāktas, or followers of the Mother-goddesses, and the Vaishṇavas, or worshippers of Vishṇu.

In Bihār the distinctions of sect are ill-defined, and the more ignorant classes would find it difficult to say to which of the conventional divisions of Hinduism they belong. But in Bengal and Orissa, owing to the great Vaishṇava movement inaugurated by Chaitanyā, the case is otherwise, and there would be but little difficulty in obtaining a fairly accurate record of the sectarian distribution of the population (cf. Gait, *op. cit.* i. 181).

Speaking generally, we may say that the sectarian divisions of the people are not clearly defined. As in other parts of the Indian Empire, the membership of or nominal adherence to the principles of a sect often depends on the question of food; to be a Śākta is very often merely to

be an eater of meat and a drinker of spirituous liquor, both being permitted luxuries; while inclusion in the Vaishṇava sect implies vegetarianism. Hinduism, again, is perhaps more eclectic than most of the great world-religions, freely admitting into its fold the followers of many different sects provided they submit to the social rules of the body in which they accept membership. They are allowed perfect freedom to worship any or all of the sectarian gods, though to suit his own inclinations a man may devote special honour to one of the many forms of the Mother-goddess, to Śiva, or to Vishṇu in one or other of his many incarnations. His private chapel may contain an image of Devī or Durgā side by side with the *śālagrāma*, or ammonite, representing Vishṇu, or the phallic symbol of Śiva. When he visits a holy place he will be careful to pay respect to all the principal shrines, and to worship all the gods or goddesses who are represented by images. He does this because his deities are jealous gods, easily offended if they be neglected, and prone to punish any one who fails to honour them (Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, 364).

Hence, among individual castes we find a remarkable mixture of sectarian beliefs. Thus, among the Bābhans, yeomen of Bihār, representatives of all sects are found in much the same proportion as in the population at large. Vaishṇavism is said to have been only recently introduced among them, and in north Bihār most of them are worshippers of either Śiva or the Śakti. In this, as in many other castes of the same social status, no social consequences result from professing the tenets of any of the regular sects, and intermarriage between their members goes on freely within the limits of the caste (Risley, *op. cit.* i. 33). Passing to castes of a much lower grade, we find that the Bāgdī, cultivators, fishermen, and menials of Central and West Bengal, worship, under the guidance of degraded Brāhmans, Śiva, Vishṇu, and the Śakti, as well as Yama or Dharmarājā, god of Dead-land, and the myriad names of the modern pantheon, besides animistic deities like Guṣāin Ērā, the goddess, and Baṛ Pahāṛ, the mountain-god of the Santāls; but their favourite object of worship is Manasā, the snake-goddess. The Barṇī, cultivators of *pān* (*Piper betel*), are mostly Śāktas, and only a few are Vaishṇavas, but with the worship of these great gods they combine the cult of Ushas of the Veda, the Eos or Aurora of the West. The Dhobī, or washerman caste, worship Śiva, Vishṇu, Kārttikeya, god of war, or the Śakti, very much as the personal taste of the worshipper may dictate, and they venerate, besides these, non-Aryan gods such as Bhuiyā, the earth-god, and Barham Ghāsī, the deified ghost of a Brāhman. The Pods, a mixed tribe in the Delta, include Śaivas, Śāktas, and Vaishṇavas, as well as Sauras, or Sun-worshippers, and Gaṇapatyas, or followers of Gaṇapati or Gaṇeśa, god of wisdom and remover of obstacles, the two last sects being very sparingly represented among the higher classes of Hindus (*ib.* i. 41, 72, 235, ii. 177).

We find, again, instances of beliefs held in common by both Hindus and Musalmāns. In Rangpur, Buchanan (*op. cit.* iii. 512) found Hindus worshipping a spirit known as Satya-nārāyan, 'the true Lord,' whom Musalmāns venerated under the title of Satya-pīr, 'the true saint.' Hymns to him were sung by both Brāhmans and Śūdras; and while the Musalmāns used different hymns, the worship was identical.

In Bihār, the same writer remarks (i. 186) that 'when an Hindu is said to belong to such and such a sect, it does not in general absolutely imply that he worships only such and such a god; but that such or such is his family-god (*kula-devatā*) or favourite god (*ishṭa-devatā*). In some parts of India strict men will pray to no god but their favourite and his connexions, such as his spouse, sons, and servants; but in this district it is not usual to be so wedded; and though the daily prayers of the pious Hindu are offered to some one god, he without scruple has recourse to any other of whom he thinks he may be in need; and never approaches any image or holy place without some mark of respect.' The *gurus*, or sages, he adds, who instruct both Śaivas and Śāktas, are identical, and many Hindus are so careless or ignorant 'that they never have taken the trouble to inquire from their instructor whether the secret prayer is addressed to Śiva or Śakti, and they do not understand a word of it.'

It must, therefore, be understood that the Hindu sects of this Province are not in any sense analogous to the divisions found in other religions, as, for example, those of Christianity. Certain classes of the people may be generally described as Śāktas, Vaishṇavas, or Śaivas; but the fact of nominal adherence to one of these sects does not exclude the possibility of the worshipper paying reverence to gods other than those which his sect specially honours. It is in Bihār particularly, as we have seen, that the line between Vaishṇavas and Śāktas is not clearly defined. This is not the case in Bengal proper. Here a strict Vaishṇava will not even mention the names of goddesses like Kālī or Durgā, or the Bel tree (*Ægle marmelos*) the leaves of which are used in the worship of the Śakti. The reasons for this peculiarity, Gait suggests, are 'that Bihār was never so deeply infected as Bengal with the worst forms of Śākta worship, and that the Vaishṇava revival of Chaitanya which represented a revulsion from Śāktism never spread thither' (*op. cit.* i. 188).

31. **The Śāktas.**—Śāktism * was probably a development of the animistic belief in the Mother-goddesses which, as we have seen (above, § 13), is widely spread among the non-Aryan tribes. In the more highly developed form of the cult the functions of the primitive goddess 'of all work' have become divided into departments, and the various forces of Nature are personified under separate personalities, known as the Divine Mothers (*mātrigaṇ*). These female energies are conceived as the Śakti of the primeval male, Puruśa or Śiva, who is the counterpart of non-Aryan gods like Bhūmiya or Khetrapāla, the male consort of the Earth-Mother, by union with whom her fertility is periodically renewed (see § 13).

The Śākta cult is supposed to have originated in East Bengal or Assam about the 5th cent. A.D., and the headquarters of Tāntrik worship are believed to have been Kāmākhya in the latter Province, whence it was introduced into Tibet, Nepāl, and Gujarāt. The cult in this Province takes many forms.

(*a*) *General worship of the Śakti.*—We have, first, the Mātrikā pūjā, the general worship of the Mothers of the universe personified as the wives of the gods, that is to say, Śakti in all her various forms, usually eight in number, and co-ordinated with the different gods—Vaishṇavī and Lakshmī with Vishṇu; Brahmā or Brahmāṇī with Brahmā; Kārttikeyī with Kārttikeya, god of war; Indrāṇī with Indra; Yamī with Yama, god of death; Vārāhī with Vārāha, the boar incarnation of Vishṇu; Devī or Īśānī with Śiva.

(*b*) *Kālī.*—Secondly, there is the worship of Kālī, which, according to Buchanan (*op. cit.* ii. 374, 477), was in his time of comparatively recent introduction into Bihār, 'since the English took possession, some of the wise men of the East having told the wiseacres that she is the deity of the English, to whose favour they entirely owe their great success.' Until the deity was introduced, he

* For a sketch of the development of Śāktism see Gait, *Assam Census Report*, 1891, i. 80 ff.; Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, 407 ff.; Hopkins, *Religions of India*, 489 ff.; Barth, *Religions of India*, Eng. tr. 199 ff. The course of the development of Greek belief is supposed to have been on similar lines, the earliest conception being that of the Mother and the Maid, which may reflect primitive matriarchal customs (J. E. Harrison, *Prolegomena*, 260 ff.).

goes on to say, it was not common to call the female power by any particular name. She was commonly spoken of and worshipped as Devī or Bhavānī, two appellations implying merely 'the goddess,' 'although by the latter term Sītalā is commonly understood.' The original female power, in short, is thus seen undergoing the process of development, a number of special entities being created to whom each department of human action is assigned. The cult of Kālī appears in one of its lowest forms among the Tipārās of the State of Tippera and the Chittagong hill tracts to the east of the Province. This tribe offers to Kālī black goats (her name meaning 'the black one'), rice, plantains, and other fruits of the earth. The goddess has no image; she is represented for sacrificial purposes by a round lump of clay, the edges of which are drawn out into four points or legs, so that the whole, seen from above, bears a rough resemblance to a sea-urchin with four arms (Risley, *op. cit.* ii. 325).

In her temples Kālī is represented as a 'very black female, with four arms, having in one hand a scymitar, and in another the head of a giant which she holds by the hair; another hand is spread open bestowing a blessing; and with the other she is forbidding fear. She wears two dead bodies for earrings, and a necklace of skulls, and her tongue hangs down to her chin. The hands of several giants are hung as a girdle round her loins, and her tresses fall down to her heels. Having drunk the blood of the giants she has slain in combat, her eyebrows are bloody, and the blood is falling in a stream down her breast; her eyes are red like those of a drunkard. She stands with one leg on the breast of her husband Shiva, and rests the other on his thigh' (Ward, *op. cit.* ii. 117 f.).

At the present time, pigeons, goats, and more rarely buffaloes, are the victims usually offered. The ceremony commences with the adoration of the sacrificial axe. Various spells (*mantra*) are recited, and the animal is decapitated at one stroke. As soon as the head falls to the ground the votaries rush forward and smear their foreheads with the blood. These sacrifices are specially performed during the three days of the Durgā Pūjā (Gait, *op. cit.* i. 182).

Rites such as these represent the goddess in her malevolent aspect. But she is also Rākhyā or Bhadrā Kālī, the guardian of every Bengali village, to whom prayers and sacrifices are offered on the outbreak of pestilence. Wise remarks that, when cholera broke out at the great Vārunī fair in 1874, a subscription was collected for the performance of a special worship of Kālī. Her image was paraded through the fair, after which an operatic entertainment was given, at which crowds of people assembled. 'The cholera, which had been only sporadic, ceased, and the stoppage was attributed to the beneficent Kālī' (*op. cit.* 135 f.).

(*c*) *Devī*.—The cult of Devī is similar to that of Kālī. It sometimes represents her as benignant, but more often in her chthonic or malignant aspect. It is, in fact, practically impossible to distinguish the double manifestation of the goddess. Speaking generally, when kindly she is Umā, 'light,' Gaurī, 'the yellow or brilliant one,' Pārvatī or Haimavatī, 'she that has her birth in the Himālaya,' Jaganmātā, 'mother of the world,' and Bhavānī; while in her terrible form she is called Durgā, 'the inaccessible,' Kālī or Śyāmā, 'the dark one,' Chaṇḍī or Chaṇḍikā, 'the fierce,' Bhairavī, 'the terrible.' But in the popular conception these functions so completely merge and interchange that more precise definition is impossible. In Bihār during the Naurātrī or 'nine nights'' feast of the goddess, held during the fortnight of the waxing moon in the month of Chaitra (March), the rite of infusing by means of spells (*mantra*) the spirit of the goddess into an earthenware jar is performed. A space within the temple is purified by plastering the surface with mud and cow-dung. The jar is filled with water and covered with shoots of the mango tree, and over it is placed an earthenware saucer containing barley and rice, which is covered with a yellow cloth. The priest recites verses, and, sprinkling water on the jar and its contents with a few blades of the sacred *kuśa* grass, he invites the goddess to enter it. As a sign that she has occupied it, the outside of the jar is sprinkled with red powder. During the period occupied in the rite the priest practises abstinence, eating only roots and fruits. The service concludes with a fire-sacrifice (*haoma*), in which barley, sugar, butter, and sesamum are burned before the jar which holds the goddess. The ashes of the sacrifice and portions of the red powder with which the jar was smeared are brought to the houses of his clients by the priest, who smears their foreheads with these substances, thus bringing them into communion with the deity. Here we find fetish rites in their crudest form (*North Indian Notes and Queries*, iv. 19 f.).

(*d*) *Divisions of the Śāktas*.—The Śākta sect is divided into three main sections—first, the Dakshiṇachārī or Dakshiṇamārgī, 'the right-hand' section, who are comparatively free from sensuality, and do not offer spirits or flesh to the deity. They follow the Purāṇas as their Veda, and are devoted to either Śiva or Vishṇu in his androgynous character, at once male and female. Besides these there are two bodies of extremists—the Vāmachārī or Vāmamārgī, 'the left-hand' sect, who follow the teaching of the Tāntrik literature, and the Kaulas or Kaulikas, following the Kaula Upaniṣad, whence they take their name, whose practices are even more grossly licentious. Their object of veneration is the great Śakti, or power of Nature, Jaganmātā or Jagadambā, 'the mighty mysterious force, whose function is to direct and control two quite distinct operations: namely, first, the working of the natural appetites and passions, whether for the support of the body by eating and drinking or for the propagation of living organisms through sexual cohabitation; secondly, the acquisition of supernatural faculties (*siddhi*), whether for a man's own individual exaltation or for the annihilation of his opponents' (Monier Williams, *Brāhmanism and Hindūism*[4], 185 f.). The foul orgies which accompany such celebrations have been described by Jogendra Nath Bhattacharya (*Hindu Castes and Sects*, 411 f.), Ward (*Hindoos*, ii. 295 ff.), and others, and need not be further discussed here. The animistic side of the cultus appears in the Panjāb worship of young girls as Devī, apparently a form of sympathetic magic to induce fertility (Rose, *Census Rep.* 1901, i. 126).

32. The Vaishṇavas.—The revolt against this gross and debasing cultus was led by the reformer Chaitanya,* a Vaidik Brāhman who was born at Nabadwip, in Bengal, A.D. 1484.

'He preached mainly in Central Bengal and Orissa, and his doctrines found ready acceptance amongst large numbers of the people, especially amongst those who were still, or had only recently been, Buddhists. This was due mainly to the fact that he ignored caste and drew his followers from all sources, so much so that even Muhammadans followed him. He preached vehemently against the immolation of animals in sacrifice and the use of animal food and stimulants, and taught that the true road to salvation lay in *bhakti*, or fervent devotion to God. He recommended Rādhā worship, and taught that the love felt by her for Krishṇa was the best form of devotion. The acceptable offerings were flowers, money, and the like; but the great form of worship was that of the *saṅkīrtan*, or procession of worshippers playing and singing. A peculiarity of Chaitanya's cult is that the post of spiritual guide, or Gosāin, is not confined to Brāhmans, and several of those best known belong to the Baidyā caste, who practise medicine in Bengal Proper. They are all of them descended from the leading men of Chaitanya's immediate entourage. The holy places of the cult are Nabadvip [or Nadiya], Chaitanya's birthplace, and in a still greater degree, Brindaban [wh. see], the scene of Krishṇa's sports with the milk-maids, which Chaitanya and his disciples reclaimed from jungle, and where he personally identified the various sacred spots, on which great shrines have now been erected' (Gait, *op. cit.* i. 182).

* His life and the principles of his sect are fully described by Jogendra Nath Bhattacharya (*Hindu Castes and Sects*, 459 ff.).

Chaitanya, after spending six years in pilgrimage between Mathurā and Jagannāth, finally settled in the latter place, where in A.D. 1527, at the age of forty-three, he disappeared from the world. There is reason to believe that he was drowned in the sea, into which he had walked in an ecstasy, mistaking it for the shallow waters of the Jumna, where he saw in a vision Kṛṣṇa sporting with his Gopīs (Growse, *Mathurā*[3], 1883, 197). After his death his followers split up into two bodies: those who retained, and those who rejected caste. The latter are known as Jāt Baishtam or Bairāgī (*q.v.*), are recruited from all castes, and profess to intermarry freely amongst themselves; but caste distinctions are not entirely obliterated, and the recruits from the higher hold aloof from those drawn from the lower castes.

'Except for the fact that outsiders are still admitted, they form a community very similar to the ordinary Hindu caste. Its reputation at the present day is tarnished by the fact that most of its new recruits have joined owing to love intrigues, or because they have been turned out of their own caste, or for some other sordid motive' (Gait, *op. cit.* i. 182).

The other division, those who have retained the system of caste, is in no way connected with the Jāt Baishtams. They practise a cultus much purer than that of the Śāktas, and the stricter members of the body are vegetarians, and abhor the Śākta beliefs. But among those of the lower castes some freely eat animal food, and even join in processions in honour of Durgā, but will not be present when blood sacrifices are offered. The various subdivisions of the Bengal Vaishṇavas have been fully described by Wise (*op. cit.* 147 ff.) and by Risley (*op. cit.* ii. 339 ff.).

The Vaishṇavism of Bengal is thus strongly opposed to Śākta beliefs, and is probably to a large extent derived from the traditions of Buddhism.

'Apart from metaphysical subtleties, which naturally have but little hold on the minds of the populace, the social tenet of the Bengali Vaishṇavas is the all-sufficiency of faith in the divine Kṛishṇa; such faith being adequately expressed by the mere repetition of his name, without any added prayer or concomitant feeling of genuine devotion. Thus roughly stated, the doctrine appears absurd; and possibly its true bearing is as little regarded by many of the more ignorant of the Vaishṇavas themselves as it is by the majority of superficial outside observers. It is, however, a legitimate deduction from sound principles; for it may be presumed that the formal act of devotion would never have been commenced had it not been prompted at the outset by a devotional intention, which intention is virtually continued so long as the act is in performance' (Growse, *Mathurā*[3], 197).

As a parallel case, Growse, himself a member of the Roman Catholic Church, quotes from one of its manuals the rule: 'It is not necessary that the intention should be actual throughout; it is sufficient if we pray in a human manner, and for this only a virtual intention is required; that is to say, an intention which has been actual and is supposed to continue, although, through inadvertence or distraction, we may have lost sight of it.'

(*a*) *Prevalence of Vaishṇavism.*—The Vaishṇava cultus is one of the most important among the beliefs of the Province. Ward in 1815 stated that six out of ten of the whole Hindu population were worshippers of Kṛṣṇa (*Hindoos*, ii. 158); in 1828 Wilson (*Religious Sects*, i. 152) calculated them at one-fifth; and in 1872 Hunter (*Orissa*, i. 144) at from one-fifth to one-third of the whole number of Hindus. Wise (*op. cit.* 147), from a catalogue of the temples in the Dacca District, found that 74 per cent. belonged to Kṛṣṇa in one or other of his numerous forms, and only 21 per cent. to Kālī, Durgā, and Śiva. The predominance of Kṛṣṇa-worship is largely due to the *Bhāgavata Purāṇa* assigned by Wilson (*Vishṇu Purāṇa*, xxxi.) to the 12th cent. of our era. It has, however, been recently established that the Purānic literature goes back to the 6th or 8th cent., and thus the movement which led to the rise of Neo-Brāhmanism must be assigned to an earlier date than that fixed by the older authorities. The *Bhāgavata Purāṇa* is now regarded as the chief book among the Vaishṇava scriptures.

'Since his death in 1523, Chaitanya has been identified with Krishṇa, and this deification has been ratified by the *Charitāmṛta*, written thirty years after his death. The moral and tolerant doctrines of this national teacher penetrated the hearts of the people, and roused an enthusiastic spirit that has, unfortunately, driven many into strange and perilous wanderings. Among the pure Śūdras there is less deviation from the original creed than among the lower mixed classes, who have been always neglected. The religious sentiments of the latter, instead of being properly guided, have been left to develop as fancy or bias disposed them. Whether this be a satisfactory explanation or not, it is certain that the corrupt, often immoral, sects now existing are chiefly patronized by the lower and most ignorant classes of the community. The equality of all men, a doctrine preached by Chaitanya, but repudiated by the Gosāins, has been restored by most of the later offshoots of Vaishṇavism, and with them no distinction conferred by birth, wealth, or prescription is ever recognized' (Wise, *op. cit.* 147).

(*b*) *The erotic Vaishṇavism.*—The development of Vaishṇavism on the erotic side marks the degradation of the cultus. The original doctrine of *bhakti*, or loving faith, was afterwards conceived to appear in five stages, the higher of which, as in the case of the Ṣūfī mystics, could be attained only by a few privileged persons, after prolonged austerities and mortifications: (1) *śānti*, or quietism, 'in which the Vaishṇava enjoys perfect contentment and peace of mind, ever dwelling on the happiness of his lot, and grateful to Hari for his mercy'; (2) *dāsya*, the relation between a master and his purchased slave, of which the keynote is self-denial, the dedication of all the believer's energy and thought to the service of the god; (3) *sakhya*, or friendship, at which stage 'the disciple worships Chaitanya as his bosom friend, and regards his own soul as an emanation from and a particle of the *paramātman*, or supreme spirit'; (4) *vātsalya*, 'affection towards offspring,' in which the deity is regarded 'not as a common Father of all men, but as the parent of the worshipper'; and (5) *mādhurya*, 'sweetness,' 'the efflorescence of *bhakti*,' as it has been called. 'In this, the highest and most exquisite condition, the disciple glows with the same uncontrollable desire that Krishna felt for the absent Rādhā' (Wise, *op. cit.* 155). This last development of erotic Vaishṇavism finds its most complete and degrading exposition in the practices of the sect of the Vallabhāchāryas, according to whom body, soul, and property (*tan*, *man*, *dhan*) are to be made over to the Mahārājās, or successors and vicars of Kṛṣṇa upon earth, by the rite of self-devotion (*samarpaṇa*); and women are taught that their highest bliss results from the caresses of the representative of the god (Monier Williams, *op. cit.*[4] 134 ff.; Growse, *Mathurā*[3], 199 ff.; [Karsandas Mulji,] *Hist. of the Sect of the Maharajas or Vallabhacharyas of West. India*, 1865).

33. The cult of Śiva.—The cult of Śiva is of less importance than that of either the Śakti or Vishṇu. In Eastern Bengal the Śaiva fraternities, those of the Kanphaṭās, or 'ear-pierced' Yogīs, and the Brahmachārīs, never gained popularity, and their conventual establishments, which are few, would have disappeared long since, but for the charitable endowments of former ages. The Śaiva mendicants or cenobites are, according to Wise (*op. cit.* 174 f.), notorious for their licentious lives and dissipated habits; but, notwithstanding the scandal which they cause, their *ākhāras*, or convents, are thronged by crowds of devotees, chiefly women. In Bengal proper, according to Ward (*op. cit.* ii., Introd. xxi.), few Hindus adopt Śiva as their guardian deity. His temples generally represent him in the form of the *liṅgam*, or as Pañchānana, the figure of the deity with five faces. Further west, in Bihār, the worship of Śiva is more common, and prevails widely among Brāhmans. Here village temples in honour of the deity, with images of the *liṅgam* and of Nandi, the bull 'vehicle' of the god, are common, and the worship is adopted in preference to that of

Vishnu in one or other of his many forms, because the ritual and offerings made to him are much less elaborate and expensive. The Saiva cultus thus suits the thrifty habits of the yeomen among whom it chiefly prevails.

Among the castes who are specially devoted to this form of belief may be mentioned the Yugīs or Yogīs, now a weaving caste in Eastern Bengal, of whom the great majority worship Siva or Mahādeva, especially at the Sivarātri or 'night feast' of Siva, held in the month of Māgh (January-February). The chief religious centres of the Māsya Yugīs are Brindāban, Mathurā, and Gokul, all in the United Provinces; but their chief places of pilgrimage are Benares, Gayā, and Sītākund in Chittagong (Risley, *op. cit.* i. 358). These Yogīs, as they prefer to be called, are supposed by Gait (*op. cit.* i. 381) to be descended from a religious community, not necessarily from the regular Yogī or Jogī ascetics, but possibly from some Buddhist Order. The same writer supposes that their present degraded condition is due to their having remained in the Buddhist faith after the general population had reverted to Hinduism. They call their priests, who belong to their own communion, *Mahātmas* or *Paṇḍits*, both of which terms were formerly in use among Buddhists; they bury their dead in a sitting posture, with the legs crossed in the conventional attitude of Buddha, and with the feet turned to the north-west. The Yogī sects of Northern India freely admit outsiders to their body; and their present occupation in Bengal, weaving, is one often practised by decayed religious communities. Their devotion to Siva is possibly connected with his manifestation as the typical ascetic and self-mortifier—a conception which perhaps owed much to the influence of Buddhism. The Saiva mendicants are popularly divided into ten classes, known collectively as the Daśnāmīs, or 'ten names.' Besides that of the more respectable Order, the Sannyāsīs, the cult gives shelter to loathsome ascetics, like the Aghorīs (wh. see), the Urdhvabāhus, who contort their limbs, and the Ākāśamukhins, who keep their necks bent back in a fixed gaze on the sky until the muscles become withered.

34. Buddhism.—Buddhism, which had its origin in the western part of the Province, and finally became one of the great religions of the world, is now represented in Bengal by only 237,893 adherents. In so far as they follow the orthodox standard of belief, they are included in the Mahāyāna, or Great Vehicle, which is the basis of Tibetan Lāmaism, and also of the Buddhism of Bengal. The Buddhists of this Province may be divided into at least four groups.

(*a*) *Chinese Buddhists.*—First comes the small body of immigrant Chinese in Calcutta, where they follow many occupations, such as carpentry and shoemaking, boil down pigs' fat into lard, and deal in opium and hemp drugs. Their temples seem to be usually seats of Buddhist as well as of Shinto worship, that at Calcutta being dedicated to Kwan-te, generally called the 'god of war.' In the courtyard is the god's horse, comfortably stabled. Climbing a flight of stairs, one reaches chapels and rooms for attendants, in which animals intended in the first instance as food for the god, and which are afterwards consumed by the worshippers, are being cooked (*Calcutta Review*, xxxi. 368 ff.).

(*b*) *Himālayan Buddhists.*—Secondly come the Buddhists of North Bengal, who are either natives of the Himālayan State of Sikkim, or immigrants from Bhutān, Tibet, and Nepāl. By race they are mostly Tibetans, Lepchas, and Murmīs. In Nepāl itself Buddhism is steadily losing ground under the attacks of the militant form of Hinduism professed by the rulers of that kingdom, who, like all recent converts, are more ardent supporters of the new faith than even their more orthodox brethren in the plains. Nothing, again, has contributed so much to the decline of Buddhism in Nepāl as the adoption of caste by the Buddhist Newārs, and the consequent decay of monastic institutions (Oldfield, *Sketches*, ii. 131 ff.). Besides this, the heterodox Buddhists constitute a large majority of the Buddhist population. They avowedly combine the worship of Siva and of the other Hindu deities with that of Buddha; they publicly attend the religious services of Hindu temples, and at the more important domestic ceremonies, such as those of marriage and death, they conjoin Hindu forms with those of the Buddhist church, and employ a Brāhman priest to assist their own Buddhist Vajra Āchārya, or 'thunderbolt teacher,' in the performance of his sacred duties.

These classes of Newārs are 'Buddhist only in name; for although they profess to esteem Buddha before all other deities, yet their practices belie their professions, and prove that they are steadily abandoning that faith to which they still nominally belong, and are rapidly adopting the more corrupt and more attractive religion of the Hindus' (Oldfield, *op. cit.* ii. 147).

The same is the case with those Himālayan Buddhists who have migrated into British territory. Thus, among the Lepchas of Sikkim and the adjoining region, Buddhistic usage forms only a thin veil over their primitive shamanistic Animism. Their religion consists mainly in the propitiation of the spirits of forest, hill, or stream which are considered malignant.

'The snow-clad giant Kinchinjanga, chief among the elemental deities of the Lepchas, who vexes men with storm and hail and sends down avalanches and torrents to wreck their fields and sweep away their homes, has been translated to the milder system of Buddhism, where he figures as the tutor of Sakya Muni himself' (Risley, *op. cit.* ii. 10).

Similarly the Limbūs of Dārjīling adapt their religion to their surroundings. Where their environment is Hindu, they call themselves Saivas, and profess to worship Mahādeva and his consort Gaurī, the favourite deities of the Nepālese.

'In a Buddhist neighbourhood the yoke of conformity is still more easy to bear; the Limbū has only to mutter the pious formula, *Om maṇi padme om* [or, as Waddell transcribes and translates it, '*Om* ! The Jewel in the Lotus ! *Hūṃ*'—*Om-ma-ṇi pad-me Hūṃ*, the first and last word bearing a mystic meaning (*Buddhism of Tibet*, 148)], and to pay respect and moderate tribute to the Lāmas, in order to be accepted as an average Buddhist. Beneath this veneer of conformity with whatever faith happens to have gained local acceptation, the vague shapes of their original Pantheon have survived in the form of household or forest gods, much in the same way as Dionysus and other of the Greek gods may be traced in the names and attributes of the saints who preside over the vintage, the harvest, and rural festivals of various kinds in remote parts of Greece at the present day' (Risley, *op. cit.* ii. 17).

The degraded condition of the popular Buddhism of the Lower Himālayas is shown by the adoption of rites of blood sacrifice, a relic of the old devil-worship of the country, but absolutely repugnant to the rules of the orthodox faith (Waddell, *Among the Himalayas*, 74).

(*c*) *Buddhists of East Bengal.*—The third group of Bengal Buddhists—that of Chittagong and the hill tracts of Chittagong — consists mainly of Chakmās and Maghs, the latter divided into two classes: first, descendants of Arakanese immigrants who entered the country when Arakan was conquered by the Burmese in A.D. 1785; and, secondly, the mixed race descended from Magh women by Bengali fathers, who are known as Rājbansi or Baruā Maghs, and are less numerous than the first branch. There are also some Tipārās in the hill tracts who described themselves at the last census as Buddhists.

'In the Tippera State the Tipārās now call themselves Hindus; but this country was formerly a great Buddhist centre, and some sacred shrines there were visited by the Tibetan traveller, Buddha Gupta Nāth, who travelled in India in the seventh century A.D.' (Gait, *op. cit.* i. 158).

The Chakmās profess to be Buddhists, but their religious practices have been much corrupted by

the gross Hinduism of Eastern Bengal. This change was brought about by the influence of the local Rājā, Dharm Bakhsh Khān, who was a bigoted Hindu, patronized the cult of Kālī, and pretended to be a descendant of the ancient Kṣatriyas. Much of the more primitive Animism still survives under the upper layer of Buddhism (Risley, *op. cit.* i. 172 f.). The same fusion of beliefs appears among the Maghs of Chittagong, who profess to be Buddhists of the Southern school, and regard the followers of the faith in Tibet as unorthodox. The worship of Śiva and Durgā has here been added to the Buddhist observances. While their priests are Buddhist, *phungyis* or *raolis*, Brāhmans are much respected, and are employed to determine auspicious days for particular actions, and to assist in the worship of the Hindu gods (*ib.* ii. 33).

(*d*) *Survivals of Buddhism and Hinduism.*—The last and most interesting group of so-called Buddhists in Bengal is found among the caste known as Sarāks, resident in the Baramba State in Orissa, whose beliefs have been fully investigated by Gait (*op. cit.* i. 427 ff.). Their name appears to be derived from the Skr. *śrāvaka*, 'a hearer,' a term applied among the Jains to indicate the lay brethren affiliated to the community, as distinguished from the Yatis, monks, and ascetics; it still survives in the name Sarāogi or Sarāvagi, applied to a merchant community of Jains which is rapidly becoming a regular caste of the usual type. The centre of the Baramba Sarāk worship is at the celebrated cave-temple of Khandagirī, where they assemble once a year to do homage to the idols there and to confer on religious matters. They worship, under the name of Chaturbhuja, 'the four-armed one,' an idol which usually has only two arms, and is undoubtedly a representation of Buddha. This worship is performed on what is supposed to be the anniversary of Buddha's wedding, a fact which may with some probability be considered to connect the cult with the primitive animistic conception of the union of the male consort with the primeval Mother (see above, § 13). The family rites of the caste are performed by one of their own members, who calls himself Āchārya, or 'teacher,' and Brāhmans are employed only to perform the rites of the *haoma*, or fire sacrifice, at marriage, after which the Āchārya concludes the proceedings by calling upon Buddha to bless the young couple.

The evidence, so far as it has been collected, seems to indicate that the Sarāks have retained many beliefs and practices which have descended to them from the Buddhism which was the creed of a large number of the people of Orissa. Here its place was taken by Brāhmanism, and it is now difficult to say how many of the beliefs of the Sarāks are due to direct inheritance of the Buddhist tradition, and how many have been transmitted to them with a leaven of Vaishṇavism. Too much stress must not be laid upon the worship of images of Buddha by the people of our time. All through Northern India are to be found statues or pillars disinterred from the ruins of *stūpas* or *vihāras*, which have been adopted as images of the village gods, and even of the orthodox Hindu deities. Thus Buchanan (*op. cit.* i. 73) found in a Bihār temple of Tārā Devī (the female power in her most destructive form) an image of the goddess, which was really one of Buddha himself.

Another survival of Buddhism has been traced in the worship of Dharmarāj or Dharma by low-caste tribes like the Pods, Yogīs, Ḍoms, and Bāgdīs. By some he is identified with Yama, by others with the sun; by others, again, he is regarded as a snake-god; or, finally, as an incarnation of Śiva or Vishṇu.

'He is usually worshipped by a low caste priest, a Pod, a Yogi, a Ḍom, or a Bāgdī. In a few places he has temples, but, as a rule, he is represented by a shapeless stone daubed with vermilion and placed under a tree. In a village in the Arāmbāgh subdivision he is worshipped in the form of a tortoise. His shrines are common all over West Bengal, and also in Dinājpur, Murshidābād, and the Twenty-four Parganas. He is frequently believed to possess certain curative powers, and his priests administer medicines as specifics for various diseases. Hogs, fowls, and ducks are sacrificed before him, and offerings are made of rice, flowers, milk, and *pachwāī* ['rice-beer'], but never of cooked food. The worship takes place in the months of Baisākh, Jaishṭa, and Āsārh, on the day of the full moon, and in some places on the last day of Bhādra. All castes, even Brāhmans, make offerings through the medium of the officiating priest' (Gait, *op. cit.* i. 201).

The worship of this animistic deity has been adduced as a survival of Buddhism by Mahāmahopādhyāya Hara Praśād Śāstri (*JRASBe*, 1895), and in a further statement given by Gait (i. 201) the writer supplements this by inferring that because Dharma is worshipped in meditation as void (*śūnya mūrti*) the cult represents the philosophical conception of *śūnyatā*—'concerning which neither existence nor non-existence nor a combination of the two can be predicated. It is zero.' Again, the ceremonies and fasts in honour of Dharma all take place on the full-moon day of Baisākh, the birthday of Buddha, and his worshippers are aware that Dharma is respected in Ceylon, that he is not an inferior deity, but superior to Vishṇu or Śiva. Finally, he is represented in many places as a tortoise, which is a Buddhist emblem (Waddell, *Buddhism of Tibet*, 395). It is possible that some traditions of the worship of Buddha may survive in that of Dharma; but if so, very little of the original conception remains.

35. Jainism.—Jainism, like Buddhism, had its birthplace in Bihār. The origin of this form of belief and its relation to Hinduism and Buddhism will be considered in another article (see JAINISM). Here it is sufficient to say that recent research by Jacobi, Hoernle, and others (Hoernle, 'Presidential Address,' *JRASBe*, 1898; Bühler-Burgess, *The Indian Sect of the Jainas*) has established that Jainism, so far from being an offshoot of Buddhism, was the result of an independent and contemporaneous religious movement under a Kṣatriya prince named Vardhamāna or Mahāvīra, who was born in the neighbourhood of Patna about B.C. 599, and died about B.C. 527. The dates of Buddha's career are still to some extent uncertain; but the most recent investigations place the period of his life between B.C. 588 and 508. It is thus possible that the founders of these two sects, who were both of Kṣatriya descent, may have met in the course of their preaching tours through Western Bengal. Neither sect is a religion in the true sense of the word; both are rather monastic organizations of a type very common in the age when they were founded. Both arose from the circumstance that the Brāhmans were then claiming the monopoly of admission to the monastic Orders. As a protest against this action, many non-Brāhmanical Orders were founded. They were gradually led to discontinue the use of the Vedic ritual, with the natural result that they came to be excluded from the pale of Brāhmanism. Jainism differs from Buddhism in rejecting the doctrine of *nirvāṇa*, and in asserting instead that, when the soul has gained freedom from the trammels of the successive series of existences, it passes into a state of blessedness which is vague and ill-defined. Those saintly men who have attained the rest of the blessed are known as Tīrthaṅkara; those 'who have created a passage through the circuit of life,' form the body of saints who are worshipped by Jains. From the chief of these, Parśvanātha, the hill of Pārasnāth (wh. see), the centre of Jain pilgrimage in Bengal, takes its name. Jainism, by its more democratic constitution, freely admitting

lay adherents to communion, adopting a less active missionary career than Buddhism, and preferring as its chief centres of worship more secluded sites, like Parasnāth, was able to resist more successfully the stress of the Brāhmanical revival and Muhammadan persecution, under which the Buddhism of Bengal collapsed.

The Bengal Jains, who have their headquarters at Murshīdābād, are found also in Calcutta and the chief towns of the Patna Division. But though they are permanently settled there, they are rarely accompanied by their women-folk. Most of them are temporary visitors from Western and Central India. After making money by shopkeeping in Bengal, the heads of their firms often return to their original homes, their places being taken by younger men. Many of them are Mārwāṛīs from Mārwāṛ in Central India, and belong to the Agarwāla and Oswāl sub-castes of Baniyās, the former being of the Digambara or 'naked,' and the latter of the Śvetāmbara or 'white-clad' section. These distinctions, as far as questions of dress are concerned, are now obsolete; but the titles represent the contrast between the more primitive naked ascetics of Southern India and those from the North and West. Of these merchant families some follow the Hindu and some the Jain rule; but this does not operate as a bar to intermarriage, because even when some Baniyās adopt the Śaiva or Śākta sect, in deference to the prejudices of the majority of their brethren they do not sacrifice animals or partake of meat and spirits. A large proportion of the Hindu merchant class belongs to the Vaishnava sect, and these are as strict in their regard for animal life as the Jains themselves. When husband and wife belong to different sects, the wife is formally adopted into the sect of her husband, but continues to practise her original religious rites. When, however, she visits the home of her parents, she must have her food cooked separately and eat apart from the other members of her family (Risley, *op. cit.* i. 7, ii. 151).

36. **Sikhs and Kabīrpanthīs.**—Like the Jains, Sikhs profess to be Hindus, and at each successive enumeration it would seem that their numbers have been underrated, as they have been included in some Hindu sect. They are, as a rule, temporary residents, and their strength depends largely upon the number of Panjābī regiments which happen to be serving in the Province. The only place with which they have any permanent connexion is Patna, where the Har Mandir is said to mark the place where their tenth *guru*, Govind Singh (A.D. 1675–1708), is believed to have been born while his mother halted there during a pilgrimage. In Eastern Bengal the Sikh sects best known are the Suthrashāhī and the Nanakshāhī. Wise (*op. cit.* 181 f.) describes the members of the former sect at Dacca as disreputable, generally drunkards and smokers of hemp drugs. They are often Brāhmans who do not discard the sacred cord on joining the Sikh communion, and continue to eat with Brāhmans of their own tribe, and not with all grades of Sikhs. No Sikh, however, will refuse to partake of the consecrated food (*praśād*) when offered by them. They observe all the great Hindu festivals, and pay special adoration to the *śālagrāma*, or ammonite, which represents Vishṇu. The account given of this sect by Maclagan (*Panjāb Census*, 1891, i. 154) is not more favourable. He describes them as importunate beggars whose profligacy is notorious, most of them being spendthrifts who have lost their wealth in gambling, and spend their lives in roving mendicancy. Nānakpanthī is a term of less definite meaning, as it is often applied to Sikhs in general, who are all followers of their *guru*, Nānak (A.D. 1469–1538). They have some connexion with Dacca, which is said to have been visited by Nānak Shāh; but their *ākhāra*, or convent, in that city possesses no endowment, and depends largely on the charity of Armenian or Muhammadan residents (Wise, *op. cit.* 182 ff.).

Kabīr was closely connected with Nānak. The chief note of his teaching was the endeavour to link Hinduism to Islām. 'Alī and Rāma, he said, are only different names for the same god. His teaching seems to be rapidly gaining adherents in Western Bengal and the United Provinces. Differences in rank and religion are all, he taught, but *māyā*, or illusion. Emancipation and peace are to be gained only by recognizing the Divine Spirit under these manifold illusions. The way to union with the Divine is not by means of formula or sacrifice, but by fervent faith (*bhakti*) and meditation on the Godhead. The use of spirituous liquor and the worship of idols were prohibited by the founder of the sect; but, as often happens, in process of time practice lags behind precept, and the successors of the teacher fail to maintain the ideal which he set before them. In the case of the Kabīrpanthīs it is said that there is now a tendency to revert to idolatry, while at the same time they pretend to maintain the teaching of Kabīr.

37. **Deistic sects.**—(*a*) *The Brahmo Samāj.*—Of the Hindu deistic sects the best known is the Brahmo Samāj, though its numbers are small, and show no tendency to rapid increase. In Bengal it is divided into three sections: the Ādī, or 'original'; the Nababidhān, or 'new dispensation'; and the Sādhāran, or 'common.' All alike believe in the unity of the Godhead, the brotherhood of man, and direct communion with God in spirit without the intervention of any mediator.

'The differences which exist are ritualistic and social rather than religious. The Ādi Samāj, or oldest section, is also the most conservative. While discarding all idolatrous forms, it follows as closely as possible the rites of Hinduism, and draws its inspiration solely from the religious books of the Hindus, especially the Upanishads, and not from the Bible or Qur'ān. It has only once allowed a non-Brāhman to officiate as its minister. Inter-caste marriages are not allowed, and a considerable agitation was raised when one of its Brāhman members recently married the daughter of the Mahārājā of Kūch Bihār. In other respects the restrictions of the caste system sit lightly on the members of the Samāj, but they are particular to style themselves Hindus, and before the Census of 1891 they submitted a memorial intimating their desire to be entered as Theistic Hindus, and not as Brāhmos' (Gait, *op. cit.* i. 159).

The second section, known as the Nababidhān Samāj, or Church of the New Dispensation, was founded by the well-known Keshab Chandra Sen. It is more eclectic than the Ādī Samāj in its tendencies, and has assimilated what it considers right not only in the sacred books of Hinduism, but also in the religious teaching of Christianity, Buddhism, and Islām.

The most advanced of these Churches is the Sādhāran, or 'common' Samāj. It rejects all the essentials of what is commonly regarded as Hinduism; disapproves of ritual and set forms of worship; absolutely rejects caste; disapproves of the custom of secluding women, gives them a liberal education, and allows them equal voice in Church government. It freely permits marriage between persons of different castes.

'They are thus,' as Gait remarks, 'gradually becoming a separate caste, recruited from a variety of different sources, but mainly from the ranks of the Brāhmans, Baidyas, and Kāyasths. . . . Most Indian gentlemen who have received an European education join this community, not so much perhaps on account of religious conviction as because of the freedom which it allows to them from the irksome trammels of caste and from the necessity of undergoing a ceremony of purification' (*op. cit.* i. 159 f.).

(*b*) *The Śivanārāyaṇīs.*—The Śivanārāyaṇī or Śrīnārāyaṇī is an interesting sect, founded about two centuries ago by a Rājput named Śiva Nārāyan from Ghāzipur in the United Provinces. It was first described by Buchanan in Patna and Bhāgal-

pur (*op. cit.* i. 214, ii. 137), who notices its adherents under the name of Santā, or 'pious.'

'They believe in one formless (*nirākār*) God, forbid idolatry, and venerate their original Guru, whom they regard as an incarnation of the Almighty. The eating of flesh and drinking of wine were forbidden by the founder of the sect, but this rule has now been relaxed. *Mantras* ['spells'] were composed by the founder, to be uttered from time to time during the day, *e.g.* when bathing. The sacred book of the sect is known as the *Sabda-Sant* or *Guru Granth*. It contains moral precepts, and declares that salvation is to be attained only by unswerving faith in God, control over the passions, and implicit obedience to the teaching of the Guru. The Guru is said to be held in such respect that all his leavings are most scrupulously partaken of by his disciples. Their great annual festival is on the fifth night after the new moon of Māgh [January–February], when they assemble in the house of one of their fraternity, and sing songs and read extracts from the *Guru Granth*. When a man wishes to become a Seo Nārāyaṇi, he selects one of the sect, belonging to a caste not inferior to his own, who imparts to him the *mantra* ['formula'] of initiation. He is then enjoined to have faith in God (*Bhagabān*) and the original Guru, and is given a certificate of admission. This is done in the presence of several members of the sect, whose names and addresses are noted in the certificate. All castes are admitted, but most of the disciples come from the lower grades of society, such as the Tatwā, Chamār, and Dosādh castes. The cult was formerly more popular than it is now, and higher castes are said to have supplied it with recruits. The Seo Nārāyaṇis bury their dead, and one of the great inducements to join the fraternity is said to be the knowledge that they will give a decent burial to their comrades when they die, and will not allow their bodies to be touched by sweepers. Their funeral processions are conducted with some pomp, and are accompanied by songs and music. The ordinary caste restrictions are observed, save only in the case of the extremists who adopt an ascetic life' (Gait, *op. cit.* i. 185; cf. Crooke, *Tribes and Castes*, ii. 185 ff.).

This sect is only one of many which have recently grown up in Northern India, founded on a revolt against idolatry, and the pretensions of the Brāhmanical Order. They have adopted many of the principles of the reformed Vaishṇava communities. Movements of this kind in India tend to degenerate, and once the enthusiasm which animated the founder has ceased to inspire later generations of disciples, the new community, having shaken itself free from the restrictions of caste and the control of the tribal council, often surrenders itself to licence. This has been the fate of this sect at Dacca, where the meetings, which occupied several nights in succession, degenerated into drunken orgies.

'The lower Hindu castes, ever willing to repudiate Brāhmanical interference, and assert spiritual independence, have always been notorious for profligacy and intemperate habits. Intoxication is with them an irresistible passion, and no threats or corrections have the slightest effect in weaning them from the vice. Faithful servants, kind parents, and affectionate husbands, they have no conception of a moral religion; and their untutored minds can neither understand nor comply with a faith inculcating morality and the mortification of all worldly lusts and passions' (Wise, *op. cit.* 181).*

38. **The Pañchpiriyas.**—The important sect of the Pañchpiriyas or Pachpiriyas forms the subject of a special article (wh. see).

39. **Muhammadans.**—The map prepared by Gait (*op. cit.* i. 156) clearly shows the distribution of Muhammadans in the Province. Prior to the Census of 1872 it was generally believed that they were most numerous in Bihār. That Census established, on the contrary, that the chief seat of Musalmān influence was in Eastern Bengal and to the north, where respectively two-thirds and nearly three-fifths of the people were found to be followers of the Prophet. On the other hand, in North Bihār less than a sixth, and in South Bihār less than a tenth, of the population accept his authority. Orissa, the most backward division, except the hill districts, and the most conservative in matters of religion, is the region where the Muhammadan element is weakest. The area of Musalmān predominance consists of a compact territory lying north of Calcutta and stretching westward from the frontier of Assam, including the Districts of Mymensingh, Pābna, Bogra, and Rājshāhi, and a second tract lying south and west of this and east of Calcutta, including the Districts of Noākhāli, Chittagong, and Backergunge. In these two regions the proportion of Muhammadans to the total population ranges from 82 per cent in Bogra to 71 per cent in Chittagong.

The extraordinary increase in the numbers of the followers of Islām in Bengal, and particularly in its eastern region, is the most remarkable fact in the recent religious history of the Indian Empire. The following table shows in a compact form the relative positions of Hinduism and Islām during the period for which fairly trustworthy statistics of religious belief become available:

Year of Census.	Hindus.	Per cent of Total Population.	Muhammadans.	Per cent of Total Population.
1872	39,996,575	63·76	19,559,252	31·19
1881	45,452,806	65·36	21,704,724	31·21
1891	47,821,468	64·07	23,658,347	31·70
1901	49,687,362	63·30	25,495,416	32·48

It is obvious from these figures that, while during the period of thirty years the proportion of Hindus in the total population has slightly decreased, the increase of Muhammadans has been steady and considerable.

The second remarkable fact in connexion with the spread of Islām is that it has occurred not in those parts of the Province which were centres of Musalmān influence and where their great cities were established. Dacca, for instance, for long the seat of Musalmān government in Eastern Bengal, though it contains 62 per cent of Muhammadans, presents an average much lower than that of the rural districts in its vicinity. Mālda, which contained the great capital city of Gaur, and Murshīdābād, an important seat of government, show no startling increase of Musalmāns; Bihār, Bhāgalpur, and Monghyr were important Muhammadan cities; but in spite of this the Musalmāns furnish barely one-tenth of the total population of the districts in which they are situated. The conclusion to be drawn from these facts is that the increase of Islām was largely due to causes independent of the action of the native government.

40. **Origin of the present Muhammadan population.**—It was, of course, ultimately due to the occupation of the Province by the Muhammadans that their faith began to spread among the Hindus and Animists whom they found in occupation of the country. The rule of the Muhammadan government lasted from the invasion of Bakhtiyār Khilji in A.D. 1203 until the British acquired the Divānī, or control of the revenue administration, in 1765—a period of more than five and a half centuries. During this time the ruling power occupied the country with a foreign army, and many soldiers after retirement from the service remained as colonists. Grants of land were made to grandees and officers of the empire, as well as to men of learning and piety whom the government encouraged to take up their permanent residence in the land. Bengal also became a place of refuge for many families driven from North-Western India by war and revolution. On these grounds various recent Musalmān writers, in their desire to enhance the social position of their co-religionists, have endeavoured to prove that they are in the main of foreign extraction. This question has been examined at length by Gait (*op. cit.* i. 165 ff.). While not denying that there are certain aristocratic families, like that of the Nawāb of Murshīdābād, who, originally of foreign descent, have

* For the Śivanārāyaṇis see also Risley (*op. cit.* i. 178, ii. 334). The ritual code of the sect is described and some of the songs quoted in *North Indian Notes and Queries*, v. 58 f.

preserved the purity of their blood by refraining from intermarriage with persons of more doubtful ancestry, and also that many families of foreign origin have, owing to the rules of the Muhammadan law of inheritance, gradually lost their estates and become merged in the general mass of the population, he regards it as impossible to suppose that the whole or even a great majority of the Musalmān population can be the descendants of immigrants from North-Western India. Such a theory does not account for the present distribution of the Musalmān population. If they were really descendants of foreign immigrants, they would now be found in occupation of the more healthy tracts in the neighbourhood of the ancient capitals, not in the rice-swamps of Noākhāli, Bogra, and Backergunge. Anthropometry, again, so far as statistics are available, shows that the foreign element among the Muhammadans of Eastern Bengal is inconsiderable, and that physically they are akin to the aboriginal or non-Aryan races whom the first Musalmān invaders found in occupation. On the whole, Gait (*op. cit.* i. 169) comes to the conclusion that the foreign element in the Muhammadan population cannot exceed four millions, or one-sixth of the total number of those professing the faith of Islām.

41. Causes of the spread of Islām.—(*a*) *Conversions.*—When we come to consider the causes which led to the spread of Islām, we find that while the Mughals were generally tolerant in matters of religion, the Afghāns who preceded them were often fanatical; local traditions, supplemented by the scanty historical evidence of the character of their rule, describe numerous cases of forcible conversions of Hindus and Animists, while the ranks of the true believers were recruited by slaves and criminals who on conversion were pardoned.

'In spite, however, of the fact that cases of forcible conversion were by no means rare, it seems probable that very many of the ancestors of the Bengal Muhammadans voluntarily gave in their adhesion to Islām. The advantages which that religion offered to persons held in low esteem by the Hindus have already been pointed out, and under Muslim rule there was no lack of pious Pīrs and Fakīrs (holy men and religious mendicants) who devoted their lives to gaining converts to the faith. There were special reasons which, during the early years of the Muhammadan supremacy, made conversion comparatively easy. Although the days when Buddhism was a glowing faith had long since passed, the people of Bengal were still to a great extent Buddhistic, and when Bakhtiyār Khilji conquered Bihār and massacred the Buddhist monks assembled at Odantapuri, the common people, who were already lukewarm, deprived of their priests and teachers, were easily attracted from their old form of belief, some to Hinduism and others to the creed of Muhammad. The higher castes probably found their way back to Hinduism, while the non-Aryan tribes, who had, in all probability, never been Hindus, preferred the greater attractions of Islām' (Gait, *op. cit.* i. 171).

(*b*) *Physical causes of the increase of Muhammadanism.*—The faith thus started progressed rapidly, owing to causes which were not so much moral or religious as physical, and due to the environment of the people. These have been carefully examined by O'Donnell and Gait (*Census Report*, 1891, i. 146 f.; 1901, i. 172). It has been established from these investigations that the main explanation of the spread of Islām in Eastern Bengal must be the greater fecundity of its adherents. In the first place, we find among Muhammadans a much larger number of potential mothers than among Hindus. While the higher caste Hindus throughout the Province, and in Bengal proper many of the castes of less importance, rigorously prohibit widow-remarriage, the Muhammadan widow usually finds a second husband. Statistics show that of every 100 Hindu women between the ages of 15 and 40 more than 16 are widows prohibited to re-marry; among Muhammadans the percentage is only 12. O'Donnell, again, remarks that ill-assorted marriages are far more common among Hindus—men well advanced in years being united to girl wives, who in the natural course of human life are left widows, debarred from further maternity, at a comparatively early age. On the other hand, Musalmāns, particularly in Eastern Bengal, are polygamists whenever they have the means to support a second wife, generally a widow, 'married as often as a convenient unpaid domestic drudge as for the sake of the children she usually bears her master.' Lastly, in Eastern Bengal the Musalmān is generally more prosperous and better fed than the Hindu in other parts of the Province. Bihār and Orissa, the head-quarters of Hinduism, are fully developed, congested regions, where a large proportion of the people live in a condition of permanent depression. Eastern Bengal, on the contrary, is a land of promise, enriched by a large trade in rice and jute. It is improbable that the enterprise of the Hindu wedded to his hamlet and his local gods would have been sufficient to bring its fertile alluvial soil under the plough. But the Muhammadan has no prejudice against leaving his birthplace, and gladly migrates in search of remunerative work. While the Hindu is very often a vegetarian, and, if he eats meat, does so only when he makes a sacrifice, the Musalmān with his more varied and nutritious dietary is more vigorous and fertile. The conditions thus described sufficiently account for the fact that, while Hinduism barely holds its ground, Islām prospers and increases the number of its adherents.

42. Characteristics of Muhammadanism in Bengal.—Islām throughout Northern India falls far short of the standard of faith laid down by the Prophet and his immediate successors. As might have been expected, this degeneration is specially apparent in Eastern Bengal, where its followers have been to a large extent recruited from an Animistic population. Thus, the Pañchpiriya sect (wh. see) shows obvious signs of the fusion of Musalmān traditions with Animistic beliefs. The Wahhābī movement (see below, § 43) has in some measure checked the corruption of the faith, but before the recent crusade against idolatry it was common for low-class Muhammadans to join in the Durgā Pūjā and other Hindu festivals.

'Although,' writes Gait (*op. cit.* i. 176), 'they have been purged of many superstitions, many still remain. In particular, they are very careful about omens and auspicious days. Dates for weddings are often fixed after consulting a Hindu astrologer; bamboos are not cut, nor the building of new houses commenced, on certain days of the week, and journeys are often undertaken only after referring to the Hindu almanac to see if the proposed day is auspicious. When disease is prevalent, Sītalā and Rākshyā Kālī (see above, § 13) are worshipped. Dharmarāj, Mānasā, and Bishahri (see above, § 30) are also venerated by many ignorant Muhammadans, who make over goats to Hindus in order that they may perform the sacrifice on their account. Sasthī is worshipped when a child is born. Even now in some parts of Bengal they observe the Durgā Pūjā, and buy new clothes for the festival like the Hindus. In Bihār they join in the worship of the Sun, and when a child is born they light a fire and place cactus and a sword at the door to prevent the demon Jawān from entering and killing the infant. At marriage the bridegroom often follows the Hindu practice of smearing the bride's forehead with vermilion or sandal-wood paste. In the Sonthāl Parganas Muhammadans are often seen to carry sacred water to the shrine of Baidyanāth, and, as they may not enter the shrine, pour it as a libation on the outside verandah. Offerings are made to the Grāmyā-devatā (see above, § 15) before sowing or transplanting rice seedlings, and exorcism is resorted to in case of sickness. Ghosts are propitiated by offerings of black fowls and pigeons before a figure drawn in vermilion on a plantain leaf. These practices are gradually disappearing, but they die hard, and amulets containing a text from the Qur'ān are commonly worn, even by the Mullahs who inveigh against these survivals of Hindu beliefs' (Gait, *op. cit.* i. 176).

As is the case throughout Northern India, customs like these are practised especially by women, who are much more conservative in their religious beliefs.

Worship of pīrs and deified men.—In the same category of corruptions of the primitive faith may be placed the adoration of *pīrs*, or saints, and other

deified men, a practice for which no authority can be found in the Qur'ān or in the older commentaries on it. The *pīr* after death is supposed to be present in spirit, and to offer daily prayers of propitiation at Mecca or Medīna. Hence a *dargāh*, or tomb, covers his ashes and becomes a place of pilgrimage, to which people resort for the cure of disease, or the exorcism of evil spirits, to obtain the fulfilment of some cherished wish, such as the birth of a child, or success in pending litigation. Gait (*op. cit.* i. 177) and Wise (*op. cit.* 10 ff.) have given full catalogues of the more famous saints (see SAINTS, [Hindu]). The educated Musalmān denies that he worships the *pīr*, he merely prays that he will intercede for him with the Almighty; 'but amongst the lower classes it is very doubtful if this distinction is clearly recognized, even if it actually exists.'

43. **Sects of Islām.**—The familiar division of Muhammadans into the two sects of Sunni and Shī'a is of less importance in Bengal than that which classes them as 'reformed' or 'unreformed.' The former is the title applied to those who are connected with the movement which resulted in the formation of the Wahhābī sect (wh. see). The sectarian movement in Islām usually follows one of two lines: it is either puritanical or pietistic. The Wahhābī sect is an example of the former, Ṣūfīism of the latter. The Wahhābī movement was started in India by Saiyid Ahmad Shāh, of Rāē Bareli in Oudh, who in 1826 proclaimed a holy war (*jihād*) against the Sikhs. He and his followers finally made Patna their headquarters, whence a propaganda was spread through Northern India. The principles of the sect, as announced by another Bengal teacher, Hājī Shariatu'llah of Farīdpur, prohibited all association with Hindu rites and ceremonies, the preparation of models (*ta'ziya*) of the martyrs Ḥasan and Ḥusain (see Pelly, *Miracle Play of Hasan and Husain*), and the offering of prayers to saints or martyrs. He also announced the principle which brought the sect under the notice of the Indian Government, that India was a 'land of warfare' (*dāru'l-ḥarb*), where the observance of the Friday service is unlawful and resistance to the infidel a religious duty. These principles were to some extent modified by another teacher, Maulāna Karāmat 'Alī of Jaunpur, who made two important alterations in the tenets of the sect. First, he declined to reject altogether, as other teachers had done, the authority of the glosses on the *Ḥadīth*, or traditions, which were assumed to represent the teaching of the Prophet; secondly, he withdrew the doctrine that India was *dāru'l-ḥarb*, and thus removed the chief cause which brought the sect into collision with the British Government. These two sects of reformers are known collectively as Farāḍī (Arab. *farīḍa*, pl. *farā'iḍ*, 'the obligatory ordinances of law and religion,' those which are believed to have been established by God Himself, as distinguished from those which are founded on the precept or practice of the Prophet, and called *sunna*). Other titles used are Namāz-i-hāfiḍ, 'those who know the prayers by rote'; Shāre', 'followers of the *shar*', or divine way of religion,' as opposed to the Sābiqī, 'those who follow the old rule,' 'the conservative party.' The distinctive name of the followers of Karāmat 'Alī and his successors is Ta'aiyunī, 'those who appoint,' from their practice of appointing as their leader a member of their own body, who decides religious questions, and takes the place of a *qāḍī*, thereby making the practice of Friday prayer lawful for true believers. The followers of Dudhu Miyān are known as Wahhābī, from the founder of the sect, Muhammad ibn Abdu'l-Wahhāb; but this name is now held in bad odour, and they prefer to be called Muhammadī, 'followers of the Prophet'; Ahl-i-ḥadīth, 'persons of the tradition'; or Rafi'yādain, the last with reference to their custom of raising their hands to their ears when praying, in opposition to the practice of the Sunnis, who fold their arms in front, and of the Shī'as, who allow them to hang by their sides. Other titles for them are Amīnī, because they pronounce the 'Amen' formula in a loud voice; and Lāmaẓhabī, 'without doctrine,' because they reject all doctrines except those contained in the Qur'ān.

The information regarding the tendency of this reform movement in Islām, so far as it is based on the scanty facts which the Government has permitted to appear in official publications, is insufficient to enable us to appreciate fully its religious and political importance. Risley is of opinion that 'at the present day the fanatical element of the Wahhābī movement seems in many parts to have died out; and the efforts of the reformers are directed mainly to the eradication of superstitious practices not sanctioned by the Qur'ān, and to the inculcation of the trne principles of the religion' (*Census Report*, India, 1901, i. 373). At the same time it would be idle to assert that the principle upon which the sect largely depends—that India is a 'land of war'—has quite disappeared; and a movement which, as is the case with the Wāhhābī movement in Bihār, draws its adherents from the lowest and most ignorant classes of the Muhammadans, must always be regarded with watchful suspicion by the ruling power.*

44. **Christianity.**—The following figures illustrate the remarkable progress of Christianity in the Province during the last thirty years:

Year of Census.	Number of Christians.
1872	91,063
1881	128,134
1891	192,484
1901	278,366

The scope for missionary effort in the future may be estimated by the fact that at present only 36 in 10,000 of the total population belong to the Christian faith. Of the total number of Christians enumerated at the Census of 1901, 27,489 (including 1081 Armenians) or 9·9 per cent belong to European races; 23,114 or 8·3 per cent are Eurasians; and 227,763 or 81·8 per cent are native converts.

'More than three-fifths of the European Christians belong to the Anglican communion, and about one-fifth are Roman Catholics. According to the returns, the Presbyterians number less than one-tenth, but it is believed that the real number is greater, and that some of those who described themselves as belonging to the Church of England were brought up as Presbyterians. Of the Eurasians, more than half are Roman Catholics, and nearly two-fifths belong to the Anglican communion. . . . The proportion of Roman Catholics is swollen by the inclusion of 2221 Feringis, of whom all but 194 belong to this persuasion' (Gait, *op. cit.* i. 161).

These Feringis (Pers. *Farangī*, *Firangī*, 'Frank') are a degraded mixed race, largely found in the Backergunge District.

'In the southern quarter [of the Backerganj district] there still exist several original Portuguese colonies, of probably two centuries' duration, which exhibit a melancholy example to what an extreme degree it is possible for Europeans to degenerate. They are a meagre, puny, imbecile race, blacker than the natives, who hold them in the utmost contempt, and designate them by the appellation of Caula Ferenghies (Hind. Beng. *kālā*, 'black') or "black Europeans"' (Hamilton, *Description of Hindostan*, 1820, i. 188).

* This account of the Wahhābī movement in Bengal is largely based on Gait's summary (*Census Report*, 1901, i. 178 ff.), which, again, is founded on Wise, 'Muhammadans of Eastern Bengal' in *JRASBe*, 1894. Also see his account in *Notes on the Races, Castes, and Trades of E. Bengal*, 21 ff. The question has been discussed by Hunter, *The Indian Musalmans; are they bound in conscience to rebel?* and the reply by Saiyid Ahmad Khan; Ibbetson, *Punjab Ethnography*, 147 f.; Maclagan, *Census Report Punjab*, 1891, i. 189 f. For the Wahhābīs of Arabia see Palgrave, *Central and Eastern Arabia*; Lady Ann Blunt, *Pilgrimage to Nejd*; Badger, *Imams and Seyyids of 'Oman*; Blunt, *Future of Islam*.

In recent times there has been little improvement in their industrial, social, or moral condition (Beveridge, *The District of Bakarganj*, 1876, p. 110).

(*a*) *Sectarial divisions of Christians.*—The ignorance of the native converts and the inability of the Census enumerators to understand the European names of the various denominations of Christians have made it very difficult to collect information regarding the sectarial divisions of the native converts.

'So far as the returns go, about two-fifths of the native Christians are members of the Roman Catholic Church; nearly one-third are Lutherans; rather more than a seventh belong to the Anglican communion, and nearly one-eleventh are Baptists. The other denominations combined account for only about one in every nineteen native Christians' (Gait, *op. cit.* i. 162).

(*b*) *Roman Catholics.*—The total number of Roman Catholics has increased from 78,000 in 1891 to 90,000 in 1901. Their chief sphere of missionary work is in the Rānchi District of Chotā Nāgpur, where the converts exceed 54,000, or form about three-fifths of the total number in the Province. Their work in this District is shared among the non-Aryan Mundās and Orāons by Anglican and Lutheran missions. Christianity has here made more rapid strides than in any other part of N. India, with the result that the total number of Christians affiliated to the three missions now amounts to 124,958, as compared with 36,263 at the previous decennial enumeration. The Roman Catholics have also important communities at Dacca in Eastern Bengal, Calcutta, the Twenty-four Parganas, Nadiyā, and Champāran.

'Although small in point of numbers, the Roman Catholic Mission in Champāran has an interesting history. There are two main centres, at Bettiah and Chuhri. The former was established about 1740 by Father Joseph Mary, an Italian missionary of the Capuchin Order, who was passing near Bettiah on his way to Nepāl, when he was summoned by Rājā Dhruva Shāh of Bettiah to attend his daughter, who was dangerously ill. He succeeded in curing her, and the grateful Rājā invited him to stay at Bettiah, and gave him a house and about ninety acres of land. The Chuhri Mission owes its origin to some missionaries who left Italy in 1707 for Tibet. Two reached Lhassa, and were followed by others. They built a mission-house and chapel; but as soon as the number of their converts began to increase, they incurred the ill-will of the Grand Lāma and were forced to leave. They then settled in Nepāl (in 1713) and established missions at Khātmāndū, Pātan, and Bhatgāon. They received grants of land from the Newār kings, and prospered considerably till 1769, when the Newār dynasty was overthrown by the Gorkhas, who were instigated by their priests to exterminate the Christians. Being warned in time, the missionaries, with sixteen families of their converts, fled to Bettiah and were given a small land-grant at Chuhri. Many of the present Christians in Chuhri are the descendants of the original fugitives from Nepāl and still speak their old language, but they have intermarried to a considerable extent with the native Christians of Bettiah' (Gait, *op. cit.* i. 162; for these Nepāl Missions see Oldfield, *Sketches from Nepal*, i. 189 f.; Hamilton, *Account of the Kingdom of Nepal*, 1819, p. 38).

(*c*) *Lutherans.*—The converts of the Lutheran Mission have increased from 23,000 in 1891 to rather more than 69,000 in 1901. Their operations extend to the non-Aryan tribes of Chotā Nāgpur, in Rānchi, the Santāl Parganas, Singhbhūm, and Manbhūm. The Rānchi Mission, known as that of Gossner, was founded by six German missionaries in 1846; but twenty-three years later an unfortunate disagreement occurred, and the Mission was split into two sections, one enrolling itself under the Society for the Propagation of the Gospel, and the other retaining the name of Gossner's Mission.

'The progress made during the decade in the Rānchi District has been phenomenal. Ten years ago the number of converts was less than 19,000, and it is now three times as great. Some years ago the Mundās were greatly agitated by disputes with their landlords; their cause was espoused by the missionaries, and it is thought by some that political reasons may have artificially augmented the number of professed Christians. Unlike the Hindus, the Mundās receive apostates from Christianity back into their community, and it is said that cases of backsliding are by no means rare. We must, therefore, wait for the next Census before we can pronounce how far the wonderful progress made in the past decade is genuine and permanent' (Gait, *op. cit.* i. 162 f.).

On the other hand, Bradley-Birt, writing of the Mission to the Hos of Singhbhūm, remarks that the barrier of exclusiveness which the race has always maintained affects the Christian missions established in the District.

'Though without the caste prejudices of the Hindus, they have no mercy on any one who disobeys the traditions of their race. No Ho would take water or food from one of another race; and as such a Christian is practically considered, being outside the pale of the Ho community, and not participating in the rites and festivals of his family. Converts thus fare badly among the Hos, and few adults have broken through the rigid customs of a lifetime and embraced Christianity. It is to the children that the missionaries chiefly turn their attention' (Bradley-Birt, *Chota Nagpore*, 104).

The same writer, when treating of the Santāls and Pahārias, remarks that it is only among people who have not yet come under the spell of Hinduism that missionary efforts have met with success.

'But hopeful as is the progress of Christianity among them, it has exercised as yet no influence beyond a certain radius from the Mission Stations, and it is even now of too recent a growth in their midst to influence whole races, as Hinduism has done, and is still doing, to embrace its tenets and beliefs. Everything to-day points to Hinduism—even the Hinduism that has lost its first faith and is fighting its own battle of doubt and scepticism—as the absorbing force of the future among the aborigines of Bengal' (*Story of an Indian Upland*, 20 f.).

On this question the views of Dalton, one of the best authorities on these races, deserve quotation.

'If we analyze the views of most of the Oraon converts to Christianity, we shall, I think, be able to discern the influence of their pagan doctrines and superstitions in the motives which first led them to become catechumens. The Supreme Being who does not protect them from the spite of malevolent spirits has, they are assured, the Christians under His special care. They consider that, in consequence of this guardianship, the witches and *bhūts* have no power over Christians, and it is therefore good for them to join that body. They are taught that for the salvation of Christians one great sacrifice has been made, and they see that those who are baptized do not in fact reduce their live-stock to propitiate the evil spirits. They grasp at this notion, and long afterwards, when they understand it better, the atonement, the mystical washing away of sin by the blood of Christ, is the doctrine on which their simple minds most dwell' (Dalton, *op. cit.* 257).

(*d*) *Baptist and other Missions.*—Farther east the Baptist Mission is at work in the swamps of Backergunge and Farīdpur, where from the menial castes of Chandāls and Nāmasūdras they have made 19,000 converts. The only other important Mission is that of the Church of Scotland, which is engaged in parts of the Dārjīling and Jalpaigurī Districts. The total number of their converts is about 2000.

(*e*) *Classes among whom Christianity progresses.*—The classes most receptive of Christianity are those outside the Hindu system, as in Chotā Nāgpur and the depressed communities of Backergunge and Farīdpur. It is thus summed up by Gait (*op. cit.* i. 164):

'The influence of Christian teaching is no doubt far-reaching, and there are many whose acts and opinions have been greatly modified thereby, but amongst the higher castes the number who at the present time are moved to make a public profession of their faith in Christ is very small. At one time there seemed a prospect of numerous converts being gained from the ranks of the educated Hindus, but the efforts of Keshab Chandra Sen and other eloquent Brāhmo preachers turned their thoughts and aspirations into another channel.'

LITERATURE.—The best recent authorities are the last three Census Reports—by J. A. Bourdillon, 1881; C. J. O'Donnell, 1891; E. A. Gait, 1901, the last being the most complete and valuable. To it this article is very largely indebted. Among the older authorities may be named: Ward, *A View of the History, Literature, and Mythology of the Hindoos*[3], 1815; Francis Buchanan, afterwards Hamilton, *The History, Antiquities, Topography, and Statistics of Eastern India*, edited in 1838 from the author's MSS by Montgomery Martin, who does not name the original author on his title-page; J. Campbell, *A Personal Narrative of Thirteen Years' Service among the Wild Tribes of Kondistan, for the Suppression of Human Sacrifice*, 1864; S. C. Macpherson, *Memorials of Service in India*, 1865; E. G. Man, *Sonthalia and the Sonthals*, 1867; Sir W. W. Hunter, *The Annals of Rural Bengal*, 1868, *Orissa*, 1872, *Statistical Account of Bengal*, v.d.; T. H. Lewin, *The Hill Tracts of Chittagong*, 1869, *The Wild Races of South-east India*, 1870; E. T. Dalton, *Descriptive Ethnology of*

Bengal, 1872; J. Wise, *Notes on the Races, Castes, and Trades of Eastern Bengal*, 1883; H. H. Risley, *The Tribes and Castes of Bengal*, 1891; J. F. Hewitt, *The Ruling Races of Prehistoric Times in India, South-west Asia, and South Europe*, 1894–5; M. A. Sherring, *Hindu Tribes and Castes*, 1872–81; L. A. Waddell, *The Buddhism of Tibet*, 1895, *Among the Himalayas*, 1899; Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, 1896; F. B. Bradley-Birt, *Chota Nagpore, a little-known Province of the Empire*, 1903, *The Story of an Indian Upland*, 1905. For the folk-lore and popular beliefs, Lal Behari Day, *Folk-tales of Bengal*, 1883, *Govinda Samanta, or History of a Bengal Raiyat*, 1874, re-published as *Bengal Peasant Life*, 1880; G. A. Grierson, *Bihar Peasant Life*, 1885, *An Introduction to the Maithili Language of North Bihar*, 1882; A. Campbell, *Santal Folk-tales*, 1891.

W. CROOKE.

BEOTHUKS.—The Beothuks were the aboriginal inhabitants of Newfoundland, and the sole representatives, so far as is known, of the Beothukan stock. The race is now extinct, and its history is wrapped in obscurity, although the attention of early voyagers to Newfoundland (or Baccalaos, as it was called from the native name of the codfish caught along its shores) was quickly attracted by the Beothuks who then inhabited the island. Though the allusions of these first explorers regarding this vanished race are scanty and frequently contradictory, they are of special interest as being almost the only sources for a knowledge of one of the most primitive of all North American Indian stocks.

1. Early accounts and culture.—The first allusion to the Beothuks is found in an 'addition' in Stephens' edition of the *Chronicon* of Eusebius (Paris, 1512, f. 172; quoted by Harrisse, *Découverte et évolution cartographique de Terre-Neuve*, London, 1900, p. 162), and is as follows:

'Septem homines sylvestres ex ea insula (quæ terra nova dicitur) Rothomagum [Rouen] adducti sunt cum vestimentis et armis eorum. Fuliginei sunt coloris, grossis labris, stigmata in facie gerentes ab aure ad medium mentum, instar lividæ venulæ per maxillas deducta. Crine nigro et grosso ut equæ iuba. Barba per totam vitam nulla, neque pubes neque ullus in toto corpore pillus præter capillos et supercilia. Baltheum gerunt in quo est bursula quædam ad tegenda verenda. Idioma labis formatur, religio nulla, cymba eorum corticea, quam homo una manu evehat in humeros. Arma eorum arcus lati, chordæ ex intestinis aut nervis animalium; sagittæ, cannæ saxo, aut osse piscis accuminatæ. Cibus eorum carnes tostæ. Potus aqua. Panis et vini et pecuniarum nullus omnino usus. Nudi incedunt aut vestiti pellibus animalium ursorum, cervorum, vitulorum marinorum et similium.'

Of the personal adornment of the Beothuks, Jacques Cartier, in 1534, gives the following account (quoted by Harrisse, *op. cit.* p. 163):

'Il y a des gens à la dite terre qui sont assez de belle corpulance, mais ils sont gens effarables et sauuaiges. Ils ont leurs cheueulx lies sur leurs testes en fason d'vne pougnye de fain teurcse et vng clou passé par my ou aultre chosse et y lient aulcunes plumes des ouaiseaulx. Ils se voistent de peaulx de bestes, tant hommes que femmes; mais les femmes sont plus closes et serrées en leurs dites peaux et sçaintes par le corps. Ils se paingnent de certaines couleurs tannées. Ils ont des barques en quoy ils vont par la mer, qui sont faictes d'escorche de bouays de boul, o quoy ils peschent force loups marins.'

To the list of Beothuk weapons Cabot (in 1542) adds lances, darts, clubs, and slings (Harrisse, *op. cit.* p. 164). The wearing of skins and loincloths ('a small payre of breeches') by both sexes, and the use of leggings and moccasins, are alluded to, in addition to their mode of dressing the hair, by Jehan Alfonse († in 1543; while the Siennese Mattioli (1547) states that the Beothuks went naked in summer, but were clad in skins in winter. Unlike Stephens, who described the Beothuks as 'sooty,' Alfonse and Mattioli term them 'white' ('très blanche,' 'gente bianca'). According to the former, moreover, the Beothuks were nomadic, while 'touching their victuals, they eate good meate, but all unsalted, but they drye it, and afterward they broyle it, as well fish as flesh. . . . They drinke seale oyle, but this is at their great feasts.' Mattioli, however, affirmed that they ate both fish and flesh raw, and added that 'some of them eat human flesh, yet secretly, that their "caciqui" may not know it.' The latter author also adds a scanty note on the Beothuk religion: 'Sono idolatri, chi adora il sole, e chi la luna, e molte altre sorti de idoli' (see Harrisse, p. 164 ff.; cf. Bonnycastle, *Newfoundland in 1842*, London, 1842, i. 25 f.).

Whitbourne, the first historian of Newfoundland, describes the aborigines in the following terms (Purchas, *His Pilgrimes*, London, 1625, IV. x. 1884):

'The naturall Inhabitants of the Countrie, as they are but few in number, so are they something rude and sauage people. . . . In their habits, customs, and manners they resemble the *Indians* of the Continent . . . they liue altogether in the North and West part of the Country, which is seldome frequented by the English: But the French and Biscaines . . . report them to be an ingenious and tractable people . . . (being well vsed) they are ready to assist them with great labour and patience . . . without expectation of other reward, than a little Bread, or some such small hire.'

In a letter written July 29, 1612, John Guy thus describes the Beothuks at length (Purchas, IV. x. 1881):

'They are of a reasonable stature, of an ordinary middle sise, they goe bare-headed, wearing their haire somewhat long, but round; they haue no Beards; behind they haue a great locke of haire platted with feathers, like a Hawkes Lure, with a feather in it standing vpright by the crowne of the head, and a small locke platted before: a short Gown made of Stags skins, the Furre innermost, that ranne downe to the middle of their legges, with sleeues to the middle of their arme, and a Beuer skin about their necke, was all their apparell, saue that one of them had shooes and Mittens, so that all went bare-legged, and most bare-foote. They are full eyed, of a blacke colour; the colour of their haire was diuers, some blacke, some browne, and some yellow, and their faces something flat and broad, red with Oker, as all their apparell is, and the rest of their body: they are broad brested, and bould, and stand very vpright.'

Like Hayes, the second in command under Sir Humphrey Gilbert (Hakluyt, *Voyages*, London, 1600, iii. 153), Guy found the Beothuks friendly, although inclined to be thievish. He describes their houses as 'nothing but Poles set in round forme meeting altogether aloft, which they couer with Deere skins, they are about ten foote broad, and in the middle they make their fires.' Another variety of dwelling was 'made in a square forme with a small roofe.' Their adornments included 'shell chains' (doubtless wampum), 'chains of leather full of small Periwinckle shels,' and a 'spitting knife.' They likewise possessed spruce bark boiling-baskets, and had hats 'sewed handsomely with narrow bands about them, set round with fine white shels' (Whitbourne, in Purchas, IV. x. 1887). It is also tolerably certain that they used gaming discs of bone similar to those of the Micmacs (Culin, *24 RBEW* p. 97).

The highest art of the Beothuks was evidently attained in their ochre-stained canoes, to which Cartier alludes. These were usually built to hold four persons, and are thus described by de Laet (*Novus orbis*, Leyden, 1633, p. 34):

'Cymbæ ipsis ex corticibus arborum compositæ, viginti ut plurimum pedes longæ, quinque aut circiter latæ et semilunæ in modum, ad proram atque puppim erectæ atque incurvæ, quinque ad summum vectorum capaces; illis utpote levissimis undas summa velocitate secant, easdemque cum opus fuerit humeris gestant.'

The last authentic record of this vanished stock is contained in John Cartwright's *Remarks on the Situation of the Aborigines of Newfoundland*, written in 1788 (printed in his daughter's *Life and Correspondence of Major Cartwright*, London, 1826, ii. 307 ff.). This, however, adds little new, except that the square type of building already noted was relatively rare, and that its roof was a pyramid rising to a hoop tied to the rafters, thus forming a chimney. His most interesting information concerns the canoes, which ran straight from keel to gunwale, being kept apart at the top by a 'spreader,' the removal of which rendered it possible to fold the canoe up like a cocked hat.

The Beothuks lived chiefly by the chase and

by fishing. Their canoes have already received mention, and for their hunting they enclosed large areas with deer fences, 8 to 10 ft. high, made by felling trees in line. These fences, which often extended for miles into the interior, served to bring the deer down to water, where they were taken by the hunters (cf. Jukes, *Excursions in and about Newfoundland*, London, 1842, ii. 132–133). A distinct racial characteristic of the Beothuks, if we may judge from the account of Bonnycastle (*op. cit.* ii. 267 f.), was that they dug within their wigwams small cavities which they lined with moss or the soft twigs of trees, thus forming their beds. Their winter wigwams, moreover, had small store-pits, about four feet deep and usually lined with birch bark; while each village possessed a wigwam for vapour baths. It is also interesting to note that their wigwams of skin are said by Peyton to have been raised on wooden platforms (Jukes, *op. cit.* ii. 126).

The Beothuks also received the name of '*Red* Indians' (a term often applied erroneously to North American Indians in general) from their custom, to which repeated allusion is made from the time of Guy, of painting themselves, as well as their bows, arrows, and canoes, with red ochre. Physically they were of a finer type than the Micmacs, whose bitter enemies they were. The last member of the race, Shawnandithit, a woman who died at St. John's in 1829, is described as having a round face with prominent cheek bones, somewhat sunken eyes, small nose, and black hair (Lloyd, *JAI*, 1875, p. 31; cf. the portrait of the Beothuk woman Demasduit or Waunathoake ['Mary March'], reproduced from Lady Hamilton's drawing, in Prowse, *Hist. of Newfoundland*, London, 1895, p. 384). The Beothuks were monogamous, and the women were chaste (Lloyd, *JAI*, 1876, p. 228).

2. **History.**—The history of the Beothuks finds its wretched parallel only too readily. The brutal excesses of the English in Tasmania and Australia, of American frontiersmen and cowboys, of the Spaniards in the Antilles, and of the Belgians in the Congo—it is all the same dreary story. It is evident that, when Newfoundland was first discovered, its inhabitants were peaceful, and they long remained on friendly terms with the French and Basque fishermen. With the inability of primitive peoples to recognize property rights of others than their own tribes, however, they, in their excursions to the seacoast in summer for cod and salmon, appropriated European nets, iron, or whatever else they could lay their hands on. The Europeans sought revenge, and, as Cartwright says, 'they were harassed from post to post, from island to island, so that neither sea nor land could afford them shelter.' By the time of the English settlements the Beothuks had fled to the north and north-west of Newfoundland. Thence they carried on such depredations against the whites that by the middle of the 18th cent. the French offered rewards for their heads. To add to their distress, Micmacs emigrated from Nova Scotia in considerable numbers during the 18th cent., and bitter war broke out between the two stocks, culminating in a battle at the eastern end of Grand Pond about 1770. With the Naskapi, or Algonquian Montagnais of Labrador, on the other hand, they remained on terms of friendship, though they despised the Eskimos for their uncleanly habits (Jukes, *op. cit.* ii. 131); and it was even supposed by Bonnycastle (*op. cit.* ii. 251 f.) that the few remnants of the Beothuks migrated in a body to Labrador, since in the Bay of Seven Islands there suddenly appeared a party of Indians who were neither Eskimos nor Montagnais. Though the actual fate of the stock is not certainly known, they probably perished gradually from the hostility of whites and Micmacs, complicated by famine and disease. Their number seems never to have been large. John Mason, writing between 1618 and 1619, records 'few savages in the north, none in the south' (Prowse, *op. cit.* p. 107); Cartwright (1798) estimated them at 450; but about 1825, Shawnandithit said that only fourteen of her tribe were alive (Lloyd, *JAI*, 1876, p. 228). The last Beothuks, except three women, one of whom (Shawnandithit) was brought to St. John's, were seen on the ice in New Bay in the winter of 1823 (Bonnycastle, *op. cit.* ii. 263 f.). In 1827 the Beothic Institution was founded for the civilization of the Beothuks; but the expedition of Cormack, undertaken under its auspices, utterly failed to find even a single member of the tribe, though there was evidence that Beothuks had fled just before his approach (Bonnycastle, *op. cit.* ii. 265–276).

3. **Relics.**—The relics of the Beothukan stock, of which the Public Museum of St. John's contains important specimens, include mortar-shaped vessels, spear-heads, arrow-heads, gouges, and axes, all of stone. Bone ornaments, used for adorning the hair or dress, and decorated with right-angled triangles, have also been found, as well as carvings on ivory and on the tusks or bones of walrus, seals, and deer, all these objects being dyed a deep sienna. On the skeleton of a man found near Comfort Head in 1888 was a medicine bag containing several charms of carved bone, strips of wampum, a brilliant piece of iron pyrites, and a number of bird skulls, some of these objects obviously being religious in character (Macdougall, in *Trans. Canadian Inst.* ii. 101 f.). In this connexion it should be noted that the Beothuks kindled their fires from the down of the *cyanocitta cristata* (Lloyd, *JAI*, 1876, p. 225). The stock seems, however, to have had no knowledge of pottery, though they possibly made soapstone vessels (*ib.* p. 29), unless these were of Eskimo origin (cf. Prowse, *op. cit.* p. 591), especially as the Eskimos in Labrador manufactured soapstone lamps (Hough, in *Report of U. S. Nat. Museum*, 1896, p. 1041 f.). What is still more extraordinary, they remained ignorant throughout their history of the use not only of firearms, but even of the dog (Bonnycastle, *op. cit.* ii. 259, 277). A point of more than usual interest is the fact that the Beothuks apparently did not practise scalping, but the more primitive American Indian custom of cutting off the head (cf. Friederici, *Skalpieren und ähnliche Kriegsgebräuche in Amerika*, Brunswick, 1906, *passim*). Thus when, in 1810, the Beothuks killed two of the marines of Lieutenant Buchan, the heads of the victims were cut off and carried away (Prowse, *op. cit.* p. 385).

4. **Language.**—Our knowledge of the Beothuk language, which bears no known relation to any other American Indian tongue, rests on two vocabularies (not altogether free from Micmac loan-words) obtained from the women Shawnandithit and Demasduit ('Mary March'), and containing about 330 words. These are only lexicographical in value, giving no hint of morphology or syntax.

5. **Religious beliefs.**—Naturally data concerning the religion of the Beothuks are extremely scanty, and must in part be re-constructed cautiously from rather vague implications. According to Broughton (quoted by Anspach, *Hist. of the Island of Newfoundland*, London, 1819, p. 457), 'they had some knowledge of a Supreme Being,' and they believed that men and women were originally created from a certain number of 'arrows stuck fast in the ground, and that the dead went into a far country,

there to make merry with their friends.' The implication of a hostile Micmac, that the Beothuks possessed no religion, is without value, especially as he expressly declared that no Micmac understood the Beothukan dialect (Chappell, *Voyage of H.M.S. Rosamond to Newfoundland*, London, 1818, p. 71). That they had a very keen sense of the future life is shown by their care in the disposal of the dead, and by the objects found interred with them. There were four types of graves. One class of burial-place resembled a hut 10 ft. long, 8–9 ft. broad, and 4–5 ft. high in the centre, with a floor of square poles and a roof covered with bark, the whole being well protected against the weather and the intrusions of wild beasts (cf. the description of the grave of Demasduit ['Mary March'] given by Lloyd, *JAI*, 1875, p. 32). In the second mode of burial the body was wrapped in birch bark, and, with the property of the deceased, was placed on a sort of scaffold about 4½ ft. from the ground. This scaffold was made of four posts, about 7 ft. high, fixed perpendicularly in the ground so as to sustain a kind of crib 5½ ft. long by 4 ft. broad, with a floor, made of small squared beams laid close together horizontally, on which the corpse and its belongings rested. A third method was by bending the body together, wrapping it in birch bark, and enclosing it in a kind of box. This receptacle, which was made of small squared sticks laid on each other horizontally and notched at the corners to fit closely, was laid on the ground. It was about 4 ft. long, 3 ft. broad, and 2½ ft. deep, and was lined with birch bark for protection against the weather. The body usually lay on the right side, though the skeleton of a boy found in 1886 (Macdougall, *op. cit.* ii. 102) had been placed on the left. A fourth, and more common, mode of Beothuk burial was to wrap the body in birch bark, and to lay it, covered with a heap of stones, on the surface of the ground in some retired spot. Occasionally in this last form of burial, the body, thus wrapped up, was put a foot or two underground, the grave then being covered with stones. If, however, the soil was sandy, graves were dug, and no stones were placed above them. The Beothuk cemeteries were located at definite places, to which the dead were brought from long distances (Lloyd, *loc. cit.*).

The Beothukan belief in a future life receives additional testimony from their custom of laying beside or on the grave, bows, arrows, and other implements of warfare. The grave of Demasduit ('Mary March') and her husband, moreover, contained small models of a male and female child and of canoes, in addition to cooking utensils of birch bark; while with the body of the boy already alluded to were buried food (salmon and trout), two pairs of moccasins, and other things. The interment of religious objects with a corpse near Comfort Head has been noted above (§ 3; cf. also Lloyd and Macdougall, *loc. cit.*).

Philosophical Soc.*, 1885, pp. 408–424, 1886, pp. 411–432; Macdougall, in *Trans. Canadian Inst.* ii. (1890–91).

WILLIAM PILOT and LOUIS H. GRAY.

BERĀR.—**1. Position.**—Berār, otherwise known as the Hyderābād Assigned Districts, is a province of India, lying between 19° 35′ and 21° 47′ north latitude, and 75° 59′ and 79° 11′ east longitude. It is bounded on the north by the Sātpurā range and the river Tāptī, which separate it from the Central Provinces; on the east its boundary is the river Wardhā, on the south the Pengangā; on the west lie portions of the Nizām's Dominions and of the Presidency of Bombay. Its total area is 17,710 square miles; and it is divided into three regions: the Melghāṭ, or hilly tract to the north, the Pāyānghāṭ, or central plain, and the Bālāghāṭ, or upland to the south.

2. History.—The history of the Province is so far relevant to its religion that it illustrates the mixture of races and the disturbing influence of the successive governments.

In the Epic period it formed part of the kingdom of Vidarbha, the first settled Aryan country south of the Vindhyan range (*BG* I. i. 185). Its name survives in that of Bīdar in the Hyderābād State, and has been doubtfully connected with that of Berār, the derivation of which is uncertain. Authentic history begins with the occupation by the Āndhra dynasty (B.C. 220–A.D. 236). They were followed by various non-Aryan chieftains, who gave way to the Chālukya, Rāshṭrakūṭa, Hoysala Ballāla, and Yādava dynasties in succession. In A.D. 1294 the Muhammadans appeared on the scene, when Alā-ud-dīn captured the stronghold of Deogiri or Daulatābād—a raid which was repeated by Malik Kāfūr in A.D. 1309. The country subsequently fell to the Bahmani kings of the Deccan and to those of Ahmadnagar. It was conquered by the Mughals under Akbar in 1596, and remained under them until the fall of the Empire, when, desolated by constant war in the 18th cent., it passed to the Nizām of Hyderābād in 1804. In 1853 the Nizām leased it to the British, and in 1902 a fresh treaty confirming this cession was concluded. In the following year it ceased to be an independent administration, and was incorporated with the Central Provinces.

3. Population.—At the Census of 1901 the population amounted to 2,754,016. In the more fertile parts the predominant caste is the Kunbī, which forms the chief element in the Marāthā people. They are classed by Risley (*Census India*, 1901, i. 503) as Scytho-Dravidian; but there is no evidence that the Śaka or Scythian tribes ever penetrated this region, and the Kunbī are of non-Aryan origin, possibly leavened by some intruding strain from the eastern or western coast. Next in numerical importance are the Mhār and Māng, almost pure non-Aryans, regarded by orthodox Hindus as foul out-castes. The forest tribes principally occupy the Gāwīlgaṛh hills in the Melghāṭ to the north, those of the greatest numerical importance being the Goṇḍ (74,280), Āndh (39,679), Korkū (28,393), and Bhīl (5,704). In the population as a whole the Aryan element is scanty. There is a notable absence of important cities or towns, and the population is largely rural. Naturally their religion is of a primitive type, little influenced by the movements which in the more advanced provinces have so profoundly affected belief.

4. Religious statistics.—According to the Census of 1901, Hindus numbered 2,388,016 (86·7 per cent of the total); Animists, 129,964 (4·7 per cent); Muhammadans, 212,040 (7·6 per cent); Christians, 2,375 (0·08 per cent). Hinduism is thus the chief religion, and here, as is the case in other provinces, it is impossible to draw a clear line of distinction between Hindus and Animists.

5. The higher Hinduism.—(*a*) *Śaivism.*—The beliefs of the higher classes do not materially differ from those prevailing in other provinces. The creed most popular with Brāhmans is that known as Smārta (Skr. *smṛti*, 'authoritative tradition') preached by Śaṅkarāchārya in the beginning of the 8th cent. A.D. It is the highest form of Vedāntic pantheism. From the point of view of sect most Brāhmans rank as Śaivas, the simplicity of the cult of Śiva recommending it in preference to that of the other greater gods. But, as is the case in other parts of India, the mass of the population is

ignorant or careless of the restrictions of sect, and they worship all or any of the recognized deities. Next to the Smārta the most important Śaiva sects are the Lingāyat and the Nāth. The former is described in a special article; the latter are connected with the Gosāīn or Gosāvī of other parts of the country. Most of the Nāth adopt a secular life and are known as Sanyogī, the ascetic minority being called Yogī. The latter are now very rare, and the majority of the Order live by weaving, fortune-telling, and charming, such as making magical passes over the sick with a bunch of peacocks' feathers; others are simple mendicants, leading about a little performing bull, known as *nandi*, the 'vehicle' of Śiva. The regular Gosāvī Order is chiefly made up of youths dedicated by their parents to the god. They act as spiritual advisers (*guru*) to the lower castes, by whom they are found more accommodating than Brāhmans, as they permit the use of meat and spirituous liquor (Kitts, 65). Most of the Śaivas, however, prefer to worship the local manifestations of the deity, such as Khaṇḍobā and Bhairobā or Bhairava, the great guardian-deities of the Deccan. A dog is tied at the shrine of the former when sacrifice is done before his image, and the Haṭkar, a pastoral tribe, flog each other severely at the temples of the latter (Lyall, *Gazetteer*, 190).

(*b*) *Vaiṣṇavism*.—The Vaiṣṇavas of Berār include a few followers of Rāmānuja and of Rāmānand; but many are disciples of Madhavāchārya, some of Vallabhāchārya, and others of the Bengal school of Chaitanya. Their increase in modern times is largely due to immigration from N. and W. India (Kitts, 61). Their favourite deity is Bālājī, the infant Kṛṣṇa, who is regarded as the god of wealth and prosperity, and at Bāsim he has the finest modern temple in the province.

The most interesting modern Vaiṣṇava sect is that of the Mānbhāv (Skr. *mahānubhāva*, 'dignified,' 'virtuous'). It was founded by Chakradhara, a Karhāḍa Brāhman, who is regarded as an incarnation of their deity Dattātreya, and was propagated by his disciple Nāgabhaṭa, who is called the Last Preceptor (A.D. 1236–1302) under the Yādava princes of Mahārāshṭra (R. G. Bhandarkar, *Times of India*, 15th Nov. 1907). They are divided into a celibate section (*Bairāgī*) and one of married householders (*Gharvāsī*). The former include both monks and nuns; the latter are divided into the nominal adherents (*Bholā*), who accept the principles of the Order so far as they do not conflict with the rules of caste, and those who ignore caste distinctions. The celibate monks shave the whole head and face, while the nuns have their hair removed by a male barber. They either live in monasteries or wander from place to place; they eat no meat and drink no water in the presence of an idol; both sexes wear black clothes and ear-rings and rosaries of the black basil wood (*tulasī*) sacred to Viṣṇu-Kṛṣṇa. They are a quiet, thrifty, orderly people; one of their chief rules is never to take life, and they are careful not to visit or eat at a place where a murder or an accidental death may have occurred. Their gods are Dattātreya, a deified saint worshipped as an incarnation of the triad—Brahmā, Viṣṇu, and Śiva—or more especially of Viṣṇu and Kṛṣṇa. Their scripture is the *Bhāgavad-gītā*, and they follow the teaching of a pontiff, known as the Kārañjkar Mahant, whose seat is at Ridhpur in Berār. Their rejection of the manifold saints and orthodox gods has brought them into conflict with Brāhmans; but they are held in much respect by lower caste Hindus. They have no belief in the agency of spirits, holding that the diseases usually attributed to them are the result of sins committed in this or in a former life. The initiation formula is communicated to the female branch by a senior nun. Each sex contains five grades of greater or inferior dignity. The dead are buried, not cremated. When a Mahant, or pontiff, dies, his corpse is washed, placed in a raised seat, worshipped, tied in a litter in a sitting posture, and carried to burial, not in one of the ordinary cemeteries, but in a clean place selected by the brethren, where the grave is spread with salt, the corpse laid on its left side facing the east, and a coconut is broken on the skull as a commutation of a sacrifice (*PR* ii. 106). After burial all traces of the grave are obliterated, and no tomb is raised—to avoid the possibility of the growth of a cult of the dead man. Like many Vaiṣṇava sects, they have been accused of immorality; in former times it is said that marriage between a monk and a nun was symbolized by the pair laying their wallets close together—a practice now denied by the members. Their numbers are decreasing, but this is perhaps due to the fact that in the present day fewer join the celibate section. In 1901 they numbered 2,566 in Berār (Kitts, 62 ff.; *BG* xix. 120 ff. xvii. 181 ff.).

6. Popular Hinduism.—The popular faith of the province has been fully described by Sir A. Lyall, whose classification (*Asiatic Studies*[2], i. 9 ff.) is here followed. (1) The worship of mere stocks and stones, and of local configurations, which are unusual or grotesque in size, shape, or position. This includes not only the worship of natural objects connected by legend with some deity or saint, but extends to 'the phallic rites, to the Sāligrām, or fossil, in which Vishnu is manifest, and to all that class of notions which entirely separate the outward image from the power really worshipped. So that at last we emerge into pure symbolism, as when anything appears to be selected arbitrarily to serve as a visible point for spiritual adoration.' (2) The worship of things inanimate, which are gifted with mysterious motion, such as water, fire, the sun, and trees. For instance, in an eddy of the Tāptī, wood, when floated down, sometimes disappears in a subterranean passage, to avoid which the Goṇḍs propitiate the river-deity with the sacrifice of a goat; Mahishobā (Skr. *mahisha*, 'a buffalo') is a buffalo-god which lives under water and demands propitiation. The worship of fire in the form of the Vedic Agni has disappeared, but it is reverenced at the Brāhman fire-sacrifice (*haoma*). The sun is the tribal deity of the wild Korkū of the northern hills, and he is also worshipped by all Hindus under different conceptions and doctrines regarding his personality. By the jungle-dweller the tree is feared as possessing sentient existence and mysterious potency, proved by its waving branches and the weird sounds which occasionally proceed from it. At a later stage trees which are fruitful or toxic are honoured, or a certain species is appropriated by one god, or a spirit seems to dwell in a great solitary trunk or in a gloomy grove. In the last case such places are laid under tabu, and no one dares to cut a tree or even to use the fallen branches as firewood. The custom of tying rags on trees, in order to bring the worshipper into communion with the indwelling spirit, is common, and one class of such trees is known as Chindiyā Deo, 'the deity of tatters,' where, if one present a rag in season, one may chance to get good clothes (Lyall, *Gazetteer*, 191; Kitts, 47 f.). (3) The worship of animals which are feared. This is illustrated by the cult of Wāgh Deo (Skr. *vyāghra*, 'tiger'), who is propitiated by those who frequent the jungle; and by the refusal of gardeners to inform sportsmen when a tiger or a leopard has taken up its quarters in their plantations, as they believe that the garden ceases to produce fruit when one of these animals is killed there (Lyall, *Gazetteer*, 61 f., 190 f.). In the same class is the cult of the snake, which is everywhere feared and reverenced, and of the monkey, which has now been appropriated by the Vaiṣṇavas in the form of the monkey-god, Hanumān. (4) The worship of visible things, animate or inanimate, which are directly or indirectly useful and profitable, or which possess any incomprehensible function or property. Such is the reverence paid to oxen, and the worship of implements, such as the fisherman's net, the scribe's pen, the banker's account-books (*PR* ii. 185 ff.; cf. MacCulloch, *Childhood of Fiction*, 200 ff.). (5) The worship of a spirit (*deo*), a thing without form and void—the vague impersonation of the uneasy sensations which come upon people in the dark, in forests, or deserts. The site of the manifestation of such spirits is marked by a pile of stones, to which every passer-by contributes, or by rags or charms tied to a cliff or tree; or such beings are supposed to haunt an old banyan-tree or a ruined temple. (6) The worship of dead relatives, and other deceased persons known in life to the worshipper. Such are the worship of ancestors, and the attempt to recall

the spirit in a stone picked up at the grave, which is reverently worshipped for a time and then decently disposed of. (7) The worship at shrines of persons who had a great reputation during life, or who died in some strange or mysterious way. In the worship of Chând Khân at almost every fort in Berâr we have perhaps a survival of the foundation-sacrifice (Tylor, *Primitive Culture*[3], i. 104 ff.; MacCulloch, *Childhood of Fiction*, 427). The Banjârâ (*q.v.*) tribe worship a notorious bandit, and M. Raymond, the French commander, has been canonized. Besides these there is a host of saints and worthies whose shrines are found in all parts of the Province. (8) In some cases persons of this class rise to the rank of demi-gods or subordinate deities, and are worshipped in temples —a phase of the local beliefs fully illustrated by Lyall (*Asiatic Studies*[2], i. 30 ff.), who has, however, extended too far the ancestor-cult as an assumed origin of the theogony (see ANCESTOR-WORSHIP). The remaining forms of the local beliefs illustrated by the same writer—the worship of manifold local incarnations of the elder deities; of departmental deities; of the supreme gods of Hinduism and of their ancient incarnations and personifications, as recorded in the Brâhmanical scriptures—form part of the general official Hinduism, which is not peculiar to Berâr.

7. **Animism.**—The general types of Animism current in the province have been described in the last paragraph. That of the forest-dwellers closely agrees with the beliefs of the cognate tribes (see DRAVIDIANS, BHÎLS, GOṆḌS). The religion of the Korkûs, Goṇḍs, and Andhs has been described by Kitts (p. 77 f.) and C. A. Elliott (*Settlement Rep. Hoshangabad*, 1867, p. 250 ff.). The special class of sorcerers who are believed to control hailstorms and exercise wide influence over the peasantry is noteworthy. At the Dasahra feast the sorcerer (*gârpagârî*) mixes up samples of all kinds of grain grown in the village, and over them sprinkles the blood of the victim offered to Durgâ. The grain is then shaken up and divided among a number of small pots, each of which is assigned to a certain period of the season during which hail may be expected. Over these, secret charms are recited. The pots are inspected daily, and, if there be danger of hail during the period represented by any pot, the grain in it is believed to bubble up, in which event Durgâ must be propitiated with a victim, whose blood is allowed to drip into the pot—after which the ominous bubbling ceases. Mâruti, the monkey-god and village-protector, must also be propitiated; but this is simply done by blowing a horn at his shrine or in some other part of the village (Lyall, *Gazetteer*, 208; Kitts, 60).

Totemism is indicated by the institution of guardians (*devak*), also common to the Deccan and the west Districts of the Bombay Presidency. The guardian is usually some animal or tree; but sometimes natural objects are included, such as one of their trade implements among artisans. Whatever the guardian may be, it is treated with respect. If it be an animal, its flesh is tabu; if it be a material object, it is worshipped at marriage and at the attainment of puberty. The Prabhû caste, when a youth is initiated into the privileges of caste by the binding of the sacred cord, mark their guardian-pot with coloured paint, place various offerings in it, close the lid and tie a string round it, and finally light a stone lamp before it (Campbell, *Notes on the Spirit Basis of Belief and Custom*, 1885, p. 8 ff.). The guardian is regarded as the head of the family, and persons possessing a common guardian cannot intermarry. Totemism is thus at present largely a social institution, and is closely analogous to the customs in Bengal (see BENGAL, p. 490; Frazer, *Totemism*, 58 ff.).

The spirits of the dead are supposed to bring disease upon children. The *mûnjâ*, or ghost of a boy invested with the sacred thread who has died before marriage, is believed to be envious of the good fortune of others, and specially malignant. To avoid his ill-will, the child is called by an opprobrious name (see Crooke, *PR* ii. 4); or his father gives a feast at a banyan-tree to the unmarried males of the village; or he employs an exorcist, who propitiates the unmarried male dead of the household, sprinkles water over which sacred texts have been recited over the mouth and eyes of the child, and calls on the evil spirit to state who he is and how he gained entry. Finally, the spirit, by a tap of the wand of the exorcist, is persuaded to depart, whereupon the child takes an old shoe—an article which repels spirits—to a sacred fig-tree, at the foot of which he is supposed to fall senseless, and thus to become freed from the incubus. A nail is then driven into the tree to confine the spirit, or it is induced to enter a bottle which is buried deep underground (*ib.* i. 162, ii. 14). Rites of a similar kind are performed to repel or propitiate the ghost of a married woman (*manwin*) who is specially hostile to her own sex, and that of a child (*jhoting*) who has died before investiture with the sacred thread (Kitts, 53 f.).

The belief in sorcery and witchcraft affecting man and beast is wide-spread. The witch is feared rather than respected, but her power is believed to cease when her teeth fall out. The more Hinduized peasantry worship Ganpati or Gaṇeśa, god of luck, before starting on a journey or other enterprise; but the common people trust more to meeting omens. If a ring-dove enters the house, it is abandoned for three days, and purified by leading a cow inside, and giving food and alms to Brâhmans (*ib.* 49).

8. **Sikhs and Jains.**—Besides the orthodox Sikhs —immigrants from the Panjâb—some members of the Banjârâ (*q.v.*) tribe recorded themselves as Sikhs at the last Census. Sikhs generally are most numerous on the Hyderâbâd frontier in the neighbourhood of the tomb of their Guru Govind at Nânder (Chinoy, 57 f.). The early influence of the Jains is shown by numerous temples, such as those at Sirpur, Muktagirî, and Kâranja. The present Jains consist largely of immigrants from Bombay, Râjputâna, and Central India, who are attracted by trade. The cave-temples at Pâtûr Shaikh Bâbâ—a site which, as its name shows, has been since occupied by a Musalmân saint—seem to be Brâhmanical (Fergusson-Burgess, *Cave Temples*, 428).

9. **Muhammadans.**—Islâm is increasing its numbers not so much from proselytism as by the greater fecundity of its members, the facts of which have been fully illustrated in the case of Bengal (see BENGAL, § 41). The faith has been much corrupted by the local Animism, as is shown by the prevalence of the cult of hermits and martyrs, to whose shrines, for the sake of their offerings, even Hindus are admitted. Some Muhammadans secretly engage Brâhmans to worship the local gods, retain their Hindu surnames, and employ the village astrologer to select an auspicious day for marriages (Lyall, *Gazetteer*, 194; Chinoy, i. 55 f.).

10. **Christians.**—Christians, now numbering 2375, have increased owing to missionary efforts during recent famines. The vast majority of them are native converts attached to the fourteen mission stations established in the Province. Enumerated by denominations, the largest congregations belong, in order, to the Roman Catholic, Anglican, Methodist, and Presbyterian Churches.

LITERATURE.—Sir A. C. Lyall, *Asiatic Studies*[2], 1899; *Gazetteer for the Haidarābād Assigned Districts, commonly called Berar*, 1870 [this is under revision at present]; the *Census Reports* by E. J. Kitts, 1882, W. Hastings, 1892, A. D. Chinoy, 1902, of which the first is the most valuable. For the history: V. A. Smith, *Early History of India*[2], 1908; J. Grant Duff, *History of the Mahrattas*[3], 1878; articles in the *Provincial Gazetteer* and *Imperial Gazetteer*.

W. CROOKE.

BERBERS AND N. AFRICA.

[RENÉ BASSET.]

i. *PAGANISM.*—Whatever opinion may be held regarding the complex origin of the races which, under the general name of Berbers, inhabited, and still inhabit, all the north of North Africa, from the Mediterranean to the Sudan and from the Atlantic to Egypt, they form a linguistic unity; and it is only by starting from this point of view that we can hope to re-construct their ancient religion. But, at the very outset, we find ourselves faced with a difficulty which is almost insoluble. Although there was unity in their language, this was by no means the case in their religion, *i.e.* their pagan religion. Moreover, the uncertainty which still exists concerning the deciphering of the Libyan inscriptions deprives us of their help, and obliges us to have recourse to the scanty information supplied by foreigners, who have not always distinguished the native from the borrowed elements in the beliefs and ceremonies of which they have handed down accounts.

1. **Mountain-worship.**—It seems that irregularities of the ground—mountains, caves, and rocks—were regarded by the Berbers, if not as deities, at least as seats of divine beings. Therefore, at least in the west, Mount Atlas—'the pillar of Heaven,' as it was called by the people of the country in the time of Herodotus (*Hist.* iv. 184)—must have been the object of their worship. Pliny the Elder (*HN* v. i. 6) writes as follows:

'In the very middle of the sands Mount Atlas rears its head to the skies, rugged and bare on the side facing the ocean to which it gives its name; but, on the side which faces Africa, very shady, covered with woods and watered by gushing springs; fertile in fruits of all kinds, which grow of their own accord . . . and are sufficient to satisfy all desire. During the day not a single inhabitant is seen; everything preserves a deep silence, like the awful silence of the desert. As men approach the mountain, a religious fear seizes their hearts, especially at the sight of the summit raised above the clouds and apparently close to the circle of the moon.'

This information is confirmed by Maximus of Tyre (*Dissertationes*, viii. 57):

'The Western Libyans inhabit a long narrow strip of land surrounded by the sea. The extremity of this peninsula the ocean envelopes with heavy waves and currents. This they regard as the sanctuary and the image of Atlas. Now, Atlas is a hollow mountain, very lofty, opening out towards the sea as a theatre towards the sky. The space which stretches to the middle of the mountain is a narrow fertile valley covered with trees on which fruits are seen. Looking from the summit is like looking into the depths of a well. It is impossible to go down into it because of the steepness of the slope; besides, it is not allowed. The wonderful thing about this place is that, at high tide, the ocean covers the banks and spreads all over the fields; the waves rise up towards Atlas, and the water can be seen standing up against it like a wall, without flowing into the hollow part or falling to the ground; but between the mountain and the water there is a great deal of air and a hollow wood. *For the Libyans it is both a temple and a god*, the object by which they swear, and a statue.'

The Atlas of which he is speaking is evidently the Atlas of Morocco. Its native name, Dyris or Addiris (cf. in the Guanch dialect of Teneriffe, *adar*, 'cliff'; in Awelimmiden Tuareg, *adar*, 'mountain'), has been preserved by Pliny the Elder (*HN* v. i. 13) and Solinus (*Polyhistor*, § 29). But the Greek and Manichæan conception of Atlas supporting the world might be found in the name which, according to Galindo, the Guanches of Teneriffe gave to God, viz. *Atguaychcefunataman*,* 'he who supports the Heavens.' It would naturally have been applied to Mount Teyde in Teneriffe. Guanch mythology, however, assigned another rôle to this mountain. It must be taken for granted that the present Bul Qornin (the ancient Balcaranensis), who rules Tunis, and whose name re-appears in the deity worshipped there (Saturnus Balcaranensis), was venerated in primitive times by the Berbers, before the Phœnicians had installed their Ba'al* there, on whom Saturn was superimposed, sometimes represented as mounted on a lion (*CIL* viii. 20437, 20448) or accompanied by the epithet Sobare(n)sis at Henchir Bu Beker (*ib.* 12390, 12392). The Ba'al Ḳarnaim, who was worshipped there by the Phœnicians, and, undoubtedly in imitation of them, by the natives, was a purely Semitic deity, like the Ba'al of Hermon or the Ba'al of Lebanon,† whose *paredros* was Tanit Pené Ba'al, mentioned in a Punic inscription of Borj Jedid. Probably the same thing happened with the cult of Ba'al Hamān at Dugga.‡ Dedications to Saturn are, however, very frequent in the Latin inscriptions of Africa, and the name of Saturnius is often mentioned. We may cite at Ain Zana (Diana) a dedication, 'Deo frugum Saturno frugifero Augusto' (*CIL* viii. 4581), and at Fontaine-Chaude an inscription, 'Deo Sancto frugifero' (*ib.* 17720). A Latin inscription, found at some distance from Aumale, is addressed to the genius of the mountain, Pastoria(nen)sis, who gives shelter from the violence of the wind (*ib.* 9180); there is also one at Chemtu in Tunisia to the genius of the mountain (*ib.* 14588). Even in our day certain mountains excite among the Tuaregs a religious fear which they cannot overcome. But it is not the terrifying appearance of the mountains that inspires the fear; it is the genii who dwell in them. This belief existed even from the time of Pliny the Elder. Reproducing a passage from the *Periplus* of Hanno, he places in Atlas the Ægipanes and the Satyrs, whom the Carthaginian traveller locates much further south (*Periplus*, § 14); the same passage is also quoted by Solinus (*Polyhistor*, § 29). In the 12th cent. of our era an anonymous Arabian writer mentioned similar beings in a mountain of the Sahara, but his story bears the clear stamp of Musalmān beliefs.§ It tells of the mountain of Felfel, which holds within it the remains of numerous towns abandoned because of the genii; during the night people see their fires there and hear their whistling and singing. Among the Azger Tuaregs the grove of Idinen, 30 kilometres to the north of Ghāt, is the object of a superstitious terror, and no one would dare to penetrate it. Barth, who explored it, almost died of thirst without, however, having found any of the ruins which were said to be there.‖ Among the Ahaggar, Mount Udan is regarded in the same way, and the name given to the mysterious beings who inhabit it, *alhinan* (from Arab. *al-jinn*), shows clearly that an Arab belief has come to be added to a superstition of Berber origin.¶ The Kudiat, to the north of Temanghaset and to the east of Ilaman, is likewise the object of fears of this kind.** In the Canary Islands, Mount Teyde,

* In this extraordinary and evidently corrupted name, it is impossible to decipher, even approximately, more than the last part *ataman*, which is an erroneous form of *achaman*, 'god.'

where hell (*echeyde*) was supposed to be, was inhabited by a demon of the name of *Guayota* or *Huayota*. The demon of Palma was called *Iruene*.*

2. Rock-worship.—Rock-worship is naturally joined with mountain-worship. Pliny the Elder (*HN* II. ii. 44) and Pomponius Mela (*de Situ Orbis* i. 8) tell of a rock in Cyrenaica consecrated to the South Wind: 'if it is touched by the hand of man, immediately the wind rises violently, tossing the sand like waves, and rages as it does over the billows.' In the Canary Islands, near the crater of Caldera in Palma, there was a rock, formed like an obelisk, which was called Idafe. To prevent it from falling, the people of the tribe of Tanansu, who were settled in the neighbourhood, used to make offerings to it, with processions and singing; they sacrificed entrails, and then ate the animals, and sometimes whole victims were cast down from the heights of the neighbouring mountains.† In the Great Canary Island there were two rocks: the one called Tismar, in the district of Galdar, the other Vimenya, in Telde. In times of distress the inhabitants, accompanied by priests called *magadas* (Viana, p. 22, calls them *harimaguadas*), used to make pilgrimages to these two rocks, carrying in their hands palm-branches and vases filled with milk and butter. This they poured on the rocks, dancing round about them and singing lugubrious airs like funeral chants, which the Spaniards called *endechas*. They then proceeded to the seashore, and beat the waves vigorously with their rods, shouting all the time at the pitch of their voices.‡ It is evident that here we have to do with a kind of worship. Besides, if we can believe to the letter what the Spanish writers have handed down, the Guanches, differing from the other Berbers, seem to have had a settled religion. In any case, we are tempted to connect with this institution of sacrifices the use made of a stone situated near Guertufa, between Tiaret and Relizane, and known by the name of *Ḥajar Gaïd*.

'In one place a recess in the rock leaves a mound between it and the road, and it looks like a huge stone, apparently fallen from the summit and caught on the other rocks. It measures 4 metres at its highest part and 1 m. 70 at its lowest; its upper surface is 10 m. long and at least 6 m. broad at its broadest part. . . . After climbing up this rock, perfectly irregular, but possessing a sort of platform, inclined at 80 degrees, one sees a sort of cascade, formed by three basins of unequal size and depth, into which it is evident that quantities of liquid have poured. To the right are two little round holes; to the left, two little square holes, all being from 10 to 15 cms. wide. There is no doubt that there was a primitive altar there, a table for sacrifices.'§

We may quote the conclusion of this description: 'The *Ḥajar Gaïd* was a splendidly-chosen place for a bloody religion. The sacrificer, raised up 8 or 10 metres above the crowd, let the blood of the victim flow from one basin into the other. The sacrifice was performed before a vast horizon; all the races of the plain saw it, and the fire that was lit was *undoubtedly* seen from the far-off heights of the mountain of Lalla Krua.'‖

But this is merely a hypothesis. There still exist, however, in the Canary Islands places where libations of milk were made—holes and trenches hollowed out in the hard rock for the purpose of receiving the liquid. There were also sacrifice-trenches—simple cavities surrounded by carefully-arranged heaps of stones.¶ In the *qsar* of Tamentit in Tuat, there is an aerolite which, even to this day, is the object of general veneration. Legend tells that, when it fell from the sky, near Nun en-Nas, it was gold, but God changed it into silver, and then into iron, to prevent covetousness.* Connected with natural rocks, and rocks wrought by the hands of men, are dolmens, but as these are really tombs, it is unnecessary to speak of them here.† See art. STONES.

3. Cave-worship.—Caverns seem also to have been worshipped among the ancient Berbers, in agreement with the testimony of Seneca (*ad Lucilium Ep.* xli.): 'Et si quis specus saxis penitus exesis montem suspenderit, non manu factus, sed naturalibus causis in tantam laxitatem excavatus; animum tuum quadam religionis suspicione percutiet.' But nothing has been found as yet to prove the existence of the god of caverns, Ifru or Ifri, affirmed by Masqueray.‡ The most celebrated deity who is mentioned is the god Bacax, whose grotto near Annuna (Thibilis) has been discovered and explored. In this cavern 'the apartments are not all situated in one horizontal plane, nor are they connected simply by narrow passages; they are often placed one above the other, and have communication with each other by natural stairs, sometimes even by actual wells. The difference in level between the entry-passage and the bottom of the cavern cannot be less than three or four hundred metres.' § The name of the god Bacax, mentioned in a certain number of Latin inscriptions, *CIL* viii. 5504 (18828), 5505 (18829), 5517 (18847), 5518 (18850), 18831, 18838, has as yet defied all attempts at interpretation. It was in front of the entrance to the cave that sacrifices were offered. Perhaps it is to a cult of this kind that we should attribute the Libyan inscriptions which are found in great numbers in the grotto of Ifri n delal. There is still another cave-deity whose name must be recognized in the enigmatical GDAS, with which a certain number of inscriptions begin —the inscriptions found in the cave known as R' ar Zemma, situated on a spur of Jebel Chettaba, in the neighbourhood of Constantine. Opposed though it is by G. Mercier,‖ who has given a minute description of the cave, the proposal of Mgr. Toulotte and M. Héron de Villefosse to connect the present name Chettaba with the mountain of Giddaba mentioned by St. Augustine is tempting; and GDAS would stand for 'Giddabæ deo augusto sacrum.'¶ In the Great Canary Island, two leagues from Teyde, at the top of a volcanic mountain, there is a large cave in the rock, entered by four openings fourteen feet high, whence arises the popular name, 'Mountain of the four doors.' The openings are separated by pillars varying in diameter from seven to nine feet. In front of each pillar, on a level part cut out of the rock, and serving as a peristyle to the cave, there are several niches, some round and others square. These seem to have been intended to hold the objects of the cult. The niches are more than five feet from the ground.** In the Isle of Fer in the Canaries, the cave of Asteheyta, in the district of Tacuitunta, served as a refuge for the man who, in times of

drought, went to implore the goddess. She appeared to him and gave him a pig, which he presented to the assembly as a token that his prayers were answered.*

4. **Air-worship.**—We do not know if the Berbers worshipped the air or the wind, but if they did, it was undoubtedly under foreign influence. We have an inscription in Latin verse, found at Naraggara (Sidi Yusuf), in which the air is invoked under the name of Juno (*CIL* viii. 4635); and it is perhaps to a cult of this order that we must attribute an inscription of Ain Mtirchu (*ib.* 17763). These should be compared with a passage of Firmicus Maternus (*de Erroribus Profanarum Religionum*, § 111), according to which the Assyrians and *some of the inhabitants of Africa* placed air in a sort of authority over the other elements. But, as he adds that they consecrated it under the name of Juno or of the virgin Venus, it is clear that we are here dealing with a Punic cult.

5. **River-deities.**—Rivers, or at least the sources of rivers, were consecrated to a particular deity. The only extant inscriptions which mention them give us, as the title of the special deity, the word 'genius,' probably due to Roman influence (*genius*). Thus near the Sig was found a dedication to the genius of the river ('genio fluminis,' *CIL* viii. 9749); at the source of the Bu Merzug, near ancient Sila, an inscription was excavated which mentions the genius of the Amsaga, the former name of the river (*ib.* 5884).† There is one in existence to the deity of the river Alexandriana (*ib.* 2662), to the deity of the waters (*ib.* 2663), to the genius of the fountain ('genio fontis') associated with Juppiter, and to the Fountain of Caïd, near Batna (*ib.* 4291).

6. **Town-deities.**—The application of the name 'genius' to towns, frequently found in the inscriptions, seems to be the result of an imitation of the customs of the Romans, who personified towns in some special genius, when it was not actually the work of Roman settlers rather than of the native populations. Thus the genius of a village in Lambessa ('genio vici,' *CIL* viii. 2604 f.); the genius of Lambessa ('genio Lambæsis,' *ib.* 2528, 2596, 2598 f.); the genius of Rusicada ('genio coloniæ Veneriæ Rusicadæ augusto,' *ib.* 7959 f.); the genius of Henchir Masfuna ('genio Lamasbæ augusto'); the genius of a market-town in Sur Juab ('genio pagi augusto,' *ib.* 9196); the genius of the Cirtæan colonies (*ib.* 5693, 10866); the genius of the colony of Milah (*ib.* 7960, 8202 [=19980]); the genius of Mactar (*ib.* 6352); the genius of Subzavar (*ib.* 6001); the genius of Phua (*ib.* 6267–91); the genius of the municipality of Testur (*ib.* 1353 [14891]); the genius of the municipality of Sataf (Ain Kebir, *ib.* 8389); the genius of the 'civitas Celtianensium' among the Beni-Welban (*ib.* 19688); the genius 'populi Cuiculitani' at Jamila (*ib.* 20144); the genius of the colony at Henchir Sidi Alibelqāsem (*ib.* 14687); the genius of the 'oppidum Lamsortense' at Henchir Maf'ūna (*ib.* 18596); the genius of the 'colonia Julia Veneria Chirtæ Novæ' at Henchir Jezza (*ib.* 16367); the genius of the market-town ('genio vici augusto') at Marcūna (*ib.* 424); the genius of Thibar at Henchir Amamet (*ib.* 154345); the genius of the people at Ain Zana (*ib.* 4575), at Constantine (*ib.* 6947 f.); the genius of Novar among the Beni Fūda (*ib.* 20429 f.); and the genius of Gadimefala ([?] *ib.* 18752). We may add to these the invincible deity of Gurai (Qsar Gurai, near Tebessa, *ib.* 1843), and the deity who is mentioned in an inscription of Borj Hamza, 'Auzio deo genio' (*ib.* 9014). The genius is usually a Latin or Punicó-Latin deity, as at Qsar al-Ahmar, in the region of Ain Beida. In a dedication to Saturn, of the 3rd cent., this god is qualified as 'genius saltus Sorothensis';* in another addressed to Juppiter, at Uzali, there is 'genius arcae frumentariae' (*ib.* 6639).

† Cf. also Cherbonneau, *Excursion dans les ruines de Mila, Sufavar, Sila et Sigus*, Constantine, n.d., p. 80 f.

7. **Sun-worship.**—Besides mountains, rocks, caves, and rivers, the Berbers worshipped the stars, and, primarily, the sun. This cult existed among the nomadic Berbers between Egypt and Lake Tritonis (Herod. *Hist.* iv. 188), and among the Berbers in general.† We read in the *Life* of St. Samuel of Qalamon that the Berber who had reduced him to slavery wished to make him worship the sun.‡ There are also some Latin inscriptions dedicated to it: 'Soli deo invicto,' in the plain of Batna (*CIL* viii. 2675); 'Soli deo augusto,' at Zarai (*ib.* 4513); 'Soli invicto,' at Suk-Ahras (*ib.* 5143), at Sluguia (*ib.* 1329), at Cherchel (*ib.* 9331), at Affreville (*ib.* 9629); to the sun and the moon, near Sidi Alibelqāsem in Tunisia (*ib.* 14688 f.); but it is doubtful whether it is the ancient Berber deity that is involved when we find the sun assimilated with Mithra at el-Gan (*ib.* 18025) as well as at Ain Tukria (*ib.* 21523). On the other hand, it seems to be the Berber god that is referred to in a Latin inscription at Aumale, of the year 207 of the era of the province, in which there is mention of ceremonies in honour of Tonant, the wearer of horns, and of a Pantheia who was connected with him, was worshipped on the Libyan and Moorish borders, and had her seat between Juppiter Ammon and Dis (*ib.* 9018).

The Guanches of Palma also worshipped the sun, and gave it the name of *Mayec*,§ as well as the name *Amen*, which seems to have meant 'Lord'; in Awelimmiden Tuareg, *Amanai* has the meaning of 'God.' According to Macrobius (*Sat. conviv.* i. 21), the Libyans worshipped the setting sun, which was impersonated by Ammon (Amen). He was represented with ram's horns, in which resided his chief power, as that of the sun in its rays.‖ In the speech of Athanasius against the Gentiles (§ 14) it is said that among the Libyans the sheep was called *amen*, and that it was worshipped as a deity. The opinion, however, has been suggested, with every appearance of reason, that Ammon (Hammon, Amen) was a god of Berber origin. We may compare with this the carving on the rock found at Bu Alem in South Oranais, representing rams with their heads surmounted by an ornamentation in the form of a solar disc, surrounded with a uræus.¶ It would be a mistake, however, to see here the prototype of the Egyptian Amen; the present writer believes, with Gsell, that it is a more or less successful copy of the Egyptian representation, as probably are the rock-drawings discovered by Barth at Telissau, west of Fezzan,** and the bas-relief found in the foundations of the Borj Tasko at Ghadames.††

But there is still another proof of the worship of a ram representing the sun, and one in which we do not see an Egyptian imitation. It is found in a monument, discovered in 1851 at Old Arzeu, representing 'a roughly sculptured head with a very slightly sharpened nose, two little round holes for the eyes and for the ears, and the mouth

represented by a hollowed line; its horns are curved back, the points to the ground, and the arms are fixed to the body with the hands coming and joining above the navel. The under part of the body ends in a terminal.'* It is also an idol of this kind that was found at Tuat, and is designated 'getule idol' (?).† This may be identified with *Gurzil*, whose priest was Terna. He was the son of Juppiter Ammon (Corippus, *Johannidos*, ii. 109 f., v. 494 f., vi. 116) by a heifer (*ib.* ii. 111). This Gurzil is regarded as an Apollo; he was represented by an image of a bull being carried to fight (*ib.* iv. 666–673, v. 22–29). The cult of this deity was maintained for a long time, for in the 11th cent. of our era al-Bakrī mentions a stone idol in Tripoli, set up on a hill and named Gorza, to which the tribes round about—the Howara amongst others—offered sacrifices and addressed prayers in order to recover their riches.‡ Al-Bakrī, unfortunately, gives no information about the shape of this idol. Probably it was also a Berber idol of this kind that the same author calls 'Maghmades' (perhaps the *Macomades* of the ancients), and describes as being set up on the seashore between Egypt and the Maghrib, and surrounded by several others.§ The name 'Gorza' seems to recur as an element of the names of the locality in a town placed by Polybius (*Hist.* i. 74) near Utica, and in a *tessera* of hospitality and patronage in the reign of L. Domitius Ahenobarbus (*CIL* viii. 68): 'Senatus populusque civitatium stipendiariarum Pago Gurzenses hospitium fecerunt . . . Faciundum coeraverunt Ammicar Milchatonis f. Cynasyn Boncar Azzrubalis f. *Æthogurzensis* Muthunbal f. . . .' The Punic names of the donors will be noticed.‖ Another brass plate mentions the 'civitas Gurzensis' (*CIL* viii. 69), and perhaps we must recognize *Gurza* in the *Gurra* of the *Peutinger Tables*. In the 11th cent., also, al-Bakrī mentions in Atlas, near the B. Lamās, between Aghmāt and the Sūs, a tribe of idolatrous Berbers who worshipped a ram. Not one of them would dare to come into the markets of the neighbouring tribes except in disguise (*Description de l'Afrique*, p. 161). In this cult of the sun, one single tribe, the Atlantes (or *Atarantes*), was an exception; they had no individual names to distinguish them, and they watched the rising and the setting sun, uttering terrible imprecations all the time, as though against a planet deadly to them and to their fields; they had no dreams like other men. This is what is recorded by Herodotus (*Hist.* iv. 184) and Pliny the Elder (*HN* v. 8). The only imprecations mentioned by Nicolaus of Damascus (frag. 140, ed. Müller) are against the rising sun.

8. **Moon-worship.** —The moon was also worshipped by the nomadic Berbers between Lake Tritonis and Egypt (Herod. iv. 188), by other Berbers in the West (ibn Khaldūn, *Kitāb al-'Ibar*, vi. 89), and by the Guanches. The latter observed all its phases with great accuracy, especially the new moon and the full moon.¶ Had the Berbers assimilated it to the celestial goddess of Dugga and Carthage, the latter title being borne, according to tradition, by Dido, called by the Phœnicians Astro Arkhe, and transported to Rome by Caracalla (Herodian, *Historia Romana*, v. vi. 4)? As is seen from a passage in *Historiae Augustae*, the predictions coming from the temple of Cœlestis in Carthage caused a great number of seditions in Africa—seditions in which the Berbers probably took part, and which Pertinax had to repress during his proconsulship of Africa (Capitolinus, *Vita Pertinacis*, ch. iv.). We find the crescent moon at the top of a great number of inscriptions (cf. *CIL*, *passim*), one of which, among the Beni-Ukden, is in Libyan and Phœnician characters (*CIL* viii. 20186); but it is very probable that this sign, which in primitive times had signified a lunar cult, had become a meaningless ornamentation. There is no occasion for the theory, formed from inaccurate etymology and assimilations, that Tanit, the great Punic goddess, was of Berber provenance.* For, since the name of the moon in Berber is masculine, *Aiur* or *Aggur*, it could not have been represented as a goddess. There is far more probability in the hypothesis of G. Mercier,† which tends to find *Aiur* in the enigmatical *Teru*, mentioned along with the epithet 'augustus' in an inscription discovered on the Guechgach, sixteen kilometres from Constantine (*CIL* viii. 5673).

9. **Worship of other planets.**—It is very probable that the other celestial bodies were worshipped by the Berbers, although we have no proofs except for a few of them. Alvise de Ca' Da Mosto asserts this for the Guanches of Teneriffe (*Relation*, p. 34). The planet Venus is called *Lemr'er* at the present day in Zuawa. Among the Awelimmiden, when it is an evening star, it has the name of *tatari*, and when a morning star, that of *amawen n ehad* or *amawen achimmelech*. Among the Ahaggar, it is called *Tatrit ta n tufat*, which can be exactly translated by 'morning-star.' Following the example of other peoples, the Ahaggar have located a certain number of tales in the sky. We cannot, however, decide whether they correspond to a religious sentiment. Thus the Pleiades are the 'Daughters of Night' (*Chĕt Ahadh*). Six of the stars of this constellation have each a name; the seventh is a boy's eye which had been taken out and flew up to the sky. This story is given in the following verses:

> 'The daughters of the night are seven in number:
> Māterejre and Errejāot,
> Māteseksek and Esseksāot,
> Mātelaghlagh and Elleghāot;
> The seventh is the eye of a boy which flew up to Heaven.'‡

We can see that the six stars reduce to three pairs whose names are derived from the same root. The Awelimmiden give them also the name of *Chettahet* (=*Chĕt Ahadh*).

Orion (in Tuareg, *Amanar*) has two interpretations. According to the one, he comes out of a muddy well; and Rigel (*Adar Nelaku*, 'the Foot in the Mud') is the foot he brings out of the mud last, *i.e.* the last star when the constellation is rising in the East. According to the other, he is a hunter, with his belt on (in Ahaggar and Awelimmiden *Tajebest en Amanar*, 'Belt of Orion'), who is followed by a dog (*Eidi*, Sirius) and preceded by gazelles (*Ihenkadh*, 'constellation of the Hare').§

The Great Bear and the Little Bear represent a camel and her young one (*Talemet de roris*); the Pole Star is a negress called *Lemkechen* (*i.e.* 'hold') because she has to hold the young camel (*Aura*) to let its mother be milked. But the stars ψ, λ, μ, ν, ξ represent an assembly which deliberates whether the negress is to be killed. She (the Pole Star) stands motionless with fear.‖ According to a legend contaminated by the Musalmān religion, the Great Bear is a camel which belonged to Noah. It was slain by seven nobles, one of them a Tuareg; he was changed into an 'ourane' (*ar'ata*, a kind of large lizard), the others into a jackal, a

§ *Ib.* p. 424.

‖ *Ib.* p. 424.

chameleon, etc. The camel was transported to the sky. Since then, the Tuaregs have never eaten the 'ourane,' which they regard as their maternal uncle.*

The Scorpion is sometimes called *Tagherdamt* ('scorpion'), sometimes *Tazzeit* ('palm-tree'). A young man, *Amrot* (*Antaris*) is going to climb the palm-tree; but when half-way up the tree he notices some pretty girls (*tibaradin*), clothed in red *haulis*, coming from the lake (*Tesahak*); he stops half-way up to watch them.†

Other constellations have names, but no legend attaches to them. In Bougie the Milky Way is called *Ajgu n tignau*, 'beam of the sky,' and among the Tuaregs *Mahellau*. The stars ϵ, δ, η of the Great Dog are called *Ifarakraken*, 'noise of a fan or of a bird,' and β, *Auhem*, 'the young of the gazelle.' θ and o of the Boat are 'Riches' (*Tenafalet*) and 'Poverty' (*Tözzert*). Aldebaran is called *Kökoyyodh* and Canope *Wadit*.‡ In ancient times the Africans (Afri) were considered very skilled in the science of horoscopes, and particularly so was Septimius Severus—as may be seen from a saying attributed to him. Speaking of his son Geta to Juvenal, prefect of the pretorians, he said: 'It is astonishing that my son Geta is to be deified; his constellation had nothing imperial in it to my eyes' (Spartianus, 'Vita Getae,' § 2 in *Historiae Augustae*.)

The name of the rainbow, among certain Berber tribes, has preserved the trace of a myth. Although at Wad Rir' it is called *abechchi* and in Harakta *abeggas* ('girdle'), in Zuawa it is called *thislith b wanzar*, among the Bot'iwa of Rif *thislith n unzar*, among the B. Iznacen *thaslit n unzar*, which means 'bride of the rain,' and among the Beni Menacer *tasliṭh n ujenna*, 'bride of the sky.' The rain (*Anzar*) is then considered a male being. In Jurjura, the Kabyle children, in times of drought, go from house to house singing:

'Anzar! Anzar!
O Lord, water us to the roots.'§

At Mzab, the children sing while transplanting grain:

'Give us, O Lord, the water of Anzar.'‖

In a popular tale of Wargla, Amzar (=Anzar) is personified.¶ The rainbow is consequently regarded as the bride of the rain. This myth is not without parallel in the way in which certain Berber and Arab peoples of the Maghrib provoke rain. At Ain Sefra, at Tlemsen, and at Mazuna, they take a wooden spoon (in Kabyle *aghenja*) and dress it in bits of cloth, so as to make it a sort of doll representing a bride, called *Ghonja*; they take this in solemn procession to the tombs of the local priests, singing couplets which vary according to the locality. For example:

'Ghonja! Ghonja has uncovered her head.
O Lord, thou wilt water her ear-drops,
Her ear is thirsty;
Give her drink, O our Master!'**

At Tit, in the oasis of Tuat, during drought, the people go out of the *qsar*—men, women, boys, and girls. They take a wooden spoon and dress it in female garments. A young girl carries it, and the people keep saying: 'O spoon! O meadow! (*ar'enja—ia merja*) Lord, remove the time of heat! Lord! in the name of the Prophets!' Tertullian (*Apol.* xxiii.) gives the Virgo Cœlestis the title of 'Pluviarum Pollicitatrix.' Among the Guanches the main part of the ceremony for bringing rain was to make men and animals fast, and, in Teneriffe, even the young animals, which were separated from their mothers, and whose cries were expected to move the heavens.* Rain-making was also a gift of certain magicians. An ancient historian tells how among the Berbers a Roman army under the command of Hosidius Geta, successor of Suetonius Paulinus, almost died of thirst in the desert when in pursuit of the rebels and their chief Subulus. A native ally persuaded the general to have recourse to incantations and magic, affirming that often great quantities of water had been got by these means. This time again the process was successful, but we do not know in what it consisted (Dio Cassius, *Hist. Rom.* ix. 9).

10. **Native deities.**—To these deities we must add those which are made known to us by Latin epigraphy, though we are not sure about their nature and attributes. Thus we have dedications to the Moorish gods at various places in North Africa: at Cherchel (*CIL* viii. 9327), near Wed Marcūna (*ib.* 2639), near Wed Tezzulet (*ib.* 2640); at Lamoricière (*ib.* 21720), at Henchir Ramdan in Tunisia (*ib.* 1442); to the Moorish saviour-gods and to the genius of Satafis at Ain Kebira (*ib.* 20251). Possibly these Moorish gods are the deified kings of whom we are to speak below (pp. 511–512), but there is nothing to prove it. Thus Autaman, associated with Mercury in an inscription at Lambessa (*ib.* 2650), and compared with the Mastiman of Corippus (*Johannidos*, viii. 306 f.), some people used to take for the god of war.† Other Moors saw in him Juppiter Tænarius (which it has been proposed to correct to Juppiter Tartarius, corresponding to Dis Severus in the Latin inscription, *CIL* viii. 9018),‡ to whom human victims were sacrificed in times of plague (*Johannidos*, viii. 307–309). We may compare this passage with the statement of Pliny the Elder (*HN* v. 8) that the Augilæ worshipped none but the infernal gods, or, according to Pomponius Mela, the *manes* (*de Situ Orbis*, i. 8). Aulisva was worshipped in the region of Tlemsen, as is shown by two inscriptions found in Agadir (*CIL* viii. 9906 f.), and one at Ain Khial (*ib.* 21704). It is not necessary to insist on Kantus Pates—a reading which is quite sure in an inscription of Khenchela—any more than on Kaub, mentioned in the Chettaba. An inscription in Henchir Matkidas (*ib.* 16749) seems to point to five gods of the village of Magifa: it is dedicated to Masidenis, Thikikvæ, Sugganis, and Iesdanis, of whom there were statues. Another inscription, at Sidi Yusuf (*ib.* 18809), mentions an Iocolo (*Iocoloni deo patrio*). This epithet, *Deus patrius*, is given to Baliddir or Baldir in the inscriptions that mention his name: at Guela 'at Bu-Sba, between Bōna and Guelma (*ib.* 5279), and at Sigus (*ib.* 19121–19123). Is this the same as the *Genius patrius*, a priest of whom was buried at Zettara (Kef Bezina)? Another *Deus patrius*, who had priests, is located at Henchir el-Bez (*ib.* 12003). Is this name Baliddir, or at least its second part, *iddir*, a Berber word, as G. Mercier§ maintains, translating it by 'the living God'? The chief objection would come from the fact that this would be a hybrid word, compounded of Punic and Berber. It has also been identified (but this is a very improbable theory) with the name of Abbadiri Sancto,‖ mentioned in

an inscription of Miliana (*ib.* 21481), and counted among the Punic deities by St. Augustine (*Ep.* xvii. 2). Priscian (vii. 313) gave the name of Abbadir to the baetyl swallowed by Saturn.

But whatever be the sense given to Iddir, it seems impossible to make him a supreme god of North Africa. Perhaps he was produced under the influence and in imitation of the Romans—a movement which set apart one of the local gods and placed him over the others, at least in Mauretania. This seems to be the indication of two inscriptions, one of which at Bougie is dedicated 'Numini Mauretaniae et Genio Thermarum' (*CIL* viii. 8926), and the other at Ain Kebira, 'Numini Maur. aug.' (*ib.* 20252). Halévy believed that this supreme god is to be found in the Iolaos who is mentioned, he says, in the treaty between Carthage and the Roman Senate, and whom he claims to have found again in a Libyan inscription.* The reading of these latter inscriptions is too uncertain, and, besides, Iol is a Punic god. If we trust the accounts of the Spaniards, the Guanches must have had a supreme god at the time of the conquest of the Canary Islands. Viana† relates that they worshipped one God, infinite, omnipotent, just and merciful, called in their language *Hucanech*, *Guayaxarax* (named by Viera *Achguoyaxiraxi*, 'saviour of the world'), *Acucanac* (named by Galindo *Achucana*), *Mencsito*, *Acoron*, *Acaman*, *Acuhurajan* (called *Achahurahan* and *Achxurahan* by Viera, *Achahuaban* by Galindo)—epithets meaning 'omnipotent,' 'protector and creator of all beings,' 'without beginning and without end,' 'cause of causes.' The sense of these words is not found in Berber, except in *Acoron* and *Acaman*, which mean 'the great' and 'the sky.' The Guanch names handed down by the Spaniards are very much corrupted; this is due to errors in writing and to the authors' ignorance of the language spoken in the Canaries. Thus *Achaman*, given by Viera with the meaning of 'supreme god,' is more correct than *Acaman*, and seems akin to the Awelimmiden Tuareg *aochina*, 'the sky' (cf. the Teneriffe Guanch *achano*, 'year'); it is connected with the root *GN*, which gives in Zuawa *thignuth*, 'cloud,' and *igenni*, 'sky,' and in other dialects *ajenna* and *ijenni* with the same meaning. But we cannot place absolute confidence in Viana, who shows a tendency to see among the Guanches a religion resembling Christianity with a supreme god and a devil. He goes the length of saying that they never believed in or worshipped any idols, and that they worshipped only one God. Chil y Naranjo restricts this assertion to the natives of Lanzarote.‡ The same author has cut out several inexact data of this kind,§ and, besides, the assertion is refuted by the discovery of idols, in the 14th cent., in the Great Canary Island,‖ and the worship of one representing a nude woman in a building called Tirma.¶

According to Viera, the god of men was called *Eraoranhan* (*Eraorangan* according to Galindo) in the Island of Fer; he had his seat with Moreyba, the goddess of women, on the two rocks of Bentayga, called to this day *Santi llos de los antiguos*. After their conversion to Christianity, the natives of Fer worshipped Christ and Mary under the names of Eraoranhan and Moreyba.** The supreme god, Espinosa says, created man from earth and water—an equal number of men and women. Flocks were given them for nourishment. Afterwards he created more men, but did not give them more flocks. When they asked for more, he replied: 'Tend these others and they will give you nourishment.' This last class of beings to be created consisted of *achicaxac*, 'peasants,' while the first class comprised *achimencei*, 'nobles,' and *cichiciquitzo*,* 'knights.'

11. Deities assimilated by the Greeks and Romans.—This list of deities could be lengthened, if we had the native names of those deities mentioned by the Greeks and Romans; the latter have assimilated them to their own names, and sometimes have gone even further, the assimilation becoming simple borrowing on their part. In any case, it seems futile to linger over the mythological romance founded in all its parts on the Amazons, the Atlantes and their kings, Ammon, etc., which finishes the third book of the *Bibliothecae Historicae* of Diodorus Siculus. It has absolutely nothing in common with the religious traditions and customs of the Berbers. Herodotus (*Hist.* ii. 50) tells us that it was the Libyans who revealed Poseidon, whom no one before them had called by name, and whom they had always worshipped as a god. Ampelius (*Liber Memorialis*, ch. ix.) speaks of a fifth Apollo, born in Libya (Gurzil?). But the most celebrated of all these divinities is Athene Tritogenis, born, according to Herodotus (*Hist.* iv. 180), Pomponius Mela (*de Situ Orbis*, i. 7), and Pausanias (*Graeciae Descriptio*, i. 4), from Poseidon and the nymph of Lake Tritonis. It is beyond the scope of this article to study the personage of Triton as represented by Greek monuments,† but Herodotus (iv. 180) mentions customary rites which the maidens of the Auseans performed in honour of a native, and therefore Berber, goddess, who was no other than the goddess called Athene by the Greeks:

ὁρτῇ δὲ ἐνιαυσίῃ Ἀθηναίης αἱ παρθένοι αὐτῶν δίχα διαστᾶσαι μάχονται πρὸς ἀλλήλας λίθοισί τε καὶ ξύλοισι, . . . τὰς δὲ ἀποθνησκούσας τῶν παρθένων ἐκ τῶν τρωμάτων ψευδοπαρθένους καλέουσι· πρὶν δ' ἀνεῖναι αὐτὰς μάχεσθαι τάδε ποιεῦσι· κοινῇ παρθένον τὴν καλλιστεύουσαν ἑκάστοτε κοσμήσαντες κυνέῃ τε Κορινθίῃ καὶ πανοπλίῃ Ἑλληνικῇ, καὶ ἐπ' ἅρμα ἀναβιβάσαντες, περιάγουσι τὴν λίμνην κύκλῳ.

The Greeks explain this custom as a souvenir of the struggle which took place between Athene, who was brought up by Triton, and Pallas, Triton's daughter, in which Pallas was slain (Apollodorus, *Bibliothecae*, iii. 12). This custom must still have existed in the time of Pomponius Mela, unless he simply copied Herodotus. Herodotus thinks that, before the Greek helmet and shield, the maidens used to carry Egyptian arms (*Hist.* iv. 180).‡

A Latin inscription found at Ain Gulea in Tunisia (*CIL* viii. 15247) and another at Henchir el-Matria (*ib.* 15378) mention a dedication to a dragon ('Draconi augusto'). Perhaps this divinity is connected with the serpent of bronze with gilt head, which the pagans worshipped at Tipasa, on the Hill of Temples, and which, in the 5th cent., St. Salsa threw into the sea, and so earned her torture. It is not certain whether this is a relic of the worship of Eshmun§ and the summary of the sufferings of St. Salsa.‖ There is nothing anywhere to show that the cult of the serpent was ever native to the Berbers.

12. Deification of kings.—The pantheon has been enriched, on the other hand, by the apotheosis of the kings, at least during the time of independence.

The phrase of Minucius Felix is well known: 'Et Juba, Mauris volentibus, Deus est' (*Octavius*, ch. xxiii.). A Latin inscription (*CIL* viii. 17159) is distinctly consecrated to Juba and the genius Vanisnensis at Tassammert.* Tertullian for his part said: 'Unicuique etiam provinciae et civitati deus est . . . et Mauretaniae reguli sui' (*Apol.* ch. xxiv.). There has been found at Bougie a fragment of an inscription dedicated to king Ptolemy, son of Juba (*CIL* viii. 9127), one at Algiers (*ib.* 9257), and another at Cherchel, to the genius of king Ptolemy (*ib.* 9342). Perhaps it was a retrospective worship that caused the inhabitants of Thubursicum Numidarum (Khamissa) to sanctify Hiempsal, son of Gauda, as a god (*ib.* 7* [17159])—a fact which explains the homage rendered to Gulussa, king of Numidia, son of Masinissa (*ib.* 3*), according to two inscriptions. These inscriptions were with extreme levity treated as false by Mommsen, who afterwards had to face the evidence and confess his mistake.† But it is probable that Africa followed the example given by Rome of deifying the Emperors. This may be seen from the comparison made by Lactantius: 'Hac scilicet ratione Romani Caesares suos consecraverunt et Mauri reges suos' . . . and further on: 'Singuli populi . . . summa veneratione coluerunt ut Aegyptii Isidem, Mauri Jubam' (Migne, *PL* vi. col. 194). Pomponius Mela (*de Situ Orbis*, i. 8) had established the fact:

'Orae [Africae] sic habitantur, *ad nostrum maxime ritum moratis cultoribus*, nisi quod quidam linguis differunt, et cultu Deûm, quos patrios servant, ac patrio more venerantur.'

This remark of Pomponius Mela is confirmed by ibn Khaldûn: 'It befell the Berbers from time to time to profess the religion of their conquerors, for powerful nations brought them into subjection' (*Kitāb al-'Ibar*, vi. 106). We must add that Septimius Severus, an African by birth, was regarded as a god by the Africans (*Historiae Augustae*, ch. xiii. 'Vita Septimi Severi'). This explains the large number of inscriptions in honour of deities adopted, without even assimilation, by the Berbers, who took the gods of Rome after those of Carthage: Juppiter, Juno, Pluto, Pallas, Venus, Apollo, Diana, the Nymphs, Neptune, Mercury, Silvanus, Bellona, Ceres, Hercules, Minerva, Mars, Æsculapius, the Dioscuri, Tellus, Hygiea, etc., and even the Eastern deities like Mithra, Malagbel, Mater Magna, Juppiter Dolichenus, Juppiter Heliopolitanus, Isis, Serapis. Bacchus-Liber must also be added, for it was a mistake, a false reading, that gave rise to the belief that the name of Bacchus appeared in the name of *Yakush*, which is of Berber origin, and is the translation of an Arabic epithet which has no connexion with Dionysus. The existence of vines in Africa does not justify in any way the hypotheses into which Lefébure‡ and, after him, Bertholon§ ventured. But it is almost impossible to make a separation among the worshippers, Roman colonists and soldiers, foreign soldiers, inhabitants of Punic origin, mixtures of Berbers and Phœnicians or Romans, and, lastly, pure Berbers.

13. **Demi-gods, mythical beings, etc.**—Perhaps we may attribute to the Berbers, alongside of the worship of their kings, the worship of beings analogous to the demi-gods of antiquity, whose giant birth and stature form the subject of various legends. The gist of them is that the sister of Ya'la ibn Muhammad al-Ifranî gave birth to a son without having intercourse with man. She was bathing in a warm spring where the wild beasts used to go to drink, and conceived by the effect of a lion's foam. The child was called *Kelmām ibn al-Asad* ('son of the lion'), and extraordinary qualities are attributed to him in stories. Ibn Khaldûn adds that the Berbers tell such a great number of stories of this kind, that if they were put in writing they would fill several volumes.* It is to similar beliefs, adapted from Greek or Jewish traditions, that we must attach the legend of the discovery of the body of Antæus, which measured at least sixty cubits (as, according to Gabinius, Sertorius declared in his *Hist. Rom.*), when the tomb of this giant was opened near Lynx in Mauretania. Juba claimed to be descended from Antæus by his son Sophax (Strabo, *Geographica*, XVII. iii. 8; Plutarch, *Sertorii Vita*, ch. ix.). Perhaps a souvenir of this kind is to be found in Prudentius, *Peristephanon*, hymn viii., where he says that Tingis contains the funeral monuments of the Massilian kings.† At the present day, the inhabitants of Arzilla in Morocco show on a rock the footprint of a gigantic foot—the trace of their ancestor.‡ Another giant, whom the Jewish and Musalmān traditions have appropriated under the name of Sidi Usha' (Joshua), is buried by the sea-shore, in the territory of the Beni Sha'bān, in the region of Nedromah. A row of stones marks the length of the body, which goes beyond the wall of the *qubba* where the grave is, and ends in a sort of *k'awita*.§

Among the mythical beings whose cult was maintained for some time after the conversion to Islām, there must be mentioned a category of genii whom we know only under the Arabic name of *Chamārikh*. In the 11th cent. of our era, among the Benu Ursifan,

'when they wished to undertake a war, they sacrificed a black cow to the Chamārikh who are their devils, and they said: "Behold a sacrifice for the Chamārikh." When they come to the fight in the morning, they watch till they see a whirlwind of dust, and say: "The Chamārikh, your friends, are coming to your aid." Then they charge confident of success. They pretend that this has never failed them, and the majority of them believe in it openly. When offering hospitality to a guest, they put food aside for the Chamārikh, and maintain that the latter eat what is reserved for them. In all this they avoid mentioning the name of God.' ‖

The Arab historians have preserved an account of the familiar genii of the Kāhinah, Dihya, daughter of Tābet (?) of the tribe of the Jerawas, who made a long and successful stand against the Musalmāns, and even drove them from Ifriqyah. It was these familiar demons who foretold to this tribe the final victory of the Moors, and caused it to send its sons to launch against them before the final battle where it succumbed.¶ This prophetic faculty is again spoken of by Procopius (*de Bello Vandalico*, ii. 8). After the expedition of Belisarius against the Vandals, the Moors, afraid that some harm would result to them, had recourse to the prophecies of the women. After a few ceremonies, they foretold the future like the ancient oracles. In the middle of the 10th cent. of our era, among the Ghūmara of Morocco, Tangrit, the aunt of Ha-Mim, and Dajju, his sister, who, as we shall

¶ Ibn 'Azāri, *Histoire de l'Afrique et de l'Espagne*, ed. Dozy, Leyden, 1848–51, i. 22; Ibn Khaldûn, *op. cit.* vi. 109 f., vii. 9; Tijani, *Voyage*, tr. Rousseau, Paris, 1853, p. 65; 'Voyage de Mouley Ahmed,' in Berbrugger, *Voyages dans le sud de l'Algérie*, Paris, 1846, p. 236 f.

see below, founded a special religion, were renowned soothsayers, and belief in the former was part of the Qur'ān of her nephew.* Procopius does not describe the preliminary ceremonies employed by the Moorish women for vaticination, but the following practice takes place among the Tuaregs at el-Esnam, near Ghadames:

'During the absence of the men, the women, dressed in all their finery, go and take their stand near the tombs of the *Zabbār* (from Arabic *Jabbār*, "giant"), whom they [the Tuaregs] believe to be of a race previous to their own, and they invoke the genius who is to give them information. His name is *Idebni* (the tomb itself is called *Adebni*). He appears to them in the shape of a giant, with eyes like a camel, and gives the required information. For this consultation the women must avoid wearing anything whatever of iron or steel about them, even a needle.'†

The same ceremony takes place at Air, but during the night.‡

'On the sides of a ghūr which commands Wed Wujidit, in the North of the Sahara, are found great tombs corresponding to those on the rocky slopes of the Tabelbalet. They are elliptical in shape, with major axis, inclined East and West, varying from 20 to 45 metres. They are surrounded by heaps of moderately-sized stones. The Azger Tuaregs attribute these tombs to a former race. If a woman who has a friend, a relative, or a lover far away for any cause goes to sleep at the middle of the day in one of these enclosures of stones, she is sure to have visions, to meet spirits there, and get news of the absent one. The Tuaregs also claim that there is hidden treasure in these tombs.'§

But, in spite of what Procopius‖ says, the gift of prophecy was accorded to men as well as to women among the Berbers. To quote only two examples: among the Kotama, at the time of their civil wars, the soothsayer Failaq foretold that they would see real war when the man of the East came to them mounted on a white mule. This prediction was recalled by a schoolmaster on the arrival of the *dā'ī* 'Abd Allāh, the Fāṭimid missionary, mounted on a white mule (Ibn 'Aẓārī, i. 120). Similarly, the soothsayers in a tribe of the Maghrib had declared that, when the two superior planets met, a king would rise who would change the form of money. Malik ibn Wahib persuaded the amir of Lemtuna, 'Alī ibn Yūsuf, that it was to Mahdi ibn Tūmert that this prediction referred, as also the popular lines:

'Put fetters on his feet,
Or he will make you hear the drum'
(Ibn Khaldūn, vi. 238).

14. Ogres.—There still remains to be mentioned the belief in ogres, who play an important part in the popular tales of the Berbers. But we must keep in mind the ease with which tales travel, and take care to strip off all that is due to borrowing. Traces of originality may, however, be found in some of these stories. Among the Fadhilah and the Benu-'Aqidān—Berber tribes in the West of Egypt—it was said that often a new-born girl changed form, becoming an ogre (*ghūl*) or a *si'la*, and threw herself on people until she was bound and pinioned (al-Bakrī, p. 4). The Arab author even mentions an eye-witness of such an occurrence. It is given by a modern tale current at Wargla, *Story of a Father and his Daughter the Ogress*,¶ and is the foundation of an accusation brought against the Uled Settut ('the sons of the Megæra'), a tribe of the Rif noted for its *penchant* for brigandage.

'At first, Settut their mother used to be seen running about with her three children in a piece of land which is desert to this day, devouring the people and feeding her children on human flesh. No one knew where she came from; she was known of no male, ogre or human, and this afterwards occasioned the saying that the Uled Settut had no father. After devastating the country for many long years, she suddenly disappeared and was never seen again. But her children remained in the desert of Garet, and were the stock of the present Uled Settut.'*

The names by which the ogres are designated are, for the most part, of Berber origin. Although we find some that have come from Arabic, like *ghūl* or *zellūma*, yet among the Rif of Morocco and the K'sūr at Wargla, we find *amza*; among the Beni-Menacer *amza*, with feminine *thamzat* or *tamzat*, which is derived from the root MZ, 'seize,' 'take'; among the Zuawas *awaghsenin*. The ogress has also the name of *taghausant* in the Chelh'a of Tazerwalt, of *tseriel* in Zuawa. But, in the tales, there is a mixture of names from stories relating to the ancient inhabitants of the country, pagans or Christians, designated also by the name of *Juhala* (Arabic for 'ignorant people'), and from stories circling around the ogres, confused to such an extent that these classes of stories are often mistaken for each other.

15. The ceremonies of worship.—Here we are reduced to conjectures, so far, at least, as the purely Berber gods are concerned. Wherever there were borrowing and assimilation, the ceremonies were those of the Phœnicians and Romans, and probably, in some parts, of the Greeks. Protected by their isolation, the Guanches were able to have a religion of their own. The way in which they practised the preservation of the mummies, for example, which was entrusted to a special caste, proves an original development among them, alongside of common traits, even before they had arrived at the idea of the immortality of the soul or of future rewards and punishments.† Viana mentions a female religious caste called *Harimaguadas* (or *Harimaguas, Magaas*) who lived in common, vowed virginity for a time, educated the children, and, as has been seen above, took part in certain ceremonies to get rain; the men were forbidden in that case to look at them.‡ The house where they lived was called *tamogantin acoran*, 'house of god' (in Berber, *tigimmi tin amoqran* [?]). In connexion with ceremonies, we may mention consultation by sleep.§ Examples of this have been cited above. We shall add another: in ancient times, the Augiles (of the oasis of Aujila) used to go to sleep on tombstones and take as answers the dreams they had during their sleep (Pomponius Mela, i. 8). This was also the custom of the Nasamonians (Herodotus, *Hist.* iv. 172). Al-Bakrī cites a case where this method of divination had no connexion with tombs or the dead. It was in the Rif, on the borders of Wed Lau (see, further, art. INCUBATION).

16. Feasts.—We must also speak of the feasts, which have been with reason called *saisonnières*, and which have continued among the majority of Berbers to mark the chief changes of the year. There is good ground for seeing in them the traces of a nature-worship with which may be associated some remains of agrarian rites. The feasts seem all the more ancient by being performed without the intervention of special ministrants, by being celebrated, not in the mosques, but near the tombs of popular priests, and by being addressed to invisible powers and not to consecrated persons. The principal feasts are those of *Ennair*, fixed for the whole year; the feast of '*ansera*, which may be called the water-festival; the feast of '*achūra*, etc. But it must be observed that the peculiarities characterizing these feasts, as death or re-birth of

vegetation, or purification by fire and water, are not confined to the Berbers, but have been found among the most widely-differing peoples. It will be enough, therefore, to mention them.*

17. Traditions, etc.—It would be difficult to say whether the following tales, although current in Africa, are of Berber origin. Pliny the Elder tells that in this country 'no one begins any undertaking without first uttering the word "Africa," while in other countries affairs are begun by asking the favour of the gods' (*HN* xxviii. v. 2). Isigonus and Nymphodorus, mentioned by the same author (*HN* vii. ii. 2, reproduced by Aulus Gellius, *Noctes Atticae*, ix. 4), tell that there were in Africa families of sorcerers, 'who, by means of spells, cause flocks to perish, trees to wither up, and children to die.'†

But we are clearly dealing with Berbers in the following examples. In Tamernā, in the desert, between Sabāb and the mountains of Targhīn, a locality inhabited by the Beni-Geldīn and the Fuzānah, when a theft has been committed, the inhabitants trace some writing which they communicate to each other. The thief is immediately seized with a trembling, which does not stop until he has confessed his guilt and restored what he has stolen. He does not recover his calm until the writing is rubbed out (al-Bakrī, *op. cit.* p. 10). In one of the mountains of the Mejeksa of the Rif there lived a magician called Ibn Kosyah. This name, which means 'the son (man) with the little cloak,' was evidently a nickname borrowed from his way of acting. No one dared to contradict him or to disobey his wishes. If any one did, he turned the cloak in which he was wrapped, and then some malady attacked that person or his cattle instantly. No matter how numerous his opponents were, the malady fell on all the same as on one. He even made them believe that a light burned under his clothing. His sons and descendants inherited the same power (al-Bakrī, *op. cit.* p. 101). Similarly in the Rif, among the Ghūmara, a Beni-Shaddād tribe, part of the U-Halawāt, there lived a man who always carried a bag filled with animals' heads, and a cord strung with the teeth of land- and sea-animals. He used this as a chaplet. He passed it round the neck of the person who was consulting him, then shook it and tugged it violently. Next he began to smell each of the pieces separately until his hand stopped on one of them. Then he answered any questions that were put to him, and unerringly foretold illness, death, gain, loss, prosperity, disappointment, etc. (al-Bakrī, *op. cit.* p. 101). Mūsa, son of Ṣāliḥ, was also a Ghūmara. He is said to have lived before the Hijra; but even in the 14th cent. there still remained his 'prophetic sayings, in the language of the country, containing a great number of predictions relating to the control which the Zenatas were going to exercise in the Maghrib. There is quoted, in proof of the accuracy of his prophecies, the fulfilment of the one that foretold the destruction of Tlemsen. The houses of this town were to become a field tilled by a negro with a one-eyed black bull. This is said to have taken place after the destruction of Tlemsen by the Merinides, between A.H. 760 [A.D. 1358] and 770 [A.D. 1368]. But if some people considered him a prophet, others took him for a magician. In any case all credited him with a supernatural power (ibn Khaldūn, *op. cit.* vi. 106, 276, vii. 51). Further mention will be found among Arab writers of persons who practised magic, such as Muhammad al-Kutamī, or 'Omar and his son 'Abd Allāh, chief of the Seksiwa; but this expression must refer to magic as understood by the Musalmāns—an imported science, not of native origin. The fame of the Berber women as sorceresses was already established in antiquity, as is shown by Virgil's anachronism when he makes a Massilian priestess be consulted by Dido, in order to keep Æneas by her magical arts (*Æneid*, iv. 483–498, 504–521). Even in our day the women of Jurjura practise incantations, for which they use certain plants. We have evidence of this in a popular song which begins thus:

> 'Greeting to thee, hawthorn (*id'mim*);
> Men have called thee hawthorn;
> For me, I call thee the *qaïd* which commands;
> Transform this husband of mine into an ass,*
> And I shall have straw brought him.'

The other plants mentioned are the roots of the dwarf-palm (*thagūnsa*), the wild jujube (*thasuggarth*), the fruit of the coniferæ—pine, cedar or fir (*azinba*)—and the green oak (*kerrush*).†

ii. *Judaism.*—It has been observed that the Jews of the North of Africa, with the exception of those who at well-known times were driven from Europe by persecution, do not belong to the race of Israel; and they have rightly been regarded as the descendants of Berbers converted to Judaism during the Roman era. In the time of Augustus we find Jewish colonies prospering in Cyrenaica and Libya, and the barbarian insurrection which broke out under Trajan at Cyprus, in Babylonia, Egypt, and Cyrenaica simultaneously, and which was repressed with great harshness, did not hinder the development of the Jewish communities. This may be seen from an inscription in a synagogue discovered at Hamman el-Enf (*CIL* viii. 12457). These communities acquired such importance that the Catholic Church took precautions to prevent relations between Christians and Jews, which soon became rigorous measures under the Christian Emperors, were suspended only by the triumph of the Vandals, and were revived with the victory of Belisarius and the Byzantines. Proselytism was naturally exercised among the lower classes of the population and even among rich Berber tribes. But we do not know what kind of proselytism it was, or to what extent the practices of the cult and the observance of the prescriptions of the Jewish Law were imposed, and we cannot give credence to a late romance with no more authority than, *e.g.*, the *Fath' Ifriqya*. The Arab writers mention several tribes which were Jewish when the Musalmāns came. But their statements are contradictory. Thus, in one place, ibn Khaldūn mentions among the Jewish tribes the Jerawas who lived in Aurās; the Nefūsa, the Fendelawa, the Mediūna, the Bahlūla, the Ghiatha, and the Fazaz in the Maghrib al-Aqsa (*Kitāb al-Ibar*, vi. 107). But we have seen that according to tradition, the Kāhinah—a name foreign to the Arabs—had familiar genii. Al-Bakrī (*op. cit.* p. 9 f.) and ibn 'Aẕārī (*op. cit.* i. 3), both earlier than ibn Khaldūn, mention the Nefūsa as Christians; and traces of churches which have preserved their name in Jebel Nefūsa prove them right. But ibn Khaldūn himself in another place (*op. cit.* iv. 12) says that the tribes of the Fendelawa, the Bahlūla, the Mediūna, and the people of the territory of Fazaz professed, some magic (paganism), some Judaism, and some Christianity. The place where the town of Fas grew up was inhabited by two Zenata tribes: the Zuagha (Benu'l Khair) and the Benu Yarghosh. Some professed Islāmism, others Judaism, and others paganism. These last even had a temple at Shibuba, where later arose

* Cf. for full details on these feasts, Doutté, *op. cit.* pp. 541–584; and among the sources cited, Destaing, *L'Ennair chez les Beni-Snous*, Algiers, 1905, *Les fêtes saisonnières chez les Beni Snous*, Algiers, 1907; Saïd Boulifa, *Textes berbères en dialecte de l'Atlas marocain*, Paris, 1909, pp. 146–167.

† On the evil eye in most recent beliefs, cf. Doutté, *op. cit.* pp. 317–328, and the authors there quoted.

* The popular Berber tales include numerous examples of metamorphosis, but they are borrowed.

† Hanoteau, *Poésies populaires de la Kabylie du Jurjura*, Paris, 1867, pp. 308–312.

the Andalusian quarters. Ibn Abi Zar', who has preserved this detail (*Rauḍ al-Qarṭās*, i. 15), designates the pagans by the name of *majus* (magi), and he naturally calls their temple a house of fire. This passage has been reproduced by ibn Khaldūn (*op. cit.* iv. 13).

In the same era, the country of Temsna (the modern Shawia) and the towns of Chella and Tadla were peopled partly by Jews and partly by Christians, who submitted to accepting Islām after the conquest of that region under Idris I. It is not safe, therefore, to try to specify that such and such a tribe was exclusively Jewish or Christian. It seems nearer the truth to say that each tribe included families, or perhaps clans, of Jews, sufficient in number to be able to remain independent, at least in the Maghrib, until the end of the 2nd cent. A.H.—a long time after the conquests of 'Oqba and Mūsa. But the Judaism which is spread at the present day by the descendants of converted Berbers has nothing to distinguish it from the Judaism practised in the other regions of the civilized world; and as regards local superstitions, they are common to Jews and Musalmāns.*

iii. *CHRISTIANITY.*—We do not know how Christianity was brought to the Berbers, but probably we should look for its starting-point in the large towns, and for its first seats, as at Rome, in the Jewish communities. The separation was not long in taking place, and the Church of Africa soon became prosperous. But its history belongs rather to the history of Christianity, and it is impossible to cull from its developments and vicissitudes what refers specially to the Berbers. We may admit, however, that it was from among the latter, at least in the places under the direct control of Rome, that the Donatists were recruited—a sect which was more schismatic than heretical—and the Circumcelliones, whose movement, in spite of its religious colour, was social rather than national. The list of African bishoprics (Proconsular, Byzacene, Numidian, Mauretanian —Sitifian, Cæsarian, and Tingitan—and Tripolitan) contains a host of names of which the great majority are Berber; but it is difficult to identify them all, these names being often simply those of little villages, for the bishop's sphere of control was a very narrow one. Epigraphical evidences have enabled us to recognize some of them, and it seems very likely that the mass of the population, omitting Roman colonists and some foreigners, was composed of Berbers, or at least of a mixed race in which the Berber element was predominant. As for the half-subject or independent tribes among whom Christianity spread, we may suppose that conversion took place, as in so many other parts of the uncivilized world, by means of captives taken in incursions. The domination of the Arian Vandals made no alteration in this state of affairs further than that Catholicism, after having been the persecutor, became in its turn (except at very occasional intervals) the persecuted, and triumphed only by the success of the Byzantines.† We must mention, moreover, as having to do with the history of Christianity among the Berbers of the West of Algeria, the existence of a native dynasty at the beginning of the 5th cent., after the fall of the Vandals and before the Arab invasion. Some distance from Frenda the tombs of these princes are seen. Two names may be recognized: Mephanias, and Massonas, who seems to have been the same man as the Masema, 'rex gentium Maurorum ac Romanorum,' mentioned in a Latin inscription of Hajar el-Rūm (Lamoricière, *CIL* viii. 9835). It was a Christian Berber dynasty, as is shown by the emblems and remains of paintings which have been excavated on the tombstones known by the name of *jedar*, and already mentioned by the Arab historians. These princes probably disappeared with Christianity itself, at the first victories of the Musalmāns.*

In the other places, however, Christianity still survived for a long time: in Tripoli, among the Nefūsa, whose territory still contains a number of ruined churches; in Aurās, among the Beranes; and in the Rif, among the Ghūmara and the Sanhaja. We have seen that at the time of Idris, *i.e.* more than a century after the appearance of Islām in this country, there still existed in the Maghrib al-Aqsa, Christian tribes or parts of tribes. Wherever a treaty was concluded between the invaders and the native population, the latter, conforming to the Musalmān legislation, were able to keep their religion, but isolation and internal division hastened its fall. In the 10th cent. there were still forty bishops; in 1054, under Leo IX., only five remained, and of these two were disputing the presidency. In 1076, we see from the letters of Gregory VII. that there were only two left: Cyriacus, primate of Carthage, and Servandus, in the see of Hippo. There was still a bishop at the Qala'a of the Beni-Hammād; he had the Arabic title of *Khalīf*, and he certainly emigrated with his flock to Bougie under an-Nasīr.† A Christian community existed at the same time in Tlemsen, but we do not know whether it was under the authority of a bishop. In 1068, al-Bakrī‡ mentions a church in this town which was frequented by the remains of a Christian population surviving till that time. But everything was carried away by the current of the Almohads. No trace of Christianity remained, alongside of vague legends, except a few words, among others *Tafaski* (the Passover = Πασχα)—the name given to the fourth month of the year by the Taitaq, to the second by the Ahaggar. *Afasko* and *Tifisko* mean 'spring' among the Awelimmiden, and this word has penetrated even to the Dyolofs of Senegal, *Tabaski dya* corresponding to 'December.'

iv. *MUHAMMADANISM.*—1. History.—We have no exact information, nothing beyond the sometimes fanciful accounts of the conquest, about the way in which Islām spread in the North-West of Africa, but it is certain that it met with a lively resistance there. The first expeditions were only cavalry raids, with pillage as their main object, in which the Arabs avoided the strongholds where the natives and the descendants of the Roman colonists were taking refuge. The coast-line itself was respected, guarded as it was by the mountains and the ports which remained in Greek possession. The foundation of Kairwan by 'Oqba gave a character of stability and permanence to the spread of Islāmism, but in no decisive way. The Musalmāns were more than once driven right back to Tripoli; accordingly it is not wrong to suppose that the conversions they had succeeded in making did not last. The Arab historians themselves declare that the Berbers recanted from Islāmism twelve times; and it is probable that, if they had found an ally in a strong and well-organized neighbouring power, they themselves, instead of

‡ *Op. cit.* p. 76.

the Byzantine Empire or the kingdom of the Goths, would have triumphantly repelled the Musalmān invasions. But their divisions and isolation, especially after the conquest of Spain by Mūsa, ended in securing the victory for Islām—a victory which was not absolute and decisive until the 12th century.

But if, during the earlier periods at least, they were converted more by force than by persuasion, they did not fail to retain in their new religion the independence and party-spirit which they had already shown in Christianity, by adopting schisms rather than orthodoxy. The history of the Musalmān Berbers is simple to unfold. Originally they were Sunnites, but soon they enthusiastically welcomed the most levelling ideas of Islām, and declared themselves for the various Kharijite sects. On account of a similar feeling—hostility towards the distant Khalīfate of Baghdad, or the nearer Khalīfate of Cordova—they took the side of the Alids, the opposite extreme from Islām, and became the source from which Idris ibn 'Abd Allāh and later 'Ubaid Allāh derived recruits to found their dynasties. Idris founded his in the present-day Morocco—a dynasty hostile to the Umayyads of Spain, and to the Abbāsids of Baghdad. That of 'Ubaid was at Mahadia—a dynasty which drove out the last representatives of the Abbāsids in Ifriqyah, almost succumbed to an offensive re-taliation from the Kharijites, but was victorious at the last moment, and once more became mistress of North Africa and conquered Egypt. Then came a Sunnite re-action, taken part in by the Berbers of the South Sahara, the recently-converted Lemtuna—a tribe whose fortune was as brilliant as it was ephemeral. Other Berbers, the Masmūda of Atlas, whose chiefs were struggling against the gross anthropomorphism of the Almoravids (Lemtuna), founded a rival Khalīfate to the Khalīfate of Baghdad (the Khalīfate of Cordova was no longer in existence, and that of Cairo was about to disappear); but, clinging to orthodoxy, they destroyed the last remains of Christianity and all that had survived of Alid Shī'ism, while dealing a blow at the same time at Kharijism, already weakened by its struggle with the Fāṭimids—a blow from which it never recovered, so far, at least, as to be independent.

After this the North of Africa, *i.e.* the Berbers and Arabized Berbers, remained Sunnite except for some stubborn industrial communities which held out in Mzab, Jebel Nefūsa, and Jerba.

2. Sects.—(*a*) *Kharijites.*—To fill in the sketch just traced would be to give a complete history of North Africa, and would exceed the limits of this article. We shall therefore pass over the orthodox Islāmism of the Berbers and refer only to that part of their Islāmism which was characteristic, viz. the Kharijite doctrines (which, however, they were not alone in spreading), and to the attempts to found a religion which should be to Islām what Islām was to Christianity and Judaism. It must be understood that, apart from these attempts, the Berber revolts, under the name of religious sects, were essentially social; they were not due to differences of opinion or interpretation concerning dogma. As a matter of fact, the Berbers had controversialist theologians, but no great champions of orthodoxy or heterodoxy. They often attached themselves to the strictest parts of the Qur'ān text; the Lemtuna even accepted to the letter all the figurative expressions and became anthropomorphists. Thus, out of the four orthodox sects, the Berbers adopted the narrowest, the most restricted, the one which (after the Ḥanbalites) was most slavish to the letter, viz., that of Mālik ibn Anas.

Hunted down in the East, after the fall of Nahrawan and the victories of Hajjaj, which had saved the Khalīfate of Damascus and driven out the Iraq Arabi Kharijites, the latter, divided into two sects, Zubairites and Abadites, emigrated to the West. They found no difficulty in spreading their doctrine among the Berbers, the victims of the greedy Musalmān governors. In the interests of the public and also of their own private treasury, these governors did not exempt converts to Islām from the tax of a fifth—the tax paid by non-Musalmāns. The *Zubairites*, who took their name from 'Abd Allāh ibn Zubair of the Benu Tamim, were furthest advanced in the doctrine of Kharijism: they refused the name of Musalmān to any man guilty of even a venial sin, and even made it lawful to kill him and seize his goods. This doctrine was developed particularly in the north of what is now called Morocco, above all, among the Matghara and the Miknāsa. Led by an old water-carrier of Tangiers, Maisara, who took the title of Khalīf, more than 200,000 Berbers, with shaven heads and carrying the Qur'ān in front of them fastened to their spear-points, annihilated the Khalīf's armies and took possession of Tangiers and Sūs (A.H. 122 = A.D. 739–40). After an indecisive battle, they killed their chief Maisara, and put Khālid ibn Ḥamīd az-Zanātī in his place. In the following year, he destroyed two fresh Arab armies, and thus brought a general alleviation in central Maghrib. The two victories, of el-Qarn and el-Asnam, checked, but did not destroy, the Zubairite Berbers in the West; and their chief, Abu Qorrah, founded a State in the region of the Moluyya. The Idrisids destroyed this centre of strict Kharijism, concerning which we have only scanty information furnished by the orthodox writers. Nothing remained of it but a small State founded at Sijilmasa in the Tafilet. It disappeared in the great Fāṭimid struggle.*

Another group was formed in Jebel Nefūsa, South-East of Tripoli, and it was not long in spreading as far as the oases of Wargla and Wad Righ. This group is better known, because it left historical and religious records. These Kharijites were *Abadites*, dating their rise from 'Abd Allāh ibn 'Abād who lived in the 1st cent. A.H. This sect showed itself relatively more tolerant than the Zubairites, and its founder seems to have had relations with the Umayyad Khalīf Abd al-Malik. Its teaching was brought to the Maghrib by Salma ibn Sa'd, and later by 'Omar ibn Imkaten, Ismā'īl ibn Darrar, Asim as-Sadrati, etc. The most famous of its chiefs, Abu'l Khatt'āb, took the title of *imām*, and founded a centre, which was reduced to a province by his fall and death in A.H. 155 [A.D. 771], but which, nevertheless, has remained down to the present day one of the principal Abadite centres.† One of its officers, a man of Persian birth, 'Abd ar-Rahmān ibn Rustam, succeeded in founding a religious kingdom at Tahert (modern Tagdemt), which at one time comprised all the South of the modern region of Algeria, part of the region of Oran, the oases of the Constantine region, South Tunisia, and a part of the vilayet of Tripoli. But this kingdom was soon involved in divisions, as usually happened among the Berbers. Schisms arose: the Nukkarites, separated by personal questions, ending in reviving the uncompromising doctrines of the Zubairites;

* Cf. the summary of these events in Dozy, *Histoire des Musulmans d'Espagne*, Leyden, 1861, i. 141–156, 192–207, 238–250; Fournel, *Les Berbers*, i., Paris, 1875, 285–301, and the sources given; for the East specially, Wellhausen, *Das arabische Reich und sein Sturz*, Berlin, 1902, pp. 47–125.

† Cf. on the Abadites of Jebel Nefūsa, ash-Shamākhi, *Kitab as-Siar*, Cairo, n. d.; de Motylinski, *Les Livres de la secte abadhite*, Algiers, 1885, pp. 6–20, 28–35, 37–61, *Le Djebel Nafousa*, Paris, 1898–99; R. Basset, *Les Sanctuaires du Djebel Nafousa*, Paris, 1897.

and the Wasilites, with doctrines tending to Mu'tazilitism (liberalism). These dissensions greatly favoured the work of destruction accomplished later by the Fāṭimids.*

(*b*) *Alids.* — Although, on the one hand, the Berbers adopted and intensified the levelling characteristic of Islām, and the Zubairites and Nukkarites succeeded the Circumcelliones among them, on the other hand, some of them adopted an entirely opposite doctrine. These, instead of making the *imām* a chief freely elected by the community and, when necessary, deposed by it, saw in their *imām* not merely the descendant of the Prophet, but the incarnation of all the Prophets and even of the Deity. The Alid doctrine penetrated into the Maghrib, and was adopted twice as a protest against the orthodox Khalifate. The first time, it was a descendant of 'Alī, Idris ibn Abd Allāh (who had escaped his family's disaster), that founded the dynasty of the Idrisids, and Fas afterwards became their capital. But it seems that the Shī'ite doctrine, professed at this time by the Berbers, meant simply adherence to this dynasty. It even contributed to the consolidation of Islām by converting the few Christians still surviving, and by destroying the Nukkarites settled in Tlemsen. This dynasty is of no importance in the religious history of the country. We need only observe that it had a firm ally in one Berber tribe, namely, the tribe of the Auraba.†

(*c*) *Ismā'ilians.*—The Ismā'ilian doctrine, on the other hand, made great modifications on Islām by reviving, under the mask of Shī'ism, the ancient doctrines of Persia—mixtures of Manichæism and Greek philosophy. It is hardly necessary to remark that the mass of the Berbers who rallied to this teaching always remained in the ranks lower than initiation. Those of the central Maghrib, in modern Great and Little Kabylia, became the chief adherents of the Fāṭimid prophet (*dā'ī*) 'Abd Allāh, and he recruited from them the army that was to destroy the remains of the Abbāsid government in Ifriqyah, the Zubairite-Kharijite kingdom of Sijilmasa, the Abadite-Kharijite kingdom of Tahert, and the ghost of a State which had taken the place of the Idrisid dynasty in Fas. The fall of Tahert scattered the Kharijites who were settled in it. Some of them were brought to Jerba, where one of their communities still exists; the others fled to Wargla, Sedrata, and the region of Wad Righ. Their life there was peaceful, and their prosperity increased steadily until the ravages of ibn Ghanya, and especially the expeditions of the Almohads, which brought the levelling influence of Musalmān orthodoxy over N. Africa, came to drive them from their refuge. Determined to keep their faith, they proceeded to settle in a hilly stretch, called in Arabic *chebka* ('thread'), where the Beni-Mzab-Wasilian nomads, whose name they took, used to wander about. Sheltered in this solitary place, where they made rich oases, the emigrants, like the Mormons on the shores of Great Salt Lake, prospered under the shadow of outside wars, and founded a community, a sort of ecclesiastical State. This community grew rich by commerce and agriculture; but, as usual among the Berbers, it was torn by dissensions, not only between towns (there were seven towns), but even between districts of towns. It required the authority of France, in 1882, to restore peace.

Another group of Nukkarites had remained independent in the Aurās. Abū Yazid, nicknamed 'the Man on the Ass,' brought up by an old schoolmaster who was born in the Sudan and preached the Kharijite doctrines in their utmost strictness, imperilled the existence of the Fāṭimid dynasty under its second prince. The dynasty was at this time reduced to within the walls of its capital, Mahdya. But a supreme effort saved it. The Berbers were first driven back, then utterly crushed, and the Empire of the Ismā'ilians regained all its power, which was increased later by the conquest of Egypt.* It was probably at this time that Kharijism disappeared in the central Maghrib (except in Wargla, Jebel Nefūsa, and Mzab).

As for the dynasties which followed, they were all helped by the Berber tribes from whom they were sprung, the Almoravids by the Lemtuna, the Almohads by the Masmūda, and the Kūmia by the Beni-Merin, the Beni-Zyān and the Beni-Wemannu, who ruled simultaneously. Their religious history, accordingly, offers no characteristic interest. And it is the same with the dynasties which were established in the central Maghrib and Ifriqyah before and after the great Hilālian invasion (in the eleventh century of our era).

3. **Present-day Islāmism.**—At the present day, orthodox Islāmism reigns alone (associated, of course, with local superstitions) all over North Africa, except, as has already been said, in Mzab, Jerba, and Jebel Nefūsa, where the modified Kharijism of the Abadites holds sway. It is especially in Mzab—the centre of theological studies, —that the traditions are kept up. The *iāzzaben* ('doctors') have retained an influence there which has a control over the conscience in spite of contact with Europeans. But Kharijism has lost its power of spreading, and more converts are being made by the Musalmāns.† We may form an idea of the doctrine at present in vogue from the summary given in an '*Aqīdah* reduced to the Berber language, and then translated by a Nefūsi, Abu H'afs 'Omar ibn Jamia, who lived probably in the 11th cent. A.H. Several commentaries‡ have been made on it, and it forms the basis of the *Kitāb Ma'ālim* of Shaikh 'Abd al-Aziz of the Beni-Sgen, author of a treatise no less famous, the *Kitāb an-Nīl.* It is this latter that is now followed in Mzab and Jerba, while at Jebel Nefūsa it is the treatise of Shaikh Abu Tāher Ismā'īl al-Jaitāli, who died at Jerba A.H. 750 (A.D. 1349–1350). From the point of view of dogma, so far as the fundamental principles of Islām are concerned, this doctrine does not differ from orthodoxy. The only difference lies in some points of discipline: the *walāia*, the law imposing friendliness between Musalmāns of the same group, and its opposite, the *beraa* (in Mzab, *tebria*, 'punishment,' 'excommunication'); and, among the 'ways' of religion, besides the 'manifest way'—that of the first Khalīfs—the mention of the 'forbidden way,' the 'way of sacrifice,' and the 'secret way,' which, founded as they are on orthodox example, have justified the

‡ The commentary and Arabic glosses of 'Omar ath-Tholathi and Daud ath-Tholathi were published at Constantine in A.H. 1323 [A.D. 1905] by M. de Motylinski, to whom also we owe an ed. of the text with a French tr., *L' 'Aqida populaire des Abadhites algériens*, Algiers, 1905. The *Kitāb an-Nīl* was published at Cairo in A.H. 1305 [A.D. 1887].

conduct of the Kharijites ever since their appearance.

4. **Attempts to form new religions.**—(*a*) *Ha-Mīm.*—It remains now to speak of only two attempts to form a religion that should be the complement of Islāmism, as Islāmism claims to be of Judaism and Christianity. The first attempt took place among the Ghūmara of the Rif, in the neighbourhood of Tetūan, in the territory of Mejeksa among the Beni-Ujefūl. There is disagreement concerning the exact date of the appearance of this religion; opinions vary, from A.H. 313 to 325. In any case, it was at the beginning of the fourth century A.H., the tenth century of our era.

A certain Ha-Mim, son of Mann Allāh ('Grace of God'), son of Hariz, son of 'Amr, son of U-Jefūl, son of U-Zerūal, appeared in this tribe and preached a new religion. He cut out three of the canonical prayers, leaving only two—one for sunrise, the other for sunset. In offering these prayers, his followers had to prostrate themselves so as to touch the ground with the palms of both hands. He also dispensed with the Ramaḍān fast, except for the last three days, or, according to others, for ten days; but he established a fast till mid-day every Wednesday, and for the whole day every Thursday, as well as two days in Shauwāl. Whoever failed to keep these had to pay a fine of five or three oxen. He abolished pilgrimage, purification, and total ablution, allowed the use of pork, but forbade fish that had not had their throats cut (or been gutted), all animals' heads, and the eggs of all kinds of birds. Even to this day, a tribe in the neighbourhood of Tipasa and the Tuaregs abstain from hens' eggs. He composed a Qur'ān in Berber for the use of his partisans; the Arab writers at least call it a Qur'ān. Some fragments have been preserved. One of these began with the formula of the unity of God, then continued: 'Deliver me from my sins, O Thou who hast let Thy gaze rest upon the earth; withdraw me from my sins, as Thou didst withdraw Jonah from the whale's belly and Moses from the waters.' All prostrated themselves and repeated: 'I believe in Tanguit (or Talyah, Teba'ih), aunt of Ha-Mim.' This Tanguit was a sorceress like Dajjū, the sister of the new prophet. Ha-Mim, nicknamed *al-Muftārī* ('the forger'), made numerous converts right on till his death (A.H. 315 according to some, 325 according to others). He fell in a combat against the Masmūda in the territory of Tangiers. His sect did not disappear with him. Later on, a certain 'Asim ibn Jamil offered himself as a new prophet in this tribe.*

(*b*) *Ṣāliḥ.*—Another attempt was of more importance. In the West of the Maghrib, in Temesna (the modern Shawia, which includes Casablanca, Rabat, and Chella), the Berghūata were settled. One of their chiefs, Tarif, who seems to have been of Jewish origin (son of Simeon, son of Jacob, son of Isaac), had, along with his people, embraced the Zubairi-Kharijite doctrines and struggled against Maisara. After the fall of the Berbers, he retired to Temesna and lived there in independence. He remained faithful to the doctrines of Islām; but his son, distinguished for his learning and virtues, who had also fought in the ranks of the Zubairites, offered himself as Prophet and composed a Berber Qur'ān. But he did not spread his doctrine; he entrusted it to his son Elias, and set out for the East, declaring that he would return when the seventh king of his dynasty was on the throne. The new religion remained in seclusion until the reign of Yūnos, who proclaimed it abroad and compelled the people to adopt it whether they would or not. The doctrine of Ṣāliḥ, who presented himself as the *Ṣāliḥ al-Mu'minīn* mentioned in the Qur'ān (lxvi. 4), was as follows: to recognize the Divine purpose of all the prophets and of Ṣāliḥ himself, to fast during the month of Rajab instead of Ramaḍān, and also on a certain day of the week and the same day the following weeks; to pray five times a day and five times every night; to celebrate the feast of sacrifices on the eleventh of Muḥarram (and not on the twelfth of Dhul-ḥijja).

The manner of performing ablutions was equally definite. There was no invocation (*adān*) or introduction to prayers (*iqāma*). Sometimes prayers were offered with prostration, sometimes without; in the first case, the congregation raised their foreheads and hands half a handbreadth from the ground. In proclamation of the greatness of God (*tākbīr*), they placed one hand on the other and said: *A esm en Iakosh* ('to the name of God'), then *Mokkor Iakosh* ('God is great'). The Orientalists are wrong who have thought to recognize the name of Bacchus in this word or in its variant Bakosh, and have drawn such extraordinary conclusions about the extent of Bacchus' worship and mysteries. M. de Motylinski has shown that this name Iakosh is derived from the Berber root UKSH, which means 'to give.' It is an epithet corresponding to the Arab *al-Wahhāb*, 'the generous,' one of the epithets of God.*

Public prayer took place on Thursdays very early in the morning. When making profession of faith, they held their hands open and leaning on the ground; they repeated half (?) of their Qur'ān standing and the rest prostrate. At the end of the prayer they pronounced this formula in their own language: 'God is above us; nothing that is on the earth or in the sky is hid from Him.' Then they repeated in Berber: *Mokkor Iakosh* ('God is great'); or, as often, *Ihan* (*Ian*) *Iakosh* ('God is one') and *Ur d'am Iakosh* ('There is none like God'). The alms required by law were half of all their grain. As in the religion of Ha-Mim, it was forbidden to eat eggs, the head of any animal, or fish that had not had their throats cut. Cock's flesh was forbidden, the cock announcing prayer by its crow. Hens' flesh was allowed only in cases of dire necessity. Liars were driven from the country; thieves, when convicted by evidence or by their own confession, were put to death; fornication was punished by stoning. The blood-price was fixed at a hundred head of beasts. Any man could marry as many wives as his means allowed (cousins to the third degree being forbidden), and repudiate them and take them again as often as he pleased. But the faithful were forbidden to marry Musalmān wives, or to give their daughters to Musalmāns. The saliva of their Prophet brought Divine blessings with it, and was regarded as an infallible remedy; this kind of belief still exists among certain Musalmāns of Algeria with regard to their marabouts.

Lastly, it should be said that they were very far advanced in astronomy and highly skilled in judicial astrology. The Qur'ān which Ṣāliḥ composed in Berber contained eighty *sūras*, most of them having a prophet's name for title. The first was called *Ayyūb* (Job, cf. Qur'ān xxi. 83), the last *Yūnos* (Jonah, the title of *sūra* x. of the Qur'ān). The names show clearly that it is an imitation of the Qur'ān. There were the *sūras*

of *Fir'aun* (Pharaoh, cf. Qur'ān xliii. 45–55); of *Qārūn* (Korah, Qur'ān xxviii. 79); of *Hāmān* (Aman, cf. Qur'ān xxviii.); of *Yājūj and Mājūj* (Gog and Magog, Qur'ān xviii. 93, xxi. 96); of *ad-Dajjāl* (Antichrist, Qur'ān xxvii. 84); of *al-'Ijl* (the Calf of Gold, cf. Qur'ān ii.); of *Hārūt and Mārūt* (cf. Qur'ān ii. 96); of *Tālūt* (Saul, cf. Qur'ān ii. 245 f.); of *Nimrod*; of the *Cock*, the *Partridge*, the *Grasshopper*, the *Camel*, the *Eight-footed Serpent*, and of the *Marvels of the World* which contained the most lofty knowledge. A fragment of the *sūra* of Job has been preserved in an Arab translation: 'In the name of God! He by whom God has sent his Book to men is also he by whom He has told forth His tidings. They say: Iblis has knowledge of destiny. God forbid! Iblis cannot have the knowledge of God. What can triumph over tongues in discourse? God alone can by His decree. By the tongue by which God has sent His truth to men, that truth is established. Look at Mamet [in Berber, *imūni Mamet*, i.e. Muhammad]. During his life, and right on to his death, his followers conducted themselves aright. Then his people grew corrupt. He has lied who said that truth survives where there is no messenger from God.'

The Berghūata offered a long and successful resistance to the various dynasties which followed each other in the Maghrib, and it was only to the Almohads that their sect finally succumbed.*

Must we consider as the provenance of one of these sects or of a sect analogous to them the beliefs of the Zekkara, who live in Morocco not far from the Algerian frontier, between the Beni-Iznacen, the Beni-Bū Zeggū, and the Beni-Ya'la? We have not only been informed (though it would be wise to check the information) of their absolute antagonism to the Musalmāns and their dogmas, but have even got hints of a complete indifference to every kind of belief. Some have even gone the length of regarding them as Positivists, although they claim to believe in the doctrine of the celebrated marabout buried at Miliana, Sidi Aḥmad ibn Yūsuf.† The most daring systems have found acceptance; even Druses have been seen there. Before risking any opinion on this question, we should wait until a seriously conducted inquiry is made. When this has been done, it will probably be found that this is a tribe which, on account of its isolation, has remained in the state in which the greater part of North Africa was during the anarchy of the 15th and 16th centuries, when the Musalmān missionaries succeeded in resuscitating Islāmism from a vague shadowy memory.

LITERATURE.—The literature has been given fully throughout the article. In addition to the works there mentioned, the following may also be consulted:—H. Leclercq, *L'Afrique chrétienne*, 2 vols., Paris, 1904, vol. i. for paganism, and *passim* for Christianity; M. Slouschz, *Hebræo-phéniciens et Judéo-berbères*, Paris, 1908.

RENÉ BASSET.

BEREANS.—The Bereans were a religious sect, originating in Edinburgh in the year 1773, who took their name from the Bereans mentioned in Ac 17[10, 11] ('who received the word with all readiness of mind, and searched the Scriptures daily, whether these things were so').

1. Life of founder.—John Barclay, their founder, was the son of a farmer, Ludovic Barclay, in the parish of Muthill. Early designed by his father for the Church, he received a good education, and was sent to the University of St. Andrews. In his theological course he came under the influence of Dr. Archibald Campbell, professor of Church History, author of an *Enquiry into the Original of Moral Virtue*, and *The Necessity of Revelation*. Campbell's views attracted considerable attention in his time, and were deemed sufficiently heretical to bring him to the bar of the General Assembly, though the case was dismissed. The first of four charges was that he held that 'man was unable by the use of his rational powers to find out the Being of a God.' This thesis Barclay was afterwards to take up and amplify.

Meantime Barclay was licensed on 27th September 1759 by the Presbytery of Auchterarder, and shortly afterwards was appointed assistant to the Rev. James Jobson of Errol. From the first he attracted attention by his preaching. He was a man of strong convictions, of great fervency of utterance, with a command of rhetorical language which readily passed into violent invective against those who opposed what he conceived to be the truth. Jobson belonged to the Evangelical party in the Church. He was a 'Marrow man,' with clear views of his own, and it is not surprising to find that after some controversial passages, culminating in a statement from the pulpit of their respective positions, he and Barclay were obliged to part. In 1763, Barclay went to Fettercairn to be assistant to the Rev. Anthony Dow, whose failing health prevented him from fulfilling the duties of his pastorate. Here he found himself in a more congenial atmosphere, as Dow's son, who was minister of Dron, had sat on the same bench with him at college, and sympathized with his opinions. Barclay's ministrations were warmly received by the people. He preached to crowded congregations, many flocking from the surrounding parishes attracted by his eloquence. He was most assiduous in his visitation and catechizing, and exercised a strong moral influence over the people. Barclay had a considerable gift of verse, though his productions scarcely rise into the region of poetry. Many of his verses were afterwards collected into a hymnary which was used in his own church.

In 1766, Barclay came into collision with the Presbytery through the publication of a book entitled *Rejoice Evermore, or Christ All in All*. The book was condemned as heretical, and Barclay received a formal censure. A list of his heresies was also drawn up and read from the pulpit of Fettercairn Church. This, however, only increased his popularity in the parish. When Barclay's connexion with the parish ceased, he asked for the usual Presbyterial certificate, which was refused, nominally on the ground that he was obstructing the peaceable settlement of the presentee. Barclay appealed from this refusal to the Synod and Assembly, but the appeal was dismissed.

On the occurrence of the vacancy at Fettercairn a petition was sent to the Crown (in whose gift the patronage lay) by the whole body of the parishioners, asking for the appointment of Barclay as their minister. The petition was refused, and the Rev. Robert Foote was presented to the living, though only three communicants could be found to sign the call. An appeal to Synod and Assembly met the usual fate. Thereupon the whole body of the congregation, to the number of over a thousand, hived off and built a church at Sauchieburn, in the neighbouring parish of Marykirk.

Meantime Barclay, by appeal in the matter of his certificate, had had an opportunity of stating his views in the General Assembly and also of preaching in various churches in Edinburgh. In the capital he gained a number of adherents, who resolved to secede from the Church, and who presented him with a formal call to be their minister. The church at Sauchieburn also wished to secure his services, but Barclay preferred to stay in Edinburgh, though his adherents there were very few (the call contains sixty signatures), and could

† Moulièras, *Une tribu Zénète anti-musulmane au Maroc*, Paris, 1905.

do very little for him. It is a characteristic of Scottish dissent which is frequently overlooked that a peculiar High Church tradition has invariably run through it. The call of the people, while indispensable to a valid ministry, has never been deemed sufficient. The minister must be ordained by his brethren in the ministry, who alone can judge of his qualification, and through whom alone can come the necessary authority to administer the ordinances of religion and to dispense the sacraments. Barclay's congregation could not find any presbytery in Scotland that would furnish him with the necessary status, and so he was sent to England with a general letter addressed 'to whatever Presbytery or class of dissenting Brethren this shall be presented.' Armed with this epistle and accompanied by two commissioners from his own congregation, Barclay proceeded to Newcastle, where he was regularly ordained on 12th October 1773. The certificate of ordination is signed by John Blyth, moderator, minister at Thirsley; Robert Green, clerk; and three others. On his return to Edinburgh, the new Church was constituted as the 'Berean Assembly,' so called from 'those noble Bereans who professed to search the Scriptures for the whole counsel of God, and to have a conversation becoming the gospel of Christ.' The church at Fettercairn had meantime found a minister in Mr. James Macrae, and another congregation had been formed at Crieff which, through its proximity to Muthill, had been touched by Barclay's influence.

The internal economy of the Church in Edinburgh was troubled from the first. The congregation was very poor, and Barclay had never more than £18 a year for his services. He was more concerned, however, about the publication of his views than about the straitened means of his domestic life, and the unwillingness of the outlying congregations of Fettercairn and Crieff to subscribe to a complete edition of his works was the occasion of much searching of heart. An epistle, signed by all the managers and overseers of the Church in Edinburgh, was sent to these provincial centres, pointing out the serious detriment it was to the Berean cause, 'which is the only Christian cause on the face of the earth,' that at a time when the Truth of God was being hopelessly perverted, its defence should fail through their negligence to purchase a book containing 'an express and undeniable confutation of all the heresies of men in the power of the devil.' The arguments used by some of Barclay's followers for giving him no encouragement to publish was an inference from his own central thesis. 'Since we know nothing of God and Divine things save from the Bible,' they urged, 'what is the use of publishing theological treatises?' In 1776, however, all difficulties seem to have been got over, and there appeared *The Psalms, paraphrased according to the New Testament Interpretation*, prefaced by a long dissertation in which Barclay expounds his peculiar ideas of Scripture. This is very much a reproduction and expansion of his earlier work, *Rejoice Evermore*. His previous productions had been *Without Faith, without God, or an appeal to God concerning His own Existence*, and a *Tractate on the Eternal Generation of the Son*, called forth by a phase of the Glasite controversy in 1769, *On the Assurance of Faith*, *On the Observation of the Lord's Supper*, and *A Letter on Prayer*, in 1774. In 1778 these were re-published along with a *Treatise on the Sin against the Holy Ghost*. In 1783 appeared *The Epistle to the Hebrews paraphrased*, and later, *A Close Examination into the Truth of several received Publications*. A new edition of part of his works was published in 1852, with funds left for the purpose by Mr. James Carswell, for many years a deacon of the Berean Church in Glasgow.

Barclay had the zeal of an apostle. Towards the close of 1776 he went to London on the invitation of some friends who had read his books and sympathized with his views. He meant to stay only a few weeks, but he was so warmly received and attracted such crowds of admiring hearers that he was forced to remain in order to consolidate the movement. Meanwhile he was sorely distressed by the importunities of the little flock in Edinburgh, who needed his personal influence to hold them together. He sent, as his substitute, William Nelson, a surgeon, who, before his departure, was ordained to the ministry. Nelson was a man of some gifts. He had been educated for the Church of England, but had embraced the doctrines of Whitefield, and had joined the Calvinistic Methodists. While in England, Barclay visited Bristol, where a Berean Church was founded. There is an interesting passage in the *Autobiography* of Dr. Somerville of Jedburgh which shows conclusively that Barclay made a considerable impression in London. Writing of the year 1785, he says (p. 219):

'Upon the dismission of this little congregation we were met by such an immense crowd pressing at the entrances to the chapel that we could not make an escape without a struggle; and when I enquired who came next, I was answered by one of the female sex which seemed to predominate in this new assemblage, "The Bereans, if you please." The Rev. Dr. Horsely, a few days before, had mentioned the sect (the Bereans) to me, of which I had not heard before. He said it had lately sprung up in the west of Scotland, and he seemed to speak of it as an interesting event and likely to make a figure in the Christian Church. I confess I was rather ashamed to be found ignorant of an event occurring at my own door which seemed to him so important.'

The fact that an intellect so acute as that of Horsely, the great champion of orthodoxy against Socinianism, saw possibilities in Barclay's views is sufficient evidence that they were worthy of more attention than they have since received.

Barclay returned from London in 1778, leaving the church there in charge of two ordained presbyters, James Donaldson and Samuel Bishop. He resumed his ministry in Edinburgh, and Nelson was sent throughout the provinces to strengthen the Berean churches that had sprung up in various places. There is a record of congregations in Glasgow, Crieff, Kirkcaldy, Dundee, Arbroath, Montrose, Brechin, and Fettercairn. Barclay himself took a keen interest in all these churches. His means were narrow. His stipend from his own church was trifling, and, though he had a small income from property belonging to his first wife, it was spent mainly in publishing his books. His apostolic journeys, therefore, were on foot, and were confined to Scotland—which was one reason why the cause in England languished. His exertions gradually impaired his health. He died suddenly, while on his way to church, in a friend's house, on 29th July 1798, and was buried in Calton cemetery, where a monument is erected to his memory. His work was carried on in Edinburgh by Donaldson, one of the London pastors, who had some time previously been transferred to the pastorate at Dundee. Under his charge the church for twenty-five years met with a fair measure of success, but after his death it was split up by internal dissensions and gradually melted away. The Berean churches throughout the country in course of time lost their identity and were merged in the Congregationalists.

2. Doctrine.—John Barclay's theological position is extremely interesting, and ought not to be dismissed with the scant courtesy with which it has hitherto been treated. In this obscure founder of a dead sect we see a man struggling with a theological environment that was inadequate to contain his thought, and endeavouring to express in the theological terminology of his day ideas that in our time have created their own terminology. His leading tenet is that we derive all our knowledge of God from direct revelation—the revelation given us in God's word. Now this is just the position of Ritschl, and Barclay reached it by a process of thought similar to that of the German theologian. Ritschl had Kant to fall back upon in order to find a metaphysical sanction for his system. John Barclay had to create his own metaphysics on a hint supplied to him by Dr. Archibald Campbell. His central thesis he states thus: 'We do not come to the knowledge of God by any foregoing train of reasonings to introduce it, but merely by a sovereign act of God's own power, revealing Himself in our hearts.' In short, reason is totally inadequate to reach the idea of God.

Barclay thus consciously breaks with the Scholastic distinction, held in his day by every section of the Christian Church, between Natural and Revealed Religion. The Scholastic position is that our belief in God is an inference crowning a logical process. Reason convinces us of the existence of God, but all that reason can tell us of God is the bare fact of His existence. We need revelation to supplement reason, to unfold to us the nature of God, to explain His attributes, and to teach us His relation to man. To believe otherwise is to land ourselves in a logical dilemma. To say that we believe in God because we believe the revelation of Himself He has given us in Scripture, and that we believe the Scripture revelation to be true because it comes from God, is simply reasoning in a vicious circle. We must have an antecedent belief in God before revelation becomes even a rational conception. Now John Barclay in Scotland saw as clearly as Kant did in Germany, and rather before him than after, that there is a deeper fallacy than appears underlying this method. In the first place, suppose reason could prove the bare existence of God, all that reason gives us is a mere abstraction—a mere *caput mortuum*. We cannot know God apart from His attributes any more than we can know substance apart from its qualities. The variety of ethnic ideas concerning God shows that there is no unanimity regarding any one of His attributes, or even regarding the moral or immoral consistency of His character. It was admitted by all Christian schools that the attributes of God can be known to us only through revelation. If this be so, then the God of Nature, a Being without attributes, is an impossible conception.

(1) But what of the theistic arguments themselves? Barclay criticizes them with an acumen worthy of Kant. He takes up the *a priori* proof of Dr. Samuel Clarke, which then held the field, stating it thus: 'No being can produce another being or thing before itself exists. But the world exists; therefore the world behoved to be produced by some other being which must have existed before the world, and what can that being which must have existed before the world in order to produce it be but God?' Barclay points out that the original position holds here with regard to God. On this learned divine's own showing there must be something antecedent to God in order to produce Him. In short, you cannot reason from contingency to absolute being. You can but recede through secondary causes till imagination calls a halt, and then arbitrarily posit a self-existent cause. But this is not reasoning, and the result of it is not God. And the same holds true of the argument from design: 'If you were to see a beautiful, convenient, and well-contrived house, would you not conjecture that there behoved to be some artist for the builder, and that he were eminent in his way too; you would not imagine that it came by chance.' Again, Barclay with rare acumen and a truly modern ring says: 'There is no argument here. We know men, and we know houses are their works, from experience and observation; but we have no access for experience or observation in the framing of worlds.' Moreover, he goes on to say, we cannot tell the character of the workman directly from his works, which may be fashioned for either a good or an evil purpose. It is our antecedent knowledge of that character that determines the judgment we form of his works.

No doubt there is much in this reasoning that reminds us of Hume as well as Kant, but it is doubtful whether Barclay was familiar with Hume. He was evidently a good classical scholar and well read in the theology of his day, but the present writer can find no direct reference to Hume in his works, though the analogy of his reasoning with that of the sceptical philosopher was early pointed out by the Rev. D. Thom of Liverpool, one of his disciples. Barclay's interests were purely religious and theological. He did not trouble himself with the problems of epistemology. But undoubtedly his main position is exactly that of Hume, viz., that we cannot carry our ideas of causation beyond the field of experience and observation, that we cannot argue from the finite to the infinite, and that so transcendental a fact as a Divine revelation cannot be reached by argument or established by human testimony. It was rather from Dr. Archibald Campbell that Barclay drew his inspiration. And yet the two men were of essentially different natures, and even their central tenets were by no means identical. Campbell's polemic is directed against the Deists, and all he seeks to prove is that as a matter of fact and history men never have arrived at a true conception of God by means of reason or the light of nature. He does not assert that reason is incapable of discovering God, but only that reason never has discovered God without the aid of revelation. The knowledge of God, therefore, may still be the logical prius of revelation, though it never has been the actual antecedent. Barclay's intellect, on the other hand, is metaphysical. His argument is essentially a criticism of the reasoning faculty. There is something in its very nature that prevents reason from grasping the transcendental.

(2) But what is revealed truth, and on what testimony is it to be received? To this the answer is that the objective content of revelation is to be found in the Bible, and the Bible is to be received on the testimony of the Holy Ghost. 'God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ' (2 Co 4[6]). The illumination that enables the soul to see God in the Bible is a direct act of His grace, administered by the Holy Spirit. But the Holy Ghost gives only the illumination. The knowledge of God comes from without. It is seen in the face of Jesus Christ, of whom the whole Scripture testifies. This assent to the truth of the revelation of God given in Scripture is 'faith.' Faith is not a subjective emotion or personal appropriation of Christ. It is an intellectual act. It is belief in the Bible in its totality as the word of God, on *the testimony of the Holy Ghost*, i.e. through the light thrown upon it by the Holy Ghost illumining the soul of the believer, 'without any kind of collateral support, or any other evidence or testimony whatever.' There is no mysterious meaning in the theological term 'belief.' 'Belief is our holding of a thing for truth which is told us by another person, merely on account of that person's credibility or authority.' We believe earthly things on human testimony, heavenly things on Divine. Barclay is here doing what all the great theologians have done. He is simply interpreting his own experience. He saw that all the arguments for the being of God were untenable and inconclusive. And yet he knew that this fact, instead of shaking his faith, seemed only to confirm it. His faith, therefore, came from a deeper source than logical reasoning. It was inevitable. It was the illumination of the Holy Ghost. And if he held by the intellectual nature of faith, and made it grasp an objective reality outside of the soul itself, it was because he also saw the extreme danger of allowing his faith to be merged into a mere subjective emotion which might lure him into all the vagaries of mysticism. He refused to separate between the practical and the pure reason, as Kant did. He held rather, with the later idealists, that the postulates of experience were as much intellectually apprehended and had as genuine an objective validity as the inferences of syllogistic reasoning.

(3) And this conception of the nature of faith led to the distinctive tenet which brought him into most direct collision with the theology of his time, and was the cause of his being repelled as a heretic even from the most evangelical Churches—the assurance of salvation. It was his insistence upon this point as of the very essence of faith that was the cause of the charge of antinomianism to which he was continually subjected. To understand his point of view, we must place ourselves in the theological atmosphere of his day. The 'Moderates' were ex-

treme Calvinists in theory, but moralists in their practical teaching. The distinctive doctrines of Christianity formed simply the background of their prelections, and had little vital relation with the ethical life. The 'Evangelicals,' again, were moderate in their Calvinism, insisting strongly on the universality of Christ's atonement, but they made faith a mystic quality which was inwrought with the very texture of their religious practice. The atonement was sufficient for the whole race of humanity, but the elect alone were saved; for the atonement meant simply a free offer of the gospel, which became efficacious in the soul of the believer only by an 'appropriating act' of which they could give no clear account. When a sinner became awakened to a consciousness of sin, his great endeavour was to obtain 'an interest in Christ.' This he reached through a soul-struggle in which he passed from despair, through doubts and fears and fervent prayers, to a modified assurance which was chequered, even in the case of the greatest saint, with strange misgivings lest after all he was not in a state of grace. The practical test as to whether he was in a state of grace was his good works; for good works, though powerless to secure salvation, yet necessarily flowed from the 'appropriation' of Christ.

Now Barclay opposed both of these parties with a vehemence rendered impressive by his large command of the language of invective. The Moderates, in their eloquent laudations of the beauty of virtue, had no need of faith. But the Evangelicals were even worse, for they made God a liar and blasphemed against the Holy Ghost. To believe was to be saved, and belief meant simply faith in the Scriptural record. This faith was, indeed, a gift of God. It was the illumination of the Holy Ghost making the record luminous, and commending it to the believer's heart and conscience. It came unbidden, and was not to be prayed for, nay, could not be prayed for; for only the prayer of faith was efficacious, and without faith the sinner knew neither what to pray for nor to whom to address his prayer. Barclay repudiated the religion of doubts and fears and misgivings as of the devil. For a believer to doubt of his own salvation was simply to doubt the veracity of the Holy Ghost, and proved that he was no believer. 'Whosoever believeth that Jesus is the Christ is born of God' (1 Jn 5^1). If a man is born of God, then he is spiritually alive, and life is its own evidence. 'He that believeth hath the witness in himself, as he hath consciousness in himself of life and being, while he is alive and awake.' And again, 'Shall I then doubt or deny that I certainly see and exactly distinguish colours and objects with my own eyes, because another man is unhappy enough to be blind, or must needs be so perverse as to shut his eyes and then affirm that he cannot see the objects which I see and confess I do see? Is his blindness or perverseness any argument against my sight and my pleasure therein? I would indeed gladly open the windows of his chamber to let in light. I would set before him all the agreeable objects I myself perceive; but, alas! I cannot open the eyes of the blind or convert the perverse.'

It is plain that Barclay is not taking the word 'belief' in a mere conventional sense. It is not the general belief we give to matters we have never thought over, but accept simply as part of our environment. It is the belief which comes from personal conviction of a truth that enforces a rule of conduct, such as our belief in causation or the uniformity of natural law. And this belief comes only through the supernatural action of the Holy Ghost. It differs from the 'faith' of the Evangelicals in being more an intellectual act than a subjective emotion; for the 'appropriation' of Christ, which to them alone secures salvation, is essentially subjective in its nature. The difference between the two parties is a very real one, and Barclay is much nearer the modern standpoint than they were. In fact, Barclay is here, with Ritschl, making a 'value judgment.' Jesus Christ has to him the value of God, and simply to realize this is salvation. It is to be within the Kingdom. Barclay realizes it, not through any historical evidence as to the truth of the record, nor through any metaphysical reasoning as to the personality of the Son, but because life becomes luminous to him when he accepts it, because the Holy Ghost testifies to his soul and conscience that the fact is so. There is here no room for doubt. He is simply treading the solid rock of experience. He is trusting his own consciousness, and he cannot do otherwise. His assurance is perfect, and it is synonymous with his faith.

(4) And from this position resulted certain other tenets that ran counter to the religious ideas of his age. The sin of unbelief was the blasphemy against the Holy Ghost, which could not be forgiven either under the old dispensation or under the new. For to doubt the testimony of the Holy Ghost, *i.e.* to obscure the inner illumination, was to be in a state of perdition. So long as that state lasted salvation was impossible, because light was impossible. This was evidently the meaning of his teaching, though Barclay takes the old theological words in the old theological sense. Further, it was impossible for a sinner to pray for his own conversion. Barclay knew that for him the light was shining while others were in darkness. He could account for the fact only on the old lines of predestination. The sinner could but wait and be passive till God of His free grace opened his eyes. Prayer was one of the privileges of the believer, who was to pray for greater sanctity, because that entrance into the Kingdom which was salvation was but the first step in his spiritual progress. Moreover, the Lord's Supper was not a renewal of the covenant with God—a solemn, mystic rite to be approached with fear and trembling, because Christ was present at a Communion Table as He was present nowhere else. Believers were always to be holy, and required no more special preparation to commemorate the death of Christ at a Communion Table than to commemorate His resurrection on the Lord's Day. Barclay held that the idea of covenant-renewal at the Lord's Table, with the mystic sense of a Real Presence hovering around it, led logically to the Romish doctrine of the Sacrifice of the Mass. His views were those associated with the name of Zwingli.

(5) Barclay's conception of Scripture, in which to his opponents he seemed merely to be setting himself up as the only infallible interpreter of Holy Writ, must be taken in the light of his whole system, and will be found to be an inevitable deduction from his central tenet. To Barclay the testimony of the Holy Ghost is to Jesus Christ as the only Revealer of God. 'God . . . hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ' (2 Co 4^6). But the knowledge of God through Jesus Christ came to him from the word of God. And the word of God was the Holy Scripture. Here, again, the position is exactly like that of Ritschl, but there is this difference: Ritschl approaches a Bible that has been critically examined, dissected, re-constructed. He can no longer maintain the old theory of inspiration, but he is satisfied that the spiritual process which Scripture records remains unimpaired. That process can be read and understood only through Jesus Christ, who is the One Revealer of God, a knowledge of whom is life eternal. Barclay, from the circumstances of his time, had

to accept the Bible uncritically. The Bible was a book dictated by God to inspired penmen, who wrote exactly what God told them, whether they understood it or not. This was the general idea of the age, and Barclay differs from his contemporaries only in holding it more clearly and consistently than they did. The subject of the Bible is Jesus Christ and His salvation, and in a book practically written by God there must be no irrelevancies. The Bible invites a close and prayerful study. There are some parts of it which, to the soul illumined by the Holy Ghost, are clear as crystal. There are others that are dark and obscure. The true principle of interpretation, therefore, is holding fast by Jesus Christ, the main thesis, to interpret the obscure by the clear. The Holy Ghost Himself supplies a clue to the right interpretation in the references made in the Gospels to the fulfilment of prophecy in the Messiah. Many of these passages are from the Psalms, and it was to the Psalms that Barclay specially devoted his remarkable powers of exegesis. It seemed to him that the Evangelists regarded the Psalms as simply prophetic biographies of the coming Messiah, and this idea fell in exactly with his theory of Holy Writ. The Psalms in no wise express the emotions of the penmen. If they did, it is clear that their religion must have been dangerously similar to that religion of doubts and fears which he repudiates. They are the expression either of the sufferings of the Messiah when the whole weight of the world's sin pressed upon Him, or of the sufferings and triumphs of the Church of Christ. There is no verse in the Psalter that is not a reference either to Christ Himself or to His Church. Barclay has his canons of criticism, which are too long to be detailed here, but which show a careful study of the Psalms, and a singular appreciation of those points which, in other hands, have yielded different conclusions. He notices, *e.g.*, that the last two verses of Psalm 51 have not the personal note of what precedes, and uses them to give a Messianic interpretation to the whole. He points out, too, how his method of exegesis gets over the difficulty of the cursing Psalms. It is inconceivable that any of the saints of God could have uttered such curses upon their personal enemies. But when we know that the speaker is He who said, 'Vengeance is mine,' and that those whom He is cursing are the enemies of the gospel, the difficulty disappears. Barclay translated the Psalms into English verse, bringing out in each what he conceived to be its Messianic meaning. The book was intended to be used as a book of praise in the Berean Church, but it is notable that, in 1826, the edition published for this purpose, while it contains his dissertation, falls back upon the familiar version common to all Presbyterian Churches.

Barclay's religious system has fallen into complete oblivion. Of the churches he founded not a single trace remains. He lacked the spiritual magnetism necessary to be a great religious leader, and his theological position is deficient in that mystic element which touches the heart and excites enthusiasm. He was a metaphysician rather than a prophet, an acute reasoner rather than an inspired visionary, though neither was his knowledge of philosophy sufficiently wide nor his mental grasp sufficiently strong to enable him to break from his environments and find his proper sphere. He was intensely assertive in holding his tenets, and his powers of vituperation were extraordinary, necessarily repelling instead of conciliating opponents. But, at the same time, he has his own distinctive place in the history of the development of religious thought, and his ideas have enough permanent vitality in them to entitle them to a better fate than they have received.

LITERATURE.—The account of Barclay's life has been taken from the records of the Presbytery of Fordoun, extracts relating to his case having been made by the Rev. J. Brown of Bervie, presbytery-clerk, and also from the *Memorials of the Berean Assembly*, the official record of the Church in Edinburgh, in the possession of the writer. There is a life of Barclay in Chambers's *Biographies of Eminent Scotsmen*, 1835, and the *Dictionary of National Biography*, and short accounts in *Lives* prefixed to various editions of his works. A brief exposition of his doctrines is given in a preface to an edition of *Without Faith, without God*, by D. Thom of Liverpool in 1836. See also Archibald Campbell, *Necessity of Revelation*, 1739; *Autobiography of Dr. Somerville of Jedburgh*, 1861; Cameron, *History of Fettercairn*, 1899.

A. MILLER.

BERENGAR.—Berengar (Bérenger) was born at Tours about 1000 A.D. He was educated at Chartres, and was a pupil of Fulbert, the Bishop of Chartres. In 1031 he became Director of the Cathedral School at Tours. About 1040 he was appointed Archdeacon of Angers, though he continued to live at Tours. Some eight years later it was widely reported that he was advocating an opinion that the consecrated elements in the Holy Eucharist are only figures and likenesses of the body and blood of Christ, and not the body and blood themselves. He does not appear to have made any answer to remonstrances which were addressed to him by his friends, Adelman of Liège and Hugh of Langres. In 1050 he wrote to Lanfranc, the Prior of Bec, who was afterwards Archbishop of Canterbury, that he agreed with John the Scot about the Eucharist, probably meaning by 'John the Scot' the treatise of Ratramn, *On the Body and Blood of the Lord*, under the belief that this was the work of John Scotus Erigena. In a Council held at Rome in 1050 under Pope Leo IX. this letter was read, and Berengar was excommunicated. At a Council held at Brionne, near Bec, a little later, he is said to have made some kind of retractation. King Henry I. of France imprisoned him; and in September 1050, while he was in prison, his opinions were condemned at a Council held at Vercelli. A month later there was another condemnation in a Council held at Paris. In 1054 at a Council meeting at Tours under the presidency of Hildebrand, afterwards Pope Gregory VII., as Papal legate, Berengar denied the charges brought against him, and declared that after consecration the bread and wine are really the body and blood of Christ. Five years later, at a Council held at Rome, when Nicholas II. was Pope, Berengar burnt his writings, and either actually signed, or gave some kind of assent to, a paper drawn up by Cardinal Humbert in the following terms:

'I, Berengar, an unworthy deacon of the Church of St. Maurice of Angers, acknowledging the true Catholic and Apostolic faith, anathematize every heresy, especially that concerning which I have hitherto been in ill repute, which attempts to affirm that the bread and wine which are placed on the altar are, after consecration, only a sacrament and not the real body and blood of our Lord Jesus Christ, and that these cannot be held or broken by the hands of the priests or crushed by the teeth of the faithful with the senses but only by way of sacrament. And I assent to the Holy Roman and Apostolic See, and with mouth and heart I profess that concerning the sacrament of the Lord's Table I hold the faith which the Lord and venerable Pope Nicholas and this Holy Synod have by Evangelical and Apostolical authority delivered to be held and have confirmed to me, namely, that the bread and wine which are placed on the altar are, after consecration, not only a sacrament, but also the real body and blood of our Lord Jesus Christ, and that with the senses, not only by way of sacrament but in reality, these are held and broken by the hands of the priests and are crushed by the teeth of the faithful.' *

For some time after this Council any controversy in this matter was confined to theological discussion by means of writings. Further condemnations

* The wording of this document is capable of two interpretations. It is usually thought to be the expression of a wholly natural and carnal view of the Eucharistic presence. On the other hand, it was explained by the mediæval theologians to be a loose way of stating that the consecrated sacrament held in the hand and eaten in the mouth is the body of Christ. It is not unlikely that in a panic such expression as that in the document might be given to this belief.

were passed on the teaching of Berengar at Councils held at Poitiers in 1075, and at Saint Maixent in 1076. In 1078 a Council was held at Rome under Pope Gregory VII., whose policy both before and after he became Pope was aimed at protecting Berengar by endeavouring to find a form of words, in accordance with the ordinary belief, which he could accept. At this Council Berengar assented to a statement of much more general character than that which had been required at Rome in 1059. It was in these terms:

'I profess that the bread of the altar is, after consecration, the real body of Christ, which was born of the Virgin, which suffered on the cross, which sitteth on the right hand of the Father; and that the wine of the altar, after it has been consecrated, is the real blood which flowed from the side of Christ.'

In 1079 another Council was held at Rome, and at this Berengar, after some struggles, subscribed a statement which was more explicit than that of the previous year, but without the special kind of language which had marked the declaration of 1059. This statement was as follows:

'I, Berengar, believe with my heart and confess with my mouth that the bread and wine which are placed on the altar are, by the mystery of the holy prayer and the words of our Redeemer, substantially converted into the real, and true, and life-giving flesh and blood of our Lord Jesus Christ, and are, after the consecration, the real body of Christ, which was born of the Virgin, and which was offered and hung on the cross for the salvation of the world, and which sitteth on the right hand of the Father; and the real blood of Christ, which was shed from His side, not only by way of sign and sacramental power, but in peculiarity of nature and reality of substance.'

In 1080 a Council was held at Bordeaux, at which Berengar made a statement as to his belief, which appears to have been accepted by the Council as satisfactory. He died in 1088 at St. Cosme, an island in the Loire near Tours.

There is considerable difficulty in forming a judgment as to what the opinions of Berengar really were. There is no doubt of his vacillations under persecution; and it is probable that his mind changed to some extent from time to time. Of contemporary authorities who wrote against him, Lanfranc and Durand of Troarn say that he regarded the consecrated elements as being merely figures of the body and blood of Christ; while Witmund of Aversa records a view that he held an opinion that the body and blood of Christ are united with the elements so that, without the bread and wine being changed, the body and blood are present in the consecrated sacrament. In his own treatise, *On the Holy Supper*, it is quite clear that he denies any destruction or material change or conversion of the bread and wine, and any idea of a carnal or natural presence of the body of Christ; but as to the further question whether he meant that the consecrated elements are the body and blood of Christ in actual spiritual reality or that they are so only figuratively or virtually, there are passages which tell in both directions. It is not impossible that this difficulty in interpreting his language reflects some degree of uncertainty in his own mind; and such uncertainty may afford part of the explanation of his failure to meet opposition and persecution in any steadfast and consistent way. There appear to have been two schools among his followers, one of which maintained that the consecrated elements are merely figures of the body and blood of Christ, while the other asserted a presence of the body and blood united, through the consecration, with the bread and wine, without any change in the bread and wine themselves.

BERKELEY.—

1. Life.—George Berkeley, bishop and philosopher, was born on 12th March 1685 at Dysert in the county of Kilkenny, Ireland. At the age of 11 he was sent to Kilkenny school, and four years later, in 1700, left for Trinity College, Dublin, where in the various capacities of undergraduate, graduate, fellow, and tutor he remained for the next twelve years. The latter half of this residence at Trinity College is, so far as his philosophy is concerned, the most important period of his life. For it was then that he thought out his leading philosophical ideas and published his chief philosophical works. His later life did not lack opportunities apparently no less favourable for philosophical reflexion; but his interests had by that time been largely diverted to practical work, and, even as regards philosophy itself, his first constructive impulse seems to have yielded to the receptive mood of the meditative scholar.

The next period of Berkeley's life is divided between foreign travel and residence in London, where he speedily became intimate with, and greatly esteemed by, the cultured society of the time, including literary men such as Steele, Addison, Swift, and Pope. At the end of 1713 he went abroad as chaplain to the brilliant but eccentric Lord Peterborough, and spent nearly a year in travel in France and Italy. After an interval of two years, regarding which little is known, we find him again in Italy, this time as travelling tutor; and of this tour, prolonged over some four years, and covering a considerable part of Italy and Sicily, a partial record has survived in the shape of a private *Journal*, which copiously illustrates his impartial curiosity and close observation.

The period of his life which begins with his return to London, at the end of 1720, is marked out by the conception, attempted realization, and enforced abandonment, of his singular project for founding a missionary college at Bermuda. In 1724 he was made Dean of Derry. In the previous year he had received a totally unexpected legacy from a lady to whom, as one of his letters tells us, he was a perfect stranger—Hester Vanhomrigh, better known in connexion with the life of his friend Swift. This improvement in his fortunes enabled Berkeley to devote himself seriously to the realization of his Bermuda scheme. At length his efforts to arouse interest in it were rewarded. He obtained a Parliamentary vote of £20,000. The money, however, was never forthcoming; and in 1728, anxious to convince people that he was in earnest, Berkeley set sail with his wife, whom he had but lately married, and some friends, not directly for Bermuda, but for Rhode Island, where he was to await payment of the grant. After some three years' waiting it became clear, from a broad hint given by the minister Walpole himself, that there was little or no hope that the official assurances of payment would ever be carried out, and Berkeley set sail once more for England.

Some two years after his return he was made Bishop of Cloyne, and, in this retired spot in the county of Cork, Berkeley, whose health was now somewhat broken, spent the next eighteen years of his life, occupied partly with practical work, partly with scholarly study and meditation. In 1752 he left Cloyne to reside at Oxford, where one of his sons was going to be educated; but he did not long survive the change. His death took place on 14th January 1753.

2. Works.—As was said above, Berkeley's most important philosophical works were written in early life. The works referred to are the *Essay towards a new Theory of Vision* (1709), *Treatise concerning the Principles of Human Knowledge* (1710), and *Three Dialogues between Hylas and Philonous* (1713). These works will be dealt with below. To this period belongs also a discourse on *Passive Obedience* (1712), which is important as containing a brief statement of his views on the fundamental principles of ethical and political obligation. The content of social and political duty is defined, according to Berkeley, by universal and immutable laws of nature, by which he means rules of action whose constant observance is plainly seen to be necessary to the general well-being of mankind. The sanction of duty lies in the Divine government of the world, and the motive of duty in that reasonable regard for our eternal happiness, which should induce us to obey laws of nature so

sanctioned. In the discourse Berkeley is more particularly concerned to show (against, *e.g.*, Locke) that unlimited passive obedience to the civil ruler is a law of nature.

Upon this early period of productive activity a long interval of almost twenty years ensued, broken only by the publication in 1721 of a Latin treatise, *de Motu*, in which motion and causation are discussed from a philosophical point of view. Continental travel, London society, and his Bermuda project occupied his interests, and, when at length the quieter years of waiting at Rhode Island enabled him to produce a considerable work, he comes before us less as a philosopher than as an apologist of morality and Christian religion. *Alciphron, or the Minute Philosopher* (1732), the longest of Berkeley's writings, consists of a series of seven dialogues directed 'against those who are called Free-Thinkers.' Under the somewhat vague designation of 'Free-Thinking,' Berkeley includes practically any tendency of thought which he thinks hostile to the best interests of morality and Christian religion. And the rather undiscriminating zeal which leads him, not merely to condemn the levity of Mandeville, but to assail with somewhat inadequate criticism the genuine convictions of Shaftesbury, must be allowed to deserve the censure of being 'not without a tincture of clerical party spirit.'

The earlier dialogues are admirable examples of that literary form, and are extremely well managed for Berkeley's purpose. Two types of free-thinker are depicted for us. Alciphron, as confident in his philosophical pretensions as he is devoid of real thoroughness, is capable of taking part in reasonable discussion, but can never anticipate the effects of his own admissions, and succumbs helplessly to criticism. His constant recourse to new arguments renders only the more apparent his superficiality of mind. In Lysicles, on the other hand, free-thinking means little more than an absence of moral principle. He is ready to spout the extremest cynical views, but will not trouble himself with sustained argument, and remains quite unaffected by criticisms which he cannot answer. The later dialogues, in which Berkeley defends Christianity with the weapons of a now antiquated apologetics, are undeniably tedious. Considerations of literary art are too often forgotten, and the natural interchange of argument and answer gives place to instruction and learned disquisition.

In 1733 Berkeley was induced by the misconceptions of an anonymous critic to return, with a tract on *The Theory of Vision or Visual Language, Vindicated and Explained*, to the argument of his earliest work, which he had used for apologetic purposes in *Alciphron*. The next two years saw him involved in a mathematical controversy provoked by his attempt to show that mathematicians have no right to enlarge upon the obscurity and defective foundations of religious doctrine, since their own science is in such respects by no means beyond reproach. Berkeley's next published work, *The Querist*, which appeared in three parts (1735–1737), consists of a long series of brief and pointed questions, designed to call his fellow-countrymen's attention to the social and economic condition of Ireland and the means of improving that condition. The queries give ample evidence, not merely of the very genuine and practical character of Berkeley's philanthropy and patriotism, but also, when we consider the time at which he wrote, of a very remarkable grasp of economic truth as to the true sources of real wealth, as to money, credit, and banking, and as to the interaction of moral and economic causes. Finally, in 1744 there appeared an extraordinary work entitled *Philosophical Reflexions and Inquiries concerning the Virtues of Tar-Water*, better known by the title of *Siris*, which was prefixed to the second edition. The work was produced primarily to communicate to the world Berkeley's own conviction and experience of the medicinal value of tar-water. But the chain of reflexions which is hung on this medical peg proceeds to connect

'tar with the highest thoughts about things, by links which involve botanical, chemical, physiological, and metaphysical speculations that are subtle and mystical. . . . Its successive links of ascending science are connected by a gradual evolution, first, with ancient and modern literature concerning Fire; and, next, with the meditations of the greatest of the ancients about the substantial and causal dependence of the universe upon active Mind' (Fraser's Preface in *Works*[2], vol. iii. p. 118).

The book is to be regarded rather as an illustration of the learned studies which occupied the leisure of Berkeley's later life than as a document of his own philosophy. The 'hoary maxims' of antiquity 'scattered in this Essay,' he tells us, 'are not proposed as principles, but barely as hints to awaken and exercise the inquisitive reader' (§ 350).

3. Philosophy.—For a statement of Berkeley's substantive philosophy, then, we must depend on the earlier works of 1709–1713, together with the important *Commonplace Book* (first published in Fraser's *Life and Letters of Berkeley*), which was kept by Berkeley in the immediately preceding years of his residence at Trinity College, and in which his philosophy is seen in the making. The three main doctrines set forth in these works are those of Nominalism, Immaterialism, and Acquired Visual Perception, and all three furnish real and important contributions to philosophical thought. 'Among all philosophers, ancient or modern,' says Ferrier (Essay on Berkeley in Ferrier's *Philos. Remains*, 1866, vol. ii.), there is 'none who presents fewer vulnerable points than Bishop Berkeley.' And this is probably true if we are content to criticize Berkeley in respect of the things which he actually said, not in respect of those which he left unsaid. Ferrier goes on to point out the reason of Berkeley's success:

'The peculiar endowment by which Berkeley was distinguished, far beyond his predecessors and contemporaries, and far beyond almost every philosopher who has succeeded him, was the eye he had for *facts*, and the singular pertinacity with which he refused to be dislodged from his hold upon them.' And again, 'he was a speculator in the truest sense of the word; for speculation . . . is the power of seeing true facts, and of *unseeing* false ones.' 'No man ever delighted less to expatiate in the regions of the abstract, the impalpable, the fanciful, and the unknown. His heart and soul clung with inseparable tenacity to the concrete realities of the universe.'

(1) *Nominalism*.—It is this dislike of unreal abstractions, this desire to see concrete facts and to see them as they are, that inspires Berkeley's attack on 'abstract general ideas' in the Introduction to the *Principles of Human Knowledge*. He fastens upon a well-meaning, but not altogether happy, passage in Locke's *Essay*, in which that candid inquirer asks:

'Does it not require some pains and skill to form the general idea of a triangle . . . for it must be neither oblique nor rectangle, neither equilateral, equicrural, nor scalenon, but all and none of these at once? In effect, it is something imperfect that cannot exist, an idea wherein some parts of several different and inconsistent ideas are put together.'

Berkeley makes short work of this passage:

'Mr. Locke acknowledgeth,' he says (in a later work, *Defence of Free-Thinking in Mathematics*, § 45, where he is referring back to the *Principles*), 'it doth require pains and skill to form his general idea of a triangle. He farther expressly saith it must be neither oblique nor rectangular, neither equilateral nor scalenum; but all and none of these at once. He also saith it is an idea wherein some parts of several different and inconsistent ideas are put together. All this looks very like a contradiction. But, to put the matter past dispute, it must be noted that he affirms it to be somewhat imperfect *that cannot exist*; consequently, the idea thereof is impossible or inconsistent.'

And Berkeley makes his well-known appeal to the reader 'to look a little into his own thoughts, and there try whether he has or can attain to have' such an idea as Locke describes (Introd. to *Principles*, § 13). Now Berkeley's main contention in this attack is perfectly sound, viz. that a general idea is something *toto cælo* different from a confused image. He does not, it must be observed, deny that there are general ideas, but only that there are *abstract* general ideas, *i.e.* ideas which can be *imaged apart in their generality*. His own

example of generalized thinking makes this point perfectly clear:

'Suppose a geometrician is demonstrating the method of cutting a line in two equal parts. He draws, for instance, a black line of an inch in length: this, which in itself is a particular line, is nevertheless with regard to its signification general, since, as it is there used, it represents all particular lines whatsoever; so that what is demonstrated of it is demonstrated of all lines, or, in other words, of a line in general' (Introd. to *Principles*, § 12).

That is to say, a percept or image may in itself be quite definite and particular, and yet be the vehicle of a general meaning. Berkeley's contention, then, could be expressed by saying that we must distinguish sharply between an image and a meaning, and must place true generality not in images but in meanings. (The recognition by modern psychology of the *generic* image does not affect the question of principle.) Now, the symbols we use to express general meanings are words, and, unfortunately, in his eagerness to avoid unreal abstractions, Berkeley tends to say that generality is simply a matter of the application of names. In the rough draft (first published by Fraser) which Berkeley made of the Introduction to the *Principles* he states this view in a very uncompromising way:

'If a man may be allowed to know his own meaning, I do declare that in my thoughts the word "animal" is neither supposed to stand for an universal nature, nor yet for an abstract idea, which to me is at least as absurd and incomprehensible as the other. Nor does it indeed [in the proposition that Melampus is an animal] stand for any idea at all. All that I intend to signify thereby being only this—that the particular thing I call Melampus has a right to be called by the name "animal"' (*Works*[2], iii. 374).

That this view cannot be maintained is certain. For it is evident (1) that the 'right to be called by the name animal' must be based on certain properties which Melampus possesses in common with other animals; and (2) that these common properties may be made an object of thought. That is to say, there must exist a 'universal nature' (though not an *abstract* universal nature, or platonic εἶδος), and we must be able to think that universal nature by means of a general idea (though not an *abstract* general idea or *general image*).

It is to this same tendency to let the *meaning* fall out between the image and the word, that we must trace Berkeley's algebraic theory of general discourse:

'In reading and discoursing, names [are] for the most part used as letters are in Algebra, in which, though a particular quantity be marked by each letter, yet to proceed right it is not requisite that in every step each letter suggest to your thoughts that particular quantity it was appointed to stand for' (Introd. to *Principles*, § 19).

The fatal defect of this theory is, that, whereas in Algebra we attend to the symbols themselves, in reading and discoursing we attend, not to the words as such, but to their meanings (cf. Stout's *Analytic Psychology*, vol. i. p. 88).

(2) *Metaphysics of Immaterialism.*—There were two general ideas more especially, in respect of which men seemed to Berkeley to have become the victims of their own unreal abstractions—the ideas of Matter and Existence. Ignoring or forgetting the concrete applications on which the meaning and value of these general ideas depend, men had come to confer in thought *on the mere abstractions* another, and actually more fundamental, sort of reality than that possessed by the concrete experiences from which the abstractions are illegitimately derived. ''Tis on the discovering of the nature and meaning and import of existence that I chiefly insist,' says Berkeley in the *Commonplace Book* (*Works*[2], i. 17). Now, if we are to discover this real meaning of Existence, we must keep continually before our view the actual conditions under which alone this general idea can find particular application. We must not begin, for instance, by making the perfectly gratuitous assumption that there is a real or absolute existence of things, totally distinct from their being perceived or known. By doing so we should obviously be setting up a general idea which is abstract in the bad sense, because in the very nature of the case it can never have any application in experience. Yet this is precisely the assumption which the free and uncritical use of abstract general ideas like Matter and Existence leads men of science and philosophers to make. They wish to assert the reality of things, especially of external or material things, against sceptical doubts. But they choose the very worst possible way of doing so. For they put the real nature of things quite outside perception or knowledge, and thereby remove the only reason we have for asserting their existence or reality at all, viz. that we have actually experienced it. And thus, as a consequence of the misuse of abstractions, we land ourselves in the most absurd contradiction—the supposed real or absolute nature of things is nothing but 'the fiction of our own brain,' and yet we have made it 'inaccessible to all our faculties' (Preface to *Dialogues between Hylas and Philonous*). We have by our own act delivered ourselves over bound hand and foot to the sceptic. When we are pressed as to what we mean by the absolute existence of things, we have to admit that we have no knowledge of it at all. 'Methought I had some dilute and airy notion of Pure Entity in abstract; but, upon closer attention, it hath quite vanished out of sight.' Pure being is a '*something in general*, which being interpreted proves *nothing*' (*Dialogues* [*Works*[2], i. 437]).

We must return, therefore, Berkeley argues in effect, from these empty and mischievous abstractions to observe the actual conditions under which we predicate existence. And we observe, in the first place, that the things we affirm to exist are things which we know, *i.e.* objects of knowledge—in the case of the material world, objects of perception—and that the existence we affirm of them is their known or perceived existence. We affirm them to exist in that manner in which we know or perceive them as existing. Take first the case of material or sensible things. When we speak of the existence of material things, we mean their existence as we perceive them. Their *esse*, as Berkeley puts it, is *percipi*. Of an existence on their part different in kind from that which they have as objects of perception we know, and in the nature of the case can know, nothing. 'If there were external bodies [so existing], it is impossible we should ever come to know it; and if there were not, we might have the very same reasons to think there were that we have now' (*Principles*, § 20).

To express the fact that the only kind of existence which we can intelligibly attribute to material things is that kind of existence which they have for perception, Berkeley describes them as *ideas*, i.e. objects before the mind. In view of Locke's use of the term 'idea,' this mode of expression was the natural one for Berkeley to adopt, but it has exposed him to much misunderstanding. To it, no doubt, is mainly due the constantly repeated, but largely unjust, accusation of subjective idealism. Berkeley was quite aware of the danger of what we may call the *popular* misunderstanding of his terminology. 'It sounds very harsh,' he supposes an objector to urge, 'to say we eat and drink ideas, and are clothed with ideas' (see his answer and explanation regarding the use of the term 'idea' in *Principles*, §§ 38, 39). He was also aware of the danger of a more subtle or *philosophical* misunderstanding, viz. that of attributing to ideas some other kind of relation to the mind than that simply of being objects

before it. 'It may perhaps be objected that, if extension and figure exist only in the mind, it follows that the mind is extended and figured.' His answer is that 'those qualities are in the mind only as they are perceived by it—that is, not by way of *mode* or *attribute*, but only by way of idea' (*Principles*, § 49, and cf. the important passage in *Dialogues* [*Works*², i. 470]). But the question may be raised whether Berkeley himself was really able to keep himself free from the subtle confusion which he is here trying to obviate. Does not the habit of describing things as ideas tend to make him regard external things as simply modifications, or private possessions, of the individual mind that perceives them? His critics assume as a matter of course that he did so regard them. And certainly he makes statements which can easily be understood in that sense. For instance, 'What are [material things] but the things we perceive by sense? and what do we perceive besides our own ideas or sensations?' (*Principles*, § 4). Or again, 'Did men but consider that the sun, moon, and stars, and every other object of the senses, are *only* so many sensations in their minds, which have no other existence but barely being perceived, doubtless they would never [as idolaters do] fall down and worship their own *ideas*' (*Principles*, § 94). In passages like these he seems to enunciate subjective idealism in its extremest form. But it must be remembered that everything depends on the prepossessions with which we read these emphatic statements. When the critic, who reads them in the light of his ready-made distinction *between ideas and things*, sees that things are said to be nothing but ideas, he straightway infers that all reality and objectivity are taken out of them. But Berkeley, who entirely denies the distinction *in the sense in which the critic intends it*, infers no such conclusion. On the contrary, he conceives himself, as we have seen, to be vindicating for our perceptions the reality which has been denied to them in order to be attributed to empty abstractions. As he himself protests, he is 'not for changing things into ideas, but rather ideas into things' (*Dialogues* [*Works*², i. 463]). 'Those immediate objects of perception,' says Philonous to Hylas, 'which, according to you, are only appearances of things, I take to be the real things themselves' (*ib.*). From this point of view, then, it is much nearer the truth to speak, with Professor Fraser, of Berkeley's Immediate Sense-Realism (*Life and Letters of Berkeley*, p. 386, where see also the illuminating footnote with its well-known illustration of the two concentric circles). What Berkeley's critics, of course, object to is that things and ideas should be identified at all. But unless the distinction between ideas and things is to be asserted in that absolute fashion, which leads, as Berkeley himself pointed out, directly to scepticism, the objection is really irrelevant. For any less extreme distinction between ideas and things is, and must be, from Berkeley's point of view, a distinction *within ideas themselves in his sense of the term*.

For it must be observed that, when we say that, according to Berkeley, the *esse* of material things is *percipi*, we are by no means giving a complete statement of his doctrine as to their reality. He affirms that all material things are ideas, but he does not affirm that all ideas are material things. The remainder of his doctrine, however, is less characteristic, and may be stated quite briefly. The important question is how those ideas or objects which we regard as real are distinguished from those which are *mere* ideas or products of the imagination. The distinction rests, according to Berkeley, on these grounds: (1) that real objects of sense are independent of our will, (2) that they are much stronger and more distinct than ideas of the imagination, (3) that they are connected together according to fixed laws (*Principles*, §§ 29, 30). That fixed connexions of some sort should obtain among our ideas of sense is the condition upon which alone we can 'regulate our actions for the benefit of life; and without this we should be eternally at a loss' (*Principles*, § 31). But why the particular laws of connexion which do obtain should be just those and not others we cannot say; so far as our insight goes, the laws of nature are contingent or, as Berkeley is fond of saying, arbitrary.

So far we have been dealing with the reality of *material* things. But the doctrine of the nature of *their* reality plainly points *beyond them* to realities of another order. To say that material things are ideas is to say that they are objects for mind, and we have therefore to develop our doctrine of existence in reference to mind. Berkeley does not, however, develop his doctrine of existence very far under this head, and we can again afford to be brief. It remains true, of course, here as in the case of material things, that the only kind of existence we can attribute to mind in general is that which we find actual particular minds to possess. In what way, then, do we know minds as existing? In other words, what manner of existence do we experience in ourselves? The answer is that we know ourselves as busied about ideas or objects, viz. (*a*) as perceiving them or thinking about them, (*b*) as willing or acting in reference to them. In both respects the existence of mind is directly contrasted in character with that of ideas. Mind is percipient, ideas are perceived; mind is active, ideas or objects are passive. To exist, then, in the case of mind, *means* to be active, whether in the way of perception or in that of volition: the *esse* of mind is *percipere*, *velle*, *agere*. From this contrast of mind and ideas two consequences follow: (1) that we have, strictly speaking, no *idea* of mind. We do, of course, have knowledge about mind, but to describe this knowledge we must use some other term than 'idea.' Berkeley himself, in the second edition of the *Principles*, suggested the term 'notion' (§§ 27, 89, 142). But the new term does not imply any alteration in his doctrine of mind. Even in the *Commonplace Book* we find him insisting again and again that 'to ask, Have we an idea of will or volition, is nonsense. An idea can resemble nothing but an idea. . . . Thought itself, or thinking, is no idea. 'Tis an act' (*Works*², i. 35, 51). (2) Since agency is known to us only as a characteristic of mind or spirit, it follows that any changes which ideas or objects undergo must ultimately be referred to the agency of mind. All that we can observe in ideas is the bare fact of motion or change. For the causal explanation of such motion or change we must invoke the agency of mind or will.

While the foregoing doctrine as to the reality of mind has necessarily been developed in the light of our knowledge of our own finite minds, it cannot stop short at the recognition of finite minds. For (1) we assume the existence of many things, which we do not perceive, or have reason to suppose any other finite mind perceives, and (2) we observe many changes, which we do not produce, or have reason to suppose any other finite mind produces. The only way, then, in which we can render intelligible such existence of things which are not perceived by any finite mind, and such change in things as is not produced by any finite agency, is to assume an Infinite Mind on whose intelligence and agency the whole order of Nature depends. And so obvious does

this assumption appear to Berkeley, that he argues that

'God is known as certainly and immediately as any other mind or spirit whatsoever distinct from ourselves. We may even assert that the existence of God is far more evidently perceived than the existence of men; because the effects of Nature are infinitely more numerous and considerable than those ascribed to human agents.'

And among these effects of Nature are the signs by which finite spirits communicate with each other. So that 'He alone it is who, "upholding all things by the word of his power," maintains that intercourse between spirits whereby they are able to perceive the existence of each other' (*Principles*, § 147).

Both in the *Principles* and in the supplementary *Dialogues* Berkeley was at great pains to anticipate and reply to such objections as seemed likely to be brought against his Immaterialism. It is hardly necessary to refer to these in detail, because it is evident *a priori* that any function that can be fulfilled by a perfectly unknown 'Matter' can be equally well fulfilled by Berkeley's intelligent Deity. And, on the other hand, as Berkeley himself points out (*Dialogues* [*Works*[2], i. 468]), it is no use to bring against Immaterialism objections that apply equally against 'Materialism' itself, such as that no two minds, on Berkeley's theory, perceive the same things. For, if this objection holds against Berkeley (a point on which he does not express himself very clearly, *ib.* pp. 466–468), it holds even more obviously against those whose 'same things' are *not* 'ideas,' *i.e.* are not perceived at all.

Subsequent criticism of Berkeley has been inclined to take the line that he has no right to assume the existence of that intelligent Deity which he substitutes for 'Matter,' or even the existence of fellow-men, since logically he is shut up in the circle of his own 'ideas.' The view we take of this criticism will depend, of course, on the view we take of the accusation of subjective idealism. It is a criticism which may be said to come from reading Berkeley too much in the light of Hume's scepticism—a kind of injustice from which Locke too has notoriously suffered. After the manner of Reid—who was frightened out of his original Berkeleyanism by a study of Hume's *Treatise*—the critics construct a logical evolution of thought from Locke (or Descartes) to Hume, in which Berkeley's philosophy must take its appropriate place, however much distortion it undergoes in the process.

The real difficulties of Berkeley's philosophy begin at the point where he himself left off, viz. his inadequately developed doctrines of active mind and of God. Some of the most interesting notes in the *Commonplace Book* are those which show him struggling with the problem of Will. The problem is not followed up in his published works, and yet it is of the utmost importance for his philosophy on its more constructive side, since with him Will, Activity, and Mind coincide. Reflexion soon shows that the eternal volition by which God 'upholds all things' cannot be exercised, as man's finite will is, upon a material given to it from without; and in like manner God's eternal perception of the world is not a perception to which objects are given from without. We have therefore to face this difficulty, By what right do we distinguish God's eternal perception and will from the Order of Nature at all? Berkeley protests (*Principles*, § 150) against Nature being taken for 'some being distinct from God.' He does not realize that, conversely, there is, so far as our mere knowledge of Nature goes, an equal difficulty in taking God as a being distinct from Nature. His blindness to this difficulty is no doubt due to the apparent sharpness of the contrast in finite mind between active thought or will and the ideas upon which these operate. But, even as regards the finite mind, the abstract separation of the activity of thinking and volition from the ideas which alone make thought and will concrete is one which Berkeley could hardly have retained if he had ever come to develop his doctrine of mind for its own sake.

It is noteworthy that Berkeley's negative philosophy or Immaterialism proper is represented in our own day both in science and in philosophy—in science by thinkers like Mach, in philosophy by the Immanent Philosophy of Schuppe and others, which rejects the Kantian thing-in-itself as Berkeley rejected the Lockian substratum or unknown 'Matter,' and adopts a similar identification of things with ideas. Like Berkeley, the Immanent Philosophy is, of course, accused of subjective idealism (see, *e.g.*, the criticism of both in Volkelt's *Erfahrung u. Denken*, 1886, p. 121 ff.). If we take Berkeleyanism in a broad sense as representing some kind of identification of existence with consciousness or experience, the list of recent thinkers who show more or less strong Berkeleyan sympathies might be widely extended.

(3) *Psychological Theory of Visual Perception.*—Berkeley's *New Theory of Vision* is in some ways, perhaps, the most brilliant of all his writings, and is quite unquestionably one of the most brilliant monographs ever written on a psychological subject. It is, moreover, at least as remarkable for its scientific method as for its philosophical power. The general aim of the Essay is to discriminate clearly from each other the specific data of sight and touch, and to show how visual data have acquired a tactual significance. Just as a printed page means far less to an illiterate person than to one who has learned to read, so the patches of colour which are the proper data of sight must have meant far less to us, before experience established a connexion between them and the data of our other senses (especially those of touch and movement), than they do now when that connexion has become firmly fixed. When we look at a picture of a landscape, what is actually before our eyes is a small flat-coloured surface, but this arrangement of colour is significant to us of a great expanse of country. So completely established is this significant character of colour arrangements that it is difficult for any one but a trained artist to eliminate the significance and perceive the mere colour arrangements as such. And in like manner it took the genius of a Berkeley to dissolve that established connexion of visual and tactual data, upon which our adult perception of the actual world depends, and to discover the kind of way in which the connexion must originally have been established. The first problem he deals with is that of the visual perception of distance. He takes it for granted that distance out from the eye is not directly perceived, and that our estimates of *remote* distance are plainly dependent on experience. The part of the problem of which no proper account had as yet been given was the perception of *near* distances; for the mode of treatment adopted in geometrical optics was, as Berkeley showed, quite inappropriate in psychology. The question to be answered was, By what experience is the connexion between near distance as measured by movement and near distance as signified to the eye established? What are the signs of near distance which have brought about the *acquired visual* perception of it? Berkeley discovers three such signs: those which are now known as sensations of convergence and divergence, sensations of accommodation, and diffusion circles. And he shows how, in virtue of the regular connexion of these sensations, on the one hand, with distinct or indistinct vision, and, on the other, with distances as measured by movement, the visual object whose perception brings these sensations is perceived as being at the distance which the sensations signify. *E.g.* if, in order to perceive an

object distinctly, I have to make my eyes converge, I perceive this object as nearer than that at which I was previously looking; if, next, I have also to strain my eyes to keep it distinct, I perceive it as nearer again; and if, finally, it nevertheless becomes blurred, I perceive it as quite close to the eyes. So firmly is the connexion between the specific visual perception of patches of colour and the acquired visual perception of distance now established, that we find the greatest difficulty in discriminating between them; while the sensations whose work it is to establish and maintain the connexion are hardly ever noticed, because our attention is so wholly given to what the sensations mean—viz. differences of distance—that we have none left to bestow on the sensations themselves. Berkeley illustrates his argument from our experience of understanding spoken words:

'No sooner do we hear the words of a familiar language pronounced in our ears but the ideas corresponding thereto present themselves to our minds: in the very same instant the sound and the meaning enter the understanding: so closely are they united that it is not in our power to keep out the one except we exclude the other also. We even act in all respects as if we heard the very thoughts themselves. So likewise the secondary objects, or those which are only suggested by sight, do often more strongly affect us, and are more regarded, than the proper objects of that sense; along with which they enter into the mind, and with which they have a far more strict connexion than ideas have with words' (*New Theory*, § 51).

After dealing with our acquired visual perception of Distance, Berkeley proceeds to investigate in like manner, first, our acquired visual perception of true or tactual (as distinguished from apparent or visual) Magnitude; and, next, our acquired visual perception of Situation. In the latter part of the Essay he urges, in all its breadth, the doctrine, already exemplified in dealing with Distance, Magnitude, and Situation, that the true data of vision and of touch, respectively, are radically distinct, and shows how helpless pure vision would have been if it had been wholly deprived of the aid of touch. The developed sense of vision is extremely rich, but its development depends on what it borrows from touch. It is the experienced connexion of purely visual data with tactual data that makes developed vision what it is. And, according to Berkeley, this experienced connexion is essentially an arbitrary one. *E.g.* it is a fact of experience that, as an object recedes in tactual space, the corresponding visual appearance grows smaller; but the relation might just as well have been precisely reversed, and in that case we should have interpreted decreasing visual magnitude as a sign of approach instead of the opposite. Of course, whichever relation holds must hold consistently. If vision and touch are to correspond at all, their correspondence must be consistent throughout. But that they should correspond at all, and in what manner, is, so far as we can see, an arbitrary or contingent fact (see, *e.g.*, § 143). Throughout the whole Essay, Berkeley develops the logical consequences of his general view with great acuteness and thoroughness. But he does not fail, on the other hand, to use such means of verifying his theory as offer themselves. He applies it, for instance, to solve problems in optics, and also such well-known problems as those raised by the larger appearance of the moon at the horizon, and by the inversion of retinal images.

Berkeley's theory has been both developed and criticized. It left room for development, partly, of course, because it was only a theory of the one sense of vision, whereas modern psychology gives a generalized theory of space-perception; but partly, also, because it assumed (in accordance with the current philosophy) the atomic distinctness of sensations, and therefore treated the problem of perception as a problem simply of the combination or integration of sensations, whereas in a modern psychology such as Ward's, which has learned from biology to regard mind from the point of view of development, the problem of perception is seen to be one of differentiation as well as of integration. And perception, of course, develops as a whole: we do not, as Berkeley's treatment might suggest, have tactual perception present in its completeness before any connexion with visual perception begins.

Criticism (not unaccompanied by misunderstanding) of Berkeley's theory has fastened mainly upon his account of our acquired visual perception of distance. It has been sought to show that the perception of distance is native to vision itself. But no genetic psychology can really afford to dispense with the experiences of movement of the body and limbs in accounting for the perception of space. We must not forget that, if we consider only adult or fully-developed visual perception, we are begging the question so far as Berkeley is concerned. He fully admits that *acquired* visual perception of distance is, in point of *time*, immediate enough. The look and ocular feel, so to speak, of distance in objects is now so familiar to us that we are, within limits, as immediately aware of distance as of colour itself. A table looks to be at a certain distance just as it looks hard, though mere or uneducated vision could no more inform us of distance than of hardness. Recent experimental physiology has shown, however, that, as regards adult visual perception, the primary factor in the (binocular) perception of the *relative* distances of *near* objects is one of which Berkeley was not aware, viz. (in physiological terminology) the mechanism of corresponding points in the two retinæ. And it has been shown that the perception of relative distance by means of this mechanism precedes, and probably sets up, movements of convergence and divergence, not conversely. The question, what answers *psychologically* to the physiological mechanism, *i.e.* Berkeley's question of the *psychological* signs of distance, is one with which physiology is less concerned. Finally, it should be observed that physiological inheritance of nervous co-ordinations may greatly shorten the process of the education of vision.

For the historical antecedents and reception of Berkeley's theory of vision see Fraser's Editorial Preface; on the history of the theory of visual perception generally, Sully's *Human Mind*, 1892, vol. ii. App. B, where reference is also made to the medical evidence; for a full statement of current psychological views, James's *Principles of Psychology*, 1891, ch. xx. in vol. ii.; for the physiology of vision, chap. on 'Vision,' by Rivers, in vol. ii. of *Text-book of Physiology*, ed. Schäfer, 1900. On the more philosophical questions of the 'arbitrariness' of visual signs, and the relative importance of vision and touch in our perception of the external world, there are some illuminating remarks in the chapter on the Theory of Vision, bk. i. ch. xii., in Grote's *Exploratio Philosophica*, pt. ii., 1900.

LITERATURE.—Fraser's *Complete Works of Berkeley* is now in its second edition (4 vols., Oxford, 1901); his *Life and Letters of Berkeley* (Oxford, 1871) contains also an important chapter on the Philosophy of Berkeley; it is supplemented by a smaller biography, *Berkeley*[2], 1899, in Philos. Classics, based in part on new materials.

As regards Berkeley's metaphysics, the criticisms of Reid, *Intellectual Powers* (in vol. i. of Hamilton's ed. of his works), Essay ii. chs. x. xi., are classical in their way; Green, in the General Introd. to his ed. of Hume (reprinted in Green's *Works*, vol. i., 1885), § 158 ff., treats Berkeley only as preparing the way for Hume's completer empiricism; J. S. Mill's essay in *Dissertations*, vol. iv., 1875, and the chapters on the 'Psychological Theory of the Belief in Matter,' in his *Exam. of Sir W. Hamilton's Philos.* (third, 1867, and later editions), chs. xi. xii. and Appendix, are interesting for their points of difference from, as well as of identity with, Berkeley's theory; a brief review of the English psychology of external perception in Croom-Robertson's *Elements of General Philosophy* (1896), pp. 154–180, is useful; in addition to the histories of philosophy see Lyon's *L'Idéalisme en Angleterre au xviiie siècle* (Paris, 1888), and Adamson's *Development of Modern Philosophy* (1903), vol. i. pp. 124–132 and 250 f.; for other literature see *DPhP*, vol. iii. pt. i. (1905) pp. 120–122, or Ueberweg-Heinze's *Gesch. d. Philos.*[10] iii. (1907) p. 172 f.; Ueberweg's own German tr. of the *Principles* is useful for the running criticism given in the notes.

H. BARKER.

BERNARD OF CLAIRVAUX.—I. **Life.**—Bernard was born at Fontaines, two miles from Dijon, in 1090 (not 1091; see Vacandard, *Vie de S. Bernard*, i. 1). His father, Tescelin († Apr. 1117, at Clairvaux), was a knight of experience, gentle but brave, of high birth; his mother, Alith or Alice of Montbard, was of saintly character (for Bernard's noble descent see the 'diatribe' by P. F. Chifflet, 1660, *PL* clxxxv. 1383–1542). Such was Bernard's commanding will that, when (1112) at the age of 22 he determined to become a monk, he persuaded thirty young noblemen, including his brothers, to enter with him the most austere monastery of Europe, the famous Citeaux (*PL* clxxxv. 237), founded 15 years previously by Robert of Molesme († May 1110), and governed, after Robert had been forced to return to his original monastery (1099), by the real founder, Stephen Harding of Sherborne in Dorset († 28th March 1134; for his life see *DNB*, xxiv. 333). In 1115, as Citeaux had grown too big, Bernard was selected by Stephen as the leader, or abbot, of a third colony of twelve sent out from Citeaux to found a new home. Bernard struck out for the plateau of Langres in Champagne, and there (25th June 1115), in a wild valley called Wormwood, watered by the Aube, he built a rude wooden structure, with chapel, dormitory, and refectory under one roof, long afterwards preserved by the veneration of Cistercians (see Joseph Meglinger's description of a visit to it in May 1667; Meglinger, *Itin. Cist.* in *PL* clxxxv. 1608). To this rude structure Bernard gave the name of Clairvaux (i.e. *Clara Vallis*, 'Brightdale,' *vice* Wormwood, *Vallis Absinthialis*, *PL* clxxxv. 241). Here the discipline and asceticism was of the strictest, and for a time Bernard's health was impaired. But the abbey speedily grew in numbers, so that in 1118 it sent out its first colony to Trois Fontaines near Chalons.

In 1119 Bernard began his correspondence, his first efforts showing abundant vigour but little of the later skill. His activity was indefatigable, and his fame and influence rapidly grew. Miracles were assigned to him, especially the gift of prophecy (for the contemporary evidence on this matter see *PL* clxxxv. 252–7, 262, 333–50; and, above all, the astonishing diary of Hermann, bp. of Constance in 1446, in *PL* clxxxv. 374 ff.). At the Synod of Troyes (Jan. 1128) his powerful advocacy gave the Knights Templars their real start, though the Rule of the Templars, commonly assigned to him (Bouquet, *Recueil*, xiv. 232), is by a later hand, at any rate in parts (Labbé, *Conc.* xxi. 360; Mabillon, *Op. Bern.* ii. 543, in *PL* clxxxii. 919). His *de Laude novæ militiæ ad milites Templi* was written about five years later, between 1132 and 1136. Though short, it is rhetorical and somewhat weak (in *PL* clxxxii. 922 ff.). At the same Synod of Troyes he procured the deposition of the bp. of Verdun. For this he was denounced to Rome as a meddler, and received a bitter letter of rebuke from the Roman chancellor, Cardinal Haimerich (*Ep.* 48).

With the death of Honorius II. (14th Feb. 1130) Bernard's European fame began. In the schism which followed, Bernard's voice at the Council of Etampes (1130; for the date see Vacandard, *op. cit.* i. 291 n.) secured for Innocent II., whose hurried election, though prior to that of his rival the Jewish Pierleoni (Anacletus II.), had been most irregular, the support of the French clergy (Labbé, *Conc.* xxi. 441–4); and a few months later, at Chartres (Jan. 1131; see Vacandard, *op. cit.* i. 303), the allegiance of Henry I. of England, in spite of the fact that the English clergy were leaning to the anti-pope Anacletus (*PL* clxxxv. 271). In consequence, Innocent showered immunities on the Cistercians, to the disgust of Clugny, and on his return to Italy in 1132 (from which he had fled almost immediately after his election) took with him Bernard, to whose exertions and letters (Bern. *Epp.* 128 ff.) he owed no small part of his growing recognition. In 1135 Bernard returned to Clairvaux and set about the re-building of the abbey in a more convenient place (*PL* clxxxv. 283–5). In this year we date also the preaching of the first 23 *Sermones in Cantica* (Bern. *Epp.* 153–4; Vacandard, *op. cit.* i. 471). In 1137, as the schism in Italy, under the lead of the Norman Roger, whom Anacletus had crowned as the first king of Sicily, was still disturbing the Church, Bernard once more journeyed there. The death of Anacletus (25th Jan. 1138), and Innocent's recognition in Rome, left Bernard the virtual pope of Christendom, though not without opposition from the cardinals (see below, *re* Gilbert de la Porrée); and with the election of Eugenius III. (15th Feb. 1145), a Cistercian monk and pupil of Bernard, the ideas of Clairvaux became supreme.

In 1145 Bernard was called upon by Eugenius III. to preach the second Crusade at Vézelay (Easter, 31st March 1146). He was afterwards deputed to preach the same in Germany; and as a result of his meeting with the Emperor Conrad III. at Speyer, the reluctant monarch, overcome by Bernard's eloquence, took the cross (27th Dec. 1146). On the failure of the first expedition, Bernard and Suger planned a second, and at a Council at Chartres (7th May 1150; for the date of this Council, which Mabillon, Baronius, Morison, and others put in 1146, see Vacandard, *op. cit.* ii. 428–33) Bernard was actually elected commander-in-chief—an office which he refused (Bern. *Ep.* 256). In his last years Bernard suffered much pain and disappointment. The misfortunes of the second Crusade were laid at his door. He was saddened by the death of his friend, the abbot Suger (13th Jan. 1152). He died five weeks after Eugenius, on 20th Aug. 1153, and was buried at Clairvaux. He was canonized by Alexander III., 15th Jan. 1174 (*PL* clxxxv. 622), while Dante's references (*Par.* xxxi.) show the regard in which he was universally held. When in 1793 Clairvaux was turned into a glass factory and the tombs broken up, Bernard's bones were distributed as relics to surrounding churches (*PL* clxxxv. 1697).

2. **Character and place in history.**—The character of St. Bernard has already been sketched in vol. i. p. 16 (*s.v.* ABELARD). His marvellous energy, in spite of bodily weakness (see the list of his journeys in Vacandard, *op. cit.* ii. App. D), and his power as a ruler of men will be apparent from the preceding outlines of his life. His personal magnetism, as we see from the *Life* written by William of St. Thierry (c. 12 in *PL* clxxxv. 258), was extraordinary, and no doubt, in part, gave rise to the innumerable tales of his miraculous gifts (see above). Equally important was his fearlessness. In his personal humility amid all exaltation he proved himself a true saint, as also in the passion and depth of his piety.

The importance of St. Bernard as the virtual pope of his age cannot be exaggerated. For a few years the centre of Christendom was transferred from Rome to Clairvaux. His influence was generally on the side of the angels, though deduction must be made for his passion as a heresy-hunter (see below), and for a certain impatience of contradiction, which leads him at times into arrogant writing and action (*e.g.* his dispute with the gentle Peter the Venerable of Clugny with reference to the bishopric of Langres [Bernard, *Epp.* 166–87, with which cf. Peter of Clugny, *Ep.* i. 29], which resulted in the election of a prior of Clairvaux, a kinsman of Bernard). At times his restless vigilance shows a tendency to lead him into meddling with matters that did not concern him, probably, as in the case of William

Fitzherbert, archbp. of York, through the appeal to him of Cistercians looking to Clairvaux as their head.

St. Bernard was the last great founder of the older forms of monasticism. Through his influence the Cistercian order spread into every land. Within his lifetime no fewer than 160 Cistercian monasteries were founded, chiefly through his prestige and influence; of these 68 were filiations of Clairvaux (see lists in Janauschek, *Orig. Cist.* vol. i., Vienna, 1877; Vacandard, *op. cit.* ii. App. C). In England especially, the influence of the Cistercians was very great. Introduced at Waverley in Surrey in 1128, they soon established their homes in every part of the country, especially in the wilder parts of Yorkshire (*Eng. Hist. Rev.* [1893] pp. 625–76: 'The Settlement of the Cistercians in England,' by Miss Cooke; see also article MONASTICISM for the distinguishing features of the Cistercians).

3. St. Bernard's theological disputes.—The influence of Bernard as a theologian was always thrown against all change or progress. He was the last of the Fathers, as Abelard was the first of the Schoolmen. In his antagonism to all that Abelard represented (on which see ABELARD, vol. i. p. 16; to the authorities there cited add, for R.C. views, Vacandard, *Abélard, sa lutte avec S. Bernard*, Paris, 1881) Bernard was the refuge of a reactionary school destined to be swept away by the rise of Scholasticism. In later years his hatred of heresy became almost a monomania. As his contemporary, Otto of Freising, tells us:

'Bernard was, from the fervour of his Christian religion, as jealous as from his habitual meekness he was in some measure credulous; so that he held in abhorrence those who trusted in the wisdom of this world and were too much attached to human reasonings; and if anything alien to the Christian faith were said to him in reference to them he readily gave ear to it' ('de Gest. Friderici,' i. 47, in Pertz, *MGH* xx. 376).

Hence a want of fairness in dealing not only with Abelard—this perhaps was natural, for the two men were diametrically opposed—but also with Gilbert de la Porrée.

The struggle of Gilbert and Bernard has been told us on Bernard's side by his secretary, Geoffrey of Auxerre in his *Libellus contra Gilbert. Porret.* (*PL* clxxxv. 595 ff.), and in his *Epistola de Condemnatione*, written forty years later to Henry (not 'Albinus,' as Mabillon, Migne, and other editors; see *Hist. Litt. de la France*, xiv. 339 n.), cardinal bp. of Albano. This *Ep.* is in *PL* clxxxv. 587 ff. It is this version that is followed in the *Acta Sanctorum* (Aug. iv. c. 41) by R.C. writers in general, and by Cotter Morison, *op. cit.* But the publication of the *Historia Pontificalis* (written in 1163, first published in 1868 by W. Arndt in *MGH* xx. 517–45) of John of Salisbury († Oct. 1180, for whom see *DNB* xxix. 439), who was present during the trial, has shown us the inaccuracy and bias of Geoffrey. A more impartial statement is given us by Otto of Freising (*de Gest. Friderici*, i. cc. 55–7).

Gilbert, who was born at Poitiers about 1075, was trained under Bernard of Chartres and Anselm of Laon. After lecturing on theology at Paris, he retired, as bishop, to Poitiers (1141), possibly as the result of Abelard's condemnation at Sens (see vol. i. p. 16). He died in 1154. His *de Sex Principiis*, a supplement to the *Categories* of Aristotle (ed. Venice, 1489), was the recognized mediæval text-book on which Albert the Great and other schoolmen wrote extensive commentaries. By his continuation of Anselm of Laon's continuation of Walafrid Strabo's *Glossa Ordinaria* he became a joint-author of the current mediæval notes on the Bible (R. L. Poole, *Illustrations of Hist. of Med. Thought*, 1884, p. 135 n.; for Gilbert's philosophical position, see Ueberweg, i. 399).

Gilbert, who, according to John of Salisbury, 'was a monk of the clearest intellect and of the widest reading, in literary culture surpassed by none' (*Historia Pont.* viii. 522), had published a commentary on the *de Trinitate* (a collection of treatises first printed at Basel in 1570, currently assigned to Boëthius, but proved spurious by F. Nitzsch, *Das System des Boëthius*, Berlin, 1860). In this *Commentar. in Boëth.*, Gilbert, by distinguishing 'God' from 'Deity,' in which last he found the universal that his realism demanded, had laid such stress on the absolute unity of the Trinity as almost to exclude the existence within it of a Trinity, except as external, non-essential, and merely formal (see Poole, *op. cit.* 179 ff.; or, more fully, Lipsius in Ersch and Gruber's *Allgemeine Encyk.* [1858] lxvii. 209 ff.). His obscure statements led his archdeacons to lodge charges with Eugenius III., and to the attack of Bernard, first in a Synod at Paris (1147), then in an adjourned Council at Rheims (March 1148), where among the advocates for the prosecution we find Theobald, archbp. of Canterbury, and Thomas Becket. On the other side we find the sympathies of the cardinals; the struggle, in fact, in one of its aspects, was a conflict between the prelates of England and France and the cardinals, 'with the object of forcing the Apostolic See to follow Bernard' (John of Salisbury, *op. cit.* ix. 523 ff.; on the complicated politics which led the English to this support of Bernard see K. Norgate, *Angevin Kings*, i. 363 ff.). The issue was a complete failure for Bernard. When Eugenius proposed that Gilbert's commentary should be handed over to him that he might erase whatever was needful, Gilbert claimed that it was his own duty to erase what was amiss—a declaration received with loud applause by the cardinals. The Council ended with the Pope's mysterious ruling 'that the essence of God should not be predicated in the sense of the ablative case only, but also of the nominative' (Otto Freis. *op. cit.* i. 56 f.), and Gilbert returned 'with his honour unabated to his own diocese'; for Geoffrey's statement of Gilbert's recantation (*PL* clxxxv. 597) is, as John of Salisbury shows (*Hist. Pont.* xi. xii. 525 ff.), an exaggeration.

Bernard's other theological controversies may be briefly dismissed. In his attack upon Abelard at Sens (1141, not 1140; see Deutsch, *Die Synode v. Sens*, Berlin, 1880) he came into conflict with Abelard's pupil—'Goliath's armour-bearer,' as Bernard calls him—Arnold of Brescia (see 'Arnoldists,' *s.v.* SECTS [Christian]). But, beyond writing vehement letters demanding his expulsion from Zürich, Bernard had little to do with this twelfth-century Mazzini (Bern. *Epp.* 195 f., 243 f.; Vacandard, *Revue des Quest. Histor.* 1884, 52–114).

St. Bernard also came into conflict with the Henricians, so called from a monk, Henry of Lausanne, of whom we first hear as preaching at Le Mans in 1116. With many of Henry's ascetic and disciplinary views Bernard would, probably, have agreed, but in the South of France the people welcomed the doctrines as an excuse for spoiling the Church. At the instance of the Papal legate Alberic, Bernard (June 1145; for date see Vacandard, *Vie de S. Bern.* ii. 217 n., 223 n.) preached at Albi, the centre of the disorder, with some success, which became complete when his opponent Henry refused St. Bernard's challenge to a disputation. The discredited Henry was captured and brought in chains before his bishop (1146), and, probably, died in prison (Vacandard, *op. cit.* ii. 233 n.).

[For St. Bernard and the Henricians see Bern. *Ep.* 241, also *Vitas* in *PL* clxxxv. 311, 427; 'Acta Hildeberti Cenoman.' in Bouquet, *Recueil*, xii. 547–51, 554.]

On the side of tolerance, we must note Bernard's defence of the Jews of the Rhineland in 1146 against the murderous attacks of the priest Rudolph (Bern. *Ep.* 365; Otto Freis. *op. cit.* i. 37; and, for a Jewish contemporary account, the *Chronicle of Joseph ben Meir* [tr. by C. H. F. Bialloblotzky, London, 1835]). His tolerance in this matter is in notable opposition to his contemporaries, *e.g.* Peter the Venerable, *Epp.* iv. 36 (*PL* clxxxix. 366).

4. Writings and place as a thinker and theologian.—Bernard's writings may be classified as follows:—

(i.) *EPISTLES.*—Bernard's *Letters*, of which about 450 appear to be genuine (in *PL* clxxxii.), reveal the width of his influence and the range of his activities. They deal with all the affairs of the times, from the most spiritual matters through all

the tangled diplomacy of Church and State down to a theft of pigs. In their constant interest in current events they are a great contrast to the letters of Anselm (see vol. i. p. 558), and reveal the fundamental differences of the two authors. The eloquence of the letters is, at times, of a very high order, and they are of considerable value for the history of the period, as is his *Vita Malachiæ*, written in 1149 for contemporary Ireland.

(ii.) *DEVOTIONAL AND HORTATORY*.—Of these the most important are :—

(*a*) The *de Consideratione*, in 5 books (*PL* clxxxii. 727 ff.), composed by Bernard in the leisure moments of many years, but published at intervals (book ii. in 1150, book iii. in 1152; see the references in iii. c. 5, § 20) in the evil days which followed the return of the second Crusade (*de Consid.* ii. c. 1). The book is dedicated to Pope Eugenius III. 'Consideration' was treated by Bernard under four heads: (1) concerning oneself, (2) concerning the things which are under one, (3) concerning the things around one, (4) concerning the things above. In this last we see his Mysticism. But the work, though full of shrewd moral reflexions, owes its chief interest to its discursive treatment of other topics, especially the matter of Papal appeals (*de Consid.* iii. c. 2) and other abuses. Bernard held that the reformation of the Church must begin with the sanctity of its head. Its plain speaking has made the work a favourite weapon with Protestant controversialists, *e.g.* E. Brown, *Fasciculus rerum Expetendarum et Fugiendarum* (1690). But, in spite of its anti-ultramontanism (cf. iii. 1, 2), it has also formed a manual for Popes. Pius V. had it read aloud to him daily.

(*b*) The *de Moribus et Officio Episcoporum*, written about 1126 to Archbp. Henry of Sens, and the *Sermo de Conversione ad Clericos* (both in *PL* clxxxii.) contain much plain speaking on the vices of the clergy and the need of reform.

(*c*) The *Sermones de tempore* (*PL* clxxxiii. 35–360), *de Sanctis* (*ib.* 359–536), and *de Diversis* (*ib.* 537–748). The oratory of St. Bernard, though not perhaps of the highest order (see a criticism in Vacandard, *op. cit.* i. ch. 16), was remarkable for its effects (*e.g.* crusades), and in its 'converting' power, especially using 'conversion' in the technical monastic sense. [A remarkable instance of this is given in the *Exordium mag. Cisterciense*, ii. 13, in *PL* clxxxv. 423; other instances in Cæsar Heisterbach, *Dial. Miraculorum* (ed. Cologne, 1851), bk. i.]

(*d*) The *de Gratia et Libero Arbitrio* (*PL* clxxxii. 1001 ff., written before 1128, see *Ep.* 52). Bernard's recognition of prevenient grace as the source of all the good in man had appeared to an auditor to be an eulogium of grace at the expense of human merit and activity. Bernard therefore drew up an account of the relation of grace and freewill. He claims for man after his Fall formal freedom as his distinguishing feature, without which there could be no imputation of guilt, and which must consent to the grace which awakens it. But 'the beginning of our salvation comes from God, neither through us nor with us,' in a constraining influence stimulating voluntary consent. In the union of the two lies 'merit.' But his hard Augustinian doctrine of original sin leads him into the usual difficulties, not lessened by his strong evangelical stress upon God's mercy as our sole 'merit' (*e.g.* *Serm. in fest. omn. Sanct.* i. 11, *PL* clxxxiii. 459: 'Sed quid potest esse omnis justitia nostra coram Deo?' etc., or *in Cantica*, xxii. 11, in *PL*, *ib.* 883), being combined with the usual mediæval and monastic conceptions.

(iii.) *MYSTICAL*.—The most important of Bernard's mystical writings are his Homilies on the Song of Solomon (*Sermones in Cantica Canticorum*, *PL* clxxxiii. 780 ff.). To this we must add the later sections of the *de Consideratione*. Of this series, begun in 1135, 86 had been finished before his death. They were actually preached to the monks of Clairvaux, and still bear the signs of interruptions and other local circumstances (cf. Nos. 26 and 47, § 8). *Cant.* iii. 1, where Bernard left off, was thus a favourite starting-place for later imitators. [The continuation by the Cistercian abbot Gilbert († before 1202) of Swineshead Abbey, Lincolnshire, is in Migne, *PL* clxxxiv. cols. 1–251.]

'The great importance of Bernard in the history of Mysticism does not lie in the speculative side of his teaching, in which he depends almost entirely upon Augustine. His great achievement was to recall devout and loving contemplation to the image of the crucified Christ, and to found that worship of our Saviour as the "Bridegroom of the Soul," which in the next centuries inspired so much fervid devotion and lyrical sacred poetry' (W. R. Inge, *Christian Mysticism* [1899], 140 n.).

Bernard thus gave to the romantic, not to say erotic, side of Mysticism a great stimulus. It is true that he always speaks of the Church and not the individual as the bride of Christ, but the enforced celibacy of monasticism soon led to the transference to the individual of the luscious language of the *Canticles* (Inge, *op. cit.* App. D). The symbolism and allegorism of Bernard's methods of Scripture interpretation was, of course, no new thing, and in the Christian Church was chiefly due to the influence of Origen (see vol. i. p. 315). In his *Sermones de Diversis*, No. 92 (in *PL* clxxxiii. 714), Bernard gives a threefold interpretation of Scripture—historical, moral or figurative, and mystical. This is further expanded in his *Serm. in Cantica*, No. 23 (*PL*, *ib.* 884 ff.), with a special panegyric of the vision of God which the mystical interpretation gives (*op. cit.* 893). The mysticism of Bernard is really not systematic, but the outcome of his persuasion that faith receives all truth 'wrapped up' (*involutum*). All that reason can do is to add clearness, a certain strictly limited measure of unwrapping; for the highest knowledge is that which comes neither by *intellectus* nor by *opinio*, but by intuition or spiritual vision. Of this there are three stages—*consideratio dispensativa*, *æstimativa*, and *speculativa*, in which last *consideratio* becomes identical with *contemplatio* (*de Consid.* v. 1–4; *Serm. in Cant.* v. 4, lii. 4, 5).

We see the same mystical principles in his *de Diligendo Deo* (*PL* clxxxii. 974 ff.). God is the ground and cause of a love in which there are four stages (*op. cit.* cc. 8, 15). The first stage is carnal love, in which the man loves himself. The second is a love of God which is selfish, inasmuch as it is due to suffering and experience. In the third stage he loves God for God's own sake. In the fourth stage the spirit, 'intoxicated by the Divine love, wholly forgets itself, becoming nothing in itself, and becoming one spirit with Him.' To be thus affected is to be deified ('sic affici deificari est,' *op. cit.* § 28, and cf. *Ep.* 107, 5 [the expression is a favourite with later mystics])—the annihilation of self 'in the immense sea of a luminous eternity' (§ 30).

(iv.) *POETICAL*.—Much doubt has been cast upon the authorship of the hymns usually assigned to Bernard, but by none more than by Mabillon, who pointed out (*Op. Bern.* v. 891) that the Cistercians 'denied themselves the use of metrical forms' (see the statement of Nicholas de Clairvaux, *Ep.* 15, in *Bib. Max. Pat.* xxi.); nor is the ascription to Bernard of very early date. That Bernard composed some hymns and had some distinction as a plain chantist is acknowledged, but he tells us himself that he 'neglected metre that he might pay more attention to sense' [Bern. *Ep.* 398, 3; the *Tonale* (*PL* clxxxii. 1151 ff.) owes more to his disciples than to himself (Vacandard, *op. cit.* ii. 101–5)]. The arguments of Trench and others, that 'if Bernard did not write them, it is not easy to guess who could,' are therefore of little value, more

especially as Trench owns the 'general ascription to Bernard of any poems of merit, belonging to that period, whereof the authorship was uncertain.' The *Salve, mundi salutare*, an address in 350 lines to the various limbs of Christ on the cross, shows the influence of his erotic mysticism (see above, p. 532[b]). The section *ad faciem*, 'O sacred head once wounded' (*Salve, caput cruentatum*), is in all hymn-books. The *Jubilus rhythmicus de nomine Jesu*, originally in 42 stanzas (earliest MS, 12th cent., in Bodleian; the other stanzas in printed edd. have not been traced earlier than 15th cent.; see J. Mearns, in Julian, *Dict. Hymn.* 586), is beautiful throughout, in spite of a certain lack of progress in the thought. The translations of the 1st, 2nd, 3rd, and 5th stanzas [*Jesu, dulcis memoria*; E. Caswall († 1828), 'Jesu, the very thought of Thee'; for other versions see Julian, *s.v.*] are in all hymn-books. It is interesting to note that this hymn was specially arranged by the mystic Henry Suso († 1365) as an office for the daily use of the Friends of God. The author, who was probably not St. Bernard, but one of his school, had certainly adopted his style and thought (see Bern. *Serm. de Div.* iv. § 1, 'Bonus es, domine, animæ quærenti te,' etc.).

LITERATURE.—i. *LIFE OF ST. BERNARD.*—(*a*) *Sources.*—We gain our best knowledge of Bernard from a study of his voluminous *Letters* [*supra* § 4 (i.)]. A critical edition of their order is much needed. Contemporary biographies of value were written by (i) William of St. Thierry about 1145 (in *PL* clxxxv. 226 ff.), and continued after William's death by Arnold of Bonneval († *c.* 1156), near Chartres (*PL ib.* 267 ff.), to whom Bernard had written from his death-bed (*Ep.* 310); (ii) his secretary Geoffrey, who succeeded him as abbot of Clairvaux (*PL* clxxxv. 302 ff.); (iii) Alain († 1182), bp. of Auxerre (*PL* clxxxv. 470 ff.). To the above we must add (iv) *Liber Miraculorum* (in *PL* clxxxv. 1273 ff.) of the Spanish monk Herbert of Clairvaux, much of which is legendary; as is also (v) the *Vita Bernardi* of John the Hermit (in *PL* clxxxv. 533. John the Hermit is unknown, unless he be identical, as Vacandard, *op. cit.* i. xliv, suggests, with the prior of Clairvaux, *c.* 1180); (vi) the *Exordium Magnum Ordinis Cisterciensis* (in *PL* clxxxv. 996 ff.), written between 1206 and 1221 adds little of value.

(*b*) *Modern Lives.*—Of these we may mention the Life in the *Acta Sanctorum* (Aug. iv. d. 20); the general preface by Mabillon to his editions (see *infra*); Aug. Neander, *Der heilige Bernhard*, 1813, 1848, 1868, also 2 vols. ed. S. M. Deutsch, Gotha, 1889, Eng. tr. by M. Wrench, 1843 [Neander has also given a full treatment of the theology in his *Church History*]; G. Hüffer, *Der heilige B. von Clairvaux*, Münster, 1886, and 'Die Anfänge des zweiten Kreuzzugs,' in *Hist. Jahrb.* 1887; M. T. Ratisbonne, *Hist. de S. Bernard et son siècle*, 1848 (many later edd.). This last uncritical work has been largely used by the somewhat rhetorical but sympathetic R. S. Storrs, *Bernard of Clairvaux*, 1892. Probably the best life in English, though full allowance must be made for its angle of vision, is J. C. Morison, *St. Bernard*, 1868 (many later edd.). The fullest and best life, apart from its ultramontane standpoint, is E. Vacandard, *Vie de S. Bernard*, Paris, 1895. To this add his early studies, *S. Bernard Orateur*, Rouen, 1877, and *Abélard, sa lutte avec S. Bernard*, Paris, 1881. Kugler, *Analekten z. Gesch. des zweit. Kreuzzugs*, Tübingen, 1878 and 1882, and *Neue Analekten*, 1885, should not be overlooked. For a complete bibliography of Bernard, see L. Janauschek, *Bibliographia Bernardina*, Vienna, 1891.

ii. *THEOLOGY.*—To the well-known works of Harnack, Loofs, Seeberg, and W. R. Inge (*Christian Mysticism*, 1899), add Dieckhoff, *Justin, Augustin, Bernhard und Luther*, Leipzig, 1882.

iii. *EDITIONS.*—MSS of Bernard abound (see Potthast, *s.v.*), and testify to his hold on the Middle Ages. Some of his *Sermons* were printed at Strassburg as early as 1472; and his *Epistles* at Brussels, by the Brothers of the Common Life, in 1481. The first fairly complete ed. of his works is by Andrew Bocard, Paris, 1508. This was followed by the more complete Lyons ed. of 1520 and many others (*e.g.* 1515, 1547, 1566, 1572, 1586, 1601, 1609). These were superseded by the able ed. of J. M. Horst, 1641, 1667, on which J. Mabillon based his standard ed. (2 vols., 1667, 1690, 1719, 1839). The ed. of 1719 is that reprinted in Migne, *PL* vols. clxxxii.–v. A new critical ed. of many of the *Sermons* was brought out by Janauschek, *Xenia Bernardina*, Vienna, 1891. A more critical ed. of *Letters* and *Works* is much needed. A complete tr. into French by A. Ravelet, 1865, is in progress; also by Charpentier, Paris, 1878, in 8 vols. Many of the works and all the *Epistles* have been translated into Eng. by S. J. Eales, 4 vols., 1889–96 (with Introduction and Life). Add also M. C. and C. Patmore, *On the Love of God*, 1881. The *de Considerations* is in Goldast, *Monarchia Rom. Imperii*, Hanover, 1612, ii. 68 ff.

H. B. WORKMAN.

BEROSUS (or BEROSSOS).—A Chaldæan priest in the temple of Bel (Marduk) at Babylon, who is said by Eusebius (*Chronicon*, 5. 8) and Tatian (*Oratio ad Græcos*) to have been a contemporary of Alexander the Great, and to have lived into the reign of Antiochus Soter. He compiled in Greek a *History of Babylonia*, which, unfortunately, like the corresponding work of Manetho in Egypt, has perished, and is known to us only by fragmentary quotations from Alexander Polyhistor and Apollodorus, preserved by Eusebius and George the Syncellus. Josephus (*c. Apion.* i. 19 f.) seems to have been acquainted with the original work of Berosus.

According to Alexander Polyhistor (see Cory, *Ancient Fragments*, 1832), he wrote the historical account of fifteen myriads of years, the history of the heavens and of the sea, of kings and their memorable actions, and of the generations of mankind and their civil polity. His *History* professed to begin with creation, and was carried down to his own time. It first described a state of chaos, presided over by the female monster Tiâmat, who was encountered and slain by the god Marduk, and whose overthrow was succeeded by the creation of the heavens and the earth. Berosus then gives a chronology of the Babylonian kingdom. Only a part of this has come down to us, and that in a condition which makes it in parts almost unintelligible. The difficulty of re-constructing his system is increased by the fact that the lists which he copied from the cuneiform originals have been mutilated by his abbreviators, and have suffered still further at the hands of those who copied the abbreviated lists. The most probable reconstruction is that of A. von Gutschmid, which is here given.

10 kings before the Flood, 432,000 years.

Ist Dynasty :	86 Chaldæans . .	34,091 years.		
IInd ,,	8 Medes . . .	224 years.	B.C.	2450–2226
IIIrd ,,	11 Chaldæans . .	248 ,,	,,	2225–1977
IVth ,,	49 Chaldæans . .	458 ,,	,,	1977–1519
Vth ,,	9 Arabians. . .	245 ,,	,,	1518–1273
VIth ,,	45 Chaldæans . .	526 ,,	,,	1273– 747
VIIth ,,	8 Assyrians . .	121 ,,	,,	746– 625
VIIIth ,,	6 Chaldæans . .	87 ,,	,,	625– 538

It has been pointed out by Brandis (*Rerum Assyriarum tempora emendata*, p. 17) and Gutschmid (*op. cit. infra*) that the post-diluvian period of 36,000 years has been adjusted to coincide with an astrological period during which the gods had granted glory and independence to the Chaldæans, and which terminated with the capture of Babylon by Cyrus.

The latter part of Berosus's historical statement has not survived except in detached fragments which have been preserved by Josephus, Eusebius, and the Syncellus. One fragment concerning Nabonassar (B.C. 747?) states that the Chaldæans were acquainted with astronomy only from his time onwards, because he destroyed all previous records. There are also fragments concerning the reigns of Nabopolassar and Nebuchadrezzar—the death of Nabopolassar, the succession of Nebuchadrezzar and his adornment of Babylon—and about the succession of Chaldæan kings after Nebuchadrezzar, ending with the capture of Nabonidus by Cyrus.

In comparing his work with the Babylonian and Assyrian inscriptions, it is somewhat difficult to arrive at any definite result on account of the deficiency of exact dates on both sides. In the absence of more satisfactory information, the list of Berosus must be taken as a provisional framework for Babylonian chronology, as the lists of Manetho are taken in Egyptian chronology, but with less confidence in the case of Berosus. Recent discoveries indicate, on the whole, his trustworthiness so far as regards the fact that his work actually represents the sources from which it professes to have been drawn; *e.g.* his account of

the Deluge agrees even in details with the cuneiform text. No confidence, however, can be reposed in the numbers allotted to his dynasties. In his antediluvian dynasty one or two names can be recognized with some difficulty as being possible variants of some of those which occur in the inscriptions, *e.g.* the last two kings—the name of the first of whom, Otiartes, has been suggested by Lenormant to be a corruption of Obartes, who appears in the inscriptions as Ubaratutu; while the name of the second, Xisuthros, may be Khasisatra, or Atrakhasis, the Sîtnapišti of the Gilgamesh legend. His third dynasty, consisting of eleven kings, seems to correspond with that traced by G. Smith, and suspected by Sayce to be of Arabian origin. The most prominent king in it is the famous Ḫammurabi (B.C. 2130). His Arabian dynasty, according to Sayce, appears to be the Kassite dynasty of the inscriptions; and if so, both the title and the figures of 9 kings and 245 years must be corrupt, since 36 Kassite kings are known, covering a period of 576 years. Minor dynasties seem to have been either run together or omitted altogether from Berosus's lists, as a broken tablet which once contained a complete list of Babylonian monarchs arranged in dynasties introduces a number of very short ones. This arrangement or omission may have been the work of Polyhistor or his copyists.

Apart from the chronological value of his work, the main interest of Berosus's *History* lies in the fragments of the ancient cosmogonic myths of Babylon which he has preserved. The chief of these are the legend of Tiâmat and Marduk (Bel and the Dragon); that of the giving of letters and civilization to mankind by Oannes (*Eâ-ghan*—Eâ the fish?), a composite being, partly fish and partly man (cf. the giving of letters to Egypt by the composite deity Teḥuti); the legend of the great tower and the confusion of tongues; and that of Xisuthros and the Deluge. From the actually existing cuneiform records it is apparent that Berosus's account of these legends practically represents the ancient Chaldæan tradition. In particular, his story of Xisuthros and the Deluge has been found to be a fragment of the great Gilgamesh epic.

LITERATURE.—Maspero, *Histoire ancienne*, Paris, 1886, vol. i. 'Les Origines'; Lenormant, *Essai de commentaire de fragments cosmogoniques de Bérose*, Paris, 1872; Cory's 'Ancient Fragments' (*Texts and Translations*), 1832; G. Smith, *TSBA* vol. iii., and art. 'Berosus' in *EBr*; Sayce, *Ancient Empires of the East*, Lond. 1884, also *Religions of Ancient Egypt and Babylonia*, Lond. 1902, and *Hib. Lect.* on 'Babylonian Religion,' Lond. 1887; A. von Gutschmid, 'Zu den Fragmenten des Berosos und Ktesias,' in *Rheinisches Museum*, viii. 256 (1853).

JAMES BAIKIE.

BESTIALITY.—Bestiality, *i.e.* the possession or exhibition of the qualities or nature of a beast, may manifest itself in human life, and so touch the religion or ethics of a people, in three ways: in eating and drinking, in sexual matters, and in the manifestation of wanton cruelty. Apparently among all primitive peoples bestiality is in some degree exhibited. It is eradicated only after a considerable intellectual and moral development. The peculiar conditions of Arabia and North Africa, the primitive Semitic and Hamitic homes, although they compelled an advance, if life was to be maintained at all, to a relatively high degree of barbarism, made the development of a high civilization impossible. Human ingenuity was compelled to extract from the oases the greatest possible nourishment; this urged the races forward; but the hard deserts which intervened between the scattered oases bound the struggling peoples in the fetters of barbarism (see Barton, *Semitic Origins*, ch. ii.). The constant influx of large numbers of immigrants from these desert conditions into the various Semitic countries through the whole course of history tended to keep alive within them all primitive bestial elements.

1. Bestiality in eating and drinking was probably exhibited whenever an opportunity was afforded for the underfed men of the desert to obtain a plentiful supply of meat. The ordinary diet was milk and dates, supplemented occasionally by a little game (see Doughty, *Arabia Deserta*[2], 1888, i. 156 ff.; Palgrave, *Central and Eastern Arabia*, 1865, i. 60; and Barton, *op. cit.* 75 and 77 ff.). The population was always underfed and afflicted with a gnawing hunger. These facts sufficiently explain the origin of the method of sacrificing a camel among the Arabs, described by Nilus, *c.* 400 A.D. While the last words of a chant were still upon the lips of the worshippers, the leader inflicted a wound on the camel and hastily drank his blood. The whole company then fell upon the victim with their swords, hacking off pieces of the quivering flesh and devouring them raw, with such wild haste that in the short interval between the rise of the day-star, at the appearance of which the service began, and the disappearance of its rays before those of the rising sun, the entire camel, body and bones, skin, blood, and entrails, was wholly devoured (cf. W. R. Smith, *Rel. of the Semites*[2], 338 ff.). Even if some allowance is made for exaggeration on the part of Nilus, the method of consuming this sacrifice is not unlike the tearing asunder of a carcass by dogs or wolves. As religious customs preserve ancient ways longer than they survive elsewhere, we have here an exhibition of the bestiality of the primitive Semite in eating.

Some passages in the OT indicate that at the religious festivals excessive eating, or more properly drinking, occurred. Thus Eli (1 S 1^{13}) naturally thought that Hannah had become drunk at the feast which was just concluded. Again, La 2^{7} compares the turmoil in the temple, when Nebuchadrezzar sacked Jerusalem, to the noise 'in the day of a solemn assembly.' This noise could hardly have been all due to the wailing, which originally attended the death of a victim, but must in part at least have been due to revelry. Private feasts were accompanied by music and wine (Is 5^{12}), and were occasions of hilarity (Am 8^{10}); and the same was probably true of all religious feasts down to the Exile.

As the Semites moved into agricultural lands and began to cultivate the vine, their excessive drinking led naturally to some drunkenness. A classic instance of this is embodied in the tradition of Noah's drunkenness in Gn 9$^{20ff.}$. That drunkenness existed in all periods of Israel's history is proved by 1 S 25^{36}, Dt 21^{20}, and Pr 23$^{21ff.}$. Herodotus (ii. 60) vouches for the fact that large quantities of wine were also consumed at certain Egyptian festivals, where, no doubt, it produced similar results. Apparently, however, drunkenness among the ancients was never so flagrant a vice as it is in modern Anglo-Saxon countries.

2. Among the ancient Semites, as among other peoples at a similar stage of culture, the sexual appetite was strong. The physical conditions, which held them so long in a state of barbarism in their cradle-land, led to the crystallizing of their religious customs about sexual ideas of a primitive character; and as religion perpetuated these customs, certain primitive features bordering on the bestial appear more prominently among the Semites than other peoples of antiquity, though they can be traced to some extent also among the Egyptians, who appear to have originated under similar conditions.

In early times sexual bestiality seems also to have led occasionally to actual connexion with animals. In the Gilgamesh epic, Eabani, the

primitive man, is represented as living a wild life with the animals, and as satisfying his passion with them. He was induced to leave them only after having experienced the superior charms of a woman (cf. *KB* vi. 125–127). Jastrow (*AJSL* xv. 207 ff.) holds that this was the primitive Semitic idea of the relations of men and animals, and that the original form of the second chapter of Genesis contained a similar story. Certain it is that such relations continued to exist sporadically until comparatively late times, for such prohibitions as that in Lv 20[15f.] would never have been made had there been no such practice to eradicate.*

Among the primitive Semites the marriage relations consisted of various forms of polyandry, of which Nair polyandry was the most ancient (cf. W. R. Smith, *Kinship and Marriage in Early Arabia*, and Barton, *op. cit.* ch. ii.). This type of polyandry was, in reality, the loosest kind of marriage, and was accompanied by a good deal of promiscuity. After settlement in agricultural lands this type of marriage gave way to polygamy. Women who adhered to the older type of marriage lost caste, except where connexion with a temple gave them a certain standing. In Israel they maintained themselves down to the reform of Josiah in the year B.C. 621 (cf. Dt 23[17. 18], 2 K 23[7]). In Babylonia similar conditions existed. The code of Ḥammurabi shows that a class of unmarried women were connected sacredly with the temple. They might have children, who apparently were frequently adopted by other people (see *Code*, §§ 192, 193). In many parts of the Semitic world, male prostitutes, called technically 'dogs,' were also connected with the temples (Barton, *op. cit.* 188 and 251 n. 2). This is the meaning of the term in Dt 23[18]. In Egypt similar ideas seem to have been kept alive by the ithyphallic god Min, whose festal procession is pictured on the walls of the temple of Deir el-Bahri and elsewhere, and by the god whom Herodotus (ii. 48, 49) identifies with Dionysos. At feasts in Babylonia (Herod. i. 199), in Egypt (*ib.* ii. 64), and in Israel, loose sexual practices were kept alive, protected by the sacred name of religion. This, no doubt, tended to perpetuate low and bestial ideals. The bestial influence of these practices can best be appreciated by those who have seen the objects exhumed at the Ashtart temple of ancient Gezer, but naturally not yet published. Many of these objects are the grossest sexual emblems. They reveal how great were the odds against which the ethical religion of the Hebrew prophets had to contend.

Apart from religion, bestial sexual practices were sometimes indulged in. For example, the treatment accorded by the men of Gibeon to a young woman (Jg 19) was unmitigated bestiality. Similar crimes, however, occur in modern times, especially in countries where, as in the United States, there is a considerable number of backward coloured people.

* [This crime, which still occurs sporadically, so that modern criminal codes provide penalties for its suppression, seems to have prevailed among the Greeks and Romans of the later period, as is proved by an extremely unsavoury adventure described in the *Metamorphoses* of Apuleius, so that the *'Abodā Zārā* forbids the stabling of cows in Gentile stalls (*JE* v. 621). Equal degeneracy is recounted in the *Arabian Nights* (tr. Payne, London, 1882–84, iv. 137–148), and in the Hindu Aśvamedha (*q.v.*) there was even a ritual bestiality with the *membrum virile* of the sacrificed sacred horse. In mythology, however, the majority of the amours between human beings and animals, with which every student of the classics and comparative religion is familiar, receive their explanation from totemism, so that, as MacCulloch observes, 'as man's religious conceptions advance, his worshipful spirits and gods assume more and more a human form, but preserve traces of their animal form, and from this such tales take their origin' (cf. his admirable chapter on 'Beast-Marriages,' *CF* pp. 253–278, and the literature there cited).—LOUIS H. GRAY.]

3. Bestiality was also exhibited by some of the ancient Semites in their *warlike practices*. Thus we are told that the Ammonites ripped up women with child (Am 1[13]). Assyrian kings seem to have practised the greatest cruelty upon their captives taken in war. Thus they boast that they flayed their prisoners alive and spread their skins on city walls (*KB* ii. 165), bored out the eyes of their prisoners (*ib.* i. 113; cf. 2 K 25[7]), and tore out their tongues (*ib.* ii. 257), and also they impaled their victims on stakes (cf. *ib.* i. 113, ii. 165). Perhaps to future generations the warfare of the present will seem as bestial as these cruelties do to us. See, further, CRIMES.

BETTING.—See GAMBLING.

BHAGAVAD-GĪTĀ (the 'Song of the Blessed') is the name of the celebrated religious and philosophical poem of India, which is inserted as an episode in the sixth book of the Mahābhārata.

The two nearly related but hostile clans of the Kauravas and Pāṇḍavas, after disputes extending over many years, make ready for open combat, and advance against one another with the forces and allies on either side to the plain of the Kurus, in the neighbourhood of the modern Delhi. The two families, being nearly related, have equal claim to the name of Kurus or Kauravas; but the title is usually limited to that side which was arrayed under the leadership of the blind king Dhṛtarāṣṭra. To him the course of the battle is narrated by his charioteer Sañjaya, who has been endowed by Vyāsa, the reputed author of the Mahābhārata, with supernatural power to discern all the incidents of the fight. Almost the first place in this narrative of Sañjaya is taken by the dialogue between Kṛṣṇa and Arjuna, the full title of which is *Bhagavadgītopaniṣad*, 'the secret doctrine proclaimed by the Blessed One,' usually abbreviated into *Bhagavad-Gītā*, or simply *Gītā*.

At the sight of his near relatives in the hostile army, Arjuna, the famed archer of the race of the Pāṇḍavas, hesitates to begin the fight; and is recalled to a sense of his duty by Kṛṣṇa, who in human form stands by his side as his charioteer. The admonitions and instructions of Kṛṣṇa adopt a more serious and elevated tone as he proceeds, and in the eleventh book he reveals himself to Arjuna as the one only God, the Lord of all worlds, who has assumed the form of the hero of the Yādava race.

This is not the place in which to enter into the full details of the historical development of Kṛṣṇa, who in the Mahābhārata appears at one time as a human hero, at another as semi-divine (a phenomenal form of Viṣṇu), or again as the one only God, and who finally is identified with Brahman, the All-Soul. The judgment which the author of this article has formed with regard to the lines which this development has followed may be learned from the Introduction to his translation of the Bhagavad-Gītā, ch. ii. (Leipzig, 1905). The following brief statement must suffice for a due appreciation of the contents of the Gītā.

It may be assumed as probable that Kṛṣṇa was originally the leader of a warrior and pastoral tribe of non-Brāhman race, and that he lived long before the Buddha. He became the eponymous hero of his people, not only because of his prowess in war, but also probably because he was the founder of the religion of his race—a religion independent of the Vedic tradition and monotheistic, in which a special stress was laid on *ethical* requirements. The adherents of this religion were called 'Bhāgavatas,' adopting other names later on. As the form of Kṛṣṇa within the race to which he belonged was advanced from the position of a demi-god to that of a god (identified especially with the god of the Bhāgavatas), Brāhmanism claimed as its own this popular and powerful representation of the Deity, and transformed it into an incarnation of Viṣṇu. In this way Brāhmanism

succeeded in gaining over the entire religious community of the Bhāgavatas, and the latter (a still existing sect [see BHAKTI-MARGA]) were merged in Brāhmanism. The Bhagavad-Gītā was originally a text-book of this sect, and in the course of time has won a position of such significance for the whole of Brāhman India that in recent years educated Hindus have put it forward as a rival to the New Testament. No other product of Indian religious literature is worthy to hold a place by the side of the Bhagavad-Gītā, in view of the beauty and elevated character of the thought and expression in many passages. On a metaphysical basis there has been raised in it a structure of lofty ethical teaching, which we miss in the orthodox systems of Indian philosophy.

It has long been known that we do not possess the Bhagavad-Gītā in its original form, but in a form which is the result of essential modifications. The doctrines, which are here put into the mouth of Kṛṣṇa, present a remarkable combination of pantheistic and monotheistic ideas, of philosophical thoughts, and of pure and deeply religious faith in God.

A personal God, Kṛṣṇa, manifests himself in the form of a human hero, propounds his doctrines, and demands of his hearer not only the exact fulfilment of duty, but before everything else faith and love and resignation, of which he is himself to be the object. By a special act of grace he then reveals himself in his superhuman but still bodily form, and promises to the faithful, as reward for his love to God, admission after death to His presence, and the prize of fellowship with Him. By the side, however, of this deity, thus conceived in as *personal* a manner as possible, who dominates the entire poem, there is introduced several times as the supreme first principle the neuter *impersonal* Brahman, the Absolute. At one time Kṛṣṇa says of himself that he is the one sole supreme God, the creator and ruler of the universe and of all things therein; at another he sets forth the Vedāntic doctrine of the Brahman and of *māyā*, the cosmical illusion, and proclaims that the supreme end of man is to transcend this cosmical illusion and become one with Brahman.

These two doctrines, the theistic and the pantheistic, are interwoven with one another, sometimes following one another closely and without a break, sometimes more loosely connected. Yet the one is not announced as the lower exoteric doctrine, and the other as the higher esoteric; nor is it in any way taught that theism is a grade preliminary to knowledge, or a type of the truth, and the pantheism of the Vedānta the truth itself (see art. VEDĀNTA). But the two forms of belief are throughout treated entirely as though there were no distinction at all between them, whether as regards contents or value.

The attempt has been made to explain away the contradictions of the Bhagavad-Gītā, on the theory that no definite system is here intended; that the whole is the work of a poet, who gives utterance and shape to his thoughts as they occur to him, without heeding the anomalies which are involved in detail.

The fundamental contradiction, however, which permeates the Bhagavad-Gītā cannot be set aside by an appeal to its poetical character. It can be explained only on the hypothesis that one or other of the heterogeneous doctrines propounded by Kṛṣṇa must be a later addition. Adolf Holtzmann therefore maintained the view that the Bhagavad-Gītā was originally a poem of a purely pantheistic nature, which was later modified and adapted in the interests of the Viṣṇu-Kṛṣṇa cult, and had thus impressed upon it its present form. This theory also, however, is mistaken; precisely the reverse seems to be the fact. The entire character of the poem in design and execution is so overwhelmingly theistic, that we must suppose it to have been from the very beginning of a purely theistic character, and to have been adapted later in a pantheistic sense from the standpoint of the Vedānta philosophy. In the ancient poem Kṛṣṇa speaks of himself, and Arjuna of Kṛṣṇa, as of an individual, a person, a conscious deity. In the recension the neuter Brahman appears in the added portions as the final and loftiest conception, and is occasionally identified with Kṛṣṇa. Briefly stated, then, the real facts are that in the ancient poem *a Kṛṣṇaism based upon the Sāṅkhya-Yoga philosophy is set forth; in the additions of the recension the Vedānta philosophy is taught* (see artt. SĀṄKHYA, YOGA, VEDĀNTA). It has long been known, indeed, that the doctrines of the Sāṅkhya-Yoga formed, on the whole, the basis of the philosophical speculations of the Bhagavad-Gītā, and that, as compared with them, the Vedānta holds a quite secondary position. Acting on this conviction, the author of the present article has attempted, in his translation of the Gītā, to determine the original form of the poem, and to separate the additions of the Vedāntic recension.

The doctrines of the true original Bhagavad-Gītā are briefly as follows. They may be defined as the faith of the Bhāgavatas, considerably modified by the introduction of elements from the Sāṅkhya-Yoga. In the following account it is not proposed to adhere to the line of thought of the poem, which wanders from one to the other, and especially in its practical demands constantly intermingles the different recognized standpoints of religion and philosophy.

We begin with the *systematic* part, and in the first place with the person of God. God is a conscious, eternal, and almighty Being, the 'great Lord of the universe, who is without beginning' (x. 3). He is distinct not only from the perishable world, but also from the imperishable soul of existing beings (xv. 17–19). He is therefore soul in another and higher sense than the souls of all creatures. When it is asserted in vii. 4–6 that God has two natures, one a higher spiritual nature, by which the universe is sustained, and a second, a lower and material nature, consisting of all that, according to the Sāṅkhya, belongs to *prakṛti* or matter, this statement is not to be construed in the sense that a half of the Divine essence is composed of matter; the meaning is rather that matter is not itself independent, following its own blind impulses, but that its evolution is under the control of God; in other words, that God works in matter, and acts through it. This is clearly expressed in other passages of the Bhagavad-Gītā. God deposits in matter the germ from which development takes place (xiv. 3, 4). He is therefore the father of all creatures, while matter may be compared to the mother's womb (xiv. 4). God superintends the rise, development, and decay of the universe (ix. 7, 8, 10), and in this sense He is termed the origin and end of the whole world (vii. 6, x. 8), and is identified with death (xi. 32). The creatures in all their doings and conditions of life have their origin from Him (x. 4, 5); He determines their fate, *i.e.* recompenses them according to their deeds, and in the cycle of life makes the creatures 'revolve like figures in a puppet-show' (xviii. 61). All His acts are solely for the sake of the universe, for He Himself has no wish to fulfil, no end to attain (iii. 22, 24). 'Whenever justice declines and injustice increases,' God, who is yet eternal and imperishable, re-creates Himself, *i.e.* assumes new phenomenal forms 'for the protection of the good and the destruction of the evil, in order to establish the right' (iv. 6–8). Because the action of God is due to the matter of which He is the ruler, and is never due to a selfish motive, He is not fettered by His action (iv. 13, 14, ix. 9), and can never, therefore, be entangled in worldly existence. The imaginary picture of God in Book xii. is a dramatic embellishment, which is intended to touch the fancy, but is of slight importance for the real teaching of the Gītā.

The relation of God to the world of mankind is determined not solely by the stern law of retribution, but by love to those who know Him and are whole-heartedly devoted to Him (vii. 17, xii. 14–20, xviii. 64, 65, 69), and He delivers from all sin those who take refuge in Him alone (xviii. 66). In this passage already, therefore (and also in xviii. 56, 58, 62, 73), is set forth that confidence in the Divine

grace (*prasāda*) which we meet with in some Upaniṣads of the middle period (see art. UPANIṢADS), and which in consequence holds so important a place in the Indian sects.

Although it is God who guides the processes of the world, yet, as we saw above, all acts are to be ascribed to *matter* (iii. 27, v. 14, xiii. 20, 29). Out of primitive matter the universe is evolved, and it returns back again into it (viii. 18, 19). This conception of evolution and re-absorption, like the theory of the world-periods, is therefore derived from the Sāṅkhya system; and in general all the views of the Bhagavad-Gītā with regard to matter agree with the doctrine of the Sāṅkhya. The three *guṇas* play here the same part as in that system (see art. GUṆAS); by their influences the soul is enchained (xiv. 5 ff.), and the consequences of their activity make themselves felt throughout the entire life, as is described in detail in Books xvii. and xviii. Even the physiological conceptions with regard to the inner organs and the senses are those of the Sāṅkhya system (iii. 40, 42, xiii. 5). None of these correspondences, however, is of such importance for the doctrines of the Gītā as the fundamental conception of the nature of matter, derived from the Sāṅkhya, which forms the basis of the philosophical discussion in Bk. ii. Matter, it is true, is in no sense created by God, but exists from eternity; it is, however, subject to incessant mutation and change. All its products and effects are transitory; its influences, especially those of pleasure and pain, come and go, and they do not therefore deserve that man should regulate his conduct by them (ii. 14).

Over-against this mutability of all the products of matter is set the immutability of the soul. The latter, indeed (the soul, the self), resembles matter, in so far as both are eternal and indestructible; for that which is, ever has been, and ever will be: 'existence cannot be predicated of that which is not, nor non-existence of that which is' (ii. 16). The main contrast, however, between soul and matter consists in this, that the former is never subject to change. In reality the soul dwells within the body absolutely inactive, 'neither acting nor inspiring action' (v. 13–15), and remains unaffected by all the influences and acts of matter. This thought is elaborated in choice language in the 2nd Bk. of the Bhagavad-Gītā. He who knows that the soul is the true I, which abandons the worn-out bodies and enters into new ones, as a man puts off old clothes and puts on new (ii. 22), that the soul can neither be hurt nor destroyed, laments not over human suffering and death, *i.e.* over events which affect merely the perishable body.

All this is pure Sāṅkhya doctrine. Nevertheless the conception of the spiritual principle in the Gītā is essentially different from that of the Sāṅkhya system; it is decidedly more religious than philosophical. According to the Gītā as representing the belief of the Bhāgavatas, the individual soul does not lead a separate existence from all eternity, but it has become severed as a part from the Divine soul (xv. 7, cf. also xvi. 18, xvii. 6). Individual souls are therefore of Divine origin. They have entered into a union with matter, which is incapable of effecting any change in the souls themselves, but by which life and consciousness have been brought into the universe. It is the duty of man to behave in such a way that his soul may be able to return again to its origin, to God.

We now come to the *practical* part of the doctrines of the Gītā. Here two ways of salvation are contrasted with one another, one of which consists in withdrawal from the life of the world, and seeking after knowledge, the other in acts conformable to duty and free from desire. Although the second way is repeatedly described as superior (iii. 8, v. 2, xviii. 7), and, to judge from the whole tenor, is to be regarded as the true ethical ideal of the poem, the author has nevertheless not ventured to reject the way of salvation by renunciation of the world, and abstract knowledge. The conception that deliverance from the cycle of existence was to be won by meditation in complete isolation from the world, had been for centuries so deeply rooted in all thoughtful circles among the Indian peoples that it could no longer be seriously assailed. No course remained open but to concede a place to the two ways side by side with each other, and to teach that both right action and the knowledge which implies non-action or abstinence from works lead to salvation. From the fact that in the Gītā now one and now the other standpoint is adopted, and at times the ideal of quietism is placed unreservedly above that of activity (vi. 3), all sorts of inconsistencies and ambiguities have arisen, which a decided rejection of the quietistic standpoint would have avoided. The Bhagavad-Gītā reconciles the two views by explaining that action in fulfilment of duty, which is performed without regard to success and without any personal interest, ceases to produce fruit, and accordingly for the actor does not result in any continuance of worldly existence. Action of this nature, therefore, as far as consequences are concerned, is equivalent to the abstinence from action of the way of knowledge.

The knowledge which is to be attained by the quietistic way of salvation is described in several passages of the Gītā, precisely on the lines of the Sāṅkhya system (xiii. 23, xiv. 19), as a discrimination of soul and matter; and as a consequence of this discrimination release from the necessity of re-birth is assured to him who knows, without regard to conduct (xiii. 23). This may be looked upon as an isolated recognition of the pure Sāṅkhya ideal. In general the view of the Bhagavad-Gītā is that saving knowledge is not limited to the discrimination of soul and matter, but this discrimination is to be regarded merely as a condition preliminary to the *knowledge of God*; it is this that first really opens the way to the highest salvation.

The second way of salvation, the unselfish discharge of duty, is incessantly enjoined in the Bhagavad-Gītā in the most varied manner. But the mere discharge of duty would not lead to the goal so long as there is still associated with it any expectation of fruit. What is commanded must be done without passion, with quietness and equanimity, with an even regard for every one, esteeming indifferently the pleasing or displeasing, pleasure or pain, good or evil fortune, with no trace of desire or personal interest. If a man acts in this frame of mind, without vexing himself with regard to transitory material results (ii. 14), solely according to the precepts of duty and the Divine example (iii. 22), leaving to God the outcome of all his works, his works are not subject to the law of retribution (iv. 22, 23, ix. 27, 28, xviii. 12, 17). The requirements here laid down necessitate the rejection of the Vedic conception of the merit of works, and this is expressed in the original Gītā without any limitation. All the ceremonies of the Brāhmanical ritual minister, indeed, throughout to individual desires, and therefore stand in sharp contrast to the ethical ideal of the Gītā. 'Abandon all sacred rites,' it is said in xviii. 66; and similarly, in ii. 42–45, unconcealed contempt is expressed for the promises of the Veda, which take account only of the material world and offer only transitory reward (cf. also ix. 20, 21). Indifference towards the prescriptions of the Vedic ritual is therefore also a preliminary condition for the

attainment of salvation (ii. 52, 53). In this requirement, again, pure Sāṅkhya doctrine is assumed, as will be plain to every one acquainted with the Indian systems of philosophy.

Whether, however, it is the one or the other way of salvation that is followed, a hindrance that lies in the natural disposition must be overcome. When it is said in iii. 3 that 'the creatures follow their nature,' and when in xvi. 1 ff. a distinction is drawn between men who are born to a godlike existence and those who are born to the existence of demons, this predetermination is to be conceived as an effect of previous merit or guilt. Nothing is said in the Gītā of a real predestination; rather it is apparent that, throughout, moral freedom is taken for granted. It is left to man's option whether he will contend with the hindrances that lie in the path to deliverance or not, whether he will seek to reach a lower or the highest goal. On the way to the latter, natural ignorance hinders the practice of knowledge (v. 15), as natural desire hampers the performance of duty, and is man's real enemy to the observance of duty (iii. 37, 43). But unbelief also and scepticism are fatal (iv. 40). Moderate ascetic (*yoga*) practices are recommended as aids to the successful combating of these hindrances (v. 27, 28, vi. 10 ff., viii. 10, 12 ff.). Even if a man is not successful in mental abstraction, these *yoga* observances are not useless, for such a man will be re-born under favourable conditions, and will ultimately reach the supreme goal (ii. 40, vi. 41 ff.).

We now come, finally, to the most important demand which the Gītā makes upon those men who stand in need of deliverance. As is well known, the poem is the anthem in praise of *bhakti*, or believing and trustful love to God. With unerring certainty love to God leads to the goal alike by the way of knowledge and by that of unselfish performance of duty. The entire poem is full of this thought, and it was composed with a view to its exposition. From love to God knowledge of God arises (xviii. 55), and in consequence the believer refers all his deeds to God and leaves their results to Him. To every one, without distinction of birth or regard to his former conduct, *bhakti* assures deliverance, even to evil-doers, women, Vaiśyas, and Śūdras (ix. 30–32). No transient impulse, however, of love is in question; the whole being of man must be filled with unchanging love to God. When this is the case, a man's thoughts, even in the hour of death, will be directed towards God. Especial importance is attached to this point in the Gītā (viii. 5, 9, 10, 13), because a man enters into that form of existence of which he thinks in the hour of death (viii. 6).

What, then, are we to conceive to be the condition of the soul that has been liberated from earthly existence and has attained unto God? Unconsciousness, in harmony with the doctrine of the Sāṅkhya-Yoga? Does the soul, having been part of the Divine Soul before its separation from it, lose its individuality on its return to its origin? No. Deliverance is conceived as the state of blissful peace of the soul, whose individual life continues in the presence of God. How, indeed, on the assumptions of the Sāṅkhya-Yoga, the soul can lead a conscious existence without entering into relation with matter the Bhagavad-Gītā does not explain. Evidently a view is set forth here which dates from the most ancient period of the Bhāgavata religion, and which from antiquity has formed a pillar of this faith; in spite, therefore, of the subsequent introduction of elements from the Sāṅkhya-Yoga, this doctrine maintained its ground against the contrasted teaching of the two philosophical systems. A confident faith helped to remove the methodical difficulties which must have been the result.

On the whole, however, the religious and philosophical doctrines of the *original* Bhagavad-Gītā, as the above account shows, were clear and defined. Their clearness is greatly impaired by the pantheistic redaction. The form of the poem, as it has come down to us, is full of internal contradictions, seeing that in it at one time the personal God (Kṛṣṇa), at another the impersonal world-soul (Brahman), is presented as the supreme first principle—sometimes the two are also identified; and again, at one time conscious continued existence in the presence of God is put forward as the highest goal of human endeavour, and at another absorption into the world-soul.

It is difficult to determine the period of the composition of the work. We shall not, however, go materially wrong if we assign the composition of the original Gītā to the 2nd cent. B.C., its redaction to the 2nd century of our own era.

In conclusion, a few words must be devoted to the question of Buddhist or Christian influence in the Bhagavad-Gītā. Buddhist influence may perhaps be traced in the recommendation of the golden mean in Bk. vi. 16, 17; and this idea may be supported by a reference to the occurrence of the word *nirvāṇa* in the preceding verse. Since, however, the application of the term is not at all limited to the linguistic usage of Buddhism (*brahmanirvāṇa* occurs four times in the recension of the Gītā), and since the conception of a wise moderation is explained on general human considerations, Buddhist influence must be regarded as very doubtful, or may at best be due to very distant and indirect sources.

The question of the influence of Christianity on the Gītā is more important. Such an influence has often been asserted, and as often disputed. In the case of the *original* Bhagavad-Gītā, the date, which on reliable grounds may be assigned to it, is decisive for a negative answer. The historical possibility of the author of the *redaction* being acquainted with the doctrines of Christianity must unquestionably be admitted; but there are no grounds for regarding this view as even probable, much less certain. No thought is found in the Gītā which may not be satisfactorily explained from the rich storehouse of ideas at the disposal of the Indian peoples, or from their characteristic mental disposition.

LITERATURE.—The literature of the Bhagavad-Gītā is of an extent that it is almost impossible to survey. A detailed account of the manuscripts, editions, and translations of the Bhag., together with the native commentaries and the expositions of European scholars, is given by Adolf Holtzmann, *Das Mahābhārata und seine Teile*, vol. ii., 1893, pp. 121–153. No year has passed since the appearance of this volume in which there have not been issued further Indian contributions to this literature. Of older works special mention should be made of the essay of W. von Humboldt, *Ueber die unter dem Namen Bhagavad-Gītā bekannte Episode des Mahābhārata*, Berlin, 1826; of later works, the translations of K. T. Telang, *SBE*, vol. viii., 2nd ed., Oxford, 1898; J. Davies, 3rd ed., London, 1893; R. Garbe, Leipzig, 1905; L. Barnett, London, 1905; C. Johnston, N.Y. 1908. Cf. also Sir Monier Monier-Williams, *Indian Wisdom*[3], 1875, p. 136 ff.; E. W. Hopkins, *Religions of India*, London 1896, p. 389 ff.; R. W. Frazer, *Literary History of India*, London, 1898, pp. 207, 235 ff.; M. Winternitz, *Geschichte der indischen Litteratur*, i. Leipzig, 1908, pp. 365–376.

BHĀGAVATAS.—See BHAKTI-MĀRGA, p. 540[b].

BHAIRAVA.—Bhairava is a name of Śiva, meaning 'fearful.' Originally it was only an epithet of the third member of the Hindu trinity in his 'fear' form. As such the word is found quite early, but the worship of Śiva under the special (separate) form of Bhairava is of recent date. Eight, sometimes twelve, forms of this Bhairava-Śiva are then recognized, those commonly used being 'Bhairava the Black' and 'Bhairava the Dog.' Śvāśva, 'he that has a dog for his horse,' is also a frequent designation of Bhairava. He has a female consort called Bhairavī. All of this side of Bhairava, however, is purely classical,

derived from Śiva's epithet. But Bhairava has another side, which is indeed the popular modern side of his character, having nothing to do with the Brāhmanic god. This is derived from the village-god, Bhairon, a peasant personification of the field-genius, and often confused with the Bhūmiya form of the earth-god. This Bhairon has passed through the usual stages. First a peasant godling, then made by the Brāhman priests an attendant of their god, then representing that higher god, and finally, as at present, the only form of the god (Śiva) recognized by the peasants of several communities, chiefly in northern India. The chance resemblance of name facilitated the identification of the peasant Bhairon with the priestly Bhairava, and the attributes of the great god were transferred by the worshippers of the little god to their own godling. A further identification has already begun with the Brāhmanic hero Bhīm, and he is therefore known as the 'club-god,' having taken over from Bhīm the weapon associated with that hero. At present it is impossible to distinguish fully the characteristics of the Śiva form of Bhairava from those of the Bhairon form. Other forms of the same name are Bhairoba and (in middle India) Vitoba. The worship of Bhairava is found in Benares and Bombay, and throughout the agricultural districts of northern and middle India, as far north as the Panjāb. In the north he is revered chiefly as a black dog. In middle India his favourite image is that of a snake-girded drummer, or simply of a red stone. As a village-deity he is worshipped with milk offerings, in towns, especially in the north, with spirituous liquors; and his exclusive adherents are ignorant peasants in the country and dissolute Yogis of the towns. But as an attendant on Śiva he has a recognized though subordinate place in the respectable temples of the great god.

LITERATURE.—E. T. Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872; W. Crooke, *Popular Religion and Folk-lore of Northern India*, new ed., Lond. 1896.

E. WASHBURN HOPKINS.

BHAKTI-MĀRGA.—I. **Introduction.**—*Bhakti-Mārga* (the *bhakti*-path) is a general name given to those sects of modern Hinduism which lay stress on the importance of *bhakti*, or devotional faith, as a means of salvation, as opposed to the 'works-path' (*karma-mārga*) and the 'knowledge-path' (*jñāna-mārga*). The doctrine of *bhakti* is the foundation of modern Vishnuite Hinduism, and is professed by at least 150 millions of the inhabitants of India. The only other book-religion of modern India, whose believers are numerically important, is Śaivism. The latter is confined mainly to special localities; and even here, not only are there also many Vaiṣṇavas, but several Śaiva sects teach the doctrine of *bhakti* as directed to Śiva. The stronghold of Śaivism may be taken to be that part of India which lies east of the longitude of Benares. All India west of that line may be taken, so far as Hindus are concerned, as on the whole Vishnuite.

The word *bhakti*, with the allied words *Bhagavat* and *Bhāgavata*, is derived from the Sanskrit root *bhaj*, meaning, in this case, 'to adore.' *Bhakti*, therefore, has the primary meaning of 'adoration,' while *Bhagavat* means 'the Adorable One,' and *Bhāgavata* 'a worshipper of the Adorable One.' As a religious term *bhakti* is defined[*] as 'an affection fixed upon the Lord'; but the word 'affection' (*anurakti*) itself is further defined as that particular affection (*rakti*) which arises after (*anu*) a knowledge of the attributes of the Adorable One.

The best official account of *bhakti* is contained in the *Aphorisms* of Śāṇḍilya, a work of unknown date, but modern, which, with a commentary, was translated by Cowell in 1878. After defining *bhakti*, as above explained, the writer further states that it is not knowledge, though it may be the result of knowledge. Even those who hate the Adorable may have knowledge of Him. It is not worship, etc. These are merely outward acts, and *bhakti* need not necessarily be present in them. It is simply and solely an affection directed to a person, and not a belief in a system. There is a promise of immortality to him who 'abides' in Him. 'Abiding' means 'having *bhakti*.' *Bhakti* is not a wish. A wish is selfish. Affection is unselfish. It is not a 'work,' and does not depend upon an effort of the will. The fruit of 'works' is transient, that of *bhakti* is eternal life. Works, if they are pure, are a means to *bhakti*. To be pure, they must be surrendered to Him, *i.e.*, the doer must say, 'Whatever I do, with or without my will, being all surrendered to Thee, I do it as impelled by Thee.' Good actions, done for the good results which they produce in a future life, do not produce *bhakti*, but are bondage.

Bhakti, if looked upon as 'faith,' is not 'belief.' That may be merely subsidiary to ceremonial works. Not so *bhakti*. Belief is at best merely a subsidiary preliminary to *bhakti*. We have seen that knowledge may produce *bhakti*. The converse is not true. *Bhakti* is the terminus. We cannot *know* by *bhakti*, we can only *recognize* by it—a term which implies previous knowledge.

It is by its signs or 'fruits' that we know that *bhakti* is thoroughly confirmed. Such fruits are respect and honour paid to the Adorable, sorrow for sin, doubt of every other object but the Adorable, celebration of His praise, continuing to live for His sake, considering everything as His, regarding Him as being in all things, resignation to His will, absence of anger, envy, greed, and impure thoughts.

The highest *bhakti* may be directed not only to the Adorable in His highest form, but also to any of His incarnations, such as Kṛṣṇa, Rāma-chandra, and so on. The object of the Adorable in becoming incarnate was pure compassion in its highest sense. No earthly compassion is purely disinterested. His alone is disinterested. He became incarnate, and descended from His high estate, solely to abolish disinterestedly others' woes.

So far Śāṇḍilya. As a religious technical term, *bhakti* is a most difficult word to translate. Probably 'faith,' in the sense of 'devotional faith,' and not of mere 'belief,' is its best representative in English, but unless 'faith' is taken in this special sense, the word is apt to be misleading. 'Devotion' gives an idea as incomplete as 'faith'; for, though devotion is a necessary element of *bhakti*, it does not imply the *after* sense which is insisted upon by the teachers of the cult. It is devotion arising *after* the acquirement of belief. In the present article, the word 'faith,' understood as above, will be employed as the equivalent.

(*a*) *Signification and Indian origin of the word 'bhakti.'*—The use of the word *bhakti* as a religious technical term is comparatively late in Indian literature. This was to be expected, for faith requires a personal deity as its object, and for many centuries after Vedic times all Indian religious literature was confined to one form of thought which was incompatible with belief in the existence of such a God. This was the pantheistic Brahmaism[*] of the earliest Upaniṣads and of works based upon them (see VEDĀNTA). In the sense of 'love directed to God' the word appears first in Buddhist works of the 4th cent. B.C.; and it was also about the same time quoted in one of his rules (IV. iii. 95), with the same meaning, by the Sanskrit grammarian Pāṇini. It is fully established as a religious technical term in the older parts of the *Bhagavad-Gītā* (*q.v.*), which belong to the two centuries immediately preceding our era, and was subsequently freely used in all Sanskrit literature, both sacred and profane.

Devotional faith implies not only a personal God, but one God. It is essentially a monotheistic attitude of the religious sense. If, therefore, we assume that the word *bhakti*, as a religious technical term, cannot be traced to a period earlier than the 4th cent. B.C., it is important to inquire how far back we can trace the feeling which it represents. This feeling was very old in India. We occasionally come across what it is difficult to distinguish from *bhakti* even in Vedic hymns, especially those dedicated to Varuṇa. But this incipient monotheism fell still-born from the singers' lips. The untaught multitude adhered for many centuries to the genial, hearty, polytheistic nature-worship of their Vedic ancestors, while the Brāhmans—in that part of India the sole reposi-

[*] Śāṇḍilya, i. 2.

[*] This is the convenient name given by Hopkins to the unsystematized Brāhmanical teaching of the earliest Upaniṣads before it had developed into the systematized Vedānta of Śaṅkara.

tories of the learning of their time—carried their speculations into the region of pantheism. The origin of the monotheism from which *bhakti* sprang must be sought elsewhere than among the Brāhmans of Northern India.

The migration of the Aryans into India was a long process, extending over many generations. The earlier comers were separated from the later ones by differences of custom, religion, and language. There were internecine quarrels among them, which ultimately resolved themselves into one group of tribes establishing itself as the most powerful. This group, represented in history by the Kuru tribe, had settled in the tract known as the *Madhyadeśa* or 'Midland,' and corresponding to the country near the modern Delhi and to its immediate north. It was the Aryan language spoken in the Midland that in later times developed into Sanskrit. It was in the Midland that the Vedic hymns were collected and compiled, and it was here that the Brāhmans consolidated their priestly power and gained the social supremacy which subsequently extended over the whole of India, and which they have never lost. All the old religious literature which has come down to us had, if not its origin, at least its publishing centre, in the Midland.

(*b*) *Indian monotheism and its probable origin.*—The word 'Midland' suggests an 'Outland,' also inhabited by Aryans, encircling the Midland on the East, South, and West. In those days, besides the Brāhmans, the Aryans had another leading class—that of the *Kṣatriyas*, or warriors. In the earlier times these shared with the Brāhmans the right of sacrifice, which in the Midland was afterwards monopolized by the latter. It has long been recognized that the Aryans of the Outland were not, in later Vedic times, so thoroughly subjected to the religious influence of the Brāhmans as their kindred of the Midland. In the Outland the thinkers belonged rather to the Kṣatriya class, to whose learning and critical acumen witness is borne even in contemporary Brāhmanical writings. It was in the Outland that the old atheistic system of philosophy—the Sāṅkhya—took its birth, patronized and perhaps founded by Kṣatriyas. Here, later on, Śākya Siṁha and Mahāvīra, both Kṣatriyas, founded respectively the Buddhist and the Jain religions; and here, during the thousand years that precede our era, while the Brāhmans of the Midland were developing their pantheistic 'Brahmaism,' the leading spirits of the Kṣatriyas thought out their monotheism.

Śākya Siṁha and Mahāvīra were by no means the only Kṣatriyas of the Outland who were celebrated for their learning. Janaka, the famous king of Mithilā, was not merely intimately connected with the origins of the Bhāgavata religion, but also took a prominent part in philosophical discussions with Brāhmans of many varying views. According to the *Bhāgavata Purāṇa* (III. xxi. 26), even Kapila, the founder of the Sāṅkhya system, was descended from a *Rājarṣi*, and was therefore a Kṣatriya. The *Bṛhadāraṇyaka Upaniṣad* (II. i. 1 ff.) and the *Kauṣītakī Brāhmaṇa Upaniṣad* (iv. 1 ff.) both tell us how Gārgya, a Brāhman of the Outland, was actually taught by the Kṣatriya Ajātaśatru of Kāśī. To the east and south of the Midland lay the country of the Pāñchālas. Here lived the Kṣatriya Jaivali, who, according to the *Chhāndogya Upaniṣad* (I. viii. 1 and V. iii. ff.) put the Brāhmans to silence and taught the Brāhman Gautama. He even (V. iii. 7) claimed that his system of religious thought belonged to the Kṣatriya class alone. Again, in the same work (V. xi.) we find ourselves in another part of the Outland, the Kaikēya country of the western Panjāb. Five great theologians come to a Brāhman with hard questions, which he cannot answer. So he sends them on to a Kṣatriya, Aśvapati, the king of the land, who solves their difficulties. These Upaniṣads were all Brāhmanical, and their authors had no temptation to extol the learning of the Kṣatriyas. On the contrary, when they got a chance, they ridiculed it. Thus the teaching of an opponent is made short work of by the author of the *Śatapatha Brāhmaṇa* (VIII. i. 4, 10), who contemptuously compares it to 'the words of a Kṣatriya.'

We have no literary evidence as to the train of reasoning by which this doctrine of monotheism was reached, but to the present writer it appears more than probable that it was a development of the sun-worship which was the common heritage of both branches of the Aryan people—the Iranian and the Indian.

All the legends dealing with the origins of the Bhāgavata religion are connected in some way or other with the sun. According to the *Mahābhārata* (xii. 12983), the Adorable Himself taught the religion to the seer Nārada, who taught it to, amongst others, the sun, who communicated it to mankind. The greatest and most worshipped of all the incarnations of the Adorable—that of Rāma-chandra—was by human origin a descendant of the sun, while Kṛṣṇa, the other great incarnation, was descended from the moon, and with him the branch of the lunar race to which he belonged ceased to exist. Several of the legends connected with Bhāgavata saints are also connected with the sun. Sugrīva, Rāma's ally, had the sun for his father. Many legends are told about Draupadī, the wife of the five Pāṇḍavas, but in the *Acta Sanctorum* of the Bhāgavatas, the *Bhakta-māla*, only one is thought worthy of mention, and that is connected with a miracle performed by Kṛṣṇa with the aid of a marvellous cooking-pot given to Draupadī by the sun. Satrājit, Kṛṣṇa's father-in-law, was a sun-worshipper, and received from the sun a jewel that became the subject of many stories. One of the very earliest heretics recorded in Brāhmanical literature was Yājñavalkya. According to the *Viṣṇu Purāṇa* (III. v. ff.), he refused to obey his preceptor's command to join in worship with people whom he styled 'miserable and inefficient Brāhmans.' He explained that he acted 'in' or 'for' *bhakti* (the MSS differ), and rejected so much of the Yajur Veda as he had learnt from his teacher. He then departed and worshipped the sun, who imparted to him a new and schismatical Yajur Veda of its own. With this he betook himself to the Janaka referred to above, a famous king of the Outland, and the legendary father-in-law of Rāma-chandra. The *Bṛhadāraṇyaka Upaniṣad* (III. i.) tells how he discussed religious matters with Janaka and converted him, and how he disputed with and silenced orthodox Brāhmans. According to Bhāgavata eschatology, the saved soul first of all passes through the sun on its way to the Adorable after death. Nimbārka, the earliest of the Bhāgavata reformers, is traditionally said to have been an incarnation of the sun, and to have started his career by making the sun stand still. Even at the present day the sun is given the title of 'Bhagavat' by the peasants of Northern India. In modern language *Bhagavat Sūrya*, the Adorable Sun, becomes *Sūruj Bhagavān*. Finally, in the later stages of the Bhāgavata religion, the Adorable is identified with Viṣṇu, a deity who, in the oldest Indian literature, was worshipped as a sun-god.

(*c*) *Founder of the monotheistic Bhāgavata religion.*—Under any circumstances, whether this monotheism was a development of sun-worship or not, the following facts may be taken as accepted by most students of the subject:—The founder of the religion was one Kṛṣṇa (Krishna) Vāsudeva, a Kṣatriya. His father's name was Vasudeva (hence the patronymic of Vāsudeva), and his mother's Devakī. He was the pupil of a sage named Ghōra Āṅgirasa, who taught him 'so that he never thirsted again.'* He belonged to the Sātvata sept of the Outland Yādava tribe. In the older parts of the *Mahābhārata* he appears in the twofold character of a mighty warrior and of a religious reformer. He called the object of his worship the *Bhagavat*, or the 'Adorable,' and his followers called themselves Bhāgavatas, or 'Worshippers of the Adorable.' The religion was first adopted by the people of his own tribe, and gradually spread over the greater part of the Outland. Before the 4th cent. B.C., as in the case of the founders of many other religions, he was himself given Divine honours, and under his patronymic of Vāsudeva became identified with the Adorable. In its original form the religion was strongly mono-

* *Chhāndogya Upaniṣad*, III. xvii. 6.

theistic. Vāsudeva taught that the Supreme Being was infinite, eternal, and full of grace, and that salvation consisted in a life of perpetual bliss near him.*

2. History of Bhāgavata religion.—i. *FIRST STAGE.*—There has always been manifest in India a tendency to combine religion with philosophy, and, this being fostered by the speculative inclinations of the Kṣatriya class, it followed that, as time went on, and as interest in philosophical questions spread amongst the people of India, monotheism, as expressed by the Bhāgavata religion, was given a philosophic basis. The pantheistic Brahmaism of the Midland was altogether opposed to this monotheism, and the Bhāgavatas naturally turned to those systems of philosophy which had sprung up in the freer atmosphere of the less Brāhmanized Outland. There were two of these systems—the ancient Sāṅkhya † (*q.v.*) and its daughter, the Yoga (*q.v.*). These two systems influenced not only Bhāgavatism, but also two other important religions founded by Kṣatriyas—Buddhism and Jainism.

The Sāṅkhya system is based on pure atheism. It categorically denies the existence of any Supreme God. Moreover, it does not concern itself with ethics. The Bhāgavata religion, on the other hand, had a God, and from the first was strongly ethical in character. The bridge between those two opposing conceptions was afforded by the Yoga philosophy. The belief in the power acquired by the practice of *yoga*, or concentration, a kind of shamanism, had existed in India for centuries, and this became a branch of philosophy when the acquired power was intended to be utilized for the obtaining of the knowledge demanded by Sāṅkhya. The Yoga teaching inculcates morality, and the ethical tendency of Bhāgavatism led it to ally itself with this development of Sāṅkhya rather than with the parent system.

A system of philosophy, as distinct from a religion, is a matter for the learned alone, and the doctors of the Yoga system readily accepted an alliance with a religion, such as that of the Bhāgavatas, which brought the popular beliefs to their side. They paid a price for it. They added a God to the Sāṅkhya system, and Yoga became theistic. The God whom they accepted had nothing to do with their philosophy. The idea was added on from outside without organically affecting it. On the other hand, the philosophy supplied the Bhāgavatas with a number of technical terms, not the least important of which was the word *yoga* itself. With them the word gradually changed its meaning from 'concentration of thought' to 'devotion to God.' It thus approached the meaning of *bhakti*, but did not include the idea of love, which is an essential part of the signification connoted by that word. We shall see that in later times the word *yoga* received still further development. Another technical term which the Bhāgavatas borrowed from Sāṅkhya-Yoga was a frequently used title for 'God,' viz. *Puruṣa*, or the 'Male.' This was the word employed by the Sāṅkhyas for the human soul. According to the Yoga system, the shadowy God which it adopted was merely a particular soul possessed of supreme knowledge and power. To Him was given the title of the Puruṣa *κατ' ἐξοχήν*, and this name was adopted by the Bhāgavatas as an alternative name for the Adorable. As time went on, other names were also applied to Him, such as Nārāyaṇa, a patronymic from *Nara*, the Primal Male, and, as already explained, Vāsudeva. These bring us down to the end of the first stage of the development of the Bhāgavata religion, which we may roughly fix as coinciding with the conclusion of the 4th cent. B.C.

ii. *SECOND STAGE.*—(*a*) *Its absorption by Brahmaism.*—The second stage is marked by the capture and absorption of Bhāgavatism by the Brahmaism of the Midland. It is most probable that the immediate cause of this fusion was, as Prof. Garbe suggests, the life and death struggle between the Brāhmans and the adherents of the other great religion of the Outland, Buddhism. With Buddhism the Bhāgavatas had nothing in common. In Brahmaism there was at least a shadowy Pantheos. The Brāhmans were thus enabled to win over the Bhāgavatas to their side in the contest, but, like the teachers of Yoga, had to pay a price for the alliance. That price was, first, the identification of the Adorable with an ancient Vedic sun-god, Viṣṇu (Vishnu), still a popular object of worship among the polytheistic lower classes of the Midland; and, secondly, the confession of the religious orthodoxy of the Kṣatriya monotheism. The process was an easy one. Legends were discovered of Brāhmans who performed Kṣatriya functions, of Kṣatriya families that became Brāhmans, and even of the great Bhāgavata teacher, Janaka, becoming a Brāhman. It became convenient to remember that Manu, the great lawgiver, was a Kṣatriya, and Manu himself is made by his commentator to say that even a Brāhman can in certain circumstances go to a Kṣatriya teacher.* Finally, the Midland had one incarnation of Viṣṇu, Paraśu-Rāma, a Brāhman by birth, who had become incarnate merely for the destruction of Kṣatriyas. In consequence of the alliance with the Bhāgavatas, the Brāhmans had now to confess that this hero was ultimately defeated by the first Kṣatriya incarnation, that of Rāma-chandra. In the official Brāhman account (*Rāmāyaṇa*, I. lxxv. ff.) the unpleasant fact is slurred over, but it is nevertheless fully admitted.

The incorporation was, in short, carried out in exactly the same way as that in which we see Brahmaism extending its frontiers at the present day. The process is going on now before our eyes. Local or aboriginal deities are discovered to be identical with Śiva or some other member of the Brāhmanical pantheon, and the distinction of caste is conferred upon the converts. Usually they are declared to be Rājputs, or, in other words, of the Kṣatriya class. The aboriginal customs and beliefs are at first left untouched, and in a couple of generations no more ardent supporters of the claims of the Brāhmanical priesthood are to be found than those who are still fetish-ridden savages. In much the same way the Bhāgavatas became a sect of Brahmaized anti-Brahmaists. The treaty of peace is found in the older parts of the celebrated *Bhagavad-Gītā* (which see). All the noblest ethical sentiments found herein are clearly of Bhāgavata origin. In it the deified Vāsudeva is fully identified with Viṣṇu, but not yet with the Brahmaist Pantheos; and Kṛṣṇa, the personal name of Vāsudeva the Kṣatriya, is also given admission to the circle of Brāhmanical gods as an incarnation of the same deity.

As time went on, that occurred which history has

* In the above, and in what follows, the present writer has freely utilized the researches of Prof. Bhandarkar and of Prof. Garbe, whose conclusions have been amply borne out by his own inquiries. It must, however, be explained that some Sanskrit scholars are not prepared to accept these statements in their entirety. It may be noted that Bhāgavatas are often called 'Pāñcharātras.' This is, properly speaking, the name of one of the sects into which the religion was divided.

† The present writer is unable to follow Prof. Deussen in his theory that Sāṅkhya is a development of Vedāntism.

* See, for instance, *Mahābhārata*, xiii. 2914, 2397; *Śatapatha Brāhmaṇa*, xi. 6. 2, 10 (*tato brahmā Janaka āsa*); *Viṣṇu Purāṇa*, IV. iii. 5; Someśvara on *Mīmāṁsa Sūtra*, I. iii. 3; *Matsya Purāṇa*, cxxxii. 115; Manu, ii. 241.

many times since repeated, and Bhāgavatism fell more and more under the sway of the Brāhmans. We see this earliest in the later parts of the *Bhagavad-Gītā*, which belong to the first two centuries after our era. In Northern India, where the influence of the Midland was strongest, the Bhāgavatas even admitted the truth of Brahmaism, and identified the Pantheos with the Adorable, although they never made pantheism a vital part of their religion. It never worked itself into the texture of their doctrines, but was added to their belief as loosely as their own monotheism had been added to the Yoga philosophy. In the later Bhāgavata scriptures it is proclaimed and recognized, or silently ignored, according to the passing mood of the writer. At times we come across a misty divinity, personal and gracious it is true, yet of whom they can say in Brahmaist language that He is the great 'WHO?'*, and regarding whom they can only postulate that He is neither being nor not-being.† At another time, within the same work, the Deity is represented as possessing form and substance. At one time He is said never to have been seen by mortal eye, and at another time He reveals Himself in bodily form to some favoured saint. The text-books of this Brahmaized Bhāgavatism are the latter part of the twelfth book of the *Mahābhārata*, known as the *Nārāyaṇīya*, and the famous *Bhāgavata Purāṇa*.‡

(*b*) *Worship of incarnations.*—This alliance with Brahmaism had one general effect. It removed the Adorable farther from His adorers. He became less definite, and we can well believe that even in those days true believers began the cry which has become the creed of a sect in later years, 'See ye the Unseeable' (see ALAKHNĀMĪS). Bhāgavatism thus began to fail to supply the craving felt in every human heart for a personal object of adoration, and the need was met by a development of the theory of incarnations. The Adorable was represented as becoming incarnate in various forms, on various occasions, and for various purposes. To these incarnations, instead of to the Adorable Himself, the *bhakti* of the Bhāgavatas now became directed.

The idea of a god becoming incarnate is very old in India (see art. INCARNATION). We find legends on the subject in Vedic literature. Here, sometimes one god, sometimes another—Brahmā, Viṣṇu, or Indra—becomes incarnate to save the gods or to conquer the world. By the time that Bhāgavatism was received into the Brāhmanical fold, these legends had become detached from other gods, and all centred round the person of the popular sun-god Viṣṇu. He it now was who, perhaps as a relic of totem-worship, became incarnate as the Fish, the Tortoise, the Boar, the Man-lion, the Dwarf, and so on. Then heroes, first semi-Divine and next wholly human, were added to the list, such as Rāma-chandra, Kṛṣṇa, or even the Buddha. The list of incarnations, or 'descents' (*avatāra*), drawn up by Brāhmanical orthodoxy contained ten instances; and two of these, that of the Kṣatriya Rāma-chandra, and that of the Kṣatriya Kṛṣṇa, were late additions, almost certainly added to the list in obedience to Bhāgavata susceptibilities, just as the name of the Buddha may have been added to draw weak-kneed Buddhists into the Brāhmanical fold. We have already seen how the Kṛṣṇa of the incarnation bore the personal name of Kṛṣṇa Vāsudeva. Rāma-chandra, 'the glory of the Solar Race,' was also a famous Kṣatriya hero of the Outland, and was son-in-law of the Janaka previously mentioned. To the Bhāgavatas, Rāma-chandra and Kṛṣṇa were naturally the favourite incarnations, but in their later books the list became much extended, the Adorable being represented as becoming incarnate no less than twenty-four times. These incarnations became the direct object of worship. As Tulasī-dāsa said to one of those who called upon men to 'see the Unseeable,' 'Why dost thou endeavour to see the Unseeable? Pray thou to Rāma, and all at once is seen.'

(*c*) *Worship of the Śakti.*—About this period there also arose the idea of the *Śakti*, or energic power, of a divinity as a separate personality. The worship of the energic power became a prominent feature in the cult of Śiva, but it is also found among the Bhāgavatas. Among them, as Viṣṇu has been identified with the Adorable, so his spouse Lakṣmī is looked upon as the Adorable's energic power. She is one with Him, and yet distinct from Him, 'neither confounding the persons nor dividing the substance.' So entirely is she looked upon as one with Him that the text-books are deliberately silent about her; for, say they, 'She has done all that He has done, and when we tell of Him we tell of Her.' And yet, on the other hand, she also appears as the active agent in spreading abroad the true faith, which she learnt from Him. The Bhāgavata monotheistic deity has therefore become a Trinity in Unity, consisting of the Supreme, His incarnations, and His energic power. The resemblance to the Christian doctrine of the Trinity is marked, more especially when we remember that, among the Syrian Christians, the Holy Ghost was declared to be a woman, and was identified with the Virgin Mary. It is quite possible that the Bhāgavata trinitarian doctrine developed under early Christian influence (see below).

(*d*) *Relation of Bhāgavatism to popular polytheism.*—Side by side with this Bhāgavata monotheism there had always been the polytheism of the lower orders, with its great gods, Brahmā, Viṣṇu, and Śiva, and its millions of godlings. Bhāgavatism did not require any denial of these from its converts. We have seen that it had identified Viṣṇu with the Adorable Himself. Brahmā was relegated to a lower place. We shall see later that he was looked upon as a finite being, created by the Adorable to superintend the general carrying out of His orders. The dread god Śiva or Rudra, appeased only by bloody sacrifices, could not be so disposed of. His worshippers were very many, especially in the Outland, where, in early times, under the name of Pāśupatas, they, like the Bhāgavatas, had been strongly influenced by Sāṅkhya-Yoga. The 344th section of the 12th book of the *Mahābhārata* contains an interesting legend of a terrible fight between Rudra and the Adorable. Brahmā intervenes and pacifies Rudra, who acknowledges the Adorable's superiority. Then the Adorable says to Rudra (13293), 'He who knows Me, knows Thee. He that follows Thee, follows Me. There is no difference between Us two.' According to another legend preserved in the 343rd section of the same book, towards the end of a cycle of time the Adorable becomes subject to wrath (at the wickedness of the world), and therefore Rudra is born from his forehead. The sum of all this is that the Bhāgavatas accepted Śiva as a form of the Adorable, and thus in legends we find the most pious Bhāgavatas, such as, for instance, Chandrahāsa, performing their morning devotions to the Adorable Himself, and continuing them in a temple devoted to Rudra or his bloodthirsty spouse Durgā. The numerous other gods of Hindu polytheism were easily disposed of. They were classed as merely subordinate creatures of the Adorable, given special

* *Ka* (*Nāradīya Bhakti-sūtras*, i. 2).

† *Mahābhārata*, xii. 13190.

‡ The *Bhāgavata Purāṇa* is a very late work, and perhaps should preferably be classed with post-reformation literature. See below.

powers or functions in order to carry out His will.

All this time the Bhāgavatas, while they were estopped from denying the truth of Brahmaist pantheism, were still nominally professors of Sāṅkhya-Yoga. The result was a series of attempts to unite the opposing lines of thought—one an unsystematized pantheism founded on the idea that everything is part of the One, the other a systematized dualism based on the essential difference between matter and spirit. The first endeavours are to be found in the latest parts of the *Bhagavad-Gītā*. Attempt after attempt, given forth under the authority of highly honoured names, such as that of the Sāṅkhya teacher Pañchaśikha, of the learned Bhāgavata king Janaka, or of a female ascetic named Sulabhā, appears in the twelfth book of the *Mahābhārata*, and these finally settled down into the form in which we find them in the third book (section xxiv ff.) of the *Bhāgavata Purāṇa*. It is impossible to consider this result as a system of philosophy. The two opposing lines of thought, each intelligible in itself, could no more combine than oil and water, and this so-called 'Paurāṇik Sāṅkhya' can be described only as a medley of unrelated and mutually contradictory conceptions.* It has nevertheless exercised the greatest influence on the pious and more uncritical minds of India, and has to be reckoned with in dealing with the religious history of that country. Its influence is most strikingly manifest in the change that it has brought about in the meaning of the word *yoga*. We have already seen that the meaning had changed from 'concentration of thought' to 'devotion.' Even in the *Bhagavad-Gītā* this term became subdivided into *karma-yoga*, or the disinterested practice of duty, and *jñāna-yoga*, the purely theoretical side of religion. Later on, under the influence of the 'Paurāṇik Sāṅkhya,' we meet three kinds of *yoga*. *Karma-yoga* is now no longer the disinterested practice of morality, but has become attendance to religious ceremonial obligations. These give purification, and lead to *jñāna-yoga*, which is now the concentration of the mind on the Adorable, and this finally to *bhakti-yoga*, in which the devotee is full of nothing but faith, and sees nothing but the Deity.†

This brings us down to the end of the millennium after our era. In the early part of the 9th cent. A.D. the celebrated pantheistic philosopher Śaṅkara gave system to the ancient Brahmaism of the Midland, and created the Vedānta (*q.v.*) philosophy. His system, far more rigid than the Brahmaism on which it was founded, compelled him vigorously to attack the Bhāgavata monotheism, hitherto grudgingly recognized as orthodox. His assaults resulted in the Bhāgavatas not only assuming a position of defence, but also taking up two differing lines of counter-attack. On one line they remained faithful to the old alliance with Brahmaism, and contented themselves with combating Śaṅkara's arguments only so far as they were incompatible with their interpretation of Brahmaist teaching. On the other line, the alliance with Brahmaism was finally broken, and a return was made to the old Sāṅkhya-Yoga doctrines which had been abandoned, or partly abandoned, in favour of Brahmaism. The dispute culminated in the 12th cent., the leading representatives of the two lines of counter-attack being respectively Rāmānuja and Madhva, both inhabitants of Southern India.

iii. *THIRD STAGE. TENETS.*—With the appearance of these two great reformers commences the third stage in the development of the Bhāgavata religion—the modern *Bhakti-mārga*. It will here, therefore, be convenient to consider the tenets of the Bhāgavatas as they were fixed by the reformers at the commencement of this third stage of their development. Our materials are (1) the *Bhagavad-Gītā*, (2) the *Nārāyaṇīya* section of the twelfth book of the *Mahābhārata*, and (3) the *Bhāgavata Purāṇa*, as the old authorized scriptures, and the *Bhakta-māla* and numerous other works founded on it, as what might be called the 'New Testament' of the Bhāgavata religion. An account of the pre-reformation doctrines will be found in the article BHAGAVAD-GĪTĀ.

(1) *Monotheism and a God of grace.*—There is one and only one God, named the Bhagavat, the Adorable; Nārāyaṇa, the Son of the Male; Puruṣa, the Male; or Vāsudeva. He exists from eternity to eternity. He is therefore defined as 'the Endless' (*ananta*), 'the Imperishable' (*achyuta*), and 'the Indestructible' (*avināśin*). He is the Creator of all things out of matter, to which is given the Sāṅkhya-Yoga name of *prakṛti*, *pradhāna*, or 'the indiscrete' (*avyakta*). The original belief about matter seems to have been that He created it out of nothing, but in the mixed philosophy of the sect we sometimes come across statements agreeing with the dualistic Sāṅkhya-Yoga theory that *prakṛti* has existed independently from all eternity. From God issue all souls (*jīva*), which henceforth exist for ever as distinct individuals and are indestructible. He has created Brahmā, Śiva, and the countless subordinate deities to carry out His orders in creating and ruling the world, and to promulgate the true religion. He generally leaves the burden of ruling the world upon their shoulders, but, as occasion demands, from time to time in His infinite grace (*prasāda*)* He Himself becomes incarnate to relieve the world from sin or His followers from trouble. The greatest and most perfect of these incarnations (*avatāra*) are those of Rāma-chandra and Kṛṣṇa; but there have been twenty-three in all, and one is yet to come. *India thus owes the idea of a God of Grace—of the Fatherhood of God—to the Bhāgavatas.*

(2) *Process of creation.*—The principles according to which creation is held to have developed resemble those of Sāṅkhya-Yoga (see SĀṄKHYA), but, owing to the assumed necessity of connecting the immaterial Vāsudeva with the material world, are more complicated. The Adorable, who in this connexion is usually called Vāsudeva, is represented as passing in succession through three *vyūhas*, or phases of conditioned spirit. Vāsudeva first produces from himself *prakṛti*, the indiscrete primal matter of the Sāṅkhyas, and at the same time passes into the phase of conditioned spirit known as *saṁkarṣaṇa*. From the association of *saṁkarṣaṇa* with *prakṛti* there springs *manas*, corresponding to the Sāṅkhya *buddhi*, or the intellectual faculty, and at the same time *saṁkarṣaṇa* passes into the phase of conditioned spirit known as *pradyumna*. From the association of *pradyumna* with *manas* springs the Sāṅkhya *ahaṁkāra*, or consciousness, while *pradyumna* passes into a tertiary phase of conditioned spirit known as *aniruddha*. From *ahaṁkāra* and *aniruddha* spring the Sāṅkhya *mahābhūtas*, or grosser elements, with their respective qualities, and also the deity Brahmā, who from the elements fashions the earth and all that it contains.†

(3) *Bhakti and salvation.*—*Bhakti* directed towards the Adorable is the only means of salvation. It must be directed to Him or to one

* So also Garbe, *Sāṅkhya-Philosophie*, 52 ff. The *Bhāgavata Purāṇa* probably belongs to the 13th cent. A.D.

† So Nārāyaṇa Parivraj in the *Artha-pañchaka*, quoted by Bhandarkar, *Search for Sanskrit Manuscripts . . . during the year 1883–84*, p. 68.

* The doctrine of *prasāda*, or grace, has formed an essential part of the Bhāgavata religion so far back as literature takes us.

† For further details see Colebrooke, *Essays*, i. 437 ff., and Barnett's translation of the *Bhagavad-Gītā*, p. 48 ff.

of His incarnations, and to no other. The religion in this respect is strictly monotheistic. This is partly hidden by our translation of the word *deva* by 'God.' By a Bhāgavata, the word *deva* is used with exactly the same meaning as the Hebrew word *'elōhīm*. The latter sometimes signifies the Supreme God and sometimes His ministering spirits. In our versions of the OT the distinction is shown by translation, but this is not done by English writers on Indian religion, who always translate *deva* by 'God.' The word *deva* is applied not only to the Adorable, but also to His ministering spirits, Brahmā, and so on. These subordinate *devas* may, it is true, be the objects of worship, but this is δουλεία ('veneration'), not λατρεία ('adoration'), which latter is reserved for the Adorable alone. The Bhāgavata scriptures over and over again insist that the true believer must be a unitarian monotheist—an *ekāntin*.

(4) *Works and salvation*.—The question then arises as to how far works (*karma*) are necessary for salvation. This has been as much discussed in India as in Europe. The Bhāgavatas solve the problem by stating that works act only indirectly. Every work, good or bad, has its result, or, as they say, its fruit (*phala*). A good work, done for the sake of its fruits, may result in giving the soul a life of felicity in some other world, but this felicity will be merely temporary. As soon as the fruits have worked themselves out, the soul returns to this world, and to the weary round of birth and re-birth. But if a work is *niṣkāma*, or disinterested, *i.e.*, is not performed for the sake of its fruits, but is simply dedicated to the Adorable and laid before His feet, He accepts it and confers His immortal nature upon its fruits. Then the Adorable Himself enters the heart of the doer and begets therein the virtue of *bhakti*, and it is this *bhakti* that finally gives eternal salvation. *India thus owes the preservation of the doctrine of Faith to the Bhāgavatas.*

(5) *Immortality of the soul*.—We have seen that the individual soul was considered to be a part (*aṁśa*) of the Adorable, emitted by Him to a separate conscious existence. Once so emitted, it exists for ever as a separate conscious entity. Agreeably to the universal Indian belief in the doctrine of transmigration, the soul is chained to its round of births and re-births until it is saved by *bhakti*. A soul, like those of certain Divine beings, may be saved from the first, and is then known as *nitya-mukta*, 'saved from eternity,' but the ordinary human souls are not of this nature, and are classed under four heads. These are (*a*) *baddha*, those who are 'tied' to things of this life, and who are not in the way of salvation; (*b*) *mumukṣu*, those in whom there has been awakened a consciousness of the want of salvation, and who 'desire it,' but are not yet fit for it (we should call these 'awakened sinners'); (*c*) *kevala*, or *bhakta*, the pure in heart, who are 'only devoted' to the Adorable, and who are thus on the way of salvation through possessing *bhakti*; and (*d*) *mukta*, the 'released,' or saved. These last enjoy a perpetual, conscious, independent existence at the feet of the Adorable (*Bhagavat-pada*). Their only joy is serving and waiting upon Him (*kaiṁkārya*). They do not become Him, but become 'like Him' and remain in everlasting bliss. *India thus owes to the Bhāgavatas the belief in the Immortality of the Soul.*

(6) *Eschatology*.—When the soul, thus saved, leaves its earthly body, it first enters the sun as the door.* There its subtle body (*liṅga-śarīra*) is consumed and it becomes an atomic entity (*paramāṇubhūta*). Thence it enters the God, first in the phase of *aniruddha*, then in that of *pradyumna*, then in that of *saṁkarṣaṇa*, and finally the Supreme Adorable, who, by a confusion with Brahmaism in the passage now quoted from, is called 'The Supreme Self.' As in the rest of their philosophy, there is in their eschatology little that is clear and consistent. Brahmaism and Sāṅkhya-Yoga are inextricably mixed up, but the continued separate existence of the soul after it has reached the Adorable is certainly a tenet that is held through all their self-contradictory mysticism.

* *Mahābhārata*, xii. 13383 ff.

(7) *Sin*.—The root idea of sin is anything which is incompatible with *bhakti*. Every sin is a work (*karma*) and necessarily bears its fruit, just as much as any good work. Sins are classed as involuntary (*ajñāta*) and wilful (*jñāta*). An involuntary sin can be expiated by ceremonial acts. These expiatory works, provided they are disinterested, *i.e.*, not performed merely as counterbalances to the involuntary sins, reach the Adorable and give the everlasting fruit. As for wilful sins, when a man is devoted to disinterested works, or is in the way of *bhakti*, he does not usually commit such; and if perchance he do, then the Adorable, who is the Lord of good works, Himself forgives the sin of the evil works. A favourite comparison is with a paid workman and a slave born in the house. If a paid workman (*i.e.* a doer of interested works) does any damage, he has to make it good to his employer; but if damage is done by a faithful slave, who works not for reward but for love (*i.e.* the doer of disinterested works), the master bears the loss, and none of it falls upon the slave.*

The above doctrines represent the stage to which the Bhāgavata religion had developed by the 15th cent. of our era; but they have remained unchanged, as the doctrines of the *Bhakti-mārga*, to the present day. In their main principles they are the doctrines of the *Bhagavad-Gītā* and of the *Nārāyaṇīya*, which are, of course, much older.

3. The four churches of the reformation.—Since the revival of Bhāgavatism in the 12th and following centuries, the *Bhakti-mārga* has been divided into four *Saṁpradāyas*, or churches, viz. the *Śrī-saṁpradāya* founded by Rāmānuja, the *Brahma-saṁpradāya* founded by Madhva, the *Rudra-saṁpradāya* founded by Viṣṇusvāmin, and the *Sanakādi-saṁpradāya* founded by Nimbāditya.

(1) *Attitude of each to the Vedānta*.—The essential differences between these churches consist in the attitude which they assume towards the Vedānta philosophy of Śaṅkara. It is specially stated by Bhāgavata writers† that they form really one church, and that the differences are only apparent. Further, each church has become divided into sects, but none of these is opposed to its mother-church. It has been given a name and a separate recognition only on account of the preferences (*ruchi*) of particular teachers in laying emphasis on particular points.

The Vedānta doctrine is fully described elsewhere (see VEDĀNTA), and here it will be sufficient to devote a few lines to the discussion of the particular points objected to by the Bhāgavata reformers. Being purely monistic, it is generally known as the *advaita-mata*, or doctrine of non-duality. Its professors claim to be *smārtas*, *i.e.*, 'holders to tradition,' or 'orthodox.' The Bhāgavatas allow them the title and condemn the tradition. An essential part of its teaching is the doctrine, usually stated to be an invention of Śaṅkara himself, of *māyā*, or illusion. To this the Bhāgavatas raise the strongest objection, and one of their commonest nicknames for a follower of Śaṅkara is that of *māyā-vādin*, or declarer of

* 'Bhakta-kalpadruma,' in *JRAS*, 1908, p. 347.

† *e.g.* by Hariśchandra in the *Vaiṣṇava-sarvasva*.

illusion. Śaṅkara's Supreme Deity (Bráhma*) is an absolutely impersonal, quality-less being who can obtain an unreal existence only by association with *māyā*. The soul is really a part of Bráhma individualized by association with *māyā*. When released from *māyā*, the soul is again merged in Bráhma and loses its identity.

All Bhāgavatas agree in rejecting the entire doctrine of *māyā*, with all its consequences. The Supreme Deity, the Bhagavat, is personal by nature. The soul, as already said, is also personal and individual by nature, and, once emitted, lives for ever. It is never merged in the Bhagavat.

The Śrī-saṁpradāya is the most important Bhāgavata church which, while rejecting Śaṅkara's Vedāntism, remains faithful to the alliance with the old Brahmaism. The Bhagavat, identified with the Pantheos or Bráhma of the Upaniṣads, is a Pantheos, but a personal Pantheos in whom everything that is exists, and who is endowed with every imaginable auspicious quality. Matter and soul alike proceed from Him, and He pervades all things as their *antaryāmin*, or Inward Restrainer. The doctrine of this church is therefore also monism, but, to distinguish it from Śaṅkara's, it is called a *viśiṣṭādvaita-mata*, or doctrine of qualified non-duality. The teaching of this sect is said to have been communicated by the Adorable to His spouse, or energic power, Lakṣmī, also called Śrī. Hence the name of the Saṁpradāya. She taught a demi-god named Viṣvak-sēna, who taught Saṭhakōpa, and eighth in descent from the last named, in succession of master and pupil, came Rāmānuja, who flourished in the 12th cent. A.D. For further particulars see RĀMĀNUJA.

Madhva's Brahma-saṁpradāya represents the other line of defence of the Bhāgavata religion. He broke the alliance with Brahmaism and returned to the old dualism of Sāṅkhya-Yoga. His teaching is therefore said to be a *dvaita-mata*, or doctrine of duality. The sect describes Śaṅkara's Vedānta as disguised Buddhism, and lays particular stress on the five eternal distinctions, viz. (*a*) between God and the soul, (*b*) between God and matter, (*c*) between the soul and matter, (*d*) between one soul and another, and (*e*) between one particle of matter and another. Although in other respects preaching the ordinary Bhāgavata doctrines, Madhva prefers to call the Supreme 'Viṣṇu,' rather than 'Vāsudeva' or 'Bhagavat.' His followers call themselves Mādhvas or Madhvāchārīs (*q.v.*), and claim to have received the doctrine originally from Brahmā, sixth in descent from whom, in succession of teacher and pupil, came Madhva. Hence the name of the Saṁpradāya. As may be expected, the rupture with Brahmaism brought upon them vigorous attacks from the followers of Śaṅkara, and in one work, entitled the *Pāṣaṇḍa-chapeṭikā*, or 'Slap in the Face of Heretics,' they are all, as a body, genially consigned to the utmost torments of hell.

The Rudra-saṁpradāya is the most modern of all the sects. Viṣṇusvāmin lived in the early part of the 15th cent.; but his followers, in order to give the authority of age to his opinions, state that he had previously existed some 4500 years earlier, and that it was then that the doctrines were first promulgated by him. They were originally communicated by the Adorable to Rudra, or Śiva, who passed them on to mankind, Viṣṇusvāmin being fifteenth in descent from him in the line of teacher and pupil. His family belonged to the south of India, and his converts were mostly made in Gujrāt. One of his pupils, Lakṣmaṇa Bhaṭṭa, migrated to Northern India, where his son Vallabha (or Vallabhāchārya) became an energetic apostle of the church which is now usually called after his name, his disciples being known as Vallabhāchārīs (*q.v.*). The doctrines of this church are known as *śuddhādvaita-mata*, or doctrine of pure non-duality. According to them, the Adorable has three attributes, viz. *sat*, 'existence,' *chit*, 'consciousness,' and *ānanda*, 'bliss.' The soul is the Adorable with the attribute of bliss suppressed (*antarhita*), and inanimate matter is the Adorable with the attributes of consciousness and bliss suppressed. When the soul is 'released,' it regains the attribute of bliss, and thus becomes for ever identical in nature with the Adorable.

The Sanakādi-saṁpradāya (see NIMĀVATS), founded by Nimbārka or Nimbāditya, is certainly the oldest of the Bhāgavata churches.* Its founder is said to have been an incarnation of the sun. The Adorable in His incarnation as a swan (*haṁsa*) taught Sanaka and his brethren, the mind-born sons of Brahmā, who taught Nārada, who taught Nimbārka. The doctrine of this church is called *dvaitādvaita-mata*, or doctrine of dualistic non-duality. While admitting that the soul and matter are distinct from the Adorable, it holds that they are nevertheless intimately connected with Him, as its coils are connected with a serpent, or as its waves are with water. The Adorable is incomprehensible, but is manifest in the book of Nature, in which the natural objects form the letters constituting the words. The letters may be in different alphabets although the sounds are the same, and hence the actual facts of the incarnations, or the truth or falsehood of the accounts concerning them, are of small importance, so long as we read the Divine love that lies behind them. The church has suffered much from persecution. It is said to have been extirpated by the Jains and to have been resuscitated by a certain Nivāsa.†

(2) *Clerical and lay life.*—The members of each of these four Bhāgavata churches are divided into two classes, which we may conveniently call 'clerical' and 'lay.' The latter includes the great mass of the believers, who look to the former for religious guidance. The status of the clerical class varies according to sect. Usually these teachers are unmarried, leading, or professing to lead, an ascetic life; but sometimes, as for instance in the case of most sects of the Rudra-saṁpradāya, the clergy are encouraged to marry, and to live in the world as men of business and family. The ascetic clergy (*bairāgīs* [*q.v.*]) mostly lead a wandering existence, singly or in bodies, subsisting on such alms as they can collect. When old or infirm, they settle down in one of the numerous *maṭhs*, or monasteries, scattered all over India. These monasteries also serve as rallying points for the travelling brethren, where any of them can find food and shelter for a reasonable time. Each is governed by a *Mahant*, or Superior, and is usually endowed with property which is under his management.

(3) *Subsequent history of each church.*—The slight philosophical details which differentiate the churches having been discussed, it will now be convenient to consider the development of each during the past seven centuries.

(*a*) *Śrī-saṁpradāya.*—Rāmānuja, who is said by his followers to have been an incarnation of Śeṣa, the serpent of eternity, belonged to Southern India, and studied and lived the best part of his life at Conjeeveram near Madras. Although teaching the theoretical equality of all castes, the teachers and leaders of his church were invariably Brāhmans, and persons of low caste were not even admitted as disciples. The mother-church has always been strongest in Southern India, where it took its birth, and where it has still numerous monasteries. It has

* Care should be taken to distinguish between Bráhma (or Bráhman) (neut.) the impersonal Pantheos of the Upaniṣads and Śaṅkara, and Brahmā (or Brahmán) (masc.) the personal member of the well-known Hindu triad (Brahmā, Viṣṇu, and Śiva).

* The *dvaitādvaita-mata* is referred to in the *Prabōdha-chandrōdaya*, a work dating from the end of the 11th cent. A.D.

† Hariśchandra, *Vaiṣṇava-sarvasva*.

never been very popular in Northern India. Râmânuja laid down the strictest rules of conduct, even eating and drinking being bound by the most minute regulations. We have seen that in the centuries immediately following our era the faith of the Bhâgavatas was preferably directed not to the Adorable Himself, but to one of His numerous incarnations. Râmânuja did not confine his followers to any particular one of these, but that of Râma-chandra was usually preferred. We have also seen that Lakṣmī, Viṣṇu's spouse, looked upon as the Adorable's energic force, was considered as identical with the Adorable Himself. Hence many Râmânujas preferred to direct their faith to her.

Fourth or fifth in spiritual descent from Râmânuja there rose, late in the 14th cent., a teacher named Râmânanda. He was a disciple of Râghavânanda, the *mahant* of the monastery founded by Râmânuja at Seringapatam in the later years of his life. Râmânanda quarrelled with his superior on a question of discipline, and, migrating to Northern India, there founded a sect of his own called the Râmânandī. Its principal doctrinal peculiarity is the insistence that the Râma-chandra incarnation is the one which should be the chief object of faith in the present age. Its followers are hence also called *Râmâvats*, or Râmaites. Râmânanda, instead of preaching and writing in Sanskrit, as had hitherto been the custom, taught in the vernacular, and thus brought his doctrines within reach of all classes. He also interpreted the Bhâgavata doctrine of the brotherhood of man in its most liberal sense, and admitted all castes, even the lowest, not only as lay members of the sect, but also as teachers. The fact that it was a question of discipline on which he had broken with the Râmânujas led him to release his followers from the shackles which he had found inconvenient. They observed no particular ordinances in eating or bathing, and were named by him *Avadhūta*, or liberated.

Numerous sub-sects trace their origin to this branch of the Śrī-sampradâya, each of which forms the subject of a special article in the present work. See KABĪR-PANTHĪS, KHĀKĪS, MULŪK-DĀSĪS, RAI-DĀSĪS, and SENĀ-PANTHĪS, which are the most important of the sub-sects. The catholicity of Râmânanda's teaching may be gathered from the fact that he numbered among his twelve chief disciples, or apostles, a Musalmân (Kabīr), a barber (Senâ), and a low-caste *chamâr*, or leather-worker (Rai-dâsa), each of whom founded a sub-sect. Kabīr's teaching was mixed not only with Christianity (see below), but also with Musalmân Ṣūfīism, which led him and his followers to neglect the worship of the incarnate Râma-chandra, and to identify the name of Râma not with the incarnation but with the unincarnate Adorable Himself, to whom, under the name of Râma, *bhakti* was to be directly offered. From his schism, if it can be called a schism, there branched out two other important sub-sects, one of which has left its mark upon the political history of India—the Sikhs and the Dâdū-panthīs. The great bulk of the Hindu population of Northern India, however, still adheres to the original Râmânandī doctrines; and this sect has become the local mother-church, preserving friendly relations with its various sub-sects, although these are divided into two branches by the Kabīr schism. The most important later teacher of the Râmânandī church was Tulasī-dâsa (end of 16th century), the great poet. He did more towards popularizing the worship of the incarnate Râma-chandra than any of his predecessors, and his great epic, the *Râmâyaṇa*, has been truthfully described as 'the one Bible of 100 millions of people.' It is read and studied even by members of the other Bhâgavata Sampradâyas.

Another member of the Râmâvat church also deserves special mention. This is Nâbhâ-dâsa, or Nârâyaṇa-dâsa, a contemporary of Tulasī-dâsa, and the author of the *Bhakta-mâla*. This, with its commentary by Priyâ-dâsa, a member of the Brahma-sampradâya, may be called the *Acta Sanctorum* of the four churches. It is a storehouse of legends regarding the saints, ancient and modern, of the Bhâgavata religion. The importance of this book for a just comprehension of the religious attitude of modern Hinduism cannot be over-rated, and it is a matter for regret that the great difficulties of the text have deterred European students from its study. In its original form few natives can understand it nowadays, but numerous translations into modern Indian languages have made its contents familiar to every follower of the cult. For Northern India, it and Tulasī-dâsa's *Râmâyaṇa* are the two text-books of modern Bhâgavatism.

(*b*) *Brahma-sampradâya.*—Madhva, or Ânandatīrtha, the founder of this church, was also a native of Southern India (see MADHVĀCHĀRĪS). He was originally a Śaiva, but became converted to Bhâgavatism in his later years. The doctrines of the sect do not single out any particular incarnation of the Adorable for special worship, but in Northern India it has taken Kṛṣṇa as its principal object of adoration. The church is strongest in Southern India, where it has numerous monasteries; it has few votaries in the North, though they are said to have increased of late. The clerical members are Brâhmans, and profess celibacy, but the lay votaries are members of every class of society except the lowest. The church is an attempt at a compromise with Śaivism, and the votaries of the two religions pay adoration to each other's gods.

The Vaiṣṇavas of Bengal, who look upon Chaitanya (*q.v.*) as their founder, are said to be a branch of this church, of which, according to the *Bhakta-kalpadruma*, Chaitanya was himself a member. But the tenets of the Bengal Vaiṣṇavas approach much more nearly those of the Rudra-sampradâya.

(*c*) *Rudra-sampradâya.*—As already stated, the Rudra-sampradâya is now practically represented by the Vallabhâchârīs (*q.v.*). Two or three other and unimportant sects are also referred to it. The incarnation of the Adorable which is specially worshipped by this church is that of Kṛṣṇa. The form of the devotional love of this and other Kṛṣṇa-worshipping sects is not that of a son to a father, as in the case of the Râmâvats, but the love of a maid for a man; and this has given rise in later times to an erotic and sensual aspect of religion which has sometimes led to the most lamentable excesses. Kṛṣṇa's human spouse, Râdhâ, is looked upon as an incarnation of the Adorable's energic power, and sometimes one is the object of worship, sometimes the other, and sometimes both conjointly. The clergy of the church marry and live comfortable lives, and their example is followed by the laity, who may be of any caste, but mainly consist of the opulent and luxurious members of society. Another very widely diffused form of worship, especially amongst women, is that of the *Bâla Gopâla*, or Infant Kṛṣṇa. The cult is widely extended over Northern India and the Bombay Presidency. A sub-sect is that founded in the 16th century by Mīrâ Bâī, a famous princess and poetess of Râjputâna. Here the special object of worship is Kṛṣṇa Raṇachhōṛ (see MĪRĀ BĀĪS).

The Vaiṣṇavas of Bengal profess much the same tenets as those of the Vallabhâchârīs, and Vallabha himself was Chaitanya's father-in-law (see above under the Brahma-sampradâya). The Râdhâ-vallabhīs, another sect which worships Kṛṣṇa and Râdhâ, are also akin to the Vallabhâchârīs, but they are counted as belonging to the next, or Sanakâdi-sampradâya.

(*d*) *Sanakâdi-sampradâya.*—This church is now of small importance. Its few adherents, who are known as Nimâvats, are found in Northern India and in Râjputâna. They are mostly adorers of Kṛṣṇa (for further particulars see NIMĀVATS). One important sect is nominally sprung from this church, that of the Râdhâ-vallabhīs. It was founded by one Hari-vaṁśa, surnamed Hita, who was born in 1559 and was a Nimâvat. His teaching was little in accordance with that of his church, being nothing but a development of the tenets of the Vallabhâchârīs. The tendency towards erotic mysticism which distinguishes that sect is here carried to an extreme. Râdhâ, the representative of the Adorable's energic power, now throws even Kṛṣṇa himself into the shade. He is given a subordinate position under the title of *Râdhâ-vallabha*, or 'Râdhâ's husband,' and this name has given its title to the sect. The worship is directed almost entirely to Râdhâ as the spouse of God. For further particulars see RĀDHĀ-VALLABHĪS, SAKHI-BHĀVAS and CHARAṆ-DĀSĪS.

(4) *The guru.*—A striking characteristic of modern Bhāgavatism is the extravagant respect shown to the spiritual teacher, or *guru*. The first line of the *Bhakta-māla* gives as the essentials of religion *bhakti*, *bhakta*, *Bhagavanta*, *guru* ('faith, a faithful devotee, the Adorable, and the *guru*'); and this aptly illustrates the importance attributed to the last-named. Any one will admit that the first three are essentials, but few Westerns would think of adding the fourth. The rule that respect be shown to a spiritual teacher is very old in India. In ancient times, perfect obedience was required from his pupil. He was the pupil's second father, more to be venerated than even his natural progenitor. Once, however, the state of pupilage was over, the obligation of obedience ceased, and only respect and gratitude were subsequently required. But in modern Hinduism this proper attitude is greatly exaggerated. While some of the sects, and notably the Kabīr-panthīs, inculcate the greatest care in the selection of a guru, once selected he is to be obeyed implicitly throughout life. His voice is declared to be the voice of God, and the fullest devotion in word, act, and deed must be rendered to him. Some sects go further than others. The devotion is carried to incredible extremes among the Vallabhāchārīs. The devotee of this sect offers his body, soul, and substance to God, and, as the Gusāīn (properly 'Gosāī'), *i.e.* the guru, is in the later works of the sect identified with the Deity, these are in reality dedicated to him. 'By the act of dedication, a man submits to the pleasure of the Gusāīn, as God's representative, not only the fruits of his wealth, but also the virginity of his daughter or of his newly-married wife.'* It is fair to explain that few sects go to this length, and that in most, although the guru is revered as an incarnation of the Deity, his influence extends only to the sphere of morality. This is one more example of the tendency in India, as elsewhere, to deify the founder of a religion. The first Bhāgavatas deified Vāsudeva, and their successors deified, in their turn, the great men who founded their churches and their sects.

* Growse, *Mathurā*, p. 266.

Lastly, they took the further step of deifying their spiritual directors.

(5) *The mantra.*—No Hindu can become a member of a sect without the permission of a guru belonging to the sect. He is at first in the position of an inquirer, and when the guru considers him fit for admission, he whispers into his ear an initiatory formula (*mantra*), corresponding, as Mr. Growse points out, to the *In nomine Patris*, etc., of Christian baptism. These formulas are generally kept secret; but we know that the earliest, dating from pre-reformation times, was the 'twelve-syllabled' *Oṁ namo Bhagavate Vāsudevāya* ('Oṁ! reverence to the Adorable Vāsudeva'). In later times, as sectarian differences increased, the Supreme became differentiated into His incarnations. Thus, the *mantra* of the Rāmānujas is the 'six-syllabled' *Oṁ Rāmāya namaḥ* ('Oṁ! reverence to Rāma), while that of the Vallabhāchāris is the 'eight-syllabled' *Śrī-Kṛṣṇaḥ śaraṇaṁ mama* ('the holy Kṛṣṇa is my refuge').

(6) *Sectarian marks.*—Each sect is distinguished by certain marks placed by the more pious members upon the forehead or other part of the body. Thus the Rāmānujas have two perpendicular white lines, with a transverse streak connecting them above the nose. In the centre is a perpendicular streak of red. In the Brahma-sampradāya, a yellow spot is substituted for the red streak, and special marks are also branded on the shoulders and breast. It may be mentioned that worshippers of Śiva also put sectarian marks upon the forehead. As a guide for distinguishing the followers of the two religions, we may say that, as a general rule, while the essential parts of the Bhāgavata marks consist of perpendicular lines, those of the Śaiva sects are horizontal.

(7) *Bhakti and its 'flavours.'*—Later Bhāgavata writers have spent much time over the question of *bhakti* and the various modes in which it reveals itself. These modes are called *rasas*, or flavours, and as it would be difficult to understand the simplest treatise on *bhakti* without being familiar with at least the main principles according to which these flavours are held to be developed, the following brief account will be of service. The writers employ the terminology of the Indian system of poetics, but the categories are different.

Every religious attitude depends upon an objective 'dominant emotion' or *sthāyi bhāva*, considered as an abstract entity, apart from the person experiencing it. There are five of these dominant emotions: (1) resignation (*praśānta bhāva*); (2) obedience (*dāsya bhāva*); (3) friendship (*sākhya bhāva*); (4) tender fondness (*vātsalya bhāva*); (5) passionate love (*rati bhāva*). It will be observed that these are arranged in an ascending scale of emotional force.

These 'dominant emotions' may have 'accessory emotions' (*vyabhichāri bhāva*, or *sañchāri bhāva*). These are not essential to the dominant emotions, but may go along with and co-operate with them, either permanently or occasionally. These accessory emotions are thirty-three in number, and are such as 'disgust with worldly things' (*nirveda*), apprehension (*śaṅkā*), painful thoughts (*chintā*), and the like.

Each of these dominant emotions, whether accompanied by an accessory emotion or not, produces a corresponding subjective psychic condition or experience, technically called *rasa*, or flavour, in the person who is subjected to it. These flavours are, in the order of the corresponding underlying dominant emotions: (1) the resigned flavour (*śānti rasa*); (2) the obedient flavour (*dāsya rasa*); (3) the friendly flavour (*sākhya rasa*); (4) the tenderly fond flavour, (*vātsalya rasa*); (5) the passionately loving flavour (*śṛṅgāra rasa*, or *mādhurya rasa*). The last, which is the highest stage, is also called the 'king of flavours' (*rasa-rāja*) or the 'glorious flavour' (*ujjvala rasa*).

Every flavour must have an 'exciting cause' or 'excitant' (*vibhāva*) in order to induce the experience from the underlying dominant emotion, and such excitants may be either 'essential' (*ālambana*) or 'enhancing' (*uddīpana*). The absolutely essential excitant is the object towards which the underlying dominant emotion of resignation, obedience, or the like, is directed, *i.e.* the Supreme Deity. Such an excitant is called 'absolutely essential' (*viṣayālambana*). But an excitant may be 'relatively essential' (*āśrayālambana*). It then excites a flavour, the dominant emotion of which is not immediately directed to the Supreme. Such for instance is Sītā the spouse of Rāma-chandra. She can be the relatively essential excitant of the flavour of passionate love, *i.e.*, she causes the subjective flavour to arise in the heart of the devotee from the corresponding dominant emotion considered as an objective abstract entity. This ultimately leads to the flavour of passionate love directed to her husband, Rāma-chandra, who, being an incarnation of the Supreme Deity Himself, is the absolutely essential excitant.

An enhancing excitant is such an excitant as the qualities, actions, gestures, or beauty of any of the essential excitants. For instance, Rāma-chandra's cherishing of those who take refuge in him, or his love for those who serve him, is an enhancing excitant of the flavour of obedience.

When the psychic condition, or flavour, of a dominant emotion has been thus excited, certain effects occur. These are called 'ensuants' (*anubhāva*). The most important of these are the natural expressions of emotion (*sāttvika bhāva*), which are here enumerated in order of usual occurrence: (1) arrest of motion (*stambha*); (2) trembling (*kampa*); (3) disturbance of speech (*svara-bhaṅga*); (4) change of colour (*vaivarṇya*); (5) tears (*aśru*); (6) sweating (*sveda*); (7) thrills (*pulaka*); (8) unconsciousness (*pralaya*). Other ensuants may be spiritual, such as a feeling of devotion, rapture, and so on.

From the above it will be seen that the Hindu love for classification has been carried even into the province of religious emotion. It will also be noticed how closely the Indian religious experiences, and especially the phenomena attendant on what we should call 'conversion,' agree with what we observe in Christian countries.

(8) *The niṣṭhās.*—Every true Bhāgavata from his birth has his vocation allotted to him by the Adorable. For instance, his vocation may be to preach the gospel, or to wait upon saintly men, or to love hearing the scriptures, or to sing psalms, or even merely to lead a moral life. Each of these vocations is called a *niṣṭhā*; and every created being who is faithful to the Adorable must belong to at least one of them. He may belong to two or more, if the Adorable so will. These *niṣṭhās* are twenty-four in number, each being under the special protection of one of the twenty-four incarnations believed in by Bhāgavatas. In the catalogues of saints, each is carefully allotted his *niṣṭhā*, and is classified and grouped accordingly.

4. **General aspects of the Bhāgavata reformation.**—Nothing is more striking in the history of India than the rapidity and completeness with which the Bhāgavata reformation of the Middle Ages was accomplished. At first sight it almost seems as if a new doctrine, coming from some unknown land, had suddenly been revealed, and had swept with irresistible force in one mighty wave across the peninsula. Great modern scholars, men like Lassen and Weber, were found declaring that the only possible explanation was that the doctrine of *bhakti* arose in India as a more or less direct reflexion of Christianity. The late Professor Cowell himself, when writing in 1878 the preface to his translation of the *Bhakti-sūtras*, confessed that the date and history of the origin of the doctrine were unknown, and, in fact, it is only within the last few years that we have been able to pierce the cloud of mystery that surrounds it. The first to throw light upon the subject was Professor Bhandarkar; and though the conclusions arrived at by him in the year 1887 have been disputed, his labours have been the foundation of all subsequent inquiries. The next important step was not taken till the year 1905, when Prof. Garbe fixed with approximate certainty the date of the *Bhagavad-Gītā*. We can now be as sure as we can be of anything in the history of Indian literature, that portions of this poem are pre-Christian; and, as *bhakti* is taught therein, we can safely assert that the doctrine, however Christian may be its appearance, is of indigenous Indian origin.

Nevertheless, although one is based upon the other, a whole world of difference lies between the Bhāgavatism of the reformation and that of the *Bhagavad-Gītā*. Like the Brahmaism of the Midland Brāhmans, the pre-reformation Bhāgavatism was the religion of a class—the warriors. It was taught in a learned language, and was practised by learned Kṣatriya kings and men of

note.* It had its ritual and its five solemn sacrifices, and was therefore a religion of the wealthy. As has more than once been remarked,† official Vaiṣṇavism is a costly religion, while Śaivism is a cheap one. Bhāgavatism, after the identification of the Bhagavat with Viṣṇu, can hardly have been a religion of the lower castes or of the poor. In other words, it was not a religion of the people. The alliance with Brahmaism still further parted it from the lower orders. The theory of absorption peculiar to that form of belief, but now dallied with by Bhāgavatism, had nothing in common with their hopes or fears. As Hopkins rightly says,‡ 'the ordinary mortal is more averse from the bliss of absorption than from the pleasures of heaven.' At this time, and during the centuries immediately succeeding the Christian era, the needs of the common people were amply supplied by two other religions of the Outland—by Buddhism and, for those who craved for a personal God, by Śaivism. Bhāgavatism in its pure form came to be professed by fewer and fewer, and from the 9th cent., when all thinking India fell under the spell of the genius of Śaṅkara, it practically disappeared. Only at rare intervals do we come across references to it in literature and inscriptions.§ Śaṅkara himself mentions *bhakti* only once in his great philosophical work, and merely to dismiss it with contempt. It was in Southern India that the lamp of Bhāgavatism was kept burning, though with but a feeble light,‖ and it was in the South that it revived through the teaching of the four great leaders whose names have been mentioned. Then arose Rāmānanda, and within half a century Bhāgavatism became the leading religion of India. Yet there is as great a difference between the monotheism of the *Bhagavad-Gītā* and that of Rāmānanda as there was between the teaching of Plato and that of St. Paul. It now became as fully the right of the despised classes, of Musalmāns and of unclean leather-workers, as of people of repute. From Rāmānanda's time it was to the poor that the gospel was preached, and that in their own language, not in a form of speech holy but unintelligible. No one who reads the Indian religious literature of the 15th and following centuries can fail to notice the gulf that lies between the old and the new. We find ourselves in the face of the greatest religious revolution that India has ever seen—greater even than that of Buddhism, for its effects have persisted to the present day. Religion is no longer a question of knowledge. It is one of emotion. We visit a land of mysticism and rapture, and meet spirits akin, not to the giant schoolmen of Benares, but to the poets and mystics of mediæval Europe, in sympathy with Bernard of Clairvaux, with Thomas à Kempis, with Eckhart, and with St. Theresa. In the early years of the reformation the converts lived and moved in an atmosphere of the highest spiritual exaltation, while over all there hovered, with healing in its wings, a Divine gospel of love, smoothing down inevitable asperities, restoring breaches, and reconciling conflicting modes of thought. Northern India was filled with wandering devotees vowed to poverty and purity. Visions, trances, raptures, and even reputed miracles were of every-day occurrence. Rich noblemen abandoned all their possessions and gave them to the poor, and even the poorest would lay aside a bundle of sticks to light a fire for some chance wandering saint. Nor were these converts confined to the male sex. Of devout and honourable women there were not a few—Mīrā Bāī, the queen-poet of Udaipur, who gave up her throne rather than join in the bloody worship of Śiva; Bāṅkā, the poor woodcutter's wife, who could not be tempted by a purse of gold; the chaste Surasurī with her tiger guardian; Gaṇeśa Deränī, the queen of Madhukara Sāhi of Orchha, who hid the wound inflicted by a mad ascetic, lest her husband should take indiscriminating vengeance; the penitent Magdalen of Delhi, who gave her life and the only art that she possessed, her dancing, to the service of the deity in whom she had taken refuge; and many others. Of men, there were Hari-dāsa, the sweet singer, to hear whom Akbar disguised himself as a menial servant and travelled far; Nanda-dāsa, the hymn-writer, whose last words were a prayer that his soul might stand 'very close and near' the Adored; Chaturbhuja, the apostle to the savage Goṇḍs, who taught that right initiation meant 'being born again'; Gopāla, who when smitten on one cheek turned the other to the smiter; Vilvamaṅgala, who looked after a woman to lust after her, and, because his eye offended him, made himself blind; the unnamed king, who for the same reason cut off his right hand and cast it from him; Sūra-dāsa, the blind bard of Agra; and, most famous of all, perhaps the greatest poet that India has produced, Tulasī-dāsa, the teller of the deeds of Rāma.*

The question naturally arises, whence did Rāmānanda receive the inspiration that produced this marvellous change; and an attempt is made to answer it in the following paragraphs.

5. **Influence of Christianity.**—The question as to how far Christianity has influenced the *Bhakti-mārga* has been much discussed. We have seen that it must now be taken as settled that the idea of *bhakti* is native to India, and that the existence of Bhāgavata monotheism can be traced back to very ancient times. It is still, however, open to us to consider the possibility of post-Christian Bhāgavatism being affected by the cognate teachings of the Western form of belief. The facts appear to be as follows:

Large colonies of Nestorian Christians and Jews migrated to the Malabar Coast in the 1st cent. A.D., and settled in Southern India in the early centuries of our era. The former have been there ever since. They had a bishop at Kalyāṇa on the Malabar Coast in the 6th cent., and another of their settlements was at the present shrine of St. Thomé, near Madras. There is a respectable tradition that the Apostle Thomas actually preached in North-Western India, and at any rate it is certain that the parts of Asia immediately adjoining had many Christian inhabitants. Not only was there in the early centuries of our era free and regular communication between India and the West, both by sea and overland, but during the same period India was more than once invaded from the North-West. In the year A.D. 639 the famous Indian king Śīlāditya of Kanauj, a patron of the Bhāgavatas, received a party of Syrian Christians, headed by the missionary Alopen, at his court.† The author of the *Dabistān*,

* *Bhagavad-Gītā*, iv. 1, 2, distinctly says that it was a Kṣatriya religion.

† *e.g.* by Monier Williams, *Brāhmanism and Hindūism*, 1889, p. 62 ff.

‡ *Religions of India*, p. 418.

§ Bopadēva, the reputed author of the *Bhāgavata Purāṇa*, belongs to the post-reformation period (13th cent.).

‖ *e.g.* only one prince of the Valabhī kings, Dhruvasena I. (A.D. 526), is called a Bhāgavata. The others were Mahēśvaras, or worshippers of Śiva. Cf., however, the remarks on Śiva *bhakti*, below.

* All these examples are taken from the *Bhakta-māla* (cf. the next section). The early writers were perfectly conscious of the change effected by the reformation. Priyā-dāsa says, 'the tree of *Bhakti* was once but a sapling, that might be stunted by a single kid. . . . Now it hath climbed to the sky, with its glory spread manifest over the earth; for the basin from which its roots drew moisture was the bosom of the Holy. . . . Mark well its growth. Once but a feeble thing; now, shackled to its trunk, contentedly sway the mighty elephants of the passions' (*Bhakti-rasa-bodhinī*, 6).

† Edkins, *Athenæum*, July 3, 1880, p. 8. See also Takakusu,

which was written in 1645, describes (iii. 312 f.) how, when travelling in India, he had 'greatly frequented the meetings of Hindus, Jews, Magians, Nazáreans, and Muselmans'; and speaking of the Vedas, he says (ii. 45) that every one who pleases may derive from them arguments in favour of his particular creed, whether that creed be 'Hinduism, Judaism, Christianity, fire-worship, the tenets of the Sonites, or those of the Shiâs, etc.'

Finally, there were the Jesuit missions to India in the latter part of the 16th cent., and their arrival at the court of the Emperor Akbar in the year 1580. They had churches in Agra, Delhi, and Lahore till Shāh Jahān came to the throne in 1628, and the Delhi church survived till the invasion of Nādir Shāh in 1789. We thus see that from the first centuries of our era Christianity has always been present in India, and that, both in the North and in the South, Hindus had every opportunity of becoming acquainted with its tenets.

Although there are many remarkable verbal coincidences, it is improbable that the latest parts of the *Bhagavad-Gītā* contain passages suggested by our Scriptures. As for the earlier portions, chronology renders it impossible. But in one of the latest passages of the *Mahābhārata*, written at least three hundred years after Christ, if not considerably later, there is an account of a visit paid by three saints to a 'White Continent,' where the people were of fair complexion, and endowed with a perfect *bhakti* that did not exist in India. A description is given of their worship which certainly suggests reminiscences of a Christian religious service, and many believe that the passage is based upon the tales of travellers who had come across Christian communities in those parts of Asia which lie north of the Hindu Kush. Besides this, there are other passages in the later parts of the *Mahābhārata* which it is difficult to believe are not borrowed from our Gospels, especially from that of St. John. These have been collected by Hopkins (*India Old and New*, p. 145 ff.). Two of his examples may be cited here. Kṛṣṇa, the incarnate Deity, is described as 'the unborn (*i.e.* the eternal) and ancient one, the only son of God, born of a virgin, very part of God'; and again, it is said of him that 'He, the guardian of his flock, the sinless God, the Lord of the world, consented to the death of (himself and) his race that he might fulfil the words of the seers.' A striking innovation, dating from about the 6th cent. A.D., was the divinity attributed by the Bhāgavatas to the *child* Kṛṣṇa. Hitherto he had been a religious teacher and a warrior, regarding whose childhood, as is usual in such cases, legends not essential to his character had accumulated. But from the 6th cent. onwards the greatest prominence is given to his childish miracles and freaks, and to his adolescent pastoral life in the country round Mathurā. It is the infant god, the *bambino*, brought up among the cowherds of Gokula, who is now a favourite object of worship. His mother Devakī, hitherto hardly mentioned, is now portrayed, like a *Madonna lactans*, suckling the infant Kṛṣṇa. His birth coincides with a massacre of the innocents, and we have other and new legends of 'the restoration to life of a woman's son, the healing of a cripple, and the pouring of a box of ointment over Kṛṣṇa' (Hopkins, *op. cit.* p. 163). Kennedy (*JRAS*, 1907, p. 951 ff.) suggests that all this is a Hindu adaptation of the Christian stories brought into the Gangetic Doāb by Gūjar immigrants from the North-West. Whether these legends have been borrowed or not may possibly be doubted, but all hesitation vanishes when we read the orthodox liturgy of the festival of Kṛṣṇa's birthday. The old legends of the birth and childhood are perfectly well known, but, as long ago shown by Weber, the ritual does not adhere to them. It actually alters the story in material facts to make it agree with the narratives of the nativity as contained in the early chapters of St. Matthew and St. Luke. Vallabha found this child-worship current in Mathurā, and adapted it to the needs of his own *Kṛṣṇa-bhakti*. As Hopkins (p. 167) says:

> 'So decided is the alteration and so direct is the connexion between this later phase of Krishnaism and the Christianity of the early centuries of our era, that it is no expression of extravagant fancy but a sober historical statement that in all probability the Hindus of this cult of the Madonna and Child have in reality, though unwittingly, been worshipping the Christ-child for fully a thousand years.'

The religion of Rāma presents other aspects of the case. We have seen that the modern worship of the incarnate Rāma commenced with the teaching of Rāmānuja, and was spread over Northern India by Rāmānanda and his followers. In Rāmānuja's time the Christians of St. Thomé had become paganized. They had given up baptism, while they retained the Eucharist; and a kind of mixed, or rather joint, worship, half Christian and half Hindu, had established itself in the ancient shrine. That Rāmānuja and his followers imbibed much of this teaching admits, to the present writer at least, of but little doubt. Owing to the similarity of the ground ideas of 'faith' and *bhakti*, it would indeed be extraordinary if the two religions, once brought into contact, had not influenced each other. That the Hinduism influenced the Christianity has been established as an historical fact, and that alone shows the probability of the converse also being true. According to Indian tradition, Rāmānuja was born, brought up, and spent the best part of his life near St. Thomé. In his early years he was a Vedāntist, and while he was still a young man it was in this neighbourhood that he became converted to Bhāgavatism, thought out his systematized qualified monism, refuted in a famous discussion his old Vedāntist teacher, and suffered much persecution.* Much the same as in the case of early Christianity, it is to Rāmānuja's persecution and flight from Conjeeveram that Bhāgavatism owes its acceptance over the greater part of India. Except the sects founded by Vallabha and Hari-vaṁśa, the conditions of which were altogether peculiar, the other churches have comparatively little influence beyond the localities in which they arose. But the Śrī-saṁpradāya had within it a driving force that carried it all over India from Cape Comorin to the Himālaya. Its special characteristic was the importance given to faith in a personal God, and particularly to Rāma-chandra represented as an incarnation of the Adorable, still retaining the same personality in heaven, remembering and sympathizing with the sorrows and trials of humanity. It is true that *bhakti* also plays a prominent rôle in the other churches; but it has not, with the exception of the two sects just mentioned, acquired the supreme importance in them that it has gained in the Śrī-saṁpradāya. That this is owing to the view taken of the personality of Rāma-chandra is self-evident; and though it cannot be said that the attributes with which he has been clothed are strange to the old epic accounts of him, still Christian influence may reasonably be claimed for the stress laid upon them to the comparative exclusion of others. The root conception of the

I-tsing, p. xxviii., note 8. It was at the court of this king that the poet Bāṇa refers to the presence of Bhāgavatas and Pāñcharātras (*Harṣacharita*, tr. Cowell and Thomas, p. 236).

* The similarity of the cases of Rāmānuja and Madhva is worth noting. Both were converts from Vedāntism, and both were within reach of Christian influence. Madhva was a man of Uḍipi, close to Kalyāṇa, where there was an old Christian bishopric.

Deity has been profoundly modified. The noble and pious hero has become a God of love (*δυνάμενος συμπαθῆσαι ταῖς ἀσθενείαις ἡμῶν*). The love, moreever, is that of a father for his children, not that of a man for a maid, as in the ardent *bhakti* of Vallabha and Hari-vaṁśa.

Another point of coincidence is worth noting—the institution of the *mahāprasāda*, or sacramental meal. Such meals are found in many religions, but the procedure of those partaken of by the members of the Śrī-saṁpradāya shows points of agreement with the Christian Eucharist that cannot be mere matters of chance.* The consecrated elements are even reserved for administration to the sick, and the communion, which is shared in only by those who feel themselves worthy, is followed by a love-feast attended by all members of the sect present at the time.

But it is in the literature of the church that we find the most evident reminiscences of Christianity. Kabīr, one of Rāmānanda's twelve apostles, speaks of the Word in language which is but a paraphrase of the opening verses of St. John's Gospel, and quotes sayings of our Lord almost verbatim. The authorized text-book of all believers—the *Bhakta-māla*—also contains numerous parallels to the sayings of our Lord. Attention has been drawn to several of these in the preceding section, and they need not be repeated. Here we may notice another alteration of an old legend—an alteration to make it agree with an occurrence of the most solemn hour of Christian history. In the *Mahābhārata*, Kṛṣṇa is represented as washing the feet of Brāhmans. The story, as altered by the *Bhakta-māla*, makes the incarnate God wash the feet of the disciples. In another story, which is specially mentioned as 'beloved, but hitherto not well-known,' a poor wretch is taken in and honourably entreated because he is a stranger, and therefore equivalent to Rāma. He is then told that if he has faith he can walk on the sea. He has faith, and does so.

It is possible that everything was not necessarily taken from the Nestorian Christians. There was free intercourse by sea between Christian countries and Southern India, and this may account for other coincidences, in which it is not always easy to say which side has borrowed from which. Such is the fact that the word employed in India, both by Śaṅkara and Rāmānuja, for the personal Deity was *Īśvara*, the exact equivalent of the Greek *Κύριος*. This may possibly be a pre-Christian coincidence. In early Christianity there was the same remarkable reverence for spiritual teachers that we have observed in Bhāgavatism. According to the *Didache*, such a teacher was to be 'known as the Lord.' In both religions there was the same extravagant belief in the mystic power attached to the *name* of the incarnate God. Thomas à Kempis speaks of the 'holy utterance, short to read, easy to retain, sweet to think upon, strong to protect,' just as Tulasī-dāsa praises 'the two gracious syllables, the eyes as it were of the soul, easy to remember, satisfying every wish, a gain in this world and felicity in the next.'† In both religions there are the same discussions as to the relative efficacy of faith and works, and as to the truth of the opposing doctrines of 'irresistible' and 'co-operative grace.' The change in the Indian idea of sin is also noteworthy. Till Rāmānuja's time, sin was disobedience to the rules of religion laid down in text-books, and was to be avoided as entailing certain consequences in a future life. Since then it has been defined as anything not done in faith. Sin is sin because it is incompatible with the nature of the incarnate God of Love, and, as quoted in the abstract of Śāṇḍilya's work given above on p. 539, even good works not done in *bhakti* partake of the nature of sin. Each of these instances of agreement taken singly might be an accident, but their cumulative effect, combined with the whole style and tone of the modern *bhakti* literature, is irresistible.

The political history of India at this period must also be taken into account. Maḥmūd of Ghazni's seventeen invasions commenced in A.D. 1001. He was succeeded by dynasty after dynasty of Musalmān conquerors, broken in 1398 by the terrible suffering entailed by the invasion of Tīmur. Not till Akbar ascended the throne in 1556 had the Hindus peace, and a century later the oppression was renewed by Aurangzīb (*q.v.*). For more than five centuries, from 1001 to 1556, India lay prostrate and bleeding under the feet of conquerors of alien race and alien religion. This was the period of the reformation.

To sum up the foregoing:—It is certain that in the early centuries of our era Christians visited India, and were received at a royal court. It is extremely probable that the inhabitants of Northern India were acquainted with the early Christianity of Bactria and the neighbouring parts of Central Asia, that they greatly respected it, and that they admitted that its professors possessed *bhakti* to a degree more perfect than that which ever existed in their own country. It is possible, and perhaps probable, that the worship of the infant Kṛṣṇa was a local adaptation of the worship of the infant Christ introduced to India from the North-West, and the ritual of Kṛṣṇa's birth-festival has certainly borrowed from Christian authorities. But it was in Southern India that Christianity, as a doctrine, exercised the greatest influence on Hinduism generally. Although the conceptions of the fatherhood of God and of *bhakti* were indigenous to India, they received an immense impetus owing to the beliefs of Christian communities reacting upon the mediæval Bhāgavata reformers of the South. With this leaven, their teaching swept over Hindustan, bringing balm and healing to a nation gasping in its death-throes amid the horrors of alien invasion. It is not overstating the case to say that in this reformation India re-discovered faith and love; and the fact of this discovery accounts for the passionate enthusiasm of the contemporary religious writings. In them we behold the profoundest depths of the human heart laid bare with a simplicity and freedom from self-consciousness unsurpassed in any literature with which the writer is acquainted.

6. Muhammadan influence.—The syncretism of the Bhāgavata religion has not stopped at Christianity. The later reformers, some of whom were converts from Islām, also imported into it the elements of Ṣūfiism, which will readily be recognized, and are universally acknowledged. It is sometimes difficult to decide whether a particular sectarian doctrine has been borrowed from it or from Christianity. Ṣūfiism itself has been influenced by Christian mysticism, and the doctrine of Divine love which is its distinguishing mark is so akin to the teaching of the reformed *bhakti*-churches that it could hardly fail to influence the teaching of those Bhāgavatas whose youth had been passed in a Musalmān atmosphere. But Ṣūfiism did not influence Bhāgavatism until it had reached Northern India, and, being little known in the South, it never inspired the ground doctrine of any one of the four churches.

7. Bhakti directed to Śiva.—It may be stated as a broad rule that all the followers of the Indian *bhakti-mārga* are Vaiṣṇavas. Śiva, the other

* For the whole procedure see Westcott, *Kabīr and the Kabīr Panth*, 1908, p. 127.

† For further Christian examples see Growse, *Translation of Tulasī-dāsa's Rāmāyaṇa*, i. Do. 24.

great deity of Indian worship, is associated with ideas too terrible to suggest loving devotion. There are, however, in Southern India, Śaiva sects which practise a *bhakti* cult. We have seen how the Vaiṣṇava Bhāgavatism of Northern India became infected with Brahmaism in the first few centuries of our era. In Southern India the stricter Bhāgavatas, who desired to retain their monotheism intact, began to direct their devotion to Śiva in preference to Viṣṇu, who was now, in the North, partly identified with the pantheistic Bráhma.* It is most probable that in this way there arose the Śiva-*bhakti* now sometimes met with in the South. Śiva was even provided with incarnations, such as Vīrabhadra, in imitation of those of Viṣṇu, to whom the love and devotion could be directed.

It may here be mentioned that all Indian sects agree that Śaṅkara, the promulgator of Vedāntism, was an incarnation of Śiva. Bhāgavata doctors get over the difficulty by explaining that, when the world was filled with Buddhism and other heresies, the Bhagavat directed Śiva to become incarnate and to preach a false doctrine invented by himself, so as to turn people from the Bhagavat, and thus manifest his glory by the consequent destruction of unbelievers. In other words, followers of Vedāntism were born to be damned for the greater glory of a gracious and merciful God.

The Sittars (*q.v.*), a Tamil sect, may also be noted in this connexion. Although nominal Śaivas, they are strict monotheists, who teach that 'God and love are the same.' There are other instances in Southern India of attempts to reconcile Śaivism with Bhāgavatism. The most important of these is the Brahma-saṁpradāya, founded by Madhva, already described. Regarding the true Śiva-*bhakti*, which is professedly a cult of Śiva or his incarnations, very little is known, and the subject deserves more study than it has hitherto received.

LITERATURE.—The official Sanskrit text-books of the Bhakti-mārga are the Śāṇḍilya *Bhakti-sūtras*, and the Nārada *Bhakti-sūtras*. Both are quite modern works. The text of the former was edited by J. R. Ballantyne in 1861, and translated by E. B. Cowell in 1878, both appearing in the *Bibliotheca Indica* of the Asiatic Society of Bengal. Hariśchandra (see below) wrote a Hindī version of the Śāṇḍilya work under the title of the *Bhakti-sūtra-vaijayantī*, and of the Nārada under the title of the *Tadīya-sarvasva*.

There is no European work dealing with the subject as a whole. The earliest account of the doctrines of the Bhāgavatas is that given by Colebrooke, read in 1827, and published in the first volume of the *Transactions* of the *RAS*. Like everything that came from his pen, it is scholarly and accurate, and in some particulars has been the foundation of all subsequent accounts of the Bhāgavata religion. It was re-published in his *Miscellaneous Essays*, 1837 (i. 437 ff.). The history of the origin of this form of belief was first given by R. G. Bhandarkar in his *Report on the Search for Sanskrit Manuscripts in the Bombay Presidency during the Year 1883–84* (Bombay, 1887) p. 68 ff., and, more fully, in 'The Rāmānujīya and the Bhāgavata or Pañcharātra Systems,' in *Verhandlungen des VII. internationalen Orientalisten-Congresses* (Arische Section) (Vienna, 1888), p. 101 ff. His views were adopted and developed by R. Garbe in the Introduction to his German tr. of the *Bhagavad-Gītā* (Leipzig, 1905). L. Barnett, in the Introduction to his Eng. tr. of the same work, has given an independent and shorter account of the cult of Vāsudeva, in which much valuable information will be found that lay outside the lines of Garbe's thesis. An abstract of the *Nārāyaṇīya*, with an Introduction by G. A. Grierson, will be found in the *IA*, 1908.

For Rāmānuja, see the special article. The best account of his qualified monism will be found in pt. i. of G. Thibaut's tr. of the *Vedānta-sūtras* (*SBE*, xxxiv., Oxford, 1890). For the other three reformers and the churches founded by them, as well as for the various sects, see the special articles. Bhandarkar, already quoted, gives accounts of the teaching of Rāmānuja, Madhva, and Vallabha. The leading work on modern Bhāgavatism is H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, which originally appeared in vols. xvi. and xvii. of the *Asiatic Researches* (1828–32, re-published, London, 1861). Although to a certain extent out of date, Wilson's work must still be the foundation for all inquirers into modern Hinduism. Most of the popular works on the subject are mere réchauffés of what he has written, including most of his mistakes. Of more modern works which contain original research, F. S. Growse's *Mathurā, a District Memoir*[2] (Allahabad, 1880), gives much valuable information which will not be found elsewhere. E. W. Hopkins's *Religions of India* (Boston and London, 1902), is also replete with new material collected from many sources, and illumined by many suggestive remarks. Among works written by natives of India, the *Bhakta-māla* of Nābhā-dāsa, with its commentary by Priyā-dāsa, is all-important. It has often been printed in the original and also translated into modern Indian languages. A convenient Hindī paraphrase is the *Bhakta-kalpadruma* of Pratāpa Siṁha (Lucknow, 1884). It is impossible to understand reformed Bhāgavatism without a familiarity with the contents of the *Bhakta-māla*, but its many difficulties have hitherto deterred most students from the task of studying it. The late Hariśchandra of Benares, who was a devout Bhāgavata, wrote a number of works in Hindī dealing with the history of his religion. The more important are the *Vaiṣṇava-sarvasva*, the *Vallabhīya-sarvasva*, and biographies of Rāmānuja and Vallabha. These, as well as the *Bhakti-sutra-vaijayantī* and the *Tadīya-sarvasva*, can be found in a collection of his works published at intervals during the closing decade of the 19th cent. at Bānkipur, and entitled the *Hariśchandra-kalā*.

For Early Christianity in India, see A. C. Burnell in *IA* iii. 308, iv. 153, v. 25. A. Weber in his well-known articles on the *Kṛṣṇa-janmāṣṭamī* (Eng. tr. in *IA* iii. 21, etc., vi. 161, etc.) deals with the ritual of the Kṛṣṇa birth-festival; and although all his arguments are not now accepted, his main results are universally admitted to be true. An article by the present writer (who does not adhere to all the details then advanced by him) on 'Modern Hinduism, and its Debt to the Nestorians,' in *JRAS*, 1907, may be read for the sake of the discussion to which it gave rise, and which is printed in the same volume. See also J. Kennedy, 'The Child Kṛṣṇa, Christianity, and the Gujars,' *ib.* p. 951 ff. The most complete and sane summary of the whole question is Hopkins's 'Christ in India,' in *India Old and New* (New York and London, 1902). It is, of course, earlier than the two papers just mentioned. The Bhāgavata doctrine of works is dealt with by G. A. Grierson in *JRAS*, 1908, p. 337 ff.

GEORGE A. GRIERSON.

BHANGI.—The sweeper or scavenger caste of Hindustan, who at the Census of 1901 numbered 656,668. The caste probably takes its name, on account of the drunken habits of its members, from Skr. *bhaṅga*, 'hemp.' With the Bhangīs may also be conveniently grouped other scavenger tribes of Northern India—the Chūhṛā (probably from Hindī *chūṛā-jhāṛnā*, 'to sweep up rubbish'); the Ḥalālkhor, 'one to whom any kind of food is lawful'; and the Mehtar, or 'prince,' a mock honorific term for this and other menial occupations. This group of castes numbered in all, at the Census of 1901, 2,168,594. As regards distribution, the vast majority of them were found in the Panjāb (1,316,517) and in the United Provinces (461,993). In Bengal they number only 40,971, their duties being performed in this province by still more degraded tribes, such as the Ḍom (*q.v.*) and the Hāṛī (*q.v.*). Classified according to religion, about three-fourths profess to be Hindus and nearly one-fourth Muhammadans, the small balance calling themselves either Sikhs or Animists. But the more respectable Hindus, Muhammadans, and Sikhs utterly refuse communion in worship or in the social observances of life to people whom they regard as out-castes, and believe that their touch, or even their mere presence, involves pollution.

The sweeper castes, as a whole, are the modern representatives of the Chaṇḍāla of Manu (*Institutes*, x. 12, 29, 30), who are regarded by the lawgiver as the offspring of a Śūdra father and a Brāhman woman, thus marking the Aryan abhorrence of marriage relations between women of the ruling race and men of the conquered Dravidian races. They acquired the title of Anta-vāsin or Ante-vāsin, because they were required to dwell outside the limits of the homestead. Their sole wealth must be dogs and asses—both animals which the orthodox Hindu still regards as impure. Their clothes must be made out of the cerecloths of the dead; their dishes must be broken pots, and their ornaments of rusty iron. No one who is careful of his religious duties must hold any intercourse with them, and they must marry among themselves—a rule which probably dates from early Buddhist times, when caste was only in the making. By day

they may roam about to seek work; they must be distinguished by the badges of the Rājā, and they must carry out the corpses of any who die without kindred. They should always be employed to slay those whom the law sentences to be put to death, and they may appropriate the clothes of the slain, their beds, and their ornaments.

The word Chaṇḍāla, probably a Dravidian term, but sometimes derived from the Skr. *chaṇḍa*, 'evil,' 'cruel,' 'mischievous,' is nowadays used only in a contumelious sense, and the so-called Chaṇḍāla caste of Bengal call themselves Nāmaśūdra; and their higher subdivisions, with characteristic jealousy, apply the title Chaṇḍāla to the lower, who in their turn pass it on to the Ḍom. In short, the title Chaṇḍāla may have been a generic title for the meaner non-Aryan races, who at an early period were reduced to servitude, and compelled to perform the more odious duties in the Aryan commonwealth. But at the present time the viler duties assigned to the Chaṇḍāla of Manu—the conveyance of corpses and the task of acting as public executioners—have passed to the Ḍoms, and the Bhangīs now owe their social degradation to their performance of the duties of scavengering. The rise of the present Bhangī caste seems, from the names applied to the caste and its subdivisions, to date from the early period of Muhammadan rule, and their appearance indicates that they are a mixture of various races, who for some reason or another have incurred social ostracism.

1. *The cult of Lāl Beg.*—The Bhangī legends and rites of worship centre round the person of their saint, Lāl Beg, about whom many wonderful tales are told. From the mass of folklore connected with him little can be definitely ascertained. He has been connected with the *rākshasa*, or demon, Aruṇakarat, and as Aruṇa in Skr. is a title of the sun, and *lāl* in Persian means 'red,' some connexion has been traced between his cult and earlier Hindu beliefs. Others would connect Lāl Beg with the *lāl Bhikshū*, or red-clad monk of Buddhist times; and he is also in some inexplicable way mixed up with the cult of Vālmiki, the poet-sage who compiled the epic of the Rāmāyaṇa, and who has also been adopted as their patron deity by low castes like the Aheria (*q.v.*) and Bahelia (*q.v.*). In the names of the tribal sections some vague indications of totemism appear, but these must not be pressed too far.

2. *Other Bhangī deities.*—The Bhangīs, as might be expected from the mixed origin of the caste, follow a combination of different faiths. The basis of their religion is the characteristic Animism of the Dravidians, but to this they have added elements derived from other sources. In the United Provinces a large number of them worship as their patron saint Lāl Beg, and with him is combined or confounded the Pachpiriyā (*q.v.*) cult of the Pāñchoṅ Pīr, or five saints. In Central India Lāl Beg has no temple, but is often represented in villages by a flat stone upon which two footprints are carved, and over them a rude mud shelter, marked by a red flag, is often erected. In Rājputāna, when sacrifice is being offered to him, they cut the throat of the fowl victim in Musalmān fashion (*ḥalāl*).

Higher up the Ganges valley their favourite saint is Gūgā, or Zāhir Pīr, who, they believe, possesses the power of healing the blind, lunatics, and lepers, and bestowing offspring upon barren wives. His shrine is a small round building with a courtyard, decorated with flags hung from the neighbouring trees, and provided with poles, one of which is appropriated as a perch for the deity whenever he attends in answer to the prayers of his devotees. The offering to him is a leaf or branch of a sacred tree and some grains of millet. The cenotaph is rubbed with sandalwood, which imbibes the powers of the saint, and is taken away and used as a cure in various maladies. Sometimes a goat is offered, and the meat is consumed by the worshippers. Another favourite Bhangī saint is Ghāzī Miyāṅ, supposed to be a Musalmān hero slain in one of the early invasions of Oudh. His 'marriage' is his most important feast, and there seems some reason to suspect that it is a survival of the rite of symbolic marriage of the earth, the Mother, with her male counterpart, the object of the rite being the promoting of the fertility of the earth, one of the leading features of the Dravidian religion. The Bhangīs venerate besides these a host of deified ghosts or spirits, generally those of the locality in which they happen to reside. Those who are professing Muhammadans add to the monotheistic creed of Islām a number of beliefs derived from the more primitive Animism.

3. *The religion of the Ḥalālkhors.*—The creed of the Ḥalālkhors has less Musalmān admixture, and more closely resembles that of the Ḍom and his kinsman the Bāṅsphoṛ (*q.v.*).

4. *The religion of the Panjāb Chūhrās.*—The religion of the Chūhrās of the Panjāb is equally involved and perplexing, and the researches of Maclagan have done little more than increase the mystery by which it is surrounded. In the Sirsa district, they, like their brethren in the United Provinces, worship Lāl Beg, a god without form or dwelling-place. The worshipper makes a small shrine of earth, and puts over it a stick with a piece of cloth as a flag, offers a little butter or grain as a sacrifice, and prays to be delivered from sickness and other trouble. The Chūhrās are said not to believe in the transmigration of souls; but they say that the good go to heaven after death, where they spend their time bathing and sitting at ease, and enjoy happiness; while the bad go to hell, where they are tormented with wounds and fire until the deity is pleased to release them. How much of these beliefs is original and how much has been derived from Hindu, Musalmān, or even Christian sources, it is impossible to say. By other accounts they seem to believe in a Supreme Being, with whom Lāl Beg is only an intercessor. They are said also to have family-gods (*kuldeo*), whose names they never divulge, and to whom offerings are made on holidays, and at births and deaths in the family. Possibly this is a form of ancestor-worship. In the Jālandhar district Vālmiki is said to be known as Bālā Shāh, and his shrine is surmounted by five small pillars, on which lamps are lighted every Thursday. When the spring harvest is gathered in, the Chūhrās assemble at his shrine, slay a black ram, and prepare a quantity of bread. On these they feast, presenting part of the food to the deity, and making offerings of cloth and small coins, which are taken by the attendant at the shrine.

In the Panjāb, when Chūhrās adopt the Sikh faith, they are known as Maẓhabī, 'the religious.' These Maẓhabī Sikhs form a valuable element in the Indian army. They, like all converts, are particularly scrupulous in religious matters, but most Sikhs of other castes keep them at a distance. When a Chūhrā is circumcised and becomes a Muhammadan, he is ordinarily known by the title of Muṣallī, 'the righteous,' or Kotānā. But the faith of Islām sits lightly upon such people, and their religious fervour largely depends upon the price of grain. When times are good, the Chūhrā adopts Islām, and is admitted to the privilege of smoking with Muhammadans. When times change for the worse, and he is in straits to find a living, he often relapses into his original Chūhrā beliefs, because he thus gains a wider range of diet, being allowed to eat carrion and lizards. If times improve, he again repeats the Musalmān creed (*kalima*), and becomes again a Muṣallī.

W. CROOKE.

BHĀRHUT or BHARAHUT (the proper form of the name seems to be Barhut, but some write it Bharaut and Barāhat).—A village situated in Baghelkhand, 95 miles S.W. of Allāhābād, in Northern India, famous as the site of the great Buddhist *stūpa* discovered here by Cunningham in 1873. The *stūpa*, circular in form, was surrounded by a splendid carved railing with four openings towards the four cardinal points. It was thus divided into four quadrants, each of which consisted of sixteen pillars, joined by three crossbars, and covered by a massive stone coping. At each entrance the rail was extended, to form, as Cunningham believed, a gigantic *swastika*, or mystic cross. On each side was a splendid ornamental arch, or *torana*. The medallions of these pillars are filled with most interesting sculptures—compositions of lotus and other flowers, and a number of scenes derived from Buddhist legend and history. Many of these represent scenes taken from the Jātakas, of which some twenty have been identified by Subhūti, Rhys Davids, and Hultzsch. Perhaps the most interesting of all is that of the Jetavana monastery at Srāvastī, recording the purchase of Jeta's garden by Anāthapiṇḍika, who covered the surface of the ground with gold pieces (Hardy, *Manual of Budhism*[2], 1880, p. 219; Kern, *Manual of Indian Buddhism*, 1884, p. 28). One bas-relief appears to represent a scene in the life of Rāma, which is supposed by Cunningham to be by far the earliest notice which we possess of the great solar hero and his wife. The sculptures, which extend over about a century, are particularly interesting as illustrating the dress and social and domestic life of the people of Northern India in the period after the death of Alexander the Great. They have been discussed by Grünwedel (*Buddhist Art in India*, 1901, 23, 40 ff., 141).

Images of the Buddha are wholly absent from the older sculptures at Sānchī and Bhārhut.

'Even in cases where the presence of the Lord must be presumed, it is indicated by symbols—footprints, a wheel, a seat, or altar, above which is an umbrella with garlands. A scene on the sculptures of Bhārhut represents Ajātaśatru kneeling before the footprints of the Lord, whereas the inscription distinctly says: "Ajātaśatru pays his homage to the Lord"' (Kern, *op. cit.* 94).

Among the numerous sculptures, there are no naked figures, as at Sānchī and Mathurā. All, and especially the women, are well clad, and their heads are generally covered with richly figured cloths or brocades. One gateway and a portion of the railing have been removed to the Indian Museum at Calcutta.

Cunningham assigns the *stūpa* to the Aśoka period, somewhere between B.C. 250 and 200. Hultzsch reads an inscription mentioning the Suṅgas, successors of the Maurya dynasty, on a pillar erected by Vātsī or Vāchhīputra Dhanabhūti, which gives a date in the 2nd or 1st cent. B.C.

BHĀṬ, CHĀRAṆ (the former from Skr. *bhaṭṭa*, a respectful term applied to a Brāhman or man of high caste, probably connected with *bhartṛi*, 'bearer,' 'master'; the latter, Skr. *chāraṇa*, 'a wanderer,' 'a singer').—The caste of family bards and panegyrists, found throughout Northern India, which at the Census of 1901 numbered 385,993, of whom 52,164 were described as Muhammadans, and the remainder as Hindus, with a small minority professing the Sikh and Jaina faiths. Tod compares them with the Belgic genealogist of Gibbon who 'riots in all the lust of fiction, and spins from his own bowels a lineage of some thousand years.' The Bhāṭs are most numerous in the United Provinces, but they are found in smaller bodies all over Northern India, and a few have penetrated as far south as Hyderābād. The Chārans, again, numbering at the same Census 74,014, are practically all Hindus by religion, and are mostly confined to the Presidency of Bombay and the province of Rājputāna.

Bhāṭs are generally supposed to be descended from a Kṣatriya father and a Brāhman widow. They have been connected by Nesfield with 'those secularised Brāhmans who frequented the courts of princes and the camps of warriors, recited their praises in public, and kept records of their genealogies.' But to this Risley objects that if the Bhāṭs of the present day are descended from a class of degraded Brāhmans, if, in other words, they are a homogeneous offshoot from the priestly class, it is difficult to understand how they come to have a number of sections which are not Brāhmanical and which appear to resemble rather the territorial groups common among Rājputs. There is no exact parallel to this supposed case of Brāhmans, however degraded, shedding their characteristic series of eponymous sections, and adopting those of another type. On the other hand, there is nothing improbable in the conjecture that Rājputs also may have become bards to the chiefs of their tribe, and Risley is inclined to regard them as a heterogeneous group made up of Brāhmans and Rājputs, welded into a single caste by virtue of their exercising identical functions. He grants, however, that the inviolability of the Bhāṭ's person, accepted in Western India towards the end of the 18th cent., tells in favour of their Brāhmanical origin, 'while the theory of Roth and Zimmer, that the first germ of the Brāhman caste is to be sought in the singers of Vedic times, may perhaps be deemed to tell in the same direction.'

1. *Religion of the United Provinces Bhāṭs.*—In the United Provinces those Bhāṭs who profess Hinduism are Hindus of the most orthodox kind, being by sect generally Vaishṇavas or worshippers of Vishṇu, or Śāktas, followers of the Mother-goddesses. But in addition to the god peculiar to their sect they worship other gods—Śiva in the form of Gaurīpati, *i.e.* 'lord of Gaurī,' 'the white one' (a title of his consort Pārvatī), Barē Bīr, Mahābīr, and Sārdā. Barē Bīr, 'the great hero,' seems to be the ghost of some deified worthy of the tribe. He is honoured by making a plastered square in the courtyard, and placing within it a lighted lamp. Mahābīr, 'the great hero,' is another name for Hanumān, the monkey-god. He is worshipped by painting a representation of him with red lead upon a brass tray, before which cakes, sweetmeats, and other bloodless offerings are laid. Sārdā is a corruption of the name of the goddess Sarasvatī, the patron of learning and eloquence, who naturally is worshipped by a caste of bards. Side by side with this worship of the orthodox kind they have adopted some of the local Animistic beliefs, as is shown by the cult of Birtiyā, for whose worship they employ a priest from the degraded Chamār or currier caste, who sacrifices a young pig, buries the head in the earth, and carries off the rest of the flesh as his perquisite. In other districts of the same Provinces they worship the Mother-goddess, Bhavānī or Devī, particularly when epidemic disease prevails.

2. *Religion in Bengal.*—In Bihār their religion differs little from that of the average middle-class Hindu, representatives of all the regular sects being found among them; and the caste as a whole cannot be said to favour the tenets of any particular sect. In Eastern Bengal, however, they are said to be mostly Śakti-worshippers. In Bengal, as in the United Provinces, they retain traces of primitive Animism in the worship of minor gods, who are propitiated with sacrifices of he-goats, with offerings of wheat, sweetmeats, coloured cloth, and vermilion, the eatable portions of the offerings being divided among the members of the household.

3. *Inviolability of Bhāṭs and Chārans.*—One peculiarity common to both Bhāṭs and Chārans is their inviolability—a belief based on the combina-

tion in them of the duty of herald with that of bard, a principle as old as the days of Homer, when Odysseus spares Phemius, the bard (ἀοιδός) (*Od.* xxii. 331). It is principally from West India that the stories come of what is called *trāgā*, that is to say, the custom of self-wounding or suicide performed by members of this caste when exposed to attack while in charge of treasure or entrusted with other responsible duties. In almost every part of Kāthiāwār, at the entry of villages, are to be seen the *pāliyā*, or guardian stones, erected in honour of Chāran men and women who killed themselves to prevent the capture of cattle, or to enforce their restoration by the predatory Kāthi tribe. The names of the victims, with the date and circumstances of their death, are recorded on the stones, and a rude sculpture shows the method in which the sacrifice was performed, the man generally killing himself on horseback with sword or spear; the woman transfixing her throat with a dagger. In this part of the country the Chārans have now somewhat fallen from their high estate on account of permitting widow remarriage and worshipping the local Mothers, Khodiyār, 'the mischievous one,' or Āsāpūrā, 'she that accomplishes desires.'

W. CROOKE.

BHĪLS.—1. Introduction.—The Bhīls (Skr. *Bhilla*, which Caldwell [*Dravidian Grammar*[2], 464] believes to represent the Dravidian *Billa*, 'bowman,' from *vil*, *bil*, 'bow') are one of the non-Aryan races of India, usually included under the unsatisfactory name 'Dravidian,' inhabiting the hilly country in the West and Central parts of the Peninsula. They seem to have been the chief of a group of tribes occupying a large portion of the hill country, now included in Mewāṛ, Mālwā, Khāndesh, and Gujarāt. In the early Sanskrit writings they appear to be included under the names Pulinda and Nishāda, general terms applied to the non-Aryan races when they came in contact with the lighter-coloured race from the north. They have been identified with the Phyllitai (Φυλλῖται) of Ptolemy (VII. i. 66; McCrindle, *Ancient India as described by Ptolemy*, 159 f.), a term which, like the Skr. *Parṇa-śavara*, seems to have been used to denote the 'leaf-clad' non-Aryan tribes, now represented by the Juāngs of Chotā Nāgpur, in the Vindhyan and Sātpura ranges, which stretch westward from the Gulf of Cambay to the lower Ganges valley. Their predominance during early times in W. India is implied in the fact that in many States in Rājputāna, Mālwā, and Gujarāt, when a Rājput chief succeeds to the throne, his brow is marked with blood drawn from the toe or thumb of a Bhīl, by which he secures blood-covenant with the early lords of the country, and the protection of their priesthood against the local evil spirits. The right of giving the blood is claimed by certain families, and the fact that the person from whose veins the blood flows is believed to die within a year fails to damp their zeal for the maintenance of the custom (*Trans. RAS* i. 69). At the Census of 1901 the Bhīls numbered 1,198,843, of whom 569,842 were found in the Bombay Presidency, 339,786 in Rājputāna, and 206,934 in the States of Central India. These, the three principal groups, differ to some degree in religion, custom, and culture, and may be conveniently treated separately.

2. Legends of origin.—As a whole, the Bhīls seem to have preserved little tribal tradition; and, of course, they possess no tribal literature. Their legendary lore, as we find it, is intended to explain their present degraded condition. The most common account of their origin tells that Mahādeva (Śiva), sick and unhappy, was one day reclining in a shady forest, when a beautiful woman appeared, the first sight of whom effected a complete cure of all his maladies. The intercourse between the god and this stranger resulted in the birth of many children. One of the sons, who was from infancy distinguished alike by his ugliness and vicious habits, slew the favourite bull of his father, for which crime the angry deity cursed him and expelled him from the haunts of men to dwell in the woods and mountains. His descendants have ever since been known as Bhīls and Nishādas—terms that denote outcasts (Malcolm, *Mem. of C. India*[2], i. 518 f.; A. K. Forbes, *Rās Mālā* [1878], 78 ff.).

3. Bombay branch.—These clans are found in various parts of Gujarāt, as well as in the wild region of N. Khāndesh and the Ḍāng forests, where they form one of the most wide-spread and characteristic forest tribes. Their occupation in Gujarāt, which is typical of the tribe in other districts, is that of peasants, labourers, woodmen, and watchmen. When they cultivate, they follow the custom of periodically burning down patches of jungle, and sowing coarse grain crops in the ashes; others collect catechu and similar forest produce, while the women gather fruits and wild berries as food. Many of them still maintain their reputation as thieves and cattle-lifters, which is often noticed by the Muhammadan historians and by the writers of reports in the early period of British rule (*BG* ix. pt. i. 300, iii. 219, vi. 27). It is said that the Bhīl is more truthful than the high-caste Hindu; but this is doubtful. In Gujarāt, when a Bhīl is being sworn as a witness, he is seated with his face towards the sun, with a handful of grain bound in the hem of his garment, and a handful of dust laid on his head; he must then walk twice or thrice round the horse-image of the god Bābā, and swear by the cushion on which the chief of his clan sits (*ib.* ix. pt. i. 300 n.). Their system of agriculture and the dread of witchcraft prevent the establishment of settled villages; and their rude, sometimes round, huts are scattered through the jungle which they occupy. Their dress is extremely scanty; but the women ornament themselves with much rude jewellery. In Khāndesh the hill Bhīls are catholic in their diet, eating various kinds of grain, vegetables, forest fruits and berries, fish, goat's flesh or mutton, carrion, animals that have died by a natural death, and probably in remote places the flesh of the cow (*ib.* xii. 85).

They fall into two main divisions: (1) those who are partly Rājput, inhabit the plains where they have in some cases acquired Rājput status, and adopt Rājput names for their clans; and (2) the more or less pure Bhīls, who occupy the more inaccessible tracts (*ib.* ix. pt. i. 295). This distinction of culture affects their religion, that of the Rājput Bhīls corresponding to the Hindu rule, that of the jungle branch preserving more of the primitive animistic beliefs. Thus, in Khāndesh the wildest clans worship only Vāghdev, the tiger-god, who, under the kindred titles of Bāgheśvar (Skr. *Vyāghra-īśvara*, 'tiger-lord') or Banrājā (Skr. *vana-rāja*, 'lord of the wood'), is worshipped by the allied tribes in the hill ranges west of the Bhīl country (*PR* ii. 213). Some who are more influenced by Hinduism worship Mātā, the Mother-goddess, and Mahādeva or Śiva; while some, again, who are more civilized, worship the ordinary local Hindu deities, such as Khaṇḍoba, Sītalā Mātā, the smallpox Mother-goddess, and

others (*ib.* xii. 93). In Gujarāt the branch of the tribe which claims kinship with Rājputs worships specially Kālikā Mātā, the Mother-goddess, in her more awful form. Here the jungle-dwelling Bhīl worships hardly any of the orthodox deities, except Devī, the impersonation of the female energy. But when he visits her temple, contrary to his usual practice, he releases, after dedication, the victim which he offers to her. According to Enthoven, the Mātā, or Mother-goddesses, are represented by symbols rather than by images—by wooden posts, earthen horses, wicker baskets, and winnowing fans (*Bombay Census Rep.* 1901, i. 63). This appears to be a local development, as the cult of the horse seems elsewhere to be connected with that of ancestors. The jungle Bhīl respects Muhammadan shrines, and makes offerings to Muhammadan saints. Besides this, he retains many of the primitive animistic beliefs. He reverences the moon and swears by it; but he chiefly worships spirits and ghosts. This worship is usually performed in high places, the shrine consisting of a pile of stones on the summit of a hill, where he occasionally makes a blood-offering to appease the spirits of evil. In the forest, near an old tree or spring, often at some spot selected by mere chance, but which he believes to be the haunt of spirits, he offers rude earthenware images of horses, jars, and beehive-shaped vessels. The horse-images seem among the non-Aryan tribes to be intended as steeds on which the spirits of the dead may ride to heaven; and the jars and other vessels are regarded as the abodes of spirits. We thus find a crude ancestor-cult attached to the animistic beliefs. The ritual of the death rites shows that the tribe recognizes, in a vague way, the existence of the soul after death. When the *rāval*, or death priest, comes to preside over the death feast, by which food is conveyed to the souls of the dead, he brings with him two small brass images, one said to represent the horse of the moon, the other a cow and calf. The latter having been placed in a pool of milk, the death chant is sung, after which the cow-image is laid on the ground. The horse-image, which is usually made out of the anklets of the widow, is presented to the *rāval* at the close of the obsequies (*BG* ix. pt. i. 304 f.). The purport of the rite is obscure; but it seems to be intended that the cow and horse, by a process of magic, may be placed at the service of the ghost of the deceased. When the spirits of the forest are being worshipped, beams are raised, poised on two uprights sometimes 12 ft. high, which the officiant mounts to sacrifice a goat or a cock (*ib.* ix. pt. i. 301). This form of 'ladder sacrifice' is found in other parts of India. It is used by the Musahars of Bengal in the worship of the *bīr*, or malignant spirits, and by the Dosādhs of the United Provinces in eclipse observances (Risley, *Tribes and Castes*, ii. 117; Crooke, *Tribes and Castes*, ii. 355). In Upper Burma, a man who aspires to become a diviner has to climb a ladder and sit on a platform set with sharp spikes; if he receives no injury, his powers are recognized (J. Anderson, *Mandalay to Momien*, 1876, p. 81). In Khāndesh the Bhīls suppose that spirits reside in stones, which are smeared with red lead (a substitute for a blood-offering) and with oil. An animal sacrifice and an oblation of spirits are sometimes made at such stones, portions of which are thrown into fire in the belief that the demons delight in the sweet savour, after which the worshippers and their priest consume the flesh and liquor (*BG* xii. 93). Animal-worship, except the reverence paid to the horse, is not common. Ghoṛā Dev, 'the horse-god,' is a general object of worship. In Gujarāt, if a prayer has been granted, clay images of horses are made, and placed round the shrine-image or in the spirit haunt; and in many of their legends the plot turns on the assistance given by an enchanted horse. Only the clans most under the influence of Hinduism kill neither the cow nor the blue bull (*Portax pictus*); the jungle-dwellers have no reverence for the cow, kill it, and eat its flesh. There are no signs of snake-worship. They have a firm belief in omens of the 'meeting' class, which are usually associated with animals (*JAI* ix. 400; *Asiatic Quart. Rev.* vii. 461 f.).

4. **Festivals.**—In Gujarāt their festivals are chiefly connected with the ancestor-cult. The only regular Hindu festivals which they observe are those of the spring equinox (Holī, Shiṅgā), and the autumn equinox (Dasahra), and the feast of lights (Divāli) at the full moon in October–November. The first two, which are in origin forms of sympathetic magic to promote the growth and ripening of the crops, are accompanied with rude merriment and indecency (*GB*[2] iii. 306). At the Holī they celebrate, possibly with the object of expelling evil spirits, a mock fight between men and women—an incident witnessed and described by Bishop Heber among the branch of the tribe in Central India (*Narrative of a Journey*, 1861, ii. 86 f.; *GB*[2] iii. 95 ff.; *PR* ii. 176, 321). At the same feast some clans, as is the case in N. India, practise the rite of walking through a trench filled with burning embers, without, it is said, injury to the performers (*BG* vi. 29, xii. 93 n.; *PR* ii. 317).

At the Divāli, or feast of lights, they make a thanksgiving to the gods near the shed of the cattle, the protection of which is the main object of the feast. The ground near the shed is cleaned and a small circle is made with rice. In this circle seven balls of boiled rice or maize are placed on seven leaves. A fire is lighted and fed with butter. A man, generally the house-master, lays his hands on five chickens, throws water over them, and offers them, saying, 'O Dharma Indra! We offer this sacrifice to thee! During the coming year keep our cattle free from disease, increase them and be kindly!' At the same time another man cuts the throats of the fowls. A third man sprinkles spirituous liquor on the ground, saying, 'O Dharma Indra! we pour this spirit to thee!' The cattle, with their horns painted red, are then let out of the shed, those of the headman leading the way. All are driven over the body of a Bhīl, who lies on the ground face downwards. This is probably a survival of an actual rite of human sacrifice. The invocation of Indra shows the influence of Hinduism; but the rite is part of the primitive Animism.

At the Dasahrā feast they sow barley in a dish full of earth, and keep it watered and tended for nine days, after which it is offered to the goddess Devi—a magical rite found in other parts of the world, which has been described by Frazer under the title of 'the Gardens of Adonis' (*BG* ix. pt. i. 306 ff.; Frazer, *Adonis, Attis, Osiris*[2], 194 ff.).

When rain holds off and scarcity is feared, the women go with bows and arrows to the shrine of the village-goddess, abuse her, smear her image with filth,* and leap and dance; finally, they raid a neighbouring village, seize a buffalo, the owner seldom offering resistance, and drive it back to their own village, where it is beaten to death with clubs, and the flesh shared among the raiders. They say that the intention is to shame the gods into pity, and to convince them how hard the times must be when the women are compelled to resort to acts of violence (*BG* ix. pt. i. 311). When epidemic disease prevails, asses are made to plough a piece of ground (an unnatural act intended to call the attention of the gods to their troubles), and a small cart is placed before the shrine of the god who is supposed to have been offended at some neglect, and to have brought the pestilence. The cart is then believed to move of its own accord, and accompanied by a scape animal, a goat or buffalo, carries the plague beyond the limits of the village (*ib.* ix. pt. i. 311).

5. **Priesthood.**—Except among those clans which are subject to Hindu influence, Brāhmans take no part in the public or domestic rites. The exorcist, whose duty it is to propitiate the malignant gods

* For a remarkable case of obscene ritual cursing of a goddess, see the account of the Gangammā festival in Malabar (*Bulletin Madras Museum*, iii. 267 f.).

and spirits, is known as the *bhagat* (Skr. *bhakta*, 'worshipper'). His reputation depends on his occasionally becoming possessed by the Mother-goddess, when he mutters and shakes, foams at the mouth, eats raw flesh or drinks blood, and pretends to know both the past and the future. The Rājā of the Bāriyā State, in the Agency of Rīwa-kāṇṭha, holds a feast every twelve years in honour of a god known as Bābā Dev, 'divine father,' on the Devgaḍ hill, when a Bhīl *bhagat* becomes possessed by the god, and foretells the condition of the crops and the fortunes of the Rājā's family (*ib.* vi. 29 f.). The duties of the *bhagat* are to consecrate household gods, to perform tribal and family rites, to secure the fertility of the crops, to heal the sick, and to thwart the machinations of enemies. In cases of sickness, he places grains of black gram (*Phaseolus mungo*) or rice on a leaf, which he passes round the head of the patient. By examining the grains, he decides whether the sick man has been attacked by an evil spirit or by one of his offended dead ancestors. The latter usually appear in the form of human beings, but sometimes in that of a bear or other wild beast. When their worship is neglected, they show their anger by throwing stones or sticks at their descendants, or by pinching them at night. They can be appeased by making an offering at their graves. The attack of an evil spirit is treated by means of incantations, and striking the patient gently with the branch of a tree. The *bhagat* is also the witch-finder; and in former times, before the period of British rule, witches were subjected to cruel ordeals, tortured, or even killed (*ib.* ix. pt. i. 302). The second class of priests is the *rāval* (Skr. *rājakula*, 'royal family'), a title, like that of the *bhagat*, obviously of Hindu origin, replacing the name of the original medicine-man. His chief duty is to preside over the funeral feast, and to propitiate the deceased ancestors. The dead are buried in deep graves or under stone cairns, the intention being to prevent the return of the ghost. On the return from the grave a fire is lit in the house of the dead man, and into it some woman's hair is sometimes dropped (cf. Frazer, *Pausanias*, iv. 136 f.). The death tabu is finally removed by the mourners passing their hands and feet through fragrant smoke, and by washing the shoulders of the corpse-bearers with a mixture of oil, milk, cow-dung, and cow-urine (*BG* xii. 91 f.).

'In the case of the decease of a Bhil of importance, it is not uncommon for the grave in which he has been interred to be opened some two months after burial, the opening being only sufficient to disclose the head of the corpse. The wasted features thus brought to light are anointed with red lead in the same manner as the irregular shaped stones which are common objects of worship among this primitive people.* After anointment the deceased is worshipped, and the grave is then re-closed. Without this ceremony the full rights of ancestorship are not, it is alleged, obtainable. The worshippers are by no means necessarily relations of the deceased' (*Bombay Census Rep.* 1901, i. 63).

6. Central Indian branch.—These inhabit principally the wild hilly tracts which separate Mālwā from Nimār and Gujarāt. According to Malcolm (*Memoir of Central India*[2], ii. 181), their religious rites are confined to 'propitiatory offerings and sacrifices to some of the Hindu infernal deities,' especially Śītalā Mātā, the smallpox Mother; they also pay reverence to Mahādeva, from whom they claim descent. The Barwānī sept, which is one of the most primitive, is said to have a well-defined system of sept totems, each sept reverencing a special tree or animal. If the totem be a tree, they never cut or injure it; men bow when passing it, and women veil their heads. The tribal *tatu*, however, is said never to be a representation of the totem. Luard (*Central India Census Rep.* 1901, i. 197 ff.), who gives this account, adds that, 'as a rule, some spirit is supposed to live in the tree or other object.' It may be suspected that we have here an instance of confusion between totemism and tree- or animal-worship.

* For similar customs in India see those of the Maravan and Urāli of Madras (*FL* v. 36; Thurston, *Ethnographic Notes*, 202), the Khāsī (*JAI* i. 181), and the people of Nicobar (*ib.* xxxii. 209, 220 f.).

7. Rājputāna branch.—The religion of this branch has been fully described by T. H. Hendley (*JRASBe* xliv. [1875] 347 ff.). In the Mewāṛ hills their primitive beliefs have been, to some extent, affected by Brāhmanism. Their shrines are cairns, erected on high hills, and containing clay or pottery images of the horse. Over these, poles adorned with rags are erected. Beside these are platforms of stone, on which are placed upright slabs, generally plain, or merely named after a god, and daubed with red paint or carved in the shape of Hanumān, the monkey-god. Their favourite deities are Śiva, or Mahādeva, and his consort in her various forms as Pārvatī, Devī, or Mātā, of whom Hendley (*op. cit.* p. 349) gives a list. One of them, known as Vājar Mātā, is specially worshipped by women who desire offspring. The tombs of Muhammadan holy men are also respected. Sacrifices consist of goats offered to Devī or Mātā, the flesh, after dedication, being eaten by the worshippers. The influence of Hinduism is shown in the fact that their priests are drawn from the Hindu ascetic Yogī order.

'The Bhīl has a very dim idea of a future state. He believes the soul goes before the gods, and that the spirits of the dead haunt places they lived in during life. He also holds that there is a limited transmigration of souls, especially in spirits becoming evil ones. Eclipses and the motions of the heavenly bodies are deemed to be the play of their gods, and they howl with the Hindu when the moon is eclipsed' (*ib.* 350). No tombs or cenotaphs are constructed; 'but a few days after death a relative of the deceased is said to be informed in a dream that the spirit has taken up its abode on a neighbouring hill, whereupon friends and connexions proceed to the place and erect a platform of stones, and leave there a quantity of food and liquor' (*ib.* 354).

According to Bannerman (*Census Rep.* 1901, i. 142), besides the Kul-devī, or family-goddess, Mahādeva and Hanumān, the monkey-god, are everywhere worshipped. In parts of Mewāṛ, Rishabnāth (*i.e.* Ṛishabhadeva, the first Jaina Tīrthakara, or perfected saint) is worshipped by the Bhīls—a proof of the widely spread influence of that religion in W. India in mediæval times.

W. CROOKE.

8. Language.—Bhīls are usually credited with possessing a special language of their own, which has been named *Bhīlī*. It is probable that these wild tribes did once speak a language belonging to the Dravidian or to the Muṇḍā family, but they have long since abandoned it. At the present day they speak a mongrel form of the Gujarātī spoken by their more civilized Aryan neighbours to their west. Their speech varies according to locality, and, in the District of Khāndesh, in the Bombay Presidency, has become mixed with Marāṭhī, the fusion of the two main languages resulting in a well-marked and interesting dialect known as Khāndēśī.

The general Bhīl jargon has some peculiarities of pronunciation which it shares with the dialects of North Gujarāt and, through them, with other languages of the extreme North-West of India, from Sind to the Hindu Kush. These are the pronunciation of *s* as a rough *h*, as in *hōnō* for *sōnō*, 'gold'; the tendency to disaspiration and to harden soft

mutes, as in *kōḍō* or *khōḍō* instead of *ghōḍō*, 'a horse,' *lītō* for *līdhō*, 'taken,' *ṭāhī* or *ḍāhī*, 'a cow'; and the frequent elision of a medial *r*, as in *kōi* for *kōri* or *kari*, 'having done,' *dūu* for *dūru*, 'far.' These peculiarities, although striking, and possibly giving clues to ethnologists, do not authorize us to class the so-called *Bhīlī* as an independent language.

LITERATURE.—C. S. Thompson, *Rudiments of the Bhili Language* (Ahmedābād, 1896); G. A. Grierson and S. Konow, *Linguistic Survey of India*, vol. ix. pt. iii., *The Bhil Languages and Khandēsī* (Calcutta, 1907). G. A. GRIERSON.

BHĪLSA.—Bhīlsa is the name of a village in Central India. The name has been applied by Cunningham in the title of his book, *The Bhilsa Topes*, to the whole district, about 24° N. by 77° E., in which the village is situated. It is a hilly, well-watered district of considerable natural beauty. Cunningham, for instance (p. 320), speaking of the Satdhāra Hill, says:

'The hill on which the tope stands forms here a perpendicular cliff, beneath which flows the Besāli river through a deep rocky glen. The view up the river is one of the most beautiful I have seen in India.'

He then describes the view; and has similar remarks (p. 342) on the beauty of the view from the Andherī Hill. As the principal summit was called Chetiya-Giri, 'the Shrine Hill' (*Mahāvaṁsa*, xiii. 5), and Chetiya is used of pre-Buddhistic shrines, it was probably already, before the Buddhist movement, the site of one of those sacred places on the hill-tops where tribal festivals used to be held. If that be so, this may have been one of the reasons which led the Buddhists to choose the peak as the site of their hermitages, and of their religious and educational establishments.

This main summit is now called Sānchī (*q.v.*). Remains have also been found at Sonāri, Satdhāra, Bhojpur, and Andhēr. At Sonāri there are two large square terraces, one on the top of the hill, the sides of which are each 240 ft. in length, and one a little lower down, the sides of which are 165 ft. in length. The centre of the larger terrace was occupied by a solid hemispherical dome, or tope, 48 ft. in diameter, rising from a cylindrical plinth 4 ft. in height. At the height of about 30 ft. the top of the dome was level and surrounded by a stone railing now broken away. The remains of it were found by Cunningham at the foot of the dome. Cunningham sank a shaft down the centre of the dome, but found nothing. The original height, including that of the ornamental structure which occupied the centre of the levelled space at the top of the dome, must have been about 50 feet. Outside the S.W. corner of this square terrace on which the dome stood was a solid square pile of masonry, level at the top, from 12 to 15 ft. high according to the undulations of the ground, and measuring 36 ft. along each side. A flight of steps 4½ ft. wide leads from the hillside to the summit. This was evidently the site for a building of some sort, no doubt constructed entirely of wood, as nothing remains to show for what purpose it was intended. Round the foot of the dome ran a paved processional pathway enclosed by a carved stone railing, with gates at the four cardinal points. Both this and the railing round the top were of white stone brought from a distance. The tope itself was built of the claret-coloured stone found on the Sonāri Hill. There are short dedicatory inscriptions on portions of the lower railing, cut in Pāli characters of approximately the 3rd cent. B.C., giving the names of the donors of those portions.

The dome which occupied the lower terrace of 165 ft. square was of a slightly different construction. It was solid like the other, built of stone without mortar, 27½ ft. in diameter, rising from a plinth 4½ ft. in height, the plinth resting on a cylindrical foundation 12 ft. high. The level top of this foundation was reached by a fine double flight of steps, 20 ft. in breadth, leading on to a circular pathway, 6 ft. broad, running all round the dome. The height of the whole had been about 40 ft. from terrace to summit. There was no trace of any stone railing. On a shaft being sunk down the centre of the dome five relic-caskets were found, each inscribed with the name of the person of whose funeral pyre portions were enclosed in the casket. Two of these are names of missionaries who, according to the chronicles (*Dīpavaṁsa*, viii. 10, and *Mahāvaṁsa*, xii. 42), were sent to the Himālaya regions after the close of the Council at Patna, held in B.C. 254.

The discovery of these names was of the utmost importance for the criticism of the Buddhist chronicles written in Ceylon. They are given in the inscriptions as those of missionaries to the Himālaya. Some centuries afterwards they are found in the chronicles in the list of the missions sent out, as those of the men who were sent to the Himālaya. The inscriptions, buried in Northern India, were, of course, unknown in Ceylon. The traditions handed down in the island were sufficiently well guarded to have preserved these details accurately throughout this long interval of time.

Besides these two great topes, there were on the top of the Sonāri Hill six smaller ones arranged in two rows to the south-east of the larger terrace. These had all been opened before Cunningham's visit in 1852, and he found nothing in them.

On the Satdhāra Hill, three miles across the valley from Sonāri, there are seven topes remaining on as many terraces. The largest of these solid domes was no less than 101 ft. in diameter, and its height must have been approximately 75 feet. Nothing was found in it. There were three of the solid basements, such as the one found at Sonāri, on which must have stood other buildings probably made of wood. In a second, much smaller tope, 230 ft. to the N.N.W. of this huge pile, were found two caskets, empty, but inscribed with the names of Sāriputta and Mahā Moggallāna, the two principal disciples of Gautama, the Buddha. A third tope had a diameter of 24 ft., and contained relic-caskets, but no inscription. Four smaller ones, all of which had been previously opened, contained nothing.

The topes at Bhojpur, which are very numerous, stand on the southern end of a low range of hills on the opposite side from Sonāri and Satdhāra of a broad valley through which flows the river Betwā. The largest stands in the centre of a levelled terrace, 252 ft. long by 214 ft. broad, and was 61 ft. in diameter. The next in size had a diameter of 39 feet. In a third of only 31 ft. diameter the relic-caskets bore names otherwise unknown. Cunningham examined 33 other topes on the slopes of this range of hills, but they had been previously opened; and nothing of importance, and no inscriptions, were found in them.

The Andherī topes are perched on the northern declivity of a pear-shaped hill facing Bhojpur across another valley. These are on the very edge of the cliff, about 500 ft. above the plain; and the position is a very fine one, commanding a wide outlook over the Bhīlsa district with its dome-surmounted peaks and fertile valleys. The topes are only three in number, respectively 35 ft., 19 ft., and 15 ft. in diameter. At each of them inscriptions were found, some of the names recurring also at Sānchī, and belonging to contemporaries of Aśoka. One of them is Moggali-putta, who may, or may not, be the same as the Moggali-putta Tissa who presided at Aśoka's Council at Patna, and who is the traditional author of the *Kathā Vatthu*, the latest book in the Buddhist Canon, and the only book in it which is ascribed to a particular author.

Aśoka, when on his way to take up the vice-royalty of Ujjain during the last years of his father's life, stayed in the Bhilsa district, and married a local lady, daughter of a merchant at Vedisa named Deva. Three children were born to them; and then Aśoka succeeded to the throne on the death of his father. As the marriage was a *mésalliance* he left his wife behind, and she brought up the children. Two of them, Mahinda and his sister Saṅgha Mittā, were afterwards the famous missionaries who carried Buddhism to Ceylon. It is recorded how Mahinda, before he departed on the mission, went to Bhilsa to take leave of his mother, and stayed there at a *vihāra* she had built (*Dīpavaṁsa*, xii. 8–34; *Mahāvaṁsa*, xiii. 1–14; *Samanta Pāsādikā*, p. 318 f.; *Mahābodhi-vaṁsa*, p. 115 f.).

It is sufficiently clear from these notices that the district was, in the 3rd cent. B.C., and probably earlier, an important centre of Buddhist activity. The massive terraces and solid topes are all that remain of the outward signs of this activity; but its intellectual results are still working in Ceylon, and in a less degree in the Himālaya regions.

T. W. RHYS DAVIDS.

BHṚIGU.—The word *bhṛigu* occurs twenty-six times in the Rigveda,* always in the plural† except twice, where it is singular; and as each of the two passages in question is identical in purport with some other where the plural is used, it may be assumed that even as a singular the word has a collective force. Indian tradition, however,—to anticipate a little—interprets the sing. *bhṛigu* as denoting the ancestor of an ancient race of seers, and the plur. as denoting his descendants.

In the Rigveda the Bhṛigus are associated mainly with the legend of the acquisition of fire by the human race. The Bhṛigus, having discovered Agni in the bosom of the waters (ii. 4. 2; x. 46. 2), or having received him from Mātariśvan (i. 60. 1,‡ iii. 5. 10, x. 46. 9), introduced him amongst men (i. 58. 6, iii. 2. 4), deposited him in wood (vi. 15. 2), and caused him to become luminous in that substance (iv. 7. 1), bringing him forth either by friction (i. 127. 7, x. 46. 9, i. 143. 4) or by their songs (x. 122. 5).

In two passages (iv. 16. 20 and x. 39. 14) the Bhṛigus are referred to as waggon-builders: 'We have composed a song for Indra (or, for the Aśvins) [as skilfully] as the Bhṛigus [build] a waggon.'§ Roth's conjecture (*Pet. Wörterb. s.v.* 'Bhṛigu'), that the word that stood originally in these passages was *ṛibhavo*, finds some support in Sāyaṇa (on x. 39. 14: *karmayogād ṛibhavo bhṛigava uchyante*), but the present writer believes that we have here the primitive nucleus of the legend, *i.e.* that *bhṛigu* was originally merely a name for a 'handicraftsman,' one of those who, working with wood, might quite naturally be the first to discover that that substance could be ignited by friction.

The other Rigveda passages‖ are rather colourless. The Bhṛigus appear as the sacrificers of remote antiquity, and along with the Aṅgirases and Atharvans (x. 14. 6); people invoke Agni in the same manner as did the Bhṛigus,* Aṅgirases, and Manu (viii. 43. 13). Indra is expected to help as he has helped the Bhṛigus and the Yatis (viii. 3. 9,† 6. 18; cf. 3. 16). They stand on an equality with the gods in viii. 35. 3 and x. 92. 10. A more personal aspect is shown in ix. 101. 13, where people are advised to drive away the niggardly dog, as the Bhṛigus [drive away] the Makha, but unfortunately we possess no further information regarding this Makha. We seem to have a historical reference in vii. 18. 6, where the Bhṛigus, along with the Druhyus, are spoken of as vassals‡ of King Sudās.

* We leave out of account the word *bhṛigavāṇa*, which is at least cognate, and occurs thrice in the Rigveda, as its meaning is doubtful.

† *Bhṛiguvát* (Rigv. viii. 43. 13) is of course, as such, ambiguous, though Sāyaṇa explains it as *yathā bhṛiguḥ*.

‡ *Bhṛigu* in the singular here.

§ The interpretations of x. 92. 10 given by Ludwig (*Der Rigveda*, 1876–88, i. 262, iv. 237): 'Für Götter durch Tüchtigkeit gelten allgemein die Bhrigu'; and by Macdonell (*Vedic Mythology*, 140): 'The Bhṛigus showed themselves as gods with their dexterity,' are unfortunately inadmissible, as the verb used here, *sam-chit*, bears a different meaning in other passages.

‖ Cf. Macdonell, *loc. cit.*

In the Atharvaveda *bhṛigu* is mentioned four times—once (xviii. 1. 58) in a strophe identical with one in the Rigveda. In iv. 14. 5 it is indefinite, merely saying that sacrificers should go to heaven along with the Bhṛigus. In ii. 5. 3 it is said that Indra clove the Vala asunder as Bhṛigu (nom.) conquered his enemy intoxicated with soma; in the same strophe the Yatis are again referred to (cf. above, Rigv. viii. 3. 9 and 6. 18), but, strange to say, it is stated here that Indra killed Vṛitra like the Yatis (acc.). The fourth passage (v. 19. 1), however, is a most interesting one: Sṛiñjayas, Vaitahavyas perished because they injured Bhṛigu. We shall return to this reference below.

In the later Vedic, as also in the epic literature, Bhṛigu stands forth as the progenitor of a celebrated family of priests; many of his posterity, the Bhṛigus—and Bhārgavas, 'scions of Bhṛigu'—are mentioned individually by name, and for the most part they enjoy a great reputation. Bhṛigu himself was held to be of Divine origin, as is attested by so ancient an authority as the *Aitareya Brāhmaṇa* (cf. iii. 33–34): the seed of Prajāpati was cast into the fire by the gods, in order that it might not be spoilt; from that which first flamed forth arose Āditya (the sun); from the second (flame) came Bhṛigu, who was adopted by Varuṇa, and hence Bhṛigu is a son of Varuṇa; that which the third time flashed brightly forth (*adīdet*) became the Ādityas, and that which the coals (*aṅgāra*) were became the Aṅgirases, etc. A similar story is told in the *Śatapatha Brāhmaṇa* (i. 4. 5. 13) regarding the origin of Atri. Yāska (Nir. 3. 17) combines the two legends, saying that the first to arise from the beam (*archis*) of the fire was Bhṛigu,§ then Aṅgiras from the coals (*aṅgāra*), and thirdly Atri from the same place.‖ The *Bṛihaddevatā* (v. 97–100) gives a similar version. In the *Mahābhārata* (xiii. 85. 96 ff.), Bhṛigu, Aṅgiras, Kavi, Marīchi, Kaśyapa, Atri, etc., are said to have sprung from seed of Brahman which had been cast into the fire.¶ According to the *Mahābhārata* (i. 66. 41), Bhṛigu was generated from the heart of Brahman, while in the *Bhāgavata Purāṇa* (iii. 12. 23) he is said to have issued from Brahman's skin.

That Bhṛigu was adopted by Varuṇa is intimated also in the *Mahābhārata* (xiii. 85. 124; cf. i. 5. 8); and so he appears as Bhṛigu Vāruṇi in a legend (*Śatap.* xi. 6. 1. 1), which we shall narrate presently, in *Taittirīya Āraṇyaka*, ix. 1,** and in Kātyāyana's

* *Bhṛiguvát*. † *Bhṛigu* in the singular.

‡ In the opinion of the present writer, as vassals by compulsion.

§ Here derived from *bhṛijjati*, 'to roast': *bhṛijyamāno na dehe*.

‖ *Atraiva tṛitīyam ṛichhatīty ūchus tasmād Atriḥ* (*Śatapatha*, i. 4. 5. 13, *atreva tyad iti*).

¶ Cf. 13. 85. 105 f.: *bhṛig ity eva bhṛiguḥ pūrvam aṅgārebhyo 'ṅgirābhavat | aṅgārasaṁśrayāch chaiva kavir ity aparo 'bhavat | saha jvālābhir utpanno bhṛigus tasmād bhṛiguḥ smṛitaḥ*.

** The story in *Taitt. Brāhmaṇa*, i. 8. 2. 5, according to which Bhṛigu sprang from a third part of Indra's force, is a mere theological speculation, designed to support the idea that a Bhārgava must have been present as Hotṛi at the festival in question.

Anukr. to the Rigveda, which speaks of him, or Jāmadagni, as the composer of Rigveda ix. 65, and of him, or Chyavana, as the composer of x. 19 (both of these individuals being of Bhṛigu's line). Beyond this, the later Vedic texts add relatively very little to our information regarding Bhṛigu. All that is worthy of interest is the legend just alluded to (*Śatap.* xi. 6. 1. 1 ff.).* It is narrated here that Bhṛigu deemed himself wiser than his father Varuṇa, who, observing this, sent him upon a pilgrimage, on the understanding that on his return he should relate what he had seen. By Varuṇa's instructions he journeyed to all the four quarters of the earth. He met with dreadful things on every hand; he saw men cutting their fellow-men in pieces, and then distributing and devouring the fragments. When he asked them why they pursued such a course, he always received the same answer: 'These men dealt thus with us in the other world, and we now deal with them in the same way.' He also inquired if there was no possible reconciliation, and received the reply: 'Certainly; your father knows of it.' He comes at last to the region lying between the East and the South,† where he sees two women, one beautiful, the other passing beautiful,‡ and between them a black man with yellow eyes, and with a stick in his hand. Bhṛigu is terrified, and returns home. From his dejected condition Varuṇa perceives that he has 'seen,' and then (8 ff.) shows him the meaning of what he has seen. But the explanation is certainly a disappointing one from our point of view, being simply a piece of absurd symbolizing in regard to certain features of the Agnihotra festival.

Amongst other references to Bhṛigu in the Brāhmaṇa literature we ought to mention *Kāuṣītaki Brāhmaṇa*, xxx. 5, where the Aitaśāyanas are spoken of as the worst of the Bhṛigus.§ In the earlier texts the Bhṛigus and the Aṅgirases are closely connected, and *bhṛigvaṅgirasaḥ* indeed is actually used as a title of the Atharvaveda.‖ They are likewise often found together in the *Mahābhārata* and the *Purāṇas*. Apart from these notices, Bhṛigu is mentioned, along with Atri, Aṅgiras, etc., mainly in the list of Brahmarṣis and patriarchs.¶ It is in these texts, of course, that he at length stands forth as in all respects a *Ṛṣi* of primitive times, while in *Mahābhārata*, iii. 99. 69 and xii. 3. 19 he is even exalted to the Devayuga.

It is recorded, moreover, in the *Mahābhārata* (i. 5–7,** ix. 47. 17–22, xii. 343. 55) that Bhṛigu, incensed because his wife Pulomā had been betrayed into the hands of the Rakṣas Puloman by Agni, cursed the latter, and ordained that he must suffer the penalty of consuming everything, no option being allowed.†† Agni rebels against this, resigns his function,‡‡ and hides himself.§§ Gods and men, however, find him indispensable, institute a search, and discover him at length in his retreat. But Agni resumes his work only after Brahman has intervened with conciliatory words, and given the assurance that he is to be the devourer of all things, not with his whole body, but merely as the fire of digestion and as the consumer of flesh.* Here, therefore, the story of Agni's withdrawal, which is already alluded to in the Rigveda as a well-known fact, is associated, strangely enough, with a curse uttered by Bhṛigu, the Vedic myth regarding the discovery of fire (see above) being thus simply reversed.

* See A. Weber, 'Eine Legende des Çatapatha-Brâhmaṇa über die strafende Vergeltung nach dem Tode,' *ZDMG* ix. 237–248.

† The passage is not altogether clear.

** *Bhṛiguvaṁśa* in the *Paulomā-parvan*.

†† i. 6. 14: *sarvabhakṣo bhaviṣyasi*; ix. 47. 22: *sarvabhakṣaś ca so'bhavat*; xii. 343. 55: *sarvabhakṣatvam upanītaḥ*.

‡‡ i. 7. 12: *chakre saṁhāram ātmanaḥ* (*ib.* 16: *kriyāsaṁhāram*).

§§ His hiding-place, let us note, was the *śamīgarbha*, i.e. an *aśvattha*-tree which grew in a *śamī* (cf. ix. 47. 17)—the tree whose wood was commonly used for producing fire by friction.

The *Mahābhārata* in another passage (xii. 343. 62) also makes mention of a curse spoken by Bhṛigu. Umā, the daughter of Himavat, was loved by Rudra, but Bhṛigu also sought to win her. Himavat, however, had to reject the latter's advances, Rudra being already the accepted suitor.† Bhṛigu, enraged at this refusal, utters against Rudra the malediction that no precious stones shall be found in him, 'and to this day the word of the *Ṛṣi* holds good.' Another legend tells how Bhṛigu, by means of a curse, rescues Agastya from the tyranny of Nahuṣa (xiii. 99–100).‡

These are all the really important myths relating to Bhṛigu himself, so far as found in the epic literature. There are numerous other legends, however, which relate to individual members of the Bhṛigu family. A special instance is the story of Chyavana, the son of Bhṛigu, which goes back even to the Rigveda;§ while Gṛitsamada, the author of the second *Maṇḍala*, ranks as a descendant of Bhṛigu.‖ As a recital of the various narratives in question, however, would go beyond the scope of this article, we confine ourselves to a congeries of myths which relate to the Bhṛigus in a general way, and which may, perhaps, throw light upon the passage in the Atharvaveda (v. 19. 1) cited above for further notice.

The following narrative is found in *Mahābhārata*, i. 178. 11 ff. (to the end of 180):

> King Kārtavīrya was lord of the sacrifice to the Bhṛigus, and used to load them with gifts. After his death his successors fell into penury, and began to importune the Bhṛigus for money. Only some of these, however, acceded to the request; others buried their money in the earth, while some, again, handed theirs to Brāhmans. Then the Kṣatriyas sought the money by digging, and, having discovered it, they were so moved with rage that they slew every Bhṛigu they could lay hands upon, not even sparing the child in the mother's womb. One of the women ¶ held her yet unborn babe hidden on the haunch.** But the Kṣatriyas heard of the matter, and approached the mother with the design of killing the child. Then the child forced a way through the mother's side, stood forth before the assailants, and blinded them with the splendour of his appearance, thus forcing them to cry for mercy. In order to avenge the sufferings undergone by the Bhṛigus, Aurva resolved to blot the whole world out of existence, but was induced by the entreaties of his ancestors to sink the fire of his wrath in the depths of the ocean.††

Thus the massacre of the Brāhmaṇas, according to this legend, is followed by no expiation—a circumstance which is out of keeping with the normal scheme of such narratives, and in particular with the characterization of the Bhṛigus as specially revengeful.‡‡ It need not surprise us, therefore, that in other passages of the epic and the *Purāṇas* a great deal is said regarding the great extinction of the Kṣatriyas by the 'Bhārgava' Paraśurāma.§§

* Cf. i. 7. 19–26.

† A different experience was that of Puloman, who had made his suit to Pulomā before Bhṛigu did so. See *Mahābhārata*, i. 5.

‡ Cf. art. AGASTYA, i. 180 f.

§ Cf. Pischel, in Pischel-Geldner's *Vedische Studien*, i. 71 f.

‖ The Anukr. to the Rigveda makes mention of the following Bhārgavas as authors of hymns: Iṭa (x. 171), Kavi (ix. 47–49, 75–79), Kṛitnu (viii. 79), Gṛitsamada (ii. 1–3, 8–43, ix. 86. 46–48), Chyavana (x. 19), Jamadagni (iii. 62. 16–18, viii. 101, ix. 62, 65, 67, 16–18, x. 110, 167. 6, 167), Nema (viii. 100), Prayoga (viii. 102), Vena (ix. 85, x. 123), Somāhuti (ii. 4–7), and Syūmaraśmi (x. 77–78).

¶ According to *Mahābhārata*, i. 66. 46, this was *Āruṣī*, the daughter of Manu and the wife of Chyavana.

** *ūru*; whence the son received the name Aurva, 'risen from the haunch.'

†† Where it has ever since remained, as hell-fire (*vaḍavāmukha*, *vāḍavānala*, *aurva*; see also Harivaṁśa, 2554 ff.). We have here another case of a Bhṛigu connected with a fire-legend.

‡‡ Cf. also *Mahābhārata*, xiii. 92. 45: *bhṛigavo hy atiroṣaṇāḥ | loke mithyāpravādo'yam*.

§§ See especially *Mahābhārata*, iii. 116–117; and for the

It is alleged, however, in these passages that the original cause of the feud was that King Kārtavīrya (or his sons) had stolen a calf of the sacrificial cow of Jamadagni.* Paraśurāma, who happened to be absent at the time, learns of the atrocity on his return, and kills Kārtavīrya with an arrow. The sons of the latter avenge his death by slaying the aged Jamadagni. Then Paraśurāma takes an oath that he will extirpate the entire race of the Kṣatriyas, and 'thrice seven times did he clear the earth of the Kṣatriya caste.'†

Here, once more, the crime perpetrated against the offspring of Bhṛigu is a seizure of their property, and the culprits are again descendants of Kārtavīrya. Now the latter are quite distinctly spoken of as kings of the Haihayas.‡ The Haihayas and the posterity of Kārtavīrya, however, include also the Tālajaṅghas,§ whom the Bhṛigus are reported to have conquered, as the Aṅgirases conquered the Nīpas, as Bhāradvāja the Vaitahavyas.‖ But the narrative in *Mahābhārata*, xiii. 30,¶ says that the Vaitahavyas, too, belonged to the Haihayas. Let us now examine the passage in Atharv. v. 19. 1: *bhṛigum hiṁsitvā sṛiñjayā vaitahavyāḥ parābhavan*. The idea at once suggests itself that the incident recorded here should perhaps be connected with the epic legends just referred to. In that case, however, the celebrated song in Atharv. v. 18, immediately preceding the passage before us, appears in an entirely new light. We cannot here discuss the matter in detail, but we may at least quote strophes 10–11:** 'They who ruled over a thousand, and were themselves ten hundred, the Vaitahavyas, when they devoured the cow of the Brāhmaṇa, perished (11). The cow herself, when slaughtered, came down upon the Vaitahavyas, who had roasted for themselves the last she-goat of Kesaraprābandhā.' If this interpretation be correct, then the *bhṛigum* of v. 19. 1 should be regarded as meaning the Bhṛigu-family, while Kesaraprābandhā (v. 18. 11) might perhaps be identified as the wife of Jamadagni.††

As regards the etymological explanation of the word *bhṛigu*, we have already noted that Yāska (Nir. iii. 17) connects it with *bhṛijjati*, 'roast,' while according to *Mahābhārata*, xiii. 85. 105, it is derived from the onomatopœic *bhṛig*, the 'crackling' of fire. Macdonell ‡‡ suggests *bhrājati*, 'to shine.' Bergaigne §§ considers the Bhṛigu-myth of the Rigveda to be merely a more developed form of the tradition regarding the descent of fire, and identifies Bhṛigu with Agni. According to A. Kuhn ‖‖ and A. Barth,¶¶ the Bhṛigus are personifications of the lightning-flash. Kuhn (*op. cit.*[1] 13 ff., [2]14 ff.), on the assumption of the linguistic equation *bhṛigu* = φλέγυ, tried to harmonize the Greek myth regarding the descent of fire with that of the Veda. A. Weber *** had previously called attention to the affinity of *bhṛigu* and φλέγυ, and propounded the theory that the tradition (*Satapatha*, xi. 6. 1) outlined above is a relic of primitive Indo-Germanic mythology. 'The name Bhṛgu,' he says (p. 242), 'corresponds to a nicety with the Greek φλέγυ in the name of Φλεγύας and of the Φλεγύαι, who on account of their arrogance were condemned to the harsh penalties of hell, while in this story Bhṛigu for arrogance is sent there to be a looker on.' But Weber must nevertheless admit that relevant passages of the Rigveda will not fit in with the idea of a punishment of the wicked in hell; and, in fact, any one who with unbiased mind compares the entire group of Greek and Roman myths about Phlegyas and the Phlegyæ * with the Indian group connected with Bhṛigu and the Bhṛigus, will be of one mind with the present writer in holding that in these we have two entirely different cycles of myths, and that accordingly the phonetic parallelism between *bhṛigu* and φλέγυ † is a mere coincidence.‡

BHUIYĀ, BHUINYĀ

BHUIYĀ, BHUINYĀ ('men of the land,' 'autochthones,' Skr. *bhūmi*, 'the land').—A Dravidian caste found in the western districts of Bengal and in the Mirzapur district of the United Provinces. The term is naturally of rather vague significance. In the Census of 1901 the name includes people from all parts of the Empire. Under the names of Bhuinyā, Bhuinyār, Bhuiyā, Bhumiā, 789,078 persons are recorded, of whom the vast majority are found in Bengal.

1. *Religion in Bengal*.—Dalton, describing them in the Tributary State of Bonai, states that they have their own priests called Deorī and sacred groves known as Deotā Sarā, dedicated to four deities, Dāsum Pāt, Bāmonī Pāt, Koisar Pāt, and Borām. The first three are brethren, but there is some difference of opinion whether Bāmonī is a male or a female deity. This illustrates the vagueness of their conception of her. Borām is the sun,—a title also found among the Orāons (*q.v.*),—and he is also worshipped under the name Dharm Deotā. There is no representation of him, but the other gods are to be found, each in a stone in the sacred grove. Borām, as the Creator, the first and greatest of their gods, is worshipped at the sowing season, with the offering of a white cock. In cases of sickness, goats are offered to Dāsum Pāt and to his brethren. On such occasions the goat is given by the owner of the house in which the sick person resides. At other times the victim is provided at the common cost of the people. The sacrifices are offered at the foot of a sacred tree in the grove; only men partake of the meat, and the Deorī receives the head.

The Bhuiyās of South Lohārdagā are more advanced in the direction of orthodox Hinduism, and the bloodthirsty tutelary goddess, Thakurāni Mātā, to whom less than forty years ago the Hill Bhuiyās of Keonjhar offered the head of the obnoxious minister of their chief, has now become the Hindu Durgā, to whom a Bhuiyā priest makes offerings of goats and sheep, the flesh of which is eaten by the worshippers. Besides this, their chief deity, they have a host of communal ghosts, like the evil spirits which beset the Muṇḍās (*q.v.*) and Orāons (*q.v.*). 'To appease these ghosts,' says Risley, 'by occasional offerings of fowls and rice, and thus to guarantee the community against the consequences of their ill-will, is the special function of the village Pahan, who levies small subscriptions for this sort of spiritual insurance. The tribal deities Rikhmun [probably Skr. Ṛishi-muni, "holy saint"] and Tulsī-bīr ["Tulsī, the hero"] belong to a different and less primitive type. Rikhmun is believed to be the original ancestor of the tribe; while Tulsī-bīr was a restless and valorous Bhuiyā, who made war upon the gods until they appeased his wrath by admitting him to divine honours. I venture the conjecture that both Rikhmun and Tulsī-bīr are merely transmuted totems.' It seems simpler to suppose that we have here cases of tribal ancestor- and hero-worship. And it is well to note that the names of these deities, which must have come from the Hindus, show that the cult

must have arisen, or at least have been re-named, under Hindu influence.

2. *Religion in the United Provinces.*—In the United Provinces the Bhuiyās have advanced further in the direction of Hinduism than their brethren in Bengal. Their chief deity is Kālī, who, as in the case of Ṭhakurānī Mātā, has probably succeeded some aboriginal goddess, such as the Paurī or Pahārī Devī of the Bhuiyās of Singhbhūm. Kālī's shrine is a rude thatched hut, in which a mound of earth raised upon a platform represents the shrine of the goddess. They also worship, by the agency of the *baigā* (wh. see), the *dih*, or village gods, and the Earth-goddess Dhartī Mātā, with a sacrifice of goats, young pigs, and fowls. Among their legendary heroes is Lahang Bīr, who is propitiated by the rite of fire-walking. The worshipper, possessed by the spirit of the hero, is said to sustain no injury by walking over burning coals or by rolling his body among thorns. An instance of tree-worship appears in the rite at the Anant-chaudas festival in the rainy season, when a dance round a branch of the Karama tree (*Anthocephalus cadamba*) is made the occasion for licence and rude debauchery. A man killed by a tiger becomes a dangerous ghost, and is worshipped at the *baghaut*, a shrine erected at the place of his death. The field-deity is Hariyārī Devī, 'the Mother-goddess of greenery,' and to her the *baigā* offers a sacrifice of fowls and an oblation of spirits at the end of the harvest season. They are careful to propitiate the dead by making offerings of food to them. This is done simply through fear lest the ghosts, if neglected, may come back and vex the living. It thus does not amount to ancestor-worship in the true sense of the term.

BHUTĀN.—Bhutān is a long, narrow mountainous country occupying the southern slopes of the Eastern Himālayas for a length of about 220 miles. Its breadth from the Tibetan border to the Indian plains averages about 90 miles. It is bounded on the north by Tibet, on the west by independent Sikkim and the Darjīling District of Bengal, on the south by the province of Eastern Bengal and Assam, and on the east by Tibet and the territory of semi-independent tribes.

This art. will sketch the life and ethics of the Bhutānese. For their religion see next article.

The origin of the people is uncertain. The most likely theory is that the country was originally inhabited by peoples from the South, and was conquered some centuries ago by invaders from Tibet, who drove from the mountains the old dwellers, except those who were made slaves by the conquerors. The present inhabitants bear unmistakable trace of close affinity in appearance with the Tibetans, and this is the more striking the farther north they live. Those who inhabit the more southern parts give evidence of intermingling with the darker peoples of the plains, and of the influence of more unhealthy regions. Comparatively few Bhutānese are to be found on the outer ranges abutting on the plains. These have of late years been largely occupied by Nepāli immigrants, whose habits and customs remain much the same as those of their land of origin (see NEPĀL). The country is sparsely populated. No certain information is available as to the population, though an estimate of 110,000—80,000 Bhutānese, 30,000 Nepālis (with a few hundred Lepchas from Sikkim)—is probably over rather than under the mark.

There is no written code of laws in Bhutān. The inhabitants say that they had such a code, but it got lost in the course of their frequent fightings. The poverty and lawlessness of the people are expressed by a Tibetan proverb: 'In Bhutān there are no handles to the pots, and no law in the land.' Might has been right. The Government officers are usually unsalaried, with the inevitable result of extortion and injustice. The country has been priest-ridden in the extreme by the Lāmas, who, it is asserted, give the worst of examples from the moral point of view. The population has declined. The unsettled political state of the country has accounted for this to some extent, but polyandry and other vicious customs have probably had greater influence. Polyandry is more prevalent in the northern parts, where the connexion with Tibet is closer. It is excused on the ground of poverty, and is probably on the decline. A woman who marries the eldest brother often becomes also the wife of the other brothers. Polygamy, too, is practised by some. Government officers sometimes keep wives in different parts of the country, but the practice is being prohibited by the rulers. The marriage tie is loosely held. Chastity has been at a discount, and the proportion of the people suffering from venereal diseases is appallingly large. Woman naturally holds a freer and more independent position than in India, and does more than her share of the work of the house and the field. As a whole, the men are indolent and addicted to strong drink. Physically they are robust and muscular. Their chief amusements are archery and quoits. In character they may be described as plucky, hot-tempered, truculent, avaricious, and unforgiving. While cruel to their enemies, they are kind and charitable towards their friends. The better classes are courteous in manner. Slavery or serfdom is prevalent, and on the Indian frontier is a village largely inhabited by escaped slaves. Punishment for crimes is severe. For continuance in theft the penalty is to lose the right hand and the left foot. Capital punishment is inflicted by drowning in a river. Religious exercises are well attended to. The people are superstitious and ignorant. Education has made little or no progress, and is unknown outside the monasteries. Personal cleanliness is sadly neglected. Judged by present-day Western standards, the Bhutānese are certainly not an attractive people.

There are many indications, however, that a better day is dawning in Bhutān. A few of the boys are showing a desire for Western education. The strong character and higher ideals of the present Mahārājā, and the notable change which has come over a few individuals who have been influenced by contact with European civilization, are hopeful signs. The recent unification of power in the hands of the Mahārājā bodes well for the political future of the land, and its consequent more settled state will beneficially affect its moral condition. The people are a sturdy stock, and once awakened out of their lethargy and exclusiveness, and delivered from the domination of the Lāmas and the evils of polyandry, there is every prospect of their becoming a strong, independent, and forceful race, and of the country entering upon a career of prosperity before unknown. During the late war with Tibet, the rulers eventually threw themselves enthusiastically on the British side, and they are more amenable than ever to the advice of the Political Agent.

J. A. GRAHAM.

BHUTĀN, BUDDHISM IN.—Bhutān, or more correctly 'Bhotān' (*i.e.* 'the end of Bhot [or Tibet'], the Sanskritic name by which this country is known to Europeans through the Bengalis of the British Indian province bordering it), is a large independent principality situated in the south-eastern Himālayas, wedged in between Tibet, Sikkim, and Assam. Its wild valleys are sparsely peopled by a semi-savage Mongoloid tribe which calls itself 'Duk-pa' (spelt *hBrug-pa*), a term which is also employed to denote the form of Lāmaism that is professed in

the country. The Duk-pa Buddhism, as found in Bhotān, where it appears to be the sole recognized form of religion therein prevalent, is of the primitive unreformed type of Lāmaism, and is very thickly overlaid by aboriginal animistic cults and the gross worship of malignant devils, so as to be scarcely recognizable as Buddhism at all, save for a few externals in the way of symbolism and a little deeply-embedded ethical teaching of Śākya, the Master.

Buddhism appears to have entered this country for the first time about 300 years ago, when in the beginning of the 17th cent. A.D. a Lāma from the adjoining border of Southern Tibet invaded Bhotān at the head of a band of Tibetan soldiers and forcibly occupied the country. This Lāma, named Z'ab-drung Nag-dbaṅ rnam-rgyal, established a hierarchy, somewhat on the model of that of the Grand Dalai Lāma of Lhāsa, and it still survives. Nominally, this Bhotānese Grand Lāma, or high priest, is literally a priest-king, who bears the Indian title of *Dharma Rājā*, or 'Religious King,' and combines in his hands both the spiritual and temporal rule, whilst his succession is arranged on the re-incarnation theory, by which, on his decease, his spirit is supposed to transmigrate into the body of a newly-born male child, who is to be searched for and identified by omens and supernatural portents. The regulation of the succession in this way is kept in the hands of the Lhāsa priests, who usually send a 're-incarnation' from Lhāsa or Central Tibet. During the minority of this re-incarnated priest a regent is appointed for the management of the temporal concerns, and is called *Deb-Rājā*, or 'Provincial Regent or Governor'; and he seems usually to be a secular chief. The pretentious and divine nature claimed by the Grand Lāma of Bhotān is evident in his full title as given on his seal: 'Chief of the Realm, Defender of the Faith, Equal to Sarasvatī [the Hindu goddess of learning] in learning, Chief of all the Buddhas, Head Expounder of the Commentaries, Caster out of Devils, Most Learned in the Holy Laws, God incarnate, Absolver of Sins, and Head of the Best of all Religions.'

Technically, the Duk-pa form of Lāmaism is an offshoot of the hermit section of Lāmas called *Kar-gyu-pa*, who follow the practice of the Tibetan saint Milaraspa in laying especial stress on residence in caves as a means of gaining magical powers; though otherwise the doctrines are generally similar to those of the old unreformed Lāmaism (*Nying-ma*). This Duk-pa sect arose on the rocky Tibetan hills which border upon Bhotān, and on its establishment in this latter country it adopted a fictitious so-called inspired 'revelation' alleged to have been unearthed by a Lāma named Saṅ-gyas-gliṅ, by means of which the priests were enabled to relax still further the Buddhist obligations, whilst admitting of the retention *en bloc* of the popular spirit-worship and witchcraft. Amongst the monks only a few profess to be celibate, but it is doubtful whether any even of these are really so. The distinctive hat is of a red colour, and that of the head Lāma bears as a badge a vertical cross formed by two thunderbolts, with reference to a legend of thunder-dragons (*Duk*) which is related in explanation of the etymology of the sectarian title 'Duk-pa.' The Bhotānese laity as well as the priests, unlike the Tibetans, shave their heads.

The monasteries and temples are of the general shape and appearance of those in Tibet, but roofed over with wide wooden eaves to shed off the excessive rain which falls in this climate. The largest monastery is at Tashi-cho', which is the residence of the Dharma Rājā and the capital of the country. It has been visited and described by Manning, Bogle, Turner, and others, and is said to have about 1000 monks, though other accounts place the number at 500. In British Bhotān there are small Duk-pa temples at Kalimpong and Pedong near Darjiling. The total number of Duk-pa priests cannot be stated with certainty, but has been estimated at about 5000, or about 1 to 10 of the population. Only about half reside in cloisters, the remainder being employed as State officials and traders. There are also a considerable number of hermits and a few nuns.

BIBLE.

[W. SANDAY.]

THE word 'Bible' has come to mean substantially a sacred book. Thus we might say that the Qur'ān is the Bible of Muhammadans. When we speak of '*the* Bible,' we mean the sacred book of Christians. But this is a derived sense. Our English word comes from the Greek through the Latin. The Greek original meant simply 'books' in the plural; τὰ βιβλία was a particular collection of books, or more strictly of rolls. In this sense the use of the word goes back to the prologue to Ecclesiasticus (*c.* 130 B.C.); cf. 1 Mac 12^{9}. When the Greek βιβλία was transliterated into Latin, it came to be treated as a singular and a feminine.

The earliest example of this use known to the writer is that given by Sir James Murray, *OED*, *s.v.*; it occurs in a library catalogue of the 9th cent. (Becker, *Catal. Biblioth. Antiq.* p. 42, cf. p. 172). Jerome used the term *bibliotheca* [*sacra*] (du Cange, *s.v.*)—an expressive designation of the 'divine library' compressed into a single volume; and this term occurs frequently in the catalogues of the 9th and 10th cents. (Becker, *op. cit.* pp. 4, 13, 16, 17, 24, 43, 59, 60, etc.). The word characteristic of Cassiodorus (*c.* 487–580) is *pandectes*; we remember that Justinian published his *Pandects* in 533, and Cassiodorus his *Institutes* about 544.

At the time when the books which we call the Bible were written, the usual form for a book to take was the roll. After the invention of writing, the material of books varied somewhat with time and place. The Babylonians wrote with a sharp point on clay. The Hebrew collection that we call the OT was written mainly, if not entirely, on skins. With the natural conservatism which obtains in matters of religion, the Jews to this day make use of leather and of the roll form for the sacred volume. The graphic scene (Jer 36) in which Jehoiakim cuts to pieces and burns the roll that had just been read to him will give an idea of the outward appearance. The Greek books that we call the NT were produced under a different and more advanced civilization, that of the Græco-Roman empire. By this time the material commonly used for books was papyrus (2 Jn^{12}); and it is probable that most of the books of NT were originally written on papyrus (though parchment is mentioned in 2 Ti 4^{13}). But alike in the case of OT and of NT the form adopted was that of the roll, with the text written in slender vertical columns. The volume was held in both hands, with one or two columns exposed to view at a time, and was rolled up with the left hand and unrolled with the right as it was read.

There was a conventional size for the roll, which determined roughly the length of a book. It was for this reason that the Twelve Minor Prophets were written on a single roll and counted as a single book. In the oldest Hebrew tradition, as given in the Talmud (*Bābā bathrā*, 14) and still observed in German and French MSS, the order of the Prophetical Books is that of length: Jer., Ezek., Is., Min. Proph., corresponding to each other as 24 : 21 : 19 : 17 (Budde). [In like manner in NT the usual order of the Pauline Epistles is roughly that of length.] From the custom of writing more than one shorter book on the same roll has arisen, quite innocently, the attribution of some writings that were originally without name to wrong authors, *e.g.* several anonymous compositions that now go under the name of Isaiah, a similar anonymous composition (or compositions) added to the prophecy of Zechariah, etc.

The Christian Bible then was a double collection of rolls. That is its external description, but only external. It is of more importance that both volumes consisted of *collections*, and that both

these collections were regarded as *sacred*. We shall have to follow the line of inquiry thus suggested for both OT and NT. And when we have done so, we shall have to consider how the Bible is regarded, or ought to be regarded, at the present day. In other words, the main treatment of our subject will naturally be historical, but the final summing up will be rather doctrinal; and the history should take such a form as to explain the doctrine.

It should be explained at the outset that in what follows the broad results of criticism, as at the present time widely accepted, are presupposed. That is to say, the usual literary analysis of the Hexateuch and the Historical Books, and so much of the criticism of the Prophets and other books as is common to the best writers, are taken for granted. It is also taken for granted that a line is practically drawn across the history by the promulgation of the Book of Deuteronomy in B.C. 621; those portions of the literature which assume the single authorized centre of worship and the fully developed hierarchical system of Priests and Levites being placed after that date, and those which do not make these assumptions being placed before it. These fundamental principles of criticism have now been before the world for so long, and they have been so closely and severely tested in the daily work of so many competent and able scholars, that at least in the opinion of the present writer they must be regarded as verified and established. The standard for most English students is substantially that of Driver, *Introd. to the Literature of the OT* (cited as *LOT*; from 1891).

The ablest presentation of the other (more completely conservative) side is Dr. Orr's *Problem of the OT* (from 1906). The present writer has much sympathy with Dr. Orr's view of the religious character and use of OT; indeed, it is part of the purpose of this art. to show that a view not essentially dissimilar emerges naturally from critical study on the lines of Dr. Driver and most at least of his English allies, though it is no doubt true that a different construction is put upon the facts by some in Great Britain and by a greater number on the Continent. It is also probably true that there is still room for considerable correction of critical theories in detail. But as a whole the writer finds it impossible to think that Dr. Orr's position is permanently tenable, or that the main lines of the construction opposed to his have been proved to be untenable. The principle underlying the present art. is that on its literary and historical side the Bible must be studied like any other book (*e.g.* like Livy, or like the mediæval chronicles, which supply a better parallel for some parts of the problem), but that it does not therefore follow that in other respects, and in particular as a religious revelation, the Bible is only on the same level with these. The object is to discover how far the analogies with other books and other religions extend, and what there is in the Bible that detaches itself from, and rises above, the broad phenomena of other religions.

In so wide and intricate a field it is inevitable that experiments should be constantly going on; and the recent incursions of the Assyriologists and students of Comparative Religion have been of this character. It cannot be said that either these experiments or others (like those of Prof. Eerdmans of Leyden) have really brought the question any nearer to the standpoint of Dr. Orr. It would be truer to say that recent years have seen a consolidation and general strengthening of the position criticized.

I. *History of OT.*

I. How the Books of OT came to be written. We begin by asking ourselves how, humanly speaking, did the books of OT come to be written? It is just on this side that we find the same kind of influences at work as in other ancient literature. There is a general agreement among scholars that the oldest pieces in OT, and those most nearly contemporary with the earlier events described, are the Songs.

(1) *Fragments of ancient Song.*—There is more analogy than we are apt to suppose between the beginnings of Israel and the beginnings of Greece. The literatures of both peoples began with poetry, and not with prose. Sometimes one sees the generalization broadly laid down that all national literatures began with poetry; and this is doubtless widely true; but it can hardly be proved of the oldest civilizations of all, those of Babylonia and Egypt. We are struck, however, by the resemblance between the bards of the *Odyssey*, Phemius and Demodocus, singing to the lyre in the halls of chieftains, and the fragments of primitive song preserved in the Bible. The difference is due simply to the different conditions and state of society. The scene is not the almost feudal banquet in the hall of the noble, but the tribal gathering round the well (Nu $21^{17.\ 18}$, Jg $5^{11.\ 16}$). And the character of the songs is just what we might expect; they are impassioned utterances of the natural man: laments for the dead (2 Sam 1^{19-27} $3^{33f.}$), exultation over the fallen foe (Gn 4^{23}, 1 Sam 21^{11}), denunciation of the enemy (Nu 21^{27-30} 23^{7}), or of the backward and faithless friend (Jg $5^{17.\ 23}$), and praises no less fervent of the helpful ally (Jg $5^{14.\ 15.\ 18}$) even though stained with treachery (*ib.* vv.$^{24-27}$). But, along with this, we note a very genuine and enthusiastic devotion to Jahweh as Israel's God: the wars of Israel are His wars (Nu 21^{14} 1 S 18^{17} 25^{28}); Israel cannot prosper without His blessing (Jg $5^{2.\ 3.\ 9.\ 11.\ 13}$). This implies quite definitely, though, of course, in general terms, the great covenant at Sinai (compare the reference in Jg $5^{4.\ 5}$). Some of the songs are quoted expressly from the Book of Jashar, *i.e.* 'of the Upright,' apparently a book in which were sung the deeds of the heroes or worthies of Israel, where the name at least suggests something of that moral standard which began to be enforced as Israel's side of the covenant, just as 'the righteous acts of the Lord' (Jg 5^{11}) were the acts of His covenanted succour.

(2) *Continuous history in Prose.*—The snatches of song to which reference has been made, scattered and fragmentary remains of a larger body, have come down to us embedded in later texts. The latest of the songs, however, must have been little earlier than the narrative in which they are found. By the time of David a prose style must have been fully developed by the side of the poetry. The comparatively settled conditions and rapidly advancing civilization of the reigns of David and Solomon soon gave the impulse to historical composition, of which we have a fine example in the story of David's court and family contained in 2 S 9–20, with which should go 1 K 1. 2. So admirable is this narrative, so fresh and living, so truthful in its general tenor,—recording events as they really happened, without undue preference either for one party or for another,—that more than one leading scholar (*e.g.* Budde after Duhm) has traced it to 'the archives of the house of Abiathar,' the priest who followed the fortunes of David from the time when he was fleeing before Saul, but was involved in the conspiracy of Adonijah, and compelled to retire in disgrace to his home at Anathoth (1 K 2^{26}).

As Thucydides in his exile set himself to write the history of the Peloponnesian War, so Abiathar may have used his retirement to describe the events in which he had borne an active part. Without laying too much stress on the person of Abiathar, his name may well be taken as a symbol of the conditions under which this earliest and best of all the specimens of Hebrew historical writing was composed. In 1 Samuel there are two distinct strains running side by side, and several times leading to duplicate versions of the same event. It is quite possible that the earlier strain may be a continuation backwards of the narrative of 2 S 9–20. It is also possible that in these nearly contemporary chronicles we are to see the beginning of the school which first took in hand to trace back the history of Israel to its origins, and in the pursuit of these carried its researches into the traditions of the race as far back as Creation itself. Such was the work of the so-called Jahwist (known by the symbol J). If both in this case and in other later cases scholars have recourse to what may seem the refinement of distinguishing successive hands as J^1 J^2 etc., all that is meant is that there is reason to suppose that the work was produced not so much by a single author as by a school, in which one writer took up the pen from

another, as the monks did in the *scriptoria* of the Middle Ages. These writers are usually anonymous, for the idea of literary property in such departments as history had not yet arisen; indeed, it never became established among the Hebrews as it did among the Greeks.

When once the example was set on so substantial a scale as by J, it is not surprising that it should have been followed. What J did in the Southern Kingdom, after an interval of time E did in the Northern. There, too, a school of historians seems to have taken root, who, like J, undertook to commit to writing the folklore current among the Northern tribes, especially Ephraim. This Northern school would seem to have been more directly under the influence of the prophets, who by this time had become powerful. We know that the prophets joined together in bands or companies, and it is not impossible that the writing of history may have been one of the forms of their activity (cf. Kautzsch, 'Rel. of Israel,' in *HDB*, vol. v. p. 656ᵇ). It is interesting to possess two lines of tradition so clearly and strongly marked as J and E. It would seem that after a period of separate existence, perhaps after the fall of Samaria in B.C. 722, when the spiritual leaders of the Northern Kingdom naturally took refuge with their brethren of the South, the two lines were definitely brought together in a combined narrative, JE.

(3) *The writing Prophets of the earlier period.*—So far we have had to do with literature that was not in its primary purpose moral or religious. The national traditions, as they were first committed to writing, seem to have told an unvarnished story. They reflect the national character, with its undisciplined passions and its traits of cunning deceit and fierce revenge. These features are prominent enough in the somewhat distant and idealized biographies of the patriarchs: they are still more prominent in the wild scenes of the Book of Judges; and they are prominent even in the life of Saul and the family history of David. Throughout all these periods we can see that the religion of Israel was as yet very imperfectly moralized; and it was by no means a pure monotheism. It began, like the religions of the nations around, with the cult of sacred stones and trees; it tolerated the use and worship of images ('teraphim,' Gn $31^{19. 30. 34}$, Jg 17^{5}, 1 S 19^{13}; 'ephod' [possibly], Jg 8^{27} 17^{5} 18^{14-20}; 'strange gods,' Gn 35^{4}, Jos $24^{2. 14. 23}$).

These things should not be thought of as idolatry. They did not begin to be idolatry until the revelation contained in the Second Commandment had been clearly given and clearly apprehended. Before that time they were rather helps to worship, enabling the primitive man to realize that he had an object of worship outside himself. It was not to be expected that he should take in all at once so vast an idea as that of a Maker of heaven and earth. He was obliged to use crutches or stepping-stones to higher things.

And yet it was not for nothing that the work of Moses lies in the background. Even the earlier documents show a consciousness that Israel had a special mission among the nations. It was in pursuance of this mission that Abraham had been called from the East, and that the fortunes of his descendants were subject to a Divine guiding, bringing good out of evil (Gn 50^{20}). We might say generally that this side of things comes out in proportion as the prophetical influence makes itself felt, and therefore especially in the later strata of the narrative. Sometimes this is to the detriment of the history as such: contrast, *e.g.*, the treatment of the origin of the monarchy in the earlier version (1 S 9^{1}–10^{16} $11^{1-11. 15}$ $13^{2-7a. 15b-18. 23}$, 14) and in the later (1 S 7. 8. 10^{17-24} 12. 15).

The literature so far, as we have said, shows indeed to some extent a religious influence and shaping, but not as yet a definite and predominant religious purpose. We come to this first in the works of the so-called 'writing Prophets.' Prophecy had been from the first an essentially religious institution, but in its earlier phases the forms that it assumed were crude and rudimentary (1 S 10^{5-13}). The action of Nathan in the reign of David is a clear advance upon this (2 S 7^{1-17} 12^{1-25}). These activities culminate in the energetic reforms of Elijah and Elisha. But by this time, as we have seen, the prophets had probably begun to put the hand to the pen in the form of history. The impulse to this may have come with the general advance of civilization; in the court of David and Solomon there were already secretaries and perhaps a 'chronicler' (2 S 8^{16}, 1 K 4^{3} RVm). But there seems to have been something more than this general tendency at the beginning of written prophecy. There was a higher form of prophecy and a lower. The professional prophets fell into a groove, and contented themselves with repeating the accepted maxims, which were religious in their origin but did not represent the deeper insight of religion. Such a lower truth was the doctrine that had grown up of an impending judgment, a 'day of the Lord,' upon the heathen. It arose out of the genuine, if self-regarding, attachment of Israel to its God, and the confident belief that He would one day avenge His people upon their enemies and oppressors. But it was a startling novelty when the prophet Amos announced that this judgment would be turned against Israel itself, just because it was the chosen people (Am 3^{2} $5^{18. 20}$ 6^{8} 7^{7-9} $8^{2. 3}$ 9^{1-4}). As this announcement was of the nature of protest, and ran counter to all the popular ideas, it was not unnatural that the prophet should wish to place it permanently on record, so that his words might be verified by the event. We know that they were so verified, and the same kind of motive seems to have been present with the other prophets of judgment and doom. These were the greatest of the prophets, and their scathing and searching addresses were the strongest of all the influences brought to bear in the building up of Israel as a people for God.

It does not, indeed, follow that prophecy could be only in one key, and critics have probably gone too far in eliminating the notes of hope and promise. An Isaiah, when the occasion came, could himself bind up the wounds which he had made. But it is characteristic of the prophets to resist the tendencies of the natural man, and to be always pointing the people upwards to higher things.

The Prophetical Books stand out as the most characteristic and the most truly inspired of the contributions which God made through Israel to the religious education of the world. Written, many of them as with the heart's blood, in danger and suffering (Amos, Jeremiah), or under the sting of bitterest personal experience (Hos 1–3, Ezk 24, and we may surely add Is 53), they were always above the highest level of their surroundings, and the truths brought out in them form a continuous revelation.

(4) *The history of Law as far as the Deuteronomic Reformation.*—The Hebrew tradition certainly was not wrong in ascribing the importance that it did to the work of Moses. We repeatedly find the lines of later development converging backward upon that work. Although the belief to which it gave expression may be more correctly described as Henotheism than as Monotheism—although, that

is, it denoted rather the concentration of Israel's devotion upon one God than the absolute assertion that there was no God but one—it nevertheless contained within itself the seeds of the later Monotheism. The Deuteronomic 'Hear, O Israel; the Lord our God is one Lord,' is only a step beyond what Moses must have taught, or what God taught Moses.

There is also every reason to believe that the Heb. tradition was right in connecting the work of Moses with a great historical crisis and deliverance, though the account both of this and of the religious crisis that followed appears to have come down to us with a certain amount of idealization. What we have is no contemporary record, and not even a record based to any extent upon writings now lost but once more nearly contemporary. Perhaps the only instance in which we can lay the finger on such an ancient authority is the Song of the Well in Nu $21^{17.18}$, with the other songs in the same chapter (vv.$^{14f. 27-30}$), for both Ex 15 and Nu 23. 24 are probably later. The Egyptian plagues and the story of the Exodus are idealized. So, too, is the description of the giving of the Law from Mount Sinai. In other words, from the point of view of strict historical fact the narrative of these events bears to the narrative of the revolt of Absalom the same kind of relation as (let us say) in Livy the narrative of the taking of Rome by the Gauls bears to the narrative of the Hannibalic Wars. In the one case folklore has been at work, in the other case not, or very sparingly. Just as there survived throughout the East the indistinct memory of a great destructive flood of the Euphrates or the Tigris, so also within a narrower circle there must have survived the memory of some portentous volcanic eruption, which the folklore of Israel came to associate with the greatest event in its religious history. Such association was very natural, because it was phenomena of this kind—thunder and lightning, storm and tempest, earthquake and volcano—that brought home to the Hebrew mind, as nothing else did, the presence and the power of God. So it came about that, when the more remote traditions of Israel were being collected in the earlier days of the monarchy, the story of the Wanderings in the Wilderness and the legislation of Sinai assumed their present form.

There is little doubt that a nomadic period, which may have been broken for a time by partial settlement in Egypt, preceded the permanent settlement of Israel in Canaan.* And we may well believe that Moses, taking advantage of the events of which we have spoken,—and indeed specially raised up and inspired by God for this purpose,—may have joined together the tribes in closer confederation, and cemented the bonds between them by a great and impressive religious foundation, which lived in the imagination of the people as the giving of a Law. If we seek to know more clearly the nature of this law-giving, we may find it described in Ex 18 (JE), where Jethro asks Moses:

'What is this thing that thou doest to the people? why sittest thou thyself alone, and all the people stand about thee from morning unto even? And Moses said unto his father-in-law, Because the people come unto me to inquire of God: when they have a matter, they come unto me; and I judge between a man and his neighbour, and I make them know the statutes of God, and his laws.

Or the description becomes still nearer (if we do not suppose too high a degree of organization) in the verses a little further on, where Jethro advises:

'Be thou for the people to God-ward, and bring thou the causes unto God: and thou shalt teach them the statutes and the laws, and shalt show them the way wherein they must walk, and the work that they must do. Moreover thou shalt provide out of all the people able men, such as fear God, men of truth, hating unjust gain; and place such over them, to be rulers of thousands, rulers of hundreds, rulers of fifties, and rulers of tens: and let them judge the people at all seasons: and it shall be, that every great matter they shall bring unto thee, but every small matter they shall judge themselves: so shall it be easier for thyself, and they shall bear the burden with thee.'

This description, though dating, as it would seem, from the time of the monarchy, preserves to a remarkable extent the true features of the method by which Moses wielded his authority. If we could reproduce the actual facts, it is probable that he made use of the ordinary tribal machinery of *shaikhs*, or 'elders'; but he himself must have held a more commanding position, and the decisions and laws that he gave were doubtless given as oracles from God.

In the light of what we now know about the much older Babylonian Code of Ḥammurabi, it would not be at all surprising if Moses committed some of his laws to writing. And these laws might well be the nucleus of those that have come down to us in the Pentateuch. Scholars seem to be agreed that the oldest collection that can be marked off as such is the so-called 'Book of the Covenant' (Ex 20^{22}-23^{33}). We may leave it to OT specialists to determine the succession of the different laws. The Pentateuch does not appear to have been complete until the time of Ezra.

For us it is more important to notice the landmark formed by the publication of the main body of the Book of Deuteronomy. This is perhaps the greatest of all the landmarks in the history of Israel; there is none in regard to which there seems to be a clearer division between that which falls on one side of the line and that which falls on the other. There is also a special interest in the Book of Deuteronomy, because its promulgation by king Josiah is a typical event in the process by which the OT acquired its binding authority. This event is thus described in a document that appears to be contemporary:

'And the king sent, and they gathered unto him all the elders of Judah and of Jerusalem. And the king went up to the house of the Lord, and all the men of Judah and all the inhabitants of Jerusalem with him, and the priests, and the prophets, and all the people, both small and great: and he read in their ears all the words of the book of the covenant which was found in the house of the Lord. And the king stood on the platform (RVm), and made a covenant before the Lord, to walk after the Lord, and to keep his commandments, and his testimonies, and his statutes, with all his heart, and all his soul, to confirm the words of this covenant that were written in this book: and all the people stood to the covenant' (2 K 23^{1-3}).

We have here a solemn religious act by which king and people alike—the king in the name, and with the full consent, of the people—accept the book read before them as expressing the Divine will, and take its precepts as binding upon themselves. This is the essential meaning that, as applied to a book, is contained in the epithet 'canonical,' which means 'authoritative,'* and authoritative because in its ultimate origin Divine.

We call this a 'landmark in the history,' but we do so only because the description is so full and explicit. It is not to be supposed that the idea was a new one, or that it was applied to Deut. for the first time. It is anticipated by the description in Ex 24^{3-8} (E) of the no less solemn acceptance of the 'book of the covenant' (Ex 20^{22}-23^{33}, or the nucleus of that section). But, indeed, both descriptions only represent the full acknowledgment by the whole community of that which was contained implicitly from the first in the manner in which we have seen that the legal decisions and statutes were given—as oracular responses from God. The laws given by Moses were not given in his own name but in the name of God, and they were accepted in the same sense by the people as

* This is one of the current views challenged by Prof. Eerdmans (*Exp*. 1908, pp. 118 ff., 193 ff., 345 ff.) and defended by Prof. G. A. Smith (*ib*. p. 254 ff.).

* Cf. esp. Zahn, *Grundriss d. Gesch. d. NT Kanons*², p. 10.

coming from God. In precisely the same way Hammurabi is represented as 'receiving his laws from the seated sun-god Šamaš, the judge of heaven and earth' (Johns, *Oldest Code*, p. ix). It is the common ancient conception, but at the same time a central conception to which all the habits of thought are adapted; and who shall say that it does not express substantial truth?

(5) *The later stages of History, Prophecy, and Law.*—We have seen how the earliest stages of Hebrew literature were an instinctive natural product, growing out of the national life, and receiving a permanent form by being committed to writing. Only the very earliest stages retained their original naïve simplicity. Even here (as in the Song of Deborah) the religious interest became more and more dominant. From the modern point of view, which expects that history shall be history written for its own sake and with no ulterior aims, the process is one of deterioration. More and more history comes to be written with a purpose; the prophetic ideal, the legislative ideal, the ideal of worship, get the upper hand. All three have a common root in the conception of communication with God by means of oracles; the statutes of the lawgiver and the priestly regulations for worship are equally invested with an oracular form; they are presented as having a Divine sanction behind them. So the religious interest becomes all-embracing and all-absorbing. Israel becomes the people of religion, and even its instinctive products, which might at first have been described as secular, acquire a definitely religious character.

At each new revision this character is impressed more deeply upon the historical writings. The same school which produced Deuteronomy—a coalition, as it would seem, of priest and prophet, a succession in which prophet wore the garb of priest or priest the garb of prophet—besides its great work in the sphere of law also turned its attention to history. It, too, made its own collection of older historical writings, and, as it did so, it took care to point the moral of the successive stages that the history of Israel had gone through, by hortatory or didactic paragraphs inserted at appropriate places. Thus the historian becomes a preacher, and his narrative is at the same time a sermon. It is from this point of view that we should learn to look at it and judge it. It is no longer in place to expect the disinterestedness of the secular annalist; we should look rather at the earnestness which aims at converting the people from the error of their ways and bringing them to serve the Lord.

Two more periods of literary activity complete the production of canonical history. (i.) The fifth century saw the gradual composition of the last main element in the Pentateuch (the Priests' Code, or P), and its incorporation with the already existing writings (J, E, JE, D) so as to form the Pentateuch as we now have it. It would seem that P was for the most part written in Babylonia, and that it was in fact the 'book of the law' which Ezra brought with him and promulgated in Jerusalem in the year B.C. 444. By the end of the century it had been worked up into our present Hexateuch. (ii.) Ezra and Nehemiah appear to have left behind them memoirs, which after a hundred years or rather more were embodied, along with a continuous and systematic review of the history so far as it related to Judah from David onwards, in our present books 1 and 2 Chron., Ezr., and Nehemiah.

This later historical writing is similar, though not quite identical, in its character. It has not the freshness and living human interest that marked the older narratives, nor yet the moral fervour of the Deuteronomic school. The dominant interest is now antiquarian, expressing itself in the form of lists, inventories, chronological summaries, and genealogies. In P there is a great mass of systematized law; and in Chron. there is a marked tendency to enlarge on details of worship. In both cases the style is, as a rule, dry, formal, and statistical; such warmth as there is in Chron. is thrown mainly into the liturgical descriptions and into such a view of the history as was natural from the standpoint of the priesthood.

In Prophecy, two great figures stand out, both belonging to the period of the Exile: Ezekiel (*c.* 592–570 B.C.), and the so-called 'Second Isaiah' (*c.* 546–536 B.C.), followed by a lingering train of lesser personalities (Hag., Zech., Obad., Mal., Joel, Jonah) and perhaps some fragments (Is 24–27, Zec 8–14) now bound up with larger works. Ezekiel is a significant and characteristic figure, who has a strong message to deliver, and marks with equal boldness the close of one age and the opening of another. Second Isaiah (Is 40–55) reaches perhaps the highest point of spiritual insight in the whole OT. Even the lesser names, although associated with some decline of literary force and originality, are yet all those of men who have some message from God both to their own and to future ages.

We have already spoken of the considerable codifying of law which belongs to this period. It must not be supposed that all the laws which are thus put on record represent actual existing usage. There is a tendency towards symmetry and system; the writers do not hesitate to set down not only what is, but what they think ought to be. A striking example of this may be seen in the ideal picture of the temple and its services in Ezk 40–48. But even in the Pentateuch there is not a little that was probably never actually put into practice.

The narrative of Neh 8–10 illustrates vividly the attitude of mind towards the Law which was by this time becoming common to both leaders and people. The proceedings which accompanied the promulgation of the Priests' Code were evidently modelled upon those with which we have seen that Josiah introduced and enforced the legislation of Deuteronomy. Only the ceremonies are yet more prolonged and yet more solemn, and the effect proved to be more lasting.

(6) *The Hagiographa*: (i.) *Psalms*, (ii.) *Wisdom Literature*, (iii.) *other Books.*—The central force in the history of Israel was the *prophetic spirit*, which we may take in a wide sense as attaining to permanent expression not only in the prophetic writings proper, but also in the laws and institutions which made up the concrete framework of the national life. The prophetic writings embodied great principles both of belief and practice, a high conception—gradually becoming still higher and purer—of the being and character of God, and a growing stringency and elevation in the sense of His moral and spiritual demands upon man. It was essentially the same spirit and the same principles which took effect in the work of the lawgivers, from Moses onwards. The special purpose for which Israel as a nation had been raised up was to serve as a standing example of these higher views of God and of moral duty which were the outcome of the spirit that we have called prophetic, but which was really common to prophets and lawgivers, and expressed itself in the two main branches of Hebrew literature, Prophecy and Law.

In these two branches what we may call the creative forces at work in the nation reached their fullest development; but the consequences were felt over a wider area; indeed the prophetic spirit

(if, for short, we may call it by that single name) gripped hold of the national life as a whole and made itself felt in outlying branches of the literature that did not so obviously receive their stimulus from above as Prophecy and Law. The Jews had a general name for these less central and creative writings—*Kĕthûbîm* or *Hagiographa*. These again fall into three classes: (i.) Psalms of David (so called), with the addition—outside the stricter Canon—of the Psalms of Solomon (so called); (ii.) the Wisdom literature, including Proverbs, Job, and Ecclesiastes, and—outside the narrower Jewish Canon—the Wisdom of Solomon (so called), and the Wisdom of Jesus the son of Sirach; and (iii.) certain other books, not all of the same description, and more limited in number in the Palestinian Canon than in that of Alexandria. The Jewish tradition does not exactly follow this classification by subject, but marks off the three greater poetical works: Psalms, Proverbs, Job, and the so-called 'Five Rolls'—Cant., Ruth, Lam., Eccl. (*Ḳoheleth*), Esther—which were read respectively at the five church festivals: Passover, Weeks, the fast of 9th Ab, Tabernacles, and Purim. With this division were reckoned three books of which we have in part already spoken, Dan., Chron., Ezra-Nehemiah. For our purpose it may be better to keep to the classification by subject.

(i.) *Psalms.*—Although the Psalms are not creative in the same sense as the Prophets and the Law—in other words, although they do not supply their own principles from within but rather derive them from without—they are hardly of less capital importance in the history of Religion; because they are typical and classical examples of a *genus* which is of the deepest significance in the sphere of the religious life. If Prophecy and Law embody those leading truths which (as of Divine implanting) may be described as the gift of God to man, the Psalms represent the response of man to God. They cover the whole field of devotion: praise and thanksgiving, and prayer—with the preparation for prayer in penitence and confession, the laying before God alike of the joys and difficulties and sorrows of life, whether on the larger scale of the nation or on the smaller scale of the individual.

There are not wanting analogies to the Heb. Psalms, especially in the religious literature of Babylonia; but by common consent the Heb. Psalms take the first place, and indeed many of them are not surpassed even by the ripest productions of Christianity. The Psalms supply the ideal and pattern on which the whole devotional response of man to God has modelled itself throughout every one of those branches of religion which trace back their origin to Israel. To say this is to claim for them—and to claim beyond possibility of dispute or question—an unique place in religious history. In the case of the Psalms it is perhaps not so much the substance that is a new creation as the form and mode of expression, the underlying attitude of the soul, when it approached the presence of its God.

From the beginnings of Heb. religious poetry, there are two distinct strains in which the poet speaks: he speaks in the name of the community or nation collectively, and he speaks for himself as an individual. We may take the Song of Deborah as a specimen of the first of these classes, and the Lament of David over Saul and Jonathan as a specimen of the second. In the earlier ages there can be little doubt that the former style preponderated. It was, of course, inevitable that an individual utterance should from time to time express individual emotion; even when he sang as spokesman for the community, the Heb. poet could not help expressing the collective emotion as it was reflected in his own breast. But this was a different thing from the habit of introspection which must have become much more common after the Exile, when the national existence was broken up and the doctrine of individual responsibility had been clearly and strongly asserted. We shall be safe in referring to a post-exilic date the more introspective portions of the Psalter.

But indeed it is probable that the main body of the Psalter belongs to this later date. There is probably truth in the description of the Psalter as 'the hymn-book of the Jewish Church,' and as belonging to the time when the self-consciousness of the Church was freer and stronger than that of the nation. At the same time it seems to us a mistake to lay down any hard and fast line, or to suppose that few or none of the Psalms go back to the time before the Exile. In particular, we should be inclined to treat as pre-exilic most of the Psalms which are addressed to, or speak of, the king. There may be a greater number of early Psalms than is sometimes supposed, under the disguise of later modifications and adaptations.

(ii.) *Wisdom Literature.*—The history of the so-called 'Wisdom Literature' of the Hebrews is closely parallel to that of the Psalter. The 'wise men' form a class by the side of the priests and prophets (Jer 18^{18}). Practically this class is found in all rising civilizations; there was a natural tendency to look up to those who by age and experience and native shrewdness showed themselves capable of giving good counsel. In the East particularly, this class is clearly marked; it is found in the neighbouring nations as well as in Israel. Edom appears to have had a high reputation in this respect (Jer 49^{7}, Ob ^{8}, cf. Job 2^{11}); and so, too, had Egypt and the 'children of the east' (1 K $4^{30f.}$). In Israel no one equalled King Solomon in fame (1 K 4^{29-34}). This fame led to collections of proverbs being attributed to him (Pr 1^{1} 10^{1} 25^{1}), just as collections of Psalms were attributed to David, though it does not follow that all parts of the collections really go back to this early date. The 'wisdom' of the Hebrews differed from the philosophy of the Greeks, though it held the same kind of place in the national life. With the Greeks, philosophy belonged to a higher stage of intellectual culture; in Israel, wisdom consisted mainly in sagacious maxims bearing upon the conduct of life, though sometimes it was conceived in a higher sense, and personified as a principle guiding the Almighty in His work of creation, and determining appointments of human society (Pr $3^{19f.}$ 8, Job 28).

We observe a gradual progress, in respect both of substance and of form. Proverbs, like poetry, were in the first instance a natural spontaneous product of the soil; it was only by degrees that they came to be artistically treated as a form of literature. As such they became more elaborate and more complex as time went on; they begin with short and pithy sayings, and only gradually expand into connected paragraphs, like the praises of Wisdom in Pr 1–9. In point of elaboration, as in profundity of treatment, the climax is reached in the Book of Job. In this we have the sustained and searching discussion of one of the deepest problems that exercised the Hebrew mind. It is a mark of later date as the themes become more and more religious. The personifications of Divine Wisdom are perhaps due to the influence of the *Diaspora*, and through it of Greek philosophy. It is in this direction especially that we see development in the Wisdom of Jesus the son of Sirach, and in the Alexandrian Book of Wisdom. Ecclesiastes is a Jewish product, also late, of a

frame of mind not much represented in Hebrew literature—the tendency to scepticism and pessimism, which is, however, kept within bounds by the ingrained religious habit of the nation. This book no doubt stands on the extreme verge of the OT Canon, and it was only after a struggle that it maintained its place there. But we may be glad that this type too should have received its consecration. For all men there are times when sorrow is better than laughter, and it is better to go to the house of mourning than to the house of feasting (Ec 7[2. 3]).

(iii.) *Other Books.*—We have now accounted for nearly all the books included in the Jewish Canon, but a few remain. Of these the most important is the Book of Daniel. This is a continuation of the older Prophecy, with a considerable change of form, which becomes what we now call 'apocalyptic.' It had had some precursors in the older prophetic books (especially Is 24–27 and Joel); but from the time of the Maccabees onwards the new type definitely took the place of the old. It was distinguished from this by throwing its pictures into the more distant future; it is persistently eschatological, supernatural, and, we might say, mythological—in the sense that it makes free use of imagery derived in part from ancient myths that are not confined to Israel.

The Book of Daniel was the first of a series which extended over nearly three centuries. It was the only book of its class which found its way into the Bible, until it received a companion in the Christian Apoc. of St. John. The apocalyptic literature arose in the first instance in a time of distress and trial, and the strongest impulse was given to it in such times. The Book of Daniel was written to cheer the suffering saints in the great persecution of Antiochus Epiphanes. The oldest apocalyptic portion of the Book of Enoch appears to have been produced about the same date. 4 Ezra and Apoc. of Baruch were called forth in like manner by the destruction of Jerusalem in A.D. 70. But it does not follow that every apocalyptic writing was a product of the same conditions. Dr. Charles has recently shown good reasons for assigning the Testaments of the Twelve Patriarchs, which are partly apocalyptic, to the comparatively calm and settled time of John Hyrcanus (B.C. 135–105).

Another special *genre*, which we find distributed among different sections of the Canon as the Jews divided it, was the instructive tale—instructive in different ways, and admitted into the Canon for different purposes. Such would be the very pleasing idyllic story of Ruth, the deeper religious message of Jonah (which won for that book a place among the Prophets), the patriotic legend of Esther. Lamentations is really a small collection of a special group of Psalms. The Song of Songs is in like manner a collection of the kind of lyrics that were specially in use at marriage festivities.

2. Formation of the OT Canon.—We have traced the growth of OT as a number of separate books composed along the lines of the different branches of Hebrew literature. We have tried—very roughly—to put the several books into their places in the history of this literature, and to indicate their general relations to similar phenomena among the neighbouring nations. We might call this the 'natural history' of the first part of the Bible. We have indeed, it may be hoped, left room to see that there may be in the origins of this series of books something more than a natural history. But we are as yet some way from having explained how the OT came to be received as a sacred volume. Between the point which we have reached and the further point which marks the completion of OT as a body of canonical writings there intervene two main stages: (i.) the collection of the books into a volume with certain definite subdivisions; and (ii.) the investing of this volume with certain attributes by virtue of which it was regarded as sacred. The first is an external process raising only, or at least primarily, questions of quantity or dimensions—the number of books to be included in the volume. The second process relates rather to quality—the growth of a fuller and more consciously realized conception of the attributes belonging to the volume.

For both purposes it may be well to take our start from a point which happens to stand out distinctly, neither at the beginning nor at the end, but in the middle of the process. This point is supplied by the Prologue of the Wisdom of Jesus the son of Sirach, commonly known as Ecclesiasticus. The Prologue is the work of the grandson of the original author of the book, which he translated into Greek about the year B.C. 130. The younger writer refers several times to the religious literature of his nation. He speaks of it always under three heads: 'whereas many and great things have been delivered unto us by the law and the prophets, and by the others that have followed in their steps'; 'my grandfather Jesus, having much given himself to the reading of the law, and the prophets, and the other books of our fathers'; 'not only these, but the law itself, and the prophecies, and the rest of the books.'

(1) *Contents of the OT Canon.*—The threefold division, as we have just seen, corresponds to a triple collection of books embraced within a larger unity. The three collections appear to have succeeded each other in order of time, and the order of time was also, from the Jews' point of view, that of relative importance.

The five books of the Law were brought together first, as it would seem, about B.C. 400, at the end of the period of active and concentrated study that we associate with the names of Ezra and Nehemiah. The final collection and codification of the legal material inherited from the more distant past or produced to give roundness and completeness were the first-fruits of the labours of the new class of scribes. The marking off of the legal books proper (Pentateuch) was an innovation. The older documents extended further than this, J supplying in addition parts of the Book of Joshua (Hexateuch), and E perhaps running on into Samuel. From the point of view of Ezra and Nehemiah the main object was political and religious re-organization, the re-establishment of the people under stable conditions; for them, history as such was subordinate. They had a high conception—the very highest—of the obligation of law, the origin of which they believed to be in the fullest sense Divine. This deep sense of the obligation of law comes out in the narrative of Neh 8–10. The five books of the Law thus became the nucleus of the Jewish Bible. Even the Prophets, when they came to be added, did not attain to the same absolute and unqualified authority. A writer like Philo (*ob.* after 40 A.D.) builds his whole system really on the Law, and treats the rest of the OT as a kind of appendix to it.

For the completion of the collection, or Canon, of the Prophets we go down about two centuries to *c.* 200 B.C. The number of the prophetical books, according to the Jews' reckoning, was eight. The Historical Books were counted with the Prophets, as having for the most part prophets for their authors. Among the Jews, 1 and 2 Sam. and 1 and 2 Kings were contained in single rolls and were not divided; so that there were four

'Former Prophets,' as they were called (Josh., Judges, Sam., Kings), and four 'Latter Prophets' (Is., Jer., Ezek., XII.), what are now known as the Twelve Minor Prophets being all contained in a single roll. The proof that the second division of the Canon was complete by B.C. 200 is supplied by the enumeration of 'the Twelve Prophets' in Sir 49^{10} (the original work of the son of Sirach dating from about B.C. 180). This marks the end of a period which begins with the interest shown by the prophets of the Exile in the works of their predecessors (Ezk 38^{17}, Is 44^{7} 46^{10} 48^{3}, Zec $1^{4f.}$ 7^{3-7}). The actual collection of the Prophetical Books was doubtless a further work of the scribes. It is to be noted that Jonah was included in the volume of the Twelve, though this book was not exactly a prophecy in the same sense as the others (it might seem to come rather under the head of the edifying tale); but the teaching of the book is thoroughly prophetic, a practical exemplification of Jer $18^{7.8}$.

When the grandson of the son of Sirach introduced his grandfather's work to his countrymen and others in Egypt, a third division of the Canon was in process of formation, but not as yet so closed as to be beyond receiving additions. We may infer this, partly from the vagueness of the title ('other books,' 'rest of the books'), partly from the fact that the Book of Daniel and certain Psalms composed in this period (for at least Pss. 44. 74. 79. 83 may probably be set down as Maccabæan) were admitted into it. It would appear that this division must have been closed, roughly speaking, about B.C. 100, as the Psalms of Solomon (composed B.C. 70–40) could no longer be included, but form a separate collection outside.

(2) *Palestinian and Alexandrian Canon.*—It was in the course of the 1st cent. B.C. that the process of adding books to the OT was checked and came to an end. Edifying books went on being composed in Palestine as well as among the *Diaspora*, but by degrees there grew up a reluctance to place them on the same footing with the older Scriptures. It can only have been quite gradually that this reluctance gained strength sufficient to lead to the drawing of a definite line that was no longer to be passed. We have seen how the little collection of Psalms composed about B.C. 70–40 was marked off from the Psalter of David and inscribed with the name of Solomon. This shows that the authorities—in other words, the Rabbinical schools, which were by this time in full swing—were giving attention to the matter and trying to lay down a definite rule. But in spite of their efforts they were not at once completely successful. We may see this from the freedom with which books afterwards set aside as apocryphal were still quoted in NT. The real conclusion of the OT belongs to the sixty years or so between the fall of Jerusalem and the rising under Bar Cochba (A.D. 132–135). It was part of the general settlement brought about by the commanding influence of the group of Rabbis headed by R. Aḳiba. The settlement in the case of the Canon was based upon existing usage, which was at last formally sanctioned and defined by the religious leaders of the nation. The work by which this was done was necessarily retrospective; it was a process of reflexion based on reasoning and issuing in a decision that had the force of a dogma. The reasoning comes out clearly for the first time in a well-known passage of Josephus (*c. Apion.* i. 8), where the prophetic inspiration is traced down to the time of Artaxerxes (B.C. 465–424; but Jos. appears to mean Ahasuerus or Xerxes; cf. Ryle, *Canon*, p. 161 n.); books written before this date were inspired, but not those written beyond it. There were differences of opinion as to the limit, and there was a good deal of faulty criticism abroad, the real date of many books being forgotten; but the principle of authority co-extensive with inspiration was definitely affirmed. In the same passage we have the first enumeration of the sacred books, which are equal in number with the (22) letters of the Hebrew alphabet. Here again we may see at work the speculations of the Rabbis. According to another reckoning which prevails in the Talmud, the number of the books was twenty-four, Ruth being separated from Judges, and Lam. from Jeremiah. According to yet another, there were twenty-seven in all, which were still equal to the Heb. alphabet, the five final letters being added for the double books. Such learned trifling was characteristic of the time; it was the way in which the Jewish mind sought to give expression to its idea of permanence and law inherent in the nature of things.

In the meantime the close connexion between Jerusalem and Alexandria, which had continued so long as Palestine remained a province of Egypt (to about B.C. 198), though it did not entirely cease, was loosened, and the Greek-speaking or Hellenistic Jews, whose greatest strength was in Egypt, went on a way of their own, not regulated by the schools of the Rabbis. In the copies of the Greek OT an arrangement of the books, differing somewhat from that of the Heb. and more according to subject, was adopted; and other edifying books were added more freely to the older collection. Thus arose the fuller Alexandrian Canon, which was taken over in the main by the Christian Church when it broke with Judaism.

An additional proof that, even when the list of books was provisionally formed, it was not so fixed as it afterwards became, is supplied by the state of the text. In the older books, Sam., Kings, Jer., Job, a comparison of the LXX with the Heb. shows many marked variations; and in some that belong to the later stratum, such as Dan., Esther, Ezra, Tobit, the differences are so great as to amount to another form of the book. This condition of things, without invoking deeper considerations, would be enough to prove that the idea of the Canon was still fluid. And it is in full agreement with these phenomena that the final determination of the Canon at the beginning of the 2nd cent. A.D. appears to have gone along with an authoritative revision of the text. It has been demonstrated, especially by Lagarde, that all existing copies of the so-called Massoretic Text are traceable to a single copy of the time of Hadrian, of which not only the trivial peculiarities but even the blunders are faithfully reproduced. And a late story current in Arabic expressly stated that the extant MSS were all copied from a single original that was rescued from Bitther, where R. Aḳiba met his death.

(3) *The idea of the Canon.*—Thus it appears that the full conception of the OT Canon as a strictly circumscribed collection of sacred books was the ultimate result of a process spread over a long period. The strict circumscription was in the first instance peculiar to the Jews, from whom it was taken over (though in a qualified sense) by St. Jerome, and it was revived by the divines of the Reformed Church in the sixteenth century.

How far does this sharp division correspond to the real facts of the case? What substantial grounds are there for setting apart the Canonical Books of OT as in a special sense the Word of God? Our next step must be to try to indicate these grounds and to show how what was at first an instinctive deference came by degrees to be a reasoned belief and an accepted doctrine.

(*a*) *Ground of the idea.*—When we speak of the Bible as the Word of God, we are using language that arose in prophetic circles and was at first used to describe the prophetic message. The prophet was regarded as God's spokesman, one who communicated to his fellows a message put into his mouth by God, shaped in his mind by direct Divine influence, and accepted by those to whom it was delivered as expressing the Divine will. When the prophet spoke, he spoke as God's mouthpiece; his own personality dropped out of sight;

he prefaced what he had to say by the formula, 'Thus saith the Lord.'

This conception was wide-spread through antiquity. It lay behind the belief in the oracles, *e.g.* of Delphi or Dodona. But nowhere else was the belief so strong as it was in Israel. In the case of the classical nations we seem to be in the presence of something tentative and limited. There was the belief that a reply might be given to definite questions, and such replies were given, and for whole periods together (*e.g.* especially in the era of colonization in the 8th and 7th cents. B.C.) exercised a beneficent influence over the fortunes of the Hellenic race. But at other periods (*e.g.* the Persian Wars) the oracle took the wrong side, and its utterances were often halting, obscure, and ambiguous. There is a great interval between phenomena like these and the confident burning faith of the Heb. prophets and their unflinching enthusiasm in the cause of God and of morality. And although the interval is to some extent bridged over by the many steps and degrees between the lower and the higher forms of Heb. prophecy, it is only right to remember that the higher forms triumphed so completely that they entirely dominate the prophetic literature, and it is only through incidental allusions and the narrative of the historical books that the existence of the lower forms can be at all adequately realized.

The prophet was a man with a message from God; and at first this message was delivered by word of mouth, and it was only occasionally that it was preserved by tradition and so came to be embodied in writing (*e.g.* 2 S 12^{1-4}, 1 K 11^{29-39}). But a time came when (as we have seen) the prophet himself began to write down his own prophecies; and it is in this way that the *corpus* of prophetic writings has survived and confronts us with permanent witness to their greatness. It is hardly necessary to add that the essential qualities of prophecy belonged to the spoken word, and the written word did but add to this the property of permanence. But in the history of religion that one addition was of first-rate importance. It fixed the supernatural or providential element in the history of a single race, and converted it into a possession of all humanity for all time.

It is natural to seize upon these phenomena of prophecy as the most typical and central of those which made of the OT a sacred book. But they are more typical and central in the impression which they make upon us than they were in the actual course of history. The prophetic writings have been preserved, and we can see in them the psychological process out of which they arose. The whole activity of the prophets is laid bare before us to a degree that hardly obtains for any other product of Israel's religion. The pre-prophetic period is also to a large extent pre-historic. Such knowledge as we have of it has come down to us through folklore, or imperfectly controlled oral tradition. In order to form a realistic conception of the earlier period, we have to eke out the historical data with inferences backwards from later but more contemporary descriptions. It is in this way that we have to reconstruct our conception of the work of Moses. But we can succeed in this sufficiently to verify the impression which the whole subsequent history of Israel forces upon us as to the epoch-making character of that work. We have already hinted (p. 564 f.) at the general conception that we are led to form of the work of Moses. We should perhaps think of it most adequately as a combination of the priestly and prophetic functions, or as a form of prophecy which was not only the continuation of a work already begun, but the foundation of a long line of subsequent development. In any case the figure of Moses must exceed those of even the greatest of the later prophets in magnitude. By this it is not meant that the sum-total of the Mosaic revelation, so far as it can be reconstructed, is richer in contents than later stages of the revelation built upon it. The very fact that it is earlier and foundation-laying would exclude this. But the laying of foundations must always as such possess a significance that can never belong to any part, even the finest part, of the superstructure.

The Heb. people were therefore essentially right in their estimate of Moses; and if, on the score of criticism, we are compelled to make considerable deductions from the direct historical value of the narrative of the Pentateuch as it has come down to us, there are none to be made from the proportions of the dim but grand figure which looms behind it, or from the work which God accomplished through this in many ways most colossal of His human ministers. It is therefore not without reason that the Law lies at the base of the Jewish Canon, and that all the rest is subordinate to it.

There is a sense in which it is really subordinate, and another sense in which it is not. We may understand this from the way in which OT is treated in NT. We can see from many allusions, both in the Gospels and in the Epistles, that the historical importance of Moses was abundantly recognized both by our Lord and by His Apostles. It is not explicitly discussed and defined, because there was no necessity for such discussion. It was simply taken for granted as the axiom of every pious Jew. But the time had come, after all those centuries, for a new advance in the religious education of the world. And therefore it was that a greater even than Moses gave a new law from the hillside behind Capernaum. And it is not surprising that in this new law there should be elements that have their roots in the Prophets and Psalms even more distinctly than in the Books of Moses. Isaiah is the 'evangelical prophet' in a sense in which such a name could not be given to Moses; and yet the Greater Prophet of the future was to be like Moses, and not like Isaiah.

It must be allowed that, as compared with these two great divisions, the Law and the Prophets, the rest of the OT stands in a subordinate and supplemental relation. But, here again, the very idea of 'supplement' should save us from undue depreciation. A structure that admits of being supplemented is incomplete without its supplement. What a gap would be left in OT if we were to strike out the Psalms! The sense of what that gap would mean may bring home to us the value of the Psalter in the scheme of Revelation. And, in like manner, although the loss of the Wisdom Books might not be so acutely felt, it is one that we should be very loath to incur. And even the Song of Songs brings in a touch of human nature, like the flowering of a lily or a rose, that could ill be spared.

These outlying books may be described as examples of 'applied religion.' Some are higher in the species, and some are lower; some are nearer the great generative centres, and some are more remote; some are simpler and more rudimentary, and others more advanced. But they are all alike symptoms or outlets of those eruptive spiritual forces which lay at the heart of Israel as a nation, and were at once the evidence and the expression of its special mission from God.

(*b*) *Extension of the idea.*—So far we have spoken of the actual course of the growth of the Hebrew literature and of the special qualities inherent in it. These qualities are not identical

with those implied in the doctrinal conception of the Canon, but they are the ultimate facts which led up to that conception. They belong to the process of growth which, like such processes generally, is apt to be unequal in its different parts. The doctrinal conception of the Canon implies a completed process, and takes the shape of reflexion upon an accomplished fact.

We have been trying to analyze those elements in the original Scriptures which caused them to be regarded as sacred books. But the idea of sacredness in itself is not in the first instance cut and dried; it is progressive, and admits of degrees. It is this, and we see that it is this, so long as we regard it as an attribute of the living product. But when once the process of living growth has ceased, when the mind turns back upon the finished and stationary result, and sums up its reflexions in logical form, the closer touch with fact is apt to be lost, and the propositions which take its place become dogmatic and artificial. From the time that there were religious writings in Israel at all, they were regarded as sacred; but there is a certain amount of interval and inference between this instinctive reverence and the formulated definition of sanctity which by the time of Christ had won its way to general acceptance, at least in those Pharisaic circles which held control of the future. The inferences seemed to lie very near at hand; they were easy and natural: a book is sacred; it is the Word of God; does it not follow that it must be also perfect, incapable of error, absolutely binding in all its parts, a finished whole from which nothing could be subtracted and to which nothing could be added? These consequences did not really follow, but we cannot be surprised that they should have seemed to do so.

It is just here that the difference between older and newer views of the Bible comes in. The older view was in effect identical with that formulated by the Rabbis in the first century of our era. The newer view is not traditional, but aims at being scientific; it aims at correcting the current conception by a renewed comparison with the original facts. And the main effect of this renewed comparison is to make us stand by the old ideas of sacredness and inspiration, but at the same time disengage them from inferences wrongly though naturally deduced from them. To say that the Bible is sacred, and that the Spirit of God breathed in the men who wrote it, is not the same thing as to say that it is infallible, especially on points remote from its purpose as revelation. The one set of attributes can be verified, the other cannot.

(c) *Canonical and Apocryphal.*—The technical term used by the Rabbis, where we say that a book 'is canonical,' is that it 'defiles the hands.' That is only another way of saying that it is sacred; the person using it must be ceremonially purified before he can come in contact with other things. Until he has done this he is 'under a tabu,' and the contact with a sacred thing compels him to undergo a ceremony of purification. Our word 'canonical' is less expressive; it only means that the book is 'on the list,' *i.e.* the authorized list of the sacred volumes. That, at least, was the earliest Greek use; in Latin the word acquired a more active sense of authority.

The correlative term to 'canonical' is 'apocryphal,' which means, properly, 'hidden, or withdrawn from public use.' But this idea of 'hidden books' is ambiguous, and might be used in opposite senses according to the purpose of the hiding. A book might be 'hidden' because its contents were esoteric, or beyond the understanding of the vulgar; or it might be hidden because its contents were harmful. We can see that the two senses might meet, inasmuch as what was harmful for one might be helpful to another. But we may say broadly that the two senses succeeded each other. A number of books were composed which by their authors and in certain circles were highly valued because of their mysterious contents, intended only for the select few. But in course of time and in other circles they fell out of favour and were suppressed or withdrawn, for the converse reason, because they were thought to be pernicious for the many. The standard of judgment was that of Judaism; and the writings in question were in the first instance more particularly the Jewish Apocalypses (like the Book of Enoch, 4 Ezra, Apoc. of Baruch). In the century before, and in the century after, the Christian era, many works of this kind were composed, and at first they exercised considerable attraction. It is a mistake to suppose that in principle and from the outset there was any direct opposition to them on the part of the Rabbinical authorities. But at the time when the Jewish Canon was being definitely formed, they began to go out of favour, and in the 2nd cent. A.D. Judaism more and more turned its back upon them. The most scholarly among the Christian writers (Origen and Jerome), whose opinions in the end carried the day, were in touch with Judaism; and so it came about that what the Jews rejected the Christian Church ended by also rejecting, at least in the circles that had the greatest influence with the Reformers. And the word 'apocryphal,' which began by being used in a good sense, came to be used first in a neutral, and then in a bad one; esoteric writings were first prized, then tolerated, then excluded; the name which marked them as esoteric came to mark them as excluded; and all the excluded works were lumped together under the same title.

In the early ages of the Church the exclusion was only relative, and confined to a few learned men. Meantime the great body of the Church went on using freely the wider Alexandrian Canon, which admitted practically everything that was found edifying. The two standards went on side by side, with a certain amount of influence from the stricter upon that which was more lax. At the Reformation itself different shades of opinion prevailed in different quarters. The Reformed Churches were the most thoroughgoing; the Anglicans and Lutherans took up the intermediate position of Jerome; the Church of Rome does not endorse this, but permits a guarded use of the term 'deutero-canonical'—an invention of Sixtus Senensis in 1566.

LITERATURE.—Among the most recent and instructive works on the subject of this article are: Budde, *Gesch. d. althebr. Litteratur*, with Appendix on the Apocrypha and Pseudepigrapha by Bertholet (Leipzig, 1908) [Budde's *Kanon d. AT* (1900) is more restricted in scope]; Gunkel, 'Die isr. Literatur' (in *Kultur d. Gegenwart*, Berlin and Leipzig, 1906); Cornill, *Einleit. in d. AT* (from 1891; 6th ed., 1908); Hölscher, *Kanonisch u. Apokryph* (Leipzig, 1905). The comprehensive work ed. by Kautzsch, with the help of other scholars, *Die Heilige Schrift d. AT* (1894; 2nd ed. begun in 1908), and his *Apokryphen u. Pseudepigraphen* (1900), are of much utility. In English, we have a standard work in Driver's *Introd. to the Literature of OT* (from 1891); for the formation of the Canon, Ryle, *Canon of the OT* (1892); and a translation (by B. W. Bacon) of Wildeboer, *Origin of the Canon of the OT* (1895). Excellent editions of the Apocalyptic writings have been supplied by Charles; and Swete's *Introd. to the OT in Greek* (1900) is full of exact information as to the relation of the Heb. and Gr. Bibles. The present writer's Bampton Lectures on *Inspiration* (from 1893) may perhaps still be referred to. The reader will also naturally consult the Bible Dictionaries and Commentaries upon particular books (in the International series, the Westminster series, the Century Bible, etc.).

II. *HISTORY OF NT.*

In two points the history of NT resembles that of OT. Both proceeded in the first instance, directly or indirectly, from 'pneumatic' or inspired men, and yet both were written without any idea of founding a sacred book. These characteristics they have in common. In a single

instance (Apoc. of St. John) the attitude of the writer of the NT work is very like that of an OT prophet or apocalyptist; and he describes his book by the old name as a 'prophecy.' But in other respects the conditions under which the NT arose were different and peculiar. And before going further we must try to explain them.

How the Books of NT came to be written.—(1) *The Epistles.*—(i.) *Of St. Paul.*—The Life of Christ had been lived and ended. The fundamental *events* of the Christian Religion were all past and over. The Christian Church was launched on its career; the late comer Paul had joined the original Apostles, and had begun his new and adventurous work of planting churches in Gentile as well as in Jewish lands. This work had been going on for some years. A whole journey, taken up with preaching and church-founding, is recorded in the Acts (13^{4}–14^{26}), but has not left behind it any literature that is now extant. Another journey had begun and was some way advanced—it would be about the year A.D. 51—when a letter was written, followed by a second, which are both in our possession (1 and 2 Thess.). These two Epistles are the first beginnings of NT. It is highly probable that other letters had been written by St. Paul before them; occasions for letters would be as plentiful on the first journey as on the second, and St. Paul was evidently in the habit of using these occasions in a perfectly easy and natural way. But really the wonder is, not that such letters should have perished, but that the two of which we have just spoken and so many others after them should have survived. That they have done so is a measure of the strength of the impression which the personality of St. Paul made upon his contemporaries. It must have been felt from a very early date in his career by those among whom he moved, that these letters of his were no ordinary compositions, but that they well deserved to be prized and treasured. As correspondence, they began in the way natural to correspondence: the Apostle received news of his converts after he had left them; or he bethought himself of something that he wished to say but had not said; or his converts wrote to him, asking for guidance in the new relations upon which they had entered. These were just common incidents of daily life, though daily life involved in higher issues than those which occupy the mass of mankind. And St. Paul himself was no common man. It was not for nothing that his previous career should have been so eventful; it was not for nothing that he had first persecuted the faith which he came to preach; it was not for nothing that he had undergone the shock of his conversion, and that after it he had spent a prolonged time in solitude and reflexion; it was not for nothing that at Damascus, Jerusalem, and Antioch he had been at close quarters and in active discussion with leading spirits of the Christian society, apostles and prophets and teachers who were full of the Holy Ghost. He himself in marked degree was full of the Holy Ghost and of power (1 Co 2^{4}), and the effect of this was felt not only in the crises of action and life, but in the quieter moments in which he took the pen in hand. The consequence was that, even when the occasions which led to his writings were, or might seem to be, comparatively trivial, he never treated trivial things in a trivial way. Behind all that St. Paul wrote there was a vast momentum of character and spiritual experience and insight; and all this momentum came into play as soon as he put pen to paper. Small questions were settled on large principles; and these principles were laid down with exceptional clearness and force. And behind St. Paul's writing there was always the whole man; not intellect alone, or character alone, or spiritual experience alone, but the three things blended and fused together in an unique personality.

And then it has to be remembered that, when we speak of spiritual experience in the case of St. Paul, we are not speaking merely of subjective psychological processes; we are speaking of real and mighty influences proceeding from the living God. This opens out to us another side of the life of the Primitive Church. It is of course only in a very relative sense that we speak of even St. Paul as 'unique.' He in no sense created the extraordinary enthusiasm which, we can see, animated his churches. We can be sure that he did not let them fall below the level that prevailed elsewhere; the Epistles make it clear to us that they in no way fell below this level. But the movement that we find at work in St. Paul's Churches did not originate with them. It originated on what we call the Day of Pentecost, *i.e.* in near proximity to, and under the immediate influence of, the Resurrection. The fires were kindled in the Mother Church at Jerusalem, and in the first great colonies at Antioch and Damascus, before they spread to the sphere of the missionary labours of St. Paul. It was a contagion, like the effect of leaven, that passed from one individual Christian to another. The life of the Churches was as far as possible removed from a dead and humdrum existence. A great wave of enthusiasm, which was something more than enthusiasm, swept through them all; or rather, not a single wave but a succession of waves, a succession so sustained that it seemed to be continuous. St. Paul himself did but share in this. He knew perfectly well that whatever endowment he himself possessed was not self-generated; it was not at all that he lashed himself up into a state of excitement which required extraordinary expression. It was a force outside him that seized upon him and would not let him go. As in the case of the old prophets, the call when it once came to him was irresistible; it was useless to fight against it; as he himself says, a necessity was laid upon him (1 Co 9^{16}). The necessity came from the Spirit of Christ. We cannot do better than study the Epistles of St. Paul if we wish to understand what the working of the Spirit of Christ was. It is true that this working took some forms that to us at the present day are apt to seem uncouth (1 Co 12. 14); they were attended by physical phenomena that are apt to seem abnormal. It was to be expected that a great movement affecting masses of men should affect them in ways corresponding to the ideas current at the time. Many modern writers speak as though this were the sum of the whole matter, and as though we from the lofty platform of the discipline of science could afford to look down upon these humble phenomena. Humble they may be in themselves, but they cannot be taken by themselves; they are so far from being the sum of the whole matter that they are only as it were the rippling upon the surface of the real movement. Look, again we may say, at St. Paul's Epistles. How much is there in them of the speaking with tongues, or even of the working of miracles, such as the healing of the sick? These things certainly are implied, but they are behind the scenes; and the Epistles of St. Paul have enough to occupy us that is not behind the scenes. He himself put these phenomena into their right place, though he did not under-value them. They were just a single, and very partial, expression of that mighty force which possessed his whole soul and being. If we look at the Epistles with insight and discrimination and with a sense of the true proportions of things, we shall have no difficulty

in seeing where this force really breaks out in the main stream of its volcanic working. There are certain Epistles that we instinctively call the 'Great Epistles'; we call them so because the inspiration of which we are speaking is so visibly and unmistakably strong in them. But to form an adequate estimate, we must not confine ourselves to just so much as we see; we must take the evidence which they supply as to that which we do not see. It is to some extent a matter of accident—of Divinely-guided accident perhaps, but of that which we are in the habit of calling accident—what kind of subject-matter the inspiration has to deal with; but the same moving force is at work in small things as well as great. For instance, it would be natural enough to say that there was less of inspiration in 1 Co 5–8. 12. 14. 16, or even in 9–11, than there is in chs. 1–4. 13. 15; but it is not exactly that there is less inspiration; it is the same inspiration at work all the time; but it is this same inspiration dealing with lower things.

It is convenient to use the old-fashioned word 'inspiration.' It may well be questioned whether there is any other that better expresses the facts. We mean by it the evidence of indwelling Deity in man. We no longer suppose that this indwelling Deity imparts infallibility to every chance utterance relating to external nature or man. Really, from the modern point of view, it is hardly infallibility of any sort for which we are looking. The Divine impulse and the human expression are so inextricably mixed together that we can rarely, if ever, arrive at that which could be called infallible in the strict sense. But, after all, the idea of infallibility is only a notion of the head; and these head-notions have come to be at a discount. So, although the search for infallibility is weaker than it was, we should by no means say the same of the search for the Divine. It is the presence of this that we look for in the Epistles of St. Paul, and that we find in such abundant measure. And even the modern man, when he has found it, goes on his way rejoicing, like one that findeth goodly pearls.

It may be objected that this view of inspiration is vague in comparison with the old idea. That is just its merit. The old idea was definite enough, but it did not correspond with the facts. The new idea leaves room for a width and depth of meaning that is not, all of it, expressible in language. We can see something of the working of inspiration, and we can see something of its results. In the case of St. Paul these appear in his singular wisdom in the management of men, in his strong and clear grasp of a new type of character, in his deep insight into the attributes and will of God and His providential dealings with mankind.

The letters of St. Paul, as we have seen, from an early date made a great impression on those to whom they were addressed; and this impression soon spread to enemies as well as friends (2 Co 10^{10}). This encouraged the Apostle to make a more extended use of the letter form as a vehicle for instruction. Some of his letters, like the Epp. to Romans and Ephesians, expand into regular treatises. They cover a large area of the wide field of Christian teaching. And yet they are still at bottom essentially letters (Deissmann, *Licht vom Osten*, pp. 165–167); in each case the Apostle has definite recipients before his mind. If this is less marked in the case of Eph. than elsewhere, the reason is that it was in the first instance a circular letter addressed to several Churches at once.

Of late years attention has been called (especially by Deissmann) to the fact that there existed in antiquity, and especially about the Christian era, two distinct types of letters: the ordinary letter, arising naturally out of given conditions and addressed to definite persons, and the 'epistle,' which was a more formal composition intended for a wider public, though for literary reasons couched in the form of an open letter. The consciousness of the existence of this species of composition may have had some slight influence upon St. Paul, and still more perhaps upon some other Christian leaders; but the weightier contents of some of the Epp. grew spontaneously out of the circumstances of the case, and were a natural development of his own work by an original and unconventional mind.

We have assumed above the genuineness of all the Epistles that bear the name of St. Paul. This is in accordance with the deliberate opinion of the present writer. At the same time, it would not be right to disguise the fact that the genuineness of some at least of the Epistles is questioned, and that it does in fact stand upon a different footing in some cases and in others. We may really mark off descending grades of clearness and certainty. Putting aside the extravagant views of certain Swiss and Dutch critics, who would reject the whole body of Pauline Epp., but whose doubts have met with no support from the best authorities, and may now be regarded as definitely silenced, there would be a first class of seven Epp. which may be set aside as practically certain (1 Thess., Rom., Gal., 1 and 2 Cor., Phil., Philem.). To these may safely be added 2 Thess. and Col., which are indeed questioned, but on very insufficient grounds. There is more reason, but still (as it seems to us) insufficient reason, for hesitation as to Eph.; and perhaps a little more again as to the three so-called Pastoral Epp., 1 and 2 Tim., Titus.

(ii.) *Other Epistles.*—The Epistles of St. Paul are the typical and primary example of the epistolary literature of NT. But a further group of writings of a similar character has come down to us: Ep. to Hebrews as an outlying member of the Pauline collection, not by St. Paul himself, but by a writer of a kindred spirit, a near ally or (less probably) a direct disciple; and besides this the seven so-called 'Catholic Epistles.' All these writings follow as it were in the wake of St. Paul. He gave the impulse which led to their composition, and to a considerable extent determined their form. It is possible enough that, even though St. Paul had never lived or had never written, the force of circumstances would have brought into being a *genus scribendi* corresponding more or less to our present Epistles; but the dominating personality of the Apostle of the Gentiles, and the reputation which his letters so quickly gained (2 Co 10^{10}), gave both a stimulus and a model for imitation. The Ep. to Hebrews is indeed a letter (13^{22-25}), but it partakes more of the character of another class of writing that we have not yet mentioned, the philosophical *diatribe* (Deissmann, *op. cit.* p. 171). This is rightly described as the first work of Christian literature in the technical sense. St. Paul was not naturally a writer, but a man of thought and action who was driven into writing; the author of Ep. to Hebrews was a practised stylist, we may believe with some literary experience behind him, who instinctively cast his ideas and exhortations into a rhetorical form. Something of the same kind, though with less highly developed rhetoric, attaches to the greater Catholic Epistles—1 Pet., 1 Jn., James. We may see this at once from the wide and vague address of the two that have addresses: 1 Pet. is destined for 'the elect who are sojourners of the Dispersion' in the more northerly provinces of Asia Minor; James 'to the twelve tribes which are of the Dispersion.' Perhaps in the first case a few copies may have been sent to some of the leading churches, but in the second case the address would amount to little more than a formula for publication; we may suppose that copies would be given to strangers who happened to be in the neighbourhood of the Apostle, and that would be all. 1 Jn. has no

epistolary matter or any indication that it is intended for a particular class of readers, beyond the use of the second pers. plur.; and so it comes nearer still to the *diatribe*. When this is said, it is not intended that the writer deliberately adopted the *diatribe* form, but only that the existence of this class of literature helped unconsciously to shape the expression of his ideas. 2 and 3 Jn. are genuine letters on a small scale. 2 Pet. and Jude are both rather artificial compositions, which appear to have taken shape at no great distance from each other.

1 Pet. is not only modelled in general outline upon the Pauline Epp., but it also borrows directly from some of these (*e.g.* Rom., Eph.) in parts of its substance; and James may be said to have been produced by echoes of the Pauline teaching. But it by no means follows that this amount of derivativeness prevents the Epp. from possessing a high spiritual value. James supplies a judicious corrective for exaggerations of Pauline doctrine, and its moral teaching is at once elevated, simple, and sincere. 1 Pet. deals with profounder problems in a profounder spirit, and is at the same time a good example of the principles on which the Church was administered by its leaders. We must reckon with the possibility that something of the form of this Epistle is due to Silvanus, whom the Apostle used as his amanuensis (cf. Milligan, *Thess.* p. 125 f.). 1 Jn. in like manner is a fit pendant to the Fourth Gospel, and comes with all the impressive weight of the personality of its author. The two smaller Epp., while they reflect definite local conditions, are also evidently the work of one accustomed to wield power, and accustomed to take thought for the spiritual welfare of those whom he governs.

Ep. to Heb. is anonymous: the question both as to its authorship and as to the community to which it was addressed is intricate and difficult to bring to a clear conclusion; there is no agreement, and hardly even a tendency to agreement, at the present time. Yet the attestation of the Ep. is very early (Clem. Rom.); and its value and interpretation are not much affected by the points in dispute. There is equally early proof of the existence of Ep. of James; and 1 Pet. and 1 Jn. are also very well attested. 2 and 3 Jn. really do not need attestation any more than Philem., and they go with 1 Jn. as Philem. goes with Col. 2 Pet. appears to belong to the group of pseudepigraphic writings that bear the name of St. Peter (along with Gosp., Apoc., and Preaching of Pet.). But that does not prevent it from having some good matter (esp. ch. 1 and 3^{8-18}). Beyond some impressiveness of common Christian background there is not much that is distinctive in Jude, and the circumstances of its origin must remain vague. There are no better candidates than the traditional authors for the ownership of 1 Pet., Ja., 1, 2, 3 Jn. The last group at least may be ascribed with confidence to the Ephesian Presbyter John, whether or not he is to be identified with the Apostle the son of Zebedee. There are, however, some few questions which arise as to 1 Pet. and Ja. which with our present knowledge we are not in a position to answer.

LITERATURE.—As to Hebrews, the main bifurcation of views is between Barnabas (Tert. and perhaps Roman tradition) as author and some limited congregation in Rome as address, and authorship mediately Pauline (through Lk. or Clement [Clem. Alex., Orig.]) and some community in Palestine. Apollos was a guess of Luther's. Novel and interesting suggestions have been made by Harnack, *ZNTW* (1900), and Ramsay, *Luke the Physician* (1908), p. 301 ff. The most thorough and satisfactory discussion of 1 and 2 Pet. is by F. H. Chase in Hastings' *DB* iii. 779; but for the possible share of Silvanus in the composition of the first Ep., see G. Milligan, *Thess.* (1908) p. 125 f.

(2) *The Gospels and Acts.*—We have seen in what an incidental and spontaneous manner the epistolary portion of NT arose and grew to considerable dimensions. The Gospels are a class of writings peculiar to Christianity. To understand them we must consider how they too arose. For the first years after the Lord's Resurrection there was no need or demand for writings of any kind. All this time the Church was living in the expectation of its Master's speedy return. It was an attitude of hope, looking upwards for the sign of the Son of Man in the heavens. Only by degrees did the intenser hope begin to subside. Meantime there can be little doubt that individual Christians, the disciples in Galilee and Jerusalem with the women and the relatives of the Lord, would compare notes with each other, with greater or less activity of intercourse according to the degree in which they were thrown together. But very few of the disciples will have had any sort of literary habits, and there would still be no idea of writing. If we go, not by any external chronology, but by the quality and character of what was written, we should probably not be wrong if we were to say that the first two chapters of St. Luke are the oldest evangelical fragment or document of NT. They are in any case the most archaic thing in the whole volume. In these chapters it might be said that Christianity was not yet out of its Jewish swaddling-clothes; the *Benedictus*, for example, is composed entirely from the standpoint of the Jewish expectation and not of the Christian fulfilment. But whoever first set them down in writing,—and this very archaic character compels us to believe that they were written,—they were in any case not at once published. They were written to satisfy the interest of a small and private circle; and they must for a number of years have been confined to that circle. Not until St. Luke came across them were they in the way towards anything like publication.

The first two chapters of St. Matthew's Gospel seem to have been in a similar position. They too appear to represent the tradition of a small circle, for a considerable time kept to itself. It is natural to think of this tradition as further removed from the facts than in the case of St. Luke. There are not the same guarantees of early date, and there is more reason to suspect the influence on the narrative of parallel situations in OT. At the same time we must not fail to notice the convergence of these two traditions, otherwise so independent, upon the Virgin Birth and the Birth at Bethlehem.

And yet these opening chapters of the two Gospels stand very much by themselves. They are altogether apart from the main stream of tradition current in the Churches. This was concerned, as we might naturally expect it to be concerned, with that part of our Lord's career which was lived directly under the public eye, and of which there were a number of living witnesses. Yet these witnesses, for reasons which have been explained, did not at first begin by setting down their recollections in writing. They doubtless made use of them in their own preaching, and they also handed them on to others who would utilize them in the same way. But the motive at work at first was not what we should call historical or biographical. It was exactly expressed by the peculiar word 'Gospel.' This was practically a coinage of the first Christians, sanctioned by, or even perhaps originating with, our Lord Himself, to express the message of hope and salvation addressed to a disheartened and despairing world. The ground of hope and salvation centred mainly in the Life and Death and Resurrection of Jesus Christ Himself. And therefore the earliest preaching was in its main contents a preaching of these things, in part a narration and description of them as facts, and in part an enlarging upon their profound significance in the spiritual sphere. This second aspect of 'the Gospel' is what meets us most frequently in the Epistles of St. Paul. But the other aspect is there implied if not expressed. We have specimens of it in important passages like 1 Co 11^{23-26} 15^{1-8}. Such narratives must have entered largely into the παραδόσεις of which we have repeated mention (1 Co $11^{2.23}$ 2 Th 2^{15} 3^{6}). But in its urgent expectation of the Second Coming the Church did not at first

lay great stress on these historical facts. It presupposed them always, and it was fully assured of them as facts; but it was so well assured of them that it did not find it necessary to be constantly reminding itself about them. Its treasure was, where its heart was, in the heavens; it was more intent upon the future than upon the past, even such a past.

The impulse to the setting forth of the historical side of the Gospel came through the work of missions. On this side it soon proved necessary to supplement the oral teaching of St. Paul and the other missionaries. Especially was this the case in the newly-founded Gentile communities. These, we must remember, had to be built up from the very first. They had a great many elementary lessons to learn. Even the Jews, with the OT in their hands, had much to learn. They had to take in and to assimilate all the new teaching by which Christianity was distinguished from Judaism. The earliest Evangelical document of which we have any trace (except perhaps Lk 1. 2)—the earliest Evangelical document that was in any strict sense a possession of the whole Church—was the little book, corresponding to the common matter of Mt., Lk. (see p. 576 below), which scholars are now in the habit of calling Q, and which used (as the present writer believes, rightly) to be identified with the Matthæan *Logia* mentioned by Papias (Eus. *HE* iii. 39). We describe this work as intended for the whole Church, because there was certainly no circumscribing line beyond which it was not intended to travel, though the writer probably had in his mind Palestine and the Nearer East, *i.e.* that part of the East that was nearer to himself. The leading purpose of this little book appears to have been to set before its readers (the new converts in the different Churches) some account of the Christian ideal, the character and mode of life expected of them as Christians. It was felt that this could be best done by collecting together a number of typical sayings and discourses—*i.e.* shorter and longer sayings—of Christ. There was no idea of writing a biography, and not even in this case of composing a 'Gospel' (or full statement of the redeeming acts of Christ), but only a brief exemplar to set before the eyes and minds of converts.

Valuable as this was, it was sure not to satisfy for long the needs of Christians. It contained only a small part of the Gospel, and what they wanted was the whole Gospel. As time went on, and the expectation of Christ's Second Coming became weaker, Christians were thrown back upon themselves. They felt that they had time to reflect, and they began to reflect, upon the grounds of the faith that was in them. They had had these grounds 'placarded before their eyes' (Gal 3^1) by a number of preachers, including the greatest. But they were, so to speak, 'written on water.' They made their impression, but they were soon forgotten, and there was no guarantee of their permanence. It was the consideration of this state of things which impelled the Christians at Rome who surrounded St. Peter in the last days before his death to apply to his secretary, St. Mark, to rescue from oblivion the substance of the teaching they had had from him. St. Mark complied with their request, taking this teaching of St. Peter's as the nucleus of his work, but expanding it from materials which came to his knowledge in other ways. So arose the first complete Gospel.

When once this Gospel was given to the world, nothing could be more natural than that it should supply a pattern for others. It met (as we say) 'a felt want'; and from that time onwards St. Mark's Gospel was taken as at once a pattern and a basis of similar compositions. The Gospel that we know as St. Matthew's was just a combination of the substance of St. Mark's Gospel with Q and not a large amount of other material added by the editor. The portion derived from Q was so important—extending probably some way beyond the common matter of Mt. and Lk.—that it soon came quite to supersede the separate circulation of Q; the smaller work died out, and the larger took over its name; it passed as the work of St. Matthew (*a potiori parte*), though the framework of it was derived from St. Mark. In like manner, our present Gospel of St. Luke is also a combination of St. Mark with Q, but with a larger proportion of added matter from some further source, or sources, to which St. Luke alone had access, and to which he seems to have attached a special value.

The Second Gospel, which was the first of the three in order of time, was a sketch that we may call biographical (though it did not aim, and could not have aimed, because of the scantiness of the material, at the completeness of a modern biography). Still it took a narrative form; and its leading motive was reverence for the historical Person of Christ, and the desire to promote a like feeling of reverence and faith in others. Like St. Mark's Gospel, St. Matthew's (with the qualification mentioned above) was addressed to the Church at large. St. Luke's, on the other hand, was written at least in the first instance for the use of a particular individual, who appears to have stood to the writer in what we should call the relation of a 'patron' (Lk $1^{3f.}$). The success of this first volume, in the accomplishment of its purpose, encouraged the Evangelist to add to it another, which lies before us under the title of 'The Acts of the Apostles.' It is still addressed to the same Theophilus, and is written on the same historical lines as the Gospel. The Acts, however, can hardly have been included in the writer's original plan; because its opening paragraph differs so considerably from the conclusion of the Gospel (contrast, *e.g.*, Ac 1^3 with Lk 24^{50}) that it seems safe to infer that the second volume was of the nature of an afterthought. Whether, by the time that he came to the end of this second volume, the author had conceived the idea of producing a complete 'trilogy' is perhaps slightly suggested by the way in which the volume closes, but must remain an open question.

The Fourth Gospel is generally held to stand rather by itself. It is without doubt the latest of the Gospels, and is written with a knowledge of the other three. At the same time it is not, like the First and Third, a compilation from materials already existing. On the view taken in this article, it is a retrospect by a writer of commanding position and authority, presupposing what has been already done, but adding to it from the stores of his own experience and reflexion. In some points—none of a fundamental character—it corrects the work of predecessors; on other points it supplements their statements; but, most of all, it reinforces and deepens the impression which they had left on the most central topic of Christian teaching. It is a mistake to suppose that the Fourth Gospel is essentially different in character and purpose from the other three. When St. Mark heads his work, 'The beginning of the gospel of Jesus Christ, the Son of God,' he is virtually saying the same thing as when St. John says, 'These things (or signs) are written that ye may believe that Jesus is the Christ, the Son of God; and that believing ye may have life in his name' (Jn 20^{31}). This declaration of his purpose by St. John is only an emphatic expansion of the claim that his work too is a 'Gospel,' *i.e.* a message and assurance from above of life and salvation through Jesus Christ. It is not a mere biography, like the

ordinary secular biographies; it does not aim at any completeness as a record of events or teaching. More than any of his fellows, the Fourth Evangelist concentrates himself upon the proof that Jesus Christ was all that Christians supposed Him to be. Incidentally he sets right some few things that had been 'forgotten or misdelivered'; he fills up some gaps, like the great gap which omitted all or nearly all that had been done in Judæa. But the great thing that the Fourth Evangelist did and aimed at doing was to re-affirm, with the consciousness of first-hand knowledge and conviction, the faith of the Church in its Lord and Master.

In asserting thus much of the Fourth Gospel, we do not assert that its author was raised above all possibilities of human error; we do not even assert that this very concentration of aim may not have had some prejudicial effect upon his narrative, considered simply as a narrative. What we do contend for is that the conviction to which he gives expression is the honest and first-hand conviction of one who had unique opportunities of basing his belief on fact.

The views implied above as to the origin and character of the first three or 'Synoptic' Gospels are substantially those which are held at the present time by a majority of scholars. It is very generally agreed that our present First and Third Gospels rest upon previously existing documents. One of these documents is neither more nor less than our present Gospel of St. Mark. A second may be approximately reconstructed from the common matter of St. Matthew and St. Luke which is not found in St. Mark, with the addition perhaps of some portions of St. Matthew to which there are no parallels in St. Luke, the latter writer having been compelled by lack of space to omit them. It is conceivable, though less probable, that there may be a few sections peculiar to St. Luke which also originally belonged to this document. But, in our opinion, this peculiar matter is better referred to some special source or sources to which St. Luke alone had access. The present writer fully believes that the two important extracts from the work of Papias preserved by Eusebius relate, the one to our extant Gospel of St. Mark, and the other to the second document disclosed by criticism which in the extract is referred to the Apostle St. Matthew. He believes that the authority quoted for these statements is none other than the writer of the Fourth Gospel, the John who played such a leading part at Ephesus towards the end of the 1st century A.D. He would observe that the statements made bear a great stamp of verisimilitude, just because they are so little obvious and not at all such as could be inferred from a superficial study of the Gospels. The statement about St. Mark in particular points to criticisms upon that Gospel (especially as to its want of completeness and chronological order) that we can understand being made at an early stage in the history of the Gospel, and by no means so well later. It is interesting to note the calm matter-of-fact way in which the Fourth Evangelist (if it were really he) speaks of his predecessors' work; and we believe that it throws a welcome light upon the composition of his own Gospel. The tradition, for which we are ultimately indebted to Clement of Alexandria (Eus. *HE* vi. 14), that the Fourth Evangelist, while he was satisfied with the treatment of the more external facts in the other Gospels, himself sat down to compose a 'spiritual gospel,' seems to us to describe the real course of things better than any of the conjectures of modern scholars. It is to us rather an open question whether John of Ephesus is to be identified with John the son of Zebedee, though we lean to the probability that he was. In any case we have little doubt that he had been a personal disciple and follower of our Lord, though a youthful one.

(3) *The Apocalypse of St. John and other Writings.*—Only one more work remains to be considered of those included in our present Canon. This is the Apocalypse of St. John, which holds a similar place in NT to that which the Book of Daniel holds in OT. We have already pointed out that the author throughout describes his own book as 'a prophecy,' in the same sense in which that word is used in OT. It corresponds, however, rather to the later type of prophecy as it is seen in the apocalypses, than to that of the older prophets. The writer is not less certain than any of the older prophets that what he writes was put into his mind by God. We shall try to estimate the significance of this later; but in the meantime it should be noted that, in spite of this confident claim, it was not until the fourth century that this book definitely secured its place in the Canon.

The formation of the Canon, and discrimination of the books which were, or were not, to be included in it belong rather to the next article It will be seen there how, first, the Epistles of St. Paul, and then the Gospels, came to be collected; how they were then read for edification in the churches, and how by degrees they acquired a character for sanctity which ended by placing them upon the same footing with OT. There was not at first a clear dividing line at which the books belonging to the NT were complete, and beyond which no others could be admitted. The fixing of any such line was a retrospective act of the Church, reflecting upon the books which lay before it. And the process by which it did this was spread over a long time, and was hardly matured until the end of the 4th century—if it can even then be said to have been matured, when the process by which the ultimate decision was arrived at was rather one of ripening instinct and the natural gravitation of events than anything like the application of exhaustive criticism.

A sharp line does not separate the writers who fall just within the Canon from those who fall just outside it. As the writer of Wisdom and the son of Sirach, while they draw a distinction between their own writings and the older Scriptures, yet appear to claim for themselves a lower degree of inspiration (see the writer's *Bampton Lectures*, pp. 259–262), so also can we trace in Clement of Rome and Ignatius something at once of the same kind of distinction and the same kind of claim. And just as we found the MSS of the LXX adding freely to the Canonical Books whatever seemed to them to make for edification, so also do the oldest MSS of NT add works that properly belong to the sub-Apostolic age to those which are products of the Apostolic. And yet, as we have seen the consciousness grow up that the prophetic inspiration gradually exhausted itself, so also we observe a tendency to locate the higher activity of the Holy Spirit within a definite period, which is more and more identified with that of the Apostles. And the very claim on the part of the Montanists to possess within their own body a continued operation of the old gifts only led, by way of reaction, to a stronger delimitation of the privileged area and a clearer rejection of all that fell outside it. It took something like a century of gradual but imperceptible development to harden the conception of the NT Canon; and then it took about two centuries more to determine finally the number of books that were to be included in it.

III. *THE PERMANENT SIGNIFICANCE OF THE CANON OF OT AND NT.*

By the end of the 4th cent., broadly speaking, the Christian Church was in possession of a complete Bible. Even then we must not speak too absolutely, because the Syriac Canon was not yet quite made up. For an œcumenical sanction of the existing list we must wait for the Quinisextine Council of A.D. 692. But for by far the greater part of Christendom the formation of the Canon was practically finished by about A.D. 400. From that time until the present generation the traditional conception of the Canon has been in possession of the field. It is only as part of the movement that is now commonly called Modernism that it has been seriously called in question. We shall give a typical example of the way in which it is now being challenged.

1. **The Modernist challenge.**—An able member of the advanced school, now deceased, in a pamphlet on the *Work and Method of so-called New Testament Theology*, cut at the root of the current conception in the following uncompromising terms:—

'If the New Testament writings arose in the course of a particular history and are the witnesses and documents of that history, then the question at once presents itself to us: Why should our science (*i.e.* the science of NT Theology) deal

precisely with these writings and only with these? The answer is: because they alone belong to the Canon. But that answer is not satisfactory. When once we strike out the doctrine of inspiration, the dogmatic conception of the Canon can no longer be maintained.

No New Testament writing was born with the predicate "canonical." The proposition "A writing is canonical" only means in the first instance that *after the fact* it was *declared* to be by the leading authorities of the Church between the second and fourth centuries—perhaps after all kinds of vacillation in their decision. On this subject the history of the Canon is sufficiently instructive.

Whoever then still regards the conception of the Canon as valid thereby submits to the authority of the bishops and theologians of those centuries. Whoever does not acknowledge that authority in other matters—and no evangelical theologian does acknowledge it—is only acting logically when he also calls it in question here.'

It is fair to the writer to add a slight concession which he goes on to make:

'No one is therefore called upon to deny that the ancient Church, in its New Testament, brought together *on the whole* that which was from a religious point of view the most valuable, and *on the whole* that which was also the oldest and therefore in a documentary sense the most important not only of the literature that is known to us, but of all that was in circulation at the time, and that it formed a collection that is deserving of all praise. But this verdict includes the admission that the boundary lines between the canonical and the nearest extra-canonical literature are at all points altogether fluctuating.'

In order to follow up the consequences drawn from these premisses, it is worth while to quote one more paragraph:

'If, then, we are not to embrace the New Testament writings under the point of view of "an experience after the fact," which has nothing to do with their original character, they must not be considered as canonical, but only as writings that appertain to primitive Christianity. . . . The boundary line for the subject-matter of our science should be drawn at the point where a real break begins to appear in the literature. The standard for this is naturally not to be sought in religious value.'*

This is trenchant and clear enough in all conscience. The writer is certainly right in basing his argument upon the abandonment of the idea of Inspiration. If that idea is thrown over, the consequences as he states them really follow. But ought we to throw over that idea?

Here again it is fair to observe that, when the writer speaks of 'striking out the idea of inspiration,' he probably means the full dogmatic conception of verbal inerrancy as it was asserted or reasserted in the 16th century. But we have already tried to show (p. 571[a]) that this was from the first an extension, and an undue extension, of the original idea. The Christian is not called upon to go beyond this idea; and, by adhering to it, he keeps within the range of what is strictly verifiable.

2. **The reply.**—It is true that no book either of the New Testament or of the Old 'was born with the predicate "canonical."' But we are prepared to maintain that all the books both of OT and NT, though no doubt with very considerable differences of degree, were born with the qualities which caused them to be labelled 'canonical'; in other words, with the marks that are summed up under the name of Inspiration. In sketching the history of the two Testaments, we have tried to indicate what those marks are. We have tried to show how at each point in the history there was a certain character impressed upon the literature which in due course came to be recognized as justifying its inclusion within the conception of a Sacred Book. It may be well for us to go back upon this character, and to consider it no longer—or, no longer primarily—in connexion with its place in the history, but with reference to its permanent validity among the body of Christian ideas and Christian doctrines.

(1) *The human aspect of Inspiration.*—If we were to try to sum up in a single word the common property which runs through the whole Bible, and which, broadly speaking, may be said to distinguish it from other literature of the kind, we might say that it consists in the peculiar energy and intensity of the *God-consciousness* apparent in the writers. A general term like this will perhaps best embrace the different modes and degrees in which this consciousness manifests itself. It is true that in some of the books there is such a shading-away of degree that it may be questioned whether those particular books are rightly included in the Canon, just as there are so many analogous phenomena in some books outside the Canon as to raise a doubt whether they are rightly excluded from it. It cannot be claimed that the judgment of the Jewish and Christian Churches is infallible. All we can say is that it is sufficiently near for practical purposes. On the whole, posterity has confirmed the original verdict within those limits of approximation which usually obtain in human affairs. For the purpose of our inquiry we may take the Canon as it stands.

From the question of degree we pass to the question of different kinds or modes. We may distinguish the inspiration, or God-consciousness, of the prophet, of the lawgiver, of the psalmist, of the wise man, of the apostle or prophet of NT. Of all these, as we have said, that of the prophet is perhaps the most characteristic. We call it so, not because it is essentially higher than other kinds, but chiefly because it is more easily recognized and described. The God-consciousness of a lawgiver like Moses must have been quite as strong and quite as penetrating as that of an Isaiah; but the difference is that, whereas in the case of Isaiah we can see the mind of the prophet at work behind the word in which the influence of the Holy Spirit has found enduring expression, in the case of Moses anything so clear and definite as this eludes our search, and we have to be content with inferences backwards from analogies for which we have more contemporary attestation. We are more fortunately situated again in the case of the NT apostles. There once more we can see the mind of the writer at work, and form some conception of the intensity with which it works. The chief drawback in the case of Psalms or Wisdom Books is the anonymity of the writers, which makes the evidence they supply comparatively fragmentary and limited. And yet some of the Psalms can hardly be surpassed for depth and intimacy of communion with God.

The characteristic feature in the writing prophets is the unwavering confidence with which they assume their own commission from God. When they speak, the language they use is as though God Himself were speaking through them. We repeat that even this language does not proceed from a higher level of spiritual experience than that of St. Paul. No words either of OT or of NT enter into competition with those which we call 'words of the Lord.' We only treat the prophetic utterances as typical and as lending themselves more easily to analysis and comparison.

Looking at them in this sense, we observe that they do in fact stand alone in religious literature. For the assurance with which they are spoken, for the coherence and continuity which they present spread over a succession of centuries, for beneficence of effect upon the religious history of a people, for the impressiveness which they still retain as we look back upon them, they are practically unique.

To put all this at its lowest term, to say only that the Prophetic Books of OT were books composed under these psychological conditions, is still to claim that they are *sui generis*. The Christian looks back upon them still as he looks back on no other books besides.

Doubtless the view which the prophets took of their own calling has in it an element belonging to

* W. Wrede, *Über Aufgabe u. Methode d. sog. neutest. Theologie* (Göttingen, 1897), p. 11 f.

the time at which they spoke and wrote. Even so, that element does in some ways only strengthen their claim. It is very doubtful whether the experience of modern times will ever supply anew examples of such complete concentration of thought and aim upon the things of religion. We must allow for this utter concentration as an advantage which they possessed and which is not likely to be possessed again.

Of all the books which have attempted a psychological analysis of the prophetic consciousness, the present writer does not know one that grapples with the ultimate problem more directly than A. B. Davidson's *Old Testament Prophecy* (Edinburgh, 1903). Dr. Davidson asks some searching questions:

'When God spake to a prophet, was the latter conscious of two things, namely, of the fact that God was speaking, and also of what He spake? When the word of God came to him, did its being the word of God manifest itself to him in some distinctive manner, apart altogether from the contents? Or rather, was not the feeling of the prophet in all probability something like our own,—that double kind of feeling which we express by saying that any opinion we have is *God's truth*? . . . The same question would arise as to the kind of pressure under which the prophet felt himself to be. Did the kind of feeling he had of impulse to speak differ from the feeling men still have of impulse to utter any pressing truth that lies upon them, such men as fervent, religious teachers, or lofty, earnest statesmen? And when truth suddenly dawned upon the prophet's mind, which formerly he strove unsuccessfully to reach by means of reflexion, did the feeling he had at such a moment differ from the feeling men still have when, oftentimes in peculiarly spontaneous frames of mind, difficulties are broken up, and problems solved almost involuntarily, which before resisted all conscious and direct efforts of the mind?' (*op. cit.* p. 111 f.).

We may pause for a moment to remark that, when a modern writer or speaker in order to strengthen an asseveration describes it as 'God's truth,' he is probably influenced by the traditional estimate of the Bible, and means that what he is saying is as true as if it were written in the Bible; in other words, it corresponds to the highest conception that he has of truth.

There is no reason to deprecate these modern analogies. In the effort to enter into the mental state of the prophets, we can but start from the nearest experience of our own; and the cases described are the nearest to which we have access. They bear the same kind of relation to our modern habits of thought as the language used by the prophets bears to theirs. We have seen that there was an element in their presuppositions which is wanting or much feebler in our own. That element really fits into their place in history; it is part and parcel of their whole conception of God and the world, and in particular of the relation of the Divine call to themselves. The main question that we have still to ask is, how far this conception of theirs was in agreement with the facts. But that carries us on to the next subject of our inquiry, the estimate of the prophetic message (as typical of the whole Biblical revelation) when it is seen from the side of God rather than of man.

(2) *The Divine aspect of Inspiration.*—The question that we now proceed to ask amounts to saying, Were the prophets, and the other Biblical writers represented by them, justified in the claim they make to speak for God, to use the kind of language that naturally issues from special communion with Him? Granting that this language was from their point of view wholly sincere, does it appear to be warranted when it is regarded from the other side —the side of God's providential ordering of the world and of history? We shall apply two criteria: (*a*) Is it a credible mode of statement that God has held this kind of communication with man? and (*b*) Does the Bible in particular commend itself as embodying such communication? Taking as a concise expression of the Biblical theory the famous passage He $1^{1f.}$ 'God, having of old time spoken unto the fathers in the prophets by divers portions and in divers manners, hath at the end of these days spoken unto us in his Son,' can that still be accepted as a reasonable description from the double point of view that has just been stated?

(*a*) The question is whether, allowing for the naive and simple language of primitive times, the idea of God speaking to man and through man still expresses a substantial truth. Given a spiritual interpretation of the universe, assuming that behind the world of phenomena there is a supreme Spirit which has brought it into being, there has been a wide-spread belief that this Spirit desires to be known, and has caused itself to be known, by the most intelligent of its own creatures. It is a modern expression of this belief when the poet says:

'Speak to Him thou for He hears, and Spirit with spirit can meet—
Closer is He than breathing, and nearer than hands and feet.'

The whole idea of Spirit 'speaking to' spirit is, of course, metaphor; the operations of spirit cannot be described otherwise. But if we think of the spirit of man as personal, and if we are obliged to invest the Spirit of God with personal attributes, then it must be allowed that the wide-spread belief to which we have referred harmonizes with the rest of our conception of the relation of God to man.

But if we are to suppose that God has 'spoken to' man, how should He speak? How should Spirit speak to spirit? Surely it is very credible that the method of communication chosen might well be through the influence of the higher Spirit upon the lower, not in equal degree upon all individuals but pre-eminently upon some. That is the way in which the Bible appears to describe the relation of God to man; and, simple as the language is, it seems very difficult to improve upon it. Science does not as yet seem capable of describing the facts of the case in more appropriate terms.

(*b*) But then we have also to ask whether the Biblical revelation, as we call it, is of such a kind as to approve itself to us as rational beings. As the course of it is now unrolled before us according to critical views (so far as they can be justified) of OT and NT history, there certainly does seem to be a broad correspondence between this department and other departments of God's dealings with His creatures. The history of the inorganic universe presents what we call a process of evolution; the history of life on the earth up to the advent of man is also expressed in terms of evolution; man himself as a social being has developed in accordance with ascertainable laws; and when we come to consider him as a religious being, we find again that his career has been on the whole one of gradual and progressive advance. At the present stage of our knowledge and apprehension all this appears to be homogeneous and consistent. The different parts of the Divine economy tell the same kind of story. The Christian faith, as its data lie before us in the Bible, seems, naturally and without forcing, so to fall into its place in relation to the rest of the development as to furnish it with its fitting completion or crown. Everything may not as yet have been worked out to our full satisfaction; but it seems in a fair way to be, and there are at least no valid grounds for supposing that any other mode of statement of the culminating stages of religious history will be established in preference to it. This seems to be as good verification as we can expect to have.

If we look steadily at the contents of the Bible from this point of view of 'an increasing purpose,' they seem quite worthy to have come from God. If we take them as a revelation of what God Himself is and of the method of His dealings with mankind, and if we bear in mind that this revelation has

been gradual and progressive, it is difficult to conceive one that could have been better or more completely congruous with the expansion of human thought as a whole. There is impressed upon the writings which make up the Bible a breadth and variety, an intensity and purity of religious life, that are without parallel in any other literature in the world. That is the fact which we seek to express in the doctrine of Inspiration. We know no other explanation for it than a special action of the Spirit of God. That may well be a way of speaking that is relative and imperfect. The Holy Spirit is not bound. It is not confined to any one channel. It permeates all forms of life, one after this manner and another after that. It is the same Spirit, though there are diversities of working. These diversities, or the names that we give them, are relative to our human apprehension, which cannot help classifying and defining. It cannot help observing what it calls 'degrees' and 'kinds' of operation. And this particular kind of operation that we see in the Bible is at once the highest and the most powerful that we know. It is a movement of the Divine Spirit through a long succession of human spirits, a movement which the poetic imagination of the Biblical writers themselves compared to the *wind*. And for us too that old illustration has acquired a new point. We understand more now of the nature of wind, and the analogy becomes all the more forcible. We think of a current of air, drawing in from the wide seas, charged with fresh supplies of ozone and all the other chemical constituents that vitalize and strengthen the activities of heart and brain. Such a vitalizing, such a strengthening, was that gift of God which we call Inspiration. We see the results; we can only imagine the process, and express it in the tongue of the children of men.

3. **Correction of older views.**—The progress of knowledge is progress in accuracy of description and definition. There are certain fundamental thoughts, wide-spread in space and time, going back to remote antiquity, and common to many races of men. The idea of an inspired and sacred Book is one of these thoughts. The common name 'inspiration' covers all its varied meaning; just as the common name 'God' covers a whole gamut of conceptions from lowest to highest. As time has gone on, the conception of God has been sifted and purified, and a like process must take place with the idea of Inspiration. It is certainly not to be denied or rejected; but it must be brought into closer correspondence with the facts.

Necessarily at first the idea was vague, figurative, and (if we must call it so) crude. To the prophet Ezekiel there is given a roll of a book which he is commanded to eat (Ezk 2^9–3^3). This is a very concrete and symbolic way of saying that he must absorb into himself a message which he is charged to deliver. In that period 'between the Testaments,' when the idea of an inspired book definitely crystallized, the attributes that most stood out were those of authority and infallibility. A book that came from God must needs be in all respects authoritative and infallible. It was an instinctive rather than a reasoned idea; but so instinctive and so natural that it held sway more or less completely for about twenty centuries. But in the course of last century it came gradually to be seen that this conception does not hold good. There are certainly some ways—many ways—in which the Bible is not infallible, and therefore not in the strict sense authoritative. More and more the authority of the Bible has come to be restricted to the spheres of ethics and religion. But more and more it is coming to be seen that, even within these spheres, allowance must be made for difference of times. All expression, even the most perfect in its kind, is necessarily conditioned by the sum-total of the body of thought of the period to which it belongs; and it has to be *translated* into the corresponding language of each succeeding period. It is impossible simply to transfer, in crude blocks without change, the thought of one age into another. From this point of view we do not so naturally look at things under the category of *authority*. It might be said that, in place of the category of authority, we think rather of the process of *assimilation*. The main question for us in these days is how much we can assimilate of the Bible. And when we speak of assimilation, we mean an act of the whole man, intellect, emotions, and will. That is the great problem before us. The working out of it is for us as the breath of life. And the material that the Bible supplies to us is as rich and as abundant as ever it was in the ages of most implicit and unquestioning faith. Our questions are not—or at least ought not to be—the questions of doubt, but only the throes and efforts of a more scientific, *i.e.* of a more accurate, apprehension.

LITERATURE.—The books of which the writer has made most use in the second half of this article are Deissmann, *Licht vom Osten* (Tübingen, 1908); Heinrici, *Der litter. Charakter d. neutest. Schriften* (Leipzig, 1908). A. B. Davidson's posthumous *OT Prophecy* (Edinburgh, 1903), from which some interesting extracts have been made, suffers as a whole from the fact that it consists of lectures spread over a considerable period of time, and all parts of it are not equally critical. Many other books might have been used: *e.g.* the *Einleitungen* of Jülicher, Weiss, Zahn, and Barth, Jülicher's 'Religion Jesu' (in *Kultur d. Gegenwart*, i. Abt. 4), and tracts on *Die Entstehung d. NT*, by H. J. Holtzmann (1904), C. Clemen (1906), W. Wrede (1907). But the subject is one that the writer has had before his mind ever since he wrote his *Oracles of God* (1889) and Bampton Lectures on *Inspiration* (1893), and he thought it better to state independently the views at which he has himself arrived.

Introduction.—Libraries might be filled with the literature to which the little book which we call the Bible or 'the Book' has given rise, and every day witnesses some new contribution to it. But no one as yet has made a comprehensive investigation of the influence which it has exerted upon the Christian Church and the life of Christian peoples

as a whole. For a long time no such question was felt to arise. Attention was confined to the theological teaching on the Bible in the Church, and then to the history of exposition, the Text and the Versions. One or two special problems were also discussed. Strictly speaking, the only comprehensive treatment of the subject is M. Kähler's *Gesch. der Bibel in ihrer Wirkung auf die Kirche, ein Vorschlag*, 1902, further developed as a contribution towards the establishing of the authority of Holy Scripture in *Dogmatische Zeitfragen*[2] (i. *Zur Bibelfrage*, 1907, pp. 266–435). What Kähler sets forth in a general way, and with the definite theological purpose of showing the significance of the Bible for the Church ('testimonium Spiritus Sancti in ecclesia'), needs to be worked out in detail and from a purely historical standpoint. The author of this article hopes to do this; but there is much preliminary work to be done, and the following sketch may induce some one to take it in hand.

The best method would be to trace the Bible in the Christian Church down through the centuries and give an account of its history. But in the narrow limits to which this article must be confined, the manifold effects produced by the Bible will come to light more clearly if we deal with each sphere separately. It must be added that the ordinary division of Church History into ancient (to 600), mediæval (to the Reformation), and modern does not by any means correspond to the separate lines which we have to follow. It is true that the Reformation is an important factor in all that is concerned with the effect of the Bible on piety, and perhaps also on public life. But it was not till the time of the 'Enlightenment' (about 1750) that the learned investigation of the Bible altered the methods which it had followed from the first. While our divisions, therefore, must be determined by the subject-matter, we shall endeavour to treat every topic in its historical development.

LITERATURE.—Apart from Kähler, reference can be made only to popular literature, mostly from Bible Societies: A. Ostertag, *Die Bibel und ihre Gesch.*, Basel, 1853, [3]1857, [5]1892, tr. into Fr. by Dufour with pref. by Guizot, 1857; L. N. R. (Mrs. Ellen Ranyard), *The Book and its Story*, Lond. 1853, tr. into Germ. by G. T. Phillips, with pref. by Krummacher, Elberfeld, 1858, also into Fr., 1861; H. von der Goltz, *Die universale Bedeutung der Bibel*, 1865; B. F. Westcott, *The Bible in the Church*, 1889; M. Kähler, *Die Bibel das Buch der Menschheit*, 1904; O. Zöckler, *Die Bibel in der Gesch. des Glaubens*, 1900; H. Vollmer, *Vom Lesen und Deuten heiliger Schriften*, 1907. L. Diestel's masterly *Gesch. des AT in der Christlichen Kirche*, 1869, and Ed. Reuss's *Gesch. der heil. Schriften des NT*[6], 1885, are standard works of German scholarship; they deal, however, only with parts of the subject. Reference should here be made also to *Die Bibel, Ursprache u. Übersetzungen* (from Hauck's *PRE*[3] ii., iii.), Leipzig, 1900, and art. 'Bible' in Hastings' *DB*. The *Catalogue of the Brit. Mus.* is very valuable for its bibliography on this subject: *Bible*, 1892, Appendix, 1899; also the *Hist. Cat. of the Br. and For. Bib. Soc.*, vol. i. (Eng.) 1903.

I. *ORIGIN OF THE BIBLE*.—1. **Church and Synagogue; the Old Testament.**—Christianity came from the lap of Judaism. It received from its mother a sacred book with definite ideas about it and a complete system of exposition.

The sacred writings of the Synagogue existed in twofold form. The foundation was formed by the Torah, or Law of Moses, the highest authority for faith and morals, worship and questions of law, since the proclamation under Josiah in B.C. 621. It reached its final form in the time of Ezra and Nehemiah (*c.* 430). About the year B.C. 200 there were added to this the Prophets, consisting of the four earlier—Joshua, Judges, Samuel, Kings—and the four later—Jeremiah, Ezekiel, Isaiah, the twelve Minor Prophets; and some time later a collection of writings of various content, *Kethubim* or *Hagiographa*. Designations like 'the Law,' 'the Law and the Prophets,' 'the Law and the Prophets and the other books of our fathers' (prol. to Sir.), to denote the whole Bible, show the gradual stages of its development, and also certain differences of value within the unity. At the time of Christ this stage was already reached by the Rabbis of Palestine. The discussions in the 2nd cent. A.D. about the canonicity of Ezekiel and the Song of Solomon have to do with the question of exclusion, and show that the formation of the Canon was not a matter of collection but of selection. The aim of the Canon was to winnow the materials to hand, and the motive was doctrine, not devotion. In the Greek Diaspora the development was not quite the same. As can be clearly learned from Philo, strict canonicity was accorded only to the Torah, which was translated as early as the time of Ptolemy Philadelphus (B.C. 285–247). Alongside of it, however, there was in use a much larger range of writings, mostly translated from the Hebrew, though a few of them were written in Greek, and all possessed of a *quasi*-canonical value. These were classified upon a different principle—historical, poetical, prophetic. It is an older stage of development that is represented in the sole authority of the Torah with the addition of an unsifted mass of other writings; but development went on here also, and the idea of canonical value passed from the Torah to the rest.

This twofold form of the Jewish Bible was full of significance for Christianity. Jesus, His first disciples, and the Jewish Christians of Palestine, understood by the Bible the Hebrew form of it used by the Rabbis. What Paul and Gentile Christians possessed was the Greek Bible in the Alexandrian form, including, *e.g.*, the Wisdom of Solomon.* But the knowledge that there was another form of the Bible never disappeared in the Gentile Church. In the year 170, Melito, bishop of Sardis, brought home with him from a journey to Palestine a list of the OT books which alone were recognized there (Eusebius, *HE* iv. 26. 14). Origen gives a similar list in comments on Ps 1 (*ib.* vi. 25. 2). Eusebius himself owed his knowledge to Josephus (*HE* iii. 10). But neither he, nor Athanasius (*Epist. fest.* 39, A.D. 367), nor any other Greek Father made any practical use of his knowledge. To them the Holy Scripture was the Greek Bible. It was otherwise in the case of Jerome. As he went back upon the Hebrew original, he took over the canon of his Hebrew teachers. His influence in the Western Church served to keep the knowledge of this difference between the Hebrew and the Greek Bibles alive, and more and more taste inclined to the Hebrew *veritas*. The Reformation brought the crisis. Luther followed Jerome in making a sharp separation between the canonical books and the 'Apocrypha,' but nevertheless incorporated the latter in the Bible as 'useful to read.' On the other hand, at the Council of Trent (Sess. iv., 8th Apr. 1546), Catholicism took the last step in the line of tradition, and did away with every shade of difference between the various books of the wider Canon. The Calvinists proceeded on a different line, and, breaking away from tradition, simply removed the Apocrypha from the Bible altogether. Thus they became victims of a vague and wrong use of the word 'Apocrypha,' which they owed to Jerome. To-day the British and Foreign Bible Society prints the Bible without the Apocrypha. The Bibles which the Continental societies distribute contain it, as did also the Bible upon which King Edward VII. took the oath at his accession; and the Anglican Church appoints regular lessons from the Apocrypha. In these diverging practices we see reflected the difference between the Canon of the Palestinian Rabbis and that of the Diaspora.

* On the extent to which the Wisdom of Solomon influenced St. Paul see Ed. Grafe, *Theol. Abhandlungen*, dedicated to C. v. Weizsäcker, 1892.

The idea of the Canon of the Holy Scripture involves its unconditional authority as the regulative principle of all thought and action. The ground of this authority is always found in its Divine origin—a phrase which can be understood in very different ways. Neither in Judaism nor in Christianity is it ever claimed for the Bible that it 'fell complete from heaven,' as it is among the Elkesaites, though at a later date Christianity knew something of 'letters from heaven.' Its historical origin was too clearly seen in the book itself. Moses, no doubt, is said to have received from God the tables on which the commandments were inscribed, but elsewhere he names himself as the author of the Torah; and so it was also with the prophets and the books which go by their names. No distinction was made between prophetic inspiration and literary activity. The latter was conceived as following mechanically upon the Divine dictation, so that Moses was able to describe his own death. But this was not enough. Even the minimum of human and historical that was involved in the recognition of different authors was stripped off by the growth of legend, which affirmed that by the help of Divine inspiration Ezra restored the whole body of writings lost at the destruction of Jerusalem. This brought the unity of the Canon into relief even in its origin. The Diaspora did not tarry behind this rabbinical development of the idea of inspiration. The story of the 72 (70) translators, which was originally applied only to the Pentateuch, was extended to the whole OT, and had added to it these further features: that the 70 translators did their work separated from one another, that they all finished at the same moment with a loud Amen, and that the 70 copies were found to be in entire agreement.* This is a conception of inspiration quite in line with that which we find in the legend of Ezra. The young Gentile Church viewed the Greek Bible, the so-called Septuagint, as immediately inspired, and not merely as derived from an inspired original.

The third point is that this high estimation of the Bible decided the course which its exposition was to take. It was not a matter of arriving at the historical meaning and import of the author's words, but of making the Divine thoughts and demands conveyed by them fruitful in lessons for the present. The exposition of the Rabbis was composed in the main of *halakha*, that is to say, of practical interpretation of the Law, the purpose being to arrive at stricter rules, and so to erect a fence round the Torah. The great aim of Biblical scholarship was to hang mountains of *halakha* upon every tittle of the Law. This was done by combining the most various passages and by paying attention to the most external coincidences and haphazard details, and was bound to lead directly away from the original purport of the Law. Another kind of exposition was the so-called *haggada*. It was similar in method but different in aim, not legal, but doctrinal or theological. It sought to explain away all expressions in the Bible which offended current theological views and practices, *e.g.* anthropomorphisms, anthropopathisms, departures from ordinary custom, and other features which belonged often to an older stage of development. Over and above that which lay to hand in the Bible, it wove with bold fancy an entirely legendary history. The two methods agree in treating the single verse or even the single word as sufficient in itself, and in allowing themselves to be guided by any arbitrary combination. The so-called 7 Rules of Hermeneutics, which are said to be given by Hillel, and enlarged to 13 by R. Ishmael, to 32 by R. Eliezer, are only an attempt to form this arbitrary method into a system.

* For the various forms of this legend see the passages collected in P. Wendland's *Aristeæ Epistula*, 1900, p. 85 ff.

Here, too, the Greek Diaspora took a way of its own. The Greek philosophical schools, and the Stoics in particular, had developed a system of allegorizing the venerable texts of antiquity so as to impart to them a modern sense. Besides the meaning which appeared on the surface, the words of Homer were credited with a second significance—the really important one. Zeus stood for the world, or the soul, or immaterial existence. From his head sprang Athene or Gnosis.* The fights and love-adventures of the gods were to be treated as symbolic of cosmological and psychological facts. Homer would be guilty of impiety if he did not mean this to be done (*πάντως γὰρ ἠσέβησεν, εἰ μηδὲν ἀλληγόρησεν*, pseudo-Heraclit. *Alleg. Homer*, 1). It was easy to transfer this method to the Bible, and with the help of allegory it was possible to demonstrate in Moses the Platonic or the Stoic system, or a system which borrowed from both. Such is the course taken by Philo—just as arbitrary as the Rabbinical method, but yet different, and, if we may say so, more systematic, because Greek in spirit. The Rabbis started from the text and made this or that of it as chance directed. In the case of Philo, what he had to unfold from the text was fixed from the beginning, or rather what he had to read into it in order that he might find it there. Primitive Christian exegesis followed these two paths. The method of Jesus, despite all His originality, and also the Pauline method, remind us of the Rabbis. In the Ep. to the Hebrews and in the Ep. of Barnabas we see the Alexandrian method clearly. And yet there does exist a difference, not so much of method as of aim. While the aim of the Rabbis is always a *halakha* or a *haggada*, and while Philo leans towards the ideas of his own eclectic philosophy, Christian exegesis takes its direction from the person of Christ. The whole OT is a witness to Him. Jesus treats it thus, and so do His disciples. Through the influence of this notion, it happened that Jesus was Himself conceived as the originator of this witness, and identified with the inspiring Spirit of God; *οἱ προφῆται ἀπ' αὐτοῦ ἔχοντες τὴν χάριν εἰς αὐτὸν ἐπροφήτευσαν* (Barn. v. 6). Notwithstanding the unhistorical nature of the exegesis, it thus contains a historical element. There is a reciprocal effect of prophecy and fulfilment which gives rise to typology. It is true that this method shares the defects of allegory: the words are given another sense than that which really belongs to them. But, as distinguished from allegory, it makes good its claim to existence, because, proceeding upon a pre-established harmony between the two, it gives to history a real as well as a typological value. Philo finds in Abraham only the idea of wisdom and piety, while Paul sees in him the father of the faithful, with a faith which was in principle the same as that of Christians. It is allegorizing when Paul simply dispenses in 1 Co 9^9 with the literal sense of Dt 25^4, and when Barnabas interprets the commandments respecting food in the same moral fashion as the Neo-Pythagoreans. It is typology, however, when in 1 Co 10^{1-11} Paul treats the history of the Exodus as actual but at the same time typical. We find the same thing in the Epistle to the Hebrews, with its doctrine of the provisional but widely significant character of the OT expiatory sacrifices. It is neither rabbinical nor Philonic.

The method of using the Holy Scripture in Divine service was developed also in the Synagogue. There were the readings from the Law (*Parashiyôth*)

* Cornutus, *Theologiæ Græcæ Compendium*, ed. C. Lange, 1881; *Stoicorum veterum fragmenta*, coll. by von Arnim; H. Vollmer, *Vom Lesen u. Deuten heil. Schriften*, 7-11.

and the Prophets (*Haphtarôth*), the Targum, or translation in the popular tongue, and the Midrash, or devotional exposition. The Synagogue practised the singing of psalms, and its liturgy had a Biblical form. All these the primitive Christian Church took over and enriched with additions of its own.

Already, too, there were to be found in Judaism the private study of the Law, the regulation of the whole life by *halakha*, and the misuse of the Bible for magical ends which its deification made inevitable. This was the case in other religions possessed of sacred books—Islām, Buddhism, and Parsiism—and cannot be regarded as brought over straight from Judaism. Similar ideas give rise to similar customs.

LITERATURE.—W. Robertson Smith, *The OT in the Jewish Church*², 1892 (Germ. tr. by J. W. Rothstein, 1894); Fr. Buhl, *Kanon und Text des AT*, 1891; B. Duhm, *Die Entstehung des AT*, 1897; K. Budde, *Der Kanon des AT*, 1900; H. B. Swete, *An Introd. to the OT in Greek*², 1902; W. Riedel, *AT Untersuch.* i., 1902, p. 90 ff., 'Einteilungen des AT Kanons'; H. E. Ryle, *The Canon of the OT*, 1902.

ON RABBINIC INTERPRETATION: F. Weber, *Jüd. Theol.*², 1897, 109 ff.; W. Bacher, *Agada der Tannaiten*², 1903, *Exeget. Terminologie der jüd. Traditionslitt.*, 1905; C. Siegfried, *Philo von Alex. als Ausleger des AT*, 1875; H. E. Ryle, *Philo on Holy Scripture*, 1895; *JE* iii. 162–174.

2. The New Testament.—Christianity added a New Testament to the Old. Like most great founders of religion, Jesus left nothing written behind Him, nor did He give His disciples any commission to write. Mt 28^{20}, Mk 14^{9}, 1 Co 1^{17} have reference to oral teaching. The pen first became necessary to correspond with distant Churches and to record memories of Jesus as the number of eye-witnesses decreased. Neither Paul nor the Evangelists think of placing their writings on a level with those of the OT. That distinction might rather be claimed for the Revelation of St. John, which, as the work of a Christian prophet, contains a revelation of God like the OT (cf. Rev $22^{18f.}$ with Dt 4^{2}). To be sure, inspiration is also claimed by a Christian community for its epistle of exhortation addressed to a sister Church (Rome to Corinth, 1 Clem. lix. 1, lxiii. 2). The Pauline Epistles as well as those of the martyr Ignatius were perhaps collected in the lifetime of their authors, and the four Gospels were put together soon after the appearance of the fourth. At meetings for Divine service these were read like the OT. But so also were new letters as they came to hand, and prophetic writings like Hermas (see p. 602). This was not yet the same thing as a NT alongside of the Old. That did not come about until a sharp distinction was drawn between canonical and uncanonical, authoritative and unauthoritative compositions. The deciding consideration was not liturgical use, but dogmatic authority. A holy book of revelation was required as the foundation of ecclesiastical doctrine. Marcion, who rejected the OT, made a Bible for his reformed Christian Church out of 'the Gospel' and 'the Apostle.' In opposition to this, the Catholic Church formed a NT consisting of the four Gospels, the Pauline Epistles (including the Pastoral Epistles), the Catholic Epistles, the Acts of the Apostles, and the Revelation of St. John, and placed it alongside of the OT. This NT grew to form a unity with the OT, shared the dogmatic value placed upon it, and was subjected to the same expository system. In this sense the Bible was complete by the time of the old Catholic Fathers—Irenæus, Tertullian, Clement. The notion of a Canon in this sense is first found in Origen. Here, too, it can be observed that the formation of the Canon was more a matter of choosing than of collecting. The Muratorian Fragment, where the first actual list of Canonical books is found, excludes the Apocalypse of Hermas, and mentions that the Apocalypse of Peter is already rejected by some people. Down to the 5th cent. the question was whether single books were not to be expunged. Learned interests and ecclesiastical practice were often found to be in opposition, and the result was a compromise like the Canon of Eusebius (*HE* iii. 25). In the case of Athanasius (*Epist. fest.* 39) and in the West, ecclesiastical considerations had the preponderance. In spite of the Church's adherence to the idea of the Canon, there was no lack of patience shown towards local differences in its composition. The Syrian Church acknowledged two, at most three, of the seven Catholic Epistles. The Alexandrian Church would have nothing to do with the Revelation of St. John, which was so highly prized in the West. The result of this was scholarly disputation, but no disturbance of the Church's unity. Finally, as in the case of the Calendar, a compromise between the chief Churches, Rome and Alexandria, was almost universally accepted.

LITERATURE.—B. F. Westcott, *Canon of the NT*, 1855 (⁶1889), out of date; Th. Zahn, *Gesch. des NT Kanons*, 1888–92, *Grundriss*², 1904; A. Harnack, *Das NT um das Jahr 200*, 1889; H. Holtzmann, *Die Entstehung des NT*, 1904; H. Lietzmann, *Wie wurden die Bücher des NT h. Schrift?* 1907; J. Leipoldt, *Gesch. des NT Kanons*, 1907; C. R. Gregory, *Canon and Text*, 1907; W. Bauer, *Der Apostolos der Syrer*, 1903.

3. Old and New Testament.—Thus from about A.D. 180 the Christian Church possessed a Bible composed of two parts of different origin, one taken over and one formed by itself. What this meant is best shown by a comparison with the Muhammadan Qur'ān. There an entirely new book of purely native origin, and containing the revelation of the prophet Muhammad himself, takes the place of the religious books of the Jews and the Christians.

Christianity has strongly opposed every attempt to remove the OT, and will oppose, too, the modern Marcionitism. It lays stress upon the close relationship of the two parts (see III. 3), and rightly so. The OT is the pledge of historical continuity, and without it Jesus and primitive Christianity cannot be understood. It is a safeguard against such arbitrary interpretations of the NT as are inspired by Greek philosophy, syncretic mysteriosophy, and modern speculation or mysticism.

It has to be admitted that the union of the two involves a great danger, into which from time to time the Church has fallen. When, instead of their close relationship, their unity or identity is maintained, Christian worship is bound to sink to the level of the pre-Christian and inferior religion of the OT. The legal or formal conception of religion, so natural to mankind, and believed in the OT to be the object of Divine desire, can easily obscure the elevation and purity of the gospel ideal.

LITERATURE.—E. Kautzsch, *Die bleibende Bedeutung des AT*, 1901 (²1902); Ed. Grafe, *Das Urchristentum u. das AT*, 1907; M. Kähler, *Dogmat. Zeitfragen*², i. 279 ff.; R. L. Ottley, *Some Aspects of the OT*, 1897.

II. *SPREAD OF THE BIBLE.*—In the OT the Church received a book which existed in many and often very different copies. The Gospels and the Apocalypses were probably published in numerous copies to begin with. The Epistles were originally intended neither to be preserved nor to be multiplied, but it was not long before they came to be looked upon as Holy Scripture. The Church had the great task laid upon it of preserving and circulating all these various writings which, outwardly separate, were one in spirit.

1. Transmission.—For the multiplication of Bibles the Christians, like the Jews of earlier times probably, were at the outset entirely dependent upon voluntary labour. Any one who wished to possess a copy of the Scriptures had to make it himself or ask some brother to do so for him. It was only later, when well-to-do people associated themselves with the Church, that the

Bible came to be dealt in by booksellers in the ordinary way of business. A number of slaves, trained for the purpose in tachygraphy and calligraphy, were placed by a friend at Origen's disposal. His friend Pamphilus got copies of many books made, and then he corrected the copies himself.* It was his custom to carry Bibles about with him, and present them to people. Reference is also made to the purchase of Bibles or parts of the Bible (pseudo-Justin, *Quæst. ad Orth.* 134). The copying of Scripture soon came to be considered a peculiarly pious labour, and was largely undertaken by ascetics, *e.g.* the younger Melania.† Next to episcopal seats the monasteries were the great homes of Bible-copying, and before long of all kinds of literary work. So it was in the East at Constantinople in the monastery of Studium, and in the North in Russia, where, in the grotto-monasteries at Kiev, Hilarion made copies of books, while Theodosius devoted himself to prayer or span wool for the binding;‡ and even as far away as Sicily and Calabria, where the transmission of the Bible was marked by special characteristics of writing and text. So it was also in the West, where we are coming to discover with increasing clearness the differences which distinguished the various monastic schools. In the more ancient monastic foundations writing was confined to the younger men, the elders giving themselves entirely to prayer. Later on, and not with any advantage to the work, copying was often made a penance. Charlemagne showed his greatness by attending to even this small matter, and decreed that the Holy Scriptures should be copied only by grown-up men, and not by schoolboys (capit. A.D. 789, 72; 805, 3). With the rise of the universities in the 13th cent. the booksellers pushed the now profitable industry of Bible-production. It is to a bookseller's enterprise that we owe the so-called Paris Bible, whose appearance, with its divisions into chapters and other apparatus, was epoch-making in the West.§ Besides this, the Brothers of the Common Life (*q.v.*), a community founded by Gerard Groot († 1384), were very industrious as copyists.

Naturally it made a great difference whether a copy was made for one's own use or as a business order, for a private or for an ecclesiastical purpose. The MSS which have been preserved exhibit every grade from the crudest to the costliest. Two significant stages are to be noted. There was, in the first place, the change from papyrus, which was employed in the first three centuries for the Bible, to parchment. This involved the further change from roll to book form, books of papyrus being exceptional. The Church's multiplication of Bibles seems to have been largely responsible for the change. In the second place, there was the transition from parchment to paper, which had been making its way from the East since the 9th cent., but was only at a late date adopted for the Bible. There are no Greek paper MSS before the 13th cent., and no Latin ones before the 14th, while parchment codices remain in the majority up to the 15th century. Like the material, the style of writing also undergoes alteration. The flowing current hand of daily life is hardly met with in copies of the Bible. It is possible that the originals were written thus, but copies intended for reading in public all exhibit the somewhat more dignified style proper to books. First, there is the uncial, which after the 9th cent. yielded slowly and with peculiar transitional forms to the minuscule. Several MSS are known which are partly minuscule and partly majuscule (*e.g.* 566 and Λ of the Gospels; in the Gospel MS X the text is majuscule, the commentary minuscule; in other cases the marginal scholia added to the minuscule text are often written in very fine majuscule). In the West we have, at the transition from capitals and majuscule to minuscule, the national writing—Lombardic, Visigothic, and Irish.

The oldest papyrus MSS, of which only a few fragments are preserved [*e.g.* Genesis, *Brit. Mus. Pap.* 212; Psalms, *ib.* 230, Berlin, Leipzig (ed. Heinrici, 1903); the Prophets, Oxford, *Bodl. Gr. bibl. d.* 4 (pap.), Heidelberg (ed. Deissmann, 1904), etc.], were extremely simple. A single book or one or two together made a complete roll. The greater unity was indicated only by the leather covering in which several rolls were contained. In the 4th cent., however, no sooner had the Church formed its compact with the State than traces of luxury began to creep in. The oldest parchment Codices which we possess, viz. the Vatican and the Sinaitic, are huge Bibles, made evidently in response to an Imperial order, and intended for the churches of capitals. In this connexion Constantine's order to Eusebius (*Vita Const.* iv. 36) and the order of Constans mentioned in Athanasius (*Apol.* i. 297) have been thought of. These embrace the whole Old and New Testaments, but in the East this is extremely seldom the case. Not only the two Testaments, but also their separate parts, were usually handed down separately. In the West it was otherwise. There at an early date the so-called *bibliotheca* (very rarely in 1 vol., usually in 8, but up to as many as 14), or the *πανδέκτης*, made its appearance. It was not only their bulk, but also the manner in which they were executed, that made the oldest Bibles imposing. The wonderfully fine snow-white parchment of the Sinaitic MS seems to be of antelope skin. Both Chrysostom (*Hom. on Joh.* 32) and Jerome (*Pref. to Job*) complain of the luxury which even private people indulge in Bible MSS. Sometimes specially fine white parchment was taken; sometimes it was purple-coloured. Such MSS were not inscribed with ordinary, but with gold and silver ink: *e.g.* the Codices of Rossano, Patmos, Sinope (now Paris), and the Codex Argenteus at Upsala. We still possess an array of such precious Bibles, and, as a rule, they are associated by legendary tradition with the names of princes and princesses. The titles, initial lines, etc., are usually done in red, and initial letters beautifully ornamented. One instance is known where the text is in four different colours: the words of the narrator being in green ink, those of Jesus in red, those of His Apostles in blue, and those of His enemies in black (*Ev.* 16=*Par. Gr.* 54, sc. xiv.). From the 5th cent. onwards we find the addition of pictures (cf. VII. 4). In some cases these were placed under the text, as in the Vienna Genesis and the Sinope Matthew; sometimes they were separated from the text altogether, as in Cod. Rossanensis; in other cases they are found opposite the text, and arranged in a kind of table (*e.g.* the Itala fragments of Quedlinburg). In the East they often took the form of light marginal drawings; in the West they were often introduced into the text or set into the large initial letters. The range of these illustrations is wide. From the 24 pp. with 48 pictures that remain of the Vienna Genesis, it has been reckoned that there were 120 illustrations for Genesis and 510 for the whole Hexateuch (Wickhoff, p. 144). Such a wealth of illustration, however, is not common. The Sinope Matthew has only 5 pictures on 43 pages (out of a total of about 144), and the Syriac Gospels at

§ S. Berger, *RThPh*, 1883, pp. 40–66.

Florence, written A.D. 586 by Rabbûla, have only 4 scenes from Gospel history apart from the tables of the Canon and the dedicatory engraving. In the Middle Ages there were occasionally more illustrations, but one cannot speak of increase or decrease in their number. They were plentiful or sparse according to the wish of the person ordering, or the capability of the artist. The time of Justinian was distinguished for the fine nature of its MSS; so afterwards the Renaissance of the 10th cent. in the East, and the periods of Charlemagne and Otto in the West. As in the Synagogue the Karaites set themselves against all ornamentation of the Holy Scripture, so in the Christian Church opposition to these luxurious MSS was not lacking. The complaints of individual Fathers have already been mentioned. It is still more important that the Cistercians, as opposed to the pomp-loving monks of Clugny, forbade all artistic decoration of books. The Paris Bibles, executed in the ordinary way of business (see above), exhibit quite a special style of simple red and blue. The Brothers of the Common Life write well but plainly, while at the beginning of the Renaissance great wealth of illustration again becomes a prominent feature.

The new art of printing with movable type came at once to the aid of the Scriptures, and the first printed book was a Bible. In the years 1453–56 Gutenberg's 42-line Bible made its appearance, and was shortly afterwards followed by the 36-line one. Externally these oldest printed Bibles resembled MSS. Printing sealed the victory of paper over parchment, but some examples of the oldest printing on parchment still exist. The movement for simplicity of finish, started by Paris booksellers, was maintained, although the first Bibles printed are not only masterpieces of printing, but are in some cases also beautifully illuminated. In place of illumination and pictures there soon appeared engravings on wood. These were either marginal or embodied in the text, and in the older Bibles they are often very numerous. The German Cologne Bible (1480) contains 110; the Italian Malermi Bible (1490) 383. Luther's NT of 1522 has woodcuts by Lucas Cranach. Later on these became fewer. At last they were omitted altogether, and the Bible acquired its present sober appearance. Never, however, has there been an entire absence of picture-Bibles, though it must be said that the addition of pictures serves less for ornamentation than for instruction. Speaking generally, the effort now is to make Bibles as cheap and as easy to handle as possible, and to increase their number. In the Middle Ages almost the only complete Bible was the *bibliotheca* of 8 folio vols., and the first printed Bibles were of gigantic proportions. The size, however, has always become less and the price always lower, till we have now reached the pocket Bible and the penny NT. Attempts have lately been made to secure something finer. The 19th cent. produced a series of beautiful picture-Bibles. Some of these are completely illustrated by the same artist, as, *e.g.*, Schnorr von Carolsfeld (1852 ff.), Doré (1865), and Tissot (1896). In others we find reproductions of the famous old masters, *e.g.*, R. Pfleiderer (1896). The aim of these is to assist the eye by bringing vividly before it what has been read. The historical character of modern exegesis, however, makes use of archæological and geographical illustration to explain the Bible (Pfeilstücker, 1887; Müller-Benzinger, 1900).

2. **Translation.**—Besides the preservation of the Bible, its circulation was also necessary, and this involved the task of translation. The gospel soon left the soil of Palestine and the Aramaic speech. As a world-religion Christianity employed the universal language, Greek, even in Rome. The Church used the OT in the Greek translation or LXX. The other translations by Theodotion, Symmachus, and Aquila seem also to have been possessed of importance, especially at the outset, in controversies with the Jews. Their use, however, which was facilitated by Origen's giant work, the *Hexapla*,* sank to mere scholarly ornamentation. Almost all the books of the NT were composed in Greek. The Hebrew Gospel of Matthew, of which report had spoken since the time of Papias, was really a lost work. The Hebrew original of the Epistle to the Hebrews originated in an unlucky guess of an Alexandrian scholar. The Latin originals of the Gospel of Mark and the Epistle to the Romans are inventions of the Middle Ages. As late as the year 200 the Roman Hippolytus wrote in Greek, though in Africa Tertullian already composed in Latin. Whether he employed a Latin Bible in his work, or translated from the Greek Bible, is not yet beyond the range of doubt. From that point onwards, however, Greek visibly declined. About 250, at the time of Novatian, the language in Rome, as also in Gaul and Spain, was Latin. Celtic and Iberian, like Punic, do not seem to have reached a Christian literature though they continued to be spoken by country people. In the East, Aramaic-Syriac again gained strength; in Egypt the native language (Coptic) assumed a new Hellenized form. This was a movement that the Church could not think of opposing. She had to share in it if she was to bring her Bible to the people. As yet there was no idea that the sacredness of the Bible was to be sought in its incomprehensibility. Thus at the beginning of the 3rd cent. certainly, if not about the end of the 2nd, there appeared Latin, Syriac, and perhaps Coptic translations. The origin and early history of these versions are still very obscure. What is certain is that in the OT the LXX formed the basis (the Hebrew text being employed nowhere except in Syria), and in the NT remarkably free texts differing much from those otherwise known to us. It is possible that different translations came into being independently of one another; perhaps the first translation was much edited and gradually approximated in language to various Greek texts. Generally at the outset translations are exceedingly free. One can trace the joy which was felt in the new treasure, the difficulty of finding adequate expressions, the attempt to express the thought in the form most familiar. There is to be observed an inward assimilation of the gospel, a transference of it into the common thought and speech. Not till afterwards did philological accuracy make its appearance, with the high valuation of the letter characteristic of theology. So it is always: first Luther, then Weizsäcker; first AV, then RV.

* Fragments were collected by Field in 1875; new finds have been made by Mercati in the Ambrosian Library at Milan, and by Schechter and Taylor in the Genizah at Cairo.

Almost simultaneously there came the revisions which established themselves throughout the Church—the Latin revision in 378 ff. by Jerome, and the Syrian by Rabbûla about 410. The Vulgate established itself only after a keen struggle with the Vetus Latina; but before the Peshiṭtâ the Vetus Syra disappeared, leaving almost no trace. The Latin tradition approached the Syrian also in the fact that Jerome made a new translation of the OT direct from the Hebrew. In the case of the Copts, according to present research, it was less a gradual process than a conjoining of various dialects. Yet here, too, further investigation will likely show a succession of Akhmîmic, Sahidic, and Bohairic, representing not only dialectic but also textual differences, and corresponding in some measure to the African, European, and Italian of the Vetus Latina.

To these oldest and constantly developing translations which reveal the spread of Christianity in the first three centuries, there have to be added in the 4th and 5th cents. the Gothic and the Armenian together with the Georgian and the Ethiopic. These not only indicate the further spread of Christianity, but also bring to light its power as a civilizing agent. As so often in the later history of missions, the translation of the Bible is the first literary work in these tongues, the first monument of a system of writing developed for the purpose from the Greek. The Gothic Bible survived the rapid overthrow of that proud people only as a literary relic. The Codex Argenteus (now at Upsala), one of the most beautiful Bibles of the ancient Church, is a worthy witness to their former splendour. At the same time the translation, which was evidently executed from the Greek text in the Balkan peninsula, and afterwards brought into conformity with the Latin in Italy, shows the wanderings of the people and the different civilizing influences under which they came, just as we can observe in the Armenian Bible the displacement of the originally predominant Syriac by Byzantine influences. The Georgian Bible lived till the 19th cent., when it died through the Russianizing of this ancient Christian Church. The Armenian Bible, which in the time of the Crusades had points of contact with the Latin, was threatened by the same fate, but still exists. The general view that after this period Oriental Christianity was paralyzed is disproved by the missionary labours which were carried on by Greeks, and especially by Syrians, to the very farthest East. We have, indeed, no traces of ancient Indian and Chinese translations of the Bible (about 781, however, according to the Nestorian inscription of Singan-fu [J. Legge, 1888], 27 books of Jesus, *i.e.* the NT, were known in China), the reason being that the Syriac Bible was everywhere used even among the Thomas-Christians in India. Among the Syrians themselves, however, there arose new translations more learned than popular in character. Following the Greek very closely, Paul of Tella translated the OT (616–617), and Philoxenus of Mabûg the NT (508), the latter being revised by Thomas of Harkel (616). There does not seem to have been any Persian Bible before the 14th century.* On the other hand, the domination of the Arabs after the 7th cent. in Syria and Egypt brought a whole series of translations into existence, and these to some extent displaced the older Coptic and Syriac versions. Subsequently, when Spain was overrun, the same thing happened there, though the translation in that case was from the Latin. The 9th cent., which gave the Slavs a Bible of their own as the first written work in their language, saw also the beginning of Anglo-Saxon and German translations. Like Charlemagne, King Alfred was intensely patriotic, and favoured the popular tongue both in Divine service and in literature. But Latin, having the support of the Church, kept the lead, and the national language suddenly disappeared. In the time following, the oldest translations were forgotten.

Apart from poetical renderings of the Bible, only fragments were preserved till the end of the 12th cent. brought new motives of another kind. On the one hand, there was the popular religious movement associated with the name of Peter Waldes, which spread from South France towards the S. and E. as far as Bohemia. On the other hand, there was the sudden outburst of nationalism, suggesting to us in many ways our own time, which can be traced simultaneously in France, England, and Germany, and, however paradoxical it may seem, found its centre in the *studium generale* of Paris University. Thus there came to be two series of Bible translations in the popular tongue. From Paris University, which gave to the Latin Bible the form that was to obtain in the later Middle Ages, there came, through the use of an old Norman Psalter and Apocalypse, the French Bible. To us it is known chiefly in connexion with the *histoire écolâtre* of Guyard des Moulins as the 'Bible historiale.' With it there stand in more or less clear connexion some Dutch Bibles. Of more importance was the set belonging to S. France. It influenced the whole S. of Europe as far as Bohemia until Albigensian and Waldensian tendencies spread widely. The Italian as well as the Catalonian Bibles come originally, not from the Vulgate direct, but from the Provençal translation. It was only afterwards that they were conformed to the Vulgate and polished in language. Distinct from these there is only the Castilian Bible, which was translated in 1422 at the instance of Luis de Guzman by Jewish and Christian scholars in common on the basis of the original text, and was a forerunner of the great Polyglot Bible of Cardinal Ximenes. A side-piece to this is formed by the so-called Græcus Venetus (ed. by O. von Gebhardt, 1875), a new translation of the OT, which was probably a private work of the 14th cent. and never attained to any considerable influence. In the 14th cent., in England, Bohemia, and Germany simultaneously, the work of translation was again revived under Waldensian influence. John Wyclif (†1384) gave his people the first complete translation of the Bible. It is known in about 170 MSS, including the revision by John Purvey. Hus and his friends revised the somewhat older Czech Bible, and thus fashioned the pattern that was to regulate the future. In Germany no such great name appeared before Luther. There we find a great number of independent translations which have been carefully classified in Walther's thorough work on the subject. He mentions 34 Branches and 24 Psalteries, also 6 Branches and 8 Psalteries in the dialect of Lower Germany; altogether over 200 MSS and over 50 printed works. The most important Branch, to which the 14 pre-Lutheran printed Bibles belong, points in its origin to Bohemia and the time of Charles IV. Not till the 15th cent. did the northern lands receive translations of their own.

With the single exception of the Castilian, all these go back directly or indirectly to the Vulgate,

* It should, however, be borne in mind that the Pahlavi *Šikand-gümânîg Vijâr* (late 9th cent.) contains a number of fragments of both the OT and the NT, cited in anti-Christian polemics and apparently derived from a Syriac version, with possible traces of the Targum of the pseudo-Jonathan (Gray, in *Actes du xiv. congrès international des orientalistes*, i. 182–186, Paris, 1906); and other fragments in an Iranian dialect (probably Sogdian) have recently been discovered by the expedition of Grünwedel and Le Coq to Chinese Turkestan (F. W. K. Müller, *ABAW*, 1904, Appendix, pp. 34–37 and *SBAW*, 1907, pp. 260–270).

whose influence is also traceable in the later forms of the South Slavonic Bible which was originally inspired from the East. Its influence was first broken by Humanism, which made the original text generally accessible, and also sought to replace the Vulgate of the monks by Latin translations of its own: Santes Pagninus, Erasmus, Seb. Münster, Castellio, etc. The first really effective factor, however, was the German Reformation. The importance of Luther's translation is shown by a twofold consideration. In the first place, in spite of many attempts in Germany, no other translation has been able to secure a position alongside of it. In especial the numerous attempts of the Catholics prior to the Council of Trent to oust Luther's by another translation show the great importance of his work, and all the more so since he was able to show that they systematically stole from him. The later Protestant attempts are not, as a rule, intended to enter into competition with Luther's Bible, but are meant for scholars. In the second place, even outside of Germany, the popular translations of the Reformation period are nearly all influenced more or less by it. Christian III. of Denmark gave an express order that the Danish Bible was to resemble Luther's as nearly as possible. There are further to be named as modelled on Luther's work—apart from the Zürich and Low German Bibles mentioned above—the Swedish, Finnic, Lithuanian, Lettic, Slavonic, Croatian, and Hungarian Bibles. From the time of Tindale the English Bible has contained a strong stream of Lutheran influence, which the Authorized Version still preserves, in spite of the opposing influence of the Douai Bible, which goes back to the Vulgate, and of the Genevan Bible of the Calvinists, which follows Beza. There is a remarkable difference between the evolution of the English Bible and that of the German. Luther's work was the first and the best, while in England the first work did not prove at once the matchless masterpiece, but the Bible finally established itself as the product of a century's labour. This enables us to understand how it was that England decided upon a thorough revision sooner than Germany, where the revision (1863–1892) was executed with the greatest caution.

Properly speaking, the Romanic translations are the only ones belonging to the Reformation that are entirely independent of Luther. In these, Humanism (Castellio, Calvin, Beza) won a greater influence, but when they were not killed altogether by the counter-Reformation they underwent constant alteration.

In most lands the following centuries have seen all sorts of attempts at improvement and also new and scholarly translations. These, however, cannot cope with the work of the fundamental creative Reform period. Notice must be taken, however, of the isolated attempts which were made from time to time by Catholics when a warmer Christian piety inspired the effort to find relief from Jesuitical oppression. In the 19th cent. an entirely new element appears. The work of Bible-translation has been greatly stimulated by the B. and F. B. Soc. in the interests of flourishing missionary enterprise. What we saw in the early Christian centuries, viz. that the effort to make the Bible available gave to peoples a written language and literature, is being widely repeated nowadays. In the year 600 the Bible (or parts of it) existed in about 8 languages; by 1500 it had been translated into 24; in 1600 the number had risen to quite 30 (the older translations being now replaced by new). During the last 100 years the number has advanced to nearly 400, and there is hardly a tongue in the world into which at least portions of the Bible have not been translated.

3. **Circulation.**—How great the number of MS Bibles once in existence was we can no longer reckon accurately. Probably we are inclined to under-estimate them. The Diocletian persecution made away altogether with those of the first three centuries which did not perish naturally through the frailty of papyrus. The storms of natural migration in the W., the inundation of Arabs in the E. and S., and the outbreaks of iconoclasm in Byzantium, were responsible for great destruction. There were times when parchment was so scarce that Bible MSS (contrary to the command of the Church) were used as palimpsests. Later on they were employed for binding. Remembering all this, we shall draw no false conclusion from the small number still to hand. While the circulation in ancient times was great, and in Byzantium even enormous, in regard to the W. at the beginning of the Middle Ages we must indulge very modest notions. According to the old book-catalogues (see G. Becker, *Catalogi bibliothecarum antiqui*, 1885), a royal foundation like St. Vaudrille about the year 800 did not possess a complete Bible, and Boniface had to be satisfied with parts. But from century to century the circulation increased. When we find the Bible altogether wanting in the later catalogues of the 13th cent., the explanation must be that it was not inventoried with other books. The number of MSS grew steadily with the increase of wealth, culture, and religious interest. Of Greek MSS we possess still the two complete Bibles of the 4th cent. and the two belonging to the 5th cent. (א, B, A, C). There are also 7 portions of the OT, and 14 of the NT, besides fragments on papyrus, the number of which increases every year. Belonging to the 6th cent. we have 5 OT and 28 NT MSS, and belonging to the period between the 7th and the 10th cents. there are 18 of the OT, and about 80 of the NT, all these being uncial MSS. To these have to be added about 2000 Gr. minuscule MSS of the NT which date from the 9th to the 16th cent., while the number of OT MSS preserved cannot as yet be accurately determined. The Latin MSS which we still possess go back to the 4th cent., as do also the Syriac and the Coptic. We are acquainted with 400 Latin and 100 Syriac MSS of the NT dating from the 4th to the 10th cent., and 3000 Latin MSS in all. So far as the OT is concerned, no classification has been made. When it is remembered what a labour it was to make a fair copy even of one Gospel, it is possible to estimate the pains that were devoted to the multiplication of the Bible. But when we think of the millions of Christians who have lived since the 4th cent., those numbers will seem rather

small. For the later part of the Middle Ages about 170 MSS of Wyclif's Bible, and over 200 German MSS enumerated by Walther (see § 2), give some idea of the spread of the Bible.

The invention of printing altered the conditions. Every setting up of type meant a great number of copies. Till this time every copy was a thing by itself, with its own faults and its own excellences, but these were now extended to the whole edition, which might run to any number desired. In the first stages of printing the editions were not large. Gutenberg and Schöffer cannot have made more than from 100 to 200 impressions from every setting, and the prices were so high that it still paid to copy a printed pattern by hand (see the Greek NT copied by Zwingli from Erasmus's ed. at the Stadtbibliothek of Zürich, C. 163). Even when an edition mounted to 1000 copies, its circulation remained within narrow bounds, as is proved by the numberless reprints. Up to 1500 there have been counted 109 Latin printings, and from 1500–1520 the number is 56. In German there were 17, in Italian 10, in French 4, and so on. Even when these figures are multiplied by 100, or even 1000, we reach no great total. In the first two centuries of the Reformation the Bibles reached what according to our present ideas is a very small circulation, however large it may seem as compared with past ages.

Improvements in the process of printing made larger editions possible. Freiherr von Canstein could boast that in his establishment at Halle, between the years 1710 and 1719 he had made 100,000 copies of the NT in 28 editions, and 40,000 Bibles in 16 editions (8 in 8vo, and 8 in 12mo). Now the B. and F. Bible Soc. prints in one year almost 1,000,000 Bibles, more than 1,000,000 NT's, and 3,000,000 parts of the Bible; in all 5,000,000. We must remember, too, that the oldest printers earned their living by their work, that the Bible was an article of commerce, and that, although Luther took no pay for his services, yet the printers made a large enough charge. It was the voluntary support of friends of the Bible like the Baron von Canstein († 1719), the Society for Promoting Christian Knowledge (since 1698), and the Christentumsgesellschaft of Basel, extended by Urlsperger (since 1780), that made it possible to aim at a real circulation of the Bible among the people. This was finally realized by the Bible Societies which after the foundation of the B. and F. B. Soc. in 1804 established themselves everywhere (Basel, 1806; Stuttgart, 1812; Berlin and Dresden, 1814; America, 1816; Paris, 1818, etc.).

In many places in our own day every married couple is presented with a Bible as a marriage gift. Every schoolboy possesses one. Among soldiers the Bible is diligently circulated, and in the mission field it is spread with great zeal. Often it is given for nothing, and usually the price is astonishingly small. Never has the Bible been so easy to acquire. What one cannot but regret is that this extensive circulation does not go hand in hand with a high estimation of the Book of books among the great mass of men. The colporteur was right when he gave it as the result of his 20 years' experience, that to make a present of the Bible is easy but not effective.

LITERATURE.—P. Schaff, *A Companion to the Gr. Test. and the Eng. Version*, 1888.

III. *AUTHORITY OF THE BIBLE.*—I. **Titles and citations.**—That the Bible was authoritative was an axiom taken over by the Church from the Synagogue (see above, I. 1). The words which the first Christians used to make reference to the OT, 'The Scripture saith,' were extended by their successors to the whole Bible—OT and NT alike. 'Scripture saith,' or 'It says,' was synonymous with 'God saith.'* Soon the Scripture came to be known as ἡ ἁγία γραφή, *sacra* or *divina scriptura*, or, to commemorate its formation out of single books, αἱ θεῖαι γραφαί, *divini libri*. From the 3rd to the 5th cent. the Latins gave the name of *lex Dei* to the whole. Vincent of Lerinum used the designation *sanctæ legis volumina*. The Greeks described it as τὰ ἱερὰ λόγια (= 'oracles'). τὰ βιβλία is the favourite expression in Chrysostom. From *biblia(-orum)* was derived in late Latin the feminine form *biblia-æ* (cf. *gaudia*), and this form was carried over into all other tongues. *Sacra pagina* and *sacra elogia* were used by mediæval scholars, and at the time of the Reformation the usual designation was *literæ divinæ* or *sacræ*. The expression *veritas dicit* (= 'Scripture saith'), as distinguished from *auctoritas* (= 'ecclesiastical doctrine'), was taken by the scholastics from Augustine, who, however, employed it specially of the words of Jesus.

A single verse from the Bible was always considered the word of God. In the Middle Ages occasionally, and frequently by Carlstadt and Zwingli, *verbum Dei* is used to describe the whole Bible. Luther employs 'Word of God' in a sense different from the Bible or Holy Scripture (= 'verbum prædicatum'), but the terms are interchangeable even with him. In later Protestant theology the phrase is common. It is a favourite expression of Pietism, which also introduced hymns on the Bible, *e.g.* 'Teures Wort aus Gottes Munde' (Benj. Schmolck, † 1737).

Often the whole Bible is designated by its parts. As the Jews used the phrase 'Moses and the Prophets' (Lk $16^{29ff.}$, Jn 1^{45}) or 'the Law and the Prophets' (Mt 5^{17} 7^{12} 22^{40}, Lk 16^{16}, Ac 24^{14} 28^{23}), so we find 'the Lord and the Apostles' or, more seldom, 'the Gospel and the Apostles.' In Hippolytus this fourfold division is the usual one, while Hegesippus says, 'the Law and the Prophets and the Lord,' and Clem. Al. 'the Prophets, the Gospel, and the words of the Apostles.' The whole Bible is also referred to as 'the Prophets and the Apostles' (*e.g.* Murat. Canon, 79 f.). This corresponds to the *Vetus et Novum Testamentum* or Tertullian's *Instrumentum*. 'The Lord' was used specially to indicate the Gospels, so much so that the Marcionites claimed the Lord as the author of their Gospel, just as they claimed Paul as the author of their Apostolos (Adamantius, *Dial.* ii. 13, p. 84). As the Prophets and the Apostles also acquired their authority from Him, it was possible to say, 'the Lord in His Prophets and Apostles.'

With the growth of scientific accuracy, the formula of citation became more adequate. The deliberate indefiniteness of Philo (εἴρηται γάρ που καλῶς) is still found in a Gnostic like Valentinus (ὥσπερ εἶπέ τις), but the growth of Biblicism does not favour it. Paul mentions the prophets by

* B. B. Warfield, *PRR*, 1899, pp. 472–510.

name (*e.g.* Ro $9^{26.27}$), and it becomes general to name the specific books: *Μωϋσῆς ἐν Ἐξόδῳ, ἐν τῇ πρώτῃ τῶν Βασιλέων, Παῦλος ἐν τῇ πρώτῃ πρὸς Κορινθίους*. Tertullian says, 'Habes Genesim, habes Danielum.' In one instance Origen defines the passage more exactly by the *στίχος* number. The Eusebian sections of the Gospels, arranged in ten canons for purposes of comparison, served the whole Middle Ages as a handy concordance. After the 4th cent. we meet with chapter-divisions, which differed among the Greeks and the Latins. Citations were made by the titles or the first words of the chapter. It was not till the Middle Ages that they were made by the number of the chapter. This became common in the 13th cent., when the Paris Bible established itself everywhere (see above, II. 1). There we have the chapter-divisions of Stephen Langton, with 8 subdivisions of each chapter (A–H), serving the purpose of the *concordantia biblica* of the Paris doctors. Not till modern times did the easy method of verse-enumeration come in, and with it the practice of exact citation. The germ of this was found in a concordance which R. Isaac Nathan formed in 1447 (printed Venice, 1523; taken over in Santes Pagninus's Lat. Bible, 1528). The NT was divided into verses by Robt. Stephen in 1551, on a journey from Paris to Lyons. The fact that it was done 'inter equitandum' is, unfortunately, only too evident. Moreover, in different editions there are variations. Above all, the bad habit of setting the number of the verse in the text, or printing each verse separately, destroyed the connexions, and deepened the impression that every verse was complete in itself. As the result of Bengel's initiative, the custom has recently become more general of making larger paragraphs. On the other hand, the minuteness characteristic of recent critical exegesis has made an advance upon the division into verses, and such citations as Ro 1^{16a} or Rev 1^{1d} are now used.

LITERATURE.—C. R. Gregory, *Prolegomena*, 140–182; Scrivener, *Introd.* i. 56–71; O. Schmid, *Über verschiedene Einteilungen der h. Schrift*, 1892; E. von Dobschütz, *Vulgatastudien*, 1895; J. Chapman, *History of the Vulgate Gospels*, 1908.

Formulas of citation have another side. Veneration of the Holy Scripture and its authors finds increasing fullness of expression in them. Soon what we meet with is not 'Isaiah says,' 'Peter (or Paul) writes,' but 'The Holy Prophet Isaiah says,' 'The Holy Apostle Peter writes,' and 'According to the Blessed Paul.' In this connexion, the otherwise almost valueless epithet of martyrs, *μακάριος* (*beatus*), continued long in use. Even this, however, is not enough. Peter must be called *ὁ κορυφαῖος τῶν ἀποστόλων, princeps apostolorum*, John *ὁ ἐπιστήθιος*, Paul *ὁ τρισμακάριος*. The ordinary title is *οἱ θεηγόροι*. In the Byzantine Renaissance *δαυιδικῶς* or *ψαλμικῶς εἰπεῖν, Σολομώντεια ἔπη*, are favourite phrases to introduce quotations from the Psalms or Proverbs, and a citation from the Gospels is hardly ever introduced without words like *τὸ ἅγιον εὐαγγέλιον διαπρυσίως βοᾷ*. As compared with such Eastern verbosity, Western formulas always appear simple. But *sanctus apostolus dicit* has really the same significance. It is an expression of unconditional veneration, and emphasizes Scriptural authority. It makes no difference here that in the Middle Ages prophets and apostles shared this epithet with the doctors of the Church. These also possessed the weight of authority. The Reformation retained 'St.' Matt., 'St.' Mark, etc., and in Romance lands and England 'St.' Paul is still usual. It was the period of 'Enlightenment,' with its purely human handling of Scripture, that first stripped off, even in the form, all such symbols of authority, returning thus to the simplicity of the early Church. With a false conception of accuracy, the Gospel 'according to' Matthew, Mark, Luke, or John was spoken of, the ancient Church desiring to express by *εὐαγγέλιον κατὰ* . . . nothing more than the unity of the Gospel amidst the variety of its literary forms.

However various these formulas may appear, they nevertheless establish the one important fact of the unconditional authority of every word in the Bible. The mention of the various authors is due to a conscious or unconscious instinct for accuracy. It is not upon them, but upon the Bible itself, that authority rests. In every century we find numerous instances of wrong sources given for quotations (*e.g.* Mt 27^{9}). This only shows how little depended upon any personal authority. The prophetic name is a guarantee of Scripture; prophets and apostles are possessed of authority because they are 'holy Scripture,' and all that stands in Scripture is authoritative, even when it is neither a prophet nor an apostle who speaks, but a very unholy mortal. Mt 19^{5} quotes a word of Adam as God's word. Jn $11^{50f.}$, spoken by Caiaphas, contains a Divine prophecy. The Bible as a whole and in every word of it is authoritative.

LITERATURE.—On the names of the Bible, see Suicer, *Thesaurus*, 1682, *s.v.* *βιβλίον, γραφή*; du Cange, *Glossarium*, *s.v.* 'Biblia.' On citations, see Harnack, *Dogmengesch.*[3] i. 337 ff. Formulas are collected, *e.g.*, from the *Didascalia* by Achelis, p. 333; from Didymus by Leipoldt, 38; from Diodorus by Harnack, 56.

2. **Inspiration of the Scriptures.**—Like the authority of the Bible, the idea of its inspiration was taken over from Judaism (cf. I. 1). No distinction was made between the Divine revelation accorded to the prophets and its preservation in writing (cf. Ro 1^{2}, He 1^{1}). We have the statement in 2 P 1^{21} that 'holy men of God spake as they were moved by the Holy Ghost'; but, besides this, the Scripture itself is said to be *θεόπνευστος* in 2 Ti 3^{16} (whence 'inspiration'). Descriptions like those of Ezk $1^{3f.}$, Zec $1^{8ff.}$, Rev $1^{10ff.}$ point to an ecstatic origin, and this idea, helped by the influence of Plato and Philo, was extended to writings that were not apocalyptic (Justin). At the same time, there is another view, according to which God speaks to men without any extraordinary ecstatic operation. Paul does not think that his Epistles are due to any supernatural inspiration. He draws a clear line between his own opinions and the absolutely authoritative words of the Lord, yet he claims the possession of the Spirit, and therefore authority for what he writes (1 Co $7^{10.25.40}$); so also Clement of Rome (i. 59), and even Origen (*de Orat.* 18). The pseudo-Clementine Homilies (xvi. 18) formulate a theory to the effect that the revelations which are not due to ecstasies (*ἄνευ ὀπτασίας καὶ ὀνείρων*) are preferable to those which are, and the Church adopted this view. She dismissed books like the *Shepherd* of Hermas, and repudiated the Montanistic prophets and similar phases; but she claimed inspiration for her bishops. And if Ignatius and even Cyprian still think of visions and ecstasies in this connexion, the inspiration of Synods, which Constantine solemnly proclaimed so early as the First Ecumenical Council of Nicæa, had little in common with ecstasies. The *θεοφόροι πατέρες*, or inspired Fathers, contended with arguments drawn from the Bible and logic, sometimes even with the fists, and the result depended upon the decision of the majority, while ecstatic revelation rests on the authority of a single inspired person. At the Council of Trent it was a standing joke that the Spirit came from Rome in fetters; and with regard to the infallibility of Papal utterances, no one ever dreamed of ecstasy. Naturally the idea of the Bible's inspiration corresponded with this. The Alexandrians were critical of style. Eusebius and Augustine talked harmlessly of the literary methods of Biblical authors—that was in line with their ideas of inspiration. When, however, exegetical science weakened, and the popular monastic ideas of visions

and ecstasies spread, we find these notions appearing more frequently, and in popular literature they found vivid expression. Prochorus' picture in the Acts of John of how the Gospel of John came into existence (ed. Zahn, p. 154 ff.) shows that its origin was conceived as quite ecstatic. This influenced art, and the task of investigating the way in which inspiration is represented would repay labour. As the Muse appeared to the poet Aratus, so the Divine Wisdom appeared to the Evangelist Mark (Cod. Rossan.). A hand beckons out of heaven; a dove whispers in the ear; we hear also of inspiration following the drinking of a cup (2 Es $14^{37ff.}$). The idea of a book-roll which the seer had to swallow (Ezk 3^1, Rev 10^9) has its artistic analogy in the so-called *traditio legis*, 'giving over of the law,' to Peter. So far as is known, the notion of a book fallen direct from heaven, like that which Oriental Gnosticism developed in regard to the book of Elxai, and to which ecclesiastical piety gave some colour in the so-called 'letters from heaven,' was never applied to the Bible as such. Athenagoras (*Leg.* 9) illustrates the operation of the Holy Ghost by the picture of the flute-player who blows into the instrument and makes it sound. Ps.-Justin (*Coh.* 8) and Chrysostom speak of the lyre upon which the Holy Ghost plays; there are different strings, but they give forth a harmony. The conception is quite spiritual. Much more realistic is the picture of the pencil (*stylus*) of the Holy Spirit which we find in Gregory I. In the Middle Ages the representation gradually took a more popular form, and single individuals like Agobard of Lyons and Abelard protested against it in vain. It was never thoroughly developed in theory. Luther's lively piety, like the oldest Christianity, combines faith in Divine inspiration with quite human ideas as to the method: he gives a vivid picture of the way in which one prophet uses the writings of the others. In his hands the ancient traditions which mediævalism brought down alongside of its theory of inspiration became of importance again. But orthodoxy did not follow him here. It ranged itself on the side of the strictly supernatural idea of inspiration, and carried the view to its extremest consequences. The Biblical authors are only the hands and pens of the Holy Spirit. They are perhaps *notarii et actuarii*, but never can they be called *auctores*. That epithet belongs to God or to the Holy Ghost alone. From Him proceeds not only the impulse to write, but also the matter and the method (*suggestio rerum et verborum*). In the end all human participation in the composition of Scripture is denied. Men wrote, but did not understand or know what. This inspiration of the letter, applied to the Textus Receptus of the NT and to the Textus Massoreticus of the OT, is at last extended to the mere accessories; above all, to the punctuation of the Hebrew (John Gerhard, †1637; John Buxtorf, father, †1629, and son, †1664). The theory was embodied in an ecclesiastical confession (*Formula Consensus Helvetici*, 1675), but as a theological system it was soon overturned by actual facts. Mill's multitudes of variants destroyed the theory of textual inspiration. Deism and 'Enlightenment' sought out every little contradiction and absurdity. Biblical philology renewed the criticism of style. Soon rationalistic theology spoke of a purely human Scripture.

The attempt of 19th cent. theology to revive the old orthodox doctrine has been vain (Kölling, *Theopneustie*, 1891). Even in the milder form, which added to the personal inspiration of prophets and apostles (Schleiermacher) a particular guidance only *in actu scribendi* ('kanonische Inspiration,' Luthardt), it was not able to secure a hold. The newest phase of religious-historical inquiry gives wide scope to ecstasy again, but Protestant theology tends always more and more to the conviction that the old conception of *θεοπνευστία* is not the one best suited in our time to express the actual significance and authority of the Scripture. Inspiration applies to men, not to written words.

LITERATURE.—J. Delitzsch, *de Inspiratione script. s. quid statuerint patres apostolici et apologetæ sec. sæculi*, 1872; Ed. Rabaud, *Hist. de la doctrine de l'inspiration des saintes écritures*, 1883; W. Sanday, *Inspiration*, 1893; H. Cremer, in *PRE*[3] ix. 183–203: Kähler, *Zur Bibelfrage*, 1907; A. Houtin, *La Question biblique au xxe siècle*, 1906, 27 ff.; F. Watson, *Inspiration*, 1906; M. Dods, *The Bible, its Origin and Nature*, 1905.

3. **Doctrine.**—Of course it is not enough to see in the books of the Bible only historically interesting monuments of old Israelite and old Christian literature. They were and are more than this to Christendom. From the beginning they were held to be immediately binding upon the present.

One of the first tasks of Christianity was to put the OT in the same position of authority as the NT. Primitive Christianity, filled with the living power of the Spirit, strongly emphasized the newness of the Divine revelation given in Christ as compared with the OT stage of religion. Paul did away with the Law which was the kernel of the OT in Judaism, and yet he argued with words of 'the Law.' He cast aside the nomistic system, and yet held the Law to be Holy Scripture. That could not continue. The Gnostics and Marcion rejected the authority of the OT altogether; the Church sought to discover a more positive relationship to the OT Law. In the ceremonial rules of the OT the writer of the Epistle to the Hebrews found the type and prophecy of the saving work of Christ. Barnabas considered that he had only to transmute the Ceremonial Law by allegorical interpretation into moral commandments to show that it was constantly obligatory, and that the verbal understanding of it by the Jews was a mistake into which the devil had brought them. I Clem. comes very near to deducing the principles of Christian worship from the ceremonial system of the OT, and the 3rd cent. actually did so. Tertullian (*de Monog.* 7) extracts laws for the Christian life from the OT. Later authors like Cyril of Alexandria make the sacerdotal and sacrificial law somewhat spiritualized, the basis of Christian ecclesiastical order.

When the difficulties which arose in the controversy about legalism were removed, the value of OT prophecy caused the OT to be claimed as the sacred book of Christendom, in opposition to the Jews, who made it their own special possession, and it was declared to be inseparably associated with the NT. The same Christ, the same Spirit, spoke in prophets and apostles. Marcion's criticism only served to make the Church all the more zealous in maintaining the complete unity of the two Testaments. They were the two breasts of the Church (Hippolytus on Canticles, i. 344). Very soon all sense of difference, all thought of any gradation in time, disappeared. Out of the unity of the Spirit there was evolved a mechanical uniformity, a complete equality of the contents of all parts. Even the first verses of Genesis were made to witness to the deepest mysteries of the Christian faith, the high dogmas of the Trinity, and the participation of the Son in Creation. ἐν ἀρχῇ ἐποίησεν = ἐν τῷ υἱῷ (cf. Harnack, *TU* i. 3, 130 ff.). Protestant orthodoxy went even further than this in the discovery that בְּרֵאשִׁית בָּרָא contained the initial letters of the Trinity, אָב, בֵּן, רוּחַ twice over.

In spite of this purely dogmatizing method, it was never altogether forgotten that revelation underwent an historical development. It is this feature that constitutes the peculiar charm of the Antiochene school for us, and raises the Dutch federal theologians above their own orthodox pre-

decessors. In the new orthodoxy of the 19th cent. the Erlangen school (Hofmann) laboured this thought at great length. These, however, are only individual instances, and hardly affect the doctrine of Biblical authority. They did not attain to a recognition of any differences of value in the books of the Bible. Whatever was found in the Bible was canonical and authoritative.

The dogmatic elaboration of this theory began with Origen's περὶ ἀρχῶν, and his results were adopted by his pupil Theognostus. As the Synagogue never dealt systematically with questions of the kind, the Greek theology had quite a new field here. In the West, Augustine's *de Doctrina Christiana* laid the foundation. Augustine declares repeatedly and strongly that only the canonical Scriptures are unconditionally binding (*de Nat. et Grat.* lxi. 71; *Epist.* lxxxii. 3. 24). But we find none the less that he sets ecclesiastical authority alongside of, or rather above, the authority of the Bible more markedly than the Alexandrians. The often-quoted remark is well known (*c. Epist. Manich.* 6): 'ego vero evangelio non crederem nisi me catholicæ ecclesiæ commoveret auctoritas.' This supplied the Middle Ages with a standard. The authority of the Bible was the very highest: it was absolutely infallible; everything that was found in it had to be believed whether understood or not. All this, however, was due to the living authority of the Church, and that because of two considerations: (1) it was the Church that formed the Bible as such; the Church decided which books were canonical and which were not; and (2) the Church alone had to say what was contained in the Bible, in other words, how it was to be interpreted. Even heretics appealed to the Bible, and often with a great show of right. That made a superior authority necessary—the Church. Tertullian declares that in combating heresy the Scriptures should not be referred to for proof (*de Præscr.* 19). Similarly Salvian (*de Gub. Dei*) complains that the Arians drew their proofs from the Bible, while the Catholics employed force. Naturally it was always maintained that the authority of the Bible lay in itself, came from its Divine origin. The Church could never invest with canonical authority a book that was not Divine. But—and this is the important point in the mediæval Catholic conception—the Church took over the guarantee of canonicity. Hence came the fixing of the Canon by Councils, from the Synods under Damasus and Augustine down to the Councils of Trent and the Vatican. The correct interpretation, however, was obtained from the 'unanimous consent of the Fathers,' and in this way the Fathers, who were credited to a certain extent with the same inspiration as the Scripture, came to be equally valuable authorities. Employed in the first place to interpret, they were afterwards called in to supplement Scripture. Thus there arose the idea of the double tradition, ἐγγράφως and ἀγράφως as the Greeks said, *in libris scriptis et sine scripto traditionibus* as the Council of Trent expressed it. The question whether the revelation given in Scripture was sufficient to answer every religious inquiry received different replies within the Catholic system. The really correct answer was in the affirmative, and allegory supplied a means of drawing anything out of Scripture that was wanted. In mystic circles, however, the view was always maintained that God supplemented what He had given to the Church by immediate revelations to chosen individuals. Montanism, which brought a new and extensive revelation, the Church repudiated, just as at a later date she did also the *evangelium æternum* of the Spiritualists and the visions of many fanatics. But the visions of Saint Birgitta and similar phenomena she acknowledged; and at the present time the question is being vigorously discussed in Catholicism, how far the visions of Catherine of Emmerich can be safely reckoned credible supplements to the Gospel story in regard to the life of Jesus and the Virgin Mary. From the time of Anastasius of Sinai until the present day there have not been wanting pious men who believed that they could cajole or wrest from evil spirits some light upon the mysteries of the other world.

In this domain the Reformation brought the crisis. The 'reformers before the Reformation,' as Wyclif, Hus, etc., were called, were representatives of Augustinianism, and as such of a Biblicism within Catholic ecclesiastical bounds. Zwingli and Calvin represent a Biblicism that overran these bounds but finally took its stand upon the same formal principles. Creeds of the Zwinglian and Calvinistic type nearly all contain decisions in regard to the Canon of the Bible. It was quite unobserved that this only continued ecclesiastical or synagogue tradition in opposition to the decisions of the Roman Church and the Council of Trent. It is quite otherwise with Luther. Not only did he shatter the authority of the Pope, the Councils, and the Fathers, but also from the idea of the dominating authority of Scripture he stripped off everything formal. Not because something was found in Scripture but because it witnessed to Christ, because he traced God's word in it, was it authoritative in his view. 'The right principle to follow in the criticism of all the books is to ask whether they show Christ or not, for all that is Scripture points to Christ (Ro 3^{21}), and St. Paul wants to know nothing save Christ (1 Co 2^{2}). What does not teach Christ is not apostolic even though St. Peter or St. Paul teaches it; what preaches Christ is apostolic even though it comes from Judas, Annas, Pilate, or Herod' (Pref. to Ep. of James, 1522, Erlangen ed. 63, 157). This valuation according to content, harmonizing as it does with personal experience, gave Luther the opportunity not only of criticizing the ecclesiastical Canon (he makes the NT end with 3 John and calls Hebrews, James, Jude, and Revelation an appendix like the OT Apocrypha), but also of claiming value for other writings like the *loci* of Melanchthon, and investing them with the same value as the Bible. It is true that Luther did not carry this principle to its logical conclusion. His contests with fanatics who trusted entirely to the inner light compelled the Reformer, who was at heart conservative, to lay all the importance on the historically given revelation, *i.e.* the Scripture. However much he distinguished in theory between the word of God and the Scripture, yet he found it easy to identify them, and he could then (as in the Lord's Supper) insist stubbornly upon the letter of the Scripture. The Lutheran Church has inherited both these views from him. Lutherans always speak of the *verbum Dei*, but they do not imply any formal limitation to certain books (no Lutheran confession contains a catalogue of the Canon). The phrase has reference only to the content of the Bible, the revelation of God's grace in the Law and the Gospels. On the other hand, the Lutheran Church developed the doctrine of the authority of the Bible in scholastic fashion, so that it became possible to speak of Bibliology as well as Theology and Christology. And Bellarmine had a certain amount of right on his side when he spoke of the 'paper Pope of the Protestants.' Nevertheless the distinction between a formal and a material principle in Protestantism belongs to the Calvinistic theology, and first became a feature of Lutheran dogmatics in the 19th century (Ritschl, *Zeitschr. f. Kirchengesch.*, 1876, 397 ff.).

In opposition to the mediæval conception which,

under the influence of the Neo-Platonic idea of God and in the interests of ecclesiastical authority, emphasized the mysterious, difficult, or unintelligible elements and the insufficiency of the Bible, Protestant dogmatics laid all the stress on its clearness and sufficiency (*perspicuitas et sufficientia*), and emphasized, along with its authority, its *efficacia* as a means of salvation. This made its authority—in the true Reformation spirit—altogether dependent on the *testimonium Spiritus Sancti internum*. But this witness, in consequence of the mechanical way in which inspiration was conceived, was extended to things which had nothing to do with the inward experience of a pious Christian. Pietism, having no great scientific interests, was very well satisfied; honest Rationalism admitted that it had never perceived any trace of this witness of the Holy Spirit. The scholastic system was broken up, and no artificial reconstruction was possible. Under Schleiermacher's lead the theology of the 19th cent. worked zealously and honestly to solve the problem of how the authority of the Bible should really be conceived and be impressively founded. There was plenty of fierce controversy. In opposition to the overthrow of all authority by the liberal theology, conservative circles sought support for the authority of the Bible elsewhere. Grundtvig seizes, as Lessing did, upon the Apostles' Creed as the living word of God. Calixtus's *Consensus patrum quinquesecularis* (1629) finds a powerful echo in the Oxford Movement in England. Between the two extremes numerous endeavours of a mediating character assert now the religious interests attaching to the absolute authority of the Scripture and now the scientific aspects of its historical limitations. It has to be said that a satisfactory solution will be found only when the Bible is felt to speak to the human heart with the authority of God. This experience must be expressed in clear theological terms. In religious matters the authority of the Bible is absolute, but only in religious matters. Its authority is internal, not external.

4. Practical significance.—From the very first the authority of the Bible was concerned with dogma, that is to say, it was used to prove the articles of faith. It was in this way that the Messiahship of Jesus was demonstrated by primitive Christians and afterwards by apologists in the controversy with Jewish Christians. Cyprian brings together *testimonia adversus Judæos*, *i.e.* proof passages, and he thus provides the pattern of Scriptural proof for many centuries. Soon this method came to be employed in the dogmatic disputes arising within the Church. Athanasius collects proof from Scripture of the unity of the Son with the Father—a course that was all the more necessary since the Arian party pointed out the un-Biblical character of the word ὁμοούσιος. The Cappadocian Fathers gathered proof passages in support of the Trinity. In the Monophysite and Monothelite discussions the practice was extended, with the difference that citations from the Fathers were now added to those of the Scripture; and in the disputes regarding iconoclasm John of Damascus and the patriarch Nicephorus as well as the hostile party made collections of the same kind from Scripture and tradition. Augustine begins his work *de Trinitate* with a very detailed Scripture proof (i.–vii.), and then (viii.–xiii.) adds a dogmatic elaboration. This example was followed by all scholastic theologians, and the practice attained to still greater importance after the removal of all other authorities by the orthodox theology of Protestantism. For every single topic of the system all *loci probantes* in the Scripture were carefully gathered, and their interpretation became more and more a subordinate discipline to scientific dogmatics, viz. the so-called *theologia biblica*, out of which, after a long process in which it underwent complete transformation, there arose at last the independent discipline which is now called 'Biblical Theology.' Modern theology has long seen that an enumeration of Scripture passages torn from their context is not only a forcing of the Bible but also no real proof of the dogma in question. Dogmatic theology, however, emancipates itself but slowly from the old method of Scriptural proof. It is bound to do so more and more, because with the grossly supernatural idea of inspiration the proof which rests upon it vanishes also. How different is Hofmann's attempt to reach a new kind of Scripture proof, in which everything is made to turn upon the context—upon the general view of Scripture. At the present day even this is considered by most to be too external a method, especially as Hofmann's attempt to show the organic unity of the whole content of Scripture cannot be described as happy. It is somewhat different when P. Lobstein sets the organic method of proof from Scripture over-against the atomistic. It is only a real harmony with the fundamental ideas of the Bible that can be legitimized by dogmatics. Wendt departs from the normative significance of Scripture, and has recourse to the teaching of Jesus as the only norm.

The old theology took pride in ranging itself under the authority of the Bible, in making its infallible statements the basis of its findings. As a matter of fact, what it did was to make the Bible subservient to its system. It put its views into the Bible only to drag them out again in emphasized form. That is perhaps made most evident by the numerous works on the *Hexaëmeron* (the 'six days' in Gn 1). What was there that the short account of creation was not made responsible for? All the knowledge which the cosmological speculation of Greece and late Judaism thought it had discovered was held to be already contained in Gn 1. This was the case everywhere—an entirely mechanical idea of revelation, as if God had torn asunder the details of His revelation and strewn them over the whole sacred book, in order that men might painfully gather them together again, as if He had purposely kept things mysterious in order that theologians might sharpen their wits on them.

But the Bible returned good for evil. It admitted of continual glimpses into the true nature of revelation, into the actual course of history, and provided facts which necessitated the correction of the dogmatic system. If the theoretical recognition of the right relationship between Scripture and doctrine is an achievement of recent times, yet it is possible to arrange the whole history of theology and dogma in particular under the point of view of a gradual process of biblicizing. In ancient as in modern times, there were instances of theologians who did not make the Scripture a cover for their own ideas, but propounded and solved their problems from the Bible. To these belong the Antiochene theologians, and above all Calvin, whose *Institutio* deals with much whose only claim was that it seemed to him to be required by the Bible. In later times, Bengel and J. T. Beck, with the Württemberg Biblicists as a whole, proceed on the same lines. The history of salvation which is contained in the Bible con-

tinually reacts against the attempts of dogmatics to do violence to it. As we learn from the apocryphal Acts of John, the Greeks made out their Saviour to be a docetic appearance only, and the Cross an idea; but the doctrine of Cerinthus is already a compromise with actual history: Jesus, a true man, for a time bearer of the æon Christ. Our Fourth Gospel goes further in the direction of actuality: Jesus Christ, wholly man and at the same time the full revelation of God. Alongside of the Synoptic representation of the human life of Jesus, this might appear in the nature of a theological supplement. In combination the effect was more potent. Not the Arian but the Nestorian Christology indicates a reaction of Bible history against dogmatic speculation. In Monophysitism Docetism takes a new lease of life. Alongside of the Gospels stood Paul. His influence was hardly felt for centuries, and the Greek dogmatics can be understood almost without him, but when Augustine was captured by him, Paulinism kept Christendom busy until in Luther a herald of Divine grace still more congenial to the Apostle of Justification by Faith arose. As in the ancient Church, so also was it in the modern. The theological labours of orthodox scholarship always moved further away from the facts of history. Each party endeavoured to establish the truth of its own doctrine of the Bible. Hence Werenfels of Basel (†1740) said of it:

> 'Hic liber est in quo quærit sua dogmata quisque, invenit et pariter dogmata quisque sua.'

But the proof from Scripture, however perverted and coerced, necessitated the continual study of the Bible, until in the time of 'Enlightenment' it shook off the chains of dogmatic tradition and established its claim to existence again. This becomes even clearer when we follow up the history of piety (see below, VII. 2, p. 612).

Though the authority of the Bible is concerned chiefly with dogma, it is not exclusively so. The Bible regulates the whole Christian life, and especially the life of the Church. Here more than anywhere the OT foundation comes to light with its legal conception (cf. p. 589). It is sufficient to recall how large a space the Decalogue occupies in Christian instruction. Along with the *præcepta Dei* there appear the *consilia evangelica*, the latter often not less strictly handled than the former. In Catholicism the Bible is the foundation of ecclesiastical organization as well as of ecclesiastical law. Here, indeed, the proof from Scripture is as arbitrary as in dogmatics. All Christian festivals and the hours of prayer were grounded on the Bible; also the legal rights of the clergy. Such an un-evangelical theory as the union of all spiritual and material power in the hand of the Pope had to take refuge in the figure of the two swords (Lk 22[38]). The Papal bull in which Leo X. banned Luther's doctrine (15th June, 1520) begins with references to Ps 74[22] 80[13]. Protestantism carried this method of founding all its theories upon Holy Scripture much further. In Calvinism the strictest legalism regulated not only the ecclesiastical but also the whole public life (see VII. 3), until, with the secularizing of culture on the one hand, and the altered historical conception of the Bible on the other, the fact established itself more and more that in the records of long past ages ideals might be found for the individual and social life, but never again an immediate legal system.

So in the most recent times the idea of any external authority pertaining to the Bible is everywhere losing ground. This will not be to the injury of Christianity, if only at the same time the untold inner value of the Bible as the unparalleled religious guide-book and the inexhaustible fountain of religious inspiration gains wider recognition.

Muhs, *Die Kritik und die Stellung zur h. Schrift* (1905); W. B. Carpenter (Bishop of Ripon), *My Bible*, 1884, Germ. tr. by L. Pfeiffer, 1902. Cf. art. APOLOGETICS, vol. i. p. 621.

IV. *BIBLICAL STUDIES*.—1. **Methods.**—Much against the original intention of the Bible, the Church looked upon it as a book for theologians, a book which as the source of all dogmatic and theological knowledge called for thorough study. The Gnostics were the first to handle it in this scientific way, and the Alexandrians adopted the method. It is true that the Catechetical school was interested more in philosophy than in history. Great as were the services which Origen rendered as a Biblical scholar, he was not a Biblical theologian, and in his school philosophy always maintained the upper hand. Even his admirer and successor, the blind Didymus of Alexandria, whose interest in exegesis was greater than that of others, gave the chief place to dogmatics. In the strict sense of the term we hear of exegetical lectures only in the school of Antioch. Such lectures were delivered by Lucian, Diodorus, and Theodore, and later by Paul the Persian after the flight to Nisibis. Here among the Nestorians outside the Empire there was established a regular school for the scientific study of the Bible. Among the Greeks and Latins it was sometimes by means of commentary and sometimes by 'answers to correspondents' (*Erotapokriseis*, *Quæstiones*) that Bible instruction was carried on. The services of the monasteries in this connexion were of more value to the ascetic view of the Bible than to its scientific study (see VI. 3). At the same time, both in East and West, the monasteries were for long the only places where the study of the Bible was fostered. In their libraries lay the old commentaries of the Fathers. From them excerpts were taken for handier use (*e.g.* from Gregory the Great by Paterius, Odo of Clugny, etc.), and these were made into new compilations. Pupils were taught the Bible. It was all very elementary, but it nevertheless supplied the means by which, to some degree, the continuity of scientific study was maintained. The credit here is due to the Rule of St. Basil and its renewal by Theodore of Studium, and in the West to Cassiodorus and the later Benedictines. The Fourth Lateran Council of 1215 required that in every cathedral-school at least one theologian should be appointed who would instruct priests and others in the Bible (*in sacra pagina*). In the Academy of Constantinople, founded by Bardas about 860, no theology of any kind was taught. Even in the oldest high schools of the West—the legal school of Bologna and the medical school at Salerno—it was the same. In the case of Paris the studies were entirely scholastic to start with, and not Biblical at all. The Bible first received recognition at the universities when the mendicant friars—the Franciscans first and then the Dominicans—joined their monastic schools to them. Even then the *lectiones biblicæ* were delivered in the monasteries before a mainly monastic audience—as a practical preparation for the cure of souls. It is true that a course of Bible instruction was part of the ordinary curriculum. In Paris there was a fixed course for the scholars extending over four years. The bachelor had to lecture

cursorie on the Bible for two years. But in both cases the Bible was hurried over with all possible speed as a stepping-stone to the 'sentences.' Roger Bacon (*Opus min.* 328) complains of the excessive value laid upon the sentences of the Lombard which the influence of Alexander of Hales caused people to prefer to the Bible itself.

All this was changed at the Reformation. Luther, himself a monk, attached supreme importance to exegetical lectures, as did Melanchthon and Calvin. In Zürich there was established the so-called 'Prophecy,' *i.e.* the public discussion of Scripture among theological students in the form of debate. This was taken up by Pietism in its *collegia biblica* again after Protestant orthodoxy had almost fallen back into the old mistake of the scholastic method. What Spener established in Frankfort was more of the nature of a prayer-meeting. A. H. Francke and his friends in Leipzig desired real lectures in the form of Bible-exposition. Their success proved the need of them. Since that time the study of the Bible has won a leading place within the Protestant teaching of all denominations. It is a fixed feature of the work of the German universities, and specialization becomes commoner every day. Even in the Roman Church more value is beginning to be laid upon it, as is shown by the Encyclica 'Providentissimus Deus' of Leo XIII. (18th Nov. 1893) and the formation of a Bible Commission in 1901, as well as by a series of works which these called into being. Attempts are frequently made to show that the Roman Church has always zealously furthered the study of the Bible, but the arguments which have been gathered (by Falk *e.g.*) only prove the opposite.

2. **Textual criticism.**—When we consider the Bible as the object of scientific study, one of the first things to demand our attention is the critical labour bestowed upon its text. The earliest Christians had no idea of anything of the kind. We learn this from the freedom of the citations from the OT which are contained in the NT. It must be admitted that the Jewish complaints about Christian interpolations in the LXX text were not without foundation (see, *e.g.* Ex 17^{14} in Barn. 12^{9}; Justin's citation of Ps 96^{10} in *Dial.* 72–73; Ps 37^{14} and 50^{9} in the Leipzig papyrus, edited by Heinrici, *Beitr.* iv. 1903). In the first two centuries nearly all the various readings of the NT came into existence, the majority of them by deliberate alteration of the text, many for the sake of style, and several in the interests of dogma (Jn 1^{18}, 1 Ti 3^{16}, He 2^{9} etc.). The most noticeable instances of this are provided by the heads of schools and churches, like Marcion and Tatian. The beginning of theology in the Church, however, gave rise to a systematic criticism of the text, such as we find in Irenæus's fine treatment of the variant 616 for 666 in Rev 13^{18} (*adv. Haer.* v. 29, 30). We know very little of the textual criticism by the Artemonites in Rome. All the more brightly, however, shines the star of the master Origen, though his great work in the OT province, the *Hexapla*, where the original text and the various versions are set side by side with the avowed intention of purifying the LXX text, led, it must be owned, to greater confusion (E. Schwartz, 'Zur Geschichte der Hexapla,' in *GGN*, 1903, 693 ff.). There is no evidence of a similar work for the NT, or, indeed, of any recension of the text at all, but in the numerous commentaries there is rich material for it. Even Origen could not establish his work everywhere. Different places developed different texts spontaneously. When the ecclesiastical authorities began to pay attention to this fact, revisions by the particular Churches came into existence in the various provinces. We know from Jerome (*Præf. in Paralip.*) that in Egypt the recension in use was that of Hesychius, in Syria that of Lucian, and in Palestine that of Pamphilus, the pupil of Origen. Lagarde, Bousset, Rahlfs, and others have begun to detect traces of these recensions in the still existing MSS, which, however, mostly give a mixed text. Hesychius is fond of choosing the shortest of competing readings, Lucian makes a broad text by comparing and combining, and Pamphilus admires a good Greek style. Everywhere in these ancient exegetical works we find notes on textual criticism, drawn usually, either directly or indirectly, from Origen's *Hexapla* in the OT and from various MSS in the NT. The deciding factor of criticism was sometimes dogma and sometimes the authority of individual scholars (cf. the scholion to Jn 7^{53} in A). Often readings were rejected as the falsifications of heretics, but often the heretics were right in their counter-complaint. For examples of Trinitarian interpolation, see 1 Co 8^{6} in the Cappadocian Fathers and 1 Jn 5^{7} in the Latin Church. We possess a wonderful instance of the careful tradition of a text in the Peshiṭtā, which is almost devoid of variant readings. In the case of the Copts the numerous scholia testify to continual comparison with the Greek text on the one hand and with the Arabic on the other. In Constantinople the influence of Chrysostom established the later Antiochene text, without, however, ousting the others entirely. The Athos-Codex, discovered by von der Goltz, and the labours of an Arethas, show how much interest was taken in criticism at Constantinople even in the 10th century. The continual revisions of the old versions, of which we have spoken above, are also evidence of textual criticism, whether they are concerned only with deciding between various translations or go back to the original. In the West, Cassiodorus in the 6th cent., and Theodulf and Alcuin in the 9th, did excellent work in the critical revision of the Vulgate; but none of them gained a hold. Every province, every order, every monastery, had a tradition of its own, which was based in some cases upon the work of some great individual Greek or even Hebrew scholar. In the *correctoria biblica* these traditions were laid down for guidance in the correcting of copies of the Bible. The Cistercians employed as their norm a copy by Abbot Stephen Harding; the Franciscans adopted the corrections of William of Mara; the Dominicans followed Hugo of St. Caro; the Augustinians had as their pattern a Windesheim Bible. The keen criticism of Roger Bacon proves that the success of the Paris text was due more to the renown of the *studium generale* than to its inherent excellence.

Even the introduction of printing made no difference at first. The oldest Latin prints are reproductions of a single MS. So far as the LXX is concerned, the Complutensian, the Aldine, and the Sixtine, with their reprints, represent three classes of texts. Erasmus formed the text of his NT out of very few and very late MSS. The next editors, especially Stephen and Beza, made use of others. Humanism did not rise beyond a dilettante textual criticism, and employed few materials. Still, printing brought about that which up till now was impossible, viz. the supremacy of a single

text (apart from the small errors that are unavoidable in a reprint). This was done for the Vulgate by the (Sixtine) Clementine text of (1590) 1592, which owed its origin to the carrying out of a decree of the Council of Trent. So far as the Greek text was concerned, the high esteem attached to the *textus jam ab omnibus receptus* was due to a bookseller's advertisement, the text itself being Stephen's text of 1550 in the Elzevir reprint of (1624) 1633, which was itself influenced by Beza's editions. In the year 1707, John Mill shattered all faith in the infallibility of this text by the 30,000 various readings which he found in about 80 MSS. The task of gathering together various readings, to which this Englishman devoted himself, was continued by Johann Jakob Wetstein, a Swiss who had settled in Holland (1751–52); the Saxon Chr. Fr. Matthæi, who collected and stole in Russia (1782–88, 1803–07);* the Viennese F. C. Alter (1786–87); the Dane Andr. Birch (1788); and the Catholic professor of theology at Bonn, J. M. A. Scholz (1823). The climax was reached in the editions of the Englishman S. Pr. Tregelles (1844, 1857–72), and above all in the diligent and fortunate work of G. Fr. Const. Tischendorf in Leipzig (1841, viii. crit. maj. 1869). Tischendorf used in his work 15 majuscule codices which he discovered, among them the Sinaitic (א) found in 1844 and 1859. He made new editions of 21 MSS,† and collected testimonies from the Versions and the Fathers as no one before him had done. Since that time some extremely valuable finds have been made. Von Soden has made the attempt to work through all the minuscules catalogued by Gregory and Scrivener. An enormous amount of industry is employed upon the investigation of texts, especially by German and English scholars. But this is not the last word in textual criticism. What is of the utmost importance is that the right method of passing judgment upon tradition should be followed. The Württemberg theologian Joh. Alb. Bengel (1734), with his method of distinguishing between different families of texts, here took the first step. His motive was love for God's word, in which even the slightest particular was golden in value. The rationalist, Johann Salomon Semler of Halle, carried this on, and introduced to German science the labours of the Dutch Arminians and the French Catholic Oratorian Richard Simon. He was joined by Johann Jakob Griesbach of Jena (1774–77) and Hug of Freiburg (1808), the former a Protestant, the latter a Catholic, who laboured more fully the scheme of the text-recensions which sprang from the ancient Church—a course continued in our own time most successfully by W. Bousset in his *Textkrit. Studien zum NT* (1894). While these all started from the textus receptus, improving, shortening, and transposing it, C. Lachmann, the Berlin philologist, took up Richard Bentley's suggestion (1742), and established the principle that the start should be made, not from the late printed text, but from the ancient MSS: it was possible to give the text of the 4th cent. with certainty instead of that of the 16th. Further progress is due to the two Cambridge friends, B. F. Westcott and F. J. A. Hort, whose great service was that they overcame the scruples of conservative English theology in spite of Dean Burgon's violent attacks. Their carefully elaborated method was considered by many to represent all that was attainable. C. R. Gregory, O. von Gebhardt, and E. Nestle were content to compare Tischendorf and WH. The great agreement of the newer text-critics from Lachmann to WH in their opposition to the textus receptus is shown very clearly by the editions of F. H. A. Scrivener (1859, revised by E. Nestle, 1906), though that was far from the intention of the strongly conservative author. A new textus receptus, however, was and must be an impossibility. With fine instinct Hort himself called special attention to a series of Western readings which he did not consider genuine, but which for the history of the text were well worthy of note. The more thorough investigation of the history of the oldest translations, especially the Vet. Lat. and the Vet. Syr., with which latter Mrs. Lewis's find at Sinai first made us acquainted, has led to more and more attention being attached to them. Now it is clear that not only all the important variants were in existence before the 4th cent., but also that it was just the so-called Western text that was most widely circulated in the 2nd century. In opposition to WH, a great number of English scholars, in particular F. C. Burkitt and J. R. Harris, with the Germans F. Blass, E. Nestle, etc., give this text, which was current from Carthage to Edessa, the highest place, while others, like Jülicher and Wellhausen, advocate an eclectic method. And, indeed, the history of the text can be of service now only in making clear the later developments of the text. In most cases, what it does is to bring us to a stop before the fact that two readings, equally witnessed and equally wide-spread, reach back to the earliest time. If we are not satisfied with a choice of two readings, or assume, like Blass, two editions by the Biblical author himself, then it is to exegetical considerations that we must look for finality. Thus, the method which B. Weiss has always advocated and practised has to be combined with the other one, based on the history of the text.

* O. von Gebhardt, *Centralbl. f. Bibliothekswesen*, xv., 1898.
† C. R. Gregory, *Prolegomena*, 25 ff.

In the matter of the OT, lower criticism was not so active. Here the tradition of the Synagogue was the guide. So early as the 2nd cent. this had fixed the consonantal text and its pronunciation (by oral traditions in the first instance) so firmly that it never altered. The so-called Massorah, which was committed to writing in the 8th to 10th cents. made an effort to attain an almost faultless multiplication and tradition of the text. Although the oldest Hebrew MSS do not go beyond the 9th cent. A.D., it is yet possible to maintain that we possess the text of the 2nd cent., and that it is to hand in print (Soncino, 1488, Brescia, 1494 [Gerson]; Complutensian Polyglot, 1514–17; *Biblia Rabbinica Bombergiana*, ii., Ven. 1525–26). Even the collections of numerous variants which B. Kennicott (1776–80) and de Rossi (1784–88) have brought together do not go beyond this Massoretic revision. On the other hand, the old translations, especially the LXX, the Samaritan text, and several papyri of recent discovery, show that there was a pre-Massoretic text. While editors down to Delitzsch-Baer and Ginsburg (1894) conceived their task to be the reproduction in the most exact form of the Massoretic text with all its delicacies of punctuation, the newest editions (Haupt, *SBOT*, 1893 ff.; Kittel, *Bibl. Heb.*, 1905–06) make it their aim, with the help of the versions and of conjecture, to reach an older text. How far that has been successful, and what value is to be attached to the LXX traditions, are still open questions.

In the investigation of the ancient versions of the Bible, whose value for textual criticism is increasing from day to day, excellent work has been done, especially by English scholars. There are, *e.g.*, the new Oxford editions: the Vulgate by J. Wordsworth and H. J. White (1889 ff.), the Peshiṭtā by G. H. Gwilliam (1901), the Northern Coptic (Bohairic) NT by G. Horner (1898 ff.); while Cambridge provides us with the Septuagint by A. E. Brooke and N. McLean (1906 ff.), the Old Syriac Gospels by F. C. Burkitt (1904), the Peshiṭtā Psalter by W. E. Barnes (1904), etc.

The main point, however, is that the claim of the Biblical text-critic is now recognized on all hands, and that criticism has almost entirely freed itself from the dogmatic prejudices which so long met it with opposition. It carries on its work by a scientific method. Naturally in this particular case, with the rich and complex nature of its materials, the method receives special application. It is to be regretted that this is often forgotten by philologists who labour upon the Bible. Yet the method remains entirely scientific, and in principle could be applied in any similar field of study.

3. Higher criticism.—Along with the criticism of the text, and often hand in hand with it, there has always gone the literary and material criticism. It is not a modern discovery; only the methods have changed here also. The relation between the higher and what is called the lower criticism is characteristic of the different periods. The awakening scientific consciousness attaches chief importance to the criticism of the text, while higher criticism comes afterwards. So long as science is bound by tradition and the dogma of the Church, it confines itself as much as possible to the former, and even tries to find in it the solution of higher literary problems. Modern instances may be cited in A. Klostermann, Ed. König, and Fr. Blass. As soon, however, as it becomes free, it lays the stress upon the latter, without, however, neglecting those questions which arise in connexion with the text.

Literary criticism finds its starting-point in the formation of the Canon itself. If the pre-condition of any book's canonicity is its prophetic or apostolic origin, then the book itself and the tradition concerning it must be examined to discover whether such origin can be claimed for it or not. The Muratorian Fragment, *e.g.*, denies canonicity to the *Shepherd* of Hermas, because it is neither of prophetic nor of apostolic origin. The Epistle to the Hebrews, which Roman tradition rejected as anonymous, must come from Barnabas (Africa) or Paul himself (Alexandria) to secure recognition. This was the motive which prompted the gathering of literary information regarding the individual books of the Bible, such as Eusebius of Cæsarea in particular collected with great diligence. In some cases this information found its way into the Bible MSS in the shape of prologues, titles, and subscriptions, and in a certain measure it kept alive all through the Middle Ages the knowledge of the origin of the books of the Bible. Its collection into the Bibliotheca Sancta of Sixtus of Siena († 1599) was done in this mediæval spirit. It was with the same material that the Protestant theology of the 16th and 17th centuries worked, and even modern critical investigators cannot dispense with tradition, however much they may subject it to examination.

The criticism of the ancient Church proceeded in the first place not upon literary and historical, but upon dogmatic considerations. It was from dogmatic motives that in Asia Minor the so-called 'Alogi' rejected all Johannine writings, that the Roman presbyter Gaius declared the Apocalypse to have come from the hand of Cerinthus, and that Dionysius of Alexandria reached the fine conclusion—adopted among the very latest scholars—that there were two Johns working in Ephesus simultaneously. We have the clearest evidence of this in the casting aside of everything which came from the Twelve Apostles by Marcion, who combined with this the hypothesis of an interpolation of the Gospel (Luke) and the Epistles of Paul. The repudiation of the OT also by Marcion and many Gnostics has a dogmatic basis in the dualism between the creating and the redeeming God, this being the shape which the Pauline antithesis—law and grace—took among pagan Christians. Along with this we find all manner of stages, from partial to complete recognition of the OT, often with very fine differentiation of the contents according to their significance and value (Ptolemæus, *Ep. to Flora*; Harnack, *SBAW*, 1902).

Criticism, however, became more minute. Just as Marcion in his antitheses called attention to a great number of contradictions between the OT and the NT (*e.g.* Is 45^{7}, Lk 6^{43}; Ex 3^{21}, Lk 10^{4}; 2 K $2^{23f.}$, Lk $18^{15f.}$), so inconsistencies in the NT itself soon came to be observed. The Muratorian Canon and the Monarchian Prologues deal with the differences which mark the beginning and the end of the Gospels. The disparity between the two genealogies forms the subject-matter of a correspondence between Julius Africanus and Aristides (Euseb. *HE* i. 72 ff., cf. F. Spitta, 1877). Eusebius deals with the various accounts of the appearances of the risen Lord. It was the opponents of Christianity who called attention to these difficulties. The Jews questioned the Christian proof from prophecy and the credibility of the Gospel tradition. There were also heathen philosophers like Celsus, and very notably Porphyry, who declared the OT to be incredible and full of myths, and pointed out inconsistencies in the Gospels themselves. It is against Porphyry or Hierocles that the *Apokritikos* of Macarius Magnes is directed. Ecclesiastical theologians, who were as little capable of a real literary and historical survey as their opponents, were driven in this combat to a method of harmonizing, which at all costs had to explain away those inconsistencies; and they prided themselves that they successfully accomplished this task, by means of a mental ingenuity that was often surprising. One has the impression, it is true, that they did not feel any great certainty themselves, for instead of one explanation they often offer a choice, or they smother the question at issue by abusing the malevolence of unbelief and doubt. This was the course taken by Augustine himself, whose *de Consensu Evangelistarum* is probably the best work which the ancient Church produced in this field (see iii. 40–50: the harmonizing of Jn 19^{14}, 'the sixth hour,' and Mk 15^{25}, 'the third hour'). But Christian readers also observed difficulties—often very subtle ones—in reading their Bibles, and they demanded the explanation of them from their spiritual advisers. This is shown very clearly by Jerome's correspondence with his lady friend in Rome, and later by Alcuin's interchange of letters. In this way there arose the rich literature of Biblical *Erotapokriseis*, or *Quaestiones*. So long as these critical questions were put in the faith that the inspired Scriptures were infallible and free from inconsistency, and in the blind trust that the theologians of the Church were able to solve every problem of the kind that could arise, they were welcomed as a means of exercising and displaying the mental acumen of ecclesiastical theologians.

But whenever these inconsistencies were seriously entertained they were at once condemned as heresy. The Manichæans, who continued the critical tradition of the Marcionites, gave the Church most trouble in this matter, and they were followed by Paulicians, Albigenses, and all the tendencies which were gathered together under the name of Catharists. Even within the Church itself rationalistic views were to be found. In the 9th cent. Abbot Hucbert of St. Maurice made fun of our Lord's saying in Mt 11^{29}—a piece of unparalleled levity. In 1376 the Parisian students declared that the Gospel, like other books, contained what was fabulous and false, but their thesis was immediately condemned by the bishop. Such frivolous criticism as this could not possess any lasting effect.

The Humanists introduced a new feature into criticism. They were no longer content only to hand down Patristic references, but they also—especially Laurentius Valla and Desiderius Erasmus (*Annotationes* and *Paraphrases*)—attached real importance to them. It is this that enables us to understand Carlstadt's criticism of the Canon (1520; K. A. Credner, *Zur Gesch. des Kanons*, 1847, p. 291 ff.) and the later treatment of the question by the Lutheran dogmatists from Chemnitz to Gerhard. Their distinction between canonical and deutero-canonical books corresponds generally to Eusebius's *homologumena* and *antilegomena*. Quite different was Luther's position (see III. 3). In his case literary and historical considerations were entirely secondary. It was his personal faith that was the decisive element. The books which did not bear clear testimony to Christ he considered non-apostolic. His principle was a purely religious, we may say dogmatic, valuation without any literary or historical considerations. Even in the same book one verse might be apostolic in this sense and another not. According to this view, the old idea of the Canon as representing the united authority of the Apostles was lost sight of. It was the last step in what may be called the dissolution of the Canon. Luther himself, however, did not admit this result, but identified the principle upon which he proceeded with the literary method of the Fathers and the Humanists. His own opinion was that Hebrews, James, Jude, and the Apocalypse should be excluded from the NT. There he drew a clear line. But he was far too conservative and cautious to wish to press such a personal judgment upon others. He felt that he possessed the power and the right to make an alteration upon the Canon, but he left it as it was. Gradually the line which he drew disappeared, and the consciousness of any difference of value within the Canon faded away. Later dogmatists were unaware of it. Only the order which Luther's Bible follows bears witness, in its variation from tradition, to the critical experiment of the reformer.

The new period of Biblical criticism began about the middle of the 18th cent., at the time of 'Enlightenment.' The way was prepared for it on the one hand by the pains which Catholics expended to destroy faith in the infallibility of the Bible, the Protestants' paper Pope, and on the other hand by the strictly scientific method of investigation which was adopted by the Arminians. The new feature was that it was no longer the traditions about the separate books that were made to speak, but the books themselves. Richard Simon attacked the trustworthiness of the Bible text; Astruc, Louis XIV.'s physician, by his discovery of the two strata distinguished by separate Divine names in the Pentateuch, assailed the ordinary view of the origin of the books of the Bible. The hypothesis of the two sources was taken over later by the Protestants, and further developed and extended. Ilgen and Hupfeld (1853) discovered the 2nd Elohist. Deuteronomy was disentangled, and finally J E P and Dt were found to have undergone a series of redactions. In spite of its great significance for the understanding of Israel's religious development, the dispute as to the age of these sources between the school of Ewald and that of Reuss, Graf, and Wellhausen, in which the latter emerged victorious, is quite a secondary matter compared with the fact that the gradual growth of the Pentateuch from different sources and strata ranging over centuries is acknowledged generally. Even such conservative theologians in Germany as the late Franz Delitzsch, Ed. König, and H. Strack no longer refuse to admit this fact. In Scotland, Robertson Smith was the pioneer. So much progress has now been made that not only does Haupt's 'Rainbow Bible' (1893 ff.) bring the various sources before the eyes of all who are versed in Hebrew, but learned and popular new translations like those of Kautzsch (1894), Kuenen, Hooykaas, Kosters, and Oort (1897 ff.) exhibit them also to the laity. Upholders of the Mosaic authorship of the Pentateuch are almost entirely dumb, while books like Schlatter's *Einleitung in die Bibel* (Calw, 1889, 3rd ed. 1901), which come from and are intended for evangelical circles, set forth the principles of this criticism as the result of the latest investigation.

Naturally this did not stop at the Pentateuch. The method spread automatically to the other historical books of the OT. Those same sources of which we have spoken include Joshua also, while in the case of Judges, Samuel, and Kings the conditions are largely similar. The prophetical books, especially Isaiah, but also some of the Minor Prophets, bear evidence that they are not unities; so, too, the poetical books, Job, Ecclesiastes (Siegfried), Proverbs. The 'Psalms of David' themselves confess that they do not all come from his pen, and the fact was always recognized. Theodore of Mopsuestia in his day connected some of them with princes of the Maccabæan dynasty. The systematic investigation of different collections, strata, and dates led to the conclusion that there was as little of David in the Psalms as there was of Moses in the Pentateuch. The results of OT criticism are in matters of detail quite fluctuating. The revision of ideas about the development of Israel's religion, which we owe to the comparative history of religion, will lead to many modifications (Br. Baentsch, *Altoriental. u. israelit. Monotheismus*, 1906). But the necessity for criticism and the method which is to be followed are established (E. Kautzsch, *Abriss der Gesch. des AT Schrifttums* [a supplement to his translation], 1894).

In the field of the NT, which has been separating itself from the OT more and more for a century, the topic which has received most investigation since 1750 has been the Synoptic problem. So far as any literary relationship between the Gospels was thought of in former times, the view most widely taken was that of St. Augustine, that the order observed in the Canon was also the historical order. With astonishing rapidity, however, various possibilities were now put to the test: (1) the use of the oldest Gospel by more recent ones, (2) a common source, and (3) independent use of oral tradition. Gradually a combination of these various hypotheses emerged as the only possible solution, viz. the use of Mark by Matthew and Luke, with the addition of a common source, and much drawn from oral tradition. In matters of detail this leaves room for any number of suggestions, and science can hardly come to any

definite conclusion, because no explanation can be found to clear up the whole question. But the principle has been found, and will never again be lost sight of. In regard to the rest of the NT books, it was questions of genuineness that exercised critics until the middle of the 19th century. What had to be proved, in the first place, was the claim of the various books to canonicity, *i.e.* their genuineness, integrity, and trustworthiness. Rationalistic critics confined their attention to single and often very external points. Schleiermacher and his school made a real advance in the literary method. But it was Baur that first achieved a general conception of the significance of each book from a consideration of the place which it filled in the general development of primitive Christianity. Subsequent examination proved Baur's conception to be false, resting, as it did, upon Hegel's philosophical scheme of the movement of ideas through thesis, antithesis, and synthesis. The conception of the separate books as having been written with the express intention of making them effective factors in the contest between the Church parties is now given up. What is left, however, is the necessity for dealing with each individual book as a whole, and finding out the part which it played in a great development. The method which was followed by Baur (and still by Holtzmann), of starting from the criticism of the Canon, has yielded more and more to the literary method (Reuss, Jülicher, Krüger, von Soden). The great advance from the scientific point of view consists in the fact that Biblical criticism has attained the greatest possible freedom from all dogmatic prepossessions. Externally this is shown in the fact that the question of genuineness is now discussed quite calmly, conservative theologians occasionally denying it, while critical theologians often maintain it or pronounce a *non liquet*. Recent criticism also speaks freely of different sources, and propounds theories of interpolation or some similar literary attempt at solution. Baur held only the four chief Pauline epistles to be genuine, but now the majority of them (eight to ten) are recognized. It has to be admitted that the integrity of 2 Cor. is still keenly disputed. The radical criticism of the Dutch school, which repudiates all the apostolic epistles, finds as little support as that of the few who desire at any price to maintain the genuineness of all. The Acts of the Apostles is everywhere handled upon the theory of different sources, though the methods differ much in detail. How much vigour used to be spent on the discussion of the genuineness, the Johannine origin of the Fourth Gospel, and the Revelation *pro et contra!* At the present time we have an increasing number of attempts to show that neither is a unity. Undoubtedly this search for rents or joinings, these outvying theories of sources and interpolations, may become to some extent unnatural. But in the meantime they form the most valuable instrument we have —an instrument which is not yet by any means worn out.

LITERATURE.—The Ancient Church: K. J. Neumann, *Hippolytus von Rom*, 1902, p. 144 ff.

The Middle Ages: H. Reuter, *Gesch. der relig. Aufklärung im Mittelalter*, 1875–77.

Recent times: T. K. Cheyne, *The Founders of OT Criticism*, 1893; W. Robertson Smith, see I. 1; H. Holzinger, *Einleit. in den Hexateuch*, 1893; C. A. Briggs, *The Higher Crit. of the Hexateuch*, 1893 (3rd ed. 1897); Baron Fr. von Hügel (Cath.), *The Hist. Method and the Documents of the Hexateuch*, 1898; J. Orr, *The Problem of the OT*, 1907; W. G. Jordan, *Bibl. Criticism and Modern Thought*, 1909; H. S. Nash, *The Hist. of the Higher Crit. of the NT*, New York, 1900; L. Pullan, *NT Criticism*, 1907; H. Holtzmann, *Lehrb. der Einleit. in das NT*[3], 1897; A. Jülicher, *An Introd. to the NT*, Eng. tr., Lond. 1904; B. Weiss, *Manual of Introd. to the NT*, Eng. tr., Edin. 1887–88; Th. Zahn, *Introd. to NT*, Eng. tr., Edin. 1909.

4. Exegesis.—All criticism, higher and lower, is ultimately only a means to the correct understanding of the text. It is a serious mistake to suppose, as has sometimes been done, that criticism is an end in itself. Literary criticism is a part, a very important part, of exegesis as it is now understood, just as allegory was its most important feature in former times.

We have already learned that the Christian Church found elaborate exegetical methods to hand, and have seen how she provided these with new aims. The allegorical method, which the Stoics developed and the Jews of Alexandria applied to the OT, discovered a hidden and profound meaning, such as was alone worthy of the old conception of God and His Spirit, and this meaning, often with the utmost disregard for the plain sense of the words, it tried to establish by all kinds of artifices. In contra-distinction to philosophical speculations which disregarded history, Christianity was by its whole nature bound up in history. The notion of prophecy and fulfilment took the place of the Platonic *noumenon* and *phainomenon*. Thus it comes about that the history of Christian exegesis is a continual conflict between a historical interpretation and the old allegorical method. The Gnostics, who were the first real exegetes and wrote commentaries to the OT and the NT, fell under the influence of this latter method in its most marked form. The Gospel dealt not with the earthly life of Jesus, but with events in the supramundane world. Heracleon understood the saying that Jesus went down to Capernaum (Jn 2^{12}) as referring to the descent of the æon Christus from the region of light into this material world. Among the twelve apostles the traitor Judas was the lowest of the twelve æons, and his fall brought the world of sense into being. At the same time, the Apologists adopted a method of interpretation which reminds us of the exegesis of Palestinian Rabbinism and early Christianity, mainly in the form of fulfilment of prophecy. It was reserved for the theologians of Alexandria to remove this contradiction by maintaining the rightfulness of both methods, considering them, however, to represent two separate stages. In especial there was Origen's brilliant formula that, as man contains body, soul, and spirit, so exegesis shows the strictly verbal, the moral, and the mystical senses, challenging, supplementing, and qualifying one another. This theory of the greatest thinker and Biblical scholar in the ancient Church continued to dominate exegesis. He himself, however, did not always put it into practice, and there were very few of his followers who had the capacity to do so. The majority of them made his allegorical method a means of coaxing from the text things which it did not contain at all. The interpretation of the parables provides an instance. No regard was had for the simple hortatory lesson of the parable of the Good Samaritan. The parable was the representation of Christ's own work of salvation from the Fall to the Judgment-Day. There were some who went further in this direction than others. Origen's school contained a Pamphilus and a Eusebius as well as the great Cappadocians. The Alexandrians were the keenest allegorizers. At the same time they were spiritualists in regard to the eschatology of the ancient Church, while a section of Christian theologians (Nepos, Methodius) accepted it literally. More important was the exegesis of Lucian's school. These Antiochenes wrote Greek, but there was evidently a Semitic element in them. They understood Syriac and Hebrew and had sympathy with Rabbinical exegesis. Thus in the case of Diodorus of Tarsus and his greater pupil Theodore of Mopsuestia, exegesis is much less allegorical than typological (though the two are always inter-

woven), and occasionally it becomes almost wholly historical in method.

As this Antiochene school acquired much influence in the Greek Church through the great preacher Chrysostom, whose expositions were quite unfettered by school tradition, so through Theodore, the interpreter κατ' ἐξοχήν, it assumed quite supreme influence among the Syrian Nestorians. We are astonished to find among these in the late Middle Ages excellent commentators like Išodad and others, while the Monophysites followed the Alexandrian traditions. Bar-Hebræus, in exegesis as in politics, approximates to both. The school of Antioch gained influence also in the West. The much used *Instituta regularia divinae legis* of Junilius are reproductions of the lectures of Paul of Nisibis.* Ambrose was a faithful follower of Origen; and Augustine, in spite of his more practical Latin nature, which made him akin to the Syrians, resembled him greatly. He has laid down the principles which he followed in *de Doctrina Christiana*. Tychonius and Eucherius wrote text-books on the allegorical method. But it was Jerome who, under the direct influence of Rabbinical exegesis and a verbal understanding of the original, brought about the change from the method of Origen and the Cappadocians to an exegesis that fixed the verbal or grammatical sense and made interpretation historical. In practice, it must be admitted, he himself fell short; but the effect of his influence is to be seen in the fact that the West has never quite ceased to be alive to the significance of a verbal and historical exegesis. In general, in the Middle Ages there was a much more active exegetical movement among the Latins than among the Greeks. In the 6th cent. there began the period of *catenae*, that is to say, exegetical compilations from various authors. At first the authors were named; then the names were omitted; the excerpts were connected by some suitable phrases, and then the Byzantine compiler placed his name before the result. It may be said without fear of contradiction, that since the time of Justinian hardly a new exegetical thought has found expression—at least in the way of sound interpretation. The same conditions prevailed in the West until the 12th century. The Carlovingian commentators give nothing of their own, and make a formal excuse when, once in a way, they venture to add something to the authority of the Fathers. These commentaries, destitute of any spark of individuality, differ from one another only in the way in which they combine Ambrose, Augustine, Jerome, Pelagius, etc. Ultimately, however, the speculations of scholasticism infused new life even into exegesis. The Patristic exegesis was displaced by a dialectic method. The theory of the fourfold sense of scripture became developed:

'litera gesta docet; quid credas allegoria;
moralis quid agas; quo tendas anagogia;

and it was carried into practice with almost painful consequences. For example, Lk 2^{21} means (1) verbally, that Jesus was circumcised on the 8th day (the best time for the operation), (2) allegorically, the eight parts of Holy Scripture, (3) morally, the eight stages of repentance, (4) anagogically, the octave of the Resurrection, the eight ages of the world, the eight blessings of future salvation (*Leg. aur.* 13). This method, like that of the Rabbis, thinks nothing of placing the most varied and often contradictory interpretations side by side. They are gathered in from all quarters, and the more the better, provided only that by a good *partitio* the appearance of some system is maintained. At the same time there is preserved a certain philological element fostered by Jerome's works, especially his *Interpretatio nominum hebraicorum*, and Isidore's *Etymologica*, though now and again by an independent acquaintance with the language. As a great many of the monasteries taught Greek, so we find an occasional Hebrew scholar, controversies with the Jews making a knowledge of Hebrew necessary (Sam. Berger, *Quam notitiam linguae Hebraicae habuerint Christiani medii ævi temporibus in Gallia*, 1893). Roger Bacon († *c.* 1292) was an excellent philologist. He found fault with the scholastic exegesis of his time, because it confined itself to *divisiones per membra varia*, after the manner of artists, forced concordances after the manner of jurists, and rhythmic consonances after the manner of the grammarians (*Opus min.* 323). It resulted probably from the controversy with the Rabbinical exegesis that Nicolaus of Lyra († 1340), the Minorite, first set up the principle of literalism in complete clearness, though, indeed, his acceptance of a *duplex sensus literalis* became a side-door to allegorical interpretation. Knowledge of the Rabbinical exposition increased through Jewish converts like Paul of Burgos, and therewith also the doubt as to the sole accuracy of the Patristic exegesis.

* Kihn, *Theodor von Mopsuestia und Junilius Africanus als Exegeten*, 1880.

Here, now, we meet with the Reformation exegesis, whose principle was that the literal sense was the only right one. The new religious principle of confidence in the revealed God overcame the Neo-Platonic delight in mystery. The new interest which Humanism awakened in the original languages also helped (Reuchlin, Erasmus). Its effect is seen in Melanchthon and Calvin more than in Luther, to whom the religious motive was always the deciding one. It has to be said that exegesis did not by any means free itself at once from the custom of centuries. The example of the Fathers produced an after-effect, and all the more so since exegesis continued to be preponderatingly interested in dogma or edification. However diligently exegetes laboured, systematic interests held the first place in the orthodox period, and the exposition of Pietism aimed always at practical edification. Rationalism, which read the Bible no longer as God's word, but as the product of human composition, arrived, in theory at least, at a purely historical exegesis, whose aim was to establish clearly what the author really meant by his words. In the working out of this, however, it came to grief, and indeed fell into the mistake of modernizing. It could not think of the Biblical authors as less enlightened than it prided itself on being. It was only last century that historical exegesis came to be practised; and at the close of the century it was practised to excess in the effort to exhibit the views of the Biblical writers with archaic realism, and to render as clear as possible the difference between the ideas of then and now. Exegesis received a tremendous impulse. Everywhere great enterprises were called into life, chiefly by the collaboration of several exegetes.

Exegesis still exhibits the greatest possible differences in dealing with the text, but the principle that the meaning is to be reached by means of a grammatico-historical exegesis is being more firmly established. It cannot fail to become more widely recognized, moreover, that such an exegesis needs no supplementing to become theological. To explain the Bible historically means to grasp and expound it in its spirit, and the spirit of the Bible is religious. It is matter of rejoicing that this idea is gaining ground among exegetes, and we may rejoice too in the fact that more attention is given now than formerly to form, and that, following Herder's successful start, æsthetic questions receive consideration. At the same time the beauty of the Bible will never

reveal its chief aspect. Theological exegesis has rather to learn from the general investigation of the history of religions. When the old conception of inspiration is given up, it follows that in the domain of exegesis the isolating of the Bible in regard to language and subject-matter must cease. As the OT cannot be understood without the study of Babylonian texts, so in the NT regard must be had not only to the OT, but also to profane sources. Religious ideas are to be followed up in their general development in the history of humanity and not only of Israel. What we find peculiar to the Bible has to be observed as carefully as what it possesses in common with other sources. Exegesis is not to be dissolved into isolated studies in religious history; it must make its aim the understanding of the religious personalities which speak to us in these writings as bearers of Divine revelation.

It would take us too far to add to this sketch of exegesis a detailed survey of individual exegetes and their services. Much of the Patristic work is lost. A beginning has just been made in the task of recovering these older works from excerpts made by succeeding ages (*e.g.* Apollinaris of Laodicea, H. Lietzmann, 1904; Petrus of Laodicea, G. Heinrici, 1908; Titus of Bostra, J. Sickenberger, 1901, cf. C. H. Turner in *HDB*, ext. vol. 484 ff.) in connexion with the investigation of mediæval compilations (Heinrici, art. 'Catenen' in *PRE*³, iii. 754 ff.; H. Lietzmann, *Catenen*, 1897; Karo-Lietzmann, *Catenarum Græc. Catalogus*, 1902; M. Faulhaber, *Die Prophetenkatenen*, 1899; J. Sickenberger, 'Die Lukaskatene des Niketas von Herakleia,' *TU*, new ser., vii. 4, 1902; A. E. Schönbach, *Über einige Evangelienkommentare des Mittelalters*, 1903 [*SWAW*, cxlvi.]; Ed. Riggenbach, 'Die ältesten latein. Kommentare zum Hebräerbrief,' in Zahn's *Forschungen*, viii. 1, 1907; J. Haussleiter, *Victorin von Pettau*, 1900; A. Souter, 'The Commentary of Pelagius on the Epp. of Paul,' 1907 [*Proceedings of the Brit. Acad.* ii.]; H. L. Ramsay, 'Le Commentaire de l'apocalypse par Beatus de Liebana,' in *RHLR*, 1902). Notwithstanding all investigation, the greatest part will remain lost. On the *Glossa ordinaria* of Walafrid Strabo, the authoritative text-book of mediæval exegesis, and the commentaries of Nicolaus of Lyra, which were often printed together with the *Glossa*, see Ed. Reuss and R. Schmid in *PRE*³ xx. 790, xii. 28. A bibliography of modern exegetical literature would need a volume to itself.

In place of the old collections of *Critici sacri* (1660) and the Synopses of M. Polus (1669) and Starke (1733 ff.), we have in Germany, for the OT, specially the Biblical commentary of Keil and Delitzsch (1861 ff.) and the short commentary of Strack and Zöckler (1884 ff.), both conservative. From the critical standpoint we have Hitzig's short text-book (Knobel, Dillmann, etc., 1841 ff.), now superseded by the commentaries of Nowack (1892 ff.) and of Marti (1897 ff.). For the NT we have Meyer's critical and exegetical commentary (1832), still a standard work in its new editions (by B. Weiss, Wendt, Heinrici, and others), and de Wette's short exegetical handbook (1836 ff.), superseded by Holtzmann's short commentary (1889), which has itself been supplemented by Lietzmann's essentially philological text-book (1906). A more conservative commentary began to be published by Zahn in 1903 ff. Of a more practical nature are the Bible-works of Josias Bunsen (1858 ff.) and J. P. Lange (1857 ff.); recently J. Weiss (1906). England has the *Speaker's Commentary* (1871 ff.), the *Pulpit Commentary*, by Dean Spence and J. S. Exell (1880 ff.), the *International Critical Commentary*, edited by Driver, Plummer, Briggs (1895 ff.), and Robertson Nicoll's *Expositor's Bible* (1895 ff.). France has the fine unified work of Ed. Reuss, *La Bible* (1874–81). Catholicism has to add to the *Cursus Scripturae Sanctae*, by the Jesuits Cornely, Knabenbauer, and Hummelauer (1886 ff.), something a little more modern in the *Manuel Biblique* by Vigouroux (1881 ff.).

LITERATURE.—Ed. Reuss, *Gesch. der h. Schriften des NT*⁶, 1887, pp. 574–679; L. Diestel, *Gesch. des AT in der christl. Kirche*, 1869; H. Holtzmann, 'Das Problem der Gesch. der Auslegung' (*Heidelberger Festschrift*, 1886); G. Heinrici, art. 'Hermeneutik,' in *PRE*³ vii. 718–750; F. W. Farrar, *Hist. of Interpretation* (*BL*, 1885), 1886; G. H. Gilbert, *Interpretation of the Bible*, 1908; H. Dechent, *Herder und die aesthet. Betrachtung der h. Schrift*, 1904; Eb. Schrader, *Die Keilinschriften und das AT*, 3rd ed. by H. Zimmern and H. Winckler, 1903; A. Jeremias, *Das AT im Lichte des alten Orients*², 1906, *Babylonisches im NT*, 1905; H. Gunkel, *Zum religionsgeschichtl. Verständnis des NT*, 1903; E. von Dobschütz, *Der gegenwärtige Stand der NT Exegese*, 1906; J. Weiss, *Die Aufgaben der NT Wissenschaft*, 1908.

5. **Biblical sciences.**—Exegesis presupposes the subsidiary sciences of philology and archæology, and includes the general, historical, and systematic study of the Bible's contents. In this sense the Biblical sciences have always existed, although the strictly scientific method is a modern achievement.

It is easy to undervalue the scientific labours of the early Church upon the Bible. It is true that these were often of an elementary character, and not devoid of the element of fancy. We possess an instance of this in the explanation of Biblical names in the *OS* (ed. Lagarde, 1870, ²1887), which, though ultimately traceable to Philo, is probably rightly considered the work of Origen. It is preserved only in Gr. excerpts, and in the Lat. revision by Jerome. Eusebius's Biblical topography, also translated by Jerome, is of the same kind (*Eusebius' Works*, vol. iii., by Klostermann, 1904). Here, alongside of monstrosities like the Hebrew derivation of Latin proper names (Pilatus = פה לטש), we find excellent geographical notes. All through the Middle Ages these explanations of names were considered such valuable aids to allegorizing, that the two translations by Jerome were usually bound up with the Bible. Many of the homilies presuppose the use of alphabetically arranged collections of texts such as we find in concordances. The concordance which was organized in the 13th cent. (*c.* 1243) by Paris theologians under the lead of Hugo of St. Caro, and afterwards revised and improved by Franc. Luca, Hub. Phalesius, Balth. Tournaire, Dutripon, etc., was certainly not the first attempt of the kind. Fragments of even a Coptic work of this kind are preserved (Pleyte and Boeser, *Manuscrits Coptes du Musée . . . à Leyde*, 1897; O. von Lemm, *Kopt. Misc.* lii. 4–7).

Aids of a mnemonic kind to the understanding of the Bible were sought with special diligence. This purpose was served by the *Synopsis Script. Sacrae*, which may perhaps have come from Chrysostom himself, and by many of the *capitulationes*. The *Hypomnesticon* of the so-called Josephus Christianus contains all that was considered worthy of remark (*PG* cvi.). The most curious work of this kind is the *Caena Cypriani*, probably a Gallic product of the 5th cent., revised by Rabanus Maurus about 840 (ed. Harnack, *TU*, new ser., iv. 3, 1899). The Middle Ages made both Gr. and Lat. *versus memoriales*, in which the contents of the different books and various Biblical questions were contained. In the 15th cent. what was called the *Ars Memorandi* appeared in the form of a block-print. This whole material requires to be thoroughly collected and investigated.

We have already dealt with the literary material and its tradition. On the one hand, there were the *Church History* of Eusebius (tr. by Rufinus) and Jerome's *de Viris illustribus*, to which must be added the pseudo-Athanasian *Synopsis Scr. S.*, and also Isidore of Seville's *Proœmiorum liber* and

de Ortu et Obitu Patrum. On the other hand, there were the *Prologues* (*ὑποθέσεις, argumenta, praefationes*). In this way there was produced a work similar to the Jewish Massorah, equally anonymous, indefinite in date, growing with time, and fluctuating in tradition. Under the name of 'Euthalius,' the portion referring to Paul, the Acts, and the Cath. Epp. has received special attention and investigation, though without as yet quite definite results. What the ancients called *εἰσαγωγὴ εἰς τὰς θείας γραφάς* (*e.g.* Adrianos, *c.* 430) does not correspond to what we understand by Biblical introduction. It was what we should now find in some handbook on Biblical hermeneutic. It belonged to the same class as the *Instituta regularia divinae legis* of Junilius Africanus, who lived in Constantinople and took them from the lectures of Paul of Nisibis (551), the *Liber de VII regulis* of the Donatist Tychonius Afer, Augustine's *de Doctrina Christiana*, bk. iii., the *Formulæ Spiritalis Intellegentiae* of Eucherius of Lyons, and similar interpretative works.

Biblical history, in spite of its importance for teaching (see V. 3), did not receive scientific treatment in the older period. Mingled with general history, it appears in the form of *chronicles* by Hippolytus, Junilius Africanus, Eusebius, Hieronymus, and many others. For the purpose of apologetics, Augustine put sacred and profane history side by side in his great work, *de Civitate Dei.* The unified presentation of tradition, with some additions from universal history, and here and there a critical note upon various attempts at harmonizing, was best found in the *Historia scholastica* of the Paris teacher, Petrus Comestor († 1179), and the *Speculum historiale* of Vincent of Beauvais (*c.* 1264). The *Lives* of Jesus, which increased so much in number towards the end of the Middle Ages, belong entirely to the literature of devotion. The most widely circulated of such Lives was the *Vita Jesu Christi*, by the Carthusian Ludolf of Saxony (*c.* 1330). The Biblical theology which Roger Bacon demanded, in contrast to the scholastic sentences, remained a pious wish.

It was not till within modern times that Biblical sciences actually appeared. Their cradle was found in Holland among the Arminians. It was there that the great foundation compilations were made both in classical and in Biblical philology and archæology. For the study of the Hebrew language Reuchlin's labours provided the start (1506), and his work was extended mainly by the elder Buxtorf († 1629; *Thesaurus Grammaticus* and *Lexicon*). From the Dutchman, Alb. Schultens († 1750), Johann Dav. Michaelis († 1791) took over the comparative method. In the work of Gesenius († 1842) this combined with the statistical to produce a system which was considered a pattern for long. Then J. Olshausen († 1882) and, above all, B. Stade († 1907) applied the historical method developed by Germanic philology to the study of Hebrew with the greatest success. In the case of the NT the Biblical philology of Georg Pasor († 1637, Franecker), Sal. Glassius († 1656, Jena), and Joh. Jakob Wetstein († 1754, Amsterdam) was again taken up by Ernesti's school at Leipzig, and reached in the *Grammar* of J. B. Winer (1822) and Grimm's *Lexicon* (1867) a position which it maintained till the knowledge of Hellenistic popular speech, made possible by the new papyrus discoveries, widened the horizon (A. Deissmann, *Bibelstudien*, 1895, *Neue Bibelstudien*, 1897, *Licht vom Osten*, 1908). In the 19th cent. the Erlangen school and H. Cremer renewed the attempt to isolate the language of the Bible as much as possible, but this newest turn made the idea of *philologia sacra* impossible. Classical philologists now work in competition with theologians in this field (F. Blass, *Grammatik*, 1896; E. Norden, *Antike Kunstprosa*, 1898; Thumb, *Die griech. Sprache im Zeitalter des Hellenismus*, 1901). In regard to *physica sacra*, the course has been the same. The *Hierozoicon* of Sam. Bochart († 1667) and similar compilations still show us the transition from the manual of science based upon revelation to the modern archæological method which we find in our newer Bible dictionaries. Biblical archæology has won its way from a collection of scholarly observations to a unified presentation of the subject, made possible by the idea of evolution, to which we owe the fact that archæology has become a fruitful subject of study for the history of religion.

It is owing to the activity of the Palestine Exploration Fund and the Deutscher Palästina-Verein that Biblical geography, formerly a mere collection of travel-notes, is coming to form a systematic and complete discipline, showing how to appraise the witnesses of tradition by reference to local conditions (Fr. Buhl, 1896). Geography is thus becoming an important aid to Bible history, which is no longer content merely to repeat tradition or even to criticize tradition, but is gradually winning its way to a general view of the actual historical development, with its motive powers, including persons as well as ideas. In this process naturally the unity of the Biblical point of view is more and more lost sight of. We have the History of the People of Israel (Ewald, Renan), or, more accurately, Israelitish and Jewish History (Wellhausen). Distinct from that, there are the History or the Life of Jesus (Keim, P. W. Schmidt, B. Weiss, and many others), and the History of Apostolic and post-Apostolic Times (Weizsäcker, Knopf, McGiffert, Vernon Bartlet). The Middle Ages did not altogether reject secular evidence, and now the bringing of Biblical history into the frame of general history is a principle. The background acquires increasing significance through the Egyptian and Assyro-Babylonian discoveries and the clearer knowledge which we possess of Judaism and Hellenism in NT times, and threatens, under the influence of the modern positive treatment of history, almost to overshadow the really important features. By way of reaction, we have the treatment of the 'history of salvation' by itself.

A greater degree of advance than in those Biblical subsidiary sciences is to be observed in the two comprehensive disciplines which in the academic studies of our time bear the traditional names of 'Biblical Introduction' and 'Biblical Theology.' It was the 18th cent. that first transformed these into the independent sciences which they now are, through an entire re-arrangement, in the spirit of historical criticism, of the material received from the Middle Ages and orthodox theology. From scattered traditions concerning the Biblical books and their authors there arose the historico-critical introduction to the OT and the NT by the subjection of the material to external and internal criticism. The Scriptures themselves were carefully examined to discover how far they corresponded with traditional views about them. This negative procedure, which was due to the dogmatic consideration of canonicity, was superseded by the literary method (see above, 3), which acknowledges the Scriptures to be part of a great development. In this field the distinction between canonical and uncanonical books remains more and more outside consideration (see the collections of the apocryphal and pseudepigraphic books of the OT by Kautzsch, 1900, and of the NT Apocrypha by Hennecke, 1904; the splendid editions of R. H. Charles and M. R. James; Budde's *History of Hebrew Literature*, 1907; the Histories of old Christian Literature by A. Harnack, 1893, and G. Krüger, 1895). Con-

trariwise on the philological side, the Jewish-Christian literature is given a place in the general literature of the Orient and Greece (von Wilamowitz, in *Kultur der Gegenwart*, i. 8², 1907; Gunkel, *ib.* i. 7).

The so-called Biblical theology, which originated in the collection of passages to prove dogma, first became an independent study as a system of Biblical dogma urged by Pietism, in opposition to the scholastic dogma of orthodoxy. Soon it began to draw historical distinctions (OT and NT and then their various parts), and developed into a representation of the various Biblical systems of doctrine. Hegel's philosophy taught us to see therein a complete development. Thus we arrive at the modern study of the religious history of Israel and Judah and early Christianity, the doctrinal element being more and more consciously subordinated to the study of pious feeling and its effects in the life and thought of men. In place of the Divine story of revelation, we find a history of human piety and pious ideas. In view of the current conception of science, this is unavoidable. But faith is always at liberty to recognize in such human piety and its continual advance the effect of Divine revelation. In this distinction of methods of treatment (scientific and devotional) there lies the guarantee of sound development.

Altogether, the present position of Bible study is quite remarkable. No age has seen such intense study; no age has spent such a wealth of mental energy in Bible investigation; no age has produced such a rich literature on the Bible. The field is so enlarged and the labour so minute, that individuals can hardly keep the whole field in view. Therein lies a danger, and each individual discipline must always remember the common aim. Above all, the study of the OT must never lose sight of its goal in the NT, and the study of the NT never lose sight of its foundation in the OT. Otherwise the living nerve will be snapped; and, however necessary scientifically a clear view of the external relations of the Bible is, on the one hand, it must be remembered, on the other, that the Christian interest which confines itself to the Bible is equally justified. The methods which theology employs in its Biblical sciences are the same as those of all other sciences, but the standpoint is different. The interest with which it handles the material is the interest of Christian piety.

LITERATURE.—G. Hoberg, *Überblick über die Entwickl. u. den Fortschritt der bibl. Wissenschaften auf christl. Boden von ihrem Anfang an bis zur Jetztzeit*, 1902: C. A. Briggs, *The Study of Holy Scripture*, 1899.

History of Biblical Introduction: H. Holtzmann, *Lehrb. der hist.-krit. Einleit. in das NT*³, 1892, 1–16; Jülicher, *Einleit. in das NT*⁶, 1906, pp. 7–21.

History of Biblical Theology: B. Stade, *Bibl. Theol. des AT*, 1905, i. 6–11; H. Holtzmann, *Lehrb. der NT Theol.*, 1897, i. 5–22.

History of Biblical Archæology: W. Nowack, *Lehrb. der hebraischen Archäol.*, 1894, pp. 15–24.

History of Biblical Philology: Winer's *Grammatik*⁸, revised by P. W. Schmiedel, 1894, pp. 4–15.

There is as yet no history of Biblical History, but see H. Vollmer, *Vom Lesen und Deuten h. Schriften*, 1907.

History of Research in the Life of Jesus: C. Hase, *Gesch. Jesu*, 1876, pp. 150–174, more objective than A. Schweitzer's *Von Reimarus zu Wrede*, 1906, which is dominated by its eschatological point of view.

The best information as to the enormous growth of Biblical literature in the last decades is to be found in the *Theologische Jahresbericht*, founded in 1881 by Pünjer, continued by Lipsius, H. Holtzmann, and now ed. by Krüger (OT reviewed by Siegfried, Baentsch, Beer, Gressmann, Volz; NT reviewed by H. Holtzmann, A. Meyer, Knopf, J. Weiss, etc.). In addition there is the *Theologische Rundschau*, ed. by W. Bousset and W. Heitmüller—since 1897.

In place of the *Jahrbücher für Biblische Wissenschaft*, by H. Ewald (1849–1865), and similar publications, such as Hilgenfeld's *Zeitschr. für wissenschaftl. Theologie*, 1858–1907, we now have the *Zeitschr. für AT Wissenschaft*, by B. Stade (now K. Marti), 1881, and the *Zeitschr. für die NT Wissenschaft und die Kunde des Urchristentums*, by E. Preuschen, 1900—a testimony to the progress of specialization. In America there are devoted to Biblical studies in especial the *Journ. of Bibl. Lit.* (1880 ff.) and the *Bibl. World* (1893 ff.), and in Britain the *Expositor*, 1875 ff., the *Expository Times*, 1899 ff., and the *Interpreter*, 1905 ff. For scientific Biblical research by the Catholics of France the central point is the *Revue Biblique*, by Lagrange, 1892; in Germany, the *Biblische Studien* of Bardenhewer, 1895 ff., and the *Biblische Zeitschrift* of Göttsberger and J. Sickenberger, 1903.

In encyclopædic form the whole material is offered at an earlier stage by G. B. Winer, *Biblisches Realwörterb.*³, 1847 f.; D. Schenkel, *Bibellexicon*, 1869–75; E. Riehm, *Handwörterb. des bibl. Altertums*, 1884, 2nd ed. 1893–94; Wm. Smith, *Dictionary of the Bible*, 1863 (Amer. ed. Smith-Hackett, 1892; 2nd Eng. of vol. i., ed. Smith-Fuller, 1893); J. P. Migne, *Scripturae Sacrae Cursus Completus*, 1861–63; Hamburger, *Realencyclopädie für Bibel und Talmud*, 1883 ff.

All these, however valuable they were in their own time, are now superseded by recent works. Now we have the exhaustive articles of Hauck's *Realencyc. für Prot. Theol.*³, 1896–1908. There are also the *Kalw. Bibellexicon*, by P. Zeller³, 1893; H. Guthe, *Kurzes Bibelwörterbuch*, 1903; J. Hastings, *Dict. of the Bible*, 1898–1904, *Dict. of Christ and the Gospels*, 1906–08, and *Dict. of the Bible*, in one vol., 1909; T. K. Cheyne–J. S. Black, *Encyc. Bibl.* 1899–1903; F. Vigouroux, *Dict. de la Bible*, 1895 ff.; *Jewish Encyc.* 1901 ff.—an imposing array, in itself a proof of the high standard to which Biblical science has attained in our time.

V. *THE BIBLE IN DIVINE SERVICE.*—The Bible was not only the authoritative standard of Church doctrine in the hands of the learned theologian; it was also the book from which the Church drew instruction and exhortation, consolation and inspiration. It was a book to be used in Divine service, just as it had been in the Synagogue. Here we come upon the great distinction between Christian and all other forms of worship. The object elsewhere is to produce some theurgic effect. The idea is to operate upon the Deity through sacrifice and prayer, and by effective symbolism to attain to some connexion, some union, with the god. This is the case in the heathen world generally, and also in the temple-worship of Judaism. Only in the Synagogue and in the Christian form of service is the central place given to God's word, as it speaks to the assembled congregation out of the sacred book with voice of instruction, edification, and exhortation.

LITERATURE.—A. C. A. Hall, *The Use of Holy Scripture in the Public Worship of the Church*, 1903.

1. **Reading.**—The use of the Bible in the services of the Church has been rich and varied. In the forefront stands reading. In the Synagogue the practice followed was the continuous reading of whole books. In the course of three years, *e.g.*, the Law with 154 *parashiyôth* was read through. The young Christian Church adhered to the same plan. It is to be regretted that we know nothing very definite about the reading of the Bible in the first three centuries. But from the acquaintance with the books of the Bible which is taken for granted, and which in many cases could have been gained only through the services of the Church, we may conclude that it was extensive. It is certain that the Law and the Prophets, and afterwards the Gospels and the Epistles, came to be read *seriatim*. In his description of the Christian service about 150, Justin speaks of the reading of the ἀπομνημονεύματα τῶν ἀποστόλων (*i.e.* the Gospels) and the συγγράμματα τῶν προφητῶν (*i.e.* the OT—or is it the writings of Christian prophets, in other words, Apocalypses, that he means?) μέχρις ἐγχωρεῖ (*Apol.* i. 67). These last much-disputed words seem to lead to the conclusion that there was no special division of the Scripture into portions for reading, and that the time allotted to it was not definitely fixed. Justin's statement is perhaps best understood by comparison with the custom which the present writer found in some outlying Swiss churches. At the beginning of the service, and while the congregation was still gathering ('donec totus populus congregetur,' *Can. Hipp.* xxxvii. 203), instead of the organ playing, which is customary in other places, the teacher read from the Bible, and after going through several chapters in succession suddenly broke off at the entrance of the clergyman. Naturally there

was more read than the OT books and the Gospels. The Divine service for which the congregation assembled afforded opportunity for bringing newly-received letters from other churches to the knowledge of the congregation (1 Th 5^{27}, Col 4^{16}), and also written addresses from distant teachers and prophets (He 13^{22}; II Clem. 19), particularly the records of revelations (Rev 1^{3} 22^{18}; Herm. *Vis.* ii. 4. 3). In the beginning probably some distinction was drawn between the reading of the sacred Scripture and the reading of these new letters. But the custom of reading these over and over again (see Dionysius of Corinth *ap.* Euseb. *HE* iv. 23. 11, on I Clem. and the letter from Rome by Soter) was itself enough to give them a place alongside of Holy Scripture. The effect of this was twofold. On the one hand, the extent of Scripture read in this way was increased. There are 4th and 5th cent. MSS which contain the Epistles of Clement (*Cod. Alex.*; cf. the *Syr. Codex*, dated 1170, at Cambridge and *Can. Apost.* 86), the *Shepherd* of Hermas, and the Epistle of Barnabas (*Codex Sin.*), and Athanasius makes Wis., Sir., Est., Jth., Tob., *Didache*, and Hermas into a special class of ἀναγινωσκόμενα (*Epist.* 39, A.D. 367). On the other hand, the Church insisted on having everything uncanonical excluded from the reading of the Bible in public worship (Synod of Laodicea, 363 [?], Can. 59; Carthage, 397, Can. 39; Westcott, p. 540)—a step specially directed against the introduction of the Apocryphal literature fostered by Montanists, Marcionites, Manichæans, and Priscillianists. The limitation to what was canonical was never quite adhered to in the mediæval Church. So early as the 4th cent. the custom was adopted of reading Martyrdoms of Saints on the days dedicated to their memory (Carthage, 397, Can. 39: 'liceat autem legi passiones martyrum cum anniversarii eorum dies celebrantur'; Liturg. Gall. *PL* lxxii., xc.). The Roman Church, always specially cautious—as, *e.g.*, in the matter of the Epistle to the Hebrews (Euseb. *HE* iii. 3. 5)—refused for a long period to read them in the services of the Church, on the ground of uncertainty of authorship and suspicion of heretical falsification (*Decr. Gelas.* v. 16, Preuschen, 151). Very soon there thus came about the reading not only of the passions of the martyrs, but also of other sacred legends (Augustine allowed miracles of healing to be read [*de Civ. Dei* xxii. 8]). All through the Middle Ages the Bible shared the honour of being read in church with these books of legends and passions. The Reformation really established the principle of reading only the Bible.

In the matter of the choice of passages for reading, the various national churches developed various practices. The Aquitanian pilgrim (Silvia, or Etheria) presents us with a picture of the extremely rich supply of readings on Easter Friday in Jerusalem (*Itin. Hieros.*, ed. Geyer, p. 89). The Syrian practice, laid down in the *Apost. Const.* ii. 57, viii. 5, seems to prescribe two lessons from the OT, one from the Epistles and one from the Gospels. Tertullian bears witness that the Roman Church and the African Church of his time followed the same custom: 'legem et prophetas cum evangelicis et apostolicis litteris miscet' (*Praescr. Haer.* 36). OT lessons are also presupposed in *Praes. Hær.* 51, *Monog.* 12, *adv. Gentes*, 22. At the time of Cyprian these seem to have been wanting in the African Church (*Epist.* xxxiv. 4, xxv.). Three readings—Prophetic, Epistolary, and Gospel—are known in the Asia Minor Church (Basil, *PG* xxxi. 425), as also in Gaul (Germanus of Paris, *PL* lxxii. 90, Liturg. Gall. *ib.* 171 ff.) and in Spain (*Liber Comicus*, ed. Morin; *Anecdota Maredsolana*, i., *Liturg. Mozarab.* ed. Cabrol-Leclerq I.). But here, too, the OT lesson was often wanting.

Later on, the number of readings was everywhere reduced to two—Epistle and Gospel. This was the case in Rome, perhaps from the time of Damasus (if it was really Jerome who compiled the first *comes*), and certainly from the time of the *Sacramentarium Gregorianum* (*PL* lxxviii. 25). The order followed—Prophets, Epistles, Gospels—is evidently everywhere considered an ascending one. That is shown in the special treatment of the Gospel. While the other lections were left to the *anagnostes* (placed in the beginning almost on the same level as the prophets as being a pneumatic, but later on taking a place among the lower clergy [Harnack, 'Über den Ursprung des Lektorats,' in *TU* ii. 4 (1886), 57 ff.]), the reading of the Gospel was reserved for a deacon or a presbyter (*Canon. Apost.* ii. 57; Sozom. vii. 19, 6). At Easter the bishop himself read (*Peregr. Silviae*, p. 73, Geyer; Sozom. *loc. cit.*). Candles were first lit for the Gospel-reading (Jerome, *adv. Vigil.* 7, *PL* xxiii. 361; Isidore, *de Offic. eccl.* ii. 14, *PL* lxxxiii. 793) [cf. Bellarmine, *de Reliquiis Sanctorum* ii. 3 (Rome, 1613, ii. 775)]. The *laudes* ('hymns') were to follow the lesson from the Gospel and not that from the Epistles (*Syn. Toledo*, 633, Can. 12, Mansi, x. 622).

Gradually the habit of reading certain books at certain periods of the Church year became fixed (*Lectiones annuæ*, Augustine, *PL* xxxv. 1977). In Lent, Genesis was read (Chrysostom, *PG* liii. 22); in Easter week, Job (pseudo-Origen on Job, *PG* xii. 103; Ambrosius, *PL* xvi. 1040); on Maundy Thursday, Jonah (Ambr. *l.c.* 1044); on Good Friday, in many churches of Palestine, the Apocalypse of Peter (Sozom. vii. 19); on the four Easter days, the reports of the Resurrection according to Matthew, Luke, Mark, John (Augustine, *PL* xxxviii. 1156; Fulgentius, *PL* lxv. 903 f.). Between Easter and Whitsuntide, the Gospel according to John and Acts (Chrys. *PG* li. 97; Augustine, *PL* xxxv. 1433, xxxviii. 1426) were read; in Spain during this season the Apoc. of John (*Syn. Toledo* 633, Can. 17, Mansi x. 624), and in Gaul the Acts and the Apocalypse (Germ. Par. *PL* lxxii. 90). On Victor of Capua see *ZNTW*, 1909, pp. 90 ff., 175 ff.

The Euthalian apparatus contains a system of *lectio continua* for the Epistles of the NT in 57 ἀναγνώσεις (see G. Rietschel, *Lehrb. der Liturgik* i. 1, 225). Chrysostom (*Joh. Hom.* 57, 1, *PG* lix. 311) clearly implies the *lectio continua*.

Soon, however, it came to be that special lessons were taken for every day, the reason probably being that the lessons had to be suited to the commemoration of the particular saint for the day. Gennadius (*Vir. ill.* 80) mentions the presbyter Musæus of Marseilles († 460) as the compiler of a pericope system of this kind. It is certain, however, that at the same time various systems of the kind came into existence, *e.g.* that of Claudian of Arverni (Clermont), referred to by Apollin. Sidonius (*Ep.* iv. 11). These were frequently combined with the older system. The Armenian Church broke through its *lectio continua* only on the great feast-days when it had special lessons. The Greek Church had a peculiar system of *sabbato-kyriaka*: besides the *lectio continua* for the days of the week, there was also a special system of pericopes for Saturday and Sunday (so in a great many Gr. MSS; cf. C. R. Gregory, *Textkritik*, i. 327 ff.). Excellent service has been done by E. Ranke in investigating the very confused history of the various pericope systems. In the Middle Ages Charlemagne was the first to give attention to this matter. Improvements were essayed in all countries, usually in the vain endeavour to bring about uniformity. The Roman practice established itself more and more generally. It was this *usus Romanus* that the Reformers found

to hand, and there were many attempts at improvement. These have not ceased even in modern times, nor has any unanimity been reached even in the churches of Germany. In 1898, *e.g.*, in Prussia, besides the usual lessons from the Epistles and the Gospels, others were introduced, in which OT passages were included. The lectionary put together for Rhineland by Nitzsch, and the Bavarian system revised by Thomasius, contain a series of OT lessons extending over a year, while in the Palatinate the system in use extends to a four years' course.

There is great uncertainty as to the motives which induced the choice of the different pericopes. Many of them owed their existence to chance, and were afterwards justified by ingenious theories.

In the ancient Church the principle was always strictly adhered to that the reading of Scripture was for the congregation, and must therefore be intelligible. When this was not immediately possible for everybody, the reading was accompanied by translation, just as formerly in the Targums of the Synagogue. In the whole of the Western half of the Empire Greek was almost everywhere read and understood. In many parts of Syria and Egypt recourse was had to oral explanation, until translations in the respective tongues were made. In the case of Jerusalem we know that the Greek lessons and also the Greek sermon were immediately translated into Syriac for the people, and when there were pilgrims present from the West a translation was made for them into Latin (*Peregr. Silviae*, p. 99, Geyer). In the same way in the West, translations of the Latin were given in the Celtic, Punic, and Iberian tongues.

In any case it was understood that the whole congregation could follow the reading. Attention to the reading of Scripture is mentioned in an episcopal letter of the 4th cent. (Petrus Alex. [?], C. Schmidt, *TU*, new ser. ii. 4^b, 5) as the most important part of the Sunday regulations. The reading of Scripture was also expected to produce a direct effect upon the hearers. In a great number of records of conversion the crisis was reached suddenly while some passage of Scripture was being read in Divine service. Athanasius relates that the conversion of St. Anthony (*Vita*, ch. 2, *PG* xxvi. 841) was due to his chance hearing of Mt 19^{21}. Augustine remembered this at his own conversion, when, hearing a voice say 'Tolle, lege,' he took the Scripture and read Ro 13^{13} (*Confess.* viii. 12, 29). It was hearing Mt 19^{29} read that induced Hypatius, a youth of 18 years, to leave his home, though the biographer states naïvely enough that his father had previously thrashed him (*Vita*, by Callinicus, p. 9, ed. Bonn). Similar stories are related of Babylas the actor (Moschos, *PG* lxxxvi. 2880), and of Simeon Stylites (Lietzmann, *TU*, 3rd ser., ii. pp. 2, 20, 81, *Synaxarium Constantinopolitanum*, 1 Sept).

Not until the Middle Ages did it happen that in almost all churches, both Oriental and Latin, the Holy Scripture was read in a tongue unintelligible to the people. Even Charlemagne would have none of this, and demanded that wherever necessary there should be an interpreter. This practice, however, entirely ceased, until in the 13th cent. some attempt was again made to have the sermon delivered in the language of the country. Thus a custom which arose only through tenacity of ecclesiastical practice and clerical remissness was afterwards justified by the theory that a holy speech was seemly for the Holy Scripture. The abandonment of intelligibility was connected with the development of the Catholic service to a business of the priests, before and for the passively interested congregation. The Reformation broke away from this idea of worship and from the view of sacred unintelligibility, and returned to the principle of the ancient Church.

LITERATURE.—P. Glaue, *Die Vorlesung heil. Schriften im Gottesdienst*, 1906; E. Ranke, *Perikopensystem*, 1847; Scrivener, art. 'Lectionary' in Smith-Cheetham, *DCA* ii. 550 ff.; G. Rietschel, *Lehrb. der Liturgik*, i. 1900, 223 ff.: W. Caspari, art. 'Perikopen,' in *PRE*[3] xv. 131–159; artt. in *ExpT* from Oct. 1905 to May 1907.

2. Preaching.—The reading of the Scripture was not all. An attempt was made to come still more to the congregation's aid. To the reading there was nearly always added an exposition, with a hortatory, explanatory, and devotional application (cf. Lk $4^{17ff.}$). According to Justin (*Apol.* i. 67), the reading was followed by an admonitory and inspiring address by the presiding presbyter. The second Epistle of Clement seems to be a homily on Is 54–56 (Knopf, *Preuschens ZNTW* iii. 206 ff.; cf. *Acta Petri c. Simone*, 20; Augustine, *de Civ. Dei* xxii. 8, p. 611, 9, 10; *CSEL* xl. 2).

Often the preachers refer in the introduction of the sermon to the passage of Scripture read. This is the practice of Augustine, Cæsarius of Arles, Petrus Chrysologus of Ravenna, Chrysostom, and even Theophanes Kerameus. Bede often begins, 'Lectio sancti evangelii quam modo, fratres, audivimus . . .' At a later date the words used were, 'Post illa verba s. scripturae,' and hence from the 14th cent. the name *postilla*, 'postil,' was applied to collections of sermons (Nicolaus of Lyra, Geiler of Kaysersberg, Luther, etc.).

In many cases these sermons are nothing more than the devotional exposition of the Scripture. This is the nature of the homilies of Origen, who, besides his commentaries and scholia, expounded almost the whole of the sacred Scripture. We are acquainted with 17 homilies on Gen., 13 on Exod., 16 on Levit., 28 on Numbers, 13 on Deut., 26 on Joshua, 9 on Judges, 4 on 1 Sam. and 1 on 2 Sam., 1 on 2 Chron., 2 on Ezra, 22 on Job, more than 100 on Psalms, 2 on Proverbs, 8 on Eccles., 2 on Song of Sol., 32 on Isaiah, 45 on Jeremiah, 14 on Ezekiel. There are 25 homilies on Matt., 39 on Luke, 27 on Acts, 11 on 2 Cor., 7 on Gal., 2 on Thess., 1 on Titus, 18 on Heb.—altogether close on 500. In the same way we possess continuous expositions of whole books of the Bible in the form of sermons by Ambrose, Augustine, Chrysostom, etc. In Lent there was a sermon every day, and on Sundays there were two. The peculiar method followed by Chrysostom is worthy of remark. First he gives a complete practical exposition of the passage, and then in a second part he deals with some theme that has often very little connexion with it.

A special kind of such exposition is represented by the discourses which Jerome delivered in the monastery (ed. Morin, in *Anecd. Mareds.* ii.). These have not been preserved in their complete form, but only as they were written down freely afterwards from shorthand notes. Occasionally he expounds a Psalm, and immediately afterwards a passage from the Gospels (*Rev. Ben.* xix. 30). The so-called little catecheses of Theodore of Studium originated in the same way (ed. Auvray and Tougard, 1891; cf. A. Gardner, *Theodore*, p. 82 ff.).

But even where sermons do not deal with continuous passages in this way, as in those of Petrus Chrysologus of Ravenna and Maximus of Turin (both about 450), the majority of them have texts from the Bible as their foundation. Even occasional addresses are joined to a definite text, and the sermons are so full of Scripture references, that, despite their elevated rhetoric, they amount to centos made from passages of the Bible, as, *e.g.*, the opening sermon delivered by Gregory of Nazianzus at the Council in 381 (Mansi, iii. 529 ff.).

Gennadius (*Vir. ill.* 100) boasts of the extraordinary facility which his countryman, Bishop Honoratus of Marseilles, showed in extempore preaching, and accounts for it mainly by his rare acquaintance with Scripture.

It is true that in the matter of preaching, too, the Bible had to compete with the legends of the saints. Chrysostom and Augustine preach a great deal about the glorious deeds of the martyrs and the miracles of the saints. In the collections of sermons which are characteristic of the later Middle Ages, such as the *Homiliarium* of Paulus Warnefrid * made to the order of Charlemagne, or the *Homiliae Toletanae*,† sermons of both classes are found side by side. Later on a distinction was drawn between the *sermones de tempore* (on the Biblical pericopes of the Church year) and *de sanctis* (on the legends of the saints), *e.g.* by Hildebert of Tours († 1134), Bonaventura († 1274), Heinrich of Frimar (about 1340), Pelbart of Temesvar (about 1500), and many more.

Generally speaking, in the Middle Ages the sermon fell more and more into the background or assumed a barren form. In many Oriental churches it almost ceased. Among the Copts the only preacher was the Patriarch, and he preached only once a year. The Byzantine liturgy has scarcely a proper place for the sermon. The Western mass can not only do without it, but is then much more of a unity. Hence it is that the sermon is often a feature of supplementary services. But even where we find it in ordinary connexion with the reading of the Bible in the later Middle Ages, it has wandered far from its original purpose. It has become dogmatic, and is Biblical only so far as scholasticism operates with the authority of the Bible for its own purposes. It was otherwise in popular preaching, and especially preaching in the languages of the country, such as the exhortations of the Franciscans like Berthold of Regensburg († 1272); the German preaching of the mystics and popular men like Tauler († 1361) and Geiler of Kaysersberg († 1510); and in England Richard Rolle of Hampole († 1349).

Nevertheless it must be acknowledged that it was not till the Reformation that preaching again returned to its task of expounding the Bible. Apart from exceptional cases like Mathesius's sermons on Luther's life, Sermons on the Catechism or the Hymn-book, or even the modern experiment of preaching upon Schiller, the Holy Scripture is acknowledged in all Protestant Churches as the exclusive foundation of the sermon. It cannot be denied that, partly through the coercion of the pericope system, but chiefly in consequence of the scholastic tendency of thought in the orthodox period, its connexion with the text often became very loose. In Pietism, however, the connexion again gained strength, and to-day it may be laid down as the general requisite of Protestant preaching that it should be in keeping with the text, or, in other words, Biblical. In Luther we meet again with the exposition of whole books in a series of sermons—a form that has lately gained much vogue (*e.g.* the four Gospels in 'Predigten und Homilien,' ed. by Kögel, in association with Dryander, Frommel, and Pank, 1889 ff.).

Even where, in opposition to the style of homily which follows the text step by step (developed with special success by Menken), the so-called thematic sermon is preferred, not only is the theme drawn out of the text or chosen because of its close connexion with the text, but also in its elaboration the effort is made to exhaust the text as far as may be.

* F. Wiegand, in Bonwetsch-Seeberg, *Studien zur Gesch. der Theol. u. Kirche*, i. 2.

† G. Morin, *Anecd. Mareds.* i. 1893.

In addition to this, we have within recent times the Bible-class by way of supplement to the sermon. It was introduced by Pietism (Collegium biblicum directed by Spener and A. H. Francke), and is becoming more and more common. In entire freedom from the compulsion of the pericope, which is still followed in some churches, it supplies a connected system of Scriptural exposition.

LITERATURE.—Hering, *Gesch. der Predigt*, 1897; Schian, in *PRE*³ xv. 623–747; *Altdeutsche Predigten*, ed. A. E. Schönbach, 3 vols. 1886–91; G. Cruel, *Gesch. der deutschen Predigt im Mittelalter*, 1879; F. R. Albert, *Die Gesch. der Predigt in Deutschland bis Luther*, 1892–96; F. Dargan, *A History of Preaching*, 1905; J. Ker, *Lectures on the History of Preaching*, 1888.

3. **Catechetics.**—Besides the sermon as a means of explaining the Holy Scripture, we must not forget the instruction given in catechetics. In the classic form which it bore in the ancient Church this began with a survey of Bible-history, having regard to its typological and allegorical significance. A splendid instance is given in the newly-discovered work of Irenæus entitled *εἰς ἐπίδειξιν τοῦ ἀποστολικοῦ κηρύγματος* (*TU* xxxi. 1, 1907). In Jerusalem during the Lent season three hours daily were given to this instruction (*Peregr. Silviae*, p. 97; cf. Augustine, *de Catechiz. rudibus*).

With regard to the catechumens, the teacher could take for granted their wide acquaintance with the Holy Scriptures. The reading of Scripture took place during the first part of the service, to which catechumens were admitted (*missa catechumenorum*); they, indeed, were the 'hearers' (ἀκροώμενοι). Over and above this, Cyril of Jerusalem exhorted his catechumens to diligent reading in private of the Scriptures recognized by the Church (*Cat.* iv. 33 ff., *PG* xxxiii. 493). In the West, indeed, the creed (*symbolum*) was more emphasized than the sacred Scriptures, and so it happened that, as time went on, instruction in the Bible received less attention. The age of Charlemagne was content with the Decalogue and the Paternoster.

This catechetical tradition influenced even Luther, although, so far as was possible, he strove for the widening and deepening of Bible knowledge. When the practice of catechetics received a fresh lease of life in connexion with confirmation under pietistic influence, Biblical material came to be more handled again, and nowadays the catechism most favoured is that which adduces many Bible-texts as proofs or is altogether couched in Biblical phraseology. Bible-history forms a main subject of popular education. Where this is not the case, or the religious aspect is neglected, the attempt is made to make up, for what has been missed, by Sunday Schools and Children's Services. The modern tendency of the Herbart-Ziller school to make the Biblical history yield to other narratives (*Märchen*, Robinson Crusoe) undervalues the religious and moral, and therefore the pædagogic, value of the Scriptures. Modern theology of the historico-critical school, too, has raised many objections to the old method of treating Bible-history. It is not, however, merely a matter of history, but of the spirit in which it is handled. Bible-history is not now what it was in the Middle Ages, the history of humanity. For us it is but a history of faith. The important feature is not the knowledge of history, but the perception of faith. The aim must be to get the child to reach beyond the history into the spirit of the prophets and the perfection of Christ. This being so, the newer critical Biblical science sets religious instruction

the difficult task of making the Bible a cherished and beloved book to the child, of investing it with honour and authority in his eyes, and at the same time of making him adopt such an attitude towards it as the knowledge of defects and mistakes in its record of history and natural history will not disturb. See art. CATECHISMS AND CATECHIZATION.

LITERATURE.—H. Vollmer, 'Beitr. zur Gesch. des bibl. Unterrichts,' in *Mittheil. der Gesellsch. f. deutsche Erziehungs- und Schulgesch.* 1904, *Monatschrift f. d. kirchl. Praxis*, 1904, and *Evangelische Religionslehre*, 1906; Caspari, art. 'Gesch. biblische,' in *PRE*³, vi. 619–22; J. Hoffmann, *Die h. Schrift, ein Volks- und Schulbuch in der Vergangenheit*, 1902; E. Chr. Achelis, *Der Dekalog als katechet. Lehrstück*, 1905; E. Kautzsch, *Bibelwissensch. u. Religionsunterricht*, 1900.

4. **Prayer and praise.**—To the direct devotional value of the Bible in reading and exposition there have to be added yet other elements of Biblical origin. Nearly all the liturgical formulæ—Amen, Alleluia, Hosanna, Kyrie Eleison, Gloria, and Pax —find a place here. The single exception to this in the ancient Christian liturgy is the *Sursum Corda*, whose origin still remains uncertain. The Lord's Prayer, which is to be heard at every Christian service, is Biblical, and so also are the different forms of the Benedictions. The Reformed Churches have also the Decalogue as a part of the service, while—the difference is significant—the Lutherans adhere to the Credo of the Catholic mass, usually in the form of a hymn of faith. The foundation and the language of most prayers are Biblical. Often whole Psalms are taken over, or single passages from the Psalms are worked in. The Psalter as the prayer-book of personal devotion is dealt with in VI. 1 and 3.

Then also there is the singing of psalms. In the ritual of the Temple this formed a most important part of the service, almost all the spoken part. In meetings of the Synagogue also it had a part to play. So it was immediately adopted by the Christians and diligently cultivated. It is disputed whether by *ψαλμοί, ὕμνοι, ᾠδαὶ πνευματικαί* (Col 3^{16}, Eph 5^{19}) we are to understand the Psalms of the OT or specially Christian poems (or both together). The canonical Psalter was of course completed, but the poetry of the Synagogue was not yet exhausted, as is witnessed by the eighteen 'Psalms of Solomon' from the period subsequent to B.C. 63. The exalted mood of the early Christians, the wonderful experience of the new salvation, must have fostered poetry. 1 Co $14^{15. 26}$ as well as Pliny's statement 'Christo quasi deo carmen dicere' suggest new Christian poems. We find samples of these in 1 Ti 3^{16}, Rev $11^{15. 17f.}$ $12^{10ff.}$ $15^{3f.}$ $19^{1f. 5. 6f.}$. But these fragments, like the hymns in Luke's Gospel (*Magnificat* $1^{46ff.}$, *Benedictus* $1^{68ff.}$, *Nunc Dimittis* $2^{29ff.}$, *Gloria* 2^{14} [cf. 19^{38}]) show clear dependence upon the OT patterns. In their form, too, they follow the Semitic rhythm and not the Greek prosody. The same may be said of the eleven psalms of repentance in the *Pistis Sophia* which are modelled on the Biblical psalms. The Greek form was first brought into Christianity by the heads of Gnostic schools who were possessed of literary culture. The Muratorian Fragment mentions Marcionite and Basilidian psalms. The Naassene hymn in Hippolytus, v. 10, already possesses the Greek form, as does also the hymn to Christ in Clemens Alex. (*Paed.* iii. 12 fin.). The hymns of the Syrian Bardesanes and his son Harmonius were famous, and it was to repress them that Ephraim wrote others. At the same time, Ambrose in the West laid the foundation of Latin hymnology. The poems of Gregory of Nazianzus and Synesius are not much concerned with congregational worship. At this time, however, a tendency made itself felt in the Church to have the congregational praise restricted to the Canonical Psalter (which included, in addition to the 150 [151] Psalms, the 9 [10] *ᾠδαί, cantica*: Ex 15, Dt 32, 1 S 2, Hab 3, Jon 2, Dn 3 [Apoc], Lk 1, 2, as they are gathered together in Codex A and in a great number of subsequent MSS and liturgies) in order to counteract the attempts of heretics (Arians, Apollinarists, etc.) to misuse the Church hymns for their own special ends (see Conc. Laod. 363 [?], Can. 59: *ὅτι οὐ δεῖ ἰδιωτικοὺς ψαλμοὺς λέγεσθαι ἐν τῇ ἐκκλησίᾳ οὐδὲ ἀκανόνιστα βιβλία*; cf. Theodoret, *HE* ii. 24 [19], iii. 10 [6], iv. 22 [19]). The *Apost. Constit.* (ii. 57) require the singing of the Davidic psalms between the readings from Scripture. Two tendencies thus run through the whole history of Church praise. The more severe of these adheres to the Biblical psalms. They formed the basis of mediæval worship, and still hold the chief place with Roman Catholics and Anglicans. In the strictly Calvinistic Churches they were in invariable use, though in paraphrastic versions. On the other hand, the Church has never ceased to produce poetry. Influenced by the Syrians, Romanus brought hymns to the Greeks in the 6th century. John of Damascus put in place of such free compositions the more correct and formal Canon, which is still used by all the Oriental Churches, Greek and Slavonic. In the West, from the time of Ambrose down to the end of the Middle Ages, there was an unbroken line of hymn-writers, and soon alongside of the Latin hymns of the Church others in the popular speech were abundant. In Germany these were specially numerous, and the Reformation introduced a new and powerful stimulus. By their paraphrases of what was ancient and their new compositions, Luther, Paul Gerhardt, and many others have supplied us with the highest that is possible in the strong and fervent expression of Christian faith and pious feeling. Here the Biblical psalm is found usually in the form of the motet, which is sung by the choir as an addition to the congregational praise. From the very beginning the Lutheran Churches have devoted special attention to praise, and thereby not only has the Roman Catholic Church been roused to new activity, but the later Calvinistic Church has been induced to permit, alongside of the Psalms, hymns which in the meantime displace the old psalms more and more. In view of what has been said about the ancient Church, it is certainly not mere chance that in Dissenting circles hymns play such an important part. A pious Moravian legitimizes his opinions by declaring them to 'conform to Scripture and the hymns.'

It has to be said that the distinction between Biblical psalms and Church hymns is in the main a formal one. Often the hymn is nothing but a free poetic rendering of the psalm; cf. *e.g.* Luther's 'Ein feste Burg' with Ps 46 and 'Aus tiefer Not' with Ps 130. The congregation is rightly kept in mind of this by the quotation of the text in the hymn-books. The best and most effective hymns are of this nature, and they show to great advantage when compared with the martyrolatry of Greek and Roman hymns and the sweet emptiness of the hymns belonging to modern sects. Instead of any opposition between Biblical psalms and Church hymns, it is, in fact, more correct to speak of the direct and indirect effect of Biblical hymns upon Christian worship, and it will be found impossible to rate either too highly.

5. **Biblical symbolism.**—It was not only the spoken word that was Biblical. The whole service was intended to bear a Biblical stamp. This, it is true, involved a great danger. The NT has little to say on the subject of worship; the OT has a great deal. This being so, it soon happened that in the Christian service analogies were discovered with the OT priestly and sacrificial system, and the service was thus lowered to a pre- and sub-Christian level. We find the fullest expression of this in Cyril of Alexandria, whose work on worship in spirit and in truth is just an allegorical transference to Christianity of the OT sacrificial laws. The later Greek Mystagogy (Theodore of Andida, 11th cent.) made an endeavour to carry through the idea of a parallelism between the history of salvation (especially the life of Jesus) and the liturgy. In the West, Isidore of Seville (†636), in his *de Officiis ecclesiasticis*, set the precedent of justifying all Church usages by the Bible (cf. Rabanus Maurus, *de Clericorum institutione*, *de Ecclesiastica disciplina*; Walafrid Strabo, *de Exordiis et incrementis rerum eccles.*; Wilh. Durandus, *Rationale divinorum officiorum*; Honorius of Autun, *Sacramentarium*).

We do not know how far these interpretations of Divine service, written for the instruction of the clergy, found their way among the people, but from the walls of the church the Bible stories and ideas shone down even upon the unlearned, in beautiful pictures. The large wall-spaces of the ancient Christian basilicas (*e.g.* Santa Maria Maggiore) formed early picture-books of this kind. In the East an extremely complicated system of decorating church-interiors was established, partly in brilliant mosaic (Hagia Sophia, San Marco, Capella Palatina at Palermo), partly in varied colours (cave-churches of Cappadocia, the monasteries on Athos). The Roman churches of the West were also, as a rule, richly decorated. Gothic art resolved those picture-cycles into a system of statues, into groups of sculpture. The Renaissance baroco and rococo returned to coloured decorations, though the original educative purpose now disappeared behind the artistic idea of ornamentation. The Biblical stories had occasionally to yield to the accessory of lovely landscape (as in Poussin's pictures in S. Pietro ai Monti in Rome). According to the principles of the newer art, the understanding of the pious beholder can no longer be helped, as was formerly the case, by inscriptions. So far as Lutheran Protestantism is concerned, the pictures which decorate the panels of the galleries in churches are only by way of ornament. They are far too small to be effective. Lately, Ed. von Gebhardt has endeavoured with great success to decorate the Friedenskirche at Düsseldorf with large and effective Gospel designs. Calvinism rejects entirely, or rather forbids, every kind of pictorial ornamentation. Instead, it makes some Biblical text in large letters speak from the wall to the assembled congregation. In the 17th cent., when the Graf von Dohna, till then a Lutheran, turned Calvinist, the family tombstone at the church of Mohrungen (Prussia), which was ornamented with a representation of the Holy Trinity, was whitened and inscribed with verses from the Bible. Calvinism has also in some cases made the reading of the Bible take the place of organ music. The liturgy begins with the recitation of the Decalogue. In this domain it is the Bible—in somewhat legal fashion indeed—that rules the whole Divine service.

LITERATURE.—On Greek Mystagogy: F. Kattenbusch, in *PRE*[3] xiii. 612–622; P. Drews, *Theol. Stud. u. Krit.*, 1900, p. 481 ff.; E. von Dobschütz, *Byz. Zeitschr.* xii., 1903, p. 559 ff.; F. E. Kunst*, 1896–97, i. 383 ff., ii. 22, 52 ff.; H. Brockhaus, *Die Kunst in den Athos-Klöstern*, 1891; H. Rott and K. Michel, 'Kleinasiat. Denkmäler' in Ficker's *Studien über christl. Denkmäler*, vi., 1908.

VI. *THE BIBLE IN PRIVATE USE.*—1. **The Bible in the Christian home.**—The Bible was not only a book to be used by learned theologians or for liturgical purposes. From the first and always it aimed at being the devotional book of every Christian. That was its special end and value. At the time of Jesus the Jews had the OT, and, as Wellhausen says, 'Die Bibel war die Fibel,' 'The Bible was the first reading-book.' Timothy knew the Holy Scriptures 'from a child' (2 Ti 3^{15}). Some of the books of the NT were written as aids to private devotion (Lk 1^{1-4}). The passage 2 Ti 3^{16} applies not only to the public but also to the private use of the Bible. It is probable that in the early period many Christians were limited to the public reading of the Bible, as they possessed no books of their own. In the opinion of the present writer, however, the number of Bibles to be found in private houses in the first three centuries has been under-estimated by Prof. C. Bigg (*The Church's Task under the Roman Empire*, 1905, p. 28). Paul presupposes quite a remarkable acquaintance with the OT among the members of his Churches. Polycarp writes to the Church at Philippi (12^{1}): 'Confido enim vos bene exercitatos esse in sacris litteris.' We learn from Tertullian that the reading of the Bible in common was one of the practices of the Christian home, and he urges this fact as an argument against 'mixed' marriages, because in such a case the custom becomes impracticable (*ad Uxorem*, ii. 8). In the *Didascalia of the Apostles* (ch. ii.) Christians are exhorted in the following terms: 'Sit at home and read in the Law, in the Book of Kings and in the Prophets and in the Gospel which is their fulfilment,' while in ch. xxii. the rod of discipline (Pr 13^{24} 19^{18} 23^{13}) is interpreted as the word of God, in which youth must be diligently instructed. Family prayers, as well as those of the Church, are Biblical in character. The morning-prayer makes reference to Lk 2^{14}, the evening-prayer to Ps 113 and Lk $2^{29ff.}$. The grace before meat, preserved in *Const. Apost.* (vii. 49), is drawn from Gn 48^{15}, Ps 136^{25}, 2 Co 9^{8}. The real prayer-book is the Psalter; Christian maidens sit at the distaff and sing about the Divine revelation (Tatian, *Orat.* 33); husband and wife entertain one another with psalms and hymns, and vie with one another as to who shall best sing to God's praise (Tertullian, *ad Uxorem*, ii. 8). On the occasion of Monica's death, when Augustine and his son Adeodatus were overcome by grief, Euodius took the Psalter and intoned the 100th Ps., all present making response (Augustine, *Confess.* ix. 31). All the teachers of the first centuries counted upon this private use of the Scripture, and encouraged it (Justin, *Apol.* 44; Cyprian, *Ep.* i. *ad Donatum*). Pamphilus is said always to have kept copies ready to give to Christians who desired them (Hieronymus, *ad Ruf.* i. 9). The Acts of the Diocletian persecution indicate the extent to which the Christians honoured and defended the Bible as their sacred possession and their dearest treasure. More than one martyr was discovered while reading the Scripture, and brought to account for it, *e.g.*, Euplius of Catana, who read Mt 5^{10} 10^{28} before the judge, and, when asked why he had not obeyed the Emperor's injunction (dated 24th Feb. 303) to deliver up all Bibles, quietly answered: 'Quia Christianus sum et tradere non licebat magisque expedit mori quam tradere' (cf. *Mart. s. Irenae*, and Eusebius, *Mart. Pal.* 8. 4). The reproach which

was made against the Catholics by the Donatists, 'velut traditores in persecutione divinarum scripturarum,' was keenly felt by the former as an attack upon their Christianity. No difference was made later on when the time of Constantine began to see the masses streaming into the Christian Churches, except that exhortations to use the Bible at home were rendered more frequent by the neglect of the custom. Chrysostom assumes that his hearers possess a Bible, in which they can read the text at home; if they do not, he urges them to buy one. In many places a Bible was probably laid out for public use. The lending of sacred books was considered to be pleasing to God. The diligent reading of the Bible took a specially high place among the virtues and merits of holy men and women. The acquaintance which these people had with the Bible was really astonishing. The sermons of the great preachers of the time were composed of Biblical quotations, and preachers counted upon their hearers to take note of and understand them. Pilgrimages to the scenes of sacred story, which at this time were becoming more and more common, added to the knowledge of the Bible a certain knowledge of localities, however superficial and superstitious it may have been. The Aquitanian pilgrim (Silvia or Etheria?) informs us that at each place the pertinent passage of Scripture was read to the pilgrims.

With the collapse of the ancient civilization and the decay of learning, the following centuries, naturally enough, brought a decline in the reading of the Bible. There came times when it was rare to find the art of reading outside the monasteries. Perhaps in the boudoir of a great lady there was still opportunity for the study of the Bible and Virgil. The laity, whether prince or peasant, and even the secular priests, were illiterate. We hear complaints about the meagre acquaintance with the Bible to be found even in the ranks of the clergy. Charlemagne had to insist upon every priest knowing at least the Catechism. Petrus Damiani († 1072) and Æneas Silvio (Pius II., † 1464) complained similarly of the small knowledge which priests possessed as compared with heretics. The Bible exerted only an indirect influence through the medium of preaching, poetry, and pictures, and even that was shared with much other material. It was not till the 12th cent. that the people again began to show a wide interest in the Bible as such. This movement, though viewed with suspicion by the Church, and occasionally violently opposed, continued and increased in intensity and extent in proportion as ecclesiastic theology and piety became dissociated from the Bible. There were circles where Biblicism went so far as to remove from the Bible everything that was not strictly Biblical, as, *e.g.*, the prefaces—a purism to which sometimes even the prologue to the Gospel of Luke (1^{1-4}) was sacrificed. But though the Bible was really the devotional book of these circles (Thomas à Kempis, Geiler of Kaysersberg on *Right Reading of the Bible*), the circles themselves were limited. Only few possessed a Bible, and the attempts to make it accessible to all in the adjoining rooms of churches benefited only individuals, and helped study rather than devotion.

With the aid of the new art of printing the Reformation first made the Bible in reality the people's book. From that point onward one can speak of daily Bible-reading as a Christian duty. Along with the hymn-book and the Catechism, it is the only book that many evangelical Christians know. It is their manual of devotion, and still more their reading-book. The wider circulation of the Bible, which followed the improvements effected upon printing, made its acquirement increasingly easy. At the same time, however, competition increased. Thus we find that, simultaneously with the widest circulation of the Bible which has ever been reached, there is a decline in the pious use of it. Here, however, there is this comfort to be laid to heart, that where it is read a really pious desire is the motive. Many German Bibles are wisely prefaced by A. H. Francke's fine 'Kurzer Unterricht, wie man die h. Schrift zu seiner wahren Erbauung lesen solle.' Then also the emphasizing of the supreme verses of Scripture by special type, which we find in many Bibles, is significant. These are the utterances in which the *testimonium Spiritus Sancti internum* ever reveals itself in experience, in which the troubled soul finds richest consolation, inspiration, and strength. We find this illustrated in an old family Bible mentioned by Hesselbacher. It was underlined in the 18th cent. by his great-grandfather in four different colours. 'What touched the sin of my heart:—Black. What inspired me to good:—Blue. What comforted me in sorrow:—Red. What promised me the grace of God in eternity:—Gold' (cf. with this the Gospels mentioned above, p. 583b, belonging to the 14th cent. and written in four colours of ink, in order to see the difference between the objective treatment of the Bible by the Catholics and its subjective treatment by the Evangelicals, who always kept in view the thirst of their own sinful hearts for comfort). Naturally, we have no documentary evidence of the reading of the Bible in families or in retirement. An unusually favourable opportunity is afforded in the letters of Bismarck to his wife, from which we learn that the Bible was read daily by one of the greatest statesmen, one, too, who was certainly no pietist. Naturally, in biographies and memoirs there is little said of the devotional reading of the Bible in the quiet closet or in the small family-circle; it is taken for granted or considered immaterial. All true effect of Bible-reading takes place in secret. So far as it is possible to observe, it would seem that the desire for God's word and the eternal truth which the Bible contains is again on the increase (A. W. Robinson, *Co-operation with God*, 1908, 114).

LITERATURE.—Bartlett and Peters, *The Bible for Home and School*, 1898; C. G. Montefiore, *The Bible for Home Reading*, 1896, 1899.

2. Bible-reading by the laity.—In the ancient Church every Christian could obtain access to the Bible, and exhortations to read it were general. The idea characteristic of late Judaism, that certain Scriptures were to be confined to a select circle, is to be found only in the pseudo-Clementine Homilies—a fact which is to be connected with the sectarianisms of Jewish Christianity and esoteric literature. Elsewhere the warning is limited to the reading of heretical works (Cyril of Jerusalem, *Catech.* iv. 33). The sacred Scriptures included those which were for use in church and those which were for private devotional use (cf. Murat. Canon. on the *Shepherd* of Hermas). But the canonical Scriptures were to be within everybody's reach. Athanasius reproaches heretics with preventing people from reading the Bible. Chrysostom combats the idea prevalent among the laity that the reading of the Bible was a thing for the clergy and monks. Later on this giving up of the Bible on the part of the laity led to its being withdrawn altogether, exactly as in the case of the communion cup. There came a time when laymen could not read, and when they had again learned the art they were not allowed to read the Bible. This was part of the mediæval system of keeping the laity in dependence upon ecclesiastical authority, and was based upon the idea of the unfathomableness of the mysteries which the Scripture contained. The traditional exegesis of the Church was the only means of reaching these, and the laity, left to themselves, always

wandered from the track. As a matter of fact, where Bible study was fostered in lay circles, there was to be found, as a rule, an anti-hierarchical, anti-clerical, sectarian tendency. It was believed that, in the Bible-reading conventicles of South France and Lorraine, Albigensian and Catharist tendencies were to be observed. Thus Innocent III. wrote to the Bishop of Metz that conventicles of the laity for the purpose of reading the Bible were to be suppressed. The study of the Bible was to be encouraged, but theological training was necessary: the *profunditas* of the sacred Scripture was so great that even scholars could not quite understand it; the *arcana fidei* were not for every man. Ex 19[12] was the passage which was founded upon in this connexion: the beast that touched Mount Sinai was to be stoned. Of course this did not amount to a general prohibition of the reading of Scripture by the laity, but it bore a close resemblance to it, and without doubt the tendency gained ground. Against the Bible in the popular tongue especially, a continual, though sometimes veiled, and certainly unsuccessful war was waged. Where the Church had no patience with these conventicles, people were driven into the arms of the sectaries, because it was these—especially Albigensians, Waldensians, Wyclifites, and Hussites—who gave the laity free access to the Bible and a free field for its exegesis, which developed in increasingly acute form upon anti-papal, anti-ecclesiastical lines. This made the Church all the more anxious to keep its members apart from the movement. Soon it came to be that the reading of the Bible brought people under the suspicion of heresy. The decrees passed by Councils of the 13th and 14th centuries against the reading of the Bible by Waldensians, Wyclifites, Beghards, and Beguines were followed by occasional local prohibitions like that of Archbishop Berthold of Mainz (1485). This caused printers of the Bible not perhaps to suspend operations, but to omit their names from their work. In the period prior to the Council of Trent, therefore, we cannot speak of any general prohibition of the Bible. It was a time of unreadiness and confusion, when mystic piety contended with ecclesiasticism for the supremacy.

The crisis was brought about even in Catholicism by the Reformation, which successfully established the unconditional right of every layman to the Bible. It rested upon the *perspicuitas*, that is to say, the intelligibility of the Scripture to the ordinary pious mind—the victory of the devotional use of the Bible over the theological—and compelled Catholicism to take up a more definite attitude to the whole question. In England the first endeavour to spread the gospel brought about a persecution which recalled the time of Diocletian. The Council of Trent (Sess. iv. *Decr. de editione et usu sacrorum librorum*) decreed, *ad coercenda petulantia ingenia*, that the exposition of Holy Scripture was to be guided by ecclesiastical tradition or the *unanimis consensus patrum* (cf. Conc. Vatic., Sess. iii. *Const. de fide*, c. 2). Resting on this decree, the Pope announced that only Bibles containing annotations approved by the Church could be published, and their use was dependent upon the special permission of the *parochus*, or the bishop of the diocese. Practically this was almost the withdrawal of the Bible. The Protestant Bibles were assailed, especially by the Jesuits, as falsified and dangerous to the soul. The same treatment was meted out to the Jansenists, especially in connexion with the translation and exposition of du Quesnell (Clement IX., *Const. Unigenitus*, 1713, *prop.* 79-82). In 1794 Pius VI. condemned *prop.* 67 of the Synod of Pistoja, which stated that the neglect of Bible-reading was innocent only in the case of inability to read, and that this neglect was responsible for the great ignorance in matters of faith. Hardly had the Jesuit order again attained influence when the Bible Societies in Catholic spheres were everywhere suppressed. Leo XII. published an encyclical against them in 1824, and Pius IX., in the syllabus of 1864, § 4, condemned them along with Socialism, Communism, and Secret Societies (*e.g.*, Freemasons) as *ejusmodi pestes*. It is one of the most remarkable indications of an internal change of system that there is at present in Italy a 'Società di San Girolamo' for the spreading of the Gospels among the people, which has a cardinal for its protector, and whose patron Pius X. is said to have been, before he took his place upon the Papal throne.

Within all Protestant Churches the Bible is the assured possession of the laity, and any isolated opposition to it is hopeless. The great necessity now is to emphasize, along with the right to the Bible, the duty of a true use of it in opposition to the contempt in which it is now widely held.

Moulton, *The Modern Reader's Bible*, 1907.

3. The Bible in monasteries and reading-circles.—From the moment when the masses entered the Church, and a distinction came to be drawn between half-Christians and whole-Christians, that is to say, between the secular world on the one hand, and monks, ascetics, and conventuals on the other, Bible-reading among Christians as such decayed, while in ascetic circles, where religion was taken seriously, it increased. Chrysostom was aware of the opinion popularly entertained that the Bible was for priests and monks. As a matter of fact, it was in ascetic circles like those which gathered round Jerome and Rufinus that Bible-reading was most diligently fostered. Melania, *e.g.*, a noble Roman lady who renounced the world entirely, read the whole Bible four times every year, and knew large portions of it by heart. Jerome was quite pestered by the puzzles which his admirers put him from Scripture. Marcella showed intelligence in her queries, and suggested real difficulties; the less gifted Paula adopted more the style of the modern Biblical riddle. The same thing was repeated in the court of Charlemagne, where Alcuin was looked upon as an oracle for the solution of all difficulties. We possess the correspondence of two nuns of the 6th cent., and find it to be entirely composed of passages from Scripture.

In these pious circles the Psalter, as the daily prayer-book, played the chief part. The Egyptian anchorites passed days and nights in reciting psalms which they learned by heart. This was held to be the surest weapon against the temptations of Satan. In the monasteries the *Psalmodia* (chanting of psalms) was regulated (at Studium and St. Maurice chanting never ceased, one choir relieving the other [Acœmetæ]). At the same time, a free field was left to the piety of the individual. It was in the monasteries, too, that the reading of Scripture was most practised. Not only were several services held every day (or were provided for by the regulations), but at meal-times, etc., some book was read aloud. Sometimes it was the Scriptures, sometimes it was legends of the martyrs or lives of the monks. In the early period of the Middle Ages the monasteries were the only places where the Scriptures were to be found. Only there was it known how to use them and communicate them in some degree to the people. The monasteries

were the homes of writing, reading, meditation, and study. In the schools of the various orders we have already seen that Biblical sciences were fostered.

This condition of things was altered by the Reformation, in so far as the distinction between whole- and half-Christian was now done away with. It was impossible, however, to remove the distinction between those who desired with their whole soul to be Christians and those who were Christian only in appearance. With all the emphasis which it laid upon the right and the duty of all Christians to read the Bible, Protestantism also possessed small circles of particularly zealous friends of the Bible. Just as these circles occur here and there in modern Catholicism, often in connexion with some monastery, *e.g.* Port Royal, so in Protestantism the influence of Pietism made itself felt. The necessary impulse was given by the *pia desideria* of Spener, who thus came into line with the work of his opponent, Carpzow, in Leipzig. Thus there originated 'Collegia Philobiblica.' At the outset these combined the features of the exegetical lecture and the devotional meeting, as was also the case with the Zürich 'Prophecy'; but afterwards the strictly scientific lecture of the university became more and more separated from the devotional meeting of the Church. The latter frequently stood in a sort of opposition to the Church service, as in the case of the Lay-preachers of Württemberg and the Stundists of Russia; but it found acceptance outside the strictly pietistic circles, and came to be a regular part of Church life in the shape of a week-day service. The more strongly pietistic circles possess reading-circles of their own, as well as Bible-classes for students and schoolboys. It is here that extraordinary achievements in the way of continuous Bible-reading are accomplished. It reminds us of what we are told about ascetics in the ancient Church, when we hear that the whole Bible from Gn 1^1 to Rev 22^{21} was read through several times in one year (A. H. Francke is said to have read the Hebrew OT seven times in one year). The tables of lessons which are published by many societies (*e.g.*, the Prussian Bible Society) distribute the material of the Bible over a year, not in continuous portions, but in selected passages.

LITERATURE.—Falk, *Bibel am Ausgange des Mittelalters*, 56 ff.

4. Substitutes and favourite passages.—It was not always in its complete form that the Bible was in use. The substitutes which existed alongside of it were of great importance, and in the Middle Ages exerted a greater influence than the immediate use of the Bible. There were the select passages for Sunday in the so-called Plenaries, Postils, and Books of the Gospels and the Epistles. These were intended to be used not only in the services of the Church, but also, as is shown by the MSS and copies printed in the popular tongue, in private devotions, partly at least to explain the reading of the Bible in the Church service. There were also excerpts from the Bible in the form of Bible histories (*Bible historiale*, 'History-Bible'). These were characterized by the almost complete absence of the more important Didactic Books, the Prophets, and the Apostolical Epistles. Then also there were rhymed Bibles, containing the same material, but in verse, which, though not by any means good, was easy to remember. To these must be added the picture-Bibles, with their short descriptive paragraphs, including the so-called *Biblia Pauperum* ('Bible of the Poor'), which contained from 24 to 48 woodcuts illustrating the most important events in the OT and the NT in harmony. Lastly, there was the *Ars Memorandi*, where the contents of the four Gospels were suggested in rebus fashion. Towards the end of the Middle Ages these were widely circulated instead of the Bible, not only because the great majority of the people were still too ignorant to read the Bible, and because the Church did not wish them to do so, but also because the piety of the age took more delight in the marvellous stories which the Bible contained than in the hard fare of the Prophets and the Epistles of Paul. Even for the Psalms a substitute existed in the *Psalterium Puerorum*, a collection of certain Psalms much employed in Divine service, and of other important features in Christian instruction, *e.g.* the Lord's Prayer and the Creed.

The Reformation demanded that the whole Bible should be given to the people and made free to everybody. Some difference of attitude, however, can be observed in the two Protestant Confessions. In Lutheranism the Catechism, with Biblical notes, took the place of the Bible to a large extent both in private use and in ecclesiastical teaching, while Calvinism adhered to the Bible itself. At the same time, the mediæval substitutes continued in use, especially in schools, where Bible-history formed the foundation of the entire education, as it will probably do for long, in spite of recent attacks. The efforts which are now made to give a due place to the Prophets and the Apostles, as well as the Historical Books, are significant and deserving of success. On the other hand, the desire for a school- and home-Bible that shall be intermediate between Bible and Bible-history is to be looked on with suspicion, both from the educational and from the ecclesiastical point of view.

The pious Bible-reader of the old school read the whole Bible as the word of God. But it may be observed that various parts of the Bible produce various effects, according to the period and the people. In the ancient Church and the Middle Ages, Paul is little understood and valued, and yet Pauline reactions mark the critical epochs both in theology and in the Church. Mysticism adheres either to the Song of Songs or to John. The Spiritualists who broke with the Church, the fanatics of the Reformation period, and many sects of modern Protestantism, build almost entirely upon the Revelation of John. In the later Middle Ages there were wide circles where the historical parts of the Bible were the only parts known, and even these only indirectly, through the so-called history-Bibles—that is to say, Scripture excerpts, with many legendary additions from extra-Biblical sources. The Didactic portions, the Prophets and the Apostolic Epistles, had to be re-discovered. The 'Enlightenment' laid supreme value upon the moralizing Wisdom-literature. As has been recently noted, Frederick the Great's favourite book was Ecclesiastes. Of the Gospels, Luke's edifying narrative has enjoyed the greatest vogue among pious readers, while speculative theology (*e.g.*, Schleiermacher's school) prefers John, and the historical school abides by Mark. Modern socialistic tendencies, again, do honour to the Epistle of James, which Luther once very wrongly threw into the fire as an 'epistle of straw.' Speaking generally, interest in the Bible, which under the influence of materialism and naturalism was reduced to a very low ebb at the close of the 19th cent., has again happily revived. The chief motive is the æsthetic one. Pearls of Biblical poetry are selected for books of wisdom and beauty (Freiherr von Grotthus). Works on the beauty of the Bible (A. Wünsche, 1906) and on the poetry of Christ's gospel (O. Frommel, 1906) find a grateful public. Modern investigation and criticism of the Bible are beginning to create interest (Schiele's *Religionsgeschichtl. Volksbücher*, and the more conservative *Biblische Zeit- und Streitfragen*, by Kropatschek). More and more space is being given to Biblical

material in popular collections, which are meant to provide a general culture (Goeschen's *Sammlung*, Teubner's *Aus Natur und Geisteswelt*, etc.). As the inevitable result of this, the religious interest in the Bible must receive a powerful stimulus, and Christian consciousness become re-awakened.

5. **The Bible and the Classics.**—The Bible satisfies Christian piety, but it nevertheless has its place in history as a link in a long process of civilization. This fact explains the speedy development of two tendencies. On the one hand, there were those who placed the Bible, the book of Christian devotion, side by side with universal literature. In their opinion, both were possessed of rights, and the Bible was in alliance with culture. On the other hand, there were Biblicists pure and simple. These condemned all reading of profane (*i.e.* heathen) literature as un-Christian, and put on a level with the Bible only the devotional Christian literature of a distinct ascetic colour. This was the view entertained in ascetic and monastic circles. Even in the ancient Church we meet with it in Syria, the home of ascetic tendencies. The *Didascalia* of the Apostles, *e.g.*, ch. ii., contains the following exhortation:

'Keep away from the books of the heathen. What hast thou to do with the strange words, the laws, and the lying prophecies which tempt young people from the faith? What fault hast thou to find with the word of God that thou stayest thyself upon heathen fables? Wilt thou read history? thou hast the Book of Kings; wise men and philosophers? then thou hast the Prophets, in whom thou wilt find more wisdom and knowledge than in the wise men and philosophers, because theirs are the words of God, who alone is wise; dost thou wish songs? then thou hast the Psalms of David; an explanation of the world? then thou hast Genesis, by the great Moses; laws and commandments? thou hast the Divine law in Exodus. Keep entirely away from all strange things which are in opposition to these.'

Later we find the same way of thinking in the monastic circles of Syria and Egypt, although it is to the everlasting credit of Syrian Nestorians that they communicated the Greek philosophy—Aristotle and his commentators—to the Arabs, from whom they were taken over again by Christians in the West. There is a typical presentation of this sentiment in the famous dream of Jerome. This master of rhetoric, who prided himself on his classical knowledge, wants the pious Eustochium to believe that he had been thoroughly chastised in the night-time for his admiration of Plautus and Cicero, and compelled to give up the Classics (*Ep.* 22)—a delicate little piece of rhetoric that quite gives its author the lie. This renunciation on the part of Jerome was not to be taken seriously. Later he insisted strongly that in education there should be a union of Christian and general culture, of the Bible and the Classics. But his fiction produced its effect, and in many a cloister-cell during the Middle Ages the dream was actualized.

It is true that the Greek theologians, and also the monastics, among whom were Basil and Theodore of Studium, etc., never quite gave up the idea of a union of classic beauty of form with Biblical content. Thus the Alexandrian Clement and Origen were steeped in Greek philosophy. Clement quotes the Bible with remarkable freedom, adopting a Greek style unawares. The same thing can be observed in the whole school of Origen (cf. the thanksgiving speech of Gregory Thaumaturgus). But his opponent Methodius, the Biblical realist, also writes a Christian symposium. Specially noteworthy, because they regulated the succeeding age, were the great orators of the 4th cent., Basil and the two Gregorys, who as young men at Athens had, along with their heathen comrades, familiarized themselves with the whole profane culture. Chrysostom, the pupil of Libanius, believed it his duty to apologize for the rusticity of Biblical Greek: the Apostles were uncultured fishermen, but that only made the miracle which the Holy Ghost effected by them the greater. At the same time, Chrysostom felt the peculiar strength of the Biblical language. He adorned his brilliant orations with Scripture quotations, and so gave them the impressiveness which lifts them above the contemporary speeches of heathen orators, with their hollow phrases. The monastic tendency in the 6th cent. sought to introduce the popular Greek, which resembled more closely the Semitic element in the Bible (John Malalas of Antioch). It would be a valuable service to investigate the influence which the language of the Bible exercised upon the popular legendary literature and Christian revisions of older material like the *Romance* of Alexander. But although monastic circles prided themselves no less on their modesty than on their simplicity of language, classicism, or the union of Christian and Greek culture, was always maintained in Byzantium, and after short periods of decline it never failed to revive. This was the case after the iconoclastic struggle in the 9th cent., chiefly through the instrumentality of Photius, and also, after the Latin invasion of the 13th cent., through the Palæologi. Arethas, the Archbishop of Cæsarea († *c.* 932), wrote a commentary on the Apocalypse, and studied Plato and Lucian diligently. Eustathius, the Homeric commentator, who was afterwards Archbishop of Thessalonica († *c.* 1192), complained bitterly of the want of culture on the part of the monks, who could not appreciate the treasures of the monastic libraries. This classicism was specifically Greek in character, and it was not transmitted by the Byzantines to the Slavonic peoples converted by them.

In the West the development took a somewhat different course. There Jerome and Augustine provided a model of the noble union of Biblical and secular culture. But, just as Jerome sometimes felt that the latter was forbidden fruit, so in the case of Augustine, from the moment when he entered the service of the Church, an increasing Biblical element is found to colour his views and language. Cassiodorus and Boethius were still familiar with pagan culture, but such familiarity soon ceased. What little culture survived the migration of the peoples is monastic and Biblical. At the Court of Charlemagne the first revival of learning occurred. Along with the Bible, Virgil was studied. The Emperor himself was liberal enough to appreciate the value of the German epics. But so early as the time of the monk-emperor, Ludwig the Pious, this disappeared. As a matter of fact, Plautus and Terence were still read even by pious nuns, but Hroswitha of Gandersheim endeavoured to suppress these heathen writers by her Biblical imitations. In the time of the Swabian dynasty there occurred another revival, and after the fall of the Empire (from middle of 13th cent. onwards) the foundation was everywhere laid of a real national secular culture, in opposition to ecclesiastical Latin. This spread from France to England and the German Imperial cities, and in an entirely independent manner it united Biblical and extra-Biblical material. Much more dangerous was the classicism of the Renaissance. In their admiration of the ancient form the Humanists made sport of the ancient religion as they understood it, and

some of them were ashamed of the Biblical element. This led to a strong Biblical reaction, especially in Calvinistic countries, while Lutheranism tried to reach a combination of both tendencies. The 'Enlightenment' confined strict Biblicism to a narrow pietistic circle, while general culture, characterized in some cases by tendencies hostile to religion and the Bible, spread more widely. Here, too, a wholesome reaction can be hoped for only from the perception that the Bible, in its true nature as the supreme book of devotion, can never come into collision with any other means of culture.

LITERATURE.—C. Neumann, *Byzant. Kultur und Renaissancekultur*, 1903; J. E. Sandys, *Hist. of Class. Scholarship*, 3 vols., 1906–08; G. Kaufmann, 'Rhetorenschulen und Klosterschulen, oder histor. und christl. Kultur in Gallien während des 5. und 6. Jahrh.,' in Raumer's *Hist. Taschenbuch*, 1869; Zappert, *Virgils Fortleben im Mittelalter*, 1851; Comparetti, *Vergilio nel medio evo*, 1872.

6. Misuse of the Bible.—Our sketch would be incomplete without some mention of the abuse of the Bible by misguided Christian piety. Although the idea that the Bible had fallen from heaven was never entertained, yet the conception of its sanctity had become so strong among the Jews that the roll of the Law was held to be inviolable. A Roman soldier who had seized one of these rolls was executed by the Procurator Cumanus to please the Jews (Josephus, *Ant.* XX. v. 4, *BJ* II. xii. 2). Copies which had grown useless had to be carefully preserved in sacred burying-places made for the purpose (the Genizah at Cairo has yielded a rich harvest of extremely valuable ancient copies of the Bible). This material notion of sacredness, which was familiar both to heathenism and Judaism, was at first quite foreign to Christianity. It soon found its way into the Christian masses, however, and made the Bible, like other sacred things, tabu. Especially was this the case with the book of the Gospels which, along with the Host and the likeness of Christ, speedily came to be one of the most effective guarantees of the presence of Christ Himself and His miraculous power. This was the origin of kissing the book—still an important feature of the liturgies of the East—and also of the double procession, first with the Gospels and afterwards with the Communion elements. The official valuation by the Councils gave to the Gospels, as representative of Christ, the place of honour. In the consecration of a bishop the Gospels were laid upon his head as the means of communicating the Spirit and Christ's indwelling, whereas they were placed in the reader's hand only as the symbol of his ecclesiastical function. They played a similar part in the consecration of the highest grade of Catharists. From the 4th cent. it became the custom to take the oath upon the Gospels, and on these occasions it was usual to turn up the beginning of John. In the Middle Ages we find, along with or in place of the Gospels which represented Christ, relics as representing the saints. The idea here is no higher than that which is embodied in the monastic legend that a Christian who was sorely beset by fleshly lust was enabled to resist temptation by having the Gospels hung upon his neck by a cord. One must beware of spiritualizing this to the extent of making it the psychological effect of reflexion upon the content of the book. It was to the book itself that talismanic virtue was ascribed. The explanation of inserting a finger or 'dipping' in the Bible is similar. The method which the Romans followed with Virgil and other authors whose works were considered inspired and sacred was taken over by Christians and applied to their sacred book (*sortes legere*), and, in spite of the opposition which it met at the beginning from ecclesiastical authority, this method of consulting the oracle about the future was long maintained among the people. We can observe the material view which was entertained of the magical qualities resident in the book, from the practice of writing the answers to the most usual questions on its margin. Such queries could also be answered by means of slips of paper or threads, but when the answers were read out of the Gospels they possessed a greater guarantee of being Divine oracles.

The magical effect of the Bible reached still further into the dark regions of human superstition. There were certain passages of Scripture which were considered specially effective in defence and attack. The Lord's Prayer, inscribed upon a disc of clay found at Megara, was certainly possessed of this significance, just as in ancient and modern times Jesus' letter to Abgar was attached to the doors in order to keep all evil and hurtful influences far away from the house and its members. A sheet of lead inscribed with the 80th Psalm, which Hiller von Gärtringen found in a vineyard on the island of Rhodes, belongs rather to the ancient formulas of malediction, by which evil was supposed to be brought upon some definite person. Chrysostom complained of the superstitious abuse of sayings from the Gospels (δελτία, εὐαγγέλια) which women and children wore round the neck. Augustine relates how the Gospel of John was laid upon the head of those who were ill with fever. Gregory M. sanctioned by word and example what the Church till then contended against as abuse. In the later Middle Ages the only reason why this superstition in regard to the Bible decayed was the keen competition which it had to face in the superstitious valuation of saintly relics.

The Reformation destroyed the material notion of sacredness which lay at the basis of all this error. The bibliolatry which Lessing and others opposed in the time of 'Enlightenment' had nothing in common with this Biblical magic. It was the dogmatic valuation of the Bible as possessed of infallible authority. Evangelical Christians have in the Bible not a book that is to be handled with timidity and awe, but one which is for the intimacy of home and private devotion. Where searching with the finger or 'dipping' in the Bible still exists as a practice in Protestant circles (Pietists and Moravian brethren), it has acquired an inward and spiritual significance. At the same time it has to be said that the practice in Evangelical circles of making the Bible serve for pastimes (*e.g.* Biblical riddles) amounts to excessive familiarity and abuse; the Bible is to be handled not indeed with timidity, but with all due reverence.

LITERATURE.—For the ecclesiastical use of the Gospels see St. Beissel, *Gesch. der Evangelienbücher*, 1906, pp. 1–10, who tries to dissociate this use from every element of superstition; Kayser, 'Gebrauch von Psalmen zur Zauberei,' *ZDMG* xlii., 1888, 456; Hiller von Gärtringen, *SBAW*, 1898, p. 582; N. See also art. BIBLIOLATRY.

VII. *THE BIBLE IN THE LIFE OF THE PEOPLE.*—The Bible is pre-eminently the book of religious devotion, but its operations are not limited thereto. They embrace the whole life of Christendom.

1. Bible and language.—The Bible has exercised great influence on the development of language. Not only have translations of the Bible made literature possible to a whole array of peoples by giving them a written language in the same way as missionary enterprise still does, but in other ways language has been powerfully influenced by the Bible. The Biblical vocabulary supplied Latin, and thence the Romance and German languages, with the terms 'manna,' 'Passover,' 'Sabbath,' 'angel,' 'devil,' 'Paradise,' etc. The Biblical structure

of sentences—loose co-ordination of clauses and *parallelismus membrorum*—has been largely adopted as a model. It may be noted that here three methods are to be distinguished: (1) The conscious imitation of the solemn music of the Prophets, which hardly exists in the ancient period, but of which Lamennais is a modern instance. (2) The allegorical use of Biblical names and expressions—a method specially favoured among the Greeks, who applied the typical names of the Bible to the men of the times (πάλιν Ἡρωδιὰς μαίνεται, Chrysostom). Speaking of the bull of Canonization dated 1228, which is composed in this style, Sabatier rightly remarks that one can learn the history of the Philistines, of Samson, and also of Jacob from it better than that of St. Francis. In later times the 'speech of Canaan' has been much adopted in pietistic circles, while it has been abhorred in others. (3) The unconscious absorption of familiar Biblical phrases—the normal and most widely spread form. Not only do the great preachers of the ancient Church and moderns like Bossuet, Schleiermacher, and Spurgeon employ the language of their Bible, but the masters of literature do so also. If Dante is the creator of modern Italian, Luther deserves the same title in regard to modern German, and it was through his translation of the Bible chiefly that his influence was felt. In reading Goethe, one becomes aware of his lifelong familiarity with the Bible. The style of many Catholic authors shows that they do not have the same familiarity with it. It is an obvious mistake when Janssen's school attempts to transfer the credit which belongs to Luther to an obscure chronicler of the 13th cent., Eike of Repkow. In English-speaking countries the Authorized Version possessed the same importance. It came too late for Shakespeare, but even he could not have written as he did without the older translations. The best age of French literature has more than a temporal connexion with the Biblical activity of Port Royal. The influence which the Bible has exerted upon literature deserves to receive more attention than it has done in the past. That, however, would require a wider acquaintance with the Bible than most moderns possess. More than any other book, the Bible has contributed to the familiar phrases used by numberless people who know nothing of their origin. It is to be regretted that these phrases are often used in a sense quite false and entirely opposed to their original meaning.

LITERATURE.—R. v. Raumer, *Die Einwirkung des Christentums auf die althochdeutsche Sprache*, 1845; E. Stein von Nordenstein, *Über den Einfluss der Bibel auf deut. Sprache und Litt.* 1856; P. Frédéricq, 'Les Conséquences de l'évangélisation par Rome et par Byzance sur le développement de la langue maternelle des peuples convertis,' in *Bull. de l'acad. roy. de Belg.* 1903; A. S. Cook, *Bibl. Quotations in old Eng. Prose Writers*, 2 vols., 1898 and 1903; C. Wordsworth, *Shakespeare's Knowledge and Use of the Bible*, 1864; C. von Kügelgen, *Die Bibel bei Kant*, 1904; E. Höhne, *Umfang und Art der Bibelbenutzung in Goethe's Faust*, 1906; L. Rosenthal, *Schiller und die Bibel*, 1905; R. de la Broise, *Bossuet et la Bible*, 1890; J. Trénel, *L'ancien test. et la langue française du moyen âge*, 1904; G. Büchmann, *Geflügelte Worte*[22], 1903.

2. Bible and views of the world and human life.—To the language of the Bible must be added the general view which it takes of the world and human life; speech and thought are intimately related. The Bible contains no conception of the universe peculiar to itself. What we find in it is the view entertained by the ancient world, and especially the ancient East. To the early Christians there was nothing strange in this, because their own view resembled it, and where there were differences it was easy to harmonize them. The Scriptures themselves, covering as they did a space of 1000 years, were not at one in this regard. The transition from the Semitic to the Greek method of thought was effected as easily as in the domain of language. Plato and Aristotle were read into the Bible involuntarily. This is shown very clearly by the abundant literature on the *Hexaëmeron*. The Middle Ages looked upon this mixture of old Oriental Biblical ideas and Greek philosophy as authoritative ecclesiastical doctrine. It was surrounded by the nimbus of revelation, and was therefore infallibly true. Every consideration against it and every attempt to account for the world empirically (as Bacon, *e.g.*, demanded) was authoritatively suppressed. The effect of this was felt till within recent times. Luther was so far from seeing how little of the Bible there was in this ecclesiastical theory of the world, that he called Copernicus a fool (*Table-Talk*, Förstemann-Bindseil, iv. 575); the Roman Inquisition compelled Galileo to retract; Kepler encountered great internal and external difficulties in accepting the credibility of the Bible as it was conceived in his time; while Newton combined with the exactitude of his physical theories a Biblicism which we find it difficult to understand. The 'Enlightenment' completed what the Renaissance had begun. It secularized science and emancipated views of the world from all Biblical ecclesiastical authority.

The great discoveries of the 15th cent., the transition from the speculative methods of scholasticism to empirical research, not only in the domain of natural science but also in that of history, brought about an entire change of opinion. The confidence of the 'Enlightenment' and the modern love of truth have brought this clearly to light, and with it the immense gulf between the ordinary and the Biblical view of the world. Here we come upon the leading problem of the Bible for moderns. Can the Bible still possess value when it contains views about the world and man belonging to a stage of human thought now outgrown? That heaven (or the 3 to 7 heavens) arches over this earth, that the stars encircle it, that the earth is surrounded by the great ocean (only the parts bordering on the Mediterranean being then known), that its central point is Jerusalem, that all the peoples on the earth are descended from the three sons of Noah, who was rescued from the Flood, that their languages can be traced back to one single confusion—all these ideas represent only the primitive thought which the Biblical authors shared with their contemporaries in Babylon and Egypt. It cannot be denied that we have ceased to entertain these notions nowadays. But this admission does not by any means overthrow all Biblical authority. What the theology of the last decade has toiled to show and has succeeded in showing is gaining increasing recognition, viz., that the Bible is not a revealed text-book of nature and history, but that God speaks in it to men about the salvation of their souls. To every pious conception of the world and its course as a whole and in detail, the Bible will always be possessed of validity because of the way in which it sees God's hand in everything and teaches people to see God's saving intention in fortune and misfortune, the way in which it places the whole history of mankind under the point of view of an education to the stature of manhood and independence in Christ. In a word, the Bible will always remain the book of pious devotion, and such pious devotion will always be easily able to surmount any difficulties which arise from different conceptions of creation. As in language, a kind of translation is possible. What apologetics must learn, however, is to abandon the desire to justify every Biblical utterance, and after every discovery in natural science and history to begin at once to search about for some statement in the Bible which it confirms. That only leads to confusion where what is needed is clearness. It is true that, so long as men read the Bible, the

Biblical view of the world and human life will remain popular. Without regard to the millions of stars, men will speak of heaven as the Divine dwelling-place and the goal of pious desire, and of the earth as the central point of the Divine plan of salvation with man as its special object. In their thoughts about love and hate, joy and sadness, good and evil, they will speak of the heart and not the brain. But what there must be no doubt about is that these are only poetical forms of speech, which, though fully justified in ordinary life, ought not to be put on the same platform as what is strictly scientific.

LITERATURE.—Van Eicken, *Gesch. und System der mittelalterl. Weltanschauung*, 1887 (with little attention to the Biblical element); E. F. Apelt, *Die Reformation der Sternkunde*, 1852; A. Deissmann, *Joh. Kepler und die Bibel*, 1895; L. Günther, *Kepler u. d. Theol.* 1904; L. Keller, 'Bibel, Winkelmass und Zirkel,' *Monatshefte der Comeniusgesellschaft*, 1908.

3. Bible and law.—Of greater practical significance is the influence of the Bible upon the life of the people. The adoption of Christianity by the State made it necessary that the revealed book of Divine law should regulate constitutional law. As early as 400 a *Collatio legum Mosaicarum et Romanarum* was prepared (ed. Th. Mommsen, 1890; *Collectio librorum iuris anteiustiniani*, iii.). In most ancient Christian legislations this principle finds expression in the preface. The so-called Syriac-Roman statute-book (ed. by Bruns and Sachau, 1880) affirms that the law of Moses is older than that of all other nations, but declares that, since the time of Christ, the only obligatory law is the law of Christ given through the Christian emperors, Constantine, Theodosius, and Leo. As a matter of fact, this was etiquette more than anything else; for the legislation is drawn almost wholly from Græco-Roman law. The same thing may be observed in the case of German law. Alfred the Great placed the Decalogue in front of his *Laws of England*. The ancient Bavarian and Frisian codes, as well as those of the Swabians and ancient Saxons, contain introductions full of ecclesiastical Biblical ideas. The law itself, however, is national. There are only a few traces of any Christian Biblical influence to be observed. These may perhaps be made out, however, as early as Constantine's legislation. The abolition of branding the face is based upon the Biblical doctrine of the Divine likeness (*C. Th.* ix. 40. 2); the second marriage of a divorced person is punished except when in the first marriage the other partner was guilty of adultery (*C. Th.* iii. 16. 1, cf. Mt $5^{31f.}$); two witnesses are required (*C. Th.* xi. 39. 3, cf. Dt 19^{15}). The influence of Christianity becomes commoner under Theodosius, Leo, and Justinian, whose 'novels' (*i.e.* supplementary laws) refer directly to the *sacrae scripturae* (e.g. *Nov.* clx. 1). The severe language of the OT is echoed in the legislation of Charlemagne; the continually recurring *morte moriatur* of the pitiless Saxon law is Hebraic. Justification was found for the bloody persecution of heretics in the OT condemnations of the disobedient. Demands which were originally made by the Church to safeguard Christian morals were all incorporated in constitutional law under Charlemagne: keeping the Sabbath-day holy, the prohibition of interest, etc. What is still more important for Charlemagne's conception, however, is that the whole theocratic idea was considered to possess immediate significance for the present. He felt himself a modern David, Solomon, Hezekiah, Josiah. This state of things, however, soon gave way under the pressure of the ecclesiastical idea that the State was opposed to God and was to receive recognition only in the service of the Church. The conflict gave birth to the modern State, which takes no interest in ecclesiastical or Bible authority. In Biblicist circles the obligation of the OT, and especially of the commandments of the Gospel, is more and more emphasized. This gave rise to the refusal to take an oath (Mt 5^{34}, Ja 5^{12}) among many sects down even to the Mennonites, while the Church sought to Christianize the oath by furnishing it with the Trinitarian formula and causing it to be sworn on the Gospels, and in the Middle Ages on the relics of saints. It was from the OT that ecclesiastical law derived the prohibition of marriage with a sister-in-law, and from it also Joseph Smith drew the Mormon commandment of polygamy. In a purely legal way the Baptists of the Reformation endeavoured to realize the theocratic idea, as Calvin aimed at training Geneva to be a city of God. The Sabbath commandment still calls for Sunday rest in Calvinistic countries. These genuinely Biblical influences are to be distinguished from those which are due to the century-long effect of Christianity upon the life, the customs, and the legislation of the nations. It is to this latter influence, *e.g.*, that we owe the abolition of slavery—not in the 1st or in the 4th, but in the 13th cent. for N. Europe, and in the 19th for the S. and the New World. With this the Bible had no direct connexion, for in the American Civil War both sides took their stand upon Biblical authority. Here too, however, there was an indirect and educative influence exerted by the Bible upon the moral sympathy and social thought of mankind.

LITERATURE.—Troplong, *De l'influence du christianisme sur le droit civil des Romains*, 1844; C. Schmid, *Die bürgerliche Gesells. in der altröm. Welt und ihre Umgestaltung durch das Christentum*, 1857 (Fr. and Germ.); C. Bigg, *The Church's Task under the Roman Empire*, 1905; C. Loring Brace, *Gesta Christi, or A Hist. of Human Progress under Christianity*, 1882; L. Seuffert, *Konstantins Gesetze u. das Christentum*, 1891; W. Ohr, *Der Carolingische Gottesstaat*, Leipzig, 1902; W. E. H. Lecky, *Hist. of European Morals*[12], 1899.

4. Bible and art.—Specially interesting is the powerful effect which Biblical *motifs* exercised upon art and through it upon the national consciousness. The Christians of the first centuries adorned with Biblical symbols not only the graves of their dead in the Catacombs, but also the articles which they employed in daily life—lamps, tumblers, etc. Noah in the ark with the dove, Jonah swallowed by the whale or lying under the gourd, Abraham's sacrifice of Isaac, etc., were favourite subjects. At first these scenes were of a purely symbolic nature. The 4th cent. began to show interest in the story, and continuous Bible illustrations are then found in MSS (cf. above, p. 583). But the picture became separated from the text; the illustrations suppressed and took the place of the text. In the famous Joshua-roll in the Vatican, supposed to be a 9th cent. copy of an ancient Christian original, there is a series of scenes with small inscriptions like those upon the Trajan and Marc. Aurelian pillar. Towards the close of the Middle Ages the history-Bible shrank more and more to a picture-book. Great favour was accorded to the *Biblia Pauperum*, a pictorial representation of the Gospel story with its OT types, and occasionally with explanatory notes. Picture-Bibles of this kind without any text, or with at most brief explanations like those which were made by Hans Beham (1537) and Mich. Graff (1536–53), were known occasionally also in the 17th and 18th cents., while the 19th returned again to the complete Bible and illustrated it.

Besides Bible illustration, however, there was the art of painting in general. The long walls of the basilicas were picture-books of Bible-history, and continued so until the end of the Romanesque period (cf. above, p. 606). Gothic art changed the telling of a story into the sculpture of individual figures, and preferred the multitude of ecclesiastical saints to the Biblical characters. Then the Renaissance went back again to Bible-story, and at

this stage it was ancient mythology instead of the legends of the saints that entered into serious competition with the Bible. The Churches were ornamented with stories from the Bible (Giotto's cycle in Padua, Madonna dell' Arena, indicates the beginning; and the culmination is found in the twelve scenes on the walls of the Sistine Chapel by Tintoretto, Botticelli, etc.). Private rooms also contained similar ornamentation, and it was in the *loggie* that Rafael executed his famous Bible in fifty-two pictures. So far as altar-pictures, stained windows, and other ornamentations are fostered in the modern Lutheran Church, the subjects are always drawn from the Bible instead of from favourite stories of the saints, as was the custom earlier.

Besides the sculpture of sarcophagi in the 4th and 5th cents., there is also the stone- and wood-work of the doors of churches (S. Sabina in Rome, S. Ambroggio in Milan). At a later date bronze-castings became usual (baptistery at Florence). The art of weaving was also employed in Bible-illustration. We hear of Biblical scenes not only upon hangings for churches (*vela*), but also upon private draperies (Asterius of Amaseia). In the Middle Ages, besides the rich ecclesiastical vestments, there were embroideries for household use. From the 15th cent. onward the crafts received a stimulus and showed a preference for Biblical material. Painted and inlaid cupboards and presses of the 16th and 17th cents. show whole rows of Biblical pictures, and even the easy-going Rococo period ornamented the toilet tables of its ladies with pictures from sacred history. Nor did this custom, in itself a profanation of the Scripture, cease until the art of the 'empire' began to look for themes in the Classics. The following period made extreme simplicity its goal, while to the eyes of modern naturalism Biblical themes present no attractions. This, however, is not to be deplored, for Biblical art must always be of a pious character.

The number of passages employed for illustration naturally varied very much. In certain branches of art a strict tradition came to be formed. Walls provided scope for more scenes than sarcophagi, and book-illustration made more detail possible. It would be a useful task to investigate systematically the differences which mark the various series of illustrations. Great interest attaches to the scenes which were preferred by individual periods and artists. To some extent it is possible in this way to discover what acquaintance with the Bible different periods possessed, not only in regard to the artists who were dependent frequently upon a pattern, but also in regard to the beholders upon whom the pictures—usually explained by notes—produced their effect.

It must not be overlooked here that the subjects were often drawn not directly from the Bible but from some intermediate source or other. The peculiar choice of scenes which the early period of Christianity made has been connected with their employment in sermons or in prayer. In the Middle Ages, St. Augustine's *de Civitate Dei*, the *Historia scholastica* of Peter Comestor, and the *Speculum historiale* of Vincent of Beauvais provided artists with their Biblical material. This explains the Apocryphal features, the story of Christ ranging from the birth of the Virgin Mary to her ascension and coronation. Not till the advent of Protestantism did the immediate influence of the Bible again assert itself strongly. Then there was a different choice of scenes and a different arrangement of them. Much legendary material was dispensed with, and in its place much that had long been unobserved was utilized. The finest service was here rendered by Rembrandt. As a good Calvinist, he was so familiar with his Bible that he could always find new and unused subjects for his etchings. He could always count, moreover, upon their being understood at once by the public. See ART (Christian), vol. i. p. 855.

Besides the graphic arts, the art of language and tone is also naturally concerned with the word of Scripture. Poetry has found its highest impulses in the Bible. In this field there is much bad rhyming to be met with, and literary re-creations like the turning of the Gospels into Homeric and Virgilian centos are common (4th and 5th cent.). There are also the rhymed Bibles of the Middle Ages, and in the later period, influenced by humanism, we find the Christiades and Christeïs. But there are also masterpieces to be included here—the old Anglo-Saxon poetry, the *Heliand*, Milton's *Paradise Lost*, and Klopstock's *Messias*. This is to take no account of the inspiration, the images, and the expressions for which the greatest poets, Walther von der Vogelweide, Dante, Shakespeare, and Goethe, are indebted to the Bible. As a rule, Biblical poetry is epic, but occasionally, and especially in imitations of the Psalms, it is lyrical. The small dramatic element is specially interesting. Not the clumsy Byzantine Χριστὸς πάσχων (about 1100), which lays hands upon the verses of Euripides but despises all stage-craft and probably was never produced, not even the Biblical and legendary compositions with which the pious Hroswitha of Gandersheim († 1001) tried to suppress the comedies of Plautus among the nuns, but the ecclesiastical dramas of the end of the Middle Ages, which, with a gradually increasing and finally almost exclusive participation of the laity, brought the Bible-history to the popular eye and ear simultaneously in the most effective manner possible. Adam's fall, the stories of the patriarchs, and above all the life and bitter sufferings of Jesus, were lived over again by actors and audience, sometimes with the most emotional realism. Mediævalism was naïve enough simply to transfer the story to its own time in matters of costume and background. There was besides, however, a reciprocal action between the ecclesiastical drama and the reports which pilgrims brought about the holy places of Jerusalem.* Here, too, there was an admixture of the Apocryphal element. A complete play (four days) begins with the creation and goes on to the judgment day, following the Church practice rather than the Bible. Only a single instance, the Oberammergau Passion Play, has survived, in a greatly altered form, to our own time. Humanism and the Reformation opposed those plays equally, though from different motives, and when modern dramatic art makes an attempt to bring Biblical material upon the boards, cultivated Christian taste rightly feels it to be a profanation.

Protestantism possesses something which the more ancient period entirely lacked—the Biblical musical composition. The 'Bible sonatas' of Joh. Kuhnau († 1722) may be considered trifling, but the oratorios of Heinr. Schütz († 1672), J. Seb. Bach († 1750), and G. Fr. Händel († 1759) have attained to the most perfect artistic rendering of Biblical material. A distinction is marked by the fact that while a Palestrina felt his task to be the creation of Masses and Requiems, they devoted their attention to Cantatas (Psalms) and Oratorios. And if the Catholics Joseph Haydn († 1809) and H. von Herzogenberg († 1900) joined them, they did it under Protestant influence. When a Passion by Bach, with its moving arias between the recitatives, is compared with the mediæval Passion Play, the same difference meets us which we found in our comparison of the two coloured Bibles (see above, p. 607). In the one

* E. von Dobschütz, *Christusbilder*, 253 ff., 334*.

case, what we find is the objective presentation of history, in the other, the adoption of a subjective relation to it.

LITERATURE.—E. Hennecke, *Altchristl. Malerei und altkirchl. Lit.* 1896; L. von Sybel, *Die christl. Antike*, i. 1906; F. X. Krauss, *Gesch. der christl. Kunst*, 1896 ff.; E. Mâle, *L'Art relig. du xiiie siècle en France*, 1898; Pokrowski, *The Gospel in iconographic Monuments* (Russ.); A. Wünsche, *Schönheit der Bibel*, i. 1906, p. 380 ff.; H. Grimm, 'Raffael und das NT' in *Preuss. Jahrb.* lx. 1888; *The Gospels in Art: Life of Christ by Great Painters*, Lond. 1904; Petit de Julleville, *Les Mystères*, 1880; A. W. Ward, *Hist. of Eng. Dramatic Lit.*[2], 1899; A. Hohlfeld, 'Die Altengl. Kollektivmysterien,' *Anglia*, xi. 1889; K. Lange, *Passionspiele*, 1887; Ph. Spitta, *J. S. Bach*, 1873–80; F. Spitta, *Die Passionen von Heinr. Schütz*, 1886, and *Händel und Bach*, 1885; A. W. Pollard, *Eng. Miracle Plays*, 1904.

5. **Bible and hostile influences.**—The picture would be incomplete were we not to mention, along with the operations of the Bible, the counter-actions which proceed from an impious spirit. We are not thinking here of the attacks upon the Bible by the heathen State under Diocletian (see above, VI. 1) or by the ecclesiastical and political hierarchy of the Middle Ages (see VI. 3), but of the opposition to the Bible which characterizes modern 'Enlightenment,' materialism, and socialism. The clever ridicule of a Voltaire, the absurd attacks of a Haeckel, and the vulgar insults of social-democratic literature, it must be said, are not really directed against the Bible as such, but against a false doctrine of the Bible. What has Balaam's ass that spake, or Joshua's sun that stood still—to mention two things most widely assailed—to do with the Sermon on the Mount or the great hymn on love (1 Co 13)? They show that the Bible is not inspired in the old mechanical sense, but that is not maintained any longer by any competent judges. They will not cause any pious reader who heeds God's voice to have any doubt in regard to the *testimonium Spiritus Sancti internum*, which he is always tracing. For the unfortunate antithesis between the Bible and Science, ecclesiastical theology is itself most to blame, for it made the Bible something that it was never meant to be.

The chief enemy of the Bible is ignorance of it. Doubts and suspicions do not arise from Bible-reading, but they are communicated from outside to those who are not acquainted with the Bible. Of the whole book these people know only those passages which are attacked by the modern 'Enlightenment.' Consequently they hold it in contempt and even detest it as a hindrance to education and culture. Had they ever experienced any of the comfort and gladness which the pious reader can draw from its pages, they would be of a different opinion. The history of the Bible is an objective proof of its beneficent operation.

LITERATURE.—H. Köhler, *Socialist. Irrlehren von der Entstehung des Christentums*, 1899; H. Meinhof, *Bibl. Schutz- und Trutzbüchlein*, 1896.

In order to rob the Bible of its value, it has been pointed out that other religions make the same claim for their sacred books. That is true only to a limited extent. But the Bible does not need to dispute its position with the book of any other religion. 'This portion of universal literature is the most influential book that ever existed,' says Jülicher (*Introd.* p. 2); and Harnack (*Reden und Aufsätze*, ii. 168) speaks as follows: 'It is enough to reflect upon the Bible as the book of the ancient world, the book of the Middle Ages, and—though not perhaps in the market-place—the book of modern times. Where does Homer stand compared with the Bible? Where the Vedas or the Qur'ān? The Bible is inexhaustible. Each succeeding period has revealed some new aspect of it. The Doctor of Divinity is rightly called Doctor of the Sacred Scriptures. It is upon and round the Bible that all the studies of the theological faculties ultimately concentrate and group themselves. Whenever a single individual—layman or theologian—has been enabled to draw fresh and full out of the Bible and present to others what he has thus obtained, the inward life of Christendom has been raised to a higher level.'

E. VON DOBSCHÜTZ.

BIBLE CHRISTIANS.—See METHODISM.

BIBLIOLATRY.—This term usually means the excessive veneration of a book regarded as being Divinely inspired. The phenomenon is a religious one, and is found in the faiths known as 'book-religions.' It is to be noted, however, that our view of the merits of any given book-religion or sacred book will deeply affect our judgment as to the presence or absence of bibliolatry in that particular case. One who rejects the infallible authority of a certain book will see bibliolatry where another sees no more than a legitimate reverence. Hence, if we would accurately define the term, we must lay down the limits of its exact usage, seeking to determine not merely the qualities that give it a relative and variable applicability, but rather its essential characteristics. For this purpose a preliminary historical survey will be of service; after which we shall seek a more precise definition, and then proceed to a discussion of the causes and consequences of the phenomenon.

1. **Historical survey.**—Nearly all the higher religions are book-religions, *i.e.* their teaching is deposited in a sacred book, which ranks as a Divine revelation. These religions usually have a *clerus*, who regards himself as the official interpreter of the book, and bases his authority upon it, and whose concern it therefore is to have the book recognized as of Divine character. So true is this, indeed, that even where the book is of set purpose given to the people for their private instruction and edification, the *clerus* still remains its accredited interpreter. This is precisely what we might expect, since the homage paid to the book rests upon the authority of the community and of their representative, the *clerus*. This authority, however, commonly involves a perfectly definite doctrine as to the sacred volume—a doctrine which sets forth its unique position in the most express form. In fine, the *clerus* supports the authority of the book, and the book that of the *clerus*; and there are few exceptions to this general rule.

We must, however, bear in mind that no such sacred book is ever a complete whole from the outset, and that the several parts which go to the formation of the Canon are never appraised as absolutely Divine from the first. The truth is, indeed, that the deification of the work is always a later process, as will be shown by the following examples:—

(*a*) The *Vedas* (which, be it remembered, were not committed to writing till long after they had been collected, but were handed down orally from one generation to another by precise and highly elaborate methods) were not regarded by their writers as they are now regarded by the Brâhmans. The Vedic poets compare their work to that of the weaver or the carpenter. Their hymns are 'shapen in the heart, brought forth by the mouth,' or they are inspired by the Soma-cup. But at a later period they are looked upon as of Divine origin; the gods themselves are the authors. The poems are collected, and form a sacred code, declared to be infallible. Their authority, in the period of the Sûtras, is pitted against all gainsaying. Only the systems which recognize their authority are reckoned orthodox. The infallibility, the divinity, the eternity of the Vedas become dogmas. 'The immortal Veda embraces all created things'; so speaks the Law-book of Manu. The Brâhmans base their own authority upon the eternal Veda, and such support can be dispensed with only by those who, in virtue of a direct intuition, have become one with Brahma. This development is all the more striking in view of the fact that Brâhmanism looks upon no historical personality as its founder, around whom or whose apostles a sacred literature might have gathered.

(*b*) In *Buddhism* also there has grown up a sacred literature, though Buddha himself left behind him no legacy of written words. The sayings of Buddha, however, have been garnered in one division of the Tripiṭaka, though, of course, the authenticity of these cannot be vouched for in detail. But reverence

for a sacred book holds no such place in Buddhism as it does in Brāhmanism. In point of fact, it is admitted that Buddha did not reveal everything to his disciples: the Mahāyāna doctrine is said to have been taken from the breasts of the serpents which listened to his discourses; while, again, verses flash upon the minds of his disciples, notably Vangisa, by inner illumination. Hence it is maintained that that alone which is at one with reason can be the teaching of Buddha. Did Buddha himself not say that he had turned the wheel of doctrine in various ways, now rightly and now wrongly? Buddhism, in fact, lays too much stress on individual knowledge to be susceptible of a genuine bibliolatry; every man must for himself tread the path which Buddha trod. But the reverence subsequently accorded to Buddha as a deity doubtless opened the way to a species of bibliolatry, particularly when his followers became bent upon tracing back to him every detail of ordinance and doctrine; and the fact that the sacred writings of Buddhism became a nucleus for the accretion of endless commentaries shows again the importance of these writings for *clerus* and community alike.

(*c*) In *Parsiism* the law of Zarathushtra plays a great rôle. This religion, being of a more pragmatic type than the foregoing, bears a markedly authoritative character. He who would champion the cause of Ahura Mazda must stringently keep the law of Zarathushtra. This quite accords with the fact that the sacred word is regarded as the soul of the holy spirit, the holy *fravashi* of Ahura Mazda; that this word expresses itself in sacred formulas; that, in particular, such a formula is found in the *Ahuna-Vairya*, a prayer corresponding to the Buddhist's *Oṁ maṇi padme oṁ*; that generally the ceremonies are considered as of the utmost importance; and, above all, that the sacred book, the Avesta, is still acknowledged as a Divine revelation, even by the reforming party in Parsiism, though its language is now scarcely understood. The guardians of the tradition and of the authority of the revealed word are the priests, while the dogma of the Divine character of the sacred writings vested with authority the Atharvans, or priests of the later Avesta, as being the interpreters thereof.

(*d*, *e*) The two great Semitic religions, Judaism and Muhammadanism, have developed a bibliolatry in keeping with their authoritative character. The prophets of *Judaism* regarded their utterances as Divine oracles—a view which, however, did not exclude a certain elaboration of what they had experienced in the ecstatic state. The various writings show extensive traces of redaction. The Canon was of gradual formation. A beginning was made by the people pledging themselves upon oath to the acceptance of Deuteronomy; a further step was the obligation to observe the Torah of Ezra. The lower limit for the production of canonical books was the period of Ezra, although the collection of these works was made in three stages, viz. first, the Torah, in Ezra's own day; then the Prophets, about the middle of the 3rd cent. B.C.; finally, the Hagiographa, the strictures upon which, however, had not been silenced even at the beginning of the Christian era. At length, after the doubts regarding certain antilegomena had been set at rest by the Synod of Jamnia (A.D. 90) and Rabbi 'Aḳiba, all the books of the Canon were recognized by the Mishna (*c*. 200 A.D.). The traditional Heb. text is the Massoretic, as it existed in the reign of Hadrian, and its vocalization represents the pronunciation current at that time, while the actual vowel signs date from cents. 7–9 A.D. The Alexandrian version of the LXX had come by the time of Christ to enjoy such a repute that the OT quotations in the NT, as well as in Josephus and Philo, are taken from it. After the destruction of Jerusalem, however, the Jews in their growing exclusiveness began to rank the LXX as no better than Aaron's golden calf, mainly because the Church appealed to it in controversies with the Synagogue. In fact, the Jewish Canon of 'Aḳiba stood in such favour that arguments were founded upon its letters, and the minutiæ of its text were reckoned all-important. This reverence for the text was on all-fours with the theory of inspiration of which Philo is the most outstanding representative, viz., that the OT scriptures are the immediate product of the Spirit of God. Readers will not need to be reminded that in the Christian Church, particularly in Protestant orthodoxy, the Massoretic text, embracing even the vocalization, was regarded as plenarily inspired. Nevertheless, a corrective was furnished by Philo himself in his use of the allegorical method of interpretation, by means of which he could make a patchwork of Greek and Jewish materials without the risk of infringing the Canon—a practice which also found its way into the Church (St. Paul, Origen), while, again, Protestant orthodoxy controlled its exegesis by its Confessions. The first, within the pale of Judaism, to impugn this bibliolatry was Spinoza, in his *Tractatus theologico-politicus*, but it was of course impossible that such a theory of inspiration, extending even to the OT, could be permanently maintained by Protestantism.

In *Muhammadanism* we find an analogous reverence for the Qur'ān. Again, however, this does not represent the original state of things. Muhammad, of course, as a prophet, claimed to have received revelations, which he dictated, and even subjected to later revision. But he set no great store by the form of the revelations, altering it as he thought fit, and holding that the substance should live in men's hearts. Various scattered memoranda were extant at his death. Obbai had begun to gather the fragments together during the prophet's lifetime; Zaid subsequently arranged his literary remains in a corpus which became the basis of the definitive collection made under Othman. Under Abd al-Malik the text was fixed by means of vowel signs. By this time Muhammad's widow, 'A'isha, had announced that the prophet himself, with the assistance of the archangel Gabriel, had collated the Qur'ān with the original text in heaven. The doctrinal theory regarding the book was also a gradual growth. Under the Sasanians it became a civic dogma that the Qur'ān was a thing of time, neither supreme nor final. In opposition to the Mu'tazilites, however, the Mutakallim brought the doctrine of the non-created character of the Qur'ān to the front; while Ash'arī adopted a characteristic mediating position, holding that the heavenly original was from eternity, but distinguishing from it the earthly exemplar as the work of human hands. The Arabian philosophers Avicenna and Averroës differentiate also between the religion of the people and that of the scholar, asserting that it is the task of philosophy to furnish proofs for the faith which speaks in popular metaphor, and that a distinction must be drawn between the external word, which is for the masses, and the inner interpretation, which is for learned men. The doctrine of the Mutakallim eventually prevailed, and the Qur'ān was accepted as Divinely inspired, even to letter and sound, with punctuation and vocalization to boot. One sect of Muhammadans makes tradition co-ordinate with the Qur'ān. Muhammad had explained that in matters regarding which he had given no instructions men must act according to their own judgment. But after his death the need for an authority became clamant, precepts being desired for every detail of life. Accordingly there grew up the *Sunna*, or Tradition, which is said to have embraced the biography and utterances of the prophet. It was compiled by Abu Hurayra, but was received by only one sect, the Sunnis. In any case, it is certain that there arose such a reverence for the written word, the Qur'ān, as extinguished all liberty of thought.

(*f*) Finally, bibliolatry also appears at certain stages in the development of *Christianity*. At first Christianity had no Canon of its own, but simply appropriated that of the OT, which, however, it set in a new light. There sprang up, however, a distinctively Christian literature, which presently came to be used in worship. The story of Jesus, the Gospels, and the lessons read at the Church services formed the beginnings of the Canon. The selection of approved writings, which did not exist before the middle of the 2nd cent., is traditionally said to have been made at the *sedes apostolicæ*. The criterion was that the writings should be of Apostolic authorship, and conform to the Rule of Faith. The common substratum was the Rule of Faith itself, which grew around the Baptismal Formula, and at length appeared as the Apostolicum. How vague as yet were the limits of the Canon, appears from the fact that both Origen and Eusebius still speak of Antilegomena (Rev., James, Jude, 1 Peter, 2 Peter, 2 Jn., 3 Jn.) and accept the *Shepherd* of Hermas. Only at the Council of Laodicea (A.D. 360) was it decreed that none but canonical writings should be read in churches; and Augustine, at the Councils of Carthage (A.D. 393 and 397), was the first to determine the Canon for the Western Church, taking in the OT Apocrypha and Rev., while for the Eastern Church the Canon was fixed by the Trullan Council of A.D. 692, the *Apostolic Canons* being still attached to the NT. It is thus evident that the Canon is a group of writings which was ratified by the Church, and which, moreover, still required to be expounded by tradition, even as tradition had been a factor in the process of compilation. It was the Church that invested the Canon with authority, since it was the Church that laid down the conditions of canonicity. Though inspiration and sufficiency were ascribed to the Scriptures, thus giving them pre-eminence over all other literature, as containing a Divine revelation, yet they were read with the Church's eyes, and the doctrine held regarding them was an ecclesiastical doctrine, a dogma of the Church. Whoever appealed to the authority of Holy Writ, and at the same time took a course of his own, had to avail himself of the allegorical method of interpretation and the theory of the 'manifold sense' of Scripture. But, such courses notwithstanding, the fact remains that, when controversy arose, the word was interpreted on traditional lines, *i.e.* according to the *regula fidei* and the decisions of the Councils, which were now becoming recognized as infallible—a belief necessarily engendered by the sense of incompatibility between a fixed interpretation and the doctrine of the 'manifold sense.' In reality an infallible Scripture without an infallible interpretation would have been destitute of value. Only with the rise of the Churches of the *Reformation*, however, was the doctrine of Scriptural authority pushed to its final consequences, as the Reformers, following the example of outstanding personalities who lived at the close of the Middle Ages (Wyclif, Hus), and in view of the frequent errors of the Church tradition, and of the fallibility of the Church and its representatives, believed it possible to fall back upon the authority of Scripture alone. In this course they really proceeded upon their personal experience of faith; as we know, Luther himself criticized the Canon with faith as his criterion. But the Lutheran orthodoxy recognized the Canon as something given, and appealed to Scripture as the sole *norma et judex* in all matters of belief, thus surrendering the independent testimony of a living faith and the certitude which springs therefrom. Scripture must now be the basis of religion; man must now find God in it, since the theory of direct intercourse with God has been repudiated. Scripture has become the depository of the Holy Spirit; the *vis intrinseca et efficacia verbi* is the *ultima ratio* of our belief. Whereas, on the Roman Catholic view, the Church, as being in possession of the Holy Spirit, was the trustee of infallibility, in the Reformed Churches, this prerogative is accorded to Scripture. The written word is no less than God incarnate. It is *aliquid Dei*; *formaliter consideratum*, its place is not among created things at all; so Hollaz: '*male creaturis accensetur.*' Thus there grew around Scripture a group of attributes designed to signify that it was its own guarantee, e.g., *sufficientia, perspicuitas, facultas semet ipsam interpretandi, efficacia*. It is the sole arbiter

in matters of faith. Philo's doctrine of inspiration is thus again to the front. Inspiration was held to be verbal. The authors of Scripture were simply the pens (*calami*) of the Holy Spirit. It implied great naiveness to suppose that Scripture was self-interpreting, whereas, as a matter of fact, in this instance too it was interpreted in the sense of the Confessions.

The theory of the 'manifold sense' had now been abandoned, and the demand was all for grammatico-historical interpretation. But it is obvious that an absolutely infallible Scripture could be of no service without an infallible interpreter, which, according to the theory, should have been found in Scripture itself, but which was in fact sought in dogma. This view still survives, though only in less important communities. Those who desire to possess the Divine in a finite form, immediately present to the senses, who in their religion waive all claim to self-reliance, *i.e.* to personal experience of the indwelling Deity, will always hold with a community that proffers guarantees of salvation, in virtue either of its alleged possession of the Holy Spirit, or of its actual possession of objects which embody the Divine, such as the Host or a sacred book. When the early Protestant dogmatists took their stand upon Scripture alone, they forgot that the corpus of Scripture, the Canon, was a product of the Church, and that only an infallible interpretation of the Canon could make the infallible book infallibly intelligible. As a matter of fact, the logical outcome of the situation was the institution of a *ministerium verbi divini*, an office of the means of grace, the function of which was the proper exposition of the word—the work of the *clerus*.

The Reformed Church also maintained the view of verbal inspiration, but its pre-eminent and distinguishing feature was its doctrine of predestination. Hence the Scripture was for this Church but the infallible document from which men could ascertain the will of God, and in which the will of God was enshrined in all its purity. In this case it is the need of an authority which makes an infallible word necessary. But as the means of grace was not put in place of God, or, more generally, as the distinction between creature and Creator was still upheld, the Scripture was not deified. The Reformed Church was satisfied to see in Scripture the absolutely inerrant revelation of the Divine will, as something to be personally appropriated; but it likewise recognized that Scripture gave no information regarding the election of any particular person. Men must win the conviction of their own election from other sources; such certainty was in fact given by the Holy Spirit. But the claim for the unconditional recognition of Scripture as the expression of the Divine will was still held to be valid. The word is, so to speak, the Divine will *in persona*, in which man must acquiesce. Again, indeed, we see that the absolute infallibility and plenary inspiration of Scripture consort but ill with the principle of inner certainty. If such certainty be a fact, infallibility is superfluous. But if infallibility be necessary, then salvation is unconditionally dependent upon Scripture as the depository of the Divine will, and inner certainty is a chimera. Besides, that the community fixes the Canon is corroborated by the fact that the Reformed Confessions expressly enumerate the several books contained therein; and that scholars interpret in the sense of these Confessions is beyond the need of proof.

Bibliolatry, then, as the foregoing survey shows, is found in book-religions generally. Its essential character consists in the belief that a group of sacred writings is the plenary depository of the Divine Spirit, and that, as such, it is of eternal duration and of superhuman origin; that it transcends all created things, or that, at all events, it possesses the quality of absolute infallibility, being, in fact, the perfect channel of Divine revelation. In the eyes of those who so estimate it, such a book proscribes all criticism, and ranks as the one all-sufficient standard of appeal in questions of belief. We are thus dealing with a conception which is to be defined not quantitatively but qualitatively, *i.e.* which marks out the particular sacred book as possessing qualities absent from all other literature, namely, exclusively Divine authorship, absolute infallibility, immunity from all natural influences in its origin; and hence also its recognition as of unconditional authority, and its supremacy in comparison with all individual judgment. Absolute submission to this sacred book is the obligation of the bibliolater. Outside it there exists no final tribunal in matters of faith. It is all-sufficient, and shares in the sovereign prerogative of God.

2. Causes of bibliolatry.—We would first of all observe that bibliolatry never exists where religion has the character of spontaneity, or where the religious consciousness finds free and natural utterance. But whenever religion loses this spontaneous enthusiastic character, when the Deity is no longer supposed to manifest Himself directly, then, in place of such immediate intercourse with the Divine, there comes into operation the mediating function of the community and of its recognized sacred book. Men begin to feel the need of a guarantee of salvation, of a sacred authority, and this they find in Scripture only when they regard themselves as being, so to speak, yet in their nonage, *i.e.* at that stage of consciousness when man assumes his entire incapacity of making judgments regarding the Divine, and when the individual makes full surrender of his private judgment. The necessary condition for the acceptance of any new revelation is that it must move the souls of men. But it is only after a society has been constituted upon the basis of an accepted revelation that means are employed, in the succeeding generations, to preserve the original message. Accordingly the message is committed to writing, and in its written form is looked upon as the authentic source of the revelation. Now, the less capable people are of personally experiencing the truths thus won, the more eager are they to find guarantees thereof, and such they believe to exist in the inspiration and Divine character of the written word, and not in the actual message, which they could of course verify for themselves. In fact, even when the sacred writings contain such a maxim as 'Prove all things: hold fast that which is good' (1 Th 5^{21}), men still prefer not to 'prove,' but rather to give a blind adherence to the authority of the Divine book. But now, such a course can be justified only upon the assumption that this book is free from all human elements, and thus arises the theory of unconditional inspiration and the act of deification. Wherever we find men holding to a revelation in external and perfect form, we find also the need of infallibly preserving the revelation to all time, *i.e.* of a Scripture whose inspiration is absolute, pure, and Divine.

The origin of bibliolatry is therefore in part subjective; it presupposes the complete religious nonage of man, and his need of an absolute authority, as also his lack of such genuine religious emotion as might furnish a personal experience of the Deity. But bibliolatry has likewise an objective source, viz. the belief in an external revelation supposed to be infallibly and unchangeably embodied in Holy Writ.

This explanation, however, does not cover the whole case. Since the seal of sacredness is stamped upon the Scripture not by the individual but by the community, bibliolatry in the event leads the former to recognize his dependence upon the latter; and when the individual assumes his entire incompetence in religious things, he will pin his faith, not to his own understanding, but to that of the expert, *i.e.* the *clerus*. Thus bibliolatry brings us back to the infallibility of the Church, upon which it originally rests, since it is the Church that determines the Canon. Such has been the process in the religions of India as in Muhammadanism, in Judaism as in Christianity. And if the same cannot be said of all, as, *e.g.*, Protestantism, which puts the Bible freely into the people's hands, the exception is but apparent, particularly in professedly orthodox circles, since, for one thing, the sacred book owes its prestige to the Church, which brought its contents together; and for another, the laity are dependent upon the translator; while, finally, orthodoxy holds to the necessity of a *ministerium verbi divini*, an office of the means of grace, by which Scripture shall be interpreted in the sense of the Confessions. The moment, however, that the Bible-worshipping laity casts about for an interpretation of its own, bibliolatry begins to wane, and is seen to be a mere transition stage; the unmethodical exegesis of non-experts reveals

such diversity as convinces even the unprejudiced observer that these interpreters are the victims of a subjectivity which but ill accords with their assumption of the purely Divine nature of Scripture. It thus becomes obvious that bibliolatry either issues in the recognition of an infallible Church, which delimits and interprets the Canon, or, in other words, in the supremacy of the *clerus*, of whose authority the Scripture provides the grand support; or else it disintegrates itself by subjective exegesis, thus losing whatever significance it may have had—a result ever the more certain the more religion is required to meet the needs of the age.

Not only, however, is bibliolatry indicative of a lower stage of the religious consciousness, and in itself untenable, but the very conception of revelation which underlies it is unsound. Were the Deity revealed in a manner which excludes the co-operation of the soul, such revelation would of course be purely objective, free from every human element, especially in the case of its authoritative document being unconditionally inspired. But in religion the chief thing is ever the intercourse of man with God, and a revelation that is truly such must always be some delineation of this intercourse. The conception of the individual soul as entirely outside the current of revelation, leading, as it does, to a belief in verbal inspiration and to bibliolatry, is radically unethical.

3. **Consequences of bibliolatry.**—The consequence of bibliolatry is that the people upon whom it is laid as an obligation become bound hand and foot to a fixed point of view—a result specially disastrous when the sacred book not only prescribes religious or ceremonial ordinances, but also enacts laws for social and political affairs. Muhammadanism wrecks itself upon the Qur'ān. The Christianity which is tied to a stereotyped interpretation of a supposed infallible book becomes ossified; and the same may be said of a Christianity which would make the Bible the standard for life as a whole, or which in particular cases uses random passages as oracles, thus assuming the individual's incapacity for moral freedom. The existence of innumerable commentaries to the sacred books of all religions is at least partly explained by the desire to find an interpretation which shall be of service to the contemporary generation, or to harmonize the writings with some private point of view. Men have often tried the experiment of combining their recognition of the absolute authority of Scripture with the germs of spiritual freedom; by the device of virtually emancipating themselves from the burden of the book, while preserving their nominal adherence to it by exegetic methods, they have striven to satisfy the demands of progress. Such methods, of course, do scant justice to the requirements of historical veracity. Then the ossification resulting from bibliolatry is sometimes kept in abeyance by dint of associating tradition, especially a *traditio constitutiva*, with Scripture. But in truth both interpretation and tradition are mere palliatives. Only on condition that religion be a living fact, and that the personal element therein be given its full due, and not suppressed, is the escape from bibliolatry sure. For then the venerable documents become but incitations to the personal experience of religion, and are by no means to be accepted without examination. It is impossible that a genuine piety should curb the spontaneity of the individual soul; it should rather animate the same in its various manifestations. Accordingly it is the privilege of the individual to assimilate whatever in the sacred volume answers to his own experience, and at the same time to subject the documents themselves to a continuous process of criticism, in order to separate between what is merely temporary therein and their permanent eternal truth.

BIGOTRY.—A term of disputed etymology, denoting the moral characteristic which combines strong will with narrow intelligence in its direction. It appears sometimes in that lack of moral perspective which distinguishes the stickler for trifles, exalting trivial and variable forms into equal rank with the immutable principles of moral and religious life. Sometimes a strong will may grasp tenaciously even a doctrine or line of conduct that is wrong, and then we may have the cruel intolerance of an inquisitor or of the leaders in the Reign of Terror during the French Revolution. When a strong will is supported by religious enthusiasm, bigotry is well described as 'a zeal for God, but not according to knowledge' (Ro 10²).

J. CLARK MURRAY.

BIJĀPUR (Skr. *vijayapura*, 'city of victory').—The capital of the District of the same name in the Bombay Presidency, lat. 16° 49′ 45″ N.; long. 75° 46′ 5″ E. The present city was founded on an ancient site which was already the site of Hindu and Jaina worship. It became the seat of the famous Adil Shāhi dynasty, the existence of which terminated on its capture by Aurangzib in A.D. 1686. In recent years the British Government has taken steps to conserve the splendid series of buildings which were erected by this Musalmān dynasty. Among those of a religious character may be noticed the Jāmi' Masjid, or Cathedral Mosque, commenced by 'Alī Adil Shāh (A.D. 1557–1579), but never completely finished, which Fergusson calls 'one of the finest mosques in India.' Equally remarkable are the splendid tombs of 'Alī Adil Shāh, and his successors, Ibrahīm and Maḥmūd, the last remarkable for its wonderful dome, supported by a method much less clumsy than that employed in the Pantheon and in most of the domes of Europe.

LITERATURE.—Meadows Taylor and Fergusson, *Architecture at Bijapur* (1866); Fergusson, *History of Indian and Eastern Architecture* (1876), 558 ff.; *Bombay Gazetteer*, xxiii. 601 ff. For the old Hindu and Jaina remains, *IA* vii. 121 ff.

BINDING AND LOOSING.—In Mt 16¹⁹ and 18¹⁸ Christ bestows the power of binding and loosing upon St. Peter and all the Apostles respectively, with the promise that what they bind on earth shall be bound in heaven, and what they loose on earth shall be loosed in heaven. For a right understanding of the nature of the power involved in this gift, it is necessary to consider what must have been the meaning conveyed to the minds of the Apostles, typical Jews of their time, by these words of Jesus. First, we notice that the power to bind and loose is granted in connexion with *things*, not with persons, which concurs with the common use of the terms in the Talmuds. In them the phrases are applied to such questions as the sending of letters by the

hands of a Gentile on the eve of the Sabbath (Jerus. *Shabb.* fol. 4. 1), the beginning of voyages, or the gathering of wood (Jerus. *Jom. Tobh.* fol. 61. 1). They are used, in doctrinal and judicial matters, of things allowed or not allowed in the Law; in particular, there is the recurrent formula, 'The House of Shammai binds . . . the House of Hillel looses.' Interpreting the former passage in Mt. by the normal usage of the time, we shall conclude that our Lord declared St. Peter to be a competent Rabbi, whose decisions in the matter of conduct (*halakha*) would be ratified by the Heavenly Tribunal. In the exercise of his authority, he would forbid (bind) certain things, and permit (loose) others. In view of the close connexion in Mt $16^{18.19}$ between the keys and the power of binding and loosing, we may note that the power of the keys (*q.v.*), equally with that of binding and loosing, belonged to the office of scribe or teacher; the scribe, when admitted to office, received 'the key of knowledge' (Lk 11^{52}). Thus St. Peter was qualified to be a scribe fully instructed unto the Kingdom of Heaven, endowed with legislative power concerning things, not judicial power concerning persons. In Mt 18^{18} the sense of 'bind' and 'loose' has developed in view of the context, and its positive content has become greater: the power to exclude from the society in view of a stubbornly maintained refusal to rectify an offence is involved; vv.$^{19.20}$ as well as vv.$^{15-17}$ show that the new society is regarded as possessing powers of self-government from God, and that its decisions will be ratified by God.

Mt 16^{19} and 18^{18} cannot legitimately be connected with Jn 20^{23} ('whose soever sins ye forgive, they are forgiven unto them; whose soever sins ye retain, they are retained'), though, as we shall see, the identification began very soon and became normal. δέειν corresponds to Heb. אָסַר and Aram. אסר; λύειν to Heb. הִתִּיר and Aram. שְׁרָא. The most that we can say is that in Mt 18^{18} the context seems to show that the power of binding and loosing implies, among other things, the power of treating sin as pardonable or the reverse, with reference to admission into, or exclusion from, the community. And this conception can be obtained only from the context; it must not be read into the words, for whereas such a phrase as λύειν ἁμαρτίας might be allowed, the corresponding δέειν ἁμαρτίας would be impossible. Dalman (*Words of Jesus*, 216) partially supports the Patristic connexion of Mt 16^{19} and 18^{18} with Jn 20^{23}. He thinks it doubtful whether Matthew understood Jesus as merely bestowing on His disciples power to give authoritative decisions in matters of conduct, and points to the exclusion from the community, which, admittedly, is involved in the context of Mt 18^{18}. Therefore, with the inclusion of the conception of St. Peter as the steward of God's house on earth, who possesses the keys, and has power to open or shut, he allows that the sense of Jn 20^{23} is latent in the passages of Mt., since 'exclusion from the community on account of some offence includes the "retaining" of the sins; the re-admission of the sinner includes the "remission" of his sins.' Yet, while the natural connexion in thought between the passages in Mt. and Jn. is not to be denied, we ought not to interpret the Matthæan passages by the later passage in Jn.; nor can we say that the gift of the power to open and shut, to bind and loose, was only promised in Mt $16^{18.19}$, and not actually conferred till Jn 20^{23}—a position adopted in *The Pulpit Commentary*.

The power to remit and to retain sins is not without analogy with the power to bind and loose; but it was a distinct and additional power. The interpretation of 'bind' and 'loose' in accordance with the practice of the Rabbinic schools is the natural and obvious one. Neither Lange's objection, in his commentary on St. Matthew's Gospel, that Christ would not have spoken merely after the Rabbinic pattern, nor Dalman's inference that Mt. can hardly have understood Christ in that sense, since δέειν and λύειν do not in his Greek mean 'forbid' and 'permit,' is really a serious objection to this view. Lange does not give adequate weight to the fact that our Lord and His disciples must be interpreted as far as possible in accordance with the Jewish usages of the time, while Dalman's objection loses its force when we remember that the *ipsissima verba* of Jesus, if they can be obtained, are of more importance for the interpreter than the Greek translation given in Mt. It is agreed that the Aramaic words used by Jesus were the same as those so constantly found in the Talmuds in the sense indicated above. Moreover, there is no need to suppose that Mt. found in the passage some force other than 'forbid,' 'permit'; he used δέειν and λύειν as being the nearest Greek equivalents in literal meaning to אסר and שְׁרָא.

We may regard as instances of loosing and binding in the Apostolic Church, the action of St. Peter in having intercourse with Gentiles (Ac 10), and the letter of the Church of Jerusalem with reference to abstention from things offered to idols, blood, and fornication (15^{29}). The same assembly refused to bind distinctively Jewish customs upon Gentile Christians. St. Paul's action with regard to the incestuous person (1 Co 5), which was ratified by the community, and led to the excommunication of the offender, at least for a time, may also, in view of Mt 18^{15-18}, be regarded as a case of binding.

An account of the various ways in which discipline has been exercised in the Christian Church, based largely on the two passages in Mt., would hardly be in place in the present article; but it is possible to gather from the Fathers considerable information as to the influence of these texts, and the manner in which they were utilized in the interests of disciplinary authority. In the *Clementine Homilies, ad Jac.* ii., St. Peter is represented as communicating to Clement the power of binding and loosing, 'so that with respect to everything which he shall ordain in the earth, it shall be decreed in the heavens. For he shall bind what ought to be bound, and loose what ought to be loosed, as knowing the rule of the Church.' The natural, Rabbinic meaning of the words is clearly kept here, though the sentences which immediately follow seem to point to a power extended over persons as well as things. Tertullian deals with the question in *de Pudicitia*, xxi. His strictness in his Montanist days led him to combat the notion of discipline and forgiveness generally prevalent in the Church. In the chapter referred to he distinguishes between the doctrine of the Apostles and their power, and argues that, even if they had forgiven any sin committed against God, the prerogative to pardon which, in accordance with Mk 2^7, belonged to God alone, they did so in the exercise of power, not of discipline; such power was akin to their power of performing miracles, both of healing and destruction. Tertullian demands an equal display of power before he will recognize in the Catholic clergy the power to remit sin; since the mere fact that the functions of discipline had been entrusted to them carried with it no such capacity. As to the argument that, in view of Mt 16^{18} (it is interesting to note that he does not deal with Jn 20^{23}), the Church has the power to bind and loose, Tertullian answers that this gift was conferred personally upon St. Peter, who made use of it by bringing men to Christian baptism, and so into the Kingdom, 'in which are loosed the sins beforetime bound, and those which have not been loosed are bound in accordance with true salvation.' The same power was exhibited in the death of Ananias and the healing of the impotent man, while both operations were seen in St. Peter's speech, recorded in Ac 15, when certain parts of the law were loosed and others bound. Tertullian does not give any proper weight to the fact that the letter of the Jerusalem assembly was the work of the whole local Church, and not the mere outcome of a number of individual opinions, of which St. Peter's was the first. In any case,

if we accept Tertullian's distinction between the doctrine (*i.e.* discipline) of the Apostles and their power, it can hardly be denied that the 'binding and loosing' letter falls under the former head. But Tertullian's chief anxiety in his discussion is to show that nowhere has authority to *remit sins against God*—the only point round which controversy could rage—been granted to the Apostles, much less to the Church.

Questions with regard to binding and loosing naturally arose in connexion with the controversies in which Cyprian was involved, on the one hand with the Novatians concerning the lapsed, on the other with Stephen in the matter of the re-baptism of heretics. While he urged with ever-increasing force against the Novatians that the power of loosing from even the gravest sins existed in the Church, Cyprian maintained against Stephen that outside the Church there was no one to bind and loose, to baptize and give remission of sins (*Ep.* 73. 7, *ad Jub.*). In the same letter he shows that he completely identifies the power given to St. Peter in Mt 16 with the power given to all the Apostles in Jn 20. To 'loose' is for him the same as to 'remit sins'; and as in *Ep. ad Magnum* 11 he seems to make of 'baptizare et remissum peccatorum dare' one idea, it is likely that 'loosing' was in his mind specially connected with baptism. The same identification of Mt 16^{19} with Jn 20^{23} is seen in the letter of Firmilian to Cyprian (Migne, *PL* iii. 1201); he insists on the power of forgiveness having been given to the Apostles, from whom it descended to the bishops ordained by them, and so on in continual succession. We see from this how the use of the power to bind and loose was being regularized in the interests of Church order and a ministry that was becoming increasingly sacerdotal. Ambrose, as well as Cyprian, attacked the Novatian restrictions on the Church's power to loose. Novatian and his followers had denied that the Church could extend forgiveness to the lapsed or to those who had fallen into any of the graver sins. Ambrose (*de Pœn.* i. 2), relying on Jn 20^{23}, replied that the Church had power both to bind and to loose, and turned the attack upon the Novatians by arguing that, as they rejected the power of loosing, clearly they had not the power of binding.

Origen, in his treatment of Mt 16^{19} (*Com. in Mt.*, tom. xii.) is more careful to insist on the spiritual character of the gift. According to his interpretation, St. Peter was entrusted with the keys of the Kingdom of Heaven, to open to *those who* were loosed on earth, that they might be loosed and free in heaven. While allowing that bishops also had the right to pronounce *things* bound on earth, which would then be bound in heaven, Origen insists on two qualifications for them, before they can exercise such power. (i.) They must possess that *ἔργον* in virtue of which it was said to St. Peter, 'Thou art Peter.' (ii.) Their character must be such that the Church can be built upon them: a bishop 'tied by ropes of his own sins' would bind and loose in vain. It is clear that Origen is maintaining the necessity for soundness of faith and life, if the bishop is to be able to bind and loose—a doctrine of the worthiness of the minister which not unnaturally alarmed the annotator of Jerome's exposition of the same passage (*PL* xxvi. 131). In another place, Origen shows the same tendency to urge spirituality rather than office as the essential thing for one seeking to forgive sins. In *de Orat.* 28 he says that, while we can all forgive sins against ourselves, he on whom Jesus has breathed as on the Apostles, and who can be recognized as made spiritual through the gift of the Holy Spirit, forgives what God would forgive, and, on the other hand, retains sins which cannot be healed. Of other Eastern teachers we may notice Chrysostom and Cyril of Alexandria. Chrysostom (*in Mt.*, Hom. liv.), while interpreting binding and loosing as the power to retain and remit sins, which belongs to God alone, in which he agrees with Tertullian, differs from the African theologian in seeing in Christ's words a specific promise to bestow this very power on St. Peter. Cyril Alex. (*Com. in Mt.* lv.), commenting on Mt 16^{19}, postpones the actual delivery of the power of the keys till after the Resurrection, as recorded in Jn.; on Mt 18^{18} he writes that Christ gives to those who have obtained the office of teaching the power to bind and loose, which suggests a possible appreciation of the original force of the words, and their connexion with Jewish custom.

The *Apostolic Constitutions* (ii. 11) connects binding and loosing with the bishop's authority to judge offenders, and interprets Mt 18^{18} as specially addressed to the bishops. The great Fathers of the West came to connect binding and loosing more and more strictly with penance and priestly absolution. Thus Augustine (*Sermo* lxvii. 2) makes 'loose' equivalent to letting go free, and makes use of the words of Jesus to Lazarus in Jn 11^{44}, *λύσατε αὐτὸν καὶ ἄφετε αὐτὸν ὑπάγειν*, to enforce his meaning. As Lazarus was awakened to life, and came forth at the word of Christ, so does the sinner spiritually revive when he penitently confesses his sins; but, as all had not been done for Lazarus till the disciples loosed him and let him go free, so the penitent needs the Church's absolution. Hilary interprets binding on earth as leaving entangled in the noose of sin, and loosing as receiving into the safety of pardon (*PL* xi. 1021). Jerome, commenting on Mt 18^{18} (*Comment. in Ev. Mt.* iii. cap. 18), says that priests and bishops have no power to bind and loose of themselves, but can only decide who is pure and who is not, who is to be bound and who loosed, and compares Lv 14^{2-4}: elsewhere (*in Ev. Mt.* iii. cap. 16) he says that the Church has judicial power to declare those freed whom God's grace has freed within; those bound who are not so loosed. Gregory the Great (Hom. 26 *in Evangelia*) says that the bishops have the power of binding and loosing, but that it is lost by those who use it for their own ends, and not for the advantage of their penitents. He also makes use of the raising of Lazarus to show that the Church has power to absolve those whose hearts God has touched and revived by His grace. Gregory warns against unjust binding; yet, at the same time, bids the penitent ever fear, lest, even if he be unjustly bound in connexion with the particular matter which he confesses, the binding may be merited, and therefore valid, owing to some other fault. Gregory connects the official sentence most closely with the sinner's inner feeling, which, in fact, the loosing and binding of the bishop regularizes. Rabanus (*Com. in Mt.* lib. v.), differentiating between the gift to St. Peter and the gift to all the Apostles, points out that, while the power of binding and loosing was given to all, as is clear from Jn 20^{23}, St. Peter had it conferred upon him in a special way, so that no one separated from the unity of faith and communion with him could be loosed, *i.e.* absolved. Paschasius Radbertus distinguishes between the power of binding and loosing given to St. Peter in Mt 16^{19} and that given to all the Apostles in Mt 18^{18}. The latter, he says, are urged to argue three times with the offender before binding him, while St. Peter has the keys of all heavens, not merely the power of binding in heaven (*Exp. in Mt.* lib. viii. cap. 16). Bernard, Abbot Fontis Calidi, interprets 1 Co 5^{5} as a possible instance of binding by excommunication. In Thomas Aquinas the power of the keys and the

power of binding and loosing are identical, and he distinguishes, in binding and loosing, between the power of authority, which belongs to God alone, the power of excellence, which belongs to Christ, and the power of ministering, which belongs to the priests (*Summa Theol.* 3ᵃ s. Qu. xvii.-xx.).

Of the Reformers, Luther makes the power to bind and loose equivalent to the power of the keys, and interprets it of absolving or retaining sins. Mt 18^{18} was addressed to all Christians, and may apply to any one who confesses his sins privately before a brother. He does not distinguish the passages in Mt. from Jn 20^{23}. These words are intended to call forth the faith of penitents, so that the word of the Divine promise may free them. A Christian should know that, if he believes and is absolved, he will be truly absolved in heaven. For Luther the power of the keys belongs to the Church, not to the Pope, and the Church's judgment, if the Church be truly spiritual, is God's judgment. Binding and loosing could be exercised both in preaching and in private absolution. The Church, which possesses the power, allows particular individuals to exercise it ('Babylonish Captivity of the Church,' in Luther's *Primary Works*, ed. Wace-Buchheim; also 'Of the Keys'). Melanchthon (*Loci Comm.*, 'de Confess.') interprets Mt 18^{18} of the giving of the power of absolution—a power operative in dealing with the lapsed and excommunicate. Calvin distinguishes Mt 16^{19} and Jn 20^{23} from Mt 18^{18}: the former passages have to do with the ministry of the word by preaching, the latter with the spiritual jurisdiction and discipline of the Church. Of Mt $16^{18.19}$ he says that the keys apply to teaching, and he compares Lk 11^{52}. Loosing is directly connected with the forgiveness of sins; the doctrine of the gospel is applied to the loosing of our bonds—that being loosed on earth through man's testimony we may be loosed in heaven also; binding, on the other hand, is accidental to the gospel. In Mt 18^{18} the discipline exercised by the Church is in question, and Calvin understands by the Church's sentence on the offenders, which God ratifies, the sentence presided over by Christ through His word (*Works*, 'Harmony of Matthew, Mark, and Luke,' ii. 292).

The Council of Trent (sess. 14, vi.), in opposition to the teachers of the Reformation, insisted on the application of Mt 18^{18} strictly to bishops and priests, and to them alone. Bellarmine (*Disput. de cleric.* 5) argues that by the keys delivered to St. Peter the supreme power is intended, as may be seen from Mt 16^{19}, since in the Scriptures he is said to bind who gives orders and punishes. Cornelius a Lapide (*Commentarius*, tom. 15) goes with some fullness into the question. He argues that in Mt 16^{19} 'quodcumque' (ὃ ἐὰν δήσῃς) is equivalent to 'quemcumque,' but that the neuter is used as more universal, since the Pope binds and looses sins, vows, etc., as well as men. Binding is exercised in (1) retaining sins and denying absolution, (2) enjoining penance, (3) excommunication and other censures, (4) laws and councils, (5) binding Christians to a confession of faith; while loosing is to release from these obligations. By a curious piece of exegesis he refers 'super terram' (ἐπὶ τῆς γῆς) to St. Peter, not to the thing bound.

Hooker (*Eccl. Pol.* vi. 4) discusses the question. He argues that the office of regiment over God's Church consists of functions both of doctrine and of discipline, contained in the name of the keys: there is in the Church power to excommunicate, and make sinners as heathens and publicans. God has promised to ratify what is done by His Church, first by the Apostles, then by their successors. The custom of binding by ecclesiastical censure and retaining till repentance leads to loosing has been adopted as the most expedient method for the cure of sin.

Modern commentaries on Mt., while slightly differing among themselves as to the exact force of the words, agree in dissociating the passages in Mt. from Jn 20^{23}. For a point of view which denies that the power conferred has reference to any discipline in the visible Church, admission to or exclusion from the Kingdom of Heaven, or specific authority of the Apostles over the Jewish law, see Lyman Abbot's *New Testament with Notes and Comments*. He interprets the promised power as power in the spiritual life: whatever Christians permit themselves, God will permit; whatever they prohibit, God will prohibit; the passage is therefore the spiritual Magna Charta of Christ's disciples. But such an interpretation is too individualistic, and does not do justice to the historic situation, or to the obviously present idea of a community in Mt 18^{17}. The idea of the power of self-government in the Church is the nearest modern parallel to the idea conveyed in Mt 16^{19} and 18^{18}.

LITERATURE.—J. Lightfoot, *Hor. Heb. et Talmud.* (ed. Pitman, London, 1823, vol. xi. pp. 226-231); Dalman, *Worte Jesu* (Eng. tr., *Words of Jesus*, 1902, p. 213 f.); *PRE*[3], *s.v.* 'Schlüsselgewalt, 1906; *HDB*, *s.v.* 'Power of the Keys'; of modern commentaries (in addition to those cited in the article), esp. Th. Zahn (*Kom. z. NT*) and W. C. Allen (in *ICC*) on Matthew, and B. Weiss (*Die vier Evangelien*, Leipzig, 1900; also in Meyer's *Kommentar*[8], 1893) on John; Ahrem, *Das Amt der Schlüssel*, 1864; Steitz, 'Ueber den neutest. Begriff der Schlüsselgewalt,' in *SK*, 1866, pp. 435-483; Cremer, *Lex. der neutest. Gräcität*[9], 1902, *s.v.* λύειν; and other authorities cited in the article.

J. K. MOZLEY.

BIOGENESIS.—Biogenesis is a term used to express a fact of observation in regard to the present-day beginning of living organisms, that they arise from parents approximately like themselves, and in no other way. It is perhaps possible that they may arise in some other way, *e.g.* from not-living matter, or from parents quite different from themselves—both of these hypotheses have their supporters, but as yet no exception to the fact of biogenesis has been proved. The fact is often expressed in the aphorism *omne vivum e vivo*, which in most cases may read *omne vivum ex ovo*. It is unnecessary to speak of this as 'the law of biogenesis,' for the biologist who states that he does not know of any form of life arising except from a parent form of the same kind is not thereby denying the possibility of abiogenesis in the past, the present, or the future. See ABIOGENESIS.

The term 'biogenesis' is sometimes used to mean individual development—a usage which should not be encouraged. Thus Haeckel's 'fundamental law of biogenesis' states that individual development (ontogeny) tends to recapitulate racial evolution (phylogeny). See RECAPITULATION.

J. ARTHUR THOMSON.

BIOLOGY (βίος, 'life'; λόγος, 'discourse') is the science of life in the widest acceptation of that term. It deals with the general conclusions relating to life that may be drawn as the result of study of the structure and activities of all living things. As such it is as intimately connected with the activities of the human organism as with those of the malarial parasite that passes a stage of its existence in man's blood; it concerns itself with every feature in the apparently passive manifestation of the oak tree's vitality, as in that of the active gall-fly, whose developing eggs stimulate the gall-formations upon its leaves. In popular thought, life displays itself in two great, apparently unrelated, fashions corresponding to the animal and vegetable kingdoms respectively—types which undoubtedly are sufficiently distinctive and apart in their most highly developed representatives, but which, as they are studied in a descending series, are found to become ever more

simple until forms are reached which, from the point of view of morphology, are practically alike in the two instances, although still differentiable physiologically; while eventually, certain forms are reached when the last *differentia* ceases to hold, and no unequivocal judgment can be passed upon their animal or vegetable nature. Yet let it not be imagined that to study life in these simpler forms does anything more than eliminate certain secondary constituent elements. 'Livingness' in itself is not more intelligible in the amœba than in the elephant.

At the same time it is convenient to think of the subject-matter of Biology as comprising, in the first instance, the two great realms of animal and vegetable life, corresponding to the sciences of Zoology and Botany. Any individual in either of these realms may be studied from the point of view of its gross build and form (Anatomy= Morphology, in the strictest sense of that term), or minute structure (Histology); from the point of view of general functional and adaptive relation to the external environment (Ecology), or particular ability to do work, associated with definite organs (Physiology proper). Morphology and Physiology suffer, however, more than any other two aspects, from separate consideration, for in life they are most intimately connected, inasmuch as form is conditioned by the function to be performed; in fact, they are the dynamical and statical aspects of one and the same thing. Further, the living organism may be studied stage by stage as a developing organism (Ontogeny), or the historical treatment may be extended to its racial ancestry (Phylogeny, expressed in some classes by Palæontology); it may be regarded in connexion with its various *habitats* on the earth's surface (Geographical Distribution), or its place in a scheme of classification (Taxonomy); investigation may further be directed into the causes that have combined to make it what we find it to be (Ætiology). Finally, in each of these subdivisions the individual may be studied in relation to other individuals more or less like it, which will give us, as in the first instance, Comparative Anatomy and Comparative Histology. Nor should it ever be forgotten in what intimate and often conditioning relation these different aspects stand to one another, so that biological interpretation is incomplete to the extent in which it fails to realize this co-ordination.

The importance of biological study, not merely as a discipline, but from the bearing of its varied subject-matter upon human life in general, can hardly be exaggerated. To recognize the truths of Biology, and appreciate them aright, is a great aid to living; the life of the spirit is grounded in them. In connexion with questions of human health and food supply, and the various other economic aspects of living forms that stand in desirable and undesirable relations to man, a knowledge of Biology should be part of the equipment of every educated man; Psychology and Sociology are torso-like studies in so far as they are not recognized as grounded on Biology. In the same way Biology rests in great measure on Physics and Chemistry, while the relations to and influence on Philosophy, Sociology, and Theology of such an integral component of biological construction as Evolution are a leading element in modern thought.

The initial question of Biology is the nature and characteristics of living matter—the determination of that wherein 'livingness' consists. Conceivably, this may be best attempted by consideration of the simplest forms of life; yet to solve the problem of their 'greatest common measure' does not necessarily mean that we have determined the unit of life. Wherein, then, does 'livingness' consist? Possibly we should instinctively reply, movement—movement, either purely locomotive, or such as is involved in the maintenance of the functions of nutrition and reproduction. Yet in the case of any seed or egg, life is somehow there, but we see no movement. We can ask about either the seed or the egg, Is it alive? or, Is it capable of living? but these are obviously two very different questions. It is known that if dry seeds be kept for a long period in hermetically sealed jars they cease to respire, failing to manifest any chemical production of CO_2, one of the great signs of life. Hence their chemical answer to the question, Are you alive? is No. But does this answer necessarily imply that they are dead? And again the answer is No; for, if released from their prison and placed in suitable conditions, they will germinate and produce new plants. 'So that a seed, in so far as it does not manifest chemical change, is not proved to be living; and, inasmuch as it germinates, is proved not to be dead' (Waller, *The Signs of Life*, p. 5). Of course, the usual escape from this dilemma is to say that the seed is in a state of latent life, during which there is a complete suspension of all the chemical changes that are characteristic of the living state. But a more correct statement is that we have no means of chemical investigation sufficiently refined to reveal to us the infinitesimal changes that are probably going on in the apparently dry and perfectly dormant seed; and it is further possible that chemical change may be completely arrested for a time (*e.g.* by low temperature) without that arrest being of necessity final and definitive. The reason for believing that infinitesimal changes, which our methods are too crude to detect, are going on in the seeds, simply is the experience in the first place that seeds that are kept for a long time do wear out, and that the percentage of seeds that germinate and grow gets smaller and smaller the longer they are kept. The deterioration is more or less rapid according to the nature of the seed and its coats, but in every known instance there is deterioration sooner or later—deterioration, *i.e.* change, chemical change. We do not know, but it is not unreasonable to suppose, that the change is of the nature of a tendency towards stability on the part of the seed molecules because of the lack of stimulation. A stage is reached when no response is offered. Similarly, in the contrary direction, the process of growth when once begun cannot be arrested; it must proceed, or the organism will disintegrate immediately. Life is a process rather than a condition. When once, as in the case of the developing egg, a certain temperature has disturbed its statically arranged molecules, proper energy must be furnished for continuing the process, or the whole structure comes tumbling down, and we say that the thing is dead.

Hence, with Waller, we ought probably to specify the character of the seed or the egg in this way: Matter—Not living—Formerly living—Capable of living again. They are physico-chemical structures whose life may begin, rather than living things themselves. Further, it has been shown that the vitality of seeds can be tested by the electromotive method (electrical changes being taken as the token of chemical changes, which are in turn a sign of life); so that in addition to the question, Are you alive? we can put the question, How much are you alive? to the seed, and learn its answer in terms of electric units. Plants are obviously not as alive as animals, and in the case of the seed, different degrees of vitality will be shown corresponding with its age. At the same time we have made little advance in our inquiry as to wherein livingness consists. For the simple truth is that we cannot tell what life is. Yet if we cannot tell what life is, we can state what living things do. It is possible to make a series of statements descriptive, if not definitive, of living things.

(1) All living things consist of a colloidal substance called **Protoplasm**. As seen in the simplest plants and animals, it is viscid and translucent,

generally colourless, immiscible in water, and yet composed of it sometimes to the extent of 90 per cent. Chemically analyzed, after treatment by re-agents, which rob it of its essential character, it is found to consist of carbon, oxygen, nitrogen, hydrogen, and sulphur, together with traces of various salts; but this complex of proteids ($C_{72}H_{112}N_{18}O_{22}S$ = possible minimal composition of a molecule of egg albumen) exhibits such a variety of qualities that the mere chemical synthesis of protoplasm is no longer a useful conception. Whether these proteids should be thought of as the actual constituents of protoplasm or its first decomposition products is difficult to decide.

Chief amongst these characteristic qualities is the fact of its organization. Careful examination shows that under the morphological aspect two main constituents are present, one of which, the more liquid ground-substance, is continuously distributed throughout the meshes of the more active and, at the same time, firmer spongioplasm or *reticulum*, as the second constituent is called. But it is just here that the greatest divergence of opinion occurs, possibly because each of the two views that are most in favour expresses a part of the truth. Bütschli, and with him a considerable and latterly increasing number of biologists, look upon protoplasm as essentially liquid, or rather a mixture of liquids showing a foam-like structure in which the firmer portion forms the walls of separate chambers that are filled with minute, closely crowded drops of the more fluid portion. Any reticular appearance is therefore an illusion, being simply the sectional aspect of the alveolar structure. With singular skill that investigator has succeeded in preparing artificial emulsions which show a striking resemblance to actual protoplasm. The majority of the earlier observers, together with a large modern school, hold to the view that asserts the presence of extremely delicate, though coherent, threads which extend through the more liquid ground-substance, either forming an uneven but continuous meshwork like the fibres of a sponge (Klein, van Beneden), or consisting of disconnected threads and their branches (Flemming). Now, although it is undoubtedly true that in many instances protoplasm does present a vacuolar or foam-like structure, to admit this does not necessarily commit us to Bütschli's special theory of its intimate structure. On the other hand, the fibrillar network so often and so widely demonstrated, especially during cell-division, seems to be a general, perhaps the more typical structure. Hence we come with Oscar Hertwig to the conclusion that 'the protoplasm of different organisms varies in its material, composition and structure. Apparently, however, these important differences are due to variations in molecular structure.' There is no universal mode in its structure; protoplasm is polymorphic, and it is just possible that the different types represent different phases.

In virtue of this organization, the attempt is continually made to offer a complete explanation of the living thing in terms of mechanics. The living organism is certainly more of a mechanism than of a chemical compound, and its activities will find a better explanation along these lines than in the mere consideration of its chemical nature. Doubtless the properties of the living cell may in the end be traced to chemical forces, just as in the case of the activities of the steam engine; yet no one will maintain that chemical forces explain the motion of the steam engine. The action of the living cell will be better explained in terms of its mechanism than of its chemistry, yet even here imperfectly. Superficial resemblances disclose themselves, that in their greater or less completeness simply serve to hide the critical points of difference. Thus it is obvious that in either case suitable fuel or food requires to be more or less continuously supplied, that this fuel or food is subjected to definite changes in the interior of the mechanism, in the course of which heat is evolved, and that waste products are formed. Yet the living organism is unlike a mechanism in various respects. (*a*) The organism is itself continually being changed in the course of its automatic developmental activity. The engine may be said to consume the fuel supplied to it, but it does not incorporate it with its own substance. The food, self-procured, of an organism is in a sense its fuel, but it becomes directly transformed into the machinery that is at work. (*b*) The organism has a power of self-adjustment and regulation amounting to self-preservation, which has not been added to it from the outside, nor is a necessary property of the substance of which it is composed; the activity of a machine, on the other hand, is of no use to it in the line of preserving its integrity. (*c*) The organism has a certain regenerative power; in its case that which is consumed is the actual machinery, and food repairs both the gaps left in the mechanism and any damage within definite limits, self- or otherwise inflicted. The coal supplied to an engine does nothing to repair its tear and wear, nor can the engine execute its own repairs. (*d*) A machine is constructed to execute a certain function or limited number of functions, and these it perpetually performs in the same way; the organism's range of activity is as wide and varied as its methods of operation. (*e*) The organism can completely reproduce itself by means of parts thrown off from itself; there is nothing analogous to sexual reproduction in the inorganic kingdom. (*f*) The activity of a machine is usually the sum of the activities of its constituent parts, but in the case of the organism it is something more, for its living unity is not merely represented by the sum of its organs, but involves a certain subtle interplay and mutual influence of its constituent activities. In fact, the differences are so great that unless they are steadily held in view, the analogy becomes positively misleading. To attempt, then, to explain the living organism and its activities in physico-chemical terminology, is permissible as a scientific ideal. Even in that most difficult of all realms, the study of nervous process, Professor Gotch is perfectly entitled to claim that nervous activity 'does not owe its physiological mystery to a new form of energy, but to the circumstance that a mode of energy displayed in the non-living world occurs in colloidal electrolytic substances of great chemical complexity' (*Brit. Assoc. Report*, 1906, p. 716). On the other hand, to pretend that even an approximation has already been reached in general or in detail is mere myopia.

Further, protoplasm has no other mode of origin than from pre-existing protoplasm (see art. ABIOGENESIS).

The above discussion may be considered as having indicated the relation of life to matter. The mere fact that the first touch of the chemical re-agent in the analysis of protoplasm robs it of its distinctive character shows that life is not material; we know life only in association with matter, yet it is not matter. A cat weighs no more or no less after the loss of its proverbial nine lives than it did in life. If life were material, then *ex hypothesi* it ought to weigh more in life than in death. On the contrary, an equally false impression that dead things weigh more, instead of less, than living things is preserved in the popular expression, 'a dead weight.' Life, then, is not matter, nor is it exhausted by the concept of matter. In itself it occupies no space; it has no weight as we know gravity. It may be figured as the flow of something—a procession.

(2) All living things exhibit a directive control over energy which leads to its further availability. They are able *to transform energy* in their own interests, for their self-maintenance.

These statements deal with the relation of life to energy—in some ways the most complicated of all the problems that fall to be considered in this connexion. In comparing what we know of life with all other forms of energy, we realize in the first place that the origin of the latter is under command in a way that is not predicable of the origin of life. Numerous experiments prove the transformation of energy and the ease of this transformation; but as yet there has been no hint of the direct transformation of any known form of energy into life.

Nevertheless, living matter is able to effect such transformations; it is, in fact, the seat of continuous transformation of energy. Now, in these transformations there is nothing that goes contrary to the fundamental laws of the conservation of matter and of energy: the potential energy in any food can be calculated, and the value found unimpaired in some type of equivalent work done or heat evolved. But this does not mean that there is nothing distinctive in connexion with these

transformations. Certain physical and chemical characteristics abide with the organism in death as in life; but when the typical energy phenomena are no longer in evidence, we say that the thing is dead. Life, then, has to do with energy, but is not itself energy, not even a specific kind of energy; its characteristic is seen in the way in which that energy is directed and controlled. Every living thing is not merely a centre at which energy is being constantly transformed—a mechanical energy-transformer—a centre, further, at which the tendency to degradation of energy is resisted, but it also acts as a directive channel along which energy can flow to accomplish specific work: as long as the organism is alive it is continually disturbing the equilibrium which should otherwise arise between itself and the environment. Life is unceasing, directive, and selective * control of energy; but it is also accumulation of energy, *e.g.* in specific tissues, and a transformation of it leading to further availability. The organism up to a certain stage appears to be continually gaining energy at the expense of the environment, and in reproduction the process is perpetuated.

There are, however, other controls of energy: temperature, *e.g.*, controls its passage in the form of heat from the hotter to the colder body. But this passage involves not merely degradation in that particular form. Hibbert brings out very clearly that the difference in temperature is a determining factor, and that in any calculation of the work done it will find a place; whereas it is impossible to show that life is a factorial element in any calculation of the work done by a living organism. The nearest parallel, yet hardly a parallel, would be in the unique characteristic of reproduction, when, owing to the accumulation of energy, it may reasonably be conceived that the control or potential factor exhibits itself in the process of division. This control is superlatively seen in the development of the segmenting egg to its predestined goal in the typical adult form. Accordingly we conclude that after the methods borrowed from the analysis of inorganic nature are exhausted, there is a residuum of fact which is untouched by them, viz. the directive control and co-ordinated adaptation of every element of its activity by the organism to its own end. The biological whole is greater than the sum of its physical or chemical parts. And it is no objection to urge that we are not objectively aware of this peculiar control, for the same is true of all physical actions, as, *e.g.*, gravitational attraction. Life is known to us as control and guidance of energy, interacting with matter in ways that, if not yet wholly intelligible to us, are clearly not covered by what we know of its physico-chemical properties.

(3) All living things are characterized by *cellular structure.* Life, that is to say, so far as we know it, appears only in one form—that of the cell. The further apart living forms are from the point of view of classification, the deeper is it necessary to go to find community. In extreme cases this may be found only in their cell-structure and protoplasm; hence the fundamental importance of these aspects. Briefly, the cell-theory amounts to the statement that the bodies of every form of life, plant or animal, are composed of one or more minute structural units known as cells, out of which, in the case of higher forms, directly or indirectly, every part is built; all organisms consist of cells and of cell-products. The body is a mosaic rather than an asphalt, but the cells are in communication, unisolated by cement. From the view-point of this cell-theory, the animal kingdom (as likewise the plant kingdom) may be regarded as an ascending series, at the bottom of

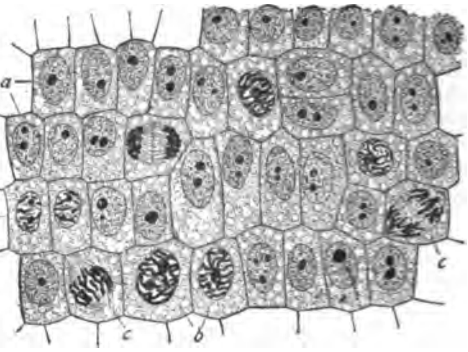

FIG. 1.—General view of cells in the growing root-tip of the onion, from a longitudinal section (×300). (*a*) Non-dividing cells with chromatin-network and deeply-stained nucleoli; (*b*) nuclei preparing for division (chromatin in form of continuous thread); (*c*) dividing cells showing mitotic figures; (*e*) pair of daughter-cells shortly after division. (From Wilson's *The Cell*, by kind permission of the publishers.)

which may be put those forms that are unicellular—the Protozoa; next above them, although essentially of them, come forms that are mere balls or colonies of cells, *e.g. Volvox globator*; thereafter we reach the sponges, where tissues, *i.e.* aggregates of similar cells performing a single function in common, are, as it were, in the making; next come the simpler members of the Cœlenterata —mere two-layered sacs of cells, with hints of organs, *i.e.* higher complexes of tissues devoted to one or more specific functions—and so we arrive at those higher forms, the substance of whose skin, bone, or muscle is not homogeneous according to the naked-eye impression, but with the help of the microscope is resolved into aggregates of those countless minute units called cells. And it may be here remarked that Ontogeny discloses the remarkable fact that every one of these higher forms, in its individual life-history, passes through a broadly corresponding series, of which the first stage is likewise a single cell, the fertilized ovum. Palæontology, as interpreted by Evolution, teaches the further striking fact that what is thus true of the individual history holds likewise for the history of the race, which began in the farthest æons with the simplest forms, and progressed through ever higher forms, till it culminated, mentally and spiritually, in man.

But in addition to thus furnishing us with a valuable point of view from which to regard the organic world in relation to structure (Morphology), the cell-theory performs a similar service from the point of view of function or activity (Physiology). The cell is not merely the unit of organization; it is the unit of function. In every Protozoon the vital functions—locomotion, respiration (or whatever corresponds to it), absorption of food, digestion, excretion, which in the higher forms are distributed amongst different groups of cells or organs devoted to the discharge of these specific functions—are all performed by the single cell.

The theory that organisms are composed of cells was first suggested by the study of plant-structure. As long ago as 1665 Hook discovered 'the chambered structure of plants,' but nearly 200 years passed before anything comparable to the modern understanding of the fact was attained. By the middle of the 18th cent. Caspar Wolff and others had in a measure got on to modern lines in their study of development, endeavouring to show that the various ducts and vessels of the plant are all derived from cells; and by the beginning of last century it was already recognized that in the cell we have the structural and physiological unit of the plant. If the nature of botanical material kept the early investigators' attention fixed on the cell-wall, the softer tissues—the skeleton apart—that constitute animal substances first incited study of the nature of living

* In the sense that it selects this or that mode of attaining an end.

matter. Already in 1835 Dujardin gave the name of 'sarcode' to the substance composing the bodies of the ciliate protozoa he was examining. But it is not till we reach the names of Schleiden and Schwann (1837–1839) that we have before us the foundation upon which all the more recent work upon the cell has been built. The former first drew attention to the significance of the nucleus in the life-history of the cell; the latter, by carefully demonstrating a corresponding development from cells in the case of the tissues of the animal body, arrived at a theory of the essential correspondence in structure of both plant and animal. Much error, however, was combined with the brilliant work of these investigators. Although they partially perceived the importance of the nucleus, they still imagined that the membrane was the most essential part of the cell, and it remained for Max Schultze (1861) to dethrone the cell-membrane from the high place it had hitherto held in the biological world, by showing that certain cells were apparently on occasion able to do without it, whilst in other cases it did not exist: he also maintained the primary importance, on the other hand, of the nucleus and protoplasm. It was likewise through the labours of Schultze, Cohn, and De Bary that the identity of plant and of animal protoplasm was completely established. The word 'protoplasm' was first used in its specific sense, however, in 1846 by Hugo von Mohl, who, perhaps, first clearly recognized the importance of the formative substance of the cell.

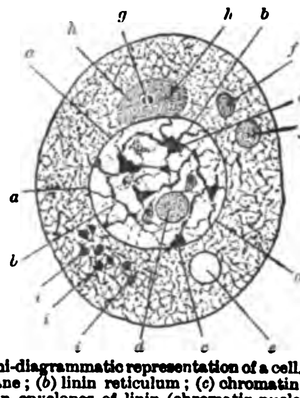

FIG. 2.—Semi-diagrammatic representation of a cell. (*a*) Nuclear membrane; (*b*) linin reticulum; (*c*) chromatin masses contained in envelopes of linin (chromatin nucleoli); (*d*) true nucleolus; (*e*) vacuole; (*f*) plastids; (*g*) centrosomes; (*h*) archoplasm, from which attraction-sphere, astral rays etc., are developed; (*i*) food particles. (From Walker's *Essentials of Cytology*, by kind permission of the publishers.)

Next to protoplasm—the fundamental constituent of the cell—the second most important element is the nucleus: indeed, its significance is hardly less than that of protoplasm itself. The nucleus, with few exceptions, is a characteristic of every cell. Modern theories of heredity are theories of the cell-nucleus.

In any ordinary nucleus, the following structural elements may commonly be recognised:

(*a*) The nuclear membrane, which is probably a condensation of the general protoplasmic reticulum, although its existence has not been demonstrated in every case. It has a variable staining capacity.

(*b*) The nuclear reticulum, which is composed of two distinct substances—chromatin and linin. The former is the nuclear substance *par excellence*, in that it is restricted to the nucleus, and is generally seen as irregular granules and masses, deposited, as it were, on the threads of linin; sometimes the relation is of a more intimate character, and the chromatin seems embedded in the linin, giving the impression of a very intimate relation between the two substances. Some of the most recent work, in fact, suggests that the chromatin, on which hitherto such stress has been laid in connexion with theories of inheritance, is nothing more than a secretion of the linin, and that it is really with the latter that the ideas of permanence and individuality should be associated. The most striking support for this view is found in the way in which during certain critical phases of the nuclear history the chromatin decreases in amount, sometimes even to the vanishing point, and is supposed to have been employed in nourishing the cell during the stage in question. The linin likewise after treatment shows a granular structure, and seems similar in composition to the cytoplasmic reticulum. The quantity of chromatin in a cell is not constant, but in the processes connected with cell division and fertilization the granules form into little rod-like bodies known as chromosomes, which are now regarded by many as the vehicles of inheritance. The number of chromosomes is constant for each species. It is still, however, 'an open question whether the chromatin-granules of the reticulum are individually identical with those forming the chromosomes' (Wilson, *The Cell*, p. 37). At certain stages the chromosomes appear perfectly homogeneous, and the same is sometimes true of the entire nucleus.

The evidence then goes to show that in the great majority of cases the chromatin thread is built up of a series of minute, deeply-staining granules (chromomeres) that are embedded, as it were, in the linin, sometimes irregularly, sometimes with such regularity that the meshwork seems entirely composed of them, and that these aggregate to form the typical chromosomes. The splitting of the chromosome involves actual splitting of these granules. As the living cells of an organism are capable of assimilation, growth, and division, so likewise are we compelled to think of the rôle the chromatin granule plays in its relation to the chromosome. But are these chromatin granules ultimate units, and can we assign to them the value of individuals?

The problem only becomes the more arresting when we further inquire into the relation of chromatin granules to the linin network of the nucleus and cytoplasm. Recent research tends to confirm van Beneden's conclusion, reached already in 1883, that the chromatin network of the nucleus, the cytoplasmic reticulum, and even the nuclear membrane, are all alike built up out of microsomes united by connective substance, and that even the chromatic granules may be transformed into achromatic, and *vice versa*. The sole limitation appears to be the restriction of the chromatic microsomes to the nucleus, while, on the other hand, the linin network of the nucleus appears to have the same granular structure as the cytoplasmic reticulum, and the nuclear membrane appears to originate in a condensation of the same substance. Are these microsomes, then, the ultimate units of life? Yes and no! Yes, in the sense that they are the ultimate units that we know capable of growth and division in their particular environment—incapable, however, of an independent existence. No, in the double sense that we can hardly suppose that the ultimate units of living matter happen to coincide with the revelations of the most powerful microscope of the 20th cent.; and that if we insist on independent existence in an ordinary environment they fail to respond to the criterion. We must obviously, therefore, look to our terminology. Possibly in a more restricted sense some of these elements of protoplasm might be spoken of as 'living.' 'In its fullest meaning, however,' says Wilson (*op. cit.* p. 29), 'the word "living" implies the existence of a group of co-operating activities more complex than those manifested by any one substance or structural element.' Life, perhaps, should only properly be regarded as a property of the cell-system as a whole, and we do better to designate the separate elements as 'active' and 'passive' rather than as 'living' and 'lifeless.' The enucleated cell cannot reproduce: strictly, therefore, it is not living, although for a short time it may still show a characteristic of life.

The demonstration of these microsomes—intra-cellular units of a lower order—has an interesting bearing upon biological theory. Altmann's granular theory of the constitution of protoplasm, ill-founded as it apparently was in relation to his own investigations, regarded protoplasm as a colony of more elementary, extremely minute units which he called bioblasts. In a real measure, these microsomes, evidencing assimilation, growth, and division, correspond to Altmann's theoretical units, and invite consideration as more elementary individuals than the cell, standing between the latter and the ultimate molecule of living matter. Herbert Spencer's 'physiological units,' Darwin's 'gemmules,' and Weismann's 'biophors,' all hitherto hypothetical units, playing the principal part in the theories of regeneration, development, and heredity associated with these great names, would thus appear to correspond to a reality.

As to the ultimate independent unit of living matter—the smallest mass that exhibits to the biologist the phenomena of independent life—it is, perhaps, neither necessary nor possible to make any precise statement. Everything depends upon the criterion that we use. If we demand that living matter show the phenomena of independent growth and assimilation, then the unit will need to consist of protoplasm plus nuclear substance: in the absence of nuclear material all synthetic metabolism is at an end. This has been experimentally proved on a very extended scale by merotomy and numerous investigations in regeneration. On the other hand, if irritability is all that is required, then the unit might well be smaller and simpler: for that particular manifestation within a certain limit, cytoplasm alone would be sufficient. Destructive metabolism may continue without the nucleus, where constructive metabolism is at an end. That is to say, if the question is viewed in the form 'how far the divisibility of living matter can be carried without interfering with its function,' the answer, as we have seen, is not difficult to find, and can be experimentally verified, depending as it does upon the physical structure of the cell, and varying for different cells.

(*c*) The nucleoli, rounded irregular bodies composed of a proteid substance markedly different from chromatin. They are, however, very varied both in structure and character, and in some instances, at any rate, are possibly a source of chromatin supply for the nucleus. They stain deeply, giving reactions similar to those presented by the fibrillar network.

(*d*) The nuclear sap or ground substance occupying the interstices of the network, and apparently unaffected by many of the stains that act on the chromatin. It is clear and essentially liquid.

A third element of the cell is the peculiar little centrosome first definitely discovered by van Beneden in 1885, which as the special organ of cell division is often regarded as the dynamic centre of the cell. It commonly lies outside the nucleus, although close to it; sometimes, however, inside (*Ascaris univalens*). It is generally surrounded either by a radiating area of the cyto-reticulum, termed the attraction-sphere or centrosphere; or by an area of protoplasm denser

than the rest of the cytoplasm (archoplasm): sometimes in the vegetative stage it lies unattended by any differentiated matter, and is then often very difficult to demonstrate. Typically the centrosome, which stains deeply, is a single organ; but, as a rule, dividing cells show a double centrosome due to anticipation of the succeeding division in which each of the daughter-cells receives one of them. The failure to substantiate its presence in the case of the cells of many of the higher plants, and the fact that in some instances at the close of cell division, or during fertilisation in animals, it disappears entirely to appear again *de novo*, rather militate against the earlier view of its indispensable and dominant function, and tend to relegate it to a less important position. At the same time as an organ that assimilates, grows, divides, and is in many cases passed on from cell to cell, it also answers to the conception of an intra-cellular unit of independent existence: it is essentially a centre of determining activity, and it seems finally to disappear with the loss of the power of reproduction.

With regard to the cell-membrane, we have already seen that its importance is now perceived to be secondary. It is more characteristic of plant than of animal tissues. In the former case it has a more or less firm consistency, and is often of considerable thickness; on the other hand, many animal cells, *e.g.* rhizopods and leucocytes, are 'naked,' although even here some difference in consistency can be established between the outermost layer of the cytoplasm and that immediately beneath it. Where a definite membrane occurs, it usually arises as a secretion product, although cases are known where it seems to be a direct physical and chemical transformation of the peripheral layer of protoplasm. Cellulose is the name applied to the carbo-hydrate that forms the basis of the plant membrane ($C_6H_{10}O_5$): it is, however, impregnated with, or transformed into, other substances such as lignine, cork, etc.

Hitherto we have regarded the cell as an independent organism, as an organic unit. Actually, however, it is such only in the case of unicellular organisms and the germ-cells of multicellular forms. When we consider other cells, *e.g.* the tissue-cells of the higher creatures, we see that in point of origin and structure, *i.e.* morphologically, they are equivalent to a collection of unicellular organisms, but physiologically the tissue-cell can hardly be regarded as independent, inasmuch as its activity is part and parcel of that of the organism—'its autonomy,' to use Wilson's phrase, 'is merged in a greater or less degree into the general life of the organism' (*op. cit.* p. 58).

What, then, is this organic unity of the body, and how is it maintained? The problem is very much the problem of the cell and its enzymes repeated on a larger scale. There, as we shall see, the question is how the cell links together and co-ordinates the activities of various substances within it, each of them with its specific industry, so to speak. In the higher animals and plants the different tissues retain in varying capacities vestiges of the primitive power of altering their function: under normal conditions they behave according to their specific character. But evidently there is some restraining influence that limits and regulates the activity of any particular cell, or group of cells, in relation to the other cells of the organism. The older workers thought of the organism as a composite, a mosaic, whose life was simply the sum of the life of its independent, yet reciprocating parts. But it becomes increasingly clear that, so far as growth and development are concerned, cells can be regarded as co-operative units in a limited degree only. 'They are rather,' says Wilson, 'local centres of a formative power pervading the growing mass as a whole, and the physiological autonomy of the individual cell falls into the background' (*op. cit.* p. 59). No true conception of the life of a multi-cellular organism is gained except in so far as that life is conceived of as a whole, untrammelled by cell boundaries. Doubtless it expresses itself in many ways, particularly in the form of the cell, thereby giving to itself an apparently composite character. But in reality this mosaic-like character is due to the secondary distribution of the organism's energy among local centres of action. This does not, however, as already stated, prevent tissues from occasionally asserting their primitive independence and functioning in an unusual way under certain special conditions: such, at any rate, is one modern explanation of cancerous growth.

(4) A further characteristic of living things is *irritability*, by which is understood the capacity for response or reaction to stimulus. Life, in fact, resolves itself into the science of response,—response to various external and internal stimuli,—simple at first in the case of the lower forms, but infinitely complex, embracing in the last instance all that is implied in the word 'education' in the higher forms; the unresponsive is the dead, that peculiar condition in which the capacity for response is gone.

Now, in all applications of stimuli to living matter, what we see as a direct consequence is a series of very complex phenomena due to the fact that these stimuli have affected an exceedingly complex object in the organism upon which they act. When we analyze these phenomena of irritability, as exemplified in a Protozoon, we find a series of specific capacities for response which we may call the various tactisms. *Paramecium* is sensitive to light in that it moves towards it; it is positively phototactic. Irritability, then, usually expresses itself in some form of movement of the organic mass, which has often led to this feature being set down as a characteristic of living matter: but while every response need not necessarily be in the form of obvious movement (the energy liberated may take some other form, *e.g.* heat), on the other hand, in many cases of apparently spontaneous movement, the cause is to be found in internal changes rather than in the external environment. It is essentially a liberation of energy,—the transformation of potential into kinetic energy, and this commonly shows itself in movement.

In the case of the higher animals and plants, the distinctive elements of irritability, studied singly as tactisms in the case of unicellular forms, may function in a specific way in the parts of a multicellular organism, giving rise to those movements that are known as the various tropisms: thus a characteristic turning towards the sun gives its name to the flower heliotrope. It is found that many movements of animals and attitudes of plants depend upon mechanisms that are 'a function of the symmetrical structure and symmetrical distribution of irritability on the surface of the body of the organisms' (Loeb, *Dynamics of Living Matter*, p. 5). Now, if lines of force (*e.g.* light rays, gravitation lines, lines of diffusion) strike an organism with greater profusion on one side than on another, the tension of the contractile elements is unequal, and if the animal moves, it tends to turn in such a direction that the lines of force impinge with equal density at symmetrical points, and at the same angle on both sides, and will continue to move in that direction, or away from it, according as it is apparently attracted or repelled. Such automatic orientation is known as a tropism.

The external stimuli which act upon the world of life are manifold: but we may consider five important groups—(*a*) thermal stimuli, (*b*) light stimuli, (*c*) electrical stimuli, (*d*) gravitational stimuli, and (*e*) chemical stimuli. The reaction of an organism is, then, simply its response to the particular stimulus applied to it. The experience of everyday life is sufficient to show us that, under the same stimulus, the reaction will vary considerably with different individuals. In fact, the same stimulus may produce totally different effects on differently constituted objects: a kick elicits a different response in the case of a stone, a bulldog, and a Skye terrier; under electrical stimulation the salivary gland yields its saliva, the liver its bile. On the other hand, it does not strike one as quite so obvious at first sight that very different stimuli will but produce identical effects upon the same protoplasmic body. Apply to a muscle cell electrical, chemical, in short any possible form of stimulus; it has but one answer,—it contracts. The same holds true for many Protozoa: they have but a single characteristic response to all kinds of stimuli. We have thought of the stimulus as exciting, or even producing, an increase of the specific activity in various forms of living substance: its action may, however, also result in a diminution of that characteristic activity. Irritability is considered to be a fundamental property of living protoplasm, but it expresses itself in specific actions, according to the specific structure of the organism, under the influence of the external world.

(*a*) With regard to thermo-tactism, it may be noted that the temperature of the environment is of vital importance to every organism. There is a limit above and below which life ceases; this limit varies with the organism, and indeed with the stage of its development. The maximum temperature for plants

and animals is generally about 45° Centigrade. The minimum temperature is not so easily determined; temperatures below zero are, on the whole, less injurious than high ones. As a rule, however, the power that plants, for example, have of resistance to cold or heat is inversely proportional to the amount of water that they contain. Accordingly, we find that spores and bacilli can resist great extremes of high and of low temperature, there being instances on record in which they have not lost their power of development after exposure to −110° C., while in practical bacteriology the assumption is never made that life is destroyed in any particular instance before the germ has been subjected to a dry heat of 140° C. for at least three hours.

We may also note the exceedingly small range on the scale of temperature that is occupied by life. On the surface of the earth the extreme variations may be roughly placed within the scale of from 60° C. above, to about 60° C. below the freezing point, so that life, as existing for the most part between −15° C. and 45° C., occupies about half of the range that is due to the earth's climatic conditions. In fact, the restricted scale within which life ordinarily manifests itself corresponds roughly to the temperature scale of liquid water, which is an indispensable conjunct of life and an important constituent of protoplasm. Further, if we estimate the internal heat of the earth at 5500° C., we find that life has a place on not more than a $\frac{1}{50}$th part of the scale of terrestrial temperature.

(*b*) Light, also, acts as a stimulus to plants and animals. Some love it; others seem to hate and shun it; they are positively or negatively phototactic. As heliotropism, this tendency to turn towards the light is very marked in the stems of many plants, and in sessile and free-moving animals is most distinctive. Experiments with coloured screens have shown that in the case of plants and sessile animals 'the more refractive green, blue, and violet rays of the spectrum are more effective heliotropically than the less refractive red and yellow rays' (Loeb, *op. cit.* p. 118). That is to say, there is a sort of division of labour—the longer light waves (reds and yellows) accelerate assimilation; the shorter waves (blue and violet) hasten heliotropism. In cases of ordinary curvature, such as in a twining tendril, the explanation is found in an excess of growth on the outer side; but in heliotropism, if growth is associated, it is but accidentally, and the explanation is found rather in a certain protoplasmic *contractility* of the cells that are directly affected by the light. 'The essential feature of the heliotropic reaction consists in the fact that the light automatically puts the plant or the animal into such a position that the axis of symmetry of the body, or organ, falls into the direction of the rays of light' (*ib.* p. 124). Loeb has shown that in the case of free-moving animals the explanation may be given in identically the same terms. He has correlated the tendency of animals, particularly insects, to fly or creep towards the flame, with the heliotropic curvature of plants, maintaining 'that the essential effect of the light upon these animals might consist in a compulsory automatic turning of the head toward the source of light, corresponding to the turning of the head, or the tip, of a plant stem toward the light; and that the process of moving toward the source of light was only a secondary phenomenon' (*ib.* p. 125). That is to say, it is not curiosity, or love of light, that makes the moth fly to the candle flame, but the compelling power of the light in turning the creature's head towards it. Other animals (e.g. *Gammarus pulex*, a fresh-water crustacean, and the larvæ of the house-fly) are found to be negatively heliotropic, *i.e.* their heads bend automatically away from the source of light, while most creatures are probably not heliotropic at all. Further, in the case of some forms it is found that they are heliotropic at different periods in their life history, *e.g.* ants at the time of sexual maturity are markedly heliotropic, while the workers are not—a difference probably correlated with definite chemical changes in the creatures; in fact, by the addition of certain chemical substances to the media in which some forms were kept, Loeb found that he could make them negatively or positively heliotropic at will. Heliotropism plays a great part in determining the behaviour of animals, and there are some forms whose life at certain periods of their existence may almost be said to be a function of light.

(*c*) Light rays are, however, not the only lines of force that bring about an automatic orientation of animals. Definite responses to galvanic currents produce the phenomena of galvanotropism. When animals are exposed to a galvanic current, there may result compulsory reactions very similar to those produced by light, except that we substitute the current curves for the light rays. As the current not merely influences the superficial layers of an organism, as in the case of the light rays, but permeates the whole body, the responses in galvanotropic orientation are not so ideal as in the case of heliotropism.

(*d*) The orientation seen in plants and animals, due to gravitation, is known as geotropism. Geotropism expresses the fact that, whilst the tips of the roots of plants show a tendency to grow vertically downwards, the tip of the main stem seems constrained to grow in the opposite direction; the same holds true with limitations in the case of sessile animals, and it is probable that the attempts of free-moving creatures to keep the axis of their eyes as much as possible in the normal position when their bodies are maintained in an abnormal position is also due to the stimulus of gravitation. Although the problem is still far from solution, Loeb (*op. cit.* p. 152) considers it probable that the really geotropic reactions of higher animals are determined in certain cells of the inner ear, or in certain cells of the brain, 'through an influence upon the reaction velocity of certain chemical processes.'

(*e*) Chemotropism is the name applied to the reply made by organisms to the stimulus from particles of substances emanating from a centre of diffusion: the organism is found to bend or move itself in the direction of the lines of diffusion. The orientation is, however, rarely as perfect as in that of the other tropisms, inasmuch as the 'lines of diffusion are commonly disturbed by currents due to changes and variations in temperature' (*ib.* p. 158). Thus oxygen is known to exercise a great attractive power over freely moving cells. Experiments can be arranged by which that gas can be introduced into water crowded with unicellular organisms, when they will be seen to rush for the point from which the gas is liberated. Engelmann put small algæ into a fluid containing certain bacteria, and observed that very quickly they surrounded the weed, for the sake of the oxygen that it liberated by means of its chlorophyll. It then occurred to him that several species of bacteria might be used as a delicate test for minute quantities of oxygen.

The whole question of the chemical irritability of cells has a very human interest when we investigate it in relation to the colourless blood corpuscles known as leucocytes. The modern germ-theory as applied to most diseases holds that inflammation is set up by micro-organisms and their metabolic products (*i.e.* the products due to chemical change in the micro-organisms themselves); these various toxines are carried in the circulatory system to all parts of the body. Now Metchnikoff has shown how certain of these colourless corpuscles, by their power of absorbing the injurious elements, constitute themselves the very guardians of the organism. He has shown that, *e.g.*, the cocci of erysipelas, the spirilla of relapsing fever, and the bacilli of anthrax are eaten up, or their toxines neutralized, by the antidotes elaborated by these wandering amœboid cells, and thus rendered harmless. Hence, between these foreign micro-organisms and the leucocytes continual war is waged, and the life or death of the organism depends upon the result of the struggle. Now, if, as is practically certain, the leucocytes are initially stimulated by means of chemical substances produced by the micro-organisms, such stimulation can occur only in accordance with laws similar to those that are known to hold in the case of free cells. Recently, Wright and Douglas have shown that in the blood serum there is something that makes the bacteria more acceptable to the leucocytes: this substance they have termed generically opsonin (ὀψωνέω, 'I cater'). Its action is to sensitize the bacteria so that they more readily stimulate the leucocytes to absorb them. The opsonic value of the serum in any specific case can be heightened by the injection of suitable substances.

(5) All living things are further characterized by *continual change*, physical and chemical, of the material composing the body in every part. Certain parts are being continually used up, and fresh material is brought in and built up into its place. This ceaseless internal cycle of supply and waste, waste and supply, is designated by the term metabolism. The living organism is as a flame that, fed with oil, preserves its outward form, yet all the while the substance by which the flame is fed is being decomposed into its constituent elements and passes off transformed. Biology, apart from Morphology, knows no statics. Nutrition and digestion, respiration and circulation, secretion and excretion, are various phases of this comprehensive activity. In order to live, the cell must absorb nutrient substances which it proceeds to elaborate, retaining some portions within its body, and rejecting others. Continually, in the living cell, substances of complex molecular, and in that measure unstable, structure are being built up from substances less complex and more stable, with the absorption of energy; concurrently, other substances—food reserves, or the protoplasm itself—are being broken down in order to provide the energy required. The more intense the life, the more comprehensive are those parallel processes of construction and destruction. And yet, if parallel, they are hardly equal. In the period of youth the constructive is in excess of the destructive, and we say the organism grows.

Now, all living things grow in a sense that is not predicable of other objects to which the word may be applied. For in the saturated solution of salt or alum the crystal grows by accretion—particles are added on the outside, layer by layer; living things grow by taking up particles of matter in between already existing particles at every point—interstitial growth. Further, the crystal grows by adding to itself particles of the same matter as itself—particles that it takes up, already existing, out of the fluid around it; whereas the living thing

makes the materials of its growth, manufacturing particles like itself out of material different from itself, which it then uses for growth—by assimilation. The ciliate protozoon, *Paramecium caud.*, if kept in a hay infusion at a definite temperature, will grow and reproduce by binary fission at a definite rate. This growth and reproduction are accomplished at the expense of elements in the medium which are transformed into Paramecium; at the same time other substances appear in the medium which are the waste from the growth process. If we call these last *b*, and let *a* represent the material that goes to form new Paramecium, then $P+a=nP+b$. This growth formula may be constructively compared with that of any purely chemical equation, with the result that a striking difference is noticeable. In the case of an effective chemical reaction between different compounds, the result will be found to be of the general character $A+B=C+D$; *i.e.* different substances are found in the two terms (*e.g.* $Zn+H_2SO_4=ZnSO_4+H_2$). In the former equation the fact that P appears on either side constitutes a veiled expression of a characteristic of life: that it occurs in a greatly increased quantity indicates the amount of growth. As a matter of fact, however, this formula represents but half of what is actually in progress; for at the same time other processes of a contrary or destructive character are in operation, and the organism is alive only so long as they do not gain the ascendancy over the assimilative activities.

From the work of destruction, which may involve the breaking up of complex substances into simpler ones, or their combination with oxygen, various end products arise, some useful to the organism, *e.g.* bile, others not so useful, or positively harmful, as urea, carbon dioxide, and mineral salts. In the case of animals the whole of their energy is derived from waste; in plants only a small part is thus derived, the rest being obtained from sunlight. The metabolic processes that are going on in any higher organism, plant or animal, are manifold in the extreme, and even in the case of unicellular forms our understanding of them is far from complete. At the same time the unity of the entire organic kingdom is well illustrated in a restricted series of fundamental metabolic processes which are common to every living creature.

(*a*) Every plant and animal respires, *i.e.* it takes up oxygen from its environment, whereby it oxidizes the carbo-hydrates and albuminous substances of its own body, producing as final products carbon dioxide and water.

(*b*) The food materials of all living organisms, plant and animal alike, are originally prepared from the inorganic world through the instrumentality of chloroplasts. Further, while it is true that growing plants are able to live on simpler compounds than animals, yet a study of the development of the embryo in the seed (also the growing cells in a young stem or root) shows it to be without the adult capacity, and dependent on manufactured carbo-hydrates, proteids, and fats, as in the case of animals. The differences relating to the mode of supply in the case of the two kingdoms are ultimately referable to differences in the cell structure. The exaggerated development of the vegetable cell-wall prevents the ingestion of solid material.

(*c*) In both animal and vegetable kingdoms, characteristic corresponding substances make their appearance during metabolism, such as ptyalin in animals, and diastase in plants. These substances are known as ferments or enzymes, and particularly in the constructive process, as it occurs in plants and animals, they play a very important part. In many cases of breaking up of reserves, *i.e.* in destructive processes, it is also found that the cell produces an enzyme for this end. So fundamental is the action of these enzymes that there is a very true, but limited sense, in which it may be said that life is a series of fermentations. The evidence goes to show that a soluble enzyme is at the basis of every functional activity. Digestion is due in part to the action of pepsin which breaks up proteids. Respiration is achieved only through the presence of oxidase, which seizes the oxygen in the lungs, and hands it over to the red corpuscles of the blood. Under certain conditions—commonly greater condensation of the solution—the action of some enzymes is reversible, *i.e.* they can put together again what they have taken apart, and there are others that devote themselves solely to this aspect of the matter. What the enzyme is in its inner nature is still unknown. It appears to be colloidal, and, in several cases, is certainly not proteid; still, as a rule, in elementary structure it is more like a proteid than anything else. Possibly it is produced through a partial breakdown of the protoplasm. Its activity seems to be bound up with the peculiarities of its atomic structure rather than with any mysteries of ingredients, which are quite simple. The action of the enzymes appears, however, in large measure to be a hydrolysis: the substance acted upon is made to take up water and then undergo decomposition.

(*d*) As the result of these metabolic processes, corresponding products are organized in the plant and animal kingdoms, *e.g.* starch in plants and glycogen in animals, oxidases and trypsins in both.

We have spoken of the point of view that likens life to a series of fermentations. Investigation into the nature of these enzymes proceeds apace, and marvellous success has been achieved in the separation of them and the instigation of them to work apart from the living environment (*e.g.* rennet). Nevertheless it should not be forgotten that this does not in the least help our ultimate account of life, because no account of enzyme-action, however complete, gives us any clue to the characteristic achievement of the cell in co-ordinating and regulating these various activities that take place within it. Each enzyme is usually able to act in its specific way only upon one definite type of molecular arrangement; but the cell as an energy transformer is distinguished by the way in which it connects the varied complex reactions effected by these enzymes which it has itself produced. Accordingly, to consider the cell activity as simply the sum of its varied enzyme activity, is to make the same mistake as to suppose that an organism is the sum of its organs. It is to offer only a partial account of cell life. If regard were had only to the action of the enzymes, the interpretation would be purely katabolic, and there could be no account of the building up of compounds with higher chemical potential, which is so distinctive a feature of life. The study of enzymes is the study of isolated, yet highly selective, activities—each enzyme must fit its substratum like lock and key, or the reaction does not occur; but the characteristic of the living cell is seen in the connecting of one reaction with another, and in the using of the free energy of one reaction to carry on another. The cell directs and co-ordinates the enzymic activities, but in the more difficult cases of metabolic change, as in the conversion of carbo-hydrates into fats, or of CO_2 and H_2O into organic compounds, energy is taken up from other sources, and this the cell alone can do. 'This is the part taken up by the living cell, which in one oxidizing action obtains free energy, and in an accompanying reducing action stores this energy up, at least in part, in a new synthesized body at a higher potential of chemical energy than that from which it came. In this process, enzymes may freely be used by the cell, but they are co-ordinated and regulated in the process' (Moore, *Recent Advances in Physiology and Biochemistry*, p. 188). All this fundamental metabolic activity then is in some way controlled for the good of the individual, and in this directed control we have the distinctive character of life.

In metabolism there are three great stages which may each be characterized by a single word—Absorption (of new material); Transformation (in the interior of the protoplasm); leading to Retention and Excretion. Protoplasm is found capable of absorbing or excreting matter in either a gaseous, a fluid, or a solid condition.

The differences between Metazoa and Metaphyta are based on broad lines, physiological rather than morphological. From the food point of view we have seen that all the organic substance in the world is ultimately created by plants under the influence of sunlight. Animals, so far from creating, are continually destroying organic matter and resolving it again into its original components. The food of plants exists in a gaseous state in the atmosphere, or as salts in solution in water; it requires therefore no preparation, and can be directly absorbed by the surface of the roots and leaves. But the food of animals, being organic matter, is usually in a more or less solid condition, which necessitates the presence of an internal reservoir in which the food can be stored until it is reduced to a more or less liquid absorbable condition. That is to say, almost all animals require a stomach, and in the case of the Protozoa the whole creature functions as such for the time being.

Again, the food of plants is everywhere present. Every wind that blows brings food to the leaves: rain-water with salts in solution bathes the roots. Their food-taking is essentially passive. Animals have to seek their food—it does not usually come to them. Hence the nature of animal food requires that they shall have a definite mouth, a digestive tract, organs to carry the body in search of food, organs to seize it when found, and definite ex-

cretory organs to get rid of the waste. Free locomotion in the case of plants, apart from the Protophyta, is confined temporarily to the male cells, and, with the absence of movement, the function of sensation is at a minimum. Plants and animals thus differ in the nature of their food, yet both are dependent on the environment for supply, and that food, when elaborated into 'the physical basis of life' by contact with the living body, shows little chemical difference as animal or vegetable protoplasm.

(6) All living things exhibit *cyclical phases of activity* known collectively as a life history, in which they manifest various degrees of vitality, sometimes with accompanying change of form. Every living creature, unicellular and multicellular alike, passes through a regular cycle of changes mainly determined by forces within itself, to which there is nothing comparable in the inorganic realm. Reference has been made to a period of youth characterized in both cases by active cell-proliferation; the constructive (anabolic) phase of metabolism is then in excess of the destructive (katabolic), and the creature grows. This is followed by a period of adolescence, in which, although at first the two phases practically balance, yet the energy of division sooner or later diminishes, and is accompanied by certain morphological changes in the cells previous to fertilization—that process whereby the energy for division is renewed. This in turn—particularly in the case of unicellular forms, when fertilization is not effected—is succeeded by the period of old age, in which destruction slowly overtakes construction, and eventually the organism dies. The unicellular organism dies from protoplasmic senile degeneration just as surely as does the multicellular form. Now this 'capacity for death' is in a sense a distinguishing feature of living things. In a very real way, moreover, death is the servant of life, holding the balance between unlimited reproduction and limited feeding area. To it is due the circumstance that life is periodic in appearance; the recurrence of the living individual is a phenomenon unique in the realm of nature. This intermittent character of life is, however, seeming only. The death of the individual that has reproduced by means of a germ cell divided from off its body involves no break in that series of continuous cell divisions which thus extends backwards to the dawn of life.

To this cyclical movement there are apparent exceptions. Weismann long ago suggested the immortality of the protozoa, but it is incapable of verification, and experience is against it. In some cases of parthenogenesis that procedure is apparently strictly followed throughout the specific history, but again there is always, ultimately, death of the individual. In some of the higher plants and trees, construction appears to be continually in excess of destruction, and the tree may be said to grow as long as it lives: nevertheless the individual eventually dies, even although, *e.g.* by grafting, we have perpetuation of the race without fertilization.

Further, we remark that not merely during those internal changes of every part which comprise metabolism, but in those changes of the whole which are involved in the conception of its life history, the living organism maintains its individuality and its integrity. In spite of the constant metabolic change, in spite of growth and decay, the living organism possesses a more or less constant form which serves as the arena in which those changes are displayed. We are aware of the persistence of a state of dynamic equivalence between the organism and its environment which has no parallel in the inorganic realm. Continuously it is alive, and yet its material identity does not depend upon identity of matter. The matter changes, but the form remains more or less constant, the individuality usually even more so. These forms, with their similarities and dissimilarities, serve as the basis of classification; Morphology in its account of the internal structures that give rise to forms is the basis of classification. We may speak of life in general, but we never know it except as the special phenomena of a particular organism. Life clearly has unity or individuality at the core of its meaning, and in the scheme of nature, one of whose dominant features is a tendency towards ever higher individuation, the supreme example is found in man, with his characteristic awareness of individuality.

(7) All living things are *capable of reproduction.* Having a definite term of existence, they must reproduce themselves; otherwise the organic kingdom would soon pass out of existence. The individual dies—life is intermittent in form—not, however, before having, in most cases, by a kind of discontinuous growth, given rise to forms more or less like itself, which in their turn grow and reproduce their kind. No non-living thing reproduces itself in this way.

(*a*) *Cell-division.*—The simplest form of reproduction is by cell-division. The need for this arises directly out of assimilation. For the due interchanges (*e.g.* respiration) between a cell and its environment, a certain ratio is necessary between surface and bulk. But this ratio is disturbed by growth in the case of an organism that retains its shape, inasmuch as, while the bulk varies as the cube of the diameter, the surface grows but with the square. Further, as we have learned, the nucleus which is so intimately concerned with assimilation, is limited in the area of cytoplasm which it affects through the continual intercourse between the two. Accordingly the requisite surface is gained through division of the mass, and the mother cell loses her identity in that of the two daughter cells. Such reproduction accordingly takes the form of discontinuous growth. Growth, then, is primarily assimilation, secondarily cell-division—the multiplication of cells.

Since 1846 it has been clearly recognized that new plant cells arise only from previously existing cells by the division of a mother cell into two daughter cells (Biogenesis): it was not till many years later that enough was known about the genesis of cells in the animal kingdom to overthrow for ever the doctrine of spontaneous generation.

To-day, then, we maintain that the cell has no other mode of origin than by division of a pre-existing cell; and knowing something of the importance and permanence of the nucleus, we are prepared to believe that it plays a leading part in this process of multiplication by division. Fifty years ago Remak very naturally thought that division must commence in the very centre of the cell and work gradually outwards. Accordingly he pictured the process as beginning by division of the nucleolus, followed by constriction and division of the nucleus, and completed by division of the cell-body and membrane. Now, if we do not press the point about the nucleolus, this description holds good for several cases of cell-division in both animal and vegetable kingdoms. It is termed Direct Division (Amitotic Division).

Such a method of division seems very natural, and, if it were conducted with regularity, it would obviously result in a fair division of the total mass of nuclear substance. But so delicate is the balance of nature that this method is found to be in operation with comparative rarity; nay more, evidence is gradually accumulating to show that direct division, which is a division of the mass of the nuclear substance without formation of chromatic thread or chromosomes, rarely occurs in embryonic cells or such as are in the course of rapid multiplication; while, on the contrary, it is often characteristic of such cells as are on the way towards degeneration, of tumours and various other pathological formations. Direct division seems often to be associated with highly specialized cells whose nuclei are commonly of unusually large size; here it has proved again and again to be the forerunner of destruction. Germ-cells and fundamental tissues do not usually divide by amitosis, although certain exceptions only make the whole process more difficult to understand. The other method typically known as Indirect Division, or Mitosis (μίτος, 'a thread'), is complicated, and involves the arrangement of the linin and chromatin in a continuous thread, the breaking up of this thread into the characteristic number of chromosomes, their arrangement by the aid of the centrosomes on the equator of a spindle formed of linin, their exact longitudinal halving, regression towards the polar centrosomes, and re-construction as the nuclei of the daughter cells that are thus formed as the result of a division of the cytoplasm of the mother cell in the region of that same equator.

Biologists speak glibly of the separation of the chromosomes

by contraction of the spindle fibres, but it is certain that other factors, *e.g.* chemical and physical changes going on in the centrosphere and nucleus, must be taken into account before any satisfactory explanation of these marvellous phenomena is attempted. Possibly the persistent centrosome is the vehicle of ferments, which in their activity produce the characteristic cell-division phenomena. Further, it is possible that, while only the outer fibres attached to the chromosomes contract, the central fibres of the spindle actually elongate, and push the spindle poles apart: certainly the chromosomes themselves play a passive rôle at this particular stage. Boveri regards the splitting of the chromosomes 'as an independent vital manifestation, an act of reproduction' on their part. The splitting of the chromosomes is now known to involve the splitting of the actual chromatin granules, which possibly alone have the value of individuals (inasmuch as in the case of the Protozoa chromosomes are in many instances not formed), and which are found in the fashion of granules firstly to allow of their uniform growth, and secondly to admit of their precisely equal quantitative and qualitative division; for it is the end of mitosis to divide every particle of the chromatin of the mother cell equally between the daughter nuclei. Further, this splitting seems in some cases to take place independently of the centrosome, making the relation between the two more doubtful than was formerly supposed.

(*b*) *Fertilization.*—Cell division, however, is only one aspect of reproduction. With the possible exception of a few extremely low organisms, there comes a time in the life history of all unicellular forms when, after a greater or less number of ordinary divisions, it appears as if the cells were becoming worn out, were gradually shrinking in size after every such division, and showing signs of nuclear degeneration, so that a prospect of final extinction looms in the future, unless they are able to fuse together in pairs with cells of different origin, thus producing an elementary organism that becomes the starting-point for a new series of multiplications by division. Accordingly, amongst the Protozoa, the life history resolves itself into a cycle, the starting-point being furnished by any two cells which, after fusion, either separate and divide, or commence to divide as a single organism when fused, and continue so to multiply a-sexually, sometimes to the number of thousands, till what has been described as senile degeneration sets in. At this stage union of these cells with others of different origin is absolutely necessary for the perpetuation of the species. This process of cell union, of which, in those instances where the organisms latterly separate, the fundamental characteristic is a reciprocal exchange and fusion of nuclear substance —an exchange of experiences—between the uniting or conjugating elements, illustrates the simplest type of that second aspect of cell reproduction which we know as fertilization.

The number of divisions that may occur before the a-sexual cycle of reproduction closes, varies considerably with different species. Maupas in certain classical studies (*Archives de Zoologie expérimentale*, 2nd series, tome vi. pp. 165–278; *Recherches expérimentales sur la Multiplication des Infusoires ciliés*, tome vii. pp. 149–517; *Le Rajeunissement karyogamique chez les Ciliés*) shows that in the case of *Stylonichia pust.* the ability to conjugate is reached after 128–180 fissions, that at the 175th degeneration sets in if conjugation has not been effected, and that the creature dies by the 316th fission. In the case of *Paramecium caudatum*, maturity is often reached much sooner, and degeneration commences after 170 divisions. Maupas' statements have been subjected to re-examination by experiment and careful criticism, most particularly by G. Calkins, who succeeded in keeping cultures of Paramecium for 742 generations, by feeding the infusorians with various kinds of stimulating food (brain extract, beef, pancreas), and thus tiding them over three depression periods corresponding to the need for conjugation, and so prolonging their life without that process. Any argument, however, for the immortality of the Protozoa based on such artificial experimentation cannot be said to rest on a very secure basis.

In the higher forms of life, instances of parthenogenesis apart, we have a similar process—a fusion of cells of different origin; here, however, the fusing cells never separate, so that the element of exchange drops quite out of sight. The essential feature of fertilization is the union of a nucleus of paternal origin, with a nucleus of maternal origin, to form the primary nucleus of the next generation. In multicellular organisms the cells which result from the division of the fertilized egg remain associated together, thus forming a complex colony of cells, an organic individual, however, of a higher order than the *Volvox* community. In a sense this multicellular organism is morphologically comparable with the sum of the cells produced by a-sexual division from two unicellular ex-conjugates. The cycle closes in the higher forms when the sexual cells have become mature, and separate from the parent to unite in the process of fertilization, which forms the starting-point for the new generation of dividing cells. All this, of course, is a very complicated process in the case of the vertebrates and invertebrates, but in the lower multicellular Algæ it is simple enough. The capacity which every cell, *e.g.* of *Pandorina*, exhibits of helping to reproduce the whole multicellular organism is not seen when the organism is somewhat more highly developed. For in that case the cells of the body sooner or later become differentiated into two great classes, the members of which Weismann has termed somatic and germ cells respectively. The former are of prime importance for the individual life, being differentiated into those various tissues which collectively form the 'body.' The germ cells, on the other hand, are of less significance for the individual life, but in eventually giving rise to new creatures are intimately concerned with the interests of the species. This differentiation is already noticeable so far down in the animal scale as *Volvox globator*. Amongst the very numerous cells that constitute this colonial form some remain vegetative and others are transformed into reproductive cells. The eggs are large, and are fertilized by minute biflagellate male spores which are produced in dozens by the division of a mother sperm-cell. Indeed, we may consider that in the plant world egg- and sperm-cells are derived from reproductive cells which initially are similar in size, appearance, and origin, but have become differentiated through developing in different directions. The evolution can particularly well be traced in the group of the Algæ. At the same time it is right to bear in mind that the distinction, even in the case of the higher animals, is only relative, since both sets of cells ultimately have a common origin in the parent germ-cell.

Associated with fertilization in some of these higher forms is at least one interesting phenomenon complicating the life history. We have seen, *e.g.* in the case of *Paramecium*, that between two acts of conjugation a great deal occurs in the way and as the result of cell division. Now, there is an analogous state of affairs amongst higher forms. Sometimes the individual proceeding from the fertilized egg is unable itself to form reproductive cells. It can multiply only by means of buds, spores, or parthenogenetic eggs. These, or their a-sexually produced descendants, become sexually mature and produce eggs and sperms. Such a cycle is known as an alternation of generations. It occurs in the life history of some worms, as also particularly in the case of some members of the Cœlenterata.

There is, then, a stage in the development of every multicellular organism at which the progenitors of the germ-cells are apparently alike in the two sexes, and for that matter indistinguishable from the surrounding somatic cells. Then in the course of development follows their differentiation from these somatic cells, and eventually a divergence in themselves corresponding to the different functions that they will have to perform later. The female germ-cell, ovum, or egg supplies most of the substance for the body of the embryo, and stores the food whereby it is nourished. Accordingly not only is it large, but its cytoplasm is laden with yolk or food-matter, and it is usually

surrounded by one or more membranes for the protection of the developing individual. All its activities are, therefore, anabolic or constructive on the whole; for the early life of the egg consists in the accumulation of cytoplasm and the storage of potential energy. On the other hand, the metabolism of the male germ-cell or spermatozoon is destructive or katabolic. To the mass of the embryo it contributes merely a nucleus, centrosome, and a minimum of cytoplasm. Its early life is not spent in the accumulation of food material; it has about it no more protoplasm than is sufficient to form the typically single flagellum by whose active, rapid movements it seeks the ovum. Hence in their final mature state the ovum and spermatozoon have no external similarity. What we find is a physiological division of labour between the cells which are to join in the act of fertilization, in virtue of which one of them becomes active and a fertilizer, while the other remains passive and capable of being fertilized. In fact, we are forced to the conclusion that all the arrangements and adaptations connected with sex have the same twofold object, namely, to facilitate the meeting of the sexual cells and to arrange for the nourishment and protection of the egg. The organization that effects the one part of the scheme we call male; the organization that carries out the other we term female. These relationships are secondary and have nothing whatever to do with the process of fertilization itself, which consists of the union of two equivalent and apparently similar nuclear substances derived from different cells. This means, in its turn, that the original morphological equivalence of the germ-cells (seen, *e.g.*, in the Protozoa) is lost; what is left is an equivalence of nuclei. Hence the essential fact of fertilization and sexual reproduction comes to be a union of equivalent nuclei; and to this all other processes are tributary. Although the cell character of the ovum was perhaps recognized by Schwann, yet it is not so many years ago (*c.* 1878) since the fact that the spermatozoon is likewise a cell was universally admitted.

With regard to the growth and origin of the germ-cells, it may be stated that both ova and spermatozoa take their rise from primordial germ-cells which are at first identical in appearance in the two sexes. These identical primordial germ-cells in turn arise in the case of sponges, in a jelly-like mesoglœa that separates ectoderm and endoderm. In the Cœlenterata they arise in a germinal epithelium which may be either ectodermal or endodermal, but in the higher groups is mesodermal. What exactly determines the subsequent differentiation is not yet clearly made out. External conditions play an important, a determining part in some instances. Yung, experimenting upon tadpoles, found that by increasing the richness of the nutrition in which he kept the early undifferentiated (?) forms, he could raise the percentage of females. Maupas seemed to show with regard to rotifers that a high temperature results in the production of males. A truer reading of the facts shows that the higher temperature induced greater activity, resulting in a speedier exhaustion of the food, and, in consequence, a tendency to the production of males. It is doubtful, however, how far these experiments correspond to real facts. The decisive factor in the determination of sex is still unknown: indeed, there is evidence to show that it probably is determined previous to fertilization, which simply in that case provides the egg with the necessary stimulus to development.

The prior history of these primordial germ-cells has been very carefully investigated by different workers (Hertwig, Häcker, Boveri). They have been tracked very far back in the developing egg, and identified at their earliest appearance. In the case of the roundworm *Ascaris*, Boveri already recognizes the progenitor of the germ-cells at the two-cell stage. Further, it has been shown that this progenitor of the germ-cells differs from the somatic cells, not only in its greater size and richness in chromatin of the nucleus, but also in the manner of the subsequent distribution of this chromatin. It has been observed that only the germ-cells proper receive the sum-total of the egg-chromatin handed down from the parent, since the germ-cells in the early (5 or 6) divisions cast out a portion of that substance in the case of one of the daughter cells into the surrounding cytoplasm, where it degenerates, so forming somatic cells with less chromatin.

Fertilization we can now state to be a process by which the energy lost in a continuous cycle of divisions is restored by the admixture of living matter from another cell. It consequently entails

FIG. 3.—Fertilised ovum of Ascaris; male and female germ-nuclei, with chromatin at continuous thread stage; the centrosomes are separating. To the right are the extruded polar bodies. (From Walker's *Essentials of Cytology*, by kind permission of the publishers.)

the blending of two independent lines of descent. But when we ask—What then is the *ultimate* end of fertilization? an answer cannot be given with certainty. The mere asking of the question involves that introduction of teleological considerations which is the bane of Science, according to some of her foremost exponents; yet every one has attempted his rationale of the phenomenon.

Fertilization may be, as Maupas and others believe, rejuvenescence of the conjugating individuals: in the case of the Protozoa it certainly has this effect, for it is always the commencement of a new series of divisions—in fact, strictly it means the formation of a new individual in protozoon and metazoon alike. Further, the usual assumption in the case of *Paramecium* has been that the two ex-conjugates were equally stimulated to divide; but the more recent work of Calkins shows that in the majority of cases, 'while one individual of the original pair is markedly vigorous after conjugation, the other one either forms a weak strain or dies off at an early period' (*Biol. Bull.* vol. xi. p. 242). Now, if this is the case, it suggests in these apparently isogamous conjugants a hint of that differentiation that results in a spermatozoon losing its identity in the egg which it has fertilized. Nevertheless, experiments have shown that Ciliata can be induced to continue dividing long after the usual term has passed, and parthenogenetic eggs develop without the stimulus of fertilization. Weismann sees in it a means of mixing germ-plasms whereby variations are produced and multiplied; these variations are the material upon which natural selection is supposed to work in the production of new species. This, then, is the purpose of fertilization for him. But considerable variation has been shown to exist in the case of forms reproducing by binary fission and by parthenogenesis, contrary to the older view, which considered the forms so resulting to be mere duplicates. Consequently it is not permissible for him to say more than that fertilization is a source of variation, or is accompanied by it. But it is also possible to regard fertilization, with Darwin, Spencer, Hatschek, and others, as a means of checking variations, and so, on the contrary, of keeping the species true to the specific type. The offspring of sexual reproduction, instead of being more variable than either parent, is, so to speak, half-way between them, and so departs less widely from the mean than either of them. Which of these statements represents the truest and most complete interpretation of fertilization it is not yet possible to decide. No one of them can well be applied universally in face of the groups that show no such gametic unions, and those numerous cases in which the uniting cells are very closely related.

Previous to fertilization, a ripening process takes place in both ovum and spermatozoon, which is usually termed maturation. With this phenomenon is intimately connected a reduction in the number of the chromosomes to one-half the number characteristic of the species; in this way a progressive summation of the chromosomes throughout succeeding generations is prevented. The procedure is very complicated, and still imperfectly understood; but it is probable that, previous to the penultimate of the two final divisions by which the definitive germ-cells are formed, the peculiar condensation of the chromatin thread (synapsis), and its appearance ultimately in a number of bodies corresponding to half the typical number of chromosomes, really represent in each case a conjugation of the paternal and maternal chromosomes which have hitherto remained distinct, followed by a division in which these double chromosomes divide longi-

tudinally, succeeded in turn by a reducing division in which they divide transversely, so bringing the number to half that which is characteristic of the species, but really also segregating the paternal and maternal chromosomes into separate cells. Accordingly, the life cycle of the organism is after this fashion—conjugation of maternal and paternal cells, somatic divisions, and conjugation of maternal and paternal chromosomes.

FIG. 4.—Later stage in fertilization (Ascaris). The membranes of the germ-nuclei have disappeared, and the two chromosomes derived from each, four in all, have become attached to the spindle fibres. (From Walker's *Essentials of Cytology*, by kind permission of the publishers.)

Boveri has summarized the process of fertilization in the following words: 'The ripe egg possesses all of the organs and qualities necessary for division excepting the centrosome, by which division is initiated. The spermatozoon, on the other hand, is provided with a centrosome, but lacks the substance in which this organ of division may exert its activity. Through the union of the two cells in fertilization, all of the essential organs necessary for division are brought together; the egg now contains a centrosome which by its own division leads the way in the embryonic development' (*Sitz.-Ber. Ges. Morph. Phys.*, Munich, iii. p. 155). If this were an exact account, we should be further warranted in saying that during segmentation the blastomeres, or earliest cells of the embyro, derive their cytoplasm from that of the egg, their centrosomes from the spermatozoon, and their nuclei, *i.e.* their chromatin, in equal amounts from both germ-cells. In general terms the statement is true, but it is doubtful whether the actual centrosome of the spermatozoon identically persists as the organ around which the dividing aster directing the division of the egg is formed, or whether it is simply a locus, *e.g.* of enzymes, under whose influence a new centrosome is formed in the egg cytoplasm. Further, it has been questioned whether the sperm centrosomes are actually identical with the segmentation centrosomes, for there are cases where the former seem to disappear for a time, although this may be due to variation in staining capacity at a critical period. Still the general fact remains, that something certainly is introduced into the egg by the middle piece of the fertilizing sperm which either is the original centrosome, or has the power to stimulate the formation of one out of the egg cytoplasm—something that can divide and produce division of the cell-mass independently even of fusion of the nuclei, something that is in some way directly connected with the corresponding apparatus of the succeeding division. What it is, however, that actually starts the segmentation cannot be definitely determined; but it need not necessarily be the spermatozoon or even its centrosome. Artificially fertilization has been induced in sea-urchin eggs by exposing them to sea water whose concentration has been increased some 50 per cent. by the addition of Na Cl; development takes place right up to the larval stage (Loeb). Nathansohn has caused the parthenogenetic development of the eggs of a fern (*Marsilia*) by simply keeping them at a sufficiently high temperature, thus suggesting that the mechanism of development is in the egg, and that all it requires is a certain stimulus to set it in motion; such a stimulus in this case is the difference in metabolic activity induced by the high temperature. Accordingly we conclude generally that while the stimulus to development is normally connected with the sperm centrosome, yet this is not the only way of supplying the conditions requisite to initiate the process. While undoubtedly in some forms (*e.g.* the sea-urchin *Toxopneustes*) a real fusion of the sperm- and egg-nuclei takes place, and out of the mixed chromatins chromosomes arise, yet in other and probably the majority of animals the two nuclei simply lie closely side by side, and in that position give rise each to its own group of chromosomes preparatory to the first division. Thus the paternal and maternal chromatin may remain distinct and separate in the later stages of development, possibly throughout life. Accordingly the possibility arises that 'every cell in the body of the child may receive from each parent not only half of its chromatin-substance, but one half of its chromosomes, as distinct and individual descendants of those of the parents' (Wilson, *op. cit.* p. 208).

Every nucleus, then, arising by the segmentation of a fertilized egg-cell contains a double set of chromosomes, nuclear substance derived from both parents. As a matter of experimental fact, however, it has been ascertained in certain instances that either set is sufficient for complete development, at least as far as the larval stages. The egg may be caused to develop without the presence of paternal chromosomes, while, conversely, development has been induced in a sperm-fertilized egg from which the maternal nucleus was removed. For these and other reasons the chromosomes are now regarded as the vehicles of inheritance.

The question of the individuality of the chromosomes has lately received very close attention. From a theoretical point of view the denial of their individuality seems to make mitosis meaningless. Why this careful and accurate division of the chromosomes, if after every such division the substances of the different chromosomes are jumbled up in a common mass at nuclear re-construction? The assumption of their stability likewise gives us the better explanation of their constant number. From the practical side Rabl, so long ago as 1885, maintained, as the result of study of mitosis in the epithelial cells in the salamander, that the chromosomes do not lose their individuality between succeeding divisions, but persist in the chromatic reticulum of the resting nucleus. His idea was that the reticulum arose as the result of a transformation of the chromosomes, which gave off anastomosing branches, causing the temporary appearance of a network that was again lost as the reticulum contracted at various definite points to form the typical number of original chromosomes. Boveri, in particular, and others have further shown that, whatever be the number of chromosomes entering into the composition of a nuclear reticulum, the same number issues from it at a later stage, and in very much the same position. This is particularly striking in certain abnormal cases of fertilization, where it was noticed that the irregular number of chromosomes persisted from one cell generation to another, so suggesting that 'the number of chromosomes appearing in a nucleus during mitosis is the same as the number of chromosomes from which it was originally formed' (Walker, *The Essentials of Cytology*, p. 92). In certain species the chromosomes can be distinguished during the resting stage of the nucleus; and even if in most cases it looks as if the identity of the chromosomes was lost at this stage, yet this does not prove, of course, that it is so lost. In other species the chromosomes appear to show constant differences of size and shape, so suggesting that they may possess specific individual characters. Finally, Häcker, Herla, and Zoja have shown that, in several cases (*Ascaris*, *Cyclops*), not merely do the germ-nuclei not fuse, but they give rise to two separate yet parallel series of paternal and maternal chromosomes that remain perfectly distinct, as far, at any rate (in *Ascaris*), as the twelve-cell stage, and probably throughout life. Indeed, as the result of the later researches of Montgomery, we consider that in synapsis there is a conjugation of homologous chromosomes which are later separated in the reduction division; as a final result we have the separation of whole somatic chromosomes. Here then, in general, is an important—if it can be absolutely demonstrated—an epoch-making discovery. With Harvey's name we associate the discovery *Omne vivum e vivo*. To

Virchow we owe the induction *Omnis cellula e cellula.* Strasburger first clearly established the truth *Omnis nucleus e nucleo.* And with Boveri's name it is just possible that we shall have to establish the further truth that there are chromosome generations corresponding to cell generations, that the chromosomes of one generation arise endogenously in the chromosomes of a previous generation, that growth and reproduction, characteristic features of living things, are predicable of these intracellular units—in short, *Omne chromosoma e chromosomate.*

Boveri has further shown experimentally that qualitative physiological differences exist amongst the chromosomes; complete development is apparently possible only in presence of a particular combination of them. This suggests that some definite relation exists between individual chromosomes (or possibly the chromomeres composing them) and the development of definite characters or groups of characters. What interaction takes place during the conjugation of chromosomes we do not know. If we assume that the hereditary characters are distributed amongst different chromosomes, then their segregation is achieved at the reduction division, the results are in accordance with the Mendelian view-point (see art. HEREDITY), and the individuality of the chromosomes is fairly established. But in any case it is difficult to banish the idea of some more or less persistent morphological organization corresponding to what we at present roughly include within the conception of the chromosomes.

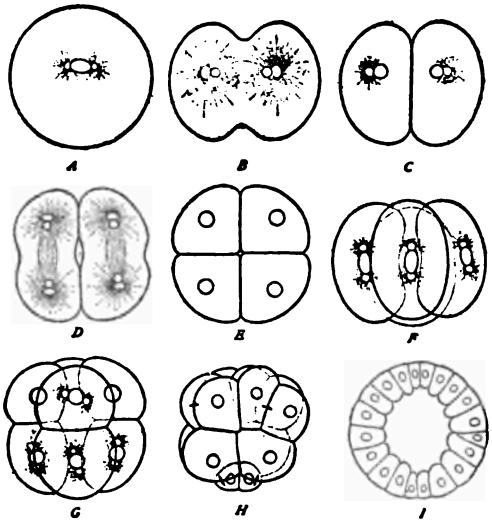

FIG. 5.—Cleavage of the ovum of the sea-urchin Toxopneustes (×330). The successive divisions up to the 16-cell stage (*H*) occupy about two hours. *I* is a section of the embryo of three hours, consisting of approximately 128 cells surrounding a central cavity. (From Wilson's *The Cell*, by kind permission of the publishers.)

As a result of some form of stimulus consequent on fertilization, the egg commences to segment. These cleavage divisions are similar to what has been described in connexion with mitosis, except that very early they are accompanied by differentiation. Differentiation in the higher forms of life is expressed in the establishment of tissues and later of organs, in connexion with that physiological division of labour which usually means so much greater capacity for doing work. The more complex the organic structure, the more detailed is this subdivision of labour; the greater the degree of co-ordination and unification of these activities, the higher the creature stands, as a general rule, in the scale of life. How all the different stages have arisen with their genetic continuity is the story of evolution, most interesting, if most difficult, in the lower grades of life, where, however, modern study, *e.g.*, of the Protozoa, sheds floods of light upon the question. In the course of this differentiation considerable change is often noticed in the functions of organs—what at one stage played one particular rôle is found at a later stage to function in a different manner.

Again, the cleavage divisions of the developing egg are often effected in planes that show some definite relation to the structural axes of the adult body. Typically the cells tend rhythmically to divide into exactly equal parts, and any new plane of division tends to intersect the preceding one at right angles. Variations, however, occur not merely in the rhythm, but in the quantitative character of the divisions, as also in the direction of the cleavage planes; these variations are often of regular occurrence. Not merely do the cells divide in accordance with the requirements of definite mechanical conditions, but also, and more distinctively, with reference to the future cell-orientation and structure of the animal: of this forward look, as of the unequal division that sometimes sets in as early as the first segmentation, and in every case appears sooner or later, no sufficient account has been offered. In fact, as Wilson puts it (*op. cit.* p. 377), 'we cannot comprehend the forms of cleavage without reference to the end-result.' Study of all purely mechanical factors, such as pressure, form, etc., only makes it more obvious that the work is subordinated to that of some superior controlling law of growth.

How far the later structure of the developmental form is already determined in the structure of the egg is one of the root problems of Embryology. In many cases a definite relationship appears to exist between early blastomeres and the later adult areas to which they give rise; in other cases, again, it becomes evident, particularly as the result of experiment, that there can be no definite, unalterable, pre-localization of parts of the egg. In several cases the egg axis is not established until after fertilization, and is even then experimentally alterable. But no general consideration holds in any number of cases. Cell-formation and localization of areas seem, ultimately, alike subordinate to some controlling formative process that expresses itself in growth. Development takes the form of an orderly correlated progress towards a definite end. The egg in each case in a remarkably short time evolves into a type about which certain general statements can be prophetically hazarded, but of the inwardness of this process no account can yet be given. To speak of developmental capacities as being involved in the organization of the egg is, perhaps, effective, but not informing; at the most an accurate descriptive account of the stages is within our power.

The idea of pre-determination or pre-localization of embryonic parts in the fertilized (possibly even in the unfertilized) egg cytoplasm has fascinated many workers; not, of course, in the crude sense of the early evolutionists, who maintained the existence of a pre-formed though invisible embryo, or even in some cases a miniature of the adult, in the egg, but in the more general sense that definite areas, perhaps definite substances, in the apparently homogeneous cytoplasm, correspond to definite parts which will later be built up out of them. Segmentation would then simply reveal what is already pre-determined. On the other hand, the identification of the physical basis of hereditary with nuclear material shows that such cytoplasmic pre-localization—if it exists—must be determined and controlled from the nucleus; and the attempt has been made, notably by De Vries and Weismann in their respective theories, to transfer the assumed germinal localization from the cytoplasm to the nucleus. The differentiation corresponding to later embryonic regions, which is early noticeable in the cytoplasm, is induced secondarily through the influence of the ultimate nuclear units that migrate into the cytoplasm and direct its development. In Weismann's theory, development resolves itself into the gradual qualitative distribution of these units from their massed

condition in the early cells, until at last in each cell there is simply left that particular determinant which controls it. But of these qualitative divisions, save in the reduction division in maturation, there is no evidence whatever; and facts like regeneration, and the ability of a single cell of the two- or four-cell stage to reproduce the whole embryo (*Amphioxus*), although on a reduced scale, seem to negative it; while in the cases where, as in the frog, the right cell of the two-cell stage appears to contain the material for the right half of the body, that cell if isolated can yet in great measure supply the deficiency by a peculiar kind of regeneration.

If, then, there be no qualitative distribution of the chromatin (idioplasm), if, on the contrary, it be equally distributed at every cell division, how is differentiation accomplished? Driesch has suggested that the answer lies in part in the relation of a blastomere to the remainder of the embryo. 'The relative position of a blastomere in the whole determines in general what develops from it; if its position be changed, it gives rise to something different; in other words, its prospective value is a function of its position' (*Studien*, iv. 39). The suggestion bears a true relation to what does occur in many instances; but it is evident that not merely the position of a blastomere to its neighbours, but the position of its own constituents has to be considered, for Morgan has shown that even in the case of the two-cell frog the single isolated cell may give rise to a half embryo or to a whole embryo of half size, as in *Amphioxus*, according as the isolated cell is left in its normal position, or turned upside down. This seems to indicate that all the material for a complete, if half-sized, embryo exists in the single cell of the two-cell stage, and that at this stage, as in *Amphioxus*, the blastomere is not so firmly set that it can only develop into the half of the creature that normally it would. In fact, embryology discloses a whole series of forms in which this equivalence of the cells at the early stages is greater or less, some easily overcoming the tendency to develop only (as normally) into a part, others doing so with greater difficulty, and even failing, with the result that a monster (defective larva or adult) is formed. Accordingly it would seem as if primarily the egg cytoplasm is equipotential, in the sense that the various regions do not stand in any fixed relation to parts which may develop out of them, but that sooner or later differentiation of these regions, resulting in a mosaic-like development, does take place from causes that we do not understand—sooner, as in the case of the mollusc *Dentalium*, whose single cells when separated cannot completely overcome the tendency to form a part and develop into monsters resembling pieces of a single embryo (and the same result is achieved by artificially cutting off pieces of the egg); later, as in the case of *Amphioxus*, where a cell of the two-cell stage or the four-cell stage may develop into a complete dwarf adult, either half or quarter size. A suggested solution of this phenomenon consists in assuming the various protoplasmic constituents as arranged in bands or zones (cf. Wilson, *Science*, vol. xxi., No. 530). In *Amphioxus* the first division would separate these symmetrically and equally. In *Dentalium* the division may be apparently symmetrical but really qualitative, so that all of one band or zone passes into one of the cells.

Further, it is difficult to avoid believing that differentiation of a kind, slight perhaps but still effective, has not occurred much earlier, even previous to fertilization, for the egg has a developmental history previous to that experience. These axial differentiations are probably due to the nucleus, and form the scaffolding, as it were, within which the development after fertilization goes on. The ability to re-adjust displayed by the isolated blastomeres largely depends on the degree to which this scaffolding has been effectively reared.

At the same time it must not be forgotten that this ability of the cells of an embryo to reproduce the whole organism is confined merely to the earliest stages of the developing form. Cells do become differentiated, and this seems to imply nuclear differentiation of some sort, even if not after the manner of qualitative division. It is possible that part of the chromatin may be cast out of the nucleus, or dissolved, or be transformed into something else. The former circumstance has been indeed observed by Boveri in the early somatic cells of the developing *Ascaris*. Driesch's conception of the nucleus as a 'storehouse of ferments which pass out into the cytoplasm and there set up specific activities,' is at least interesting. Certain it is that 'specific protoplasmic stuffs' are distributed to the cells in a definite way during division; and since they have a definite arrangement in the egg, to this extent development is mechanical, and the cleavage mosaic is an actual mosaic. If it could be shown that initially protoplasm contains only a few of these specific stuffs, that, as development proceeds, new stuffs are progressively formed and distributed, and finally that their number decreases and that they weaken as differentiation progresses, we should have an interpretation of development that is essentially epigenetic—progressive in the sense that new additional parts not already there are formed; and in this combination of the two older and contrasted view-points of pre-formation and epigenesis the truth is probably to be found.

Finally, we are unable to forget the dominating rôle of the environment in all development; without its stimuli the inherited organization of the living creature would not work itself out. The living form is at any moment the resultant of external stimuli acting upon its inherited organization. This has been experimentally proved time and again: a normal development is the response to normal conditions. The development is thus educed, and it may be modified by the environment; but the fundamental character and cause of it lie in the inherited organization. The developing organism and its environment react the one upon the other independently; yet in virtue of its adaptiveness the organism continually sets itself free from the control of the environment and proves itself the more constant of the two. Separation of the two is practically impossible; we are almost compelled to consider the organism and its environment as a single system undergoing change.

In conclusion, we re-affirm that of that marvellous co-ordinating power which guides development rhythmically and orderly to its predestined goal we have no explanation. As Wilson puts it, 'we no more know how the organization of the germ-cell involves the properties of the adult body than we know how the properties of hydrogen and oxygen involve those of water' (*op. cit.* 433). Of the origin of that 'co-ordinated fitness, that power of active adjustment between internal and external relations,' that capacity of the idioplasm of the germ-cell to respond to the influence of the environment so as to call forth an adaptive variation, we are in complete ignorance. This directive control, as we already saw, is a distinctive characteristic of life. See also artt. DEVELOPMENT, EVOLUTION, HEREDITY.

BIRTH.

BIRTH (Introduction).—In the lowest stages of civilization the observances connected with pregnancy and child-birth are relatively simple, though the germs, and frequently something more than germs, are found of ceremonies which undergo elaboration as civilization advances. Such rites and observances may be considered under six heads:

1. The condition of tabu entailed by gestation and birth.
2. The dangers from evil spirits and from witchcraft.
3. The attempt to secure an easy delivery.
4. The attempt to secure good fortune for the child.

5 and 6. The admission of the child, and the re-admission of the parents, into society.

1. The condition of tabu.—It is rare to find an express statement like that made by an experienced missionary in reference to the Murray Islands, that 'the woman was not considered unclean after child-birth, nor was any ceremony necessary for her re-admission into society' (*JAI* xxviii. 11). On the other hand, this condition of tabu is sometimes, as among many Bantu peoples, emphasized by the separation of husband and wife at an early stage of the pregnancy. It is continued right into the higher civilizations, in which, even at the present day, it is perpetuated in various ecclesiastical and traditional observances. The husband and sometimes all the household are also affected by the condition of tabu, according to the well-known law of its contagiousness. A condition of tabu is conceived of as a material infection communicated by contact with the person or with anything used by him, or even by relations of kinship or neighbourhood. Women are, during the whole of their reproductive life, specially subject to it. From the attainment of puberty, at every recurrence of menstruation, as well as at every pregnancy and parturition, they are under its ban. It is a condition associated with the mysterious, the awful, and the relations of beings more than human with mankind. The processes of generation and reproduction, so mysterious even to us, are in lower stages of culture the object of emotions that we can hardly understand. Blood, too, is regarded with horror. The slaughter even of an enemy is enough to place a man under tabu: hence warriors returning from even a successful raid are required to be purified. But of all the blood that inspires horror, that which proceeds from the female organs of sex is the most effective, perhaps because its normal cause is unknown. A menstruating woman is set apart; her touch defiles; her ordinary ministrations to husband and household are suspended. It is therefore not wonderful that pregnancy and child-birth are conditions of tabu, and that others than the woman, especially her husband, are involved.

(*a*) *Couvade.*—It would be a mistake, however, to suppose that all the prohibitions imposed on husband and wife during pregnancy and at child-birth have reference to the considerations just mentioned. Many of them concern the welfare, present and future, of the child. Such, it is now well recognized, is the intention of the couvade. This custom, which has been in modern times the subject of innumerable jests at the expense of the savage husband, is very wide-spread. It is practised by a considerable number of peoples in the lower culture, but is not strictly a primitive rite. A fairly-developed example is given by Sir Everard im Thurn. Speaking of the native tribes of British Guiana, he says:

'Even before the child is born, the father abstains for a time from certain kinds of animal food. The woman works as usual up to a few hours before the birth of the child. At last she retires alone, or accompanied only by some other women, to the forest, where she ties up her hammock; and then the child is born. Then in a few hours—often less than a day—the woman, who, like all women living in a very unartificial condition, suffers but little, gets up and resumes her ordinary work. . . . In any case, no sooner is the child born than the father takes to his hammock, and, abstaining from every sort of work, from meat and all other food, except weak gruel of cassava meal, from smoking, from washing himself, and, above all, from touching weapons of any sort, is nursed and cared for by all the women of the place. One other regulation, mentioned by Schomburgk, is certainly quaint: the interesting father may not scratch himself with his finger-nails, but he may use for this purpose a splinter, specially provided, from the mid-rib of a cokerite palm. This continues for many days, and sometimes even weeks' (im Thurn, *Indians of Guiana*, p. 217).

The name *couvade* as applied to this custom, also known as the 'man-childbed,' is traceable to a misunderstanding of a phrase used by Rochefort, a French writer of the 17th cent., in his *Histoire Naturelle et Morale des Antilles*. But the 'man-childbed' is only one of a large number of observances by the husband intended for the protection and advantage of the child and of the child's mother. The close relationship between husband and wife engenders a mystic sympathy between them, so that the acts of the one are reflected in the physical condition and success or failure in enterprises of the other: each becomes, so long as the relationship endures, as it were an outlying portion of the other. Thus, when the great national hunt, held every year by the Santals of Rājmahāl, is organized, the master of the hunt leaves his wife at home lightly bound and facing a bowl of water in the centre of the room. She must remain exactly as her husband left her and continue to gaze into the bowl until she sees its contents turn to blood. If she move or divert her gaze before this occurrence, which, of course, always takes place, the success of the hunt will be imperilled. Once the change is accomplished, she is free to go about her ordinary avocations (Bradley-Birt, *Story of an Indian Upland*, 1905, p. 273). Among the tribes about Lake Nyasa, while a woman's husband is absent on a journey, she must not anoint her head or wash her face, she must neither bathe nor cut her hair, she may hardly wash her arms; her oil-vessel is kept full of oil hung up in the house or at her bedside. Any indiscretion may not merely mar the husband's domestic peace, but even cause his death (Macdonald, *Africana*, 1882, i. 80). Conversely, her absent husband will eat no salt, lest, if his wife misconduct herself, the salt may act as a potent poison (*Archivio*, xiii. 489). A married man of Timor-Laut may not cut his

hair, otherwise his wife will speedily die (Riedel, *Sluik- en kroesharige rassen*, p. 292).

This mystic sympathy extends to parent and child. Many peoples are still at the stage in which relationship is not reckoned between father and offspring; and it is probable that the purely matrilineal reckoning of kinship generally preceded that which recognizes the father's relationship. The custom of couvade proper does not appear to exist among purely matrilineal peoples,* for the sufficient reason that they do not recognize the tie of kinship on which it depends. As the result of inquiries by Prof. Tylor and Mr. Ling Roth, it is found in the greatest force among those peoples in which matrilineal is in process of transition to patrilineal kinship, and its frequency and elaboration diminish with the gathering strength and prevalence of paternal kinship, although, even in the higher civilizations, where kinship is reckoned through both parents, observances linger which are based upon the same idea of mystic sympathy (*JAI* xviii. 255; xxii. 204). Whether its gradual disappearance is due to this idea having fallen into the background with the advance in civilization has not finally been determined. Another cause has been suggested. Bachofen (*Mutterrecht*[2], 1897, pp. 17, 255) saw in the couvade the assertion of the father's relation to his child, the mode by which he claimed it for his stock rather than the mother's. Prof. Tylor, after hesitation, gave the great weight of his authority to this opinion, which is supported by some of the cases. But it is clear that the *quasi*-legal fiction which would be thus created must be founded on the pre-existing idea of mystic sympathy and the practices connected therewith. When patrilineal reckoning became fully established, the stage of legal fiction was past. The couvade became unnecessary as an assertion of paternity, and therefore would in time be dropped. (In addition to the works cited above, discussions on the couvade will be found in Tylor, *Early Hist. of Mankind*[3], 1878, p. 291; Hartland, *Legend of Perseus*, 1894–96, ii. 400; Crawley, *Mystic Rose*, 1902, p. 416.)

(*b*) *Delivery in seclusion.*—It follows from the condition of tabu imposed on a parturient that child-birth must almost always take place in seclusion. Among many peoples, where the climate permits, the event takes place in the open air. The Herero woman in South Africa is delivered behind her mother's hut; and after the birth she is placed in a small hut, where she remains until the navel-string drops from the child (Dannert, *Zum Rechte der Herero*, Berlin, 1906, p. 19; *S. Afr. F. L. Journ.* i. 41, ii. 61). In British Columbia the Kwakiutl woman is delivered out of doors; the Sk'qomic woman retires to the woods, unless it be winter or retirement to the woods be for any other reason inconvenient, in which case she is delivered behind a screen of reed-mats in the general dwelling, which is of considerable size (Boas, *Brit. Ass. Rep.*, 1896, p. 573; 1900, p. 479). Among some of the tribes of New South Wales it is said that the spot to which the parturient withdraws is fixed upon by the elders of the band (Mathews, *Ethnol. Notes*, Sydney, 1905, p. 15). In tropical countries delivery frequently takes place in the forest; in the Babar Archipelago, on the seashore (Riedel, p. 354). The Indians of Rio de la Plata are delivered on the shore of a lagoon or river, where immediately afterwards they wash themselves and the infant (Granada, *Superst. del Rio de la Plata*, Montevideo, 1896, p. 56). Where parturition does not take place in the open air, a special hut is commonly provided for the purpose. In Japan this hut used to be a mere shed without a door (Aston, *Shinto*, 1907, p. 113). Where a separate dwelling is provided for menstruant women, as is often the case, the parturient retires thither to be delivered; the other occupants also being under tabu, no harm can be inflicted on them by her presence. This is the practice, for example, of the Kotas of the Nilgiri Hills and other tribes in the south of India. In comparatively civilized countries like Russia, among the peasants of the Government of Smolensk, the woman is placed for delivery in a barn or a hut at a distance from the house (*L'Anthropologie*, xiv. 716). The Votiak woman gives birth in the family dwelling, but behind a curtain, for it would be a bad omen for any one but the woman in attendance as midwife to see the birth (*Rev. Trad. Pop.* xiii. 254). This clearly means that it is not a desire for privacy on the part of the patient that leads to the seclusion, so much as a ban on the part of the other members of the household.

Where the seclusion cannot be carried out by delivery in the open air away from the community, or where by custom or special circumstances delivery takes place in the hut usually occupied, the tabu is none the less strict. In the west of Victoria the Australian woman remains in her husband's *wuurn*, or shelter, but he is required to live elsewhere; the neighbouring shelters are temporarily deserted, and every one is sent away from the vicinity except two married women, who stay with her (Dawson, *Austr. Aborigines*, p. 38). Among the Koragars of the western coast of India the hut is deserted by the other inmates for five days (*JAI* iv. 375). The Visayans of the Philippine Islands remove the fishing-nets and the fighting cocks from the house, just as when a person is dying there, else they would be unlucky (*JAFL* xix. 209). When a birth takes place in the house, the Indians of the Uaupes Valley in Brazil take everything out of the house, even the pans and pots and bows and arrows, until the next day (Wallace, *Trav. on the Amazon*, p. 345). All these objects would be affected by the uncleanness of child-birth if allowed to remain, and probably would have to be destroyed, as is done, among some of the tribes of New South Wales, with every vessel used by the parturient during her seclusion (*JAI* ii. 268). So contagious is the tabu, that, if the men do not avoid the neighbourhood of the hut, they, it is widely believed, will be unlucky in their own occupations, as in the New Hebrides, where the yams they cultivate will be spoiled (*ARW* x. 515).

(*c*) *Absence of the father at birth.*—As a rule the husband, in common with all other men, is required to be absent on the occasion of child-birth. The reason of this requirement has been supposed to be the condition of tabu under which the parturient woman lies—a condition that would be communicated to every one present. But the explanation will not fit the facts everywhere. Thus among the Opatas of Mexico a parturient is attended by her nearest relatives; but so little is seclusion deemed necessary, that men, and even children, may be present (*Amer. Anthr.* [N.S.] vi. 80). In the Loyalty Islands, again, the act of birth is a spectacle that everybody—men, women, and children—flocks to enjoy, except the husband, who alone must be absent. During the whole of the woman's subsequent seclusion, which lasts until the child is big enough to crawl, her husband never pays her a visit, though he occasionally sends her food (*JAI* xix. 503). He is under a special ban. On the other hand, some tribes require the husband to be present and act as midwife, while all other

* The present writer is aware of only one case, that of the Arawak of British Guiana (Brett, *Ind. Tribes of Guiana*, 1868, p. 101). A reference to Mr. Ling Roth's table (*JAI* xxii. 232), and to his authority (Codrington, *The Melanesians*, 1891), shows that in the other alleged case mother-right, though still the rule, has begun to give way. More information is desirable on the Arawak and their surroundings.

men must keep away. This is the custom of some of the wild tribes in the Malay Peninsula (Skeat and Blagden, *Pagan Races of the Malay Peninsula*, 1906, ii. 20, 22, 25). Among the Yaroinga of Queensland the parturient is attended by an old woman as midwife, but the husband is at liberty to be present and witness the process of delivery, contrary to the practice of the neighbouring Kalkadoon, who allow only a very old man or two to be present (Roth, *Ethnol. Studies*, pp. 182, 183). The active assistance of the husband is expected in the Andaman Islands (*JAI* xii. 86) and the Babar Archipelago (Riedel, *op. cit.* 354), as well as among the Basques (*ZE* xxxi. Verhandl. 292); while among the Bontoc Igorot of Luzon he is at least present (Jenks, *Ethnol. Survey, Philippine Islands*, i. 59). In the Marquesas Islands he is not only at hand, but must have conjugal relations with his wife almost immediately after the birth when she goes to bathe (*L'Anthrop.* vii. 546).

Moreover, presence at the birth is not necessary to render the husband unclean, or, in other words, to place him in the condition of tabu. He is already subjected to it by the mere fact of his relationship to the parturient. In many cases his uncleanness is expressly affirmed; in others it is to be inferred from some of the tabus by which he is bound, and which are not to be explained by mystic sympathy with the newborn child. Indeed, the tabu extends more or less to the whole household, or sometimes even to the whole community. The Kafirs of South Africa seem to regard all the members of the kraal as unclean, for they 'eat medicine,' as on the occasion of a death (Leslie, *Among the Zulus*, p. 197). The Sulkas of New Pomerania are similarly affected; and not only the men, but their weapons and the cuttings of plants they are about to put in the ground, require to be purified (*AA* [N.F.] i. 209). To the same origin we may probably attribute the stories, framed as they now stand at a period when the custom was no longer understood, of the famous couvade of the Ulstermen, when all the male population was annually laid up as a penalty for an act of cruelty to a woman about to be delivered.

Without dogmatizing on the matter, an alternative conjecture may be hazarded that the husband's enforced absence is to be regarded as a relic of earlier social conditions, when the wife dwelt at her mother's house, and descent was counted only through women. In such a case the identity of the father of the child would be of small importance, and might even be unknown, and the occurrence would be one in which he had small concern. The conjecture is supported by the frequent, if not ordinary, presence and assistance of the parturient woman's mother when alive and within reach. This might be supposed to be merely natural, were it not that the large divergences of custom and feeling between the lower culture and our own hinder any cautious anthropologist from laying down a general rule as to what is natural and what is not. It is further supported by the custom of sundry African and Indian peoples, whereby a woman, particularly at her first confinement, returns to her maternal home, and is there delivered and remains in seclusion for a ritual period, apart from her husband and unvisited by him. Among one of these peoples at least (the Basuto) the first child belongs to, and remains with, the mother's parents (*FL* xv. 250).

(*d*) *Tabu of the child.*—The condition of tabu thus affecting father and mother extends, it need not be said, to the newborn child. It is unclean, and must be cleansed by a rite of purification which assumes various forms among different peoples; and this purification, as in Christian baptism (*q.v.*), is the rite of introduction to, and incorporation in, the community. Sometimes father, mother, and child are all purified together in one and the same rite. Among certain Indians in the north-west of Brazil both parents and child remain in seclusion for five days. The parents neither work nor wash, and their diet is strictly limited. Any transgression of these rules will be injurious to the child. At the end of the five days the husband's father gives them permission to bathe and resume their ordinary food, and a common bath by the young parents and their little one brings to a close the period of seclusion. It may be noted in reference to what has been said above, that though the father shares the mother's seclusion and abstinence, *all* men are expressly stated to be absent at parturition (*Globus*, xc. 351). The Swahili of East Africa, who are nominally Muhammadan, have a similar rite for putting an end to the forty days' seclusion and dieting of the mother. At the end of that period she and the father are required to resume cohabitation. After the first occasion of cohabitation, the father, mother, and child bathe one after the other in the same water. This ceremony is called *Kurinja Miko*, 'diet-breaking,' and it is held necessary for the child's health. Ordinary life is then resumed (*ZE* xxxi. 61). It was perhaps some rite incidental to the tabu and purification of the infant among the ancient Trausi of Thrace which was misunderstood by Herodotus (v. 4) when he described the kinsmen as sitting round the child and lamenting the ills to which it was heir. That the Trausi, in opposition to the general sentiment and practice of mankind, were pessimistic philosophers of the type implied by the historian is hardly credible.

2. Dangers attendant on child-birth.—That very serious dangers, however, attend the entrance upon human existence is widely, if not universally, believed. These dangers (which can be but briefly alluded to here) affect the mother as well as the child, and in some cases the father also. They arise from two sources—evil spirits and witchcraft. Against them a pregnant woman provides by means of ceremonies (often with the co-operation of priests and shamans), abstinence, and amulets. Ceremonies and amulets are also used for the protection of the newborn child. In Christian countries baptism is of all protective ceremonies the most effectual. It is probably due as much to the belief that the devil and other evil spirits have special powers for inflicting physical evil on an unbaptized child, and often for snatching it away, as to the theological doctrine of original sin, that baptism has been hastened so eagerly and widely. At Gossensass in the Tirol the devil is believed to have power over both mother and babe. Until the one is churched and the other christened, something may befall them. They must not be left in the house alone; and the nurse in attendance must not sleep, but pray without ceasing. It would be useless to make the sign of the cross by way of prophylactic over the child before it is baptized, for it is not yet a Christian, and the mother is no longer a real Christian until she is churched, for she has been despoiled of her Christianity by the child in the act of birth (*ZVK* vi. 309). By many peoples one of the kinds of spirit most to be dreaded on these occasions is that of a woman who has died in childbed. Special ceremonies are performed over the corpse of such a woman to prevent her returning for mischief (cf. *PR* ii. 269–274). To evil spirits are ascribed difficulty of parturition, the death of the parturient or of the child, the infliction of disease on the child, the carrying off of a child or its exchange (see CHANGELINGS). Witchcraft is often practised by means of the evil eye (*q.v.*). Where the exclusion of all strangers, as such, is rigid, the reason,

express or implied, very often, if not always, is the danger from this source. For the same reason precautions are observed, as in Macedonia (Abbott, *Maced. Folkl.* p. 123), in summoning the midwife. On the island of Kythnos, in the Greek Archipelago, all the mirrors are covered during labour, no one is allowed to enter the birth-chamber after sundown, and, during the first three nights, to turn away the evil eye and conciliate the Fates, all the mother's trinkets (such as ear-rings, brooches, rings, and so forth) are laid out on the bed with a pot of jam (Hauttecœur, *Folkl. Kythnos*, 7). On the island of Karpathos the child is washed and swaddled in public, and no one is allowed to enter or leave the house until this ceremony is over and the priest has blessed the babe (Bent, *Macmillan's Mag.*, July 1886, p. 201). But witchcraft may also be practised by ceremonies, as in Ovid's account of the birth of Hercules retarded by Lucina sitting before the door muttering charms, her knees pressed together, and her fingers interlocked about them, until the yellow-haired Galanthis, one of Alcmene's attendants, induced her by a false report of her mistress' delivery to spring up in surprise, and thus undo the spell (*Metam.* ix. 295). Difficult delivery may also be caused by the acts, even unintentional, of the husband. Among the fisher-folk of Lower Brittany delivery is harder when the husband is away at sea following his occupation of fisherman (Sébillot, *Folkl. des Pêcheurs*, p. 3).

3. **Attempt to obtain easy delivery.**—Against the agony thus inflicted and the disasters which may ensue, various countervailing means are employed. It is not an unreasonable conjecture that this is the reason why delivery is often required among savage and barbarous peoples to be effected in the open air. Probably not merely the convenience of washing but the sympathetic influence of the free waves causes the seashore to be selected in some of the Moluccas as the proper place for parturition. In the Philippines the husband strips stark naked, and stands on guard either inside the house or on the roof, flourishing his sword incessantly to drive away the evil spirits until the child is born. The recitation of charms is common. Offerings and prayers are made to benevolent gods and spirits, wherever the development of religious belief sanctions them; and these are sometimes combined with a banning of the malevolent spirits. Thus, among the Chingpaw of Upper Burma sacrifices are offered to the house-spirit, and ceremonies are performed to drive away the Jungle-*Nât* and the *swawn* or *munla*, the ghost of a woman who has died in child-birth (*Internat. Arch.* xvi., Suppl. 59). In extreme cases obscene performances take place by a band of young men in the presence of the patient, when it is believed that the evil spirits for very shame take to flight (Stoll, *Geschlechtsleben*, p. 681); though it may be doubted whether the original intention of the ceremony was not rather to overcome sterility and sterilizing influence by the exhibition of generative acts. A common spell against difficult labour is the opening of all doors and cupboards, the untying of all knots, the loosening of garments, or even stripping by all present. The Arunta husband in Central Australia, though not present at the birth, takes off all his personal adornments, and empties his wallet of knick-knacks on the ground; and his hair-girdle is taken to the woman and tied tightly round her body just under her breast, apparently with the object of driving out the child. If this be ineffectual, the husband walks slowly up and down, quite unadorned, in front of the women's camp, where his wife lies about fifty yards away, with a view to inducing the child to follow him (Spencer-Gillen[a], p. 466). In Malta a specimen of the dried flower known as the Rose of Jericho is procured and put into water in the parturient's chamber. It is believed that when it opens the child will be born. Analogous to this piece of sympathetic magic is the custom in the Mark of Brandenburg of boiling peas to bring about the birth (*ZVK* i. 183); in Karpathos the patient holds an olive branch in her hand. Then, again, care must be taken to avoid doing certain acts in the house. Nobody, for instance, in Bavaria may step over a broom—a prohibition current also in India. Nor, by a widely-diffused superstition, may anything be lent out of the house; especially fire must not be given, for fear of witchcraft. Adultery among many peoples is held to be a cause retarding delivery. In cases of difficult labour the unhappy woman is closely questioned and made to confess. It is believed that, until she does so, the child cannot be born. In Europe various saints are invoked to aid delivery. They are often successors of pagan divinities; or rather they are pagan divinities under the thin disguise of a slight change of name. In continental and insular Greece, for example, St. Eleutherios has taken the place of the goddess Eileithyia.

Amulets are intended to provide against dangers to the mother both before and after delivery, and also to the child. They are hung on the person of the mother and on that of the child, or about the house, either inside or out; or they are laid or hung in or upon the bed of the lying-in woman, or the cradle of the child. When a population has passed into the age of metals, metallic objects are held to be of special value as amulets. But such various objects as parts of sundry animals and plants, stones of remarkable shape or rarity, egg-shells, bread, besoms, salt, pitch, the husband's clothes, mirrors, crosses, consecrated girdles, magical or sacred texts, Bibles—anything, in short, that may be supposed, though for reasons often obscure to us, to cause difficulty or be repugnant to malignant spirits or evil influences—are employed; and they avail not only for assisting delivery but for protecting the mother and babe during the perilous time preceding and following birth. The use of fire and lights is almost universal. The rule that, where a mother and new-born child are lying, fire and light must never be allowed to go out, is equally binding in the Highlands of Scotland, in Korea, and in Basutoland; it was observed by the ancient Romans; and the sacred books of the Parsis enjoin it as a religious duty; for the evil powers hate and fear nothing so much as fire and light.

4. **Attempt to secure good fortune for the child.**—The child's future must be divined and provided for. Before birth, means are frequently taken to divine the sex of the infant, or even to ensure the sex desired. There are lucky and unlucky times for birth. The qualities and fate of a child born on one day of the week or of the month differ from those of a child born on another day—a superstition not quite extinct in England. In Greece the three Fates are believed to visit the child three days after birth, at midnight, and decide its destiny—another relic of pagan belief. To welcome and propitiate them a feast is provided. In Karpathos the ceremony is very elaborate. The child is placed, stark naked, on a pile of its father's clothes in the wooden bowl from which the family eat on feast-days. This stands in the middle of the room, and around it seven jars containing honey. In every one stands a long candle specially made for the occasion. The priest blesses the candles, and they are named after various saints. They are then lighted, and the extinction of one of them is awaited in silence.

The first to go out indicates the saint who is to be the child's protector. In the evening, guests assemble round the bowl to eat from it a confection of flour, water, honey, and butter. When they disperse, the bowl is again filled with the same mixture and left all night for the enjoyment of the Fates, who are invoked to come and bless the child (Bent, *loc. cit.* p. 203). The child's destiny is supposed to be written by the Fates on its nose or forehead, and any little mark or abrasion of the skin is called 'the fating of the Fates' (τὸ μοίρωμα τῶν Μοιρῶν). But they never spin the lot of a wholly happy life (Rodd, *Customs and Lore of Modern Greece*, 1892, p. 111). Elsewhere, ceremonies are performed to ascertain the child's fate and to provide, according to its sex, that it shall grow up with all the qualities necessary for its after-life. First, however, where exposure of children or infanticide is practised, a decision must be taken whether it is to live or die. Where the lineage is reckoned through the father, the child's life is usually in his hands, as among the ancient Romans and Scandinavians. In other cases the mother often decides, and herself puts the child to death. If the mother die in child-birth, savage peoples as a rule bury the child with her, on account of the difficulty in rearing it; or sometimes because they fear that she will not rest without it.

Afterbirth, etc.—A point of great importance is the disposal of the afterbirth and navel-cord, and of the caul when there is one. The Swahili inter the placenta on the spot where the delivery took place, in order that the child, through a mystic power, even after it has grown up, may feel itself continually drawn to its parents' house. The cord is worn round the child's neck for some years, and afterwards is buried in the same place. By this proceeding it is believed that the child's growth is promoted (*ZE* xxxi. 62). The Australian natives on the Pennefather River in Queensland hold that part of the *cho-i* ('vital principle,' 'soul') of the child remains in the afterbirth. The latter, as soon as it comes away from the mother, is buried in the sand, and a number of twigs are stuck in the ground to mark the place, and bound together at the top in a conical form. It is believed that Anjea—a supernatural being whose business is the making of babies out of mud and their insertion in the womb—recognizes the spot, takes out the *cho-i*, carries it to one of his haunts, and keeps it for years, until it is wanted for the completion of another baby. When he has formed a baby, he puts into it, if a boy, a portion of the father's *cho-i*, or, if a girl, a portion of the father's sister's *cho-i*. He takes an opportunity of secretly placing the baby, thus completed, in the womb of the mother for whom it is intended (Roth, *Bull. North Queensland Ethnog.* v. 68). The Toba-bataks call the placenta the younger brother of the child. They hold that every man has seven souls. One of these abides with the placenta, which is buried, but can leave it to warn the child to whom it belongs, or, if he be acting rightly, to encourage him and thus play the part of conscience. The Javanese believe that the souls of their forefathers are housed in crocodiles. In the interior of the island, after the birth of a child, the women are accustomed to take the placenta, surrounded with fruits and flowers, and lighted by little lamps, in the dusk of the evening to the river, and commit it to the waters as a gift for the crocodiles, or rather by way of dedication to the forefathers whose souls inhabit them (Kruyt, *Animisme in den Ind. Archipel*, pp. 25, 189). In Europe, on the other hand, what is most dreaded is that the afterbirth and cord should be eaten by an animal, or exposed to the evil offices of fairies or sorcerers. In Spain, for example, if the least part of the placenta were eaten by an animal, the infant would be possessed of all the bad qualities of the animal in question (Sébillot, *Paganisme*, p. 30); for the placenta and cord are regarded as being an essential part of the child. Moved by the same belief, the Kwakiutl of British Columbia take precisely the opposite course of exposing a boy's placenta where it will be eaten by ravens: he will then have the gift of foreseeing the future. The same tribe bury a girl's placenta at high-water mark, in order that she may grow up an expert clam-digger (Boas, *Rep. Brit. Ass.*, 1896, p. 574). The Swahili practice, already mentioned, of wearing the cord is wide-spread. Even in Europe the cord is preserved and often worn as a talisman, or given to the child at different crises of life to suck.

The custom of planting a tree at a birth is common among sedentary nations. Such a tree is regarded as having a mystic relationship with the child. It is an index of the child's condition and fate: it grows, prospers, and decays with the child. Very often the placenta and cord are buried beneath it, as in countries so far apart as New Zealand and Old Calabar. In Pomerania the afterbirth is buried at the foot of a young tree. The Hupa of California split a small Douglas spruce, place the umbilical cord in the opening, and tie the tree together again. 'The fate of the tree is watched, and the future of the child is judged accordingly' (Goddard, *Life and Culture of the Hupa*, p. 52). Elsewhere, as in the Moluccas, the afterbirth is hidden in a tree. If we are not always told that the tree is in these various ways united with the child's fate, we may suspect that very generally a mystic connexion with the child is established.

Similar superstitions attach to the *caul*. A child born with a caul is endowed with extraordinary powers. Among the Negroes of the West Indies and North America, and among the Dutch, he can see ghosts. In England it is believed that he cannot be drowned, perhaps because (as the Icelanders believe) the caul contains the child's guardian spirit (*fylgia*) or a part of its soul. The Icelandic midwife therefore is careful not to injure the caul. She buries it beneath the threshold over which the mother has to pass (Grimm, *Teut. Myth.*, 1880–88, ii. 874). It is probable that this proceeding is adopted in order that in the event of the child's death the soul may re-enter the mother and so the child may be born again—a belief frequently implicit, and sometimes more than implicit, in the like burial of dead and still-born babes. However that may be, the caul is everywhere prized. In many places it is sewed up in a bag and hung round the child's neck, or preserved elsewhere. In Königsberg it is carried to baptism with the child (Ploss, *Kind*, i. 13). It is also regarded as a talisman valuable in itself, and is sold and bought as a preservative against shipwreck and for other luck-bringing purposes. In England, a century ago, or even less, advertisements of such objects for sale were not very rare in the newspapers.

5. Admission of the child into the community.—The moment comes at length when the most imperious tabus relating to the child are put an end to and the child is introduced into the community. He cannot, as a rule, become a full-fledged member of the community until he has, years later, passed through the puberty ceremonies; but he may be recognized as a portion, however imperfect, of the family or clan on emerging from the seclusion which follows his birth. The ceremony of reception and that of release from tabu (or purification) are, as already pointed out, the same. The giving of a name in many cases forms part of it, though the name so given is not neces-

sarily that which the child will bear throughout life. These three objects are effected in Christianity by baptism; and there can be little doubt that Christianity has in infant baptism taken up and modified, to suit its own teaching, certain pre-existing ideas and rites (see BAPTISM).

(*a*) *Visit of friends.*—Prior to the ceremony of reception, however, the relatives, and especially the female friends of the mother, despite her tabu, often pay her a formal visit to offer their congratulations and inspect the baby. It is an occasion for rejoicing, on which the visitors either bring or receive presents. It is not, however, without danger for mother or child. The evil eye is particularly dreaded, and the guests are expected to put themselves above suspicion by their expressions and conduct. They must, as is usual at other times for this purpose, either salute the child in the name of God, or speak of it as a nasty, ugly little thing, or use some such offensive expression. This is the only way open to them of praising it: direct praise is dangerous. A very common rite is to spit on it—a rite known equally well in Eastern Uganda and in Western Ireland, indeed, throughout Europe (see EVIL EYE, SALIVA). In Austria, visitors are sprinkled with holy water. Among some peoples the neighbouring children are invited to see the child, and take part in a ceremony, and are feasted—a custom practised by the Continental Jews, the Watubela Islanders, the ancient natives of Mexico, and others. It is perhaps a rite of sympathetic magic.

(*b*) *Recognition by the father.*—Formal recognition of the child as his by the husband is among various peoples a preliminary to the actual reception into the community, though it is sometimes combined with that ceremony. Occasionally it is preceded by a test of legitimacy, as among the Baganda (*JAI* xxxii. 31), where the rite is performed not by the husband, but by his father. Recognition is effected in various ways. The Santal father murmurs the name of his ancestral deity, and puts his hand on the child's head (Hunter, *Annals of Rural Bengal*, p. 203). The Fijian father makes a gift of food (*JAI*, xiv. 23). Among the ancient Norse the child was laid on the earth when born, and not lifted up until the father gave permission. This permission decided the child's fate, for otherwise it would have been exposed or put to death; but doubtless it involved also an acknowledgment of paternity. Recognition by the father involves reception into the immediate kin. Among the Amaxosa a feast is given on the occasion; the father goes to the kraal and chooses a cow from whose tail he pulls a tuft of hair and hands it to the mother. She fastens it round the child's neck. Neither the cow nor any of her posterity may be sold or disposed of in any way to strangers; but if the child be a girl, they are handed over with her on her marriage (Fritsch, *Eingeb. Süd-Afr.* p. 108). Among the ancient Welsh it would seem that there was no binding recognition by the father until the mother had first taken a solemn oath upon the altar and the relics that he and none other was the father. If the father then did not deny the child by an equally solemn ceremony within a year and a day, he could not afterwards deny him. The mode of reception into the kin was by a kiss; for a kiss, says the code of Gwynedd, is a sign of affinity. If the father were dead, the ceremony was performed by the chief of the kindred with six of the best men of the kindred; if there were no chief of the kindred, then by twenty-one of the best men of the kindred; and once performed it was conclusive (*Anc. Laws of Wales*, Venedotian Code, ii. 31).

(*c*) *Presentation to the god.*—Sometimes the child is presented to the divinity. The Chingpaw of Upper Burma formally announce the birth to the house-spirit, and place the infant under its protection (*Internat. Arch.* xvi., Suppl. 60). In Mexico the Tarahumara mother on the fourth day after delivery goes to bathe, and lays the child down naked and exposed to the sun for an hour, that Father Sun may see and know his new child (Lumholtz, *Unknown Mexico*, i. 273). The Wichita present the child to the moon, praying for its growth and other blessings (Dorsey, *Myth. Wichita*, pp. 11, 19, 29). A somewhat similar ceremony is performed by the Ronga mother in South Africa; but, since the Baronga do not worship the moon, the words used are rather an incantation than a prayer: 'Grow, grow, grow; there is thy moon!' (Junod, *Baronga*, p. 17). Among the Basuto, in the second month after birth, the child is made to look at the moon, which is called his wife if a boy, or her playmate if a girl (*Bull. Soc. Neuchat. Géog.* ix. 121). On the island of Kythnos, if the child suffers from any complaint, it is presented to the new moon with the prayer: 'O new moon, I shall be very grateful if thou wilt cure my child' (Hauttecœur, 9). In direct contrast to these practices is the Albanian forbidding of children to look at the moon. The Euahlayi of New South Wales also forbid them to look at the full moon. Among the Hupa of California a curious method of presentation to the divinities is practised. Parturition takes place in the house set apart for women in a state of tabu. The first ten days are a period of great danger to the child; and they are spent in rites to ward off the evil spirits. At the end of the period a little of the child's hair is cut off and put in the fire. 'It was thought that the divinities on smelling the burning hair became cognizant for the first time of the child's existence.' The ceremonies culminating in the burning of the hair are thus, it would seem, not merely intended to ward off evil spirits: we are justified in thinking that they are ceremonies of purification. After they are over, the mother and child leave the parturition-house, though the mother is under tabu for some time longer (Goddard, *Hupa*, Berkeley, Cal. 1903-4, p. 51. The author states elsewhere that the mother remains in the parturition-house for a longer period [p. 18]).

(*d*) *Ceremonies of admission.*—The community into which the child in lower stages of civilization is more or less formally introduced is primarily that of the kin; and, wherever ancestor-worship or the cult of a divinity in the more accurate acceptation of that term is practised, reception into the community and presentation to the divinity are, as a rule, only two aspects of the same ceremony. Thus, among the Chukchi, on the fifth day after birth the mother and child are drawn in a sledge round the tent, sunwise, to the place of sacrifice. The reindeer employed to draw the sledge is then slaughtered; the mother and child, at least two other members of the family, the sacred amulets, and the three central poles of the tent-frame are painted with the blood. The mother then proceeds to divine which of the deceased relatives has returned; and, on this being ascertained, the name of the relative in question is imposed upon the child by acclamation of the people present (*Jesup Exped.* vii. 511). The painting with blood of the sacrificed reindeer has placed the mother and child under the protection of the divinities, and has also united them with the kin represented by those members who have been painted and by the other persons present. And this is completed by the identification of the ancestor who has returned in the person of the child. The Herero of German South-West Africa perform an elaborate ceremony when the mother is released from her seclusion. She takes the

child to the sacred fire, which burns on the hearth in the open air at the eastern side of the hut where the chief of the *werft* lives. She is sprinkled with water by the chief's eldest unmarried daughter, whose duty it is to keep the fire always burning. She seats herself on the outspread hide of an ox, and the chief spurts a mouthful of water over her and the child, afterwards addressing his ancestors: 'To you is a child born in your village; may this [village] never come to an end!' Then he rubs mother and child with fat and water, taking the child upon his knees in doing so. He takes the child in his arms, and, touching its forehead with his own, he gives it a name. The other men present repeat this action on the child, uttering the name already given by the chief of the *werft* or the father, or, if they please, each giving a new name (*S. Afr. F. L. Journ.* ii. 66). Here both the mother and child are purified, and the child is presented to the ancestral spirits and received into the kin. Where, as, for instance, among the ancient Mexicans, the worship of gods had been evolved, the ceremony took place at the temple. There the child was presented to the god, and there it received the gifts which were a recognition of its membership of the kin (Payne, *Hist. of New World*, 1899, ii. 479). Among the Santals of Bengal the child is admitted into the family by a secret rite which includes the recognition by the father of his paternity. Admission into the clan is more public; it takes place three days after the birth of a girl, or five days after the birth of a boy. The child's head is shaven. The clansmen stand round and sip water mingled with a bitter vegetable juice. The father solemnly names the child, and the midwife thereupon sprinkles rice-water over each of the visitors, pronouncing, as she does so, the child's name. The family, which up to this moment has been unclean, is by the ceremony re-admitted with the newborn babe into the clan, and the kinsmen on both sides sit down to huge earthen pitchers of beer previously provided. Admission into the wider circle of the race takes place some four or five years later. It consists in marking the child's right arm with the spots indicating his Santal nationality, and the drinking of beer by the friends of the family, who, irrespective of clan, have been invited (Hunter, *Rural Bengal*[7], 1897, p. 203). The bestowal of a name among the Kayans and Kenyahs of Borneo is accompanied with great formalities. It is the starting-point of the child's life in its social aspects; before it is named, the child would not be enumerated as one of the family, and would not be mourned for any more than if it had been still-born—it is, in fact, non-existent (Furness, *Born. Head-hunters*, p. 18).

(*e*) *Admission in the higher religions: baptism.*—In the higher religions, as in Muhammadanism and Christianity, the dedication of the child to God effects its entrance into a wider society than that of the kin, and the importance of the ecclesiastical rite tends to efface its social meaning. The ecclesiastical rite insists on the relation between the child and the Deity, and the effect on the child as a social being falls into the background. But outside the ecclesiastical rite the occasion is often made one of social interest. The Swahili, a Bantu people of East Africa, have accepted Islâm, which they practise diluted with much of the ancient paganism. Forty days after its birth, all friends of the house assemble for the baptism of the child. The whole night is occupied with ritual readings from a sacred book, repeated after the reader by all present. At four o'clock in the morning (the hour when the Prophet was born) the actual baptism and naming take place. The celebration is then closed with a feast (*ZE* xxxi. 67).

Throughout Europe the most curious ceremonies and superstitions attend the baptism of a child. The utmost importance is attached to the choice of godparents, for the child inherits their qualities. They must therefore be morally and physically in a state of purity and without any bodily defect. In the Sollinger Wald, for example, they must take care to rinse their mouths with water before going to the ceremony, and abstain from spirituous liquors until it is over (*Am Urquell*, ii. 198). In Provence, if one of them were one-eyed, a stammerer, bandy-legged, or a hunchback, the child would be afflicted in the same way (Bérenger-Féraud, *Trad. de la Provence*, p. 171). The invitation to become godparents is frequently of the most formal and deferential character, by special messenger or the father in person, or else by letter. It is sometimes, as in the south-west of France, given before the birth. This is a practical necessity where baptism follows speedily on birth. The number of godparents varies: in one German family as many as twenty-three are recorded on one occasion—a luxury in which only wealth could indulge. The child's future depends on the conduct and even the dress of the godparents. On the way to the church they must not look round, or stand about, or perform any bodily needs. Their thoughts must not wander during the ceremony. Above all, they must make no mistake in repeating the Creed; nor must the clergyman stutter or make a mistake in the service. On the way back from church the same care is necessary; but now they are expected to give alms, especially to children. There are also rules as to the manner in which the children are held at the font, as to the order in which they are to be presented if more than one child be baptized on the same day, and so forth, on which much of the child's luck depends. The parents themselves do not attend the baptism. They are (at least the mother is) still under the ban, being as yet unchurched. But where this is the case, their occupations during the absence of the little one do not affect it any the less. The Esthonian father runs rapidly round the church during the service, that his child may be endowed with fleetness of foot (Grimm, *Teut. Myth.* iv. 1845). The mother, in some parts of Germany, must read her Bible and hymn-book, that the child may be able to learn easily. Elsewhere she has to perform nine kinds of work, that the child may be active. The child's conduct at the font, too, is much regarded. If it cries, in most parts of England the devil has gone out of it. But this is not the universal belief. In Auvergne, if it does not cry, it will be good; at Liège, if it cries, it will become a bad character. At Marseilles, to cry is a sign of a good constitution; but it is also the sign of an arbitrary and choleric temper. In Germany, the child who cries will not live to grow old; in Portugal and elsewhere, on the other hand, the child who does not cry will hardly live. On leaving and returning to the house a special ritual has frequently to be followed. Among the Masurs about Gilgenburg the midwife carries out the child, stepping over an axe on which three glowing charcoal brands are laid: this is held to be the best preservative against everything evil. A piece of steel is elsewhere among the same people packed in the child's swaddling clothes, or laid from time to time upon its eyes. The midwife says three times as she goes: 'I take away a heathen and bring you back a Christian' (Töppen, *Abergl. aus Masuren*[2], 1867, p. 81)—a sentiment of very common provenance. The child, on returning, is carried thrice round the table. These and other ceremonies, too numerous to be detailed here, intended to affect the child's after-life, are found

in some form or other all over Europe. When they are at an end, the feast begins, sometimes in the inn, sometimes in the parental dwelling, at which the child is now qualified to be, and frequently is, present. The godparents, the clergyman and sacrist, and the midwife are joined by the relatives and neighbours. Christening cakes are everywhere a special feature of the meal. The godparents must taste of every dish, in order that the child may speedily learn to eat and may thrive accordingly. The occasion is one for merriment, games, practical jokes, and dancing. It need not be said that the godparents are expected to present gifts to the child and to the midwife. So far as the child is concerned, that is only the beginning of their duties. He will expect gifts and help from them whenever in the course of his life he needs them. In some places, as in the Tyrol, the godparents of the first child of a family fulfil the same office for the subsequent children: it would be an insult to them to ask any others. In Greece the unbaptized child is called *drakos*, or dragon. It is not yet a fellow-Christian. The epithet, moreover, is probably deemed to have an influence on its future development by promoting its strength. At baptism the priest and godparents dance round the font. In Karpathos, on its return home the mother meets the little procession on the threshold with a ploughshare, the hollow of which is filled with embers. She waves this before the child to secure for it strength and skill in agriculture. The child is then solemnly delivered by the godfather into her hands, no longer a *drakos* but a Christian; and sweets and raki conclude the rites (Bent, *loc. cit.* p. 204).

The christening feast is the analogue of the merry-making which very generally in the lower culture follows a birth. Thus is celebrated the accession of a new member to the community. Children are the greatest asset of a people; they are a pledge of its continuance; and in a barbarous society they are often a source of wealth rather than a drain and an encumbrance. The ideas of barbarism persist in the peasant classes of Europe, among whom the various and complicated ceremonies roughly enumerated above are observed. The actual rite of reception into the community has taken an ecclesiastical form, that of baptism; and round it these other ceremonies cluster. They present, it is true, the appearance of regarding only the child. But this is delusive. It is to the interest of the entire community that the new member should grow up well-conducted, strong, and prosperous. The auguries, the omens, the provision for securing the child's future luck, are an index of the importance which the community, first in the narrower sense of the family, and in a less degree, but still really in the wider sense of the village and neighbourhood, feels to attach to the moral and mental qualities and the material prosperity of the neophyte.

6. Re-admission of the parents into the community.—The tabu of the mother is in the lowest stages of civilization often comparatively light. Among the Arunta of Central Australia the mother leaves her husband's camp and goes to that of the unmarried girls, where she is delivered; and there she remains for three or four weeks. She then resumes her ordinary life, so far as appears, without any special ceremony of purification. When among the Uaupes of Brazil birth takes place in the hut, everything, as we have already seen, is taken out of the house until the next day. The mother then washes herself and her child in the river, and returns to her hut, where she remains without doing any work for four or five days (Wallace, *Trav. Amazon*, 1853, p. 345). She is perhaps not yet completely pure, but the traveller's account does not enable us to say whether any further ceremony is performed. In the west of India the hut in which a Koragar mother is delivered is deserted by the other inmates for five days. On the sixth day the mother and child are restored to purity by a tepid bath, and the child is named. Rice and vegetables are presented to the mother; several coco-nuts are split, and given, one half to her, the other half to her husband (*JAI* iv. 375). When the mother is returning to ordinary life, in some of the tribes of New South Wales part of her hair is burnt off: this is doubtless a ceremony of purification (*JAI* ii. 268). The Maori have two alternative ceremonies to deliver the mother and child from *tapu* and make them *noa* (common). The one consists in the cooking on new fire (made by friction) of fern-root, which is waved over the child and brought into contact with it, and then offered to the *atua* (gods or ancestral spirits). In the other, mother and child are sprinkled with water by means of a branch, food is offered to the *atua*, and the branch is planted in the ground; if it grows, the child will become a warrior (*JAI* xix. 98).

Much more complex rites, elsewhere repeated, are required to restore the new mother to purity. The Hopi mother must not see the sun or put on her moccasins until the fifth day. She then bathes her head and her baby's with amole, and is at liberty to go out of doors and to resume the charge of household affairs. She is not, however, fully cleansed. She cannot yet eat meat or salt, and may drink only warm water or juniper-tea. The bathing must be repeated on the tenth and fifteenth days. On the twentieth day a much more elaborate rite takes place, including a vapour-bath administered to the mother, usually by her husband's mother or sister. The house is thoroughly cleansed. The child is formally bathed and rubbed with corn-meal, named, and presented by the mother to the sun at the moment it rises above the horizon. In the house a feast is prepared, and presents are made to the guests in return for those which the mother has received from them during her confinement (*Journ. Am. Ethn. and Arch.* ii. 165). Here it will be observed that the unbroken series of ceremonies culminating on the twentieth day effects the restoration of the mother to purity, and at the same time the purification and naming of the child. Mother and child are thus admitted together into the community. In some cases, as we have already observed (§ 1 (*d*)), father, mother, and child are simultaneously thus purified and admitted.

But while it may be possible in many stages of society for a mother to remain for a length of time under the ban, this would be very inconvenient, not to say impossible, for the father, upon whom lies the duty of providing for the wants of his family. As a rule, therefore, his tabu is light and easily got rid of, while that of the mother may extend over a lengthened period and be only progressively removed. Suckling often goes on for a lengthened period—two, three, or even four years. Among many peoples the mother is in some degree unclean until the child is weaned: she may not eat certain food or have matrimonial relations with her husband. This rule is general, for example, among the Bantu and negro tribes of Africa, and is the excuse given for the polygyny so largely practised by those peoples. The same rule applies to the Sakalava of Madagascar; but it is said that, although the Southern Sakalava woman is tabu at this time to her husband, she may admit to her bed any other man, subject to a fine payable to the husband if he discover the infidelity (van Gennep, *Tabou et Totémisme*, 1904, p. 168).

The tabu on the mother is practised also in Europe. The rule is very general that she must not go outside her home until she goes to be churched. Before that ceremony she is distinctly regarded as impure. Special precautions must be taken to drive away the powers of evil. She must eat apart; she must not work; she must not enter another house lest she bring ill-luck. When she goes to be churched (usually on the fortieth day), she steps over a hatchet or a knife fixed in the threshold of the house; a flaming brand or a packet of salt is thrown after her. On her return a feast is provided to celebrate her re-entry into ordinary life. In Karpathos the mother takes her child and a jug of water to church. The water is blessed after the churching ceremony. She then visits her neighbours, sprinkling water from the jug at each house, 'that your jugs may not break.' As she crosses the threshold she puts the handle of the door-key into her mouth, 'to make the plates as strong as the iron of the key' (Bent, *loc. cit.* p. 205). Newly fortified and cleansed by the rites she has undergone, she is no longer *tabu*, a centre of infection, but, with her child in her arms, a fountain of beneficent and in particular of prolific influence; and the interpretations of her proceedings just quoted must not be taken literally.

The foregoing general account of the rites and superstitions connected with birth is, of course, the merest sketch. But it is believed that it will suffice to give a notion of the meaning of, at all events, the most important and wide-spread customs, and of the ideas attached to them. See also BAPTISM, CHANGELINGS, CHARMS AND AMULETS, DIVINATION, EVIL EYE, FAMILY, INFANTICIDE, NAMES, PURIFICATION, TABU, TWINS.

LITERATURE.—The best general accounts of birth customs and superstitions are to be found in *Das Kind in Brauch und Sitte der Völker*, by H. Ploss, 2nd ed., 2 vols., Leipzig, 1884, and *Das Weib in der Natur- und Völkerkunde*, by the same author, 3rd ed., edited by Max Bartels, 2 vols., Leipzig, 1891, and subsequent editions. For the customs and superstitions of particular peoples, reference may be made to the various works cited above, and to others too numerous to mention here. In this, as in other departments of anthropology, there is now a large accumulation of materials in monographs, works of scientific explorers and missionaries, the journals of anthropological (including folklore) and geographical societies, and the publications of American and European museums and universities, and of the Bureau of Ethnology at Washington.

E. SIDNEY HARTLAND.

BIRTH (Assyro-Babylonian).—With the Assyro-Babylonians, as with other nationalities, especially the Semites, the birth of a child was an event of importance, and all the more so if the newborn happened to be a male. It is true that records of births are rare, but the attention paid to such events may be judged from the reference to the 'geometrical number' in Plato's *Republic*, viii. 546 B–D.* Even the ideal city, it is there stated, will come to decay, the cause thereof not being in the city itself, but from without. This degeneration was brought about by wrong or inopportune marriages and births. Plato then constructs a 'geometrical number' out of the elements which express the shortest period of gestation in man (216 days), the number in question being 12,960,000, which he calls 'the lord of better and worse births.' The connexion of 216 with 12,960,000 is rather complicated, but the former may be obtained by cubing 3, 4, and 5, and adding together the results. These numbers are also the elements of the Bab. sexagesimal unit (60), which, multiplied three times by itself, produces the 'geometrical number' referred to. As that high number, and numerous others connected with it, are found in the Assyr.-Bab. mathematical texts, there would seem to be no doubt that both that and the idea connected with it originated with the older of the nations which have handed down to us the tablets. It is natural that parents should desire to have fine and healthy offspring, but, in addition to this, the Assyro-Babylonians seem to have sought the improvement of the race by trying to arrange that births should take place at the proper time—with them, the periods when the moon had reached certain positions, either in its phases or in its course, probably the former. The numbers expressing these positions are contained in the British Museum fragment 80-7-19, 273, and are all fractions of the 'geometrical number.' They show the progress of the phases of the moon, culminating on the 15th (the moon's 'Sabbath'*), and decreasing afterwards.†

Naturally, there is at present much doubt as to how these numbers were used in deciding the times for propitious births, but certain celestial forecasts referring to the moon will give an idea of the method employed. Thus, if on the 16th of the month Tammuz an eclipse of the moon, or on the 16th of Chislev an eclipse of the sun, take place, pregnant women, it is said, will not have their offspring prosper (a variant has 'their offspring will fall').‡ This is the day after the moon was regarded as reaching its maximum fullness; and as that date would be an unexpected time for an eclipse, it seems to have been regarded as an evil omen. Independently, however, of the lunar numbers and dates influencing births, the moon was supposed to affect the offspring in other ways; for, when a halo surrounded our satellite, women, it was believed, would bring forth male children. Also, if the star Lugala or Šarru, 'the king' (*Regulus*, Merodach), stood in its place, women would likewise bring forth male offspring.§

Notwithstanding the moon's importance in its influence over births, it seems to have been less regarded than Ištar or Venus, and that goddess less than Zēr-panîtum, the spouse of Merodach, as is indicated by the name *Eru'a*, 'conception,' or the like, which she bore. It is on this account that, in the bi-lingual legend of the Creation, she appears under the name of *Aruru*, as the one who formed, with Merodach, the creator of all things, the seed of mankind.‖ Among the names of Ištar-Zēr-panîtum bearing on this subject were *Ama-du-bat = ummu pitât burki*, 'the mother who openeth the loins'; *Nagar-šaga*, 'the framer of the fetus'; *Šasuru*, 'the goddess of the fetus'; *Nin-tur*, 'the lady of the womb'; *Nin-zizna = bêlit binti*, 'the lady of birth (?)'; *Nin-dim*, 'the lady of procreation'; *Ani*, *Ama*, *Mama*, and *Mami*,¶ all, apparently, meaning 'mother.' It will thus be seen that the Assyr.-Bab. name of Zēr-panîtum (for Zēr-banîtum, 'seed-creatress'), which she bore (often transformed by Assyriologists into *Ṣarpanitum*, 'the bright one'), is more than justified.

In addition to his spouse, however, Merodach himself appears as a deity of generation, or god of birth—whether by reflexion, as it were, of his spouse Zēr-panîtum, or because he was regarded as 'begetter of the gods,' is uncertain; though the theory of reflected power is possibly the right one, since Merodach was the creator of the gods only because identified with them—an identification due to the theory by which, after the rise of Babylon (the city of which he was patron), the

other gods, including the older ones, became merely his manifestations. The name which he bore in this connexion was Tutu,* which is rendered *mûllid ilâni, mûddiš ilâni*, 'begetter of the gods, renewer of the gods.'†

Children being naturally desired, it is not to be wondered at that a letter should exist congratulating a woman that she was likely to become a mother. In this text Arad-Bêl writes to Epirtum, whom he calls his sister,‡ 'My heart hath rejoiced that thou art *enceinte* (*libbûa ilṣi* (?) *kî târi*).'§ Notwithstanding this natural desire, however, the Babylonians believed in the existence of certain stones and plants, of which they presumably made use, which furthered or prevented not only love, but also conception and bearing—*âban êri, âban lâ êri*, 'stone of conception, stone of non-conception'; *âban âlādi, âban lâ âlādi*, 'stone of bearing, stone of not-bearing'; *šammi êri, šammi lâ êri*, 'plant of conception, plant of non-conception'; *šammi âlādi, šammi lâ âlādi*, 'plant of bearing, plant of not-bearing.'‖ The 'plant of bearing' is referred to in the Etana-legend, in which the hero says to the sun-god Šamaš: 'Give me then the herb of bearing—show me then the herb of bearing! Bring forth my offspring and shape for me a name.' Whether this implies that a glance at the plant was sufficient is uncertain; in all probability a potion was made from the herb which one or both of the prospective parents had to drink. The sun-god tells Etana how to acquire the plant, and he goes and asks the eagle, which is one of the personages in the legend. It was probably in search of this plant that Etana, on the eagle's back, mounted up to heaven, and apparently appealed to the goddess Ištar; but the mutilation of the record deprives us of the sequel.¶

References to birth-rites in the Assyr.-Bab. inscriptions are rare, but there is every probability that the present material will be greatly augmented by the discovery of further stores of inscribed tablets. In the account of the birth and exposure of the infant Sargon of Agadé by his mother, there is no reference to any ceremonies or incantations which she may have made on his behalf. In all probability, however, the mother of a newly-born infant was regarded as being incapable of initiating any prayers or ceremonies herself, and another person, possibly a priest, would seem to have been employed to perform the duty. The British Museum fragment K 879 has apparently part of a prayer, or incantation, recited on behalf of a pregnant woman and her prospective offspring:

'The woman . . . .
Her binding, which is before thy divinity, may it be relieved;
. . . . safely may she bring forth—
May she bring forth, and may she live; may what is there prosper.
Into the presence of thy divinity safely may she go,
Safe[ly may she bring forth, and] may she perform thy service.'

This fragment, which has neither beginning nor end, is bi-lingual, having been used by the Sumero-Akkadians as well as by the Semitic Babylonians.

A rather remarkable reference to creation and birth occurs in the 4th column of the legend of Atarpi, or, as Jensen* reads the name, Atar-ḫasis (the Chaldæan Noah, if this be correct). Apparently the mother-goddess, Maḫ or Mami (Zēr-panîtum, the spouse of Merodach), after uttering her incantation, threw down clay, and detached therefrom 14 pieces, laying 7 to the right and 7 to the left, placing a brick or tile between. Then, seemingly, she called out, 'Women, husbands!' There were 7 and 7 fetus (representatives of future living things)—7 were made male, and 7 female—fate formed (each) fetus. 'Forms of human beings Mami shaped them.' In the house of the undelivered woman about to bear, a brick was to be placed for 7 days, for the protectress (?) of the house, Maḫ, the spouse Mami. They (apparently the fetus) were to become swarms (?), and there was to be joy in the house of the undelivered woman. When the woman about to bear brought forth, the mother of the child was expected to withhold (?) (her)self. Two mutilated lines follow containing the words *zikaru*, 'male,' and *elli-*. . , probably part of *ellitu* (*-ti, -ta*), 'pure,' suggesting that she was to keep from men, and purify herself. This text being exceedingly difficult, there is much therein which is doubtful, but the words which are certain make it a valuable contribution to the subject of the ritual attending births in Babylonia. It is not implied in this inscription that images of children were made when the birth of a child was expected, but the brick, which is referred to, was probably regarded as sufficient. It would seem to have typified the building up of the house or family.

Tablets of late date show that the hour of birth was carefully noted, and celestial observations were made for the purpose of casting the horoscope, if the child was a male; and, probably, other ceremonies followed. If a conclusion may be drawn from the tablet K 1285, it would seem that, at least in the case of the children of people of note, certain ceremonies took place in the temple of Ištar, and also, perhaps, at the fanes of other deities:

'Young wast thou, Aššur-bani-âpli, whom I (Nebo) left unto the Queen of Nineveh:
A suckling wast thou, Aššur-bani-âpli, whom I satisfied on the lap of the Queen of Nineveh;
The fullness of the teats which are placed in thy mouth, twain thou suckest, twain thou pressest to thy face.'†

The expression, 'Queen of Nineveh,' has the determinative for divinity before it, showing that the personage intended is none other than Ištar, the patron of that city. The third line of the extract has the verbs in the present tense, probably to give the phrase greater vividness.

Naturally certain days of the month, and probably certain months of the year, were regarded as especially lucky for births. At the time of the dynasty of Babylon (about 2000 years B.C.), such names as 'the son of the 20th day' (*Mâr-ûmi-ešrâ*) are met with; and from a student's exercise-tablet of late date, we learn that the 20th was the festival of the sun-god, not because, according to the Calendar in the British Museum,‡ eclipses could then take place (the days quoted are the 20th of Sivan, the 20th of Tishri, and the 20th of Chislev, the common expression, *antalu ilu Šamaš*, 'eclipse of the sun,' being used), but probably because, after the eclipse, the sun was regarded as shining victoriously. *Ululâa* (*Elulâa*=*Elulæus*), 'he of the month Elul,' and *Ṭebetâa*, 'he of the month Tebet,' are also found; but though this, to all appearance, records the month of the

* The word for 'bring forth,' 'beget,' in Sumero-Akkadian, was *utu*, of which *Tutu* is evidently a reduplicate form.

† In what way Merodach was regarded as the renewer of the gods is uncertain; the phrase may refer simply to the 'captive-gods,' who had been Tiamat's helpers in the fight with her. He is said to have visited them in prison and comforted them, apparently with the promise of ultimate release.

‡ Probably a term of affection for a beloved wife, as in Heb. (cf. Ca 4⁹ ‖ כַּלָּה, 'bride'), etc.

§ Campbell Thompson, *Late Babylonian Letters*, 1906, No. 40. The text is not certain in some places.

bearer's birth, it is doubtful whether any lucky omen was attached thereto.

As may be gathered from the reference to fate forming each fetus, the Babylonians seem to have believed that the sexes were foreordained by the gods, who were the 'makers of fate.' A disturbing element probably existed in the influence of Tiamat, the spirit of confusion, and on this account they believed also that there was nothing absolutely constant in nature, and that the species could change, so that a woman, or a sheep, might bring forth a lion, etc., and infants might have parts of the body like those of animals, such as the eye of a boar, the ear of a lion, etc. To all these departures from the normal, omens were attached; and in all probability they were regarded as being sent by the gods for the information or the warning of men. The following will give some idea of the nature of these forecasts:

'If a woman has brought forth, and there is the ear of a lion, there will be a powerful king in the land.

If a woman has brought forth, and its right ear does not exist, the life of the prince will be long.*

If a woman has brought forth, and its right ear is small, the house of the man will be destroyed.

If a woman has brought forth, and from the first his head is filled with grey hairs, the life of the prince will be long.*

If a woman has brought forth 2 males, there will be hardship in the land, etc.

If a woman has brought forth twins for the second time, that country will be destroyed.

If a cow has brought forth 3, and (they are) 2 male and 1 female, hardship of a year—the harvest will not prosper.'†

These omens are exceedingly numerous, and often very difficult to translate.

LITERATURE.—The literature has been given in the foot-notes.

T. G. PINCHES.

BIRTH (Celtic).—The data concerning the birth-rites of the pagan Celts are lamentably scanty. Aristotle (*Politica*, VII. xv. [xvii.] 2) records that 'many of the barbarians have the custom either of plunging their newborn children (ἀποβάπτειν τὰ γιγνόμενα) into a cold river, or of putting on them scanty covering, as among the Celts.' The Emperor Julian states (*Orationes*, ii.) that with the Celts (though with him this may mean the Germans) the father placed his newborn child on a shield, which was put in the Rhine. If the child was legitimate, the shield would float, but otherwise it would sink, thus affording a test of the fidelity of the mother to her husband. The only other passage which seems to bear upon the birth-rites of the Continental Celts is the curious statement of Strabo (p. 165), that among the Celts, as among the Thracians and Scythians, 'the women themselves, after giving birth, go on with agriculture and also tend their husbands, putting them to bed in their own steads.' This implies the couvade (above, p. 635ª); but this custom is reported in Europe only of the Corsicans (Diodorus Siculus, v. 14)—a fact which would seem to imply a confusion on the part of Strabo between the Celts and the Iberians, a race entirely different ethnologically (cf. Schrader, *Reallexikon der indogerm. Altertumskunde*, Strassburg, 1901, p. 347 f.; Hirt, *Indogermanen*, Strassburg, 1905–7, p. 717 f.; in favour of the Celtic explanation, Jullian, *Recherches sur la religion gauloise*, Bordeaux, 1903, p. 64 f.). At the same time, it should be noted that, whatever its racial origin, the couvade existed, at least in clear reminiscence, to a late period in Provence, as is shown by the Picard romance of *Aucassin et Nicolette* (probably early 13th cent.), ch. 39. Another apparent survival of ancient custom is recorded from a 14th cent. source by Ploss (*Das Weib*, Leipzig, 1885, ii. 70), to the effect that no woman was allowed to give birth to a child on certain islands in the mouth of the Loire, but when her time approached was sent to the mainland or placed in a boat in the river until the child was born. Herein, as Ploss notes, we may have a reminiscence of an island, sacred to 'Dionysus,' at the mouth of the Loire (described by Strabo, p. 198), where only women dwelt, all sexual intercourse (which, like birth, would thus be ceremonially impure in Celtic religion) being held on the mainland (but cf. below, p. 692 f.).

* Lit. 'the days of the prince will be old.'

† From *WAI* ii. pl. 65, No. 1, obv. lines 1, 2, 4, rev. line 7; Boissier, *Documents relatifs aux présages*, Paris, 1894–99, p. 115, verso 11, p. 116, 19; and B.M. tablet K 78, ll. 2–8.

The pagan Irish material on birth-rites is still more meagre. According to Stowe MS, No. 992 (ed. and tr. Meyer, *RCel* vi. 173 ff.), Ness, when about to become the mother of Concobar, 'went to the meadow that was on the bank of the river Concobar. There she sat her down on a flagstone (*nos fuirim iarum for in licc cloichthi*) that was on the brink of the river. So there came the pangs of childbirth upon her.' Too much must not, however, be drawn from this, for the *Cóir Anmann*, 213 (ed. and tr. Stokes, in Stokes and Windisch, *Irische Texte*, Leipzig, 1880–1905, iii.), states that a band of girls (*inghenraidh*) kept watch round a prospective mother. After the birth had taken place, the mother 'waited for a lucky hour for the child' (*ib.* 273), *i.e.* probably for the casting of the horoscope, etc. Thus the Druid Cathfaidh observed omens from the stars, the clouds, and the age of the moon immediately after the birth of Déirdre (Hyde, in *Zeit. f. kelt. Philologie*, ii. 143). In the case of the infant who afterwards became the hero Conall Cernach, 'Druids came to baptize the child into heathen baptism, and they sang the heathen baptism (*chansat an mbaithis ngeintlidhe*) over the little child' (*Cóir Anmann*, 251).

LOUIS H. GRAY.

BIRTH (Chinese).—The customs which are observed in China, in connexion with child-birth, differ widely in the various portions of the Empire, and it would be almost as difficult to describe them in general terms as to include in one article 'Birth customs in Europe.'

Many of these customs are significant of religious preconceptions, though it is not always possible to trace the connexion, owing to the gradual deflexion from the ancient usage; and modern explanations tend to emphasize the physical benefits which are supposed to accrue from these observances.

It should be remembered that the elaborate preparations which are made previous to birth are intended to secure not only a happy issue to the anxious crisis—the safety of the child and mother—but their first and primary purpose is to prevent the awful contingency of death before delivery, which would involve the mother in endless torments in the 'Lake of Blood,' which is the special department of the under-world reserved for such unfortunates. From this point of view, therefore, the anxious care which surrounds the birth-chamber may be said to be replete with religious significance.

A month previous to the expected date of birth, the bride's mother, or other near relative on that side of the house, is expected to arrive with the accustomed gifts, and perform the office known as 'undoing the fastening.' The gifts include eatables, various articles of clothing required by the expected arrival (in the South, it seems, no provision of this kind is made), and tonics for the mother with a view to producing a quiet and successful parturition. Charms from the neighbouring temple are sometimes procured to fasten on the baby's body as soon as born, for the event is supposed to be attended by hosts of

spirits with malicious designs upon both mother and child.

As soon as the birth-pangs begin to be felt, the female members of the family hasten to light candles and burn incense before the ancestral tablets, in the little shrine over the main partition of the entrance hall, and also in front of the 'god of wealth' and the 'kitchen god,' offering extempore prayers, as no settled form is provided for the occasion, and taking vows of future deeds of merit in the event of a favourable response—and all with a view to securing the assistance of the 'birth-speeding goddess,' who is supposed to have the ordering of such affairs. The midwife is at the same time summoned, together with other assistants, whose office it is to 'clasp the waist' of the expectant mother, who is maintained in a sitting posture throughout the ordeal, and is encouraged to drink a brew of dried 'longan' fruit and thin gruel to sustain her, together with certain medical potions which are held to be very efficacious. Red candles are lighted in the chamber, as for a wedding, and all words of ill-omen are carefully omitted—the idea being the ostentation of a cheerful confidence, and the avoidance of any suggestion of ill or fear.

As soon as the child is born, a messenger is despatched to the nearest lake or pond to procure a small quantity of water, which is then heated for the baby's first bath. (The bath is in some places postponed till the 3rd day; in the farther North it is generally omitted, and a little oil dabbed on the body instead.) The use of such water is said to ensure that the child, when he grows up, will become an expert fisherman. After the bath the child's body is rubbed dry with alum (in some places a raw egg is applied). A pad of fresh cotton-wool is placed over the navel, and the umbilical cord, which is cut at about a foot's length from the body, is rolled up and tightly bound, the long end sloughing away in about a week. The infant's clothes are then put on, in shape like the robes of a Buddhist *bonze*, or monk, probably with a view to deceiving the malignant spirits. (In the South, old garments warm from the wearer's body are put round the child in lieu of baby-clothes.) The male and female 'guardians of the bed' are then respectfully 'worshipped.' The placenta and its attachment are placed in a bottle, hermetically sealed, and put under the bedstead, or sometimes disposed of for the manufacture of pills.

No food is given to the infant during the first twenty-four hours, but at the end of this period three tea-spoonfuls of a liquid compounded of materials representing the five flavours—salt, sour, bitter, pungent, and sweet—are administered before the first drop of milk is allowed. The infant is not supposed to sample its own mother's milk until it has first been supplied from another household, where a baby of the opposite sex is being reared. A bowlful of this milk is obtained, and artificially warmed before being given to the child. A second bath is sometimes administered on the 3rd day, and a great number of articles are presented to neighbours and friends, each symbolical of some good wish, and duck-eggs dyed red are also sent, with the idea of advertising the fact of birth.

At the end of the first month the elaborate ceremonial of head-shaving takes place, and the various gods are 'invited,' *i.e.* by offerings of food, lighted candles, fireworks, etc. The baby-hair is shaved off with the exception of a little spot over the fontanel, which is allowed to grow and is called the 'filial lock.' In the afternoon the ancestors are 'worshipped,' and then follows a feast to which the neighbours and others are invited, each guest arriving armed with some gift, generally some object of superstitious use, such as silver necklets or bangles, which are supposed to moor the infant in the harbour of life, in view of the terrible mortality which prevails amongst young children in China. The child is sometimes taken out for an airing on this day, dressed in all the finery which can be imposed upon him, with amulets and charms to protect him from evil influences—a row of silver-gilt genii upon his bonnet, or perhaps a bright mirror to ward off the evil eye. In some of the country districts he is placed in a boat and subjected to violent rocking, to accustom him to the motion, or he is carried over a bridge in the hope that he may have a 'rise in life,' and also be able to keep his head when high promotion comes.

On the fortieth day the mother goes to the temple to offer incense (in some places, in the case of a boy being born, she goes on the 30th day), and to acknowledge the good hand of the gods in her safe delivery and happy fortune.

W. GILBERT WALSHE.

BIRTH (Egyptian).—A tale dating from the end of the Middle Kingdom relates how the wife of the priest of Rē in a local temple gave birth to three sons destined to be kings of Egypt. Four goddesses, Isis, Nephthys, Hōki (*Ḥq·t*, the frog-goddess, consort of Khnum), and Meskhōni (see below), officiated as midwives, having disguised themselves as strolling dancers, while Khnum accompanied them as baggage-carrier. They accepted a bushel of barley for their services; and the mother, we are told, was purified for 14 days ('Le roi Khoufoui et les magiciens,' in Maspero's *Contes popul. de l'Egypte ancienne*[3], 1882, pp. 36–40; Petrie, *Egyp. Tales*, 1895, i. 33 ff.). At Deir el-Bahari is pictured the divine birth of Queen Hatshepsut amidst a crowd of deities of birth, food, fortune, etc. (Naville, *Deir el Bahari*, 1898–1901, iii., plates xlvii.–lv.), and at Luxor that of Amenhotep III. (Champollion, *Monumens*, 1825, pl. cccxl.–xli.; Gayet, *Temple de Louxor*, pl. lxv.).

The name of Meskhōni, the goddess perhaps of female functions, is generally characterized by a brick, referring to that which supported the mother, or on which the child was laid. In Ex 1[16], where late Egyptian customs may be reflected, the Hebrew women are represented as delivered on 'stones,' *i.e.* bricks (?) (cf. Spiegelberg, *Randglossen z. AT*, p. 19); and the Coptic *Apocalypse of Elias* (4th cent. A.D., ed. Steindorff) still refers to the 'birth-stool' as 'the brick.' A wooden couch is also figured early as the 'determinative' of Meskhōni as well as in the birth scenes, and probably among the wealthy the brick had only ceremonial importance. The word *tōbi*, 'brick,' is feminine, and the birth-brick, figured with the head of a goddess, is present in detailed illustrations of the Psychostasia; in the Papyrus of Ani (Brit. Mus., ed. Budge) it is accompanied by Shai the god of Fate and the goddesses Meskhōni and Ermūti (*Rnn·t*, 'the Nurse'); in that of Anhai (Brit. Mus., ed. Budge) two bricks with female heads are named Shai (masc.) and Ermūti respectively. In a funerary papyrus at Edinburgh of the year 11–10 B.C. the deceased is stated to have completed the years which Thoth wrote upon his birth-brick (Brugsch, *Rhind's Zwei bilingue Papyri*, 1865); and in the Westcar Papyrus, quoted above, it is Meskhōni who approaches each child laid on its brick-cradle and pronounces its destiny.

In stories dating from the New Kingdom, the Hathors, seven in number in one text, pronounce the destiny; these may include the birth-goddesses already mentioned (Maspero, *l.c.* p. 51). Horoscopes have not been traced with certainty in

Egypt before the Roman age; but some traditions assigned to Egypt the invention of the art, and there are star-tables in two of the royal tombs of the New Kingdom at Thebes which may have been horoscopes (Petrie, *History*, vol. iii.). The day of birth was a day of rejoicing, but nothing is known of ceremonies for it. Circumcision of the child was not performed before puberty. A collection of gynæcological prescriptions for medical, not surgical, treatment dates from the XIIth Dyn. (Griffith, *Kahun Papyri*); and receipts for ascertaining conception and determining the sex or the vitality of the infant to be born are found in the Ebers Papyrus, in a Berlin text published by Brugsch, and in the London and Leyden Magical Papyrus of the 3rd cent. A.D. (Griffith and Thompson). Erman has pnblished a collection of spells for the nursery (*Zaubersprüche für Mutter und Kind*, Berlin, 1901). The word *misi*, 'to bear,' is written , properly three jackals' tails or skins made into a fly-flap, the name of which had this sound; but possibly it was a birth amulet, for in modern Nubia dead jackals laid above the door of the house are considered to protect women from miscarriage, etc. (Blackman, in *Man*, 1909, p. 10).

F. LL. GRIFFITH.

BIRTH (Finns and Lapps).—The only important rites connected with birth among the Finns and Lapps are those purificatory ceremonies which belong to what may be called a form of baptism (see also BAPTISM, p. 372ᵃ). The existence of a non-ecclesiastical form of infant baptism among the Lapps is witnessed to by Norwegian missionaries of the 18th century. The fullest description of this ceremony is found in E. J. Jessen's 'Afhandling om de norske Finners og Lappers Hedenske Religion,' pp. 33–42 (printed as an Appendix to Knud Leem's *Beskrivelse over Finmarkens Lapper*, 1767; cf. also *ib.* pp. 495–497). After the child was brought home from the official baptism in church, where it had received a Norwegian name, it could not be washed or brought into contact in any way with water until it was baptized anew with a Lapp name (*same-nabma*). The pregnant mother, who had placed herself under the protection of the *sarakka* ('creator woman'), had had the name revealed to her by a deceased person in a dream, or she had been informed, by means of the magic drum, which of the deceased meant to come to life again in the child. The baptism was not administered by the magician but by a woman, usually the mother herself. The so-called *risem-edne* ('twig-mother'), who must not have acted as Christian godmother (*Christ-edne*), presented the child with a ring or plate of brass (*nabma-skiello*), which was thrown into the baptismal water. After the ceremony this piece of brass was placed upon the child to be worn as a talisman—in the case of a son, under the arm; in the case of a daughter, upon the breast. Before the baptism both the child and the water were dedicated to the *sarakka*. Baptism with the Lapp name was regarded as one of the two sacraments of the *sarakka*.

This baptism, which was resorted to in order to secure happiness and good health for the child, often proved insufficient. If the child fell sick or cried a great deal, it was once more re-baptized and received a new name, the so-called *udde-* or *adde-nabma*, or *saivo-nabma* ('under-world name'). This fresh bestowal of baptismal names might be repeated again and again in case of sickness, even in later years. It, too, was administered by a woman, the *laugo-edne* ('wash-mother'), with almost the same ceremonies as the other.

Warm water was poured into a trough, and two birch twigs—one in its natural condition, the other bent into a ring—were laid in it. At the same time the child was thus addressed: 'Thou shalt be as fertile, sound, and strong as the birch from which this twig was taken.' Then the copper (or silver) talisman was cast into the water, with the words: 'I cast the *nabma-skiello* into the water, to wash thee; be as melodious and fair as this brass (or silver).' Then came the formula: 'I baptize thee with a new name, N.N. Thou shalt thrive better from this water, of which we make thee a partaker, than from the water wherewith the priest baptized thee. I call thee up by baptism, deceased N.N. Thou shalt now rise again to life and health, and receive new limbs. Thou, child, shalt have the same happiness and joy which the deceased enjoyed in this world.' As she uttered these words, the baptizer poured water three times on the head of the child, and then washed its whole body. Finally she said: 'Now art thou baptized *adde-nabma*, with the name of the deceased, and I will see that with this name thou wilt enjoy good health.'

In the so-called Näro MS of J. Randulf, published by J. Qvigstad (*Det Kgl. norske Videnskabers Selskabs Skrifter*, 1903, No. 1, pp. 53–55), there is mention only of a species of Lapp baptism which was administered immediately after the church baptism, or at latest within half a year, in cases where the child fell sick. In this baptism the child received a new name, *ude-nemo*. The ceremony was performed on a Thursday, in the name of the three chief Lapp gods, borrowed from the Scandinavians, namely, *Hora-Galles* (Thor), *Waralden-Olmay* (Freyr), and *Bieka-Galles* (Njordr). There was a thrice repeated pouring of water on the child. According to a supplementary note by J. Kildal, the child was baptized in the name of the *Maylmen Radien* ('world-ruler'). It is stated by S. Kildal (*Det skandinaviske Litteraturselskabs Skrifter*, vi. 458 f.) that the name selected was that of the father or grandfather.

Outside the sphere of Norwegian Lapps, our only information concerns a formerly Lapp district in N. Finland, and is to the effect that among the Finn new settlers on the rivers Kemi and Ji, about the year 1750, a re-baptism with a new name (*uusi nimi-kaste*) was not unknown. As late as the year 1803, a peasant, Erik Lampela of Tervola, who had long been an invalid, is said to have caused himself to be re-baptized at Izak, and to have recovered (J. Fellman, *Anteckningar under min vistelse i Lappmarken*, ii. 51–52).

That Lapp infant baptism is an imitation of the Christian ordinance is sufficiently proved by the existence among the Norwegian Lapps of a second sacrament of the *sarakka*, which is an imitation of the Eucharist. A similar 'nature-woman,' 'creatrix,' in magic songs of the Finns is a metamorphosed form of the Virgin Mary; and in like manner the *Radien* (father, wife, child) on the magic drums of the Lapps stand for the Trinity in its popular-Catholic form. Another Christian feature of the ceremony is the thrice repeated pouring of water. The use of a talisman of brass does not point to an original stage of Lapp civilization; it is a case of borrowing from the neighbouring Scandinavians—a conclusion that is confirmed by the mention of the three principal Scandinavian deities. The latter still survived in the popular faith of the Lapps, and their presence is in no way inconsistent with a borrowing of infant baptism during the Catholic period of Scandinavia. It is possible, however, that Lapp infant baptism had already been introduced by half-pagan Scandinavians.

The baptism in question must be distinguished from the bestowal upon the child of the name of an ancestor who was supposed to come to life again in the child's person. The determination of the

name by a revelation in a dream or by the oracle of the magical drum is no doubt a primitive Lapp custom. As late as 1534 the Finns under the dominion of Novgorod (the Chudes) had oraclemen whom they summoned to give a newborn child its name—a ceremony which they performed 'in their own peculiar way.' The magician of the Finn-Ugrian Mountain Cheremisses adopts the following method in bestowing the name. Taking the child in his arms, as it is on the point of screaming, he begins a list of names, swaying the child to and fro as he speaks; and that name which he happens to be uttering when the crying ceases is the one selected. The magician of the adjacent Chuvasses—a Finn-Turkish hybrid race—is called to the child, and is received with tokens of the greatest respect by the domestics and the assembled guests, who with one voice express the desire that he will give the child a name of good omen. He takes a bowl of water in his hand, mutters certain words over it, and gives both the mother and the child to drink. Then he works himself into an ecstasy, and at last bestows upon the child a name which he professes to have received by Divine revelation (see Julius Krohn, *Suomen suvun pakanallinen jumalanpalvelus*, pp. 104, 109).

KAARLE KROHN.

BIRTH (Greek and Roman).—I. Greek.—Amongst the goddesses to whom the Greek matron prayed in her throes, Eileithyia, Hera, and Artemis are the foremost (Preller-Robert, *Gr. Mythol.* i. 511 ff.). After these come a number of others, *e.g.* the Hekate-like Eilioneia of Argos, to whom a dog was sacrificed to ensure an easy delivery (Plut. *Qu. Rom.* 52); Genetyllis, who received a like sacrifice (Hesych. *s.v.*; cf. Roscher, ii. 1270; Rohde, *Psyche*, ii.[2], 1898, p. 81, 1); the Nymphs (Eur. *El.* 625 f., cf. F. G. Ballentine, *Harvard Stud.* xv. [1904] p. 74 ff.). Superstitious ceremonies, originating from the idea of binding and unbinding, whose purpose was to ease the birth, and whose age and origin cannot be fixed, are mentioned by Pliny (*HN* xxviii. 33, 34, 42; cf. 59; see also Philologus, lvii. [1898] p. 131). When the birth had ended happily, the women brought their clothes to Artemis as an offering (*Anth. Pal.* vi. 271; schol. *ad Call. Hymn.* i. 77); Artemis Brauronia also received the clothes of women who had died in childbed (Eur. *Iph. Taur.* 1465 ff.). When a child was born in Attica, if it was a boy, an olive-wreath was hung on the outer door; if a girl, a woollen fillet was used, 'because of the spinning of wool' (Hesych. *s.v.* *στέφανον ἐκφέρειν*). This rationalistic explanation must, of course, be discarded; the underlying artificial differentiation is to be regarded as comparatively late, if, indeed, Hesychius' words correspond to facts. At any rate, a wreath with a woollen fillet attached must be considered as the primary form. The fillet enhances the effect of the wreath. The purpose of the wreath, which still hangs on the door at the *amphidromia* (see below; cf. Ephippos in Athen. p. 370 C), is not, as Rohde (*op. cit.* 72, 1) and Samter (*Familienfeste der Gr. und Röm.* 87) suppose, to lustrate the house, *i.e.* to cleanse it from impurity; it is apotropæic: the luck which it brings drives away ill luck. The woman who is lying-in and the newborn babe require such protection, for they are weak. The numerous amulets, with which it is the custom everywhere to deck small children, have the same purpose. And an olive-wreath is expressly mentioned as one of the protectives given to Ion by his mother when she exposed him (Eur. *Ion*, 1433, Kirchhoff). According to the belief of the Cora Indians, 'the dead would come and harm the (newborn) babe if (the father) did not fix branches of the zapote-tree into the door (Preuss, *ARW* ix. [1906] p. 466). Photius lays stress upon the apotropæic character of a similar rite (*Lex. s.v.* *ῥάμνος*), when he relates that, while a child was being born, the house was painted with pitch from thorn-bushes, in order to drive away the evil spirits.* A custom in modern Greece may serve as an analogy: newborn children are rubbed with sacred oil in order to protect them (Wachsmuth, *D. alte Griechenland im Neuen*, 79).

On the fifth day after the birth, the so-called *amphidromia* were celebrated (Plat. *Theæt.* 160 E + schol.; Harpocr., Suid., Hesych. *s.v.*; *Parœmiogr.* ii. 278). Some one, probably the father (the false reading *τρέχουσαι* in schol. Plat. *l.c.* is explained by the preceding words; cf. Preuner, *Hestia-Vesta*, 54 n.), ran round the hearth with the child in his arms. Friends and relatives came, bringing presents, especially polypi and cuttle-fish. The women who had assisted at the birth and had thereby become unclean (cf. Stengel, *Kultusalt.*[2] 148) cleansed their hands on this day. Banquets were held (Ephippos in Athen. 370 D; Eubulos, *ib.* 65 C); a special kind of bread was baked, if we can trust the incoherent record in the *Etym. Mag. s.v.*; a sacrifice was probably among the celebrations (Plaut. *Truc.* 423 f.). Perhaps the father decided on this day whether he wished to keep the child or to expose it (Plat. *Theæt.* *l.c.*). Hesychius records an important trait (*s.v.* *δρομιάμφιον ἦμαρ*); according to him the rite of running round the hearth was performed naked. This, too, is a case of ritual nakedness (cf. *e.g.* Deubner, *de Incub.* 24; Abt, 'Die Apologie des Apulejus,' *Religionsgesch. Vers. und Vorarb.* iv. 246, 1).

Opinions regarding the meaning of running round the hearth are most divergent. The idea of the cleansing influence of the fire must probably be eliminated (Rohde, 72, 1); the interpretation as an ordeal (quoting Plato, *l.c.*, whose simile can, however, not be urged, in view of the decisive data of antiquarian literature), according to which the child originally lay in the fire during the *amphidromia*, is improbable (Gruppe, *Berl. philol. Wochenschr.* 1906, p. 1138).† According to some others, Samter has given the correct explanation (*Familienfeste*, 61), that we find here an initiative rite, which places the child under the protection of the domestic hearth. But this gives no reason for the running. Yet with this rite we seem to reach the lowest stratum of the rites celebrated on this day. By a comparison with folklore parallels, S. Reinach (*Cultes, mythes et religions*[3], 1908, i. 137 ff.) has rendered it very probable that this running round is to ensure fleet-footedness for the child.

In Esthonia the father of the child runs round the church, while the child is being baptized inside, so that it may learn to run quickly. With this compare the custom noted by Wuttke (*D. deutsche Volksabergl.*[3] 1900, p. 390), in accordance with which, when returning from the christening, the young godfather takes the child when they arrive at the front door, and quickly runs with it into the room to its mother. This is supposed to ensure that the child will become swift (Brandenburg), or will learn walking early (East-Prussia). In Melanesia, magic formulæ promote the child's walking and talking (*ARW* x. [1907] p. 306). The ancient Mexican festival of ear-piercing gives an interesting analogy. During this festival the children born within the last three years are led round a fire, and also lifted up high, so that they may grow tall. The feast is celebrated with a sacrifice, a banquet and dance (Stoll, *Geschlechtsleben in d. Völkerpsychologie*, 118).

Reinach's explanation is very suitable to a people which gave its favourite hero the epithet *ποδώκης* ('swift-footed'). The derisive answer of Vürtheim (*Mnemos.* xxxiv. [1906] p. 73 ff.) is not to the point. Scenes illustrating the *amphidromia* do not exist in Greek art.

On the tenth day after its birth the child received its name. This day, too, was a festive one, celebrated with sacrifices and banquets for friends

* A very artificial explanation is given by Rohde, *l.c.*, because he understands it to be a lustrative rite.

† Cf. Glotz, *L'ordalie*, 1904, p. 105.

(Eur. *El.* 1126, fr. 2 Nauck²; Aristoph. *Birds*, 494 and 922 f. + scholl.; Isæus, iii. 30. 70; Demosth. xxxix. 20, 22 [according to whom this festival signified the official recognition of the child], 24, xl. 28, lviii. 40; Harpokr. *s.v.* *ἑβδομευομένου* and *ἐνδεκάζοντας*; Hesych. *s.v.* *δεκάτην θύομεν*; Suidas, *s.v.* *ἀμφιδρόμια*, *δεκάτην ἑστιᾶσαι* and *δεκατεύειν*; Bekker, *Anecd. Gr.* i. 237, 26). A cake called *χαρίσιος* was baked, and was given, among other things, as a prize for a women's dance that was performed on this day (Eubulos in Athen. 668 D). Besides the tenth day the seventh was used for giving the name ([Aristot.] *Hist. An.* vii. 12; Harpokr. *s.v.* *ἑβδομευομένου*; Hesych. *s.v.* *ἕβδομαι*, cf. the *ἑβδόμη* as a children's festival in Lucian, *Pseudolog.* 16). The day fixed for this festival has varied in different epochs and districts, whereas the *amphidromia* were more important as being a specifically religious custom, and therefore held to their fixed day. For, whenever these are said to have been celebrated on the 7th (Hesych. *s.v.* *δρομιάμφιον ἦμαρ*) or 10th (schol. Aristoph. *Lysistr.* 757) day, or are brought into connexion with the name-giving (schol. Aristoph. *l.c.*; schol. Plat. *Theæt.* 160 E; Hesych. *s.v.* *ἀμφιδρόμια*), this is doubtless due to a blunder (cf. also Gruppe, *Berl. philol. Wochenschr.* 1906, p. 1137). The schol. to Aristoph. *l.c.* even commits the error of supposing a running *round the child*. (Similar mistakes occur elsewhere in our records; cf. *e.g.* the form *τρέχουσαι* above, schol. Plat. *l.c.*) It is not warrantable to infer a coincidence of *amphidromia* and *δεκάτη* from Eur. *El.* 654 and 1126 (Preuner, *Hestia-Vesta*, 54, 1), for l. 654 cannot be forced into closer concord with l. 1126. The uncertain notice about a sacrificial feast shortly after birth (Bekker, *Anecd. Gr.* i. 207, 13) probably refers to the *δεκάτη*.

Besides the presents brought at the *amphidromia*, there were also so-called *ὀπτήρια*, gifts presented to the child by those to whom it was shown for the first time (cf. Spanheim and Schneider, *ad Call. Hymn.* iii. 74). Slaves also gave the newborn babe a present (Terence, *Phorm.* 47). Censorinus (*de Die Nat.* 11, 7) mentions the celebration of the 40th day after the birth as a Greek custom. Even in our time the 40th day is still celebrated (cf. Wachsmuth, *op. cit.* 73 f.). But this would seem traceable to Jewish influence (Wachsmuth, *op. cit.* 74, 7). The rocking of the child in the *λίκνον*, which is explained as symbolical by Mannhardt (*Mythol. Forsch.*, 1884, p. 369 f.) and Dieterich (*Mutter Erde*, 101 ff.), must be eliminated from the birth-rites. Not only is the sense of the action not clearly thought out, but for such an explanation the rocking must form part of some *rite*, which it does not. On the other hand, the fact that the babe was put into the *λίκνον* is easily explained, for it was the natural object to use as a small child's cot in a primitive household.

2. Roman.—Roman women made offerings to the Nymph Egeria (cf. the Greek custom) during pregnancy (Festus, p. 77, 10), to ensure an easy birth. While the child was being born, Lucina and Diana (Tertull. *de An.* 39; August. *Civ. Dei*, iv. 11) or Numeria (Varro, *ap.* Non. 352, 34) were called upon. A candle was lit (Tertull. *ad Nat.* ii. 11), as also in Greece in our day a candle burning in the lying-in room has the power of repelling evil (Wachsmuth, *op. cit.* 79; cf. M. Vassits, 'Die Fackel in Kultus und Kunst der Griechen,' *Münchener Diss.*, Belgrad, 1900, p. 75 f.). The bands with which the women were bandaged were made near the image of some god, therefore probably in a sanctuary (Tertull. *de An.* 39).

When the woman had brought forth a child, three men had to stand round (*circumire*) the threshold, beat it with a hatchet, then with the pestle of a mortar, and then sweep it (August. *Civ. Dei*, vi. 9). This is a cleansing ceremony, which originally was intended to beat the impurity caused by the birth (here felt as a concrete matter) out of the threshold, and to sweep it away. At a later period the ceremony was explained (Aug. *l.c.*) as a protection against Silvanus, who, as a goblin or nightmare, might trouble the woman in childbed. In addition, there were three special deities who were regarded as protectors of mother and newborn babe: Intercidona (from *intercidere*), Pilumnus (from *pilum*), Deverra (from *deverrere*) (*ib.*)—an excellent example of the way in which gods grow out of rites. Pilumnus (together with Picumnus) even receives a sacrificial meal (*lectus*) in the house, in order to protect the woman in childbed (Varro, *ap.* Serv. *Verg. Aen.* x. 76, and *ap.* Non. 528, 15; cf. Wissowa, *Religion und Kultus der Römer*, 357, 1). In the same way Juno was given a *lectus*, and Hercules a *mensa*, after the birth of a boy (Serv. *Verg. Ecl.* iv. 62); for a whole week a table was spread for Juno, according to Tertull. (*de An.* 39). On the last day of the week the *Fata Scribunda* were invoked (cf. Wissowa, *op. cit.* 214). It is Dieterich's merit to have drawn our attention to the custom described by Augustine (*Civ. Dei*, iv. 11), according to which the newborn babe was placed upon the ground and then picked up again (*Mutter Erde*, 6 ff.)—a custom which may be identical with the *tollere* or *suscipere* by the father (Samter, *op. cit.* 62, 3. 4). Only, the signification of this wide-spread custom cannot be that the child is placed under the protection of the earth as a goddess, but that the strength of the earth is to penetrate into the child and make it strong (*e.g.* Marcell. Empir. 32, 20). A rite which bears some affinity to this consists in placing the child erect on the ground, thereby ensuring its upright growth (Varro, *ap.* Non. 528, 12; Tertull. *de An.* 39, cf. *ad Nat.* ii. 11; Varro, *ap.* Non. 532, 18; August. *Civ. Dei*, iv. 21). As in Greece, so also in Rome, wreaths were hung outside the door (Juvenal, ix. 85).

When the first week was over, the child was given its name on the *dies lustricus*: boys on the 9th, girls on the 8th day (Festus, p. 120, 19; Plut. *Qu. Rom.* 102; Macrob. *Sat.* i. 16, 36; see, further, Marquardt-Mau, *Privatleben d. Römer*, 1879, p. 83, 6). We have no information as to the lustrative ceremonies indicated in the name of the day. A sacrificial offering is recorded by Tertull. (*de Idol.* 16), who also uses the appellation 'Nominalia' for this day (*l.c.*). The difference in the treatment of boys and of girls is perhaps originally due to the difference of length of the ancient week, which varied between seven and eight days (Mommsen, *Röm. Chronolog.*² 229).

L. DEUBNER.

BIRTH (Hindu, literary).—Birth, marriage, and death are the three most important events of the natural life; and popular belief has surrounded them with a number of ceremonies, which are designed to secure the accomplishment of good wishes and to avert evil influences. The great advantage which students of Indian philology possess, as compared with those of other philologies, consists in the abundance of the materials at their disposal affording precise and detailed information on all the different branches of Indian culture.

The acts which accompany the events of the domestic life are described especially in the *Gṛhya-sūtras*, partly in the Law-Books, or, as circumstances require, in medical works. These books possess all the greater interest for the history of civilization, in that the ceremonies which they describe go back in large part to a pre-historic epoch, and are related to customs which are found in a most primitive stage of human development, and, on the other hand, have been partially preserved in India down to the present day. Into all the details of these texts it is impossible to enter. The facts which seem to be most noteworthy may here be summarized.

The *garbhādhāna*, 'the second marriage,' the ceremony of consummation, which corresponds to the *putriya vidhi* of the medical texts (Jolly, *op. cit. inf.* p. 50), marks in all cases the initial step. Although not usually referred to in the *Gṛhya-sūtras*, it is known to the Law-Books, and may be regarded as a universal practice. The appropriate time is *ṛtu*, the days or rather the nights (for the daytime is excluded) from the beginning of menstruation until the 16th day, with the exception of the first four, the 11th and 13th, and certain dates especially named, *e.g.* the time of new and full moon. Peculiar importance is attached to the selection of the *nakṣatras*. Yājñavalkya, for example (i. 80), directs that Maghā and Mūla are to be avoided. Other texts, especially the astronomical, go still further, and distinguish between constellations, the choice of which will be attended by complete or partial success, or, on the other hand, followed by failure. Manu (iii. 46 ff.), and to the same effect other texts (*e.g.* Yājñavalkya, i. 79), prescribe cohabitation on the even nights for the man who desires a son; daughters are born as a consequence of cohabitation on the uneven nights. The same texts, clearly under the influence of certain ancient teachers of physiology (Jolly, § 39, p. 51), represent the view that if the seminal fluid preponderates, a boy will be born; if the blood of menstruation is in excess, a female embryo is formed; if there is an equipoise of power, the issue will be twins or even a 'not-man,' 'impotent' (Manu, iii. 49). Bṛhaspati shows how it is possible to assist nature, and by the use of oily foods to increase the male seed. If other days than those named are chosen, *e.g.* the period *after* the *ṛtu* or the actual days of menstruation, a penalty is incurred.

The woman is impure during the first three days of the *menses*; she must avoid excessive food, laughter, or the sight of other men. Several texts, however, allow, on the appearance of the first *ṛtu*, the use of garlands, scents, and betel-nuts. On the fourth day she takes a bath, puts on clean clothes, and at his call appears adorned in the presence of her husband. Cohabitation is effected in an enclosed spot, and is subject, as regards the choice of place, to certain limitations. The *Viṣṇupurāna*, for example (iii. 11, 17 ff.), excludes sacred places and cross-roads. According to some authorities, a lamp should be kept burning, which is kindled by the woman at another light with the help of a small piece of wood, and may be extinguished only by her. The husband recites the text, 'May Viṣṇu prepare thy womb,' lays aside the gold ring that he may be wearing on his forefinger, and cohabitation is completed while he repeats various sacred texts on the subject, for the details of which reference is made by the *Saṁskāraratnamālā* to the *Pañchasāyaka* and other works of the *Kāmaśāstra*. The medical texts are still more precise in details than are those that describe the ritual.

If this ceremony proves unsuccessful, recourse is had, according to the statement of the *Gṛhyapariśiṣṭa* (a collection supplementary to the *Gṛhyasūtras*), to an act that serves the purpose of driving off the obstructing *pretas*, or spirits. This is the so-called *nārāyaṇabali*, a kind of offering to the departed spirits or demons, by which Viṣṇu is to 'purify' the *preta*; or the *preta* that is supposed to have assumed the form of Viṣṇu is propitiated. A *nāgabali*, or offering to snakes, is also to be made, which atones for sins committed against snakes in the present or former births (a deadly blow, etc.), and which is merely a second offering to the dead for those who conceived of the dead as existing in the form of snakes. The *putriyā-iṣṭi*, which Daśaratha, for example, causes to be offered (*Raghuvaṁśa*, x. 4), is different, and is designed to secure a son. It consists, according to the *Taittirīya-Saṁhitā*, in the presentation of cakes to Agni Putravat and to Indra Putrin.

The Purāṇas and other texts prescribe for *the time of pregnancy* a large number of directions for both husband and wife, which are partly of a dietetic and partly of a superstitious nature. Thus, for example, the woman must not bathe in water, or allow her hair to be loose, or lie with the head high or low, or speak without adding an auspicious word, etc. The Law-Books also, such as Yājñavalkya (iii. 79), interpose with various regulations, making it a duty, for instance, to fulfil the wishes of the woman during this period, since otherwise the embryo would be exposed to injury.

Of other observances which follow on conception, the best known is the *puṁsavana*, the generating of a male, which takes place in the second, third, or even fourth month—as Pāraskara says, 'before the child stirs'—and is to assure the birth of a son. Here also, as elsewhere, the selection of the constellation exercises an influence on the rite. But a magical character is most clearly stamped on those usages which give external expression to the wish, and seek to modify the course of events by means of spells. The Hiranyakeśins recite the text, 'Thou art a bull,' and place in the hand of the woman a barley-corn, with two grains of mustard-seed,—in obvious imitation of the male generative organ,—add a drop of sour milk, and cause the whole to be drunk as the 'generating of a male.' Or a shoot of a Nyagrodha tree, hung on both sides with fruit, a blade of Kuśa grass, or a twig of the same plant, are pulverized and placed by the husband or other near relative in the right nostril of the woman. Even entirely different objects may be employed for the same purpose, as a silk-worm or a chip from that side of the north-eastern sacrificial post which is turned towards the fire. The inhaling also of the smoke from the fire kindled with the fire-sticks (*araṇis*) is enjoined *Saṁskāraratnamālā*, p. 815).

A further ceremony, which precedes or follows the *puṁsavana*, is the *sīmantonnayana*, the parting of the hair of the head, which is performed on the woman when she bears her first child. Various utensils (in due order or at option) are necessary for the purpose; the quill of a porcupine furnished with three white spots, and a branch of the Udumbara tree or *Ficus indica*, bearing an even number of unripe fruits, are prescribed by all texts. The former served to trace the parting, the latter was as a rule tied afterwards to the woman. Players on the lute concluded the ceremony with songs; and among these, according to the statement of some texts (cf. Hillebrandt, *Rituallitteratur*, pp. 43, 44), was to be found a verse giving the name of the native stream. The customs were clearly very different in the different families. Gobhila, for example, makes no mention of the lute-players, but represents Brahman women as sitting with the young wife, and addressing to her auspicious words, such as 'mother of heroes,' 'mother of living sons.'

He enjoins also the cooking of rice and sesamum, upon which the woman has to look. She is asked, 'What do you see?' and answers, 'Descendants.' Many of these customs have not as yet received any ethnological illustration, and need to be explained by comparison with the similar practices of other peoples.

The actual *delivery* takes place in a separate house or room, into which the male members of the family have no right of entrance. At the door a fire is lighted to provide for ordinary purposes as well as to keep off evil spirits. Hiraṇyakeśin (ii. 2, 8) directs that at the time of delivery a bowl of water should be placed at the woman's head and a Tūryantī plant at her feet; and enjoins the performance of various ceremonies with the recitation of texts, one of which is actually found in the Rigveda (v. 78, 79), to relieve and expedite the birth. Whether the several acts are due to a superstitious or to a medical motive is often difficult to determine, owing to the close relation between medicine and magic. Different plants are employed as embrocations or internal remedies; others are merely hung up, or given to the woman for good luck; and fruits with a name of masculine gender are put into her hand. One text (cf. *Saṁskāraratnamālā*, p. 827) prescribes a definite amount of sesamum oil to be stirred from left to right with blades of Dūrvā grass, a part given to the woman to drink, the rest poured on the *yoni*, and the blades placed in her hair. The *Yantraprakāśa* ordains for the time of delivery a diagram of nine compartments, in which are entered from the N.E., N., N.W., etc., in succession the numbers 8, 3, 4, etc.

If the *fœtus is obstructed*, a medical prescription (cf. Jolly, *l.c.*) lays it down that the vagina is to be fumigated by means of the skin of a black snake or with certain plants, or a particular plant given into the woman's hand. Various embrocations facilitate the coming away of the after-birth, and the same purpose is served also by a decoction in which has been steeped, as the most curious medicine, the right ear torn from a living male ass. Continual fumigations with offerings of sesamum and rice serve to drive away the evil spirits which at that time imperil the life of the woman and her newborn child. Whenever the attendants enter they must throw fresh fuel on the fire. The climax of danger is reached on *the sixth day*, which up to the present time in India is dedicated to the Goddess of the Sixth. This day is especially perilous, because on it, or shortly after, the child is exposed to tetanus through unskilful severing of the navel-cord (Jolly). The *Bālatantra* (quoted in the *Saṁskāraratnamālā*, p. 846) knows of more detailed regulations, intended to ward off or conciliate this Ṣaṣṭī and other hostile goddesses. It is prescribed that men with swords in their hands shall keep watch, women sing, lamps be kept burning, weapons and clubs laid in the house of the woman, while the father repeats *om* and the *vyāhṛtis*, etc.

For the *newborn* child ceremonies of 'animation,' 'endowment with understanding,' 'tendering of the breast,' and 'naming' are observed. At the first the father must thrice exhale and inhale over the child, or whisper into his navel or right ear some texts relating to a long life. Brahmans are stationed towards the five directions of the heavens, and have to say in order *prāna*, *vyāna*, etc. Before this act the boy is fed with a food compounded of butter, honey, and certain other materials. This last as well as the former 'animation' are ceremonies which go back to a remote time, and, as Weber (*Indische Streifen*, 1868, iii. 170) and Speijer (*Jātakarma*, p. 103) have shown, are found also among other peoples. Hiraṇyakeśin's instructions are to take gold, an axe and a stone, to hold the boy over them, and give expression to good wishes for his life. Further ceremonies are recognized by the medical texts (Jolly, 'Medicin,' *GIAP*, § 43, p. 58).

The *endowment with understanding* consists in thrice whispering into the ear of the child the words, 'May the god Savitṛ grant wisdom,' or another text, or the word *vāch*; or in placing butter in his mouth with a golden vessel, while reciting the text, 'May Mitra-Varuṇa grant thee understanding.'

The third ceremony is the first formal *tendering of the breast*, when the father lays the boy on the breast of the mother. The fourth is the important *nāmakaraṇa*. On the giving of the name many peoples have laid great stress (Brinton, *Religions of Primitive Peoples*, 1897, p. 93 ff.; cf. also Kroll, *ARW*, viii. Suppl. p. 49 ff.); and this is no less true of the Indians, who give explicit directions in the ritual and astronomical texts. The ceremony takes place usually on the tenth day. The phonetic value of the chief name is of great importance, and all minutiæ demand attention. The second name is an astronomical name, which may be formed by derivation by means of a suffix, or by simple masculine inflexion of the name of the constellation (Phalguna, from Phalgunī; Hillebrandt, *Rituallitteratur*, § 15). See NAMES.

Immediately after the giving of the name, the woman rises up, and this may therefore be regarded as the closing ceremony of the birth-rites.

A. HILLEBRANDT.

BIRTH (Hindu, popular).—A Hindu woman, when the time of her delivery is at hand, lies in a room on the ground floor, on a cot which must be strung with hempen cord, and not with the cotton tape which is used for ordinary beds. In the room is placed some iron article (iron being a powerful averter of evil), and the woman lies with her head to the north or east, as do all Hindus, for the other cardinal points are dangerous. Should the delivery be delayed, it is believed that, in spite of the precautions taken, the powers of evil are in the ascendant, and, with a view to bringing their working to nought, the lying-in woman is advised: (*a*) to sell that part of the floor on which her cot stands, so that the evil spirits may be led to believe that they have to do with the purchaser (the midwife), who on account of her very low caste is immune from evil; (*b*) to call upon the name of the household god, or the family *guru* (spiritual guide), or of some *satī* (woman who has immolated herself on the pyre of her husband) who is famous on account of her act of wifely devotion; (*c*) to drink the water with which a charm, written by a Brahman, has been washed off, or that in which the feet of her husband, her mother-in-law, or a young virgin have been washed; (*d*) in regions in which rice forms the staple diet of the people, to step seven times over the rice-pounder, this being supposed to hasten labour.

In many cases there is bound on the belly of the lying-in woman a charm, written by a 'skilful man.' This may be a double equilateral triangle, or a collection of magic words such as this:

hrôm hrôm hrôm	hrôm	hrôm hrôm
hrôm	Name of the woman is written here.	klôm klôm
klôm	hrôm	kôm kôm

The above charm is so powerful, that, were it bound on the woman's loins, instead of on her belly, she would never be delivered; so the present writer was assured.

As soon as the child is born, it is placed in a grain-sifting tray, in which have been put cow-dung, ashes, turmeric, and a few coins, and is sprinkled with water. If it be a man-child that has been born, a brass tray is beaten to scare away evil spirits; and as this is never done on the birth of a girl, whose sex protects her against evil, the men of the family know when a boy is born, and fire guns to show their joy. Until the placenta is expelled, every one in the lying-in room must keep silence, lest the placenta again ascend into the womb. As soon as the after-birth is expelled, the child is washed with warm water, dried, and laid on the cot beside the mother, after the midwife has passed her little finger into its nostrils and anus, to widen these apertures so that the child may not suffer from shortness of breath or constipation. The umbilical cord is tied in two places, about 4 cm. from the navel, and cut between these with an iron knife, or a strip of the outer skin of the bamboo, as soon as the placenta is expelled. The placenta is then put into a hole which has been dug in a corner of the room, and a fire is lighted on the spot and kept burning for four or five days. While the placenta is being disposed of, the head of the lying-in woman is bound up, and she is fumigated with the smoke of the burning seeds of *Carum copticum*, which have been thrown on a brazier. This is placed under her cot, and is kept there, however hot the season of the year, for ten days. The doors and windows of the room are kept shut, and light is given by an oil-dip lamp, which is kept alight night and day. As the clothes soiled by the discharges incidental to delivery are not removed till the fourth or fifth day, the state of the atmosphere of the lying-in room, when the shade temperature is 41° C., may be guessed. The woman may drink only of a decoction of ginger, cloves, and the seeds of *Carum copticum* and *Helicteres isora*, in which have been boiled some copper coins. The pot in which the decoction is prepared is touched by seven boys if the infant be a boy, and by seven unmarried girls if it be a girl; these children receive sweetmeats for their services.

When the astrologer, to whom news of the birth has been conveyed, comes to the house, he takes the data on which the calculation of the child's horoscope is to be based, and fixes the time at which the infant is to be put to the breast for the first time, and that at which the mother may be fed: for four days if she have borne a boy, and for five if she have borne a girl, she will be allowed only sweetmeat balls made of coarse sugar, long pepper, ginger, coco-nut, saffron, gum acacia, etc. Her ordinary food she may not have, because during this period the low-caste midwife stays in the room with her.

On the fourth or fifth day the soiled clothes are removed from the room and given to the washerman to be washed. The mother and child are then bathed by the midwife in water in which the leaves of the Nim (*Azadirachta indica*) have been boiled, after which she takes some of the water in the hollow of her right hand, and waves it seven times, with the sun, round the head of the mother, in whose lap the child lies, and then throws the water away in the direction of the door of the room. In some castes this water-waving, which is designed to avert evil, is done only three times. Afterwards the mother sits on the cot, from which the soiled bedding has been removed, with the child in her lap, and dries her hair in the smoke of the seeds of *Carum copticum*, which have been thrown on the brazier: the hair is believed to be a favourite point of entrance of evil into the body. On this day all the earthen pots that are in the house are thrown away, and a feast is given, to which men of low caste are invited, as on the tenth day after a death (see DEATH [Hindu]). Of the food prepared for this feast the mother is given a small quantity, and on the following day she returns to her ordinary diet, the midwife being dismissed and her place taken by the barber's wife, who does not live in the lying-in room, as the midwife did during her term of office; but the mother may not eat after sunset, the time at which the influence of evil is most to be feared, until thirty days have elapsed from the date of her delivery.

On the tenth day the astrologer brings the horoscope of the child, and on it are put some blades of grass, on which are sprinkled a few drops of water, and then water with which turmeric has been mixed; then a few grains of uncooked rice are scattered on the horoscope, and the name of the child is chosen by the father from a few names, appropriate to the time of birth, which the astrologer reads out. This name becomes the ceremonial name of the child, whose ordinary name is that given to it by a certain woman-member of the family, whose relationship varies in different castes.

After the tenth day the family barber is sent round to announce the birth to friends and relatives at a distance. He presents to those to whom he bears the news sweetmeats made of coarse sugar, clarified butter, almonds, raisins, coco-nut, etc., which have been prepared at the house in which the birth took place; and it is taken to be a grave insult to omit to send these sweetmeats to any one who can claim the right to receive them.

From the fourth or fifth day till the thirtieth day after the birth of the child, it may be bathed only on Wednesday or Sunday; on the other days of the week its body is anointed with sesamum oil, with which some castes mix turmeric, which from its colour is an averter of evil.

LITERATURE.—H. A. Rose, 'Hindu Birth Observances in the Punjab,' in *JAI* xxxvii. (1907) p. 220; W. D. Sutherland, in *Münchener med. Wochenschrift*, 1906; and the literature appended to the previous article.

W. D. SUTHERLAND.

BIRTH (Jewish).—I. Biblical.—(1) *Notions and practices surrounding childbirth.*—The mystery of birth and procreation is euphemistically expressed in the Bible by 'knowing.' 'And Adam knew Eve his wife; and she conceived, and bare Cain' (Gn 4^1), is the first statement in the Bible regarding conception and birth, though a little earlier the condition is laid down, 'I will greatly increase thy pain and thy conception; in pain thou shalt bring forth children' (Gn 3^{16}). Nothing further is found in the Bible as to the first stages of human life, before it enters the world in a concrete form. Many speculations were rife at a later period about these stages, and legends have been handed down concerning the life of the child in the mother's womb. The pains and pangs of travail are often referred to by the prophets, and used in a figurative sense to express the throes of a new birth of nations and of the heavens. According to Ex $1^{15ff.}$, specially trained women assisted in childbirth, which took

place on the birth-stool, on which the midwives had to look, in order to ascertain whether the newborn babe was a male or a female. Moreover, we learn that the 'Hebrew women are not as the Egyptian women; for they are lively, and are delivered ere the midwife come unto them' (Ex 1^{15-19}). Cases of difficult and dangerous births are, however, also recorded in the Bible, in some of which the issue was fatal to the mother. Such was the case with Rachel (Gn 35^{17}), and with the wife of Phinehas, who died in giving birth to a son; for she heard, whilst in the throes of delivery, of the untimely death of her husband (1 S $4^{19ff.}$). While still in the womb, children, according to Biblical tradition, were believed to be fully conscious: Jacob and Esau 'struggled together within her' (Gn 25^{22}); and, when Tamar was delivered of twins, the children came out, not like Jacob holding the heel of Esau in his hand, but one put out his hand first, and then drew it back, and then the brother came forth first (Gn $38^{28f.}$). Other cases of irregular birth and their treatment will be dealt with later on. For it is necessary to follow up the references, as much as possible, in some historical order, treating the Biblical period practically as one for our purpose.

(2) *Fruitfulness a blessing.*—To have a large family was (and is still) considered a great blessing. The very first blessing mentioned in connexion with the creation of man is: 'Be fruitful, and multiply, and replenish the earth' (Gn 1^{28}); and the references throughout the Bible to this blessing of a large family and to the reverse—the misfortune of childlessness—are numerous. That woman is praised in the gates who has a large family, especially of sons (Pr 31^{28}), and the barren sits as a mourner in the midst of the festive gathering (1 S 1^{7}). Rebecca, Rachel, and Leah, Hannah and Peninnah, and others are cases in point. Barrenness and widowhood stand on the same plane; both are objects of pity and commiseration. No wonder, therefore, that from the very beginning means were sought to remove this reproach and to get children. The *dûdâ'îm* of Gn $30^{14ff.}$ have been identified with mandragora, a fruit credited with specific qualities for fruitfulness. But in the Bible the belief is more prominent that, by means of prayer and intercession, barren women could obtain children. Isaac entreated the Lord on behalf of Rebecca, because she was barren (Gn 25^{21}). When Rachel was angry with Jacob, he replied: 'Am I in God's stead, who hath withheld from thee the fruit of the womb?' (Gn 30^{2}); and later on (30^{22}): 'And God remembered Rachel, and God hearkened unto her, and opened her womb.' Similarly in the case of Hannah (1 S 1). The same agency could work also in the opposite direction, and close the womb of the once fruitful, and render them barren. So, when Abraham prayed to God, 'God healed Abimelech, and his wife, and his maidservants; and they bare children. For the Lord had fast closed up all the wombs of the house of Abimelech' (Gn $20^{17f.}$).

No other means are mentioned in the Bible for assisting women in obtaining children. Nor do we find remedies or precautions mentioned, or aught else, preceding the birth. The children were, no doubt, born on the floor of the house. The child lay first on the ground. Then it was washed in water, rubbed with salt, swathed in swaddling clothes, and given to the mother to be suckled (Ezk 16^{4}). Occasionally a wet nurse is mentioned in the Bible, like Deborah the nurse of Rebecca (Gn 35^{8}), or the mother of Moses, who was taken by the daughter of Pharaoh to suckle the child found in the river (Ex 2^{7-9}).

(3) *Uncleanness of the mother.*—The birth of a child made the mother unclean, in the first place, for seven days; and then, if it was a son, thirty-three days; and if a daughter, sixty-six days. At the end of that period lustration or purification took place, and the woman brought an offering to the Temple (Lv $12^{2ff.}$).

(4) *Primogeniture.*—Although the mother is unclean after giving birth, none of that uncleanness attaches to the newborn child. On the contrary, the firstborn, that which 'openeth the womb,' is consecrated to God, be it human, be it animal. The firstborn enjoyed special privileges, and already, in the patriarchal time, had the right of leader. He probably had also preference in inheritance above the other members of the family (cf. Jacob and Esau). In the last dispositions of Jacob (Gn 49), Reuben is deprived of his privileges of primogeniture; and, although not expressly stated, the double portion, which, according to the Mosaic legislation, was given to the firstborn, is there given to Joseph. This is made evident in 1 Ch 5^{1}. The firstborn at a certain time was invested with sacramental rights; later on, his place was taken by the Levites. The male firstborn was originally the family priest. The dedication, as in the case of Samuel, was evidently to the service in the Temple. Traces of sacrifice of the firstborn male, practised by the nations living in Palestine, are found in the Bible, but were condemned by the Law. Since the Levites took the place of the firstborn, these were 'redeemed' at the completion of thirty days after birth (see art. REDEMPTION). The succession to the throne and to the office of high priest went to the firstborn, with the exception of Solomon, who took the place of Adonijah (1 K $1^{11f.}$), and of Eleazar through the death of his elder brothers (Lv $10^{1ff.}$). The priestly character of the firstborn has to a certain extent been retained in the service of the Synagogue, where, in the absence of Levites, a firstborn present washes the hands of the *Kohanim* (descendants of Aaron) before they ascend the rostrum in front of the Ark to bless the congregation.

(5) *Naming the child.*—After an indefinite period, ranging from one to three years, the child was weaned, and the occasion was celebrated by some public festivities (Gn 21^{8}, Ex $2^{9f.}$). From the time of Abraham onwards the male child was circumcised on the eighth day, but it is not clear from the Biblical account whether the name was given on that occasion. In many instances the name was settled before the birth of the child, and had a symbolical meaning; and on other occasions it had a commemorative character, being connected with events at the birth. Examples of the former are Isaac (Gn 21^{6}), Immanuel (Is 7^{14}), or Jezreel (Hos 1^{4}); of the latter, the twelve sons of Jacob—nay, his own name and that of Esau, etc. Nowhere is a definite date mentioned for the giving of the name. Nor do we find, except in rare cases, a change of name; *e.g.* when a king ascends the throne, his name is sometimes slightly or altogether changed. In the case of girls, names of animals are often taken as prototypes: thus *Rachel*, *Tamar*, *Zipporah* ('lamb,' 'palm tree,' 'bird'), in addition to other symbolical names. In later times, but still within the period covered by the Bible, the grandson often gets the name of the grandfather, such as (2 S 8^{17}) Aḥimelech, son of Abiathar, son of Aḥimelech.

A few more details concerning birth and early infancy could be gleaned from the Bible, but they would not carry our knowledge much further. The above brief sketch was absolutely necessary for the understanding of the development which took place in the course of subsequent centuries. The Biblical data form the starting-points or the justification for legends, beliefs, and practices which cluster round the birth of children. Each of their stages is governed entirely by the details found in the

Bible. Some have been greatly expanded; others have been interpreted in a peculiar manner; and for a number of practices borrowed, no doubt, from other nations, or survivals of popular habits and moods, a support has been sought in the verses, and precedents found in, or read into, the Bible. The people did not study the Scriptures with any critical intent, and what is found written down therein was the hallowed example. The way in which we may feel inclined to interpret those facts did not obtain with the people. It is now for us to follow that tradition in the spirit in which it was understood and accepted by the people, and upon the lines along which it developed.

2. **Post-Biblical.**—The second period, stretching from the 1st cent. down to modern times, embraces a variety of practices, of which few may claim universal acceptance. Some may have belonged to one country only or to one period; others were perhaps more widely spread. A good many of these practices are now known only from books, and are little followed in modern life. Others have not yet been sufficiently sifted and verified as to the extent to which they are followed. They cover a large area—Western Asia, North Africa, and the whole of Europe. In some instances it can be proved that a more modern author has simply copied older texts, and embodied these in his collection. An endeavour will here be made to present the data in some chronological order, taking first the references found in the Mishna and the Talmud and other older Rabbinical writings from the 1st to the 5th cent., and then proceeding to works from the 6th to the 18th, finishing with a few quite modern practices, following, as far as possible, the order of the Biblical data.

(1) *Beliefs connected with the pre-natal period of the child's existence.*—The mystery of birth is now no longer veiled. In Talmudical times the notion emerges that a special angel, 'Lailah,' presides at the very beginning of conception, and through his intermediation the embryo is brought before the Divine throne, where his future is decided upon, his station in life is determined, and also whom he is going to marry. At the bidding of God, a spirit enters the sperm, and then it is returned to the womb of the mother. There the child lies folded up with its head between its knees. Two angels watch over it. A light burns over its head, by which it sees from one end of the world to the other. In the morning an angel carries it into Paradise, and shows it all the righteous who had lived a good life in this world; and in the evening he takes it to hell, and shows it the torments of the wicked. Finally, he orders the child to come forth, and he strikes it, thereby extinguishing the light, and causing it to forget whatever it had seen whilst in the womb of the mother (cf. *Chronicle of Jeraḥmeel*, ed. Gaster, ch. ix. pp. 19 ff. and lxiii ff.). A later legend adds that the indenture on the upper lip under the nose is the place struck by the angel; hence that indenture. Whatever the child hereafter learns is merely a remembrance of the knowledge acquired during its life as an embryo. Another equally ancient treatise contains an anatomical description of the gradual formation of the body of the child and the changes during gestation. But, in spite of the direct Divine influence assumed here on the shape of the child, other traditions say that external influences, especially at the monthly lustration, had a decided effect upon the shape and the mentality of the offspring. An ancient legend, preserved in many versions, tells how the superhuman beauty of the high priest Ishmael was due to the fact that his mother had returned to the bath, time after time, after meeting first a pig, then a dog, and then an ass. Each time after such an animal which would have had an evil influence had met her, she returned, until at last Meṭaṭron, the Angel of the Face, came and met her on the way home, and she then conceived and bare a son as beautiful as the countenance of that angel. The meeting with a dog has the effect of making the child's face like a dog's; that with an ass would make the child stupid; and that with a pig would cause the child to have unclean habits. For that reason, R. Joḥanan placed himself at the gate of the bath-house, so that the women returning home should look at him, who was renowned for his beauty. As a proof of such influence is adduced the experiment of Jacob with the sheep (Gn 30[39]). The black wife of an Ethiopian king was delivered of a white child; the father suspected the mother, but, having been asked by R. 'Aḳiba whether there were white images in his bed-chamber, he answered in the affirmative. This, then, said R. 'Aḳiba, was the reason why she had given birth to a white child. The same motive appears in the *Ethiopica* of Heliodorus. Other ailments in children are also due to the carelessness or callousness of the parents during the period of impurity. Leprosy is one of the results, and dumbness and deafness, as well as other infirmities. A woman may not cut her nails during the period of her impurity and drop them on the ground, lest a man tread on them and be stricken with boils. The children may also be so affected during gestation as to be changed into animals or birds, or even locusts; whereupon the woman miscarries, and her ritual status is determined by the degree of human form which the thing born has (Mishn. *Niddah*, iii. 2; cf. Ch. M. Horowitz, *Uralte Toseftas . . . aus dem 2-5 Jahrhundert*, Krakau, 1890, *passim*).

(2) *Fruitfulness.*—Means are mentioned to prevent barrenness. The women, we are told, mocked the wife of Manoah (Jg 13), and said to her: 'If you wish to get children, take the skin of a fox, burn it in fire, take the ashes and mix them with water, and drink of that water three days, three times each day, and you will get a child' (Horowitz, *op. cit.*, p. 19). 'If a man is bewitched, and cannot bathe (ritual or lustration bath?), a recipe is given, consisting of garlic and onions and the root of *kala* and the tail of *remusa* fried on the fire; leek is boiled, and the other ingredients are mixed with the leek-water; the patient drinks of this mixture for three days, and is cured' (*ib.* p. 22 f.). A pregnant woman, in order to avoid miscarriage, must not take hot baths. She must not eat green vegetables, as they affect the heart of the baby; nor may she eat salt food or fat substances, or the child will be dull; but she must eat small fish and mustard (*ib.* p. 28).

(3) *Assistants at childbirth*, etc.—In addition to midwives, medical practitioners are now mentioned as assisting in the delivery of women. We hear also of operations which took place when the child was in a dangerous position or was dead: incision for the extraction of the child, or dismemberment of the fœtus. The physician was exempt from many legal obligations when attending women in childbirth. He could break the Sabbath, and all other ordinances were considered abolished in the case of a woman in labour. The primary function of the physician was to place the woman on the birth-stool, and to make all the preparations necessary for a safe delivery. In case of twins, his word decided which was first born. Very little is mentioned in the writings of the period of means for easing difficulties of labour; but, being of a more popular nature, they have, no doubt, been preserved in later writings in which the popular element predominates. The newborn babe was treated as in olden times; but we learn now, from the 1st cent. onwards, of the existence of cradles. The name of the cradle is suggestive, for it is identical with

'trough'; and it is customary to this very day in the East to use troughs for cradles. It is mentioned only in writings of Palestinian origin (Mishna and Tosefta), and in one instance a glass cradle is mentioned (Tos. *Kelim*; *Baba bathra*, vii. 12, ed. Zuckermandel, p. 598).

(4) *Danger from demons*, etc.—Dangers not mentioned in the Bible now surround the baby and the mother immediately after the birth of the child. The notion of demons possessing the mother and then affecting the health of the child appears for the first time in the literature of that period, and the terror of these demons and the desire to drive them away or to counteract their evil influence grows steadily. In Tobit the demon Asmodæus possesses the damsel and prevents her from becoming the wife of any mortal. Every bridegroom wedded to her is killed on the night of the marriage, and only Tobit succeeds in driving the demon away by fumigating the bride with the liver of a fish. By this fumigation the charm is broken. This is then an example to be followed in later times on every occasion of difficult labour, as well as on breaking charms, or on driving away those evil spirits which haunt the chamber and bring ills on the mother and the child.

Prayers, which now assume a mystical character and become in time talismans and amulets, are also efficacious in laying the power of the evil spirit, and, according to a Talmudical legend, the Sanhedrin succeeded in capturing the demon of lust or amorous passion, the 'evil inclination' as it is termed. The consequence was that three days afterwards not an egg could be found in the whole of Palestine to feed a woman in childbed. Whereupon they merely blinded the demon in one eye and released him (*Sanh.* f. 64*a*). They resorted also to prayer, we are told, to avert the terrible ill of croup or other like disease of the throat. The cause of many of these diseases was ascribed to the influence of evil spirits. Lilith is the head of the female demons, and is mentioned as the chief cause of all the ills that befall children. Originally identified with the Incubus and with a demoniac first wife of Adam, she became in the course of time the demon who bewitched, stole, changed, and killed the children as well as the mother in childbirth. Another demon mentioned is Agrath, the daughter of Mahlath. (In both cases the etymologies are transparent. Lilith is the 'night demon' and Agrath the 'roof demon,' daughter of 'illness.') A child that is born in the likeness of Lilith is described as being like a human being, but with wings on its back (*Niddah*, 24*b*). No mention is made of the means of protecting mother and child, although no doubt they must have resorted to some magical amulets and also to other conjurations and mystical operations. Another demon Shimdon (or Ashmadon, 'Destruction') is mentioned, who, according to a legend, was met by a child of the giants that lived before the Flood, whom the mother had sent to bring her a knife for cutting the navel. The demon then said to the newborn giant baby: 'Go and tell your mother that the cock has crowed, otherwise I would have struck and killed thee'; to which the baby replied: 'Go and tell your mother that my navel has not yet been cut, otherwise I would have struck and killed thee' (*Genes. Rabb.* ch. 36, § 1). Various demons lay in wait for the newborn child. There was none, however, so dangerous as the above-mentioned Lilith. This demon plays an important rôle in the subsequent development of superstitious practices. If one might infer from the practice mentioned in the Mishna (*Ḥullin*, iv. 7), the *secundines*, or after-birth, must have been used for some superstitious purpose, very likely to prevent miscarriage. It is forbidden to bury at cross-roads or to hang up on a tree the after-birth of the miscarried first-born of an animal, for that would be of the 'ways of the Amorites' (*i.e.* superstitious practices of the heathen). We shall see later on the use made of it. It was also preserved as a remedy for some unnamed illness of children (*Shab.* f. 129*b*).

With the material at our disposal it is difficult to trace the influence of these evil demons (Lilith, Agrath, Shiddin, etc.) further back than the 1st cent., although some of them are found in the Apocryphal literature of the preceding centuries, and the legends are so widely spread among Jews and non-Jews that the roots may lie much further back than the known literary monuments. Lilith is, as stated before, also the demon Incubus, and men are warned not to sleep in ruins lest they fall a prey to lascivious demons and engender children, for female demons are anxious to join human beings and to obtain children from them. Lilith was originally the first wife of Adam, or, according to a different tradition in the *Zohar*, the woman that came up from the deep of the water (Tiamat?) and together with her innumerable company hovered round the body of the newly-created Adam, until the real wife (Ḥavvah) was created, when she was driven away by an angel and sent back to the surging sea. According to a third version, she was the real wife of Adam for a hundred years during the time when he was living in disgrace, and then brought forth demons and evil spirits. Being afterwards driven away, she retained a hatred for man, and lies constantly in wait for man, either to join him in wedlock or to destroy his offspring. In order to frustrate her evil designs, a man must utter the following conjuration before he joins his wife: 'Thy garment has become rent, it is loosened, it is loosened. Thou mayest neither come in nor go out, nothing for thee and no share for thee. Return, return, the sea is stormy, its waves are calling for thee. I lay hold of the share of God, I wrap (cover) myself with the holy king.' And the man has to cover his face and that of his wife whilst speaking thus; and after finishing the conjuration he has to pour clear water round the bed and he will be safe from attacks from Lilith (*Zohar*, Leviticus, fol. 19*a*). Another conjuration which has become the basis and prototype of all other conjurations of Lilith and evil child-stealing demons and witches is that found in the story of ben Sira, in which we have also a version of the virgin birth, for the mother of ben Sira is reported to be the virgin daughter of the prophet Jeremiah. In this story the son of the king was dying without any apparent reason, and he then wrote out an amulet with the names of certain angels upon it, which he explained as follows: Together with Adam, a wife was created from the earth. Considering herself his equal, she refused to obey Adam, and in a moment of rage uttered the ineffable name of God and flew away to the borders of the ocean. At the request of Adam the Lord sent three angels after her to bring her back, and, if she refused to obey, to threaten her with the death of a hundred of her children each day. The angels went after her, and found her at the waters through which the Israelites were to pass when going out of Egypt. They threatened to drown her in the waters of the sea. She implored them to spare her, and in return, as she had the power to hurt male children up to the eighth day of their birth, and female up to the twentieth, she swore unto them that she would not go near the house or hurt the child or the mother where she should see the names of these angels written up. They released her after she had taken that oath; and it was for this reason that ben Sira wrote the names Sinoi, Sinsinoi, Semangelaf, on an amulet and hung it up in the room where the child was, thus driving Lilith away and preventing her from further molesting it (*Alphab. Ps-Siræ*, etc., Steinschneider, f. 23a-b; M. Gaster, 'The Child-stealing Witch,' *Folklore*, xi., 1900, pp. 129-162).

(5) *Amulets, charms*, etc.—The amulet is no doubt a later stage. It is preceded, as a rule, by the very act of conjuration in which the conjurer utters those words, and through a process common to all magical operations identifies himself with those angels, and drives away the evil spirit by the account of another operation in which the demon had been vanquished by those powers. From the spoken recital we descend to the written amulet, in which the writing is considered sufficient to terrify away the demon. All the other amulets, like those used in the cases of bewitching or for protection, have gone through the same process, whether they be connected with sterility or birth, or with the protection of mother and child from evil eye and evil spirits, whether it be to facilitate the labour or to increase the difficulty, to prevent man from joining his wife or to untie the magical knots. For we are proceeding now to the third period, or the second section of the second period, from the 6th to the 18th century. Sympathetic remedies, together with medical and magical recipes, appear now in the writings of the 6th century and onwards. Ancient Greek medical

practices and recipes, popular superstitions and customs, were then gathered up and introduced into the medical science of the Arabs, together with all the popular beliefs and practices of the East, and to a certain extent also those of some of the nations of the West, with whom they came into contact. Translated into Greek (Byzantine) and into Latin, these magical, sympathetical, and medical compilations spread among the nations of Europe. Books of recipes and amulets, *Iatrosophiai*, as well as manuals of leechcraft, abound also in mediæval Jewish literature. Most of them are still preserved in manuscripts. What has been printed from the second half of the 17th cent. onwards is mere reprint, and often very faulty, from older MSS. By the aid of manuscripts (mostly in the present writer's possession) we can go back at least to the 12th or 13th cent., but no doubt they contain materials which are far older and may be of extreme antiquity. We are not concerned here with purely medical prescriptions, though it is often difficult to draw the line between the dispensary proper and magical or sympathetical recipes. Nor can we pay any attention here to the astrological horoscopes and nativities, or to prognostications from the influence of the astral bodies, as to the importance ascribed to days and months. Though intimately connected with *births*, these prognostications and nativities have remained the domain of the astrologer, and have seldom if ever formed part of popular practices. A selection of the latter culled from writings ranging from the 6th to the 18th cent. may now follow. Only such have been selected as have enjoyed great popularity and have been found repeated in MSS of diverse origin. Some hail from Spain, others from Italy and Turkey; some from Damascus and Yemen, and not a few from Germany. In all twenty-five MS compilations have been used.

The bewitching of bride and bridegroom may start from the day of marriage. 'Tie three knots during the ceremony, and the bride will be forbidden to her husband so long as those knots remain untied'; or, 'Make a thread of wool on a live sheep and say, while twisting the cord:

"Shurah, Shura, Shabrur; I tie N. against the woman N. with the knot with which God tied night and day, and I tie him in every language and with every word by which a tie can be made under heaven and earth which cannot be loosened. And so long as I do not untie it, N. shall not be able to approach the woman N. I seal these knots with the seal of King Solomon, with which he sealed the demons in the copper vessel and cast them into the sea. And similarly shall no man be able to untie these knots but me."

If he afterwards wishes to break the charm, he must kill a hen, drop the blood upon the knots, and untie them, and the charm will be broken.' Or, 'Three knots made by the woman in her girdle, when with her husband and he not knowing, it will affect him so long as the knots remain tied,' etc. More numerous are the recipes for breaking this tying. 'On both sides of a new-laid egg the verse from 2 S 22[37] "Thou enlargest my footsteps," etc., is written. Cut it in two with a knife or a dagger with which a man has been killed, give each one a half to eat, draw the picture of a small tree on uterine vellum, tie it on his left arm, put some quicksilver into a nutshell and tie it on his right arm, then tear a hole in the woman's shirt, etc., and the charm will be broken.' Or, 'Take flour from a "living" mill, mix it with the mud of the river (or rain-water), make a cake of it, (write on it v.[2] of Ps 2,) bake it on a new fire, and eat it.' Or, 'Pass a stick through a hole made in the door, burn it on coals and fumigate self and wife.' Or, 'Let the tied man go to the field, loosen an ass tied by its foot, take the rope with the knot and burn it, and drink of the ashes mixed with water or wine.' Or, 'Tie the right-foot sandal of the bridegroom to the left-foot sandal of the bride, fumigate with sulphur, pour water into them, shake the water from one to the other, and let both drink of it, and the charm will be broken.' The symbolical meaning of all these recipes requires no explanation. On the other hand, some practices like throwing the shoe after bride and bridegroom may find here an unexpected explanation.

The wearing of a dead man's tooth, or the fumigation three times with the tooth or bone of a dead man, seems to have been a universally acknowledged remedy against the 'tie.' Rubbing with raven's brains or with ox-gall is also recommended, the latter mixed with sesame oil. All these recipes and more are found in MSS of the 14th cent., and in some cases are ascribed to authors of the 11th or 12th, *e.g.* Aben Ezra, and even to Asaf of the ninth!

The remedies for removing barrenness and for furthering conception may be divided into two groups: one, the use of amulets and charms; the other, sympathetic magic and medicine. The mediæval and ancient pharmacopœia shrinks from nothing, and in superstitious practices there is no room for æsthetical considerations. The women were so anxious to get children that they would use anything that they thought would further generation. Objectionable and nauseating decoctions and sublimations abound in all these collections, and fumigation, mentioned in the Book of Tobit and practised no doubt long before his time, is resorted to on a large scale. Animal dung and droppings are often recommended by Galen and other ancient writers, and adopted by practitioners down to the time of Quincy's dispensatory. They are found in Arabic and Jewish 'dispensaries' also. But less objectionable ingredients are found which would further conception or remove sterility:

'Take the bone found in a stag's heart, put it into a leather bag sewn up with red silk, fasten on it red silk strings, and tie it round the neck of the woman on a Monday or Thursday before sunrise, and arrange it so that the bag may hang from the strings down to the navel, and take care that the knot is on the back of her neck. A man must hang that amulet on the woman, and she will bear children.' Or, 'Take a big spider, put it into a small wooden case of equal size, stop the opening with the bark of the same tree or with the shell of a nut, and carry it round the neck.' Or, 'Take the first milk of a goat before the kid had touched the udder, make a small cheese of it, put it into a new linen cloth, and tie it upon the left arm; it must never be taken off, and the woman will then bear children.' Or, 'The dried stomach of a hare, bear-gall, ammonica and myrrh, pounded and mixed with butter, taken for two days in broth, will help in getting children.' Or, 'Dip a paper in menses' blood, tie it round a fruit-bearing tree, and say: "I give thee my illness and my infirmity, give thou me thy power of bearing fruit."' Or, 'Make a decoction of bear's or wolf's meat as much as a bean. If the animal is male the child will be male, and if it is female the woman will give birth to a daughter.'

A favourite remedy next to the hare's stomach was the plant 'ox-tongue,' later on confused with the real tongue of an ox, and a decoction of either is recommended. Or, 'Ashes of burnt fox-skin, drunk twice a day in water for nine consecutive days, promote generation.' Or, 'A fish found within a fish, dried and pounded, has the same effect if taken for three nights in wine.' 'Two wings of a raven worn by a woman when with her husband will cause her to conceive.' 'If a woman is anxious to get sons, she must ask a shepherd to get the after-birth of a cow, dry it, and pound it, and drink the powder in wine.' Another remedy is 'to obtain the navel of another woman's child, to burn it, and drink the ashes in wine.' To ascertain whether a woman will always be barren, put an unopened gall in a soft linen rag for three days over her womb, and if afterwards a worm is found in the gall, it is a sign that she is by nature sterile; if the worm be red, then there is no help for her sterility.

If a woman wishes to procure barrenness or to stop bearing children, then 'let the scissors with which the navel of her child has been cut be stuck

in the ground. So long as the scissors remain in the ground, she will have no children.'

Or, 'If the plate out of which a woman has taken her first meal after delivery is placed face downward under her bed, it will prevent her from conceiving until it be turned face upward.' Or, 'Pick up a grain that has dropped from the mouth of an ant, and tie it on the left thigh, and it will prevent child-bearing.' Or, 'The first tooth dropped by a child picked up before it touches the ground, and fastened round the neck, set in silver or gold, will have the same effect.' 'The wearing of a cat's paw cut off from the live animal stops fertility.' Carrying of a hare's heart (or hare's droppings) will have the same result. Or, 'Sew into the hem of her shirt, in the front, the ashes of a wolf's heart.' Or, 'Extinguish three live coals in her menstruation blood, and bury them. If this charm is to be broken, the coals must be taken out and thrown into a burning fire.'

Great care is then taken to prevent the mother from mishap caused by various agencies. Of the diverse methods employed, a few may now be mentioned.

'Mare's milk, boiled with virgin wax and then kneaded and put in a bag of buckskin, or of pure linen, and placed on the navel, will prevent miscarriage.' Or, 'Wearing of an eagle-stone' (*aëtites*) (*Shab.* f. 66*b*). Or, 'Drink three days in the morning and in the evening milk of a pregnant ass.' Or, 'Wear a ring made of the stag's bone.' Or, 'The heart of a hare taken out alive.' Or, 'White and red corals pounded and drunk in wine or taken with egg for three consecutive days.' Or, 'A ruby hung round the neck.' Or, 'A dead scorpion tied up in crocus-green cloth, and fastened on to the skirt.' Or, 'A ring with the image of a scorpion engraved on it, worn by the woman, will prevent miscarriage.' Or, 'A girdle made of snake's skin or of that of a she-ass, worn round the waist.' Or, 'An eggshell of a hatched chicken, burnt and powdered and drunk, prevents miscarriage.' Invaluable in preventing miscarriage is declared to be the stone 'enkuntra,' which is found in the field, looks like glass, has a hole in the middle, and is of the size of an egg. If worn, it is infallible in its effect.

All these are mere prophylactic measures. The real crisis begins with the travail of delivery. Here also the danger of the evil spirits is greater, and amulets and incantations are far more numerous than in the previous stages of conception and gestation. Some of the incantations may now be mentioned:

'When a woman is in difficult labour, whisper in her ear: "The angel Michael walking on Mount Sinai heard loud screaming and weeping. He said: O Lord, what is the reason for that screaming and weeping which I hear? And the Lord replied: A doe in the pangs of labour is weeping and screaming; go and tell her. Come forth, come forth, come forth, the earth is seeking thee."' Or, 'Write certain letters on a potsherd, put it on the woman, and say: "In the name of Anael, who hears women in labour, hearken also to this woman, and let the child come forth in peace and in life. Amen."' Or, 'Write on the four corners of a piece of linen (or, take a basin of still water and say over it) in the presence of the woman: "The gate of heaven was opened, and down came three (seven) angels with three (two) rods in their hands—one was white, the other was red, and the third black. The white one struck the heavens, and the rain came down; the red one struck the sea, and it parted; the third, the black one, struck the woman and brought forth safely child and after-birth." And (give the woman to drink of the water),' or, 'Wash the cloth in sweet water, give her the water to drink, and put the cloth on her head until she is safely delivered.'

Of general use has been another set of amulets and incantations with the verse Ex 11[8] written on pure parchment, beginning and ending with, 'Go forth' and 'I will go forth,' etc. Or, an amulet is prepared with letters in nine squares, which, in whichever way read, have the numerical value of 15, probably=one of the names of God, 'Jah.' Also the words 'Kur, kur, kur' are either written or repeated to the woman in labour; or, permutations of the Aramaic word *puk*, which also means 'go forth.' Permutations of the Tetragrammaton are also found in some amulets, and even the names 'Immanuel,' 'Soter,' and 'Salvator,' often mutilated beyond recognition, are used as sacred names, written on pure parchment, and placed beside the woman in labour; or, variations of 'Sator arepo,' etc. As a supreme remedy in very difficult cases, the scroll of the Law or an ancient copy of the Pentateuch is brought from the Synagogue, and taken into the room where the woman is in pains of delivery. In addition to amulets and conjurations, other means were employed for easing the labour and ejecting the child or the after-birth.

'The woman must drink water gathered at cross-roads.' Or, 'Another woman's milk lapped from the palm of her hand; in some cases, oil.' Or, 'a decoction made of the scrapings or the grime off the sheath of the butcher's knife.' Or, 'Soak the *afikomin* (*i.e.* the piece of Passover cake reserved for the end of the meal), and put it into her mouth. She must be careful not to eat it, and it will ease difficulties of labour.' Or, 'Tie the herb *Vives* under the sole of her left foot.' (No doubt the plant mentioned here is *Vitex*, 'chaste tree.') 'A magnet tied to the left thigh; or sea sponge or red alum has the same effect, when tied on the left thigh.'

Of all herbs and plants none rivals in efficacy the mythical *Eisenkraut*, or *Eisenhart*, as it is called in German. It is akin to the mythical 'Mandragora,' and has great powers to destroy charms and to prevent every evil occurrence. In modern German botany the name stands for 'Verbena' (vervain). Another plant used is the Artemisia, or mugwort, on the stomach or on the thigh. Similarly, 'Dust from under the threshold of the room, wrapped in a piece of cloth and put on the womb.' Or, 'The woman is to keep between her teeth the right horn of a goat or hart.' Or, ashes of silkworms. Or, scraped ivory in wine or water eases difficult labour. We shall pass over the numerous ingredients recommended for fumigation; they belong mostly to the unsavoury class of remedies already referred to. The same are prescribed also in cases where the child dies unborn, and the mother is in grave danger. Drinking of such nostrums, as well as fumigation, was resorted to.

'If a child born appears to be dead, pass a sieve over its face to and fro and it will revive.' Or, 'Cover it with the after-birth' (*Shab.* f. 134*a*). 'If the mother wishes to satisfy herself as to whether the child is alive or dead, she must look into a basin filled with oil, and if it is alive she will see her face in it; if not, she is to put her five fingers into a plate filled with honey, and lick them one after the other, and then drink the honey dissolved in warm water, and the dead child will be ejected with ease.' 'If the woman drinks a decoction of "Sharlei," i.e. *Salvia horminum* (common sage), it will assist in the ejection of the after-birth.' Or, 'The eating of garlic and doves' brains mixed with honey and boiled together in water.'

But the difficulties of labour may be due also to evil influences, for 'the burying of a pomegranate in the room of the woman will prolong the labour and prevent the birth of the child. The only remedy is to remove the pomegranate.' 'The stone found in a viper's head hung on a woman will prolong labour and prevent birth.'

As soon as the child is born, both mother and child are exposed to the evil demons, who are anxious to injure the child and to obtain possession of it, sometimes even bodily, and substitute for it a changeling. Every possible precaution is then taken to frustrate the action of the demons, and to grant as much protection as possible to the newborn babe. Lilith is the chief demon, but hosts of other witches prowl about, and must be kept at a distance. Conjurations play the principal part. A circle is drawn round the walls of the chamber and on the floor, and in it the names of the three dreaded angels, 'Sinoi, Sinsinoi, and Semangelaf,' are written. These were the angels mentioned above who were sent to punish Lilith, and to whom she promised not to come near the house, or the woman and child, wherever these names should be found. A long conjuration is also written on the parchment or paper containing the names of these angels, and hung round the four posts of the bed in which the woman lies, or fastened to the curtains. The conjuration, a modification of the ancient charm against the demon Aveziha, occurs in almost every collection of Oriental and Eastern European charms.

'This child-stealing or -killing witch, then,' so the conjuration runs, 'is met by the prophet Elijah, who stops her in her roamings, and asks her whither she is going. She answers that she is going to a certain house where a baby has been born, to eat its flesh, to drink its blood, to crush its bones, and to destroy it. Threatened by the prophet, she promises not to

go near that or any house where her names are known, written down, or hung up; and she gives to the prophet the list of her 18 or more mysterious names.'

In ancient variants she is known as the demon Lilith, 'Striga' or 'Strigla'; the name is next changed into 'Estrelia,' or 'Strelia Margarita,' and then to the 'Star Margarita.' But Lilith is the more common and the more prominent name. This amulet, once universally used, is still used throughout the east of Europe (Austria, Russia, Rumania, Turkey) and almost everywhere in the East (India, Syria, Arabia, etc.) as quite a common practice among the Jews. The book *Rasiel*, containing the description of the holy circle and the pictures of those angels, is in some parts of Poland and Russia placed in addition under the pillow of the woman. But it is not the mother the demons are after; it is the baby. And the effect of the bewitching is seen in the crying of the child for no apparent reason, in its wasting away, and in its untimely death.

'If the mother sees a woman whom she suspects of being a child-eating witch, she must put her left fist into her mouth, and say: "Thou and thy head are of a swine, thou art unto me a dead bitch, the after-birth of thy mother be in thy mouth,"' and she must repeat it three times, and that woman will have no power to hurt her. 'King Solomon asked the demon Ashmedai what should be done to a child that was constantly crying, and the demon said: "Cut a strip of the saddle of an ass first met in the morning, and place it under the child's pillow."' Another remedy against bewitching: 'Buy a new pot from the maker, and pay the price he asks; buy also an open lock. Take still water, wash the baby in it, and pour it into the pot, which must be placed under the bed of the mother, and the open lock in her bed. At the slightest suspicion of an attack on the part of an evil spirit, the mother locks the lock, and puts it upon the child, then some of the water is sprinkled over the child's face, and, without speaking, the water is poured out at the crossing of roads, and the pot replaced under the bed.' Vervain and 'ruta' are the plants which, if put upon the child, are sure to drive evil spirits away. Or, 'The eye of an old black cock put on the right side of the child, the cock's comb under its pillow, and close to the child the white stones found in a hen's stomach.' Or, 'Hang round its neck a bone which a dog has dropped from its mouth.' Or, 'Take some of the earth upon which the child has fallen immediately upon its birth, before either father or mother has seen it, and tie it round its waist for thirty days, and the child will always be safe from trouble and accidents.' Or, 'Take dust from under the threshold (or, over the door), and mix it with the mother's milk, and put it on the baby's head, and it will sleep peacefully.' 'To break the charm of a bewitched child, take a little raven from its nest before it can fly, burn it on the fire, pound the ashes, mix them with milk, and give it to the child before it has started sucking, and it will be safe.' Or, 'Hang a crystal or emerald over the child, and it will be safe.'

As late as the year 1707 the *secundines* burnt, and the ashes given in milk, were believed to destroy the charm of a wasting child. Or, a bag made of it, with snapdragon, St. John's wort, and other flowers put in it and hung round the child's neck, was considered a powerful amulet against bewitching. It must be understood that the 'evil eye' is also considered as a form of bewitching; but *no* reference is made to the 'evil eye' in *any* of *all* the ancient MSS. This notion and name appear for the first time in the 18th century. In modern times, to which we are turning now, most of these latter practices seem to have disappeared. A gold coin is hung in the cap, against the evil eye or any other evil spirit (Turkey and Rumania), or a satchel with blue beads and 'ruta' over the bed. Regarding changelings, a story is told of a famous Rabbi of the 18th cent., who was invited to be present on the occasion of a circumcision. (All the attacks of the demons are concentrated upon the period from the birth of the boy to the eighth day—the day of the circumcision.) Driving from his place to the house, he met on the road a large number of demons and witches, feasting and dancing round that very baby. He ordered his servant to bring him there, and then seven knives, seven saws, two loaves of bread, and seven slippers. He stuck a knife in each slipper, took his own off, washed his hands, and uttered the great Name. The witches and demons melted away and left the baby behind, which he took and brought back to its parents. There he uttered another holy Name, and lo! the baby which the mother had been keeping with her in bed turned into a bundle of straw. 'When a child laughs in its sleep it is a sign that Lilith or some other evil spirit is playing with it,' and it must be awakened by snubbing the nose. In Rumania it is believed that an angel is playing with the child. The child's clothes must not be left outside over night; an owl drops its spittle or a feather on them, and it changes into a long hairlike worm, which enters the body and tortures the child (Egypt). By conjuring it, it comes out of the body in the form of black points, which must be carefully removed (Egypt). Neither mother nor baby is left alone all the eight days. On the eve of the eighth day children come with their teacher and read certain portions of the Law (the Shema', Dt 6[4]), and they are regaled with sweets and with bags of peas salted and peppered (Rumania and Poland). The baby is not put into the cradle before the sixth day (the naming day), and is kept all that day on the knees of an assistant woman (Turkey, India, etc.). Before the baby is laid in the cradle, almonds and raisins are put in, and the cradle is gently rocked. The almonds, etc., are then given to other children. Under the pillow the book of Psalms is laid, and under the mattress a sword or horse-shoe (India). A lying-in woman must not see any one all the week (Turkey). Over the bed a satchel is hung, containing a blue bead, some garlic, and a piece of broken glass (Salonica and Palestine). On the Friday before the circumcision similar practices are observed to those on the eve of the circumcision, and visitors are entertained.

If it should happen that a woman is losing her children, then 'she is to go to a bitch, and put her foot on a puppy, and say three times: "Take the dead and give me the living." Then she is to take the puppy and carry it close to her body, with its head to her right and its feet to her left side, and go to the water and loosen her clothes, and let the puppy drop into the water and say three times: "Give me the living and take the dead." This must be done when the woman is in the ninth month.' Or, 'Go to a dried-up nut-tree and bore a hole just over the head, and put into that hole some of the cuttings of the nails of fingers and toes and some hair, and ram a peg into that hole, and say: "I conjure thee, evil spirit, to remain for ever locked up in this tree, and no longer to be able to hurt me."' Or, 'Make a ring from the silver got from nine young maids under age, and put it on the ear of the child immediately after birth before it has been picked up from the ground, and it will live.'

The rocking of an empty cradle causes the premature death of the child, and the walking over a child or its crawling between the legs of another person causes its growth to be stunted (Rumania and Russia). Very few lullabies, if any, have been preserved. As a rule, the mother rocks the child to sleep to some popular tune. Within thirty days the chances of bewitching and changing diminish, or are considered to have entirely disappeared.

(6) *Primogeniture, naming.*—The firstborn must be redeemed within thirty days. He is believed to have some curative powers. If he treads on the back of a person suffering from lumbago or other joint-diseases, he drives the illness away (Rumania). Some of the duties and privileges of the firstborn prescribed by the Bible are still maintained, and on the eve of Passover he is expected to fast in remembrance of the death of the firstborn of the Egyptians. In some marriage settlements the male offspring is the object of an important clause regulating matters of inheritance and succession.

Among the Ashkenazic (German) Jews a child often takes the name of the grandparent, or of a dead relative. Among the Sephardic (Spanish and Eastern) Jews the parent's name is often given to the child. The former believe that it is an evil omen to name a child after a living person. In cases

of dangerous illness the name is often changed, thereby suggesting a re-birth or change in the destiny of the patient.

LITERATURE.—i. *MANUSCRIPTS.*—Most of the material is taken from the medical and magical MSS in the writer's possession, chiefly from the oldest and the fullest. The following is a list of those used, arranged according to antiquity and importance: Cod. 1055 (probably of the 14th cent., North Italy); Cod. 315 (Oriental Spanish hand, 17th cent.; contains also the work attributed to Aben Ezra); Cod. 444 (Ital., 17th cent., 2 vols., i. with 1231 recipes, and ii. with more than 500); Cod. 676 (Germany, 14th or 15th cent., medical treatises, etc.); Cod. 443 (Tunis, 1775, upwards of 400 recipes copied from older MSS); Cod. 177 (Syria, 15th–16th cent., with very ancient Babylonian material); Cod. 118 (Germany, 16th–17th cent., with old German conjurations; upwards of 400 recipes); Cod. 700 (Germany, 17th cent., many hundreds of recipes); Cod. 982 (Germany, hundreds of recipes—some German and the conjuration of the 'Eisenkraut'); Cod. 358 (Morocco, 19th cent., very full); Cod. 466 (Spanish origin, written in Bulgaria 16th cent., more than 400 recipes); Cod. 464 (Italy, 18th cent., with 308 recipes, many from Aben Ezra and other ancient authorities); Cod. 462 (Italy, 17th cent., with 200 recipes); Cod. 128 (Yemen, 18th–19th cent., some Arabic, others Hebrew, very full); Cod. 603 (Turkey, 19th cent., Hebrew, and some in Spanish). Codd. 40, 194, 438, 451, 677, 702, might be mentioned, for they also contain medical, magical, and sympathetical recipes and a number of amulets referring to birth, etc.; also Cod. 134 (Montefiore College, Ramsgate, of the 14th cent.).

ii. *PRINTED LITERATURE.*—For Bible: Winer, *RWB*, *s.v.* 'Kinder.' For Talmudic period: I. Lamperonti, *Paḥad Yitsḥaḳ*, *passim*; J. Hamburger, *RE* ii., Leipzig, 1883, *s.v.* 'Geburt,' p. 254 ff.; Gideon Brecher, *Das Transcendentale . . . im Talmud*, Vienna, 1850, p. 207 ff.—For modern times: J. Buxtorff, *Synagoga Judaica*, Germ. ed. 1738, p. 81 ff.; M. Grunwald, *MGJV*, Hamburg, i., 1898, p. 90 ff., v., 1900, p. 63 ff. And the following Hebrew works, partly reprints from ancient MSS: Anonym., *Toledoth Adam*, last ed., Lemberg, 1875; B. Benas, *Amtaḥath Binyamin*, Wilmersdorf, 1716; Anonym., *Mif'alot Elohim*, Lemberg, 1865; David Tevele, *Beth David*, Wilmersdorf, 1733; Anonym., at end of *Urim Ve-Tumim*, Dyhrenfurt (s.a.); S. Pelungian, *Sefer ha-Zechirah*, Hamburg, 1709; H. Palache, *Refuah ve-ḥayim*, Smyrna, 1874; Reuben b. Abraham, *Seguloth*, Jerusalem, 1865; Moses b. Israel Benjamin, *Yalḳut Moshe*, Munkacy, 1894; and one of the most curious collections in Jewish-German of a certain Jeh. Hentchin, *Matsil Nefashoth*, Prag. 1651 (Amsterdam, 1651), agreeing in many points with Cod. 118.

M. GASTER.

BIRTH (Muhammadan). — Among Muslim peoples the birth of a child, or at least of a male child, is an event of the first importance. It is especially so to the mother, because a barren wife is held in no regard by husband or relatives. Women therefore resort or resorted to various charms and superstitious rites, even to stepping across the corpse of a decapitated criminal and anointing their persons with his blood, in the hope of becoming fertile; and the intentional avoidance of children by husband or wife is practically unknown, though at the time of Muḥammad such avoidance was permitted to men who did not desire offspring from slave concubines (*Mishkāt al-Maṣābīḥ*, tr. Matthews, 1810, vol. ii. pp. 96–98). The ceremonies attending a birth are numerous, but it is not always easy to distinguish those which are essentially Muslim, *i.e.* handed down from the days of the Prophet, from those which are exotic and are derived from local customs and foreign superstitions. The birth-ceremonies of Muslims vary in different countries, and scarcely any of them, except the *'aqīqah*, rest upon the recorded precepts of Muḥammad; but there is a general agreement in the chief observances, which shows that they are to be ascribed to the usual practice of the Arabs at the time of the promulgation of Islām. Two or three days before the expected date of the birth, the midwife (*dāyah*) brings to the house of the woman to be confined the groaning-chair or 'birth-throne' (*kursī al-wilādah*), upon which the birth is to take place, for Muslim women are delivered sitting. The chair, which belongs to the midwife, is covered with a shawl or embroidery, and *ḥinnā* flowers or roses are tied with an embroidered handkerchief to each of the top corners of the back. As soon as the delivery is safely accomplished, the bystanders trill the *zagharīt*, or lulliloo (as in the tale of King 'Umar b. al-Nu'man in the *Alf Lāylah wa Lāylah*; cf. Burton, ed. Smithers, 1893, i. 401). The child is at once wrapped in white linen, or linen of any colour but yellow, and the father or, in his absence, some other man (but never a woman) repeats the call to prayer (*adhān*) in the infant's ear, or the *adhān* in its right ear and the nearly identical *iqāmah* in its left ear. This is done in imitation of Muḥammad himself, who is related to have acted thus on the birth of his grandson Ḥasan (*Mishkāt*, *ut sup.* ii. 316). Another custom, based upon the same authority, is for some learned man to suck a date or some sweetmeat and put it into the baby's mouth and rub it on its palate, whereby the sucker's wisdom is hoped to be communicated (*Mishkāt*, ii. 315; Herklots, *Qanoon-e-Islam*, 1822, p. 6). Among the well-to-do the mother retires to her bed for from three to six days; but poor women scarcely rest at all after their delivery. Meanwhile rejoicings begin at once; but these are much more festive for the birth of a son than of a daughter. The men recite the *fātiḥah* (Qur. ch. i.) and receive presents. Dancing men and girls assemble and perform before the house, and sometimes the father entertains his friends on each day of the week succeeding the happy event; but usually the seventh day (*yaum al-subū'*) is that chosen for the chief festivities. Lane (*Mod. Egyptians*[5], 1860, ch. xxvii. p. 504 f.) has described the ceremonies of the seventh day as practised in Cairo about 1835:

'On the . . . seventh day after the birth of a child the female friends of its mother pay her a visit. In the families of the higher classes *'Awālim* ['*Ālmahs*] are hired to sing in the *ḥarim*, or *Ālātiyah* perform, or *fiqis* recite a *ḥatmah* [of the Qur'ān] below. The mother, attended by the *dāyah*, sits on the *kursī al-wilādah* [birth-chair], in the hope that she may soon have occasion for it again; for her doing this is considered propitious. The child is brought, wrapped in a handsome coloured shawl or something costly; and, to accustom it to noise that it may not be afterwards frightened by the music and other sounds of mirth, one of the women takes a brass mortar [*haun*] and strikes it repeatedly with the pestle, as if pounding. After this the child is put into a sieve and shaken, it being supposed that this operation is beneficial to its stomach. Next it is carried through all the apartments of the *ḥarim*, accompanied by several women or girls, each of whom bears a number of wax candles, sometimes of various colours, cut in two, lighted, and stuck into small lumps of paste of *ḥinnā* upon a small round tray. At the same time the *dāyah* or another female sprinkles upon the floor of each room a mixture of salt and seed of the fennel-flower, or salt alone, which has been placed during the preceding night at the infant's head, saying, as she does this, "The salt be in the eye of the person who does not bless the Prophet," or "The foul salt be in the eye of the envier." This ceremony of the sprinkling of salt [*rashsh al-milḥ*] is considered a preservative for the child and mother from the evil eye; and each person present should say, "O God, bless our lord Muḥammad!" The child, wrapped up and placed on a fine mattress, which is sometimes laid on a silver tray, is shown to each of the women present, who looks at its face, says, "O God, bless our lord Muḥammad! God give thee long life," etc., and usually puts an embroidered handkerchief, with a gold coin (if pretty or old, the more esteemed) tied up in one of the corners, on the child's head or by its side. This giving of handkerchiefs is considered as imposing a debt, to be repaid by the mother, if the donor should give her the same occasion; or as the discharge of a debt for a similar offering. The coins are generally used for some years to decorate the head-dress of the child. After these *nuqūṭ* [wedding presents] for the child, others are given for the *dāyah*. During the night before the *subū'*, a water-bottle full of water (a *dauraq* in the case of a boy, or a *qullah* in that of a girl), with an embroidered handkerchief tied round its neck, is placed at the child's head while it sleeps. This, with the water it contains, the *dāyah* takes and puts upon a tray and presents to each of the women, who put their *nuqūṭ* for her (merely money) into the tray. In the evening the husband generally entertains a party of his friends.'

On the same seventh day (or on the 14th, 21st, 28th, or 35th day after birth) the child is named, though this is often done a few hours after its birth, without any special ceremony; and the rite of *'aqīqah* is to be observed, together with the shaving of the child's head, though both are commonly neglected at the present day. The *'aqīqah* is enjoined by a tradition of Muḥammad,

who said, 'An *'aqīqah* must be observed at the birth of a child; then slay a goat on its behalf and shave its head'; and again, 'The *'aqīqah* for a son is two goats, and for a daughter one, either male or female'; and Buraydah related: 'We used, in times of Ignorance, when children were born to us, to slay goats and rub their heads with the blood. Then, when the religion of Islām came, we slew a goat on the seventh day, and shaved the child's head, and rubbed saffron upon it' (*Mishkāt, ut sup.* ii. 315, 316; Abū-Dā'ūd, *Ṣaḥīḥ*, Arab. text, ii. 36). The *'aqīqah* is properly the hair of the newborn infant, but the term is applied by metonymy to the sacrifice made on its shaving (Lane, *Arabic Lexicon, s.v.* "Aqīqah'). It may be a ram or a goat, or two for a son and one for a daughter. The animal must be a male yearling and without blemish, according to Abū-Dā'ūd (Hughes, *Dict. of Islām*, art. 'Children'). The rite is held obligatory by Ibn Ḥanbal, but the founders of the three other orthodox schools regard it as unimportant, in spite of Muḥammad's example and the tradition prescribing the *'aqīqah* (or, as he preferred to call it, *nasīkah*). The person sacrificing should say, 'O God, verily this *'aqīqah* is a ransom for my son such a one; its blood for his blood, and its flesh for his flesh, and its bone for his bone, and its skin for his skin, and its hair for his hair. O God, make it a ransom for my son from hell-fire.' A bone of the victim should not be broken. A leg should be given to the midwife, but the *'aqīqah* should first be cooked with water and salt without any part being cut off, and part should be given to the poor (Lane, *loc. cit.*, and *Thousand and One Nights*, note 24 to ch. iv. [1859 ed., vol. i. p. 277]). 'It is a sunneh ordinance, incumbent on the father, to shave, or cause to be shaved, the head of his child, and to give, in alms to the poor, the weight of the hair in gold or silver' (Lane, *Thousand and One Nights, ib.*). Circumcision is also specially approved when performed on the seventh day; but in practice it is usually postponed to the fifth or sixth year, or even much later.

On the fortieth day, as a general rule (not universally observed, however), the purification of the mother is completed, and she goes to the bath; and on the same day the infant is introduced to its rocking cradle, and *ḥarīm* festivities take place. The various additional ceremonies, many of them common to Hindus as well as Muslims, observed in India, may be read in Herklots (*op. cit.*); those commonly witnessed in Turkey in Europe are very fully described by a Consul's wife in *The People of Turkey*, edited by the present writer, 1878, vol. ii. pp. 1-10; but most of these are merely amplifications or variations of the customs described above.

With regard to evidence of birth, the testimony of one woman, be she the midwife or another, in addition to that of the mother, is required, according to Ḥanafī law, to prove that the child is the offspring of the mother; but the father's sole testimony is accepted for his paternity. Further evidence is required, however, when the mother is passing her term of *'iddah* after a complete divorce (Hamilton's *Hidāya*, 1791, iii. 134; Hughes, *Dict. of Islām*, art. 'Birth').

LITERATURE.—The literature has been sufficiently cited in the article.

STANLEY LANE-POOLE.

BIRTH (Parsi).—1. The birth of a child is a very auspicious event in a Parsi house. It was so also in ancient Persia. According to the *Vendīdād* (iv. 47), Ahura Mazda says: 'I prefer a person with children (*puthrānē*) to one without children (*aputhrāi*).' Even the very ground where a man lives with his children is allegorically described as feeling happy (*Vend.* iii. 2). Cultivation and a good supply of food to people are recommended, because they make mankind healthy and able to produce healthy progeny (*Vend.* iii. 33). To be the father of good children was a blessing from the Yazatas like Tishtrya (*Yasht* viii. [*Tīr*] 15), Mithra (*Yasht* x. [*Mihir*] 65), Haoma (*Yasna* ix. 4, 7, 10, 13, 22), and Ātar (*Yasna* lxii. 10; *Vend.* xviii. 27), and from the Fravashis (*Yasht* x. [*Mihir*] 3; *Yasht* xiii. 134). To be childless was a curse* (*Yasna* xi. 1, 3). Domestic animals, when ill-fed and ill-treated, cursed their masters that they might be childless (*Yasna* xi. 1). Childlessness was something like a punishment from heaven (*Yasna* xi. 3; *Yasht* x. [*Mihir*] 38, 108, 110). Kingly splendour (*kavaēm khvarĕnō*) was associated with those who were blessed with children (*Yasht* xix. [*Zamyād*] 75). A Zoroastrian woman often prayed for a good, healthy child (*Yasna* ix. 22). A Zoroastrian man and woman prayed before their sacred fire for a good, virtuous child (*Yasna* lxii. 5; cf. *Vend.* iii. 33). A woman without a child was as sorry as a fertile piece of land that is not cultivated (*Vend.* iii. 24). She prayed for a husband who could make her a mother of children (*Yasht* v. [*Ābān*] 87; *Yasht* xv. 40).

Among the Achæmenians, a wife who gave birth to many children was a favourite with her husband, who did not like to displease her in any way (Herodotus, ix. 111). Children being the choicest gift of God, their lives were, as it were, pledged by parents for the solemn performance of an act (Herodotus, vii. 10). We read in Herodotus (i. 136) that 'next to prowess in arms, it is regarded as the greatest proof of manly excellence to be the father of many sons. Every year the king sends rich gifts to the men who can show the largest number, for they hold that number is strength.' Strabo also says a similar thing (xv. 11). We learn from the writings of the Christian martyrs of Persia that, for the above reasons, the ancient Persians did not like the prohibition against marriage among the Christians in the case of holy young Christian girls.

2. Thus we see that an ancient Zoroastrian considered the birth of a child a great event in his life. The modern Parsis have, to a great extent, inherited the desire. When the wife has conceived, it is considered to be an event of joy in the family. According to the Avesta, the women, on finding themselves enceinte, prayed for a safe delivery and for healthy children (*Yasna* ix. 22). They mostly prayed before Ardvī Sūra for an easy delivery (*Yasht* v. [*Ābān*] 87), and then for a copious supply of milk at their breast for their children (*Ardvī Sūra Nyāyish*, 3). The allusion to these prayers suggests that there must have been some formal ceremonies accompanying them, but we do not know what they were.

Coming to later Pahlavi-Parsi books, we find that the *Shāyast lā-Shāyast* (x. 4, xii. 11) directs that, when it is known that a woman has become pregnant, a fire should be maintained most carefully in the house.† The house or family that does not keep the fire of the house properly has less pregnancy of women in it (*Shāyast lā-Shāyast* xii. 3). The *Sad-dar* (xvi. 1) also gives this direction.‡ We have the remnant of this injunction in the present custom that, among the modern Parsis, on the occasion of the completion of the fifth and seventh months of pregnancy, a lamp of clarified butter is lighted in the house by some families. The reason assigned for this is that the fire so kindled in the house keeps out *daēvas*, i.e. evil influences, from the house. A fire or a lamp

* Cf. the blessings and the curse of Cambyses (Herodotus, iii. 65). Cf. also those of Darius (*Behistun Inscriptions*, iv. 10, 11).

† *SBE* v. (1880) pp. 316, 343.

‡ *Ib.* xxiv. 277.

is even now taken to be symbolical of the continuation of a line of offspring. For example, it is not rare to hear, even now, words like these: *Tamārō cherāg roshan rahē*, i.e. 'May your lamp be always burning.' This benediction means, 'May your son live long, and may your line of descent continue.'

3. According to the Avesta (*Vend.* xv. 8), a woman in the state of pregnancy is to be looked after very carefully. It is wrong for the husband to have sexual intercourse with her in her advanced state of pregnancy, which, according to the Rivāyats, commences with the fifth month.* She must abstain from coming into contact with any dead or decomposing matter, even with a thing like a tooth-pick, which may contain germs of disease (*Shāyast lā-Shāyast* x. 20, xii. 13; *Sad-dar* xvii. 2; *SBE* v. 323, 344, xxiv. 278).

At times, some families direct the priests to say certain prayers, and generally to recite one or two of the *Yashts*, during the whole or a part of the period of pregnancy.

4. The modern Parsis have no religious ceremonies or rites during the pregnancy of the women. On the completion of the fifth month of pregnancy, a day is celebrated and known as *panchmāsiun*, i.e. 'the day of the fifth month.' Similarly, a day is observed on the completion of the seventh month, and is known as *agharni*. These days are observed only in the case of the first pregnancy. They are not observed in accordance with any religious injunction or with any religious ceremonies or rites. The expectancy of a child being a joyful event, as said above, these days, especially the seventh-month day, are observed as joyous occasions, when the woman who is enceinte is presented with suits of clothes by her parents, relatives, and friends, and especially by the family of her husband. The husband is in turn presented with a suit of clothes by the wife's family. Sweets are sent out as presents by the husband's family to the bride's house and to near relatives and friends. Among these sweets, one prepared in the form of a coco-nut has a prominent place. A coco-nut signifies a man's head, and so it is a symbol of fecundity. Some of the customs observed on these occasions are more Indian in their origin and signification than originally Persian or Zoroastrian.

5. The first delivery generally takes place in the house of the wife's parents. A room, or a part of the room, generally on the ground-floor, is set apart for the purpose. As the *Vendīdād* (v. 46) says, the place for delivery must be very clean, dry, and least frequented by others. It appears that in ancient times such places were specially provided in Parsi houses on the ground-floor. Parsi houses in those times had generally spacious ground-floors that were used for all purposes. The upper floors were low, and were rather like lofts than storeys. So the ground-floors provided proper places for delivery as enjoined in the *Vendīdād*. But, as with changed circumstances, Parsi houses of to-day are not what they were before, and as, at present, in storeyed-houses, the ground-floor in big towns is generally the worst part of the house, it is properly condemned as a place unfit for delivery.

6. In the case of a house or a place where no delivery has taken place before, religious-minded persons generally take care that a religious ceremony takes place in it before the delivery. In other words, they get it consecrated. A priest or two say and perform the *Āfrīngān* prayer and ceremony in the place. At times even the *Bāj* prayer is recited (cf. Darmesteter, *Le Zend-Avesta*, 1893, ii. 723 ff., 686 ff.).

* Cf. Anquetil du Perron, *Zend-Avesta*, 1771, ii. 563.

7. On the birth of a child, a lamp is lighted and kept burning for at least three days in the room where the woman is confined. The *Sad-dar* (ch. xvi. 2) speaks of three days. It says: 'When the child becomes separate from the mother, it is necessary to burn a lamp for three nights and days—if they burn a fire it would be better.'* Some people keep the lamp burning for ten days, and some for forty days, which is generally observed as the period of confinement. The *Shāyast lā-Shāyast* directs that the lamp must be placed in such a position that no one can pass between it and the newborn child (ch. x. 15). It further says that ten women may be in attendance at the time of delivery, five of them to wait upon the mother and five upon the newborn child to look after its cradle. The child is directed to be besmeared with a mixture of sulphur and the juice of a plant (ch. x. 16). The day-time is preferred to the night-time for child-birth (*Shāyast lā-Shāyast* xii. 7).

8. On delivery the mother is enjoined to remain apart from others. She must not come into contact with fire, water, or any of the furniture of the house (*Vend.* v. 45–49).

The *Sad-dar* (ch. lxxvi. 1–5) † enjoins that 'she should not wash her head for twenty-one days, nor put her hand again on anything. . . . After the twenty-one days, if she sees herself in such a state that she is able to wash her head, she washes her head. And, after that, until the coming on of the fortieth day, it is requisite to abstain from the vicinity of a fire and anything that is wooden or earthen; it is also requisite to abstain from everything of her cooking and pot-boiling. Afterwards, when it is forty days, she is to wash her head, and it is proper for her to do every kind of work. Till the lapse of a second forty days it is not proper for her husband to make an approach to her, for it is a great sin, and it is possible that she may become pregnant a second time, as within a period of forty days women become very quickly pregnant.'

In the case of those who give birth to still-born children it is enjoined in the *Vendīdād* (v. 55 f.) that they must remain separate for twelve days. This period has been latterly extended, as directed in the later Pahlavi and Persian books, to forty days in all cases of delivery. Nowadays a Parsi woman has generally forty days of seclusion after her delivery. The *Sad-dar* (ch. xvi. 4) says, 'During forty days it is not proper that they should leave the child alone; and it is also not proper that the mother of the infant should put her foot over a threshold in the dwelling' ‡ (*i.e.* leave the house).

9. Some families observe the fifth day after birth, known as *patchori* ('the fifth day'), and the tenth day, known as *dasori* ('the tenth day'), as gala days; but these days have no religious signification whatever.

10. During these forty days the woman must remain in a state of isolation. She must not come into contact with anybody or with any part of the ordinary furniture of the house, especially wooden furniture and linen articles. Her food is to be served to her on her plate by others. Those who have to come into contact with her have to bathe before they mix with others. Formerly, even the medical attendant had to do so, but nowadays the salutary rule is more honoured in the breach than in the observance. The original injunction seems to have been intended to observe 'purity' in order to prevent the spread of puerperal fever and other such diseases to which women in this state are subject.§

* *SBE* xxiv. 277. † *Ib.* xxiv. 339 f. ‡ *Ib.* xxiv. 277.

§ See the chapter on 'Maternity and its Perils,' in Mr. Havelock Ellis's *The Nationalisation of Health*, 1891, pp. 23–143. It says that in England and Wales, where 4500 women die every year in child-birth, 'about 70 per cent. of this mortality is due

11. At the end of the forty days, the period of confinement, the woman has to purify herself by a bath before mixing with others. At first she takes an ordinary bath, and then goes through what is called *nān* * (a contraction of the Sanskrit word *snān*), which is a sacred bath. A priest, generally the family priest, administers this bath with consecrated water. Even those who have come into contact with the woman during the days of her accouchement have to go through a ceremonial purificatory bath.

12. All the bedding and clothes of the woman used during the forty days of her seclusion after delivery are rejected from ordinary use. They are enjoined to be destroyed, lest they carry and spread germs of disease among others. But nowadays that injunction is not strictly followed. They are now given away to non-Zoroastrian poor people of the sweepers class.

13. Formerly a mother in child-birth first drank a few drops of the sacred Haoma (*q.v.*) juice, squeezed and consecrated in a Fire-temple. The new-born child also was made to drink a few drops of this juice (*Shāyast-lā-Shāyast* x. 16). Anquetil du Perron refers to this religious custom as prevalent in his time (*Zend-Avesta*, ii. 564). In the *Haoma Yasht* (*Yasna* ix. 22) Haoma is said to give fine healthy children to women who give delivery. Haoma was emblematical of immortality; hence this custom. Now, however, the custom is rarely observed, and, in place of the Haoma juice, a sweet drink made of molasses or sugar is given to the child as the first auspicious drink.

JIVANJI JAMSHEDJI MODI.

BIRTH (Teutonic).—All the Teutonic peoples made a rigorous distinction between legitimate and illegitimate birth. They granted the full rights of consanguinity and tribal membership only to the children of legitimate unions, that is, to the offspring of a free father and a free mother joined in lawful wedlock. Whenever a child was born, it was laid upon the ground by the midwife in attendance upon the mother, and this practice is reflected to this day in the Scandinavian terms for midwife, *jordgumma*, *jordemoder*, 'earth-mother.' This rite has maintained its ground in many branches of the Teutonic stock (cf. A. Dieterich, *ARW* viii. 7 ff.); it originated in the old belief that the soul, and therefore the life, of the child issues from 'mother earth,' and that the child derives its vitality therefrom. The next step on the midwife's part was to lift the child up —hence the German term for 'midwife' *Hebamme*, O.H.G. *hevianna*—and hand it to the father. If the latter wished to acknowledge and maintain the infant, he took it in his arms, but he retained the right to condemn it to exposure. This right could be exercised in cases where the child was feeble or deformed, or when the father was in doubt as to its legitimacy—a situation which often arose at the birth of twins, the popular belief being that such an event implied the mother's unfaithfulness; or, again, if it had been predicted that the child's existence threatened the father with danger or misfortune, or even if he felt himself unable to maintain the child. The father's prerogative, however, was annulled by law after the introduction of Christianity, though various fairy-tales assume its survival down to the present day. But even in heathen times the father's decision had to be made within a few hours after the birth, for once the child had taken nourishment, milk or honey, in however small quantities, or had been laved with water, it was regarded as belonging to the family, and shared equal rights with every other individual within the same. Traces of this primitive heathen ordinance are still found in the Christian period; thus, the child's capacity to inherit sometimes dated only from its baptism, while the *wergeld* of an unbaptized child was sometimes reckoned at half the usual amount. Exposure was likewise illegal if the child had received its name. The name was usually given by the father, and at the ceremony (Icel. *nafnfestr*) a presentation was made to the child, while occasionally the blood-relations held a feast (*barnsöl*). The child was generally named after some deceased member of the family, preferably the grandfather on the mother's side, as it was believed that the name carried with it the personal qualities of its original bearer (cf. G. Storm, *Arkiv for nordisk filologi*, ix. 199 ff.). If the father, upon whom these various legal functions devolved, died before the child was born, his place was taken, according to the most ancient usage, by the entire group of his blood relations, frequently augmented by some relations from the mother's side, and these chose one of their number to act as guardian and discharge all legal obligations in regard to the child. The same procedure was observed when the father had been proclaimed an outlaw; in the eye of the law the mother was then a widow and the child an orphan. If the father was unable to be present at the birth, the mother had to decide whether the child should be acknowledged or exposed.

A somewhat different course was adopted in the case of illegitimate birth. The children of slaves were themselves slaves from birth, and belonged to the owner of the mother. In primitive times, distinctions were made amongst the illegitimate children of free parents, and the Old Norse language had special designations for the different classes: thus *hornungr* signified the son of a free mother (*frilla*) with whom the father cohabited, though not in wedlock; *hrisingr*, the son of a free mother with whom the father's relations were clandestine; *þýborinn*, the son of a free father by a slave. These distinctions, however, were gradually done away, and disappeared first of all in Iceland. In regard to the illegitimate, the first step was to find out who the father was; and when this point had been decided, the child, even in early times, acquired the right of inheritance—though in a limited degree—and a claim to the father's protection. Moreover, it frequently happened that the child was received into the family bond (Icel. *ættleiding*), and this transaction, especially when there were no children of lawful birth and capable of inheriting, was celebrated with feasting and high ceremonial. In all cases it was the duty of the father, or his family, to maintain the child till maturity was reached.

The event of birth became the nucleus of many curious practices and superstitions. In many districts of Germany, Britain, and Scandinavia, there prevails to this day the custom of lighting fires or candles round about the newly-born (cf. Liebrecht, *Zur Volkskunde*, 31), in order to prevent

to puerperal fever,' and that 'almost the whole of this mortality might be avoided.' It is the careless medical practitioners and midwives that are responsible for this mortality, because they do not preserve 'purity,' and carry germs from one woman in confinement to another. The midwifery writers of old said to their disciples: 'Thine is a high and holy calling; see that thou exercise it with purity.' In the enjoined isolation of the Parsi women during their confinement, the original intention seems to be that of observing 'purity.' Some of the later Pazend and Persian writers have not properly understood the original good intention of the early writers, and so have carried the rigour of isolation too far. But, anyhow, the original intention of isolation is intended for the 'purity' referred to by old midwifery writers.

* See art. PURIFICATION (Parsi).

their falling under the power of evil spirits. The same purpose was served by piercing the door or the door-post with a knife, placing some article of steel—a pair of scissors, a key, a horse-shoe, etc.—in the cradle, hanging amulets round the child's neck, stopping the keyholes, or keeping out cats or any old woman who was suspected of having the 'evil eye.' In some places it was the custom to put salt under the child's tongue to prevent its being bewitched. These prophylactic expedients were deemed necessary till the time of baptism, as it was during this period that the demons directed their practices against the child, and tried to put a changeling, a babe of their own, in its place. The immediate surroundings of the child were meanwhile tabu. On the other hand, every possible effort was made to secure good fortune for the newly-born. Special importance was ascribed to the umbilical cord, and to the bladder-like membrane or 'caul' with which some children are born, such children being regarded as the favourites of fortune. The caul was carefully preserved and sewn into the child's clothing, thus ensuring success in all its future undertakings. From this, indeed, developed the Old Norse belief in an attendant spirit, the *fylgja*, which accompanied the person wherever he went. The dried umbilical cord was in course of time given to the child with a meal of eggs, in the expectation that the child would thereby become shrewd and intelligent; or it was sewn into the clothing, as a means of making its possessor clever and capable. Amongst the Teutons, as amongst many other races, great emphasis was laid upon the young tree which was planted on the day of the child's birth, and was thenceforward regarded as his tree of life. The fortunes of the tree ran parallel with those of the child, and from this notion arose the belief in a person's tutelary tree (Swed. *vård-träd*). When it chanced that an animal was born in the homestead on the same day as the child, it was believed that the former, during its whole life, stood in the closest relationship to the latter. The animal was named after the child, and became his constant associate.

Widely diffused throughout the entire Teutonic area are the mythical stories regarding the goddesses of destiny, who appear at the birth of a child and determine his future. Their function is indicated by their names: thus, in Old Norse they are called *urðir*, 'the powers of destiny'; in English, 'the weird sisters'; Anglo-Saxon, *mettena*, 'those who measure out'; Middle High German, *Gaschepfen*, 'the makers.' From early times the sisters were reckoned as three in number, but sometimes also as seven or thirteen, and frequently the part assigned to one of them is to deal out misfortune to the infant. Norse poetry speaks of them as *nornir*—a word of doubtful etymology. They are represented as spinning maidens, who at the child's birth wind his thread of life—his fate; and accordingly, possessing as they do a foreknowledge of the destiny of men, they acquired at length a prophetic character.

The birth of a child was an occasion upon which a part of special importance was played by the myths regarding the origin of children. The thought underlying nearly all these myths was the belief that children come from 'mother earth.' One proof of this is supplied by the primitive heathen practice, already referred to, of laying the child upon the ground immediately after birth. In many parts of Germany and the Norse countries children were supposed to come forth from hollow trees, as these, according to popular notions, were connected with the interior of the earth. Similar ideas were also held about lakes, ponds, and wells. In South Germany various lakes and fish-ponds are known as *Kinderseen*, 'children's lakes'; while, more particularly in Central Germany, there are many *Kinderbrunnen*, 'children's wells,' in which the goddess Frau Holle was believed to keep in charge the souls of children before their birth. Other places of origin were marshes and fens. The prevailing belief in many districts was that children are drawn out of the water and carried to their mothers by water-fowl, especially the stork and the swan, while in other parts they were supposed to issue from caverns or mountains. In Pomerania, for example, we find 'swan-stones' and *Adeborsteine*, 'stork-stones,' and children obtained from these were called 'swan-children' (Jahn, *Volkssagen aus Pommern*, 390). From heathen times comes the belief that children are the men of a former day, re-born into the world. They had passed their intermediate period in an animal form. According to a popular superstition in South Germany, they had been flying around as butterflies. We thus see that these various notions regarding the origin of children are related in the closest way to the primitive Teutonic belief regarding the soul.

E. MOGK.

BIRTH-DAYS.—The custom of commemorating the day of birth is connected, in its form, with the reckoning of time, and, in its content, with certain primitive religious principles. It is the most conspicuous example of commemorative ritual. Its essence is the repetition of the event commemorated. As culture develops, this primary meaning is obscured by various accidents.

In the lower culture, what is reported of the Congo tribes applies generally: 'no record is kept of birth or age.'* The Hupas of California take no account of the lapse of time, and consider it a ridiculous superfluity to keep a reckoning of age. They guess at a man's years by examination of the teeth. One will say, 'I have good teeth yet.' The only epochs noted are those of babyhood, boyhood or girlhood, youth, manhood or womanhood, and the state of married man or woman, old man or old woman.† The Omahas have a superstitious objection to counting, and therefore never note a person's age.‡

The earliest lunar reckoning produced the seven-day week, the lunar month, and the lunar year, thus providing machinery for the expression of any ideas involving repetition of events. Parallel with these dates, and of earlier origin, are seasonal epochs, marked by changes in vegetation, and also the epochs of human growth, as noted above.

The day of birth itself may be first considered. At an early stage of chronology the influence of ideas of luck is brought to bear upon dates. Every people has its own list of ominous objects and circumstances. In highly developed popular religions the result is a dualism affecting the whole life of man. Of the Cambodians we read that the idea of luck dominates their entire existence.§

‡ Long and James, *Expedition to the Rocky Mountains*, 1823, i. 214, 235.
§ E. Aymonier, *Le Cambodge*, 1900–04, i. 53.

The religion of the Baganda is described as a religion of luck.* Among the Tshi people of West Africa each person has his lucky and unlucky days.† In the week of the Asabas of the Niger the days for marketing, for work, and for rest vary for each individual according to the particular *ju-ju* decided for him by the medicine-man.‡

As the circumstances attending the moment of birth are auspicious or inauspicious, so are those attending the day. Any object or circumstance distinguishing it may affect the destiny of the child. When days are marked, they acquire permanent or varying characteristics which automatically influence the event. The Malagasy, who possess an elaborate doctrine of fatalism (*vintana*), mark a certain number of days in each month as lucky or unlucky. The *vava*, or first days, of some months are especially disastrous to children then born, in some cases to the offspring of the people generally, in others to those of the royal family. A child born on an unlucky day, and dying young, is said to have 'too strong a *vintana*.' Formerly, children born on unlucky days were put to death by being buried alive. In modern times this infanticide is commuted to an ordeal, offering, or 'expiatory bath,' the water being buried instead of the child. In one clan of the Sakalavas all children born on a Tuesday were put to death. In the Bara tribe a child was put to death if born on a day which was unlucky to both father and mother; if the day was unlucky for one parent only, the child's life was spared. In the Tanale tribe one particular month was peculiarly unlucky for birth.§

With the rise of astrology comes the development of the horoscope and similar forms of augury. In origin such practices are a species of sympathetic magic; the intention is to influence events, or to assist nature, and the method employed is the rehearsal or artificial previous reproduction of the desired result. The Central Americans possessed an elaborate code of 'signs of the day,' applying to each day of each cycle of twenty days, the *cempohualli*, of which the year was a multiple. Horoscopes were prepared from these signs for the day and hour of birth. Every Mexican bore through life, as a species of personal name, the sign of his birth-day.‖ The Burmese predict a man's character and destiny according to the day of the week on which he is born and the constellation which rules it. The name of the child must begin with one of the letters belonging to the birth-day.¶ The Asabas of the Niger often name a child after the day of its birth.** In China the hour and the day of birth are regarded as being very important. A child born between the hours of 9 and 11 will have a hard lot at first, but finally great riches.†† The Hindus possess an elaborate astrological system of nativities connected with lucky and unlucky days.‡‡ In Madagascar nativities are drawn up from the position not of the stars, but of the moon. This method is earlier; later cultures prefer the star of nativity. The Tshi peoples name children after the day of the week.§§ The Muhammadanized Swahili consider it lucky to be born on Friday, the Muhammadan festival. Children then born are named

'son' or 'daughter of Friday.'* In German folklore Sunday is lucky as a birth-day, particularly the Sunday of the new moon. This idea is connected with growth. 'Sunday children' are supposed to be able to see spirits, or to see in the dark.†

The principle of repeating an event after its occurrence is an inversion of sympathetic magic. Whereas in the ordinary form of magic the coming event is influenced and ensured by previous rehearsal, in this inverted form it is reproduced in order to repeat the original advantages and to effect their continuance. The idea is naturally suggested by the recurrence of the same external or chronological conditions. These were closely bound up with the original event, and are therefore supposed to influence it: they are further supposed to carry it with them, and therefore require its repetition. The intention varies as the event. In the case of the repetition of birth the intention is a renewal of the life acquired by the original birth. Such ideas are illustrated by the general custom of celebrating the renewal of the year. The ritual is designed to renew not only the life of nature, but also the life of men, and at the same time to discard the old life, now regarded as decay and death. The seasonal changes of growth, connected early with the phases of the moon and the path of the sun, naturally fostered such ideas. As individualism developed they were applied to the life of each man. But the important point for the earlier periods is that these annual renewals of nature and life in general practically amounted to universal or social birth-days.

To illustrate the first of these points, we may instance the Hindu festival *saṁvatsarādi*, which celebrates the beginning of the year.

'The chief features of the day are the reading of the new almanac and hearing the forecast of the events of the New Year. New clothes also are worn when procurable, and the food partaken of during the day is, as far as possible, composed of new materials, *i.e.* new grain, pulses and such like, for this is a feast of ingathering. One dish, which must be partaken of by all who wish for good luck during the year, is a conserve composed of sugar, tamarind, and the flowers of the *neem* or *margosa* tree (*Melia Azadirachta*), which is then in full flower. The bitter taste of this is not much relished as a rule; but it is necessary that at least a small portion of the dish should be eaten. This seems to be analogous to the English idea that it is necessary to eat mince-pie at Christmas or at the New Year.'‡

In the next place, such festivals, surviving as they do into the highest stages of evolution, are in the early stages universal birth-days. The Malagasy custom is significant. In the lunar year of Madagascar, time is popularly reckoned by the annual great feast *fandroana*. Remarkable longevity is denoted by the phrase that a man has seen three *fandroanas* at the same season of the year. Thus he might see it in spring at the age of 7, again when 40, and again when 73. We are expressly informed that a man's age is reckoned not by his years, but by the *fandroana*.§

The Japanese supply an instructive case of compromise between the social and the individual birth-day. The first of January, the commencement of the New Year,

'may be considered the universal birth-day, for they do not wait till the actual anniversary of birth has come round to call a person a year older, but date the addition to his age from the New Year. The 61st birth-day is the only one about which much fuss is made. This is because the old man or woman having lived through one revolution of the sexagenary cycle then begins a second round, which is in itself an extraordinary event, for the Japanese reckon youth to last from birth to the age of 32, middle age from 32 to 40, and old age from 40 to 60. A child is born in December 1901. By January 1902 they talk of the child as being 2 years old, because it has lived through a part of two separate years.'‖

* Velten, *Sitten und Gebräuche der Suaheli*, 13; Sibree, *loc. cit.*

† Ploss, *Das Kind*, ii. 88, 89.

§ W. Ellis, *History of Madagascar*, 1838, i. 447, 448.

‖ B. H. Chamberlain, *Things Japanese*⁴, 1902, p. 62.

In the Chinese religion of piety we find a remarkably explicit illustration of the principle of the renewal of life on the anniversary of birth. 'The birth-day celebration is a peculiar institution,' though not attended with much éclat till after the age of 15. Each person has an annual festival, and every tenth year after reaching 50 an extraordinary celebration. Especially honoured is the 61st birth-day. The Emperor on his birth-day is supposed to acquire 10,000 'longevities.' The courts of justice are closed, and a general amnesty is proclaimed. The ordinary person on his birth-day receives 'longevity presents,' and his friends wish him long life. With the express purpose of prolonging life, a dish of vermicelli in remarkably long strips is eaten. Of particular importance is the 'longevity garment.' This is a handsome robe, embroidered in gold characters with the word 'longevity.' It serves at death as the man's shroud. It is generally a present from the children, and is given to the parent on his birth-day. He wears it then, and on all festive occasions, in order to acquire long life, 'it being generally acknowledged among the Chinese that it is extremely useful and necessary on the birth-day to absorb a good amount of vital energy in order to remain hale and healthy during the ensuing year.'*

The Coreans celebrate the 61st birth-day in the Chinese fashion. On ordinary birth-days new clothes are worn, and a feast is prepared for friends of the family.†

The Burmese offer on their birth-days, celebrated weekly, candles representing the animals connected with the day of the week. The offering is an act of worship at the pagoda.‡

The Central Americans celebrated birth-days with a feast given to the friends of the family. Presents were offered them on their departure.§

Among the Tshi natives of West Africa, a man's birth-day is sacred to his *kra*, or 'indwelling spirit.' If a man is rich, he kills a sheep, if poor, a fowl, and prepares a feast. In the morning, when he washes, he provides himself with an egg, and some new fibre of the kind used as a sponge. He then stands before the calabash containing the water, and addresses his *kra*, asking for its protection and assistance during the coming year, as he is about to worship it, and keep that day sacred to it. He then breaks the egg into the calabash, and washes himself with the fluid; after this he puts white clay on his face, and puts on a white cloth. Members of the higher classes, kings and chiefs, keep sacred to the *kra* the day of the week on which they were born. Thus Kwoffi Kari Kari, having been born on a Friday, made it a law that no blood should be shed on that day.‖

The ancient Persians celebrated birth-days.¶

In ancient Egypt the birth-days of the kings 'were celebrated with great pomp. They were looked upon as holy; no business was done upon them, and all classes indulged in the festivities suitable to the occasion. Every Egyptian attached much importance to the day, and even to the hour, of his birth; and it is probable that, as in Persia, each individual kept his birth-day with great rejoicings; welcoming his friends with all the amusements of society and a more than usual profusion of the delicacies of the table.'**

In modern Persia the birth-days of Muhammad and 'Alī, as in Islām generally, are duly honoured. For ordinary persons, however, the New Year's feast is the only real festival.††

Among the modern Jews, the 13th birth-day of a boy is celebrated as a family feast, this date being his religious majority.*

The preceding accounts introduce some secondary principles. The idea, inseparable from festivals, of holiday or rest, combines with the wish to avoid consuming energy and vitality, and to assimilate the same by means of food and drink. A further principle is that of a propitious commencement of an epoch as influencing the whole. At a late stage such ideas are obscured, and an ethical principle arises. This is, in Western culture, faintly suggested by the phrase, 'turning over a new leaf' at the New Year or on the birth-day. In Catholicism, it is more marked in combination with the birth-day of the individual's patron saint. In early Christianity each anniversary was a step towards the new life commencing at death.

The idea of renewal, as we saw, is in the early stages emphasized by the weekly phases of the moon. Thus we get the principle of the octave. One of its earliest applications is the celebration of the seventh day after birth, on which, among various peoples, the name is given or some ritual operation is performed.

The principle of the octave is actually applied at times to produce a weekly birth-day. This has been instanced in West Africa and Burma. A good many recorded birth-days are probably not annual, but weekly or monthly. The ancient Syrians celebrated a monthly birth-day.†

These considerations lead up to some peculiarities of reckoning or commemoration which have influenced the custom. The Apache father makes a note of each moon that follows the birth of a child. A large mark is made for the 10th month.‡ The Mayas celebrated as the birthdays of their children the first step taken, the first word spoken, and the first thing made.§ The Ovaherero reckon a man's age from the time of his circumcision, not counting the previous period. A man is called after the *otyiondo* of his circumcision. Those circumcised at the same time are *omakura*, 'persons of the same age.'‖ Such methods of reckoning age are convenient for the savage, who has little use for any more accurate reckoning. Other such epochs, which at a certain stage are the only 'birth-days,' are weaning, initiation, and marriage. The Baganda reckon a man's age by the reigns of the chiefs. 'It was in the reign of so and so that I was born.'¶

In the lower cultures names are curiously parallel and interchangeable, so to say, with dates. The Central Australians have each a name denoting age in relation to others, but have no annual reckoning. The Maori had one name given at birth, a second at puberty, a third on his father's death, and others whenever he performed some achievement.** An Aht will change his name perhaps ten times in ten years, and celebrate the event each time with a feast.†† In connexion with change of name there is the idea of renewal.

An early application of the principle of commemoration is 'the feast of the dead.' All the ideas connected with the spirits of the departed find expression here. In early religion these celebrations are as frequent and as important as any annual festival. In Oajaca great ceremonial attended the anniversary of the birth of great lords after their death. The belief was that the soul wandered about for many years before entering bliss, and visited its friends on earth once a year.‡‡

The Hindus observe the new moon of the month, *Bhādrapada* (September–October), in honour of the dead. On this day the head of a family must perform prescribed ceremonies for the preceding three generations.' The celebration is for such of the dead as may not have received the usual rites of sepulture. The fact shows, by negation, that the commemoration is the repetition of the event. The annual *śrāddhas* are well known. Their object is to 'assist the departed spirit in the various experiences it will have to pass through. At the same time, the one who duly performs these rites and ceremonies thereby lays up merit for himself and his family, which merit will be duly carried to the credit of his account hereafter.' One *śrāddha* is to provide the spirit with an 'intermediate body.' Another indicates the union of the dead with his immediate ancestors. The monthly *śrāddhas* commence on the 30th day after death. An annual ceremony is performed on the anniversary of the death.*

A slight shifting of the point of view will show the parallelism between such practices as the Hindu and the early Christian principle that the birth-day of the martyr was the day on which he died. The death-day of the faithful was regarded as their birth into a new life. The 'natale' *par excellence* was the day of death. It was a nativity to a glorious crown in the kingdom of heaven. Tertullian observes that St. Paul was born again by a new nativity at Rome because he suffered martyrdom there. Such *natalia* were contrasted with 'natural birth-days,' as spiritual in opposition to worldly. The 'birth-days' of martyrs, celebrated at the grave or monument, had a profound influence on the development of ecclesiastical institutions. The celebration was a service, at which the Communion was received. The ethical principle involved was imitation of the martyr, repetition in others of his life and death. The *fasti* of martyrs were gradually compiled, and churches were erected over their bones, the bones sometimes being replaced under the altar.†

The festivals of gods are frequently their birth-days. Thus the Hindu festival *Śrīrāmajayantī* celebrates the birth-day of Rāma, the seventh incarnation of Vishnu. The image of the god is adorned and carried in procession. Pilgrimage is made to the temple. *Kṛṣṇajayantī* is the birth-day of Kṛishṇa, and is one of the most popular of the annual festivals. The *Bhāgavata* describing the life of the god is read on that day. *Vināyakachaturthī* is the birth-day festival of Gaṇeśa. Every house sets up an image of the god, before which lights are placed. A *mantra* of consecration, *pratiṣṭā*, is pronounced, on which the spirit of the god enters the image.

In such acts we see a ritual re-creation of the divinity, a repetition of his birth.

At this feast, artisans worship their tools, and students their books, placing them before the image. Gaṇeśa is the god who is invoked in all undertakings, and who helps man on his way.‡

In Christianity the birth-day of Christ is only less important than the Passion and the Resurrection. Even here the social aspect of religion is prominent, and, by a coincidence, the date finally decided upon is that celebrated in paganism as the annual birth-day of the Sun, just as the weekly day of the sun, the Christian Sunday, was the weekly birth-day of the Solar Deity, and in Hebrew mythology the first day of Creation.

BIRTH-DAYS (Greek and Roman).—Birt
celebrations are to be met with in antiquity
a very early date. Æschylus presupposes
when he makes Apollo receive on his birth-d
oracle as a present from Phœbe (*Eumenides*,
Birth-days were celebrated with prayers, sacr
and banquets, and it was also the custom t
presents to the person whose birth-day it wa
a book, *Anthol. Pal.* ix. 93). Sometimes
who were born on the same day of the m
formed a society, and called themselves τετραδ
εἰκαδισταί, etc. Later, it was frequently the c
for such societies to celebrate the birth-da
members of distinction, or these members
selves left an endowment to enable their asso
to celebrate their birth-day even after their d
Such a posthumous celebration was called γε
whereas the celebration during a man's lif
was termed γενέθλια (schol. Plato, *Alcib*
121 C). Plato's birth-day was celebrated b
Academy on the 7th of Thargelion, because A
was supposed to have been born on that day
in other cases as well the celebrations of birth
were fixed for sacred days (Plut. *Theseus*
the Athenians mention the 8th of a month
birthday of Theseus, ἐκ Ποσειδῶνος γεγονέναι λεγ
καὶ γὰρ Ποσειδῶνα ταῖς ὀγδόαις τιμῶσιν). Fro
time of the Diadochi we often hear of the
bration of the birth-days of kings, and fro
time of Cæsar, of those of emperors (there
important inscription which indicates that in
Minor the year began with the birth-da
Augustus [*Athen. Mitt.* xxiv. 288]), when fe
ties, games, etc., took place. The same h
was also extended to empresses and princes.

These honours passed from persons to c
thus in Rome the *Palilia* was celebrated a
natalis urbis. More especially were such ho
transferred to the gods: Athene was suppos
have been born on the 3rd of a month, Herm
the 4th, Apollo on the 7th, and so on. In
cases the festival must always have bee
prius, the birth-day the *posterius*. It
happens that the birthday of the god an
natalis templi coincide (Cic. *ad Att.* IV. i. 4
xii. 3058).

BISMILLĀH.—I. **Meaning and early u**
—*Bismillāh(i)*, an Arabic expression signifyi
the name of Allah,' was borrowed by Muha
from the religious phraseology of Jews and
tians,* and was formulated by him in fu
follows: *bismillāhi-r-raḥmāni-r-raḥīmi*, 'in
name of Allah, the Compassionate, the Mer
Muḥammad employed the phrase both in its sh
and in its complete form as an introductory for
designed to connect the beginnings of action
the devout remembrance of God, and it is pro
that, while still resident at Mecca, he recomm
his adherents to use it in a similar way. I
Qur'ān he represents Noah as summoning
faithful to enter the ark with the words, 'Bisn
("in the name of Allah") be its voyage an
landing' (xi. 43); and, similarly, a letter purpo
to have been written by King Solomon to the
of Sheba opens thus: '*Bismillāhi-r-raḥm*
raḥīmi' (xxvii. 30). Probably, too, he began hi
ceremonial discourses, as collected in the Q

* Nöldeke, *Gesch. d. Qorâns* (Göttingen, 1860), p. 88 [
lished by F. Schwally) 116 f.].

with the phrase, and the redactors of the sacred volume, in prefixing it (in plenary form) to the various *sūras*, evidently regarded it as a prefatory formula having Muḥammad's own sanction. We cannot divine the reason of its omission from the 9th *sūra*, although the Muslim exegetes show no perplexity in the matter, and provide several explanations, as may be found in commentaries to the Qur'ān. The earlier theologians of Islām were at variance with each other regarding the question whether the *bismillāhi*-formula at the beginning of the *sūras* was to be considered an article of revelation, *i.e.* an utterance of God, or an item proceeding from the Prophet himself; but eventually the former alternative carried the day, and it came to be held that everything between the two covers (*bāina-l-daffatain*) of the book, including, of course, the prefatory formula of the *sūras*, was the word of God.

It is recorded that, before Muḥammad arose, the heathen Quraish made use of the sacred formula *bismika Allāhumma* ('in thy name, O God') for a similar purpose—a statement which is certainly credible, though we have no evidence to test it by. According to Arabic tradition, which delights to associate every particular custom with the name of an individual founder, the person who introduced the use of this phrase into Mecca was Umayya b. Abi-l-Ṣalt, the reputed author of many apocryphal poems which promulgated monotheistic and Biblical ideas before the time of Muḥammad. Umayya is said to have learned the formula, as a potent talisman against the evil influence of demonic powers, from the lips of a Christian hermit, and to have made personal trial of it.* But as he was an older contemporary of Muḥammad, and survived the latter's entrance upon his public career, the older formula cannot, agreeably to the above tradition, have been in use long before the Prophet's day. It is even said, indeed, that Muḥammad himself had employed it, but that the revelation of certain verses in the Qur'ān (xi. 93, xxvii. 30) induced him to substitute for it, first the shorter, and then the longer, form of the *bismillāh*.† Nevertheless he would appear, according to Muslim tradition, to have sometimes resorted to the earlier Meccan formula even at a later period;‡ thus in a treaty which he made with the people of Mecca near Hudaibiyah in A.H. 6, he deferred to the vigorous opposition they offered to the new formula introduced by him, and quite readily sanctioned the use of the Quraish '*bismika Allāhumma*' as a heading to the document.§ '*Allāhumma*' is also approved as an invocation of God in Muslim petitions.

We may regard it as historically established that rescripts drawn up by Muḥammad's instructions, contracts concluded between him and tribes which yielded him their allegiance,‖ and even records of a more private character,¶ were usually prefaced by the plenary form of the *bismillāh*.** Thereafter its insertion in similar documents as a prefatory formula became part of the religious practice of the adherents of Islām.†† Official records from the early age of Islām, preserved either as transcriptions in historical works, or, more authentically still, as originals on papyrus sheets, always begin with the *bismillāh*. It is also found on textile fabrics and other products of industrial art.‡‡ In bilingual (Arabic-Greek) documents, which were common, especially in the Egyptian province, till far on in the Umayyad period, the Greek portion contains a translation of the formula, the shorter appearing as *ἐν ὀνόματι τοῦ θεοῦ*, while the plenary form expands this with the words *τοῦ ἐλεήμονος φιλανθρώπου*.§§

¶ *e.g.* a note regarding the distribution of the wheat brought as booty from Khaibar (Ibn Hishām, 776, 778 ff.).

** L. Caetani (*op. cit.* i. 396, ii. 793) doubts the authenticity of this prefatory formula in documents given by Muslim historians.

†† *e.g.* in the *Testament of 'Abdallāh b. Mas'ūd*, in Ibn Sa'd, *Ṭabaqāt*, III. i. 112, 118.

‡‡ Karabacek, 'Zur arabischen Alterthumskunde, ii. Die arabischen Papyrusprotokolle,' in *SWAW* clxi. (Vienna, 1908) 35 ff.

§§ *e.g.*, in the bilingual documents in Karabacek, *op. cit.* 63–67; C. H. Becker, *Papyri Schott-Reinhardt*, i. (Heidelberg, 1906), 109 ff.; *ZA* xxii. 150, 170–178.

In accordance with the common Arabic practice of giving a convenient name to formulas by the device of omitting some of their constituent letters (as, *e.g.*, *ḥamdala* for '*al-ḥamdu lillāhi*,' *ḥay'ala* for *ḥayya 'ala-ṣ-ṣalāti*, etc.), the *bismillāh* is contracted to *basmala*, which is also a verb meaning 'to utter the *bismillah*'; and the use of the formula is also referred to as *tasmiya*, the invocation of the name (*ism*) of God.

2. Ceremonial use.—The *bismillāh* acquires a special ceremonial significance as the formula of benediction pronounced before slaughtering animals for food—a usage which, without doubt, was suggested by the Jewish law enjoining the utterance of the *bᵉrākhā* before killing and eating. The relevant injunction in the Qur'ān is found in vi. 118, 121: 'Eat of that over which the name of Allah hath been pronounced if ye believe in His signs' . . . 'Eat not therefore of that on which the name of Allah hath not been named, for that were certainly sin.' From this passage was argued the obligatory use of the *tasmiya** before slaughter; and, similarly, it was required that the benediction in Allah's name should precede the eating of the flesh of animals prescribed for that purpose. Even in the chase (v. 6) it was imperative to utter the name of Allah before releasing the falcon or the hound, and only on this condition could the quarry be afterwards used as food.† In pursuance of a hermeneutic practice of later Muhammadan theologians, certain theological schools attenuated the character of this absolutely binding ordinance to that of a mere wish, and in this way the omission of the actual utterance of Allah's name before the act of killing did not necessarily proscribe the use of the animal for food. If, for example, the observance of the regulation had been inadvertently neglected, the food might still be partaken of without misgiving—for, of course, the thought of Allah is never absent from the devout heart. But it is obvious that these interpretations and practical accommodations are at variance with the actual language of the injunction as given in the Qur'ān —a fact emphatically insisted upon in the teaching of the more rigid and literalistic interpreters of the book.‡

Another question of ceremonial relating to the use of the *bismillāh* arises in connexion with the Muḥammadan ritual of prayer (*ṣalāt*). The latter, as is well known, begins with the recitation of the 'opening' *sūra* of the Qur'ān (*al-fātiḥa*), whose first sentence is the *bismillāh* in its complete form. It has been from early times a subject of debate in the schools of the law whether this introductory phrase should be spoken aloud (*jahran*) or in an inaudible whisper —a controversy connected in its origin with the disputed question already referred to, viz. whether the *bismillāh* is to rank as Divine revelation or not. Most of the orthodox schools decided that the formula might be uttered in an undertone,§ but the Shāfi'ites, and especially the Shī'ites, demand that it be spoken in an audible voice.‖

3. Everyday use.—Having dealt with the use of the *bismillāh* in ceremonial functions and in im-

* But without *al-raḥmān al-raḥīm*, as it was not thought right, when taking away life, to name 'the Compassionate Merciful' (*ZDMG* xlviii. 96, n. 1).

† *Muwaṭṭa*, ii. 356.

‡ Cf. the present writer's *Die Ẓāhiriten* (Leipzig, 1884), 75 ff.

§ It is expressly recorded of 'Omar II. that, when leading in prayer, he did not pronounce the *bismillāh* of the *fātiḥa* audibly (*lā yajharu*) (Ibn Sa'd, v. 246, 25). The Khalif al-Musta'īn was accused by his opponents of double-dealing, because he spoke the *bismillāh* of the *fātiḥa* inaudibly when in Sāmarra, but elsewhere hypocritically uttered it aloud (Ṭabarī, *Annales*, iii. 1683, 8 ff.).

‖ On this question see the present writer's 'Beiträge zur Litteraturgesch. der Schī'a u. d. sunnitischen Polemik,' *SWAW* (1874), 15 ff., 86.

portant affairs of public and private life, we proceed to speak of a view which sprang up in Islām at a very early period, and soon established itself in everyday practice—the view, namely, which finds expression in a proverb commonly regarded as a saying (*ḥadīth*) of the Prophet: *Kullu amrin dhī bālin lā yubtada'u bi-dhikri*-llāhi fahuwa abtaru*, i.e. 'every matter of importance which is begun without mention of God is maimed.' This maxim was taken by devout adherents of Islām as their warrant for the practice of inaugurating every action † by ejaculating a *bismillāh*. The prophet is traditionally reported to have said that Satan sits behind every one who mounts an animal without first having uttered the formula.‡ Its use as a blessing before meals is regarded as of special importance, and on social occasions the saying of the *bismillāh* by the head of the household intimates to the guests that the repast is to begin.§ Nor must the *tasmiya* be omitted when a person enters or leaves a house, or puts on his clothes.‖ The practice is felt to be in accordance with the thought of Qur'ān xxxiii. 41: 'Remember Allah with frequent remembrance'—a maxim highly approved in Islām. The idea that the utterance of God's holy name involves an impiety never found a footing among the Muslims, who are wont to say, rather, that if we love a person we often mention his name (*man aḥabba shay'an akthara dhikrahu*).¶

4. Superstitious ideas and use.—The deep significance and the sacred character with which Islām invested the *bismillāh* led at length to its being pressed into the service of folk-lore, mysticism, and even magic. It was said that God had inscribed it upon the breast of Adam, the wing of the angel Gabriel, the seal of Solomon, and the tongue of Jesus.** The Creator has written the sacred words upon His works. The imaginative eye can sometimes trace the formula in the veins of the leaf or the varied colourings of the butterfly's wing, where nature has imprinted it in mystic (Syriac) characters. The written and oral application of the *bismillāh* possesses talismanic virtues. When the soul in its death-struggle is striving to escape from the body, the angel of death brings from paradise an apple upon which is inscribed the formula, or the angel himself writes it upon the palm of the dying man, whose agony is alleviated by the sight of it, and whose soul then yields itself to the angel.†† The *bismillāh* serves also as a means of defence against the baneful effects of the evil eye, and other malign influences of occult forces. It is a popular notion amongst Muḥammadans that the *jinn* are easily offended, as, for instance, by human encroachment upon their haunts, by pouring out hot water, etc.; but if a man feels that he has provoked their resentment, he may drive them away by uttering the *bismillāh*.‡‡ Similarly, in order to render his goods proof against the *jinn*, he uses the phrase as a charm when he shuts the door, or stores articles of food in their appropriate receptacles, or lays down his clothes at night. An article protected in this way is called *musammā* (commonly pronounced *musemmī*), *i.e.* 'something over which has been named (the name of Allah).'*

The *bismillāh*, by reason of its prophylactic virtues, is deemed specially serviceable as an inscription for amulets, and, in general, as an accessory of practical magic.† Copious illustrations of this are to be found in the *Shams al-ma'ārif* of al-Būnī (†A.H. 622, A.D. 1225) and works of a similar nature. The Muslims also construct magic squares, and distribute the words of the *basmala* in magical combinations amongst the various compartments.‡ Al-Būnī is also the author of a monograph dealing specially with the use of the formula for magical purposes (*Faḍā'il al-basmala*).§

5. Calligraphic usage.—Mention ought finally to be made of a certain convention in the method of transcribing the *bismillāh*. When the Muslim calligraphist writes the formula for a ceremonial purpose, he imparts a peculiar form to its first word by way of signalizing, as it were, the exceptional character of the phrase as a whole. The vertical stroke of the initial letter *bā* (ب) is considerably prolonged in an upward direction, and slightly curved; then, the *'alif* (of *'ism*) being omitted altogether,‖ the *sīn* (س) is placed immediately after the *bā*, while the final letter *mīm* (م) is connected with the *sīn* by a line drawn far beyond the usual length (بســــــم). The Muḥammadan scribes would appear at a very early date to have introduced yet another alteration in the written form of the *bismillāh*—a peculiarity of common occurrence in MSS. Here the tips of the third letter *sīn* (س) disappear entirely, as well as the *'alif*, and the initial *bā* (ب) is joined to the final *mīm* (م) by a long horizontal line thus: بــــــم. The antiquity of this usage is indicated by an incident recorded in Ibn Sa'd, viz. that 'the Khalīf 'Omar b. 'Abd al-'Azīz dismissed a certain scribe (*kātib*) from his office because he wrote *bism* without inserting the *sīn* distinctly' (*walam yaj'al al-sīn*).¶

LITERATURE.—The literature has been given in the footnotes.

I. GOLDZIHER.

BLACKMAIL.—The word 'mail' is derived from the Norman-French *maille*, which is used in the Act of 1335, 9 Edward III. c. 3 in the sense of 'half-penny.' We find three meanings assigned to this term.

1. Legally, blackmail refers to rents reserved in labour, cattle, or produce. In mediæval times rent was uniformly paid in kind—a custom that persisted in France down to the days of the great French Revolution. The Black Death and the Peasants' Revolt gave a powerful impetus to the transformation of English agricultural life, and among the results was the substitution of payment in money for payment in kind. In Scotland and Ireland, and indeed in the rest of Europe, this substitution was not effected till a comparatively late date. For rent in kind were substituted 'white rents,' which were reserved in 'white money,' or silver. In the Middle Ages there was a great scarcity of the precious metals, and this doubtless assisted in prolonging the existence of the old method of payment. The discovery of silver in

‖ This is a Massoretic practice.

¶ Ibn Sa'd, v. 270, 14.

South America helped forward the movement from status to contract, with the result that white rent paid in current coin or white money (*mailles blanches*) began to replace the black rent. In Scots law the rents of an estate were called 'mails' or 'maills,' while 'Blanch Holding' and 'Mail' for rent are somewhat similar terms for this old custom. Camden (*Rem.* 205), explaining black money, says, 'What that was I know not, if it were not of Copper, as *Maill* and *Black-maill.*' Coke refers to 'Work-days, rent cummin, rent corn, etc. . . . called *Redditus nigri*, black maile, that is, black rents.' Blackstone supports Coke's explanation of *redditus nigri* (cf. Camden, (*Rem.* 1605, p. 205; Coke, *Inst.*, 1642, ii. 19; Blackstone, *Com.*, 1768, ii. 43; Burn, *Justice*[28], 1845, iii. 214). In this sense the term 'blackmail' is obsolete.

2. Historically, it is the tribute in corn, cattle, other kind, or money—here we are coming to the newer form—levied from the farmers and small owners in the border counties of England and Scotland, and along the Highland border, by freebooting chiefs in return for immunity from pillage. The border counties chiefly affected were Northumberland, Cumberland, Westmoreland, and the bishopric of Durham. Sir Walter Scott in *Waverley* (i. 222) represents one of the better aspects of this custom when one of his characters remarks, 'The boldest of them (*i.e.* the freebooters) will never steal a hoof from any one that pays blackmail to Vich Ian Vohr.' It is somewhat remarkable to find how wide-spread is the use of the word 'mail' with the meaning of 'rent' or 'tribute.' In Irish *mal* signifies a rent or tax. In Armoric *mal* signifies such wealth as is acquired by the strong hand; while in Afghanistan the contributory levy on a village is called *mallia*. Blackmail sometimes denotes the money taken by the harbingers or servants, with their master's knowledge, for abstaining from enforcing exactions like coin and livery. They made up for the abstinence in these places by plundering in others. Curiously enough, we find that in Ireland in the 14th cent. black money or blackmail indicates certain coins of an inferior kind authorized to pass current.

In 1552 Archbishop Hamilton (*Catech.*, 1884, 98), in reference to the forays of the border chieftains, mentions, 'Quhay takis ouer sair mail, ouer mekle ferme, or ony blake maillis, fra thair tennands'; while about 1561 R. Maitland, in *Thievis Liddesd.* vi., describes the 'commoun taking of blak maill.' On both sides of the Border severe Acts were passed to put an end to these depredations. Under the Scots king, James VI., the measure of 1597 describes how 'diuers subjects of the Inland, takis and sittis vnder their assurance, payand them black-maill, and permittand them to reif, herrie, and oppresse their Nichtbouris.' In 1601—a memorable year in economic legislation—an English Act of Parliament also notes that 'sundry of her Maiesties louing subjects within the sayed (*i.e.* the four northern) Counties . . . have been inforced to pay a certaine rate of money, corne, cattell, or other consideration, commonly there called by the name of Blacke maile.' The 43 Eliz. c. 13, s. 1, made the levying or paying of this blackmail a felony without benefit of the clergy. The *Termes de la Ley* informs us that 'Blackmail is a word used in 43 Eliz. c. 13, and it signifies a certainty of money, corn, cattell, or other consideration, given by the poore people in the north parts of England, unto men of great name and aliance in those parts, to be by them protected from such as usually robbe and steal there.' Cowell in his famous Law Dictionary, *The Interpreter*, notes that 'these robbers are of late years called Moss-troopers.' The depredations of the Border chieftains, in spite of these repressive measures, did not cease till towards the end of the 17th century. In 1707 an 'Address from Cumberland' in the *London Gazette* points out that 'there is, now, no Debatable Land to contend for; no Black Mail to be paid to the Leaders of the Robbers, as a Ransom' (cf. Blackstone, *Comm.* iv. 263).

3. The term is now usually applied to offences called in French *chantage*, that is, the extortion of money, or other valuable consideration, by intimidation, by the unscrupulous use of official or social position, or of political influence or vote, by persons upon those whom they have it in their power to help or injure. In one sense the Border robbers have passed away, but in another sense they are with us still. For the organized forms of the Camorra of Naples, the Mafia of Sicily, the Black Hand of the United States, and the Highbinders of China are largely blackmailing bodies. Their methods and rules of procedure are much the same as those of the outlaws of old. Like them, the Black Hand, for example, levy blackmail, kidnap men or their children and hold them to ransom, murder their victims in cold blood if the ransom be not forthcoming, and terrorize the surrounding population into tacit complicity. In private life the only hope of resisting the blackmailer is to refuse to pay the first time he makes his demand. Mr. W. E. Gladstone was accosted late at night by an unfortunate woman to whom he gave alms. A man, who saw him speaking to her, stopped the statesman and attempted to levy blackmail. Mr. Gladstone kept him in conversation till a policeman came in sight, when he at once gave the blackmailer in charge. In English common law it is a misdemeanour to threaten to publish any libel upon any other person, directly or indirectly, if the act is done with the intent to extort any money or other valuable thing. The punishment is imprisonment, with or without hard labour, for three years. It is a felony to demand of any person, with menaces and without any reasonable cause, any property, and the punishment thereof ranges from penal servitude for life to a period not less than three years. The truth or falsehood of a threatening accusation, whether of crime or misconduct, is absolutely immaterial: the accused cannot set up truth as a justification of his conduct. The French and German codes deal with blackmailing in an equally stern manner. The latter states that, if the extortion is committed by violence against a person, or with the application of threats, the author is to be punished like a robber.

LITERATURE.—The authorities are quoted in the article.

ROBERT H. MURRAY.

BLASPHEMY (Gr. βλασφημία = (1) an ill-omened or profane utterance, a light or rash prayer; (2) a slander, or any defamation; (3) impious speech against God. Oppos. εὐφημία).—

I. **Blasphemy as a sin.**—Blasphemy as a sin and an ecclesiastical offence is peculiar to the Jewish and the Christian religion and to allied monotheistic cults. For, though the religions of Greece and Rome, and indeed of most countries, were far from viewing with equanimity the utterance of words which might offend any of their gods, yet the abhorrence caused by such utterances was due mainly to a fear of the disasters which the offended god might be expected to inflict on the whole tribe of which the offender was a member. The trial of Socrates would illustrate this, since he was accused of 'teaching men not to receive the gods whom the city acknowledged, and of having new gods' (Plato, *Apol.* 24 B). Under English common law this offence would have been the subject of an indictment for blasphemy, but the freer Greek spirit treated it as an offence against the welfare of the State. Similarly, in the charge brought by Pythonicus against Alcibiades (Thucydides, vi. 53),

that he had divulged the mysteries of Eleusis, the gravamen was not so much that the act was an offence against the gods as that it was dangerous to the community. The Roman criminal law appears to have had no provision against blasphemy, apparently because, 'in spite of the intensity of Roman religious feeling, the religion of the State was always absolutely subject to the political authority' (Hunter, *Roman Law*, 1880, p. 10), and hence an offence against religion was once more not so much a sin as a crime. Persons who introduced new kinds of worship, unknown to custom or reason, disturbing weaker minds, were to be punished—if persons of rank, with deportation; if not of rank, with death.

2. In the Old Testament.—It is to the Jewish and Christian law (with their off-shoots), then, that we have to look for the creation of the offence of blasphemy. We omit the 'contempt' for God referred to in Mal 1^{6}, the dishonour done Him by withholding the offerings due to Him in Mal $3^{8.9}$, the swearing falsely by His name in Lv 19^{12}, the sin 'with a high hand' of Nu 15^{30} (cf. 2 K 19^{22}), the reviling (or murmuring against) the Elohim of Ex 22^{28}, since, though these all are directed against God, they do not rise to the height of the specific sin of blasphemy. A record, however, of this sin is found in Lv 24^{11}, where a man of mixed breed 'blasphemes the Name.' In this case doubt seems to have been felt about the prescribed penalty, for the offender was put back until 'the mind of the Lord' could be ascertained. This was found to fix the penalty of death by stoning, and the law was then promulgated: 'He that blasphemeth the Name of the Lord, he shall surely be put to death, and all the congregation shall certainly stone him' (v.^{16}). This was the only kind of reproach against God which was punishable with death at the hand of man, lower kinds (such as those referred to above) being left to the judgment of God. For post-Biblical Jewish usages see next article.

3. In the New Testament.—The offence of blasphemy is referred to frequently in the NT: in the case of the sin against the Holy Ghost (Mk $3^{28ff.}$); in the case of the man whose sins were pronounced by Jesus forgiven (Mt 9^{3}, Lk 5^{21}), when the scribes accused Him of blasphemy; when the Jews declared the saying 'I and my Father are one' to be blasphemous (Jn $10^{33.36}$); when Jesus declared Himself at His judgment (Mk 14^{64}); St. Stephen was accused of speaking 'blasphemous words against Moses and God' (Ac 6^{11}); in Ac 13^{45} and 18^{6} and Ro 2^{24} the Jews in their turn are accused of blasphemy; in Ac 26^{11} St. Paul accuses himself of making the Christians blaspheme. The word occurs five times in the Pastoral Epp. (1 Ti 1^{20} $6^{1.4}$ and Tit 2^{5} 3^{2}), once in James (2^{7}), and nine times in the Apocalypse (2^{9} $13^{1.5.6\ bis}$ $16^{9.11.21}$ 17^{3}). From these passages it appears that any expression was considered blasphemous which was wrathfully, despitefully, or contemptuously directed against God, His being, or goodness, which arrogated His attributes for a creature, which opposed a truth revealed by Him, or opposed an institution of which He was the author.

4. In Church history.—The feeling and the judgment expressed in these passages were taken over by Christianity, and enforced, after its union with the civil power, by temporal pains and penalties. The *Novellae* of Justinian (lxxvii. 1) relate that some

'used blasphemous expressions and swore by God, and so provoked Him to anger, and that it was enjoined on such men therefore to abstain from such blasphemies, and from swearing by the hair, or by the head, and similar expressions; for, seeing that blasphemies against men went not unpunished, far less would blasphemies against God. If, in spite of this admonition, any one committed the offence of blasphemy, he was to suffer the extreme penalty of the law' (*Corp. Jur. Civ.*, ed. Schöll, 1895, vol. iii. p. 382).

In the Middle Ages the ecclesiastical court was the principal authority for the punishment of blasphemy, the temporal power being called in, when required, to enforce the judgment of the court ecclesiastical. Thus in a decree of Gregory IX. it is laid down that, if any one shall have presumed to loose in public a blasphemous tongue against God, or any one of His saints, or, in special, against the Blessed Virgin, he shall be condemned by the bishop to public penance at the church door for seven Sundays, being on the last Sunday deprived of his shoes and outer clothing, to fast and give alms. In default he might be excommunicated and deprived of Christian burial, and be subjected to a fine by the temporal power (*Decret. Greg. IX.*, lib. v. tit. 27, c. 2; *Corp. Jur. Canon.*, ed. Richter-Friedberg, ii. 830).

Charlemagne had already incorporated in the law of the Empire the Christian law against blasphemy, and given his sanction to the principle that God Himself was injured by blasphemy, and that He would visit the offence on all the people, thus ingeniously uniting in one the older pagan and the newer Christian sentiment. Louis le Débonnaire followed him with laws against blasphemy which inflicted the death penalty. Philip Augustus fulminated against those who swore: 'Tête bleue!' 'Corbleu!' 'Ventrebleu!' 'Sang bleu!' Offenders, if noble, were to be fined; if *roturiers*, they were to be put into a sack and drowned. St. Louis ordered that offenders should be branded on the forehead, and if they repeated the offence, should have their tongue and lips pierced. With this agrees the ordinance of Henry III., which enacted that, for the first four offences, a blasphemer should be committed to prison on bread and water; for the fifth offence, he should have the under lip slit; for the sixth, he should have it so slit that his teeth were to be seen; for the seventh, his tongue should be bored; and for the eighth, he was to be put to death. It was, indeed, about the end of the 15th cent. that blasphemy was most severely punished; but from that date onwards the feeling has gradually gained ground that God is not a Being who can be injured by man's insults, and that, when blasphemy is punishable, it is as an offence against society.

The Scholastic treatment of blasphemy calls for a short notice. Defining blasphemy, with Gury, as *locutio Deo injuriosa*, or, with Suarez, as *verbum maledictionis, convicii seu contumeliae in Deum*, it divides it into 'immediate' when directed against God Himself, and 'mediate' when it attacks Him through His Word, His Church, His officers, sacraments, or saints. It is in its form threefold, 'heretical' when it involves a false doctrine, 'imprecative' when in the form of a curse, or merely 'abusive' (*probrosa*). Materially, it is threefold: (1) when it attributes to God what is not His; (2) when it deprives Him of what is His; and (3) when it assigns to the creature what belongs to the Creator—the first two of which St. Thomas declares to be but the affirmative and negative sides of the same truth, and the last to be a subdivision of the first. Blasphemy is a mortal sin, as being contradictory to charity; nay, it is the greatest of all sins, seeing that it adds to a denial of the faith a detestation in the will, and is aggravated by its outburst into words, as, on the other hand, faith is augmented by love and confession.

5. As a crime.—It has been already stated that a milder judgment on blasphemy has during the last four or five centuries gradually been ousting the feeling which finds expression in Lv 24^{16}. The change, however, has been of slow growth. So

late as A.D. 1656 we find, for instance, a poor mad Quaker, James Nayler, for allowing himself to be honoured as Jesus Christ, sentenced by the House of Commons to be put in the pillory, whipped from Westminster to the Old Exchange, again placed in the pillory, to have his tongne bored, his forehead branded with 'B,' then taken to Bristol, there again whipped, and then sent to Bridewell to remain until Parliament should release him. Again, in 1812 an unhappy bookseller, Daniel Isaac Eaton, of Ave Maria Lane, London, was sentenced to eighteen months' imprisonment and to the pillory for publishing criticisms on the Bible story, after the manner of Thomas Paine. It is noticeable that Lord Ellenborough, in sentencing Eaton, did so on the express ground that 'the Christian religion is the law of the land, and must be protected as the law.' It was held blasphemy in the Court of Exchequer in 1729 to maintain publicly that the character of Christ is defective, and His teaching misleading, and that the Bible is no more inspired than any other book. In 1868, George Jacob Holyoake was sentenced to six months' imprisonment for oral blasphemy—for saying after a lecture in reply to a challenge: 'I do not believe there is such a thing as a God.' The law of England is still sufficiently severe against blasphemy. 'It is, indeed, still blasphemy,' according to Mr. Justice Erskine, 'punishable at common law, scoffingly or irreverently to ridicule or impugn the doctrines of the Christian faith.' On the other hand, 'if the decencies of controversy are observed, even the fundamentals of religion may be attacked without a person being guilty of blasphemous libel' (Lord Chief Justice Coleridge).

The net result of the slow process of change which has been going on for centuries in men's minds on this, as on all kindred subjects, is that blasphemy has become the technical name for a particular offence against the State. It is a crime against the peace and good order of society; it is an outrage on men's religious feelings, tending to a breach of the peace. As an indictable offence it is described by Blackstone to be 'denying the being or providence of God, contumelious reproaches of our Saviour Christ, profane scoffing at the Holy Scripture, or exposing it to contempt or ridicule' (Stephen's *Commentaries*[14], iv. 185). But though the existing law of England still embodies the tradition which regards blasphemy as a sin, and upholds the Christian religion, in practice it treats it as an offence against the peace and good order of society. It is open to anybody to call in question any article of religion, provided that his method of expression is not obnoxious to the authorities. In France the same practical state of things prevails; for, though its Code does not prohibit blasphemy as such, it yet prohibits it as an offence against good order. In Germany public blasphemy is punishable with one to three days' imprisonment; but the blasphemy must be public, coarsely expressed, and offence must actually have been caused (*Deutsches Reichsstrafgesetzbuch*, § 166). The Austrian law is stricter, and the offender may suffer imprisonment for a term ranging from six months to ten years (*ib.* §§ 122, 123, 124). In the United States the law of blasphemy is essentially the same as in England, being based on English common law and early statutes.

Thus Christian Europe and America have brought the wheel full circle round to where it was in Seneca's day, when that distinguished pagan could write:

'We are far from what we ought to be if we do not think of God as possessing all things, bestowing freely all things. Why do the gods bestow on us their bounty? It is their nature to do so. The man who thinks that they do no harm because they are unwilling errs. They cannot. They can neither inflict injury nor receive it. For to harm and to be harmed go together' (*Ep.* 95, ed Haase, 1878, iii. 307).

To this it is only necessary to add the remark that, while the legal definition of blasphemy as an indictable and statutory offence is precise, the word itself has in literature and common parlance, as is natural, a wider and looser meaning. Thus, Jefferies (*The Story of my Heart*[2], 1891, p. 125) writes: 'I believe all manner of asceticism to be the vilest blasphemy—blasphemy towards the whole of the human race.' Ruskin (*Stones of Venice*, I. i. 37) speaks of 'representations of Christian subjects which had become blasphemous under the treatment of men like the Caracci'; and Bacon in his *Advancement of Learning* has the phrase 'blasphemy against learning.'

LITERATURE.—In addition to authorities quoted, cf. art. 'Blasphemy' in *HDB*, *EBi*, *JE*, and Wetzer-Welte's *Kirch. Lex.*; G. M. Mackie, 'Blasphemy,' in *ExpT* xx. Aq., *Summa theolog.* II. ii. qu. 13, 14.

W. F. COBB.

BLASPHEMY (Jewish).—All subsequent Jewish notions on the subject of blasphemy were derived, in their main principles, from the incident narrated in Lv 24^{10-23}. In the course of that passage the general rule is enunciated (v.[16]): 'And he that blasphemeth the name of the Lord, he shall surely be put to death; all the congregation shall certainly stone him: as well the stranger as the home born *when he blasphemeth the name* shall be put to death.' Rabbinic tradition (already represented in the Targum) interpreted these italicized words to mean that, to render blasphemy a capital crime, the offender must actually pronounce the name of God, accompanied with disrespect, the nature of which is not defined. The reverential reluctance to *name* God even in worship grew up early, and, as is well known, is already exemplified in Psalms, Chron., and the LXX. The blasphemer who used the prevalent substitutes for the name of God was subjected to flagellation (*Sanh.* 56*a*). The writer of Pentateuchal scrolls was required to place his mind in a devotional attitude when writing the name of God, and in certain cases when he made an error in writing the name, the mistake was irremediable, and the whole column on which the error occurred was withdrawn from use (*Soferim*, ch. iv.). The name itself could not be obliterated. The only individuals who lawfully uttered the name were the priests. The priestly benediction (Nu 6^{23-27}) is introduced by the words, '*Thus* shall ye bless the children of Israel,' and closes with the phrase, 'And they shall put *my name* on the children of Israel.' These commands, it was held, compelled the priests to utter the name as written, and made a substitute unlawful (*Soṭa*, 37*b*; *Sifri* on Nu 6^{23}). It is recorded that sages communicated the pronunciation of the name to their disciples once in seven years (*Ḳiddushin*, 71*a*). Again, it is reported in a tradition that the priests themselves, after the death of Simon the Just, discontinued the pronunciation of the Tetragrammaton in the blessing (*Yoma*, 39*b*; *Menaḥoth*, 109*b*). The high priest, however, continued to pronounce the name on the Day of Atonement, amid the prostrations of the people (Mishn. *Yoma* iii. 8, etc. According to the Tosefta *Yoma* ii., the high priest uttered the name ten times on the fast).

This reluctance to utter the name of God was parlleled by a similar objection to hearing the name uttered. In the blasphemy trial, as described in the Mishna (*Sanh.* vii. 5), the witnesses were not allowed to repeat the actual blasphemy in their evidence against the accused; but when on a *prima*

facie case the capital charge was proved, then before sentence of death was promulgated one of the witnesses was required to utter the actual blasphemy with which the accused was charged. The judges rose to their feet and rent their garments—the statement of the Mishna thus fully confirms the report in Mt 26[65]. According to Josephus (*Ant.* IV. viii. 10), a Jew was forbidden to blaspheme a heathen deity. Besides incurring the death penalty, the blasphemer was, in the Rabbinic view, regarded as excluded from Paradise (*'Abodā zārā*, 18*a*; Mishn. *Sanh.* xi. 1. In the latter passage this deprivation is, according to Abba Saul, incurred by any one who utters the Tetragrammaton). The Talmud asserts that the offence of blasphemy greatly increased when the death penalty for blasphemy was abolished with the loss of Jewish jurisdiction (see vol. i. p. 130[b]. It may be interesting to add that Eleazar ben Zadok, a contemporary of Josephus, relates that as a child he saw the unchaste daughter of a priest burnt on bundles of grape-vines [Mishn. *Sanh.* vii. 2; Talm. fol. 52 *a–b*]. This the Talmud regards as having been the act of a Sadducean, not of a Pharisaic, court). Yet, despite this supposed increase in the prevalence of blasphemy, we find a strong abhorrence of everything which showed disrespect to the Deity. Rabbinic theology actually included blasphemy among the offences prohibited by natural law; this is the meaning of its inclusion in the seven Noachian prohibitions (with adultery, murder, idolatry, and so forth [*Sanh.* 56*a*]). Moreover, the stern moral denunciation of *profaning the name* (חלול השם) was the outcome of this range of ideas. To *profane the name* came to imply all forms of irreverence, of private insincerity, and of public disrespect for morality and religion. 'For him who has committed this sin there is no power in repentance to suspend the punishment, nor in the Day of Atonement to atone, nor in suffering to purify' (*Yoma*, 86*a*)—full forgiveness was attained only when the sinner died (cf. Schechter, *Some Aspects of Rabbinic Theology*, p. 329). Profaning the name was thus something more than mere blasphemy, for of blasphemy we are emphatically told that repentance suffices to atone (*Pesikta Kahana*, 163*b*).

In the Middle Ages the blasphemer, it was held, ought to be excommunicated (*Responsa of Geonim*, ed. Müller, 103). The current Jewish Code requires the auditor of a blasphemy to show his feeling of revulsion by rending his garment (*Shulḥan 'Arukh, Yoreh Deah*, 340, 37). Naturally, however, as public opinion has tended to weaken the efficiency of excommunication, so it has become less and less usual to take any practical notice of the offence of blasphemy. Blasphemy in the older view had been an act of rebellion, parallel to Korah's; it was a 'stretching out of the hand to the root' of religion. But such acts of rebellion are no longer punishable, and the Synagogue has shown itself as disinclined as any other organization to attempt the punishment. See HERESY. I. ABRAHAMS.

BLASPHEMY (Muhammadan).—Blasphemy is regarded by Muslim jurists as one of the most convincing proofs of unbelief. If a Muslim has been guilty of this heinous sin, he is to be put to death as an apostate unless he is willing to repent (cf. art. APOSTASY [Muhammadan]). All utterances expressive of contempt for Allāh Himself, for His names, attributes, laws, commands, or prohibitions, are to be considered as blasphemy. Such is the case, for instance, if a Muslim declares that it is impossible for Allāh to see and to hear everything, or that Allāh cannot endure to all eternity, or that He is not one (*wāhid*), but only 'one of three,' etc. All scoffing at Muhammad or any of the other prophets or apostles of Allāh is also to be regarded in Islām as blasphemy.

Unbelievers who have obtained permission to reside within the domain of Islām (the so-called *dzimmīs*) are in like manner forbidden to use, in the presence of Muslims, disrespectful expressions about Allāh or His apostles, or about the dogmas and institutions of Islām. For instance, they may not testify publicly that Jesus was the Son of God. The unbeliever who is guilty of blasphemy in the eye of Muslim law is not, however, put to death, but expiates his offence by *ta'zīr* (a penalty determined by the judge, according to circumstances).

BLESSEDNESS (Chinese).—1. Perhaps the best way of arriving at some preliminary notion of the conceptions of blessedness cherished by the Chinese is to examine in the first instance their methods of ordinary speech, which can easily be traced back in spirit to the utterings of antiquity. When a Chinaman asks an acquaintance how he fares, the stereotyped reply is: 'I depend upon your happiness,' or 'Thanks to you.' In matters of greater gravity, the Emperor or any other of his subjects, official or otherwise, will say: 'Thanks to the shade of my ancestors' happiness, I am,' etc. When two or more persons are thrown together in pursuit of a common interest, whether it be marriage, partnership, political sympathy, or what not, it is the practice to say and to assume that the individuals, or the families to which the individuals immediately concerned belong, 'have a predestination,' *i.e.* have some spiritual affinity which is continued from the anterior existence into the present existence. The word *yüan*, here translated 'predestination,' was extended in later times to signify spiritual sympathy or connexion in the present life, and even in the future life: its original meaning is a 'hem,' 'collar,' 'connecting thread'; hence a 'reason,' 'to follow up,' 'to climb up.' After the advent of Buddhism in the first century of our era, the old term *yin-yüan*, or 'because clue,' was adapted to the *nidāna*, or 'causes and effects' connecting past existences with present (Eitel, *Handbook of Chinese Buddhism*[2], 1888, p. 84); and so now in popular usage the Buddhist idea is usually connoted in the mind of the speaker or writer. But, none the less, the basic notion really takes its origin in the ancient ancestor-worship of the Chinese, one of the most elementary principles of which was that no happiness could exist in this life unless the spirits of the dead were conciliated by living representatives through sacrifice, prayer, and duty. In other words, blessedness can exist securely on earth only under the shadow or protection of the Spiritual Abode above. When a man enters into conversation with a stranger, and the interview develops sympathetic interests on both sides, one will say to the other: 'We two have a *yüan*'—meaning, 'it was already planned out before our birth that we should meet,' even if only to buy and

sell a horse, though the expression belongs rather to matrimonial arrangements. One friend will often write to or hail another as 'old generation elder brother,' the more ordinary term being 'old brother' simply. The addition of the word *shï*, meaning 'generation,' 'world,' or 'hereditary,' (for it signifies all three), delicately suggests for the past a subtle spiritual connexion running, it may be, through more than one world.

Like other nations, the Chinese have never been able to conceive conscious Deity otherwise than in the shape of man. Man has ever conceived of himself as a being above all animals, and thus he cannot but imagine the Deity in the highest conceivable shape. Hence it is scarcely to be wondered at that the Chinese have always conceived the Spiritual Abode to be a mere reproduction of the present earthly abode; its denizens being subject to the same feelings and passions, and divided into the same ranks and classes as here on earth.

One of the most ancient Chinese documents we possess, the *Hung-fan** (B.C. 1100), or 'Great Plan,' thus enumerates the 'Five Blessednesses': Long Life, Wealth, Serenity, Love of Virtue, and Object achieved at Death. This idea of blessedness in the present world is still found, after running an unbroken course of 3000 years, in the popular speech of to-day. Thus, if a Chinese wishes 'a happy New Year,' the reply is: 'May you be promoted; may you have sons; may you live rich and distinguished days!' On almost every door-post or lintel in the empire, at least when the New Year comes in, if not at most other festive times, may be seen the two words 'happiness' and '(old) age.' These two undoubtedly take premier rank among the Five Blessednesses in the Chinese mind: the love of virtue (which in China has nothing whatever to do with sobriety and continence) decidedly takes second rank; but still it is there, and most respectable Chinese, after the immediate necessities of life have been obtained, take a keen pleasure in doing what we should call 'kind acts.' The 'object achieved at death' may reasonably be held to include a proper provision of sons and grandsons for the adequate continuation of the family chain, or 'dying at the zenith of success,' *i.e.* dying with ambition or desires fully achieved—a stock Imperial phrase in reference to deceased statesmen. The ideal picture of Chinese happiness has been best given in many shapes by G. E. Simon (once French Consul at Foochow) in his pretty and sympathetic little work, *La Cité chinoise*, published in the year 1890: such pictures as he draws may be daily seen by any one who travels extensively over the more primitive districts of China, whither 'progress' has not penetrated. The grandest ideal of all blessedness is 'five generations in one hall,' *i.e.* great-grandfather, grandfather, father, son, and grandson—if possible, each with his wife still living—all in the same homestead; the old people calmly smoking their long metal pipes, giving advice, and sipping tea in the comfortable protected corners; the younger generations exposing themselves to the elements and doing the hard work; all the males assembling in the hall (or threshing-floor, according to season) for common meals; all the females decorously confining themselves to the 'inner apartments' (often merely a curtained-off space) or secluded gardens; each generation tenderly caring for the seniors' wants; each venerable man mildly but confidently authoritative to those below him, as he individually is perfectly deferential to his own parent or parents. In the field hard by is the ancestral cemetery; perhaps only the graves of an off-branch are there; possibly those of ten or twenty ancestors, ranged right and left of the 'first (migrating) ascendant.' In any case the book of genealogy for remote ancestors can be found, when needed, somewhere in China. There is little luxury in the ideal Chinese life: no boarded floors; no ceilings or papered walls; no glass or linen; no expensive wines or smart reception rooms. As a rule, the life, no matter how high the retired official may be, is what may be termed 'farm life.' Plain cotton clothes; plenty of rice, pork, and vegetables; good plain cookery; fine clothes for ceremonial occasions stowed away in chests; bedizenments for the women; pigs, poultry, ploughing cattle (seldom carts or horses); manure in heaps (or even plastered to the walls); fish and hams, or pemmican, drying and being smoked in the rafters; stiff chairs or benches; easy demeanour to servants and slaves; and, above all, perfect democracy and entire absence of snobbery: age is the only 'quality'; money counts not. Of late years newspapers have been added to the modest store of 'good books'; and (too often, alas!) so has opium been added to the mild tobacco, rice spirit, and tea of antiquity. (Tobacco, by the way, only dates from about A.D. 1500, and tea from A.D. 600.) Comfortable, healthy griminess may be said to represent well-to-do Chinese country life: baths and sanitary arrangements are, of course, entirely absent, and no one seems one penny the worse.

Here clearly we have long life, wealth, peace, and death with honour. But where does love of virtue come in? Well, a good family is neighbourly, hospitable, and friendly; even foreigners are courteously received as equals, so long as they behave themselves prudently, and so long as evil rumours have not preceded them. Kindness to slaves (who in any case are usually indistinguishable by strangers from free men) is a great Chinese characteristic. A mandarin of rank does not mind a slave lighting his pipe for him; he will sleep on the same mattress with that slave in a travelling boat; he is courteous to him in speech—so long as there is no fault to check. Kindness to animals is another Chinese trait: perhaps negative rather than positive—not fussy solicitude, but negligent easy-going tolerance, subordinate, however, to practical human needs. A country squire of the above described type will associate with equals and inferiors at the temple—he does not mind much whether it be a Buddhist, Taoist, or other temple. He has his own ancestral buildings for the settlement of family disputes; sometimes the whole village or town belongs to one single family-name, or two family-names; the village temple consequently suffices for more general interests. Mandarins are not by any means all bad: the local squireen endeavours none the less to avoid official friction, and to keep his village free of tax-collectors' exactions and the police harpies, who are unpaid, and 'live on their warrants.' Local self-government is universal; so long as the land-tax is paid, order and decency are maintained along the roads, and (latterly) so long as a reasonable tax, or, at all events, the customary tax, on commercial movement is not evaded. The virtuous paterfamilias promotes schools, maternity establishments, charities generally, and favours 'arbitration' in lieu of law. The elders may, as a rule, in council compound or hush up any crime but treason and parricide, so long as they agree, and so long as the mandarin has not the case officially brought before him. Religion in China is ignored rather than cultivated, and the priests (Buddhist and Taoist), though treated politely, especially if they are fairly educated men, are regarded as quite an inferior caste; yet their services are conventionally sought even

* See *SBE*, vol. xvi. p. 420 ff.; and Chavannes, *Mémoires Historiques*, vol. iv. pp. 230-231; also Mayers, *Chinese Readers' Manual*, p. 312.

by orthodox Confucianists when there is death in the house. If unprovoked religious observance is indulged in at all, it usually takes the form of a play at the village temple, when both sexes assemble for the combined purposes of consulting the oracles, praying for rain or children, and hearing historical dramas, and also for formal social intercourse generally. Admittance is free to all, and the local rich man pays the itinerant company.

2. Having now examined the question as to how far the idea of earthly blessedness is discernible from the ordinary conversation of social life, we come to more general, if undefined, principles, one of which is that a happy existence on earth involves no spiritual comfort derived from supernatural considerations, but takes into account solely human desires, passions, dislikes, and fears, as they are born in us, and as they are and ought to be regulated by *li*. What this *li*—usually translated 'rites' or 'propriety'—is, it is not so easy to define verbally as to realize mentally; but it may be called the Law of Nature and Right as seen by the collective wisdom of the highest human types, as understood by tradition, and as laid down by the Emperor (and his lieutenants) as Vicegerent of Heaven. The past life and the future life are the same thing; that is to say, life in heaven is exactly the same as life on earth, except that what the Chinese poets call the 'stinking bag,' or body that contains the human soul or spirit, must be considered as midway between the two. Every individual, though begotten of his father, really comes spiritually from the past life, where the souls of his ancestors are, and returns to the future life, whence his own soul contemplates his descendants on earth: the link is an unbroken one. The duty to ascendants and descendants is the same, though in a different set of phases, as is the duty to one's self; the past, the present, and the future are thus merged in one; the idea of 'time' does not come in at all. The intense anxiety to possess a male heir (by adoption of agnates, or, if none, of cognates, failing a natural heir) is now made intelligible, as also is the extreme punishment of 'cutting off posterity,' which leaves 'uneasy ghosts' to wander about for ever without dutiful attention. What heaven is, of course, no one knows, ever did know, or (in our present state of knowledge) ever can know; but such as it is, it is in the Chinese mind a place where sentient individuals in the shape of human beings conduct affairs, whether as emperors, officials, freemen, or slaves; and, as we have already shown, nothing higher than a human being, or a sentient being with human feelings, has ever or could ever have been conceived of. It is often even uncertain whether heaven is viewed as a place or as a person; or say, rather, 'Heaven forbid' and 'who art in heaven' are Chinese as well as Christian. The 'Spirit of Heaven' and the 'Emperor Above' are often convertible terms. There is but one life. The ancestor in the past is miserable unless he be tended; the mortal in the present is, or ought to be, miserable unless he tends, and unless he secures legitimate born or unborn links to tend himself when he is dead.

Hence the ancestor must always be kept informed, with due fasting and purification, of the successes and failures of the representative individual, be he ruler or ruled; and the ancestor's spirit clings to his special wooden name-tablet standing in the family temple; nor will he accept the sacrificial offerings, or evince his approval of what is done, unless things are conducted in accordance with *li*. Failure to render ghostly service to the spirits is liable to bring on mundane disaster in the shape of inundations or other irregularities of nature. But the spirits of any given family will accept sacrifice only from the legitimate representatives of that family; hence the enormity of cutting off for ever the only persons or links able to continue the family chain of life. Then only it is that Heaven steps in, finds that the virtue has gone out of its former *protégé* or nominee, and confers the vicegerency upon another ruling house: the same thing, *mutatis mutandis*, for private persons. This position is well illustrated in the year 516 B.C., when the ruler of Confucius' State took to flight in consequence of internal revolts (see *Tso Chwan*, ch. 42, p. 2). One of his ministers said: 'I do not know whether it be that Heaven has abandoned the country, or whether the country has committed some great offence against the ghosts and spirits.' It was necessary for a ruler—were he Emperor, king, vassal-prince, or what not—to have a domain before he could sacrifice to the spirits of his ancestors; and thus in ancient China the fiefs were at first subdivided indefinitely, and the domain gave a name which grew into a family name, or, as we say, a surname. Hence we find sacrifices to the gods of the land, the harvests, the rivers, mountains, and the frontiers, all concurrent with the personal sacrifice to ancestors. Dispossessed princes of previous dynasties were rarely cut off without mercy. Not only were their persons spared, but an estate, however insignificant, was conferred upon their lineal representatives by the ruling power favoured by Heaven's new choice, and these representatives were received as guests and peers by the Emperor when they presented themselves to do homage for their holdings. Except under circumstances of great provocation, it was considered impious to cause the extinction of a family, and thus to put a stop to the ancestral sacrifices. That sacrifice to ghosts and spirits can be viewed as distinct from and inferior to the sacrifices to the Emperor Above is instanced by a case in the year B.C. 482 (*Tso Chwan*, ch. 48, p. 20), when an official of Confucius' vassal-State was detained in captivity by the semi-barbarous State lying to its south. Though the State in question was ruled by the same family as the then Imperial family of China, and also the same family as that ruling over Confucius' State, the aboriginal population was still half savage, and even the Chinese rulers had become corrupted by popular spirit-worship and local superstitions. The captive orthodox minister accordingly said, well knowing this superstitious weakness: 'You had better let me go to take part in the sacrifices to the Emperor Above, which my master, the ruling duke, has to render at this season; otherwise the priest of the temple will hurl imprecations against your king!' The device succeeded.

3. It was manifestly considered doubtful whether the dead really had any exact knowledge of what was transpiring on earth; for in B.C. 502 a royal maiden of North China, who found herself dying in the above-named semi-barbarous kingdom, said: 'If the dead really possess any knowledge, please bury me where I can at least see my own native land.' A year before that, a semi-barbarous general, who was about to set fire to the enemy's camp, in which the bodies of many of his own slain also lay, asked, when remonstrated with: 'What does it matter if I burn their bones? If the dead really possess knowledge of what goes on here, then we can sacrifice to them afterwards, and thus give them satisfaction.' As is well known, Confucius himself, whilst adopting a respectful attitude towards the traditional 'nether' world (as we and they still popularly call it), declined to discuss spiritual beings, saying: 'We know little enough of man in this life, without troubling ourselves with theories about the other.' It cannot be too often repeated that in ancient China there

was no word of any kind for 'religion'; none for a public 'church'; none for 'temple' or 'priest,' as distinct from ancestral halls and precentors for Imperial worship; always except and in so far as the doctrine of continuity, through ancestors and descendants, with the past and future spiritual states may have left an inference in the mind. The nearest approach to religion was *li*, the written character expressing which idea is made up of the two separate signs signifying 'spiritual being' or '*themis*' as a radical notion, and 'a sacrificial vessel' as supplementary idea. Consequently, in figuring out for themselves an ideal for blessedness in this life, no idea of collective worship; no notion of a single jealous God; no need for praise, self-denial, confession and pardon of sin; no yearning for holiness as evinced by continence, abstinence, humility, joy in everlasting salvation or Divine grace, etc., ever even remotely entered the Chinese mind. Blessedness in the flesh was purely human, and spiritual blessedness in the past or future was—and this only doubtfully or agnostically—supposed to be the same thing.

4. It was reserved for the philosopher Lao-tse, an archivist at the Imperial Court, who lived during the 6th cent. B.C., a generation before Confucius, and who took the democratic and simple view of a life ushered in by civil strife and commercial activity, in contrast to Confucius' conservative and courtly definitions of *li*, to define for the first time in what ideal blessedness consisted. Like his rival Confucius, he worked entirely on old texts. Both philosophers ignored spiritualist views, and attempted to restore social order in the Chinese federation by interpreting exactly the same ancient texts, each in his own 'advanced' way. Even the word 'teaching,' which since the arrival of Buddhism in China, early in the first century of our era, has come to signify 'religion' or 'faith,' was not yet applied to these diverging interpretations, which were simply styled 'craft,' 'scheme,' or 'plan,' *i.e.* the plan of life, the plan of government, the plan of ancestral continuity. The old *Tao*, or 'way,' which now for the first time began to substitute in men's minds individual blessedness for collective blessedness, or, to use Sir Henry Maine's words, to substitute contract for status, took quite a new form in Lao-tse's hands. The old *Ju* (still meaning 'Confucianists') were the intellectuals of China, according to the *li* theories as developed by the then reigning Imperial dynasty (B.C. 1122–B.C. 255), whose statutes combined in one indivisible idea law, religion, life, government, social decency, war, and punishment. This was *Tao*. Just as *Tao* took a narrower meaning when Lao-tse defined it, so *Ju* took a narrower meaning when Confucius specialized it.

Lao-tse's summing up, literally translated, is as follows:

'My ideal is a series of small States with small populations. Let them possess an army machine of moderate size, but not be too ready to use it. Let them place a proper value on their lives, and refrain from distant migrations. Then, though they will be possessed of boats and carts, there will be no one to ride in them; though they will be possessed of arms and cuirasses, there will be no need for arraying them. Let the people revert to the old *quipo* system of records, enjoy their food, take a pride in their clothes, dwell in peace, and rejoice in their local customs. Each State would be within easy sight of the other; the sound of each other's hens cackling and dogs barking would be heard across. The people of each State would live to a good old age, and would have no movement of intercourse with neighbouring States.

'True words are apt to be not liked; pleasant words are apt to be untrue. Good or beneficent men do not wrangle, and wranglers are apt not to be good men. Those who know best do not range over many subjects, and those who range most widely do not know best. The highest form of man cares not to accumulate: so far as he uses his resources for others, he increases his own store; so far as he gives them to others, he has the more for himself. The Providence of Heaven benefits and does not injure; the Providence of the highest form of man takes action without self-assertive effort.'

Since the importation into China of Buddhism, Zoroastrianism, Manichæism, Muhammadanism, Nestorianism, Catholicism, and Protestantism, respectively, the doctrine of rewards and punishments in a future life has naturally entered more and more into the Chinese imagination; and, of course, to a certain extent the ideas of holiness and blessedness in this life have become correspondingly modified. But the intellectual classes are still largely swayed by the more materialistic philosophy of Lao-tse and Confucius, and it is very doubtful whether the religious enthusiasm which once revolutionized Europe has ever touched, or will ever touch, the trained Chinese intellect; *a fortiori* is it doubtful whether blessedness on earth will ever become less human than it is now, or more of a temporary preparation for supposed everlasting blessedness in eternity.

LITERATURE.—Confucius's *Ch'un ts'u*, or 'Springs and Autumns,' enlarged ed. known as *Tso Chwan*; *Shu King*, or 'Book of History'; *Shih King*, or 'Book of Ballads'; *Li Ki*, or 'Book of Rites'; and *Tao Teh King*, the Taoist classic of Lao-tse—all translated in the *SBE*.

E. H. PARKER.

BLESSEDNESS (Christian). — As distinguished from happiness (*q.v.*), blessedness denotes a state of fruition that is purer and deeper, and free from the accidents of time and circumstance to which happiness is exposed. In modern literature the distinction is familiar; Carlyle recognizes it when he writes, 'There is in man a Higher than Love of Happiness: he can do without Happiness, and instead thereof find Blessedness!' (*Sartor Resartus*, 132). But it is one that goes back to pre-Christian ages; one that, whether verbally expressed or not, has always been discerned more or less clearly from the time when men began to analyze the data of the ethical life or to reflect upon the realities of religious experience. What specially concerns us, seeing that the word 'blessedness' in Christian usage is an inheritance from the employment of the word 'blessed' in the NT, and that 'blessed' in the EV of the NT is a rendering of the Gr. μακάριος, is to notice that in Greek poetry and philosophy a distinction was made between εὐδαίμων as 'happy' and μάκαρ or μακάριος as 'blessed.' The gods of Olympus were the μάκαρες θεοί as raised above the storms and tumults of the earth (Homer, *Odys.* vi. 46); the dead were the μάκαρες θνητοί as delivered now from its griefs and cares (Hesiod, *Op.* 14); the abodes of departed heroes were the μακάρων νῆσοι, the 'islands of the blest' (*ib.* 171). εὐδαίμων, on the other hand, was applied to those who experience the ordinary well-being and happiness that are open to mortals in a world of change and chance; and sometimes it is expressly distinguished from the higher term μακάριος (Aristotle, *Eth.* I. x. 14).

For the Christian point of view it is significant that, while μακάριος is a word of frequent employment in the NT, εὐδαίμων is never found. This may be partly explained by the fact that to a Jewish mind εὐδαίμων had come to be burdened with a sinister connotation. A 'demon' was not the good and friendly 'genius' of the Greek imagination, but an evil spirit by whom men were tormented or urged on to their destruction. But the full explanation lies deeper, and must be sought in the fact that Jesus Christ introduced into the world a new and higher conception of felicity for which 'blessedness' alone is the appropriate term.

To understand Christ's doctrine of blessedness genetically, we must compare it not with Greek ideas upon the subject, but with those which we find in the OT and in contemporary Jewish thought. To a pious Israelite of the earlier history, length of days and earthly prosperity were the con-

stituents of blessedness, which was saved from degenerating into a mere equivalence with pagan notions of happiness, by the fact that these outward blessings were regarded as tokens of the Divine favour, the rewards bestowed upon righteousness, and so were associated with feelings of religious gratitude and trust. A larger knowledge of the ways of God with men (Job, Pss 37. 73), and reflexion, above all, upon the experiences of the Exile, shattered those naive conceptions, and drove the best minds in Israel to look for blessedness elsewhere than in present prosperity. There were some pious hearts which, in the midst of trouble, were able to grasp by the sheer energy of faith the profound idea of a blessedness which consists in committing one's way to Jahweh, in loving His Law, and humbly accepting His will (Ps $1^{1.2}$ 2^{12} 40^{4} $84^{5.12}$ 112^{1}, Hab $3^{17f.}$). But for the vast majority the powers of faith needed the reinforcement, which came gradually through the prophetic teaching, of the great Messianic hope of a coming Kingdom of righteousness and peace, in which the faithful should be abundantly rewarded and Israel attain to a blessedness of outward power and glory corresponding to that of inward trust and joy.

Once lighted up in the Jewish heart, this hope of a Messianic blessedness never ceased to burn. But by the time of Christ the pure radiance with which it glows in the writings of the great prophets had changed into a duskier flame, for men had come to think far less of spiritual benefits and obligations than of outward glory and material privilege. It was against this Jewish background that Christ appeared with His new doctrine of blessedness, which must be determinative for all Christian ideas upon the subject. The *locus classicus* here is His proclamation of the Beatitudes (Mt 5^{3-12}, Lk 6^{20-23}); but His teaching elsewhere serves to illuminate the principles there laid down, which are further illustrated by the Apostolic elucidation and enforcement of His words.

1. In its fundamental nature Christian blessedness appears as *an inward spiritual experience.* In setting forth His doctrine regarding it, Jesus vindicated the high idealism of those poet-saints of the OT who had risen to the point of understanding the blessedness of the man who makes Jahweh his trust, while at the same time He repudiated the prevailing popular conceptions as to the blessings of the Messianic Kingdom. In Mt. the list of the Beatitudes begins and ends with a declaration of the blessedness that lies in possessing the Kingdom] of heaven ($5^{3.12}$); and that Divine Kingdom, Jesus affirms elsewhere, is to be sought within the heart (Lk $17^{20f.}$): it is a kingdom, St. Paul explains, of righteousness and peace and joy in the Holy Ghost (Ro 14^{17}). In the Fourth Gospel we have further light upon the true essence of the Christian *summum bonum*, when 'eternal life' appears as the constant equivalent for the Synoptic 'kingdom of God,' and when this eternal life is described as the result of knowing the only true God, and Jesus Christ whom He hath sent (Jn 17^{3}), *i.e.* of knowing the Father through the Son ($14^{8f.}$). It is in the richness and intimacy of its peculiar spiritual content that Christ's doctrine of blessedness rises far above the thoughts of the most spiritual of OT saints. Those holy men of old had discovered the blessedness of trusting in the God of Jeshurun, of realizing that the eternal God was their refuge, and that underneath were the everlasting arms (Dt $33^{26f.}$); but they did not know God as Christ revealed Him, they did not know Him as the Father. It is in those experiences of filial trust and love and fellowship, which result from knowing God through Jesus Christ as our God and Father, that the essence of Christian blessedness lies.

2. But, while spirituality is the inmost quality of Christian blessedness, *natural blessings are not excluded from its scope and content.* There was nothing ascetic or dualistic in Christ's teaching upon this subject, though traces of a leaning in that direction appear in the writings of St. Paul, *e.g.* in some of his utterances regarding marriage (1 Co $7^{1.8.9}$; but ct. Eph $5^{25ff.}$). Unquestionably Jesus put spiritual goods above everything else, and taught that to these all natural desires and affections and all concern for earthly benefits must be subordinated, even, when necessary, to the point of utter sacrifice (Mt $5^{29f.}$ 16^{26}, Lk 14^{26}). But He freely recognized the intrinsic worth of the things that are naturally desirable, and their right to a place in any ideal of blessedness. He did not frown upon those familiar enjoyments and activities that belong to the ordinary conception of happiness, but showed again and again His own appreciation and approval of them. He loved the beautiful in nature (Mt $6^{28ff.}$), He gave the sanction of His presence to the joys of social intercourse (Mt 11^{19}, Lk $5^{29ff.}$, Jn 2^{2} 12^{2}), He saw in the work of field and house and market fitting types of the things of the Kingdom of heaven (Mt $25^{14ff.}$, Mk $4^{26ff.}$, Lk 13^{21}), He set forth marriage as the ideal relationship between the sexes (Mt $19^{4ff.}$), and delighted in the charms of little children ($18^{2ff.}$ $19^{13ff.}$). So also He taught His disciples to pray for their bread (Mt 6^{11}, Lk 11^{3}), and forbade them to be anxious about food and raiment, not because these things are unworthy of their concern, but because their own faith in the Divine Fatherhood ought to assure them that their Father in heaven knows that they have need of all these things (Mt $6^{31ff.}$). St. Paul, who in his larger and more inspired moods breaks away from the limitations of his lingering asceticism, puts into a sentence the whole matter of the harmony in Christian experience between the earthly and the heavenly blessings, as having their common source in the Divine love, when he exclaims, 'For all things are yours . . . and ye are Christ's, and Christ is God's' (1 Co $3^{21ff.}$; cf. Ro 8^{32}).

3. Christian blessedness is *a present reality.* To the seers and prophets of the OT the day of Messianic gladness had been a far-off vision. To the men of Christ's own time it was a prospect near at hand. But to both, the Kingdom with all its blessings still lay in the future—a hope and a promise, but not an actual experience. Jesus declared that the Kingdom of God was come, that its blessedness was already present. 'Theirs is the kingdom of heaven' was the first word and the last in that great charter of beatitude which He announced to His disciples (Mt $5^{3.10}$). And the Kingdom being come, its blessedness is come, for the substance of that blessedness, as follows from its spiritual nature already referred to, does not need to be postponed till the arrival of a millennium on earth or the entrance into a Paradise of bliss in the future world. At the heart of it there lies the present and immediate assurance of God's Fatherly love, blessing us with all spiritual blessings and daily loading us with earthly benefits as well (Mt 6^{33}). And if some much-desired blessings are withheld, as oftentimes they are, God's children know that it is He who withholds them, and that nothing can separate them from His love. The best gifts, at least those in which the very soul of blessedness lies, are not withheld from those who seek first the Kingdom of God. The Heavenly Father comforts all such in their sorrows (Mt 5^{4}), satisfies their hunger for righteousness (v.^{6}), crowns them with His mercy (v.^{7}), grants them the vision of His face (v.^{8}), calls them His children (v.^{9}). And when men know and realize that God is their Father and that they are His children, the light of the eternal strikes with a redeeming and transforming power upon all the

things of time, and even on earth the days of heaven begin.

4. But Christian blessedness has its eschatological aspect also, and *looks to the future world for its perfect consummation*. 'Great,' said Jesus in the last Beatitude, 'is your reward in heaven' (Mt 5[12], Lk 6[23]); and probably the eschatological idea is the uppermost, though not the only one, in the second of the series, where future comfort is promised to those who mourn (Mt 5[4]). We have seen that Jesus did not ignore earthly goods, or treat them as if they were not to be desired, and that He found place for them accordingly in His doctrine of blessedness. Similarly, He did not ignore earthly ills, or ask His followers to face them with a Stoical apathy or to profess that they were agreeable things. On the contrary, pain was always painful to Jesus and sorrow sorrowful, and His presentation of blessedness includes the promise of a state from which they shall at length be utterly excluded. They are to be borne, it is true, with a kind of solemn gladness for Christ's sake and for righteousness' sake (Mt 5[12]), and their fruitful effects upon the development of character under earthly conditions are not to be lost sight of (Jn 15[2.8]). But the full and rounded idea of Christian blessedness implies a condition of existence from which they have disappeared. Bacon expressed a half-truth only when he named prosperity as the blessing of the Old Testament and adversity as the blessing of the New (*Essays*, v.). Adversity is not presented in the NT as a blessing in itself, but only as a means to an end—the end being a blessedness from which every element of adversity has been taken away. The joy which a Christian can feel in pain is a joy not in the pain itself, but in the experience of the Divine love working through it, and in the assurance of a heavenly compensation (cf. Ro 8[18], 2 Co 4[17], He 4[9] 12[22.28] 13[14]). Aristotle found a more exact name for happiness in a certain unimpeded energy of the soul, and admits that this requires a perfect life as its condition (*Eth.* I. vi. 15, 16), and that calamities become disqualifications for that blessedness which constitutes happiness of the highest kind (I. xi. 14). Christianity assures us of true blessedness even here and now in a world of sorrow and pain; but it also has the promise of a 'perfect life' when no disturbing or depressing influences shall impede the energies of the soul, and when God 'shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain; for the former things are passed away' (Rev 21[4]).

J. C. LAMBERT.

BLESSEDNESS (Muhammadan).—In Islām, even more than in Christianity, theology and the religious attitude have become specifically mystical. Besides the knowledge of Divine things traditionally handed down (*naql*) from the teachings of the prophets, and revealed to them by inspiration (*waḥy*), there is also an almost universally accepted minor inspiration (*ilhām*) open to all mankind, and especially found in the *walīs*, the 'saints' (lit. 'friends, associates, of Allah'). It is called, broadly, 'unveiling' (*kashf*), and is a direct, individual perception of the unseen in ecstasy, the culmination of a series of psychological conditions arising in the soul without apparent effort or cause. These immediate, unreasoned, and underived states of consciousness are called, in Muslim theology, *aḥwāl*, 'states,' 'conditions,' and pass from mere feelings of joy or sorrow, elation or depression, through auditory and visual hallucinations to absolute ecstasy, where language fails and there comes a 'passing away' (*fanā*) from the self and a union with Allah, which some, but wrongly unless only a metaphor is meant, have called 'fusion of being' (*ḥulūl*), 'identification' (*ittiḥād*), and 'union' (*wuṣūl*). If these terms be used literally, they indicate a pantheistic position, but they can also be used carelessly as mere approximations to a description of the feeling of the moment, and, at most, as equivalent to *tawḥīd*, 'unifying,' *i.e.* perception of Allah's absolute unity.

The most general term for this ecstasy or state of religious emotion and bliss is *wajd*, which means literally a finding, perceiving, experiencing, either by the physical senses or by the intellect. Thus it can be applied to the reaching and perceiving of the Divine by the direct operation of the inner spiritual being. But *wajd* and words cognate to it have also derived meanings which greatly complicate the terminology and lead to various plays on their different senses, and even to theological positions based on these plays. Thus *wajd* means also 'loving' and 'grieving,' because these are fundamental emotions which are 'experienced.'

Further, from the idea of 'finding' has been developed the vocabulary of 'existence.' *Mawjūd* means 'that which is found,' and thence has become the normal word in Arabic for the existent, whether absolute or contingent; and *wujūd*, which, in the first instance, meant simply 'finding,' has become the abstract 'existence.'

Such double- and triple-meaninged sentences as the following thus became possible:—'*Wajd* [finding or ecstasy or love] is losing of *wujūd* [existence or finding] in the *mawjūd* [the existent or the found].' 'He is rested by means of his *wajd*, not by means of the *mawjūd* in his *wajd*.' 'He who in his *wajd* is in the presence of the *mawjūd* is absent through the *wujūd* of the *mawjūd* from his *wajd*, and his *wajd* becomes a case of *wujūd*.' 'Sometimes my *wajd* would move my emotion; then he who is *mawjūd* in my *wajd* would cause me to lose the sight of my *wajd*.' '*Wajd* moves to emotion him whose rest is in *wajd*; but *wajd* is lost in the presence of the Real' (*al-ḥaqq*; see *Dictionary of Technical Terms used in the Sciences of the Musulmans*, p. 1454 f.). The reality and nature, for the Muslims, of this religious ecstasy, and the bliss therein experienced, will be made far more clear by the narrations and descriptions in Macdonald's 'Emotional Religion in Islam,' in *JRAS* for 1901, pp. 195–252, 705–748, and for 1902, pp. 1–28, and his *The Religious Attitude and Life in Islam* (Chicago, 1909), ch. vi. to end.

For the place and handling of these ideas in the system of Muslim theology the following brief abstract of the 6th Book of the 4th Division of al-Ghazālī's *Iḥyā* will probably suffice. (The Division is that of 'Saving Matters,' and the Book 'The Book of Love and Longing and Friendliness and being Well Pleased,' in vol. ix. p. 544 to end, ed. of the *Iḥyā* with the commentary of the Sayyid Murtaḍā, Cairo, 1311.)

After a preface explaining how Allah keeps the minds of His saints from the tinsel of this world, and, uncovering His glories to them at one time, and veiling them at another, keeps them between ecstasy and despair, acceptance and rejection, plunged in the sea of the knowledge of Him, and consumed in the fire of the love of Him, love of Allah is stated to be the last and loftiest of the stages of the spiritual life. There is nothing beyond it except what is its fruit, or before it except what is an introduction to it. Yet some divines, because it, as they assert, occurs so seldom, deny its existence, and say that it means only perseverance in obedience to God, and that love in itself is impossible except between beings of the same kind or likeness. These deny also all the companions and sequents of love.

But the whole Muslim community believes that the love of Allah is an absolute duty (*farḍ*). How, then, can it be non-existent or explained away

as meaning obedience? Obedience rather follows love. Further, the Qur'ān (ii. 60, v. 59) speaks of love of and by Allah, and in tradition the Prophet defines faith as loving Allah and His apostle more than aught else. Many other traditions and sayings of the saints follow to the same effect. He who loves Allah has no thought for heaven or hell. At the Last Day, when the peoples are summoned, each in the name of its prophet, the lovers of Allah will be summoned thus: 'Hither unto Allah, O ye Saints of His!' They will not be delayed for any judgment. 'When the believer knows his Lord, he loves Him, and when he loves Him he turns to Him; he looks not on the world with the eye of lust, nor on the world to come with the eye of carelessness; that sweetness occupies him in this world, and soothes him in that to come.'

But what is the essence of love, and what are its causes and conditions? Especially, what is the meaning of the love of the creature for Allah? Love is a natural turning to an object which gives pleasure. It springs from perceptions and varies with them, being either from sense-perception, or, in man alone, from that spiritual perception whose seat is in the heart. The pleasure through it is the most complete and absolute. Some have held that it is unthinkable that any one should love another than himself for the sake of that other, and without any happiness accruing to the lover apart from the perception of the beloved. That, however, is an error; it is both thinkable and takes place. A man loves by nature, first, himself for the continuance and perfection of his self; then he loves another than himself, because that other serves the same purpose and benefits him. Thirdly, he loves a thing for its own sake, not for any happiness that it brings; but the thing itself is his happiness, like the love of beauty, simply for itself. So, if it stands fast that Allah is beautiful, He must certainly be loved by him to whom His beauty is revealed. Beauty is of different kinds, and is not sensuous only: beauty of mental and moral qualities can be loved. But, lastly, there is often a secret relationship of souls between the lover and the beloved, and it suffices. It follows, then, that the Being worthy of love, in the absolute sense, is Allah only. If any one loves another than Allah, and does not do so because of a relationship of that beloved to Allah, his love can only imply defective knowledge of Allah on his part. When the Prophet is loved, or the pious, that is because these are beloved and lovers of Allah. The previously stated causes of love all meet in Allah, and are not joined in other than Him. As to the soul-relationship, the Prophet said: 'Souls are armies divided into bands: those which know one another agree, and those which do not, disagree.' Such an inner kinship of ideas exists between the soul and Allah. Part of this relationship can be expressed in words and learned from books, and consists in travelling on the path, and making the self over in the Divine likeness and imitating the Divine qualities. But another part, peculiar to mankind, cannot be so taught, and is only hinted at in various phrases in the Qur'ān and traditions. Thus in Qur'ān xvii. 87, 'They will ask thee about the spirit (*rūḥ*), say, "The spirit is my Lord's affair."' Also (xv. 29, xxxviii. 72), 'Then when I had formed him and blown into him of my spirit . . .'; therefore the angels worshipped Adam. Also (xxxviii. 25), 'We have made thee [David] a representative (*ḫalīfa*) in the earth.' So, too, in a tradition from the Prophet, 'Allah created Adam in his own form (*ṣūra*),' which certainly does not mean external form. So, too, in another tradition Allah says to Moses, 'I was sick, and thou didst not visit me'; to which Moses, 'O my Lord, how was that?' And Allah replies, 'My creature, so and so, was sick, and thou didst not visit him: hadst thou done so, thou wouldst have found me with him.' This kinship comes to the surface only through supererogatory acts of devotion (*nawāfil*). Allah has said in a tradition: 'When a creature does not cease drawing near to me through supererogatory acts of devotion, I love him; and when I love him, I become his hearing by which he hears, and his seeing by which he sees, and his tongue by which he speaks.' But here it is time to draw the rein of the pen. At this point men divide, and some see only an external resemblance, while others speak of 'identification' (*ittiḥād*) and 'fusion of being' (*ḥulūl*)—both views being false. The kinship is real, not metaphorical, but can be known only by experience.

In the human heart there is a property of apprehension, named variously 'the Divine light,' 'reason,' 'the inner insight,' 'the light of faith.' Its nature impels it to apprehend the essences of all things; and in that is its delight, even as the other human apprehensions have their delight in exercising their functions. But, as the things apprehended rise in the scale,—the external senses, the inner apprehension, etc.,—so does the delight in them. Of necessity, then, the knowledge of Allah is the greatest delight of all. How great it is can be known only by experience, although the stories are many of the ecstasies of His saints. It pre-occupies them so that neither the fear of the Fire nor the hope of Paradise has any weight. Their entire desire is to know Him in this world, and to behold His face in that to come, which is the great felicity. Yet, even in this world, some have so purified their hearts that they have become partakers, in the flesh, of these unspeakable joys. Such are called by men mad and unbelieving, for their speech passes the limit of reason.

Two things strengthen this love of Allah. First, that the ties of the world be cut from the heart, and the love of any other thing be taken out of it; and, secondly, that the knowledge of Allah and the spread of that knowledge in the heart, and its rule over the heart, be strengthened. Thus can men differ in the love of Allah and the consequent felicity.

But though Allah is the most conspicuous and manifest of beings, and though knowledge of Him might be expected before any other knowledge, yet we find that exactly the opposite is the case. There are two reasons for this: first, His invisibility, and, secondly, His too great conspicuousness. His is the case of the sun and its light; men are confused by it like bats. If the sun never set, and darkness never covered the earth, we should never know that light is. So man is, as it were, confused by all creation crying out with Allah. In a homely parallel, he is like the dullard who was riding upon his ass and looking for it at the same time.

Again, that men have a longing (*shauq*) for Allah is a proof that there is love of Allah. Love goes before longing. Longing is seeking for that which is loved, and which is thus perceived in one way but not in another. In the case of human beings, this may be because the beloved is remembered in absence, or, being present, is incompletely perceived. Both these reasons hold of Allah. Even by the most experienced saint the veil can never be entirely removed in this world, and even in the world to come Allah can never be entirely known. The stories in the lives of saints about this love-longing and its joys and sorrows are very many.

But what is meant by the love of Allah for His creatures? That He does love them is plain from divers passages in the Qur'ān (*e.g.* ii. 160, 222, v. 21, 59, lxi. 4) and many traditions. 'Love' is a word applied first to human relationships, and

secondly to Allah. But when words are so transformed, the meaning is always changed. They can never mean the same thing in man and in Allah. In man, love is an inclination of the soul to something that suits it, that is lacking in it, and from the gaining of which it expects profit and pleasure. All that is impossible in Allah, the Perfect, the Unchanging, who can contemplate nothing but Himself and His own acts, as there is nothing else in existence. Love, then, in Allah means: (1) the removal of the veil from the heart of the creature that he may see Allah; (2) the giving of power to the creature to draw near to Allah; and (3) Allah's willing this from all eternity. For Allah's love of a creature is from eternity, inasmuch as it is related to His eternal will, which requires that the creature in question should be given the power to follow the path that brings him near to Allah. But His love is, in time, in relation to the action which draws away the veil. So there is no change in Allah, or drawing near by Allah, or supplying of a lack in Allah. These terms apply only to the creature. And the signs of Allah's love are the trials which come upon creatures. If any one loves Allah and is sorely tried, he may know that Allah loves him, and is drawing him near through these trials.

And whether a creature, on the other hand, really loves Allah can be told by the fruits of love, which show themselves in his heart, and on his tongue, and in his limbs. He should be in love with death, for the lover does not shrink from the journey to the beloved. He should joy to be killed in the path of Allah. Yet, sometimes, love of family and children brings dislike of death, although there is also in one's heart some love of Allah. Or he may desire to remain longer in the world, in order to prepare himself to meet Allah. There is no weakness of love in that. Even with moral weaknesses there may be love of Allah in the heart. But sure signs of that love are delight in the thought (*dhikr*) of Allah, in prayer, and in the Qur'ān. So the lover loves everything connected with the beloved, even to the dogs of her tribe. And a sign of weakness in such love is delight in companionship with others than Allah.

'So friendliness (*ins*), fear (*ḥauf*), and longing (*shauq*) are among the effects of love; only, these effects differ in the lover according to his contemplation, and according to what is predominant in him at the time. Whenever gazing at the Extreme Beauty from behind the veil of the Unseen predominates, and the lover fears that he may fall short of reaching the Pinnacle of Majesty, then his heart is aroused to search, and is disquieted and hastens. That state of disquietude is called "longing," and is related to a thing which is absent. But when there predominates in the lover joy in nearness and witnessing of things present, through what has resulted from unveiling, and his contemplation is limited to examining the beauty thus present and unveiled, not turning to what he does not perceive, thereafter his heart rejoices in what it observes, and its rejoicing is called "friendliness." But if his contemplation be of the Divine qualities of might and self-sufficing and lack of solicitude, and if the possibility of discontinuance and distance present itself, then his heart is pained with this apprehension, and his pain is called "fear." So these states follow these observations, and the observations are due to causes which necessitate them, and they cannot be prevented.'

'Friendliness,' then, is this rejoicing of the heart in the contemplation of Divine beauty. It sometimes reaches the point of delight where there is no trace left of longing or of fear of change. The lover, then, is intimate with Allah, but strange with all others. He is alone when in company, and accompanied when alone. Yet some have denied all these things, and have said that they would involve that Allah is like to man (*tashbih*). They have even said that there could be no approval (*riḍā*) of Allah on the part of man; there could only be patience. All which is mere ignorance and a taking of the shell for the kernel.

When this friendly intercourse is unclouded by absence or fear, it sometimes produces a confidentiality which reaches so far that the lover makes merry and plays with Allah (*inbisāṭ*, *idlāl*). Yet if the unworthy attempt this, it leads them straight to destruction.

A story is added of a certain unknown negro saint, Barh, in the time of Moses. When rain failed the children of Israel for seven years and no one could move Allah to send it, he—discovered to Moses by inspiration—procured it at once by a prayer full of familiarity and daring. Allah then explained to Moses 'He makes me laugh thrice every day.' It all depends upon who does a thing, and how and in what mind he does it.

Next, being well pleased (*riḍā*) with Allah's decrees is the loftiest of the stages of the spiritual life. Yet to most it is obscure, and to him only who is taught of Allah is the veil removed from it. Some have denied that there can be *riḍā* in anything which opposes the sensual inclination, or in the different trials of the soul. There man cannot pass beyond patience. Others contended that *riḍā* should apply to everything, even to crimes, sins, and unbelief, for everything was the action of Allah. Others, again, contended that perfect *riḍā* meant to abandon prayer and to keep silent as to sins, not exposing them or rebuking them.

But many passages in the Qur'ān (v. 19, ix. 73, 101, lv. 60, lviii. 22, xcviii. 8) speak of Allah as being well pleased with His creatures, and His creatures with Him; and the blessedness of His creatures in His being well pleased with them is reckoned better than Paradise itself. So, too, there are many traditions of the blessedness of those who are well pleased with Allah. The meaning of Allah's being well pleased with His creatures is somewhat like the meaning of Allah's loving His creatures; but created things cannot comprehend its real essence.

That this state of being well pleased with Allah enables men to overcome trials is because the state is a result of love, and the blow of the beloved does not hurt. Or the pain may be felt, but recognized as necessary, and to be welcomed and accepted, like the wound inflicted by a surgeon, or the toil of a merchant who travels in search of gain. And even as mortal love enables the lover to bear and rejoice and have pleasure in anything, however painful, so with the love of Allah.

One said: 'If He were to make me a bridge over Hell, that the creatures might pass over me into Paradise, and if He were then to fill Hell with me in expiation of His oath* and in exchange for the creation, I would love that as proceeding from His judgment and be well pleased with it as coming from His oath. That is the stage I have reached of being well pleased with Him.' Of such stories and expressions there are many.

Nor does prayer (*du'ā*) to Allah mean that the creature is not well pleased with what His Lord does. Prayer, although petition, is an act of devotion and an assumption of an attitude of need and dependence before Allah. He has praised it in the Qur'ān, *e.g.* xxi. 90. Similarly, it is right to blame evil deeds, those who commit them, and the causers of them. Those who are well pleased with such things are blamed in the Qur'ān (ix. 88, 94, x. 7). Indeed, believers are expressly warned not to take as friends evil-doers and unbelievers, Jews and Christians (Qur. iii. 27, iv. 143, v. 56, ix. 23, lx. 1). Allah has covenanted with the believer that he should hate the hypocrite (*munāfiq*), and with the hypocrite that he should hate the believer; and whom a man loves and accompanies, with them will he be raised at the Last Day.

The confusion on this point has arisen entirely from not distinguishing between the part in actions which belongs to Allah and the part which belongs to man. There are these two aspects in every action. The action is of Allah, but the man who is the agent accepts it and makes it his own. Thus we can view it with favour and with dislike at once. When one who is our enemy and the enemy of our enemy dies, our feeling is similarly

* An allusion to several passages in the Qur'ān (vii. 17, xi. 120, xxxii. 13, xxxviii. 85) in which Allah threatens to fill Hell with His creatures.

mixed. This is al-Ash'arī's doctrine of *iktisāb*, 'acceptance.' Al-Ghazālī then attempts to clarify this hopeless problem with a long illustration which need not be reproduced here. It belongs only very indirectly to this rubric. His final point is that when the Prophet forbade to leave a town in which the plague had appeared, that did not mean that a believer, in fleeing from a place of gross sin, was showing lack of pleasure in and acceptance of the will of Allah. Such was not the point of the Prophet's prohibition. It was meant rather to prevent all the healthy people from leaving the sick to perish. And flight from the possibility of sin is not away from Allah's will, but proceeds from it. It is a moot point among the learned as to who is the most excellent—the man who loves death that he may go to Allah, or the man who would rather live that he may serve his Master, or the man who says that he has no choice, but will be well pleased with that which Allah chooses for him.

LITERATURE.—All books on Ṣūfīism contain some material for this subject. Scattered through *The 1001 Nights* are stories of Saints, etc., also to the purpose. The following are more special references (but the only satisfactory materials are still in Arabic alone): Asin, *La Psicologia según Mohidin Aben-arabi*, Paris, 1906 (extract from vol. iii. of *Actes du xive Cong. Intern. d. Orient.*); also 'Psicologia del éxtasis en dos grandes misticos musulmanes,' in *Cultura Española*, Feb. 1906; Carra de Vaux, *Gazali*, Paris, 1902, p. 218 ff.; *DI* under 'Love' and 'Sufi'; Margoliouth, 'Contributions to the Biography of Abd al-Kadir of Jilan,' in *JRAS*, for April, 1907, p. 267 ff.; Merx, *Idee u. Grundlinien einer allgemeinen Gesch. der Mystik*, Heidelberg, 1893; Nicholson, 'Historical Enquiry concerning. . . . Ṣūfīism,' in *JRAS* for April, 1906, p. 303 ff.; Palmer, *Oriental Mysticism*, Cambridge, 1867; Weir, *Shaikhs of Morocco*, Edinburgh, 1904; also the two treatises of the present writer referred to above.

BLESSING.—See CURSING AND BLESSING.

BLEST, ABODE OF THE.

BLEST, ABODE OF THE (Primitive and Savage).—**1. Introduction.**—The idea of the future life entertained by many peoples is frequently a complex one; in other words, various conceptions are held simultaneously. Thus among one people it may be thought that the spirit lingers round or re-visits its old haunts, that it passes to another region, and that it transmigrates into an animal or is re-born. This, while due in part to the fluidity of primitive belief and the apparent lack of any perception of contradictory ideas, may also result from the fact that it is often thought that a man possesses several souls, to each of which a different *rôle* is assigned after death. Sometimes, however, these concurrent ideas are less contradictory. The soul leaves the other world to return for a time to the grave or the village, while transmigration occurs only after a sojourn, longer or shorter, in the spirit-world. The conception of the future state will be discussed in a separate article (see STATE OF THE DEAD); here we shall confine ourselves to the idea of it as a blissful region, or to the conception of a region of happiness open to a few favoured mortals. Such ideas have not been universal; while, again, when the belief in a future life is lacking or is vague, the Elysium idea naturally is also vague or lacking. The simplest idea of the life of the spirit in another region after death is that of a mere continuance of the earthly life without change. This conception prevails among several peoples. It is to such a continuance theory that we must trace the idea of life beyond the grave as fuller and ampler than life on earth or of an Elysium state. Such a fuller life is, of course, generally expressed among savages in terms of savage life—there will be better hunting and fishing, and plenty of food; the huts will be larger, and all bodily desires will be amply fulfilled. What caused this transition can only be suggested. Since, in the continuance theory, the chief was still a chief, the slave a slave, and all who possessed wealth or power or tribal lore still retained these, this would naturally lead to the idea that for some at least—the chief, the medicine-man or priest, the wealthy—things would be better than on earth. Again, it may have been thought that the gods would be kinder to those who had observed their cult and ritual more carefully, or that those who had distinguished themselves on earth as warriors or by great bravery would be rewarded. Here we approach the dawn of more strictly retributive ideas. Such qualities as are approved among savages—bravery as opposed to cowardice, observance of tribal laws, and the like—have an ethical tinge; while even among savages, though morality may be lax from our point of view, certain moral ideas are inculcated, and they who observe them are said to be approved by the gods. This does not necessarily mean that the 'good' man, from the savage point of view, is always rewarded after death, but in many cases this belief is entertained, while the 'bad' are supposed to be punished. Hence, though in some cases the influence of a higher religion with a retributive system may have affected savage eschatology, there are others in which the development of such a system has proceeded spontaneously and apart from outside influence. When we add to all this the fact that greater powers are generally attributed to the spirit after death, it will easily be seen that men might readily come to believe that the spirit's opportunities of exercising them would be greater, and its surroundings, along with its capacity of enjoyment, would be more ample. While, then, the continuance state is often deemed a better one than earthly life, one in which different lots are assigned to different classes of men, there arises the idea of different states or places of existence, some perfectly happy, some no better than on earth or even more miserable.

Other ideas may quite well have produced the conception that life after death was blissful. Man's experience of the miseries of this world and his instinctive desire for happiness may have suggested a blissful other-world as an offset to this earth. The same experience led him to form myths of a Golden Age in the past, in which we occasionally meet with the idea that gods and men lived together or had free intercourse with each other. These may have suggested the idea that such a state still existed, and that it would be restored to man after death. Here the belief is sometimes expressed, that men will be with the gods after death, or will return to the region, subterranean

or heavenly, whence they originally came. There is also the belief (expressed in many myths of the origin of death) that man is naturally immortal, and that pain, unhappiness, hunger, and thirst are unnatural. Hence they will no longer exist beyond the grave (see AGES OF THE WORLD, FALL). But such a state of the blest, especially when it is the abode of gods or immortals, is often reserved only for a few, while these sometimes pass thither without dying. It may also be believed in as a state apart from the ordinary abode of the dead, whether that is blissful or otherwise, though occasionally it is a mere region of the other world.

The continuance theory does not always develop in these directions, and sometimes it is held that life after death is for all a tame copy of earthly life, a dim, poor, shadowy replica of the present. This is common among West African tribes, and is found also among the Greeks and Semites, though with all these there is usually the idea of a blissful abode of divine beings.

The locality of the blissful region varies. Sometimes, probably as a result of inhumation or cave-burial, it is an underground region. Or, again, it is simply another distant part of the earth—frequently the east or west—or an island, perhaps because men believe that after death they will go to the region whence their ancestors migrated, or because the sun is supposed to pass through the place of the dead. Or it is on a mountain, probably because mountains are thought to support the sky, above which, in turn, the blissful abode is also located. Hence men are sometimes buried on mountains, while the custom of cremation may mark the change to the conception of a heavenly world whither the spirit floated when set free by the fire. Or, again, the planets, sun, moon, and stars, are held to be the abode of the blest, while many primitive folk believe that stars are the dead transformed.

In many cases the blissful region, like the world of the dead generally, is reached only after a long and toilsome journey, over mountains and rivers, over the bridge of death, while many obstacles and dangers are met with, and various supernatural enemies are encountered. Occasionally these dangers and obstacles are intended to try the worth of the spirit, and if it fails to surmount them, it cannot reach the blissful abode. Possibly, however, these trials and dangers are reminiscences of similar experiences in the old migrations of a tribe, traditionally handed down and made part of the experience of the dead where they were supposed to return to some former dwelling-place of the tribe.

Whatever ideas are held concerning the abode of the dead are strengthened and amplified by dreams, in which the soul is thought to have visited it; or when the medicine-man claims the power of going thither, and returns with a vivid description of its character; or by myths telling of visits of the living to that land, their sojourn there, and their return (see § 7).

2. The lowest peoples.—We know nothing of the exact nature of the eschatology of pre-historic man. But from the funeral *mobilier* of interments in the Stone Age, and from the elaborate customs of sepulture in its later periods, we may be certain that some continuance theory existed, whether of the body or of the spirit, in the grave or in another region. Whether it was blissful or not cannot now be known (see MacCulloch, *ExpT* xvii. [1906] 489). On the beliefs of the lowest peoples surviving now or within recent times, our information is more extensive, and, though it has been surmised that some of their eschatological ideas have been assimilated from Christian sources, there is little reason to doubt that on the whole they are original. The belief of the Tasmanians was vague, yet they looked forward to a happier life in which they would untiredly and with constant success pursue the chase, and for ever enjoy the pleasures which they coveted on earth. Contact with the white man suggested to them that they would 'jump up white men' on an island in the Straits (H. Ling Roth, *Abor. of Tas.* 1890, p. 69). The religious ideas of the Australian tribes have sometimes been exaggerated by uncritical observers, but there is no doubt that among many of them a belief in a happy other-world was found. Of the tribes of West Australia little is known, while among the central and northern tribes a belief in perpetual re-incarnation existed universally (Spencer-Gillen[b], 491); but among those scattered over the south-east region the belief in a future happy life 'beyond the great water' or in the sky is generally found (Howitt, 438).

This is a land like the earth, and is sometimes called 'the gum-tree country,' but is more fertile, well watered, and abundantly supplied with game, while everything is better than in this world; and the spirits live there as they did on earth. Considerable freedom is ascribed to them, and they can also wander freely about the earth. Sometimes, as the Ngarigo and Wolgal believe, the spirit is met by the *quasi*-divinity Daramulun, who lives with the ghosts. The path to sky-land is by the rays of the setting sun or by the Milky Way, sometimes itself the dwelling of the ghosts (tribes on the Herbert River) and regarded as a water-course with fruit-groves and all desirable things; and there are many legends regarding its former accessibility by a tree or other means (Howitt, 434 ff., 474; *JAI* ii. 269, xiii. 187 ff., 194). The tribes around the Gulf region believe in a happy life in *Yalairy*, and a spirit above who looks after them there. Yalairy is reached by the Milky Way and is 'a good land, a nice place, full of beautiful, shady trees,' with plenty of water and abundance of game. It is usually thought of vaguely as beyond the stars, and the natives have no dread of going there (Palmer, *JAI* xiii. 291).

Something corresponding to the division caused elsewhere by rank, ritual observances, etc., is found among a few tribes. The Wakelbura thought that right-handed men went to the sky, left-handed men underground, while the island paradise of certain tribes round Maryborough is reached only by the 'good,' and those who show excellence in hunting, fishing, etc. (Howitt, 473, 498). Among the Gulf tribes the custom of knocking out two front teeth is connected with their entry to the sky-world. Those who have submitted to this custom will have bright, clear water to drink, others will have dirty or muddy water (*JAI* xiii. 291). Such beliefs may explain the retributive ideas ascribed to some of the tribes, though the fact that the great Being believed in by all these groups is supposed to be a kind of moral governor may have occasionally led to a retributive eschatology (see ABORIGINES, § 1; Howitt, 504; *JAI* ii. 268–9). Thus the Baiame of certain tribes lives in Bullemah, the land of rest, a floral paradise of beauty and of plenty, where good spirits go, and can save from Eleänbah-wundah, the abode of the wicked (Parker, *More Aust. Legendary Tales*, London, 1898, 96, and cf. Lang's *Introd.* p. xxi).

The Andaman Islanders believe that beneath the earth is a jungle world (*chaitan*), where the *spirits* of the dead dwell and hunt the spirits of animals and birds. Between earth and sky is a cane bridge, over which the *souls* of the dead go to paradise, while the souls of those who have committed such sins as murder go to a cold region called *jereglar-mugu*. But all souls will finally be re-united with their spirits, and will live permanently on a new earth in the prime of life. Sickness and death will be unknown (Man, *JAI* xii. 161–2; but cf. Temple, *Census of India*, Calcutta, 1903, iii. 62).

Among the primitive pagan tribes of the Malay peninsula, Semang, Sakai, and Jakun, there is a considerable belief in retribution; the wicked, often identified with those who fear to meet the terrible beings of the soul-bridge, are condemned to a wretched existence, though sometimes they are submitted to a process of purification and permitted to enter Paradise. Paradise is a place for all others; it is situated in the firmament, and entered from the west. It is 'a glorified "Avilion," an "Island of Fruits," from which all that was noxious and distressing to man had been eliminated' (Skeat and Blagden, *Pagan Races of the Malay Peninsula*, 1906, i. 13).

The Semang and Jakun divide the firmament into three tiers; the two upper tiers are the Paradise of the blest, filled with wild fruit-trees. Some of the tribes make the moon the 'Island of Fruits,' which, in some songs, is preceded by a 'Garden of Flowers.' The choicest heaven is reserved for the old and wise.

Among the western Semang the island of fruit-trees is reserved for souls of *B'lians* ('medicine-men'); all others, save the wicked, go across the sea to a land of screw-pines and thatch-palms (*ib.* 186–7, 207–8). All souls, according to the Sakai, are purified in the infernal regions by 'Granny Langut,' after which they cross a great chopper over boiling water. The wicked fall in; the good finally proceed to the island of fruit-trees (*ib.* 239 ff.). Among the Jakun, the Blandas think that in the Island of Fruits souls of the old become young; there is no pain or sickness there, and plenty of well-water. The Besisi locate it in the moon; it contains every kind of fruit-tree; there is perpetual feasting, and souls lie in idleness, or play musical instruments. The good alone are admitted to it. According to the Mantra, souls pass to Fruit Island in the west and live in harmony and enjoyment, feasting on its delicious fruits, marrying and having children. Pain, disease, and death are unknown. Souls of men who have died a bloody death go to Red Land, a desolate region, but obtain food from Fruit Island (*ib.* 298, 298, 321; *Jour. Ind. Archip.* i. 325).

The burial rites, especially of chiefs, among the **Bushmen** of S. Africa show a belief in the continuance of life; but their ideas are scantily recorded. Of the tribes living on the banks of the Gariep there is a myth of a paradise called *Too'ga* whither all go after death, and a safe journey is ensured by cutting off a finger-joint (Clow, *Nat. Races of S.A.*, 1905, i. 129). Equally vague are the notions of the **Hottentots**, who believe that there is a land above the sky-vault where things go on as on earth. Their divinity Tsui-goam lives in a beautiful heaven. Spirits of the dead exercise power over men and have a better insight into all matters; but whether they live in the land beyond the sky does not appear, though stars are the souls or eyes of the dead. The rites of interment also show a strong belief in the soul's continuance (Hahn, *Tsuni-goam*, 1881, pp. 23, 85, 105, 112 ff.; Fritsch, *Eingeborenen Süd-Afrikas*, Breslau, 1872, p. 338).

Among the **Eskimos** of Greenland the general belief was that there were two regions: (1) in a cold sky or over-world, with hills and valleys and a heaven; the souls dwelt in tents on the shore of a lake with plenty of fish and fowl, though it is also said to have been a place of cold and famine; (2) in an underground domain of the god Torngarsuk, a blissful place with sunshine and perpetual summer, with water, fish, and fowl in plenty, while seals and reindeer were caught without trouble or found boiling alive in a great kettle.

Various accounts ascribe different causes for the presence of souls in either region. Thus the upper region is said to be for witches and the wicked, or again for all souls except those of great and heroic men, of those who had suffered much on earth, perished at sea, or died in childbirth. On the other hand, the destiny of the soul depended on the treatment of the body. If it was laid on the ground before death, it went downwards; if not, upwards. A terrible journey to the underground region had to be undertaken, and some souls perished on the way (Nansen, *Eskimo Life*, 1893, p. 238 ff.; Crantz, *Grönland*, 1765, p. 258; Rink, *Tales and Trad. of the Eskimo*, 1875, pp. 37, 42).

3. **Polynesia.**—In Polynesia, while occasionally an abode of bliss for all is met with, as in the Mitchell Group, Niutao, and Nanumanga, in the heavens, or in Nukupetau, underground (Tia [Turner, *Samoa*, 1884, pp. 281, 286, 288]), in general there were different states allotted according to conditions of rank or class, while some were retributive, depending, however, upon ritual obedience rather than upon moral considerations. A subterranean other-world is frequently met with, while at the same time an abode in the heavens, the moon, in the west, or on an island is allotted to certain persons. In Samoa, Pulotu was under the sea, where the spirits bathed in 'the water of life' and became lively and bright, with no trace of infirmity, while the aged became young. This region was a replica of earth, but chiefs became pillars in the house of Saveasiuleo, its lord—an honour proudly anticipated by them before death. There was also a belief that chiefs and grandees went to the heavens, which opened to receive them (Turner, 257 ff.; Gill, *Myths and Songs of S. Pacific*, 1876, p. 168). In the Hervey Group Avaiki was a hollow underground region whither all who died a natural death went to be eaten and annihilated by Miru. Warriors, after being swallowed by Rongo, climbed a mountain and thence went to a cheerful abode in the heavens, where, dowered with immortality and decked with flowers, they danced and enjoyed themselves, looking down with contempt on the wretches in Avaiki. This Elysium of the brave consisted of 10 successive heavens, and was the home of Tangaroa, the god of day. But in Raratonga warriors lived with Tiki underground, in a beautiful region with shrubs and flowers of undying fragrance, eating, drinking, dancing, and sleeping. Their admission here depended on their having brought a suitable offering (Gill, 18, 152 ff., 170). In the Society Islands, while the people descended to Po, members of the Areoi society, chiefs, and those whose families could afford sufficient offerings, went to the aerial paradise of perfumed Rohutu, where, amid beautiful scenes, every sensuous enjoyment was open to them. Neglect of certain rites and offerings might, however, debar them from it (Ellis, *Polynesian Researches*[2], 1832, i. 245, 352, 397, 403). The Sandwich Islanders thought that souls went to Po, the place of night, where they were eaten, though some became immortal spirits by this process. A few went to the underground paradise of Miru and Akea, while chiefs were led by a god to the heavens. This underground paradise was level and beautiful, and everything grew of itself. In Miru's part, souls amused themselves with noisy games; in Akea's there reigned a solemn peace (Ratzel, *Hist. of Mankind*, 1897, i. 315; Ellis, i. 366; Jones, *Sandwich Is.*, Boston, 1843, p. 42). For the spirits of the dead in Savage Island there was an underground region called Maui, but their favourite place was the land of Sina in the skies (Turner, 306). Another account says that the virtuous passed to *Ahonoa*, Everlasting Light, the virtues being chastity, theft from another tribe, and slaughter of enemies (Thomson, *JAI* xxxi. [1901] 139). In Bowditch Island the common people went to a distant region of delights full of fruits and flowers, where they enjoyed feasting and dancing. Kings, priests, and their families went to the moon and enjoyed all sorts of pleasures, the moon itself being their food (*JAI* xxi. [1891-2] 51; Turner, 273). *Bolotu* was the Elysium of the Tonga Islanders, an island of gods and spirits of chiefs and men of rank. Flowers and fruits when plucked were immediately replaced; and dogs, when killed, came to life again. This exquisite region was not open to the people, whose souls died with their bodies. The Maori subterranean Hades, *Po* or the *Reinga*, is variously described. Sometimes it is regarded as a gloomy state with disgusting food, again as an excellent land like earth, visited by the sun, with rivers, good food, and many villages and people. It was also thought to be divided into several compartments, the lowest being the worst. Thither went all of lesser rank. Po was personified as a goddess, and in it was the living fountain in which the sun and moon bathed and were renewed. Great chiefs and heroes went to one of the heavens after death, or became stars. There was, however, some uncertainty as to whether the spirit went up or down, or remained near the body. *Karakias*, or prayers, aided its ascent. Reinga is described by one writer, probably confusing it with the sky-abode of chiefs, as a beautiful heaven where all things were abundant, with constant calm, perpetual sunshine and gladness (Nicholls, *JAI* xv. [1885], 200; see also Shortland, *Traditions of N.Z.*, 1854, ch. 7, *Maori Rel. and Myth*, 1882, pp. 45, 52; *JAI* xix. [1890] 118–9; Taylor, *Te Ika a Maui*, 1855, pp. 103, 186, and *passim*).

Retribution was not strictly ethical, but ritual and ceremonial, as some of the above cases have shown. When the friend of a dead man in Nanumea gave a great funeral feast, the deceased was admitted to a heavenly land of light and clear waters; if not, he was sent to darkness and mud (Turner, 292). Entrance to *Mane*, the western paradise of Tamana, with its clear streams and abundant food, depended on an even number resulting when pebbles were thrown by the dead man's relatives. An odd number caused the spirit to be annihilated (*ib.* 294). In Pukapuka of the Hervey Group, Vaerua ate spirits which had committed ceremonial offences; all others went westwards to the house of Reva, where they passed a blissful existence. In Aitutaki, spirits which were provided with a coco-nut escaped by a ruse from being eaten by Miru, and went to the pleasant abode of Iva, where they feasted on the richest food and the finest sugar-cane (Gill, 171, 175). In Netherland Island, however, 'souls of the honest, kind, and gentle went and lived in light in Heaven. The thief, the cruel, and the ill-tongued went to a prison of darkness under the earth' (Turner, 301).

4. **Dayaks, Papuans, and Melanesians.**—The Dayaks exhibit a great diversity of beliefs, and the general disposition towards a retributive view, as well as the minute divisions of the future state, may owe something to Hindu or Muhammadan influences. More purely native beliefs are seen in the occasional idea that the other-world is a copy of this, or is open to all, or that a better fate awaits those who die a violent death or women dying in childbirth.

The Sea Dayaks of Sarawak believe in simple continuance. The dead build houses and make paddy fields; they are subject to the same inequalities as the living. But they can bestow on the living amulets and medicines of magical power (Ling Roth, *Natives of Sarawak and Borneo*, 1896, i. 213). Others, like the Sibuyows, think that six states are passed through, the wicked—thieves and great criminals—being punished in the first. Eventually the final heavenly state—beautiful, peaceful, and happy—is reached. The streets are clean and regular, the houses perfectly formed. There are lakes and rivers, gardens with fruit-trees and flowers, and the people are happy and rich. This place is enclosed by a great wall, while at a distance the souls of Malays have a *Kampong* (Brooke, *Ten Years in Sarawak*, 1866, i. 55). The Dusuns, the Idaans, and other tribes place paradise at or near the top of a mountain which all souls ascend, and which is guarded by a fiery dog or some other monster. The wicked try unsuccessfully to ascend it (Pryer, *JAI* xvi. [1886] 233; Ling Roth, i. 220). The tribes of the Barito, Kapuas, and Kahaian river-basins have a similar belief. The entrance to the other-world is on a mountain peak. It has rivers rich in fish; in its midst is a sea surrounding an island on which grows a tree with pearls for fruit, golden blossoms, and fine cloth for leaves. It also furnishes the Water of Life, which the souls drink to become youthful (this is also effected by bathing in the sea). While the souls retain the positions of this world, all are free from care, every desire is followed by abundant fulfilment, and there are all kinds of enjoyments and rich gems and gold. Souls, however, eventually die, returning to the earth and entering a fruit or leaf, etc. Thieves, unjust chiefs, and those who turned a good into a bad cause are excluded from these enjoyments (Grabowsky, *Inter. AE*, ii. 184 ff.; Ling Roth, citing Schwaner, ii. pp. clxx ff., cc). The Malanaus made the other-world resemble this, with seas, rivers, and sago plantations; but those who had died a violent death had a separate paradise from those who had died a natural death. Souls finally died, to reappear as worms, etc. (de Crespigny, *JAI* v. 35). Various places were allotted to the souls in the belief of the Kayans, according to the manner of their death. Those who died a violent death and women dying in childbed mated in *Long Julan*, where they had all their wants supplied, did no work, and all became rich. Those who were drowned went to *Ling Yang*, a land of plenty below the rivers, where all property lost in the waters became theirs. A place of wretchedness was reserved for suicides (Hose, in Ling Roth, i. 220).

Among the Papuans of New Guinea and the adjacent islands there is a general belief in a future state, shown by the elaborate funeral ceremonies and by explicit beliefs. But these beliefs vary in different regions, and the other-world is located now on an island, now in the sky, now underground. Sometimes it is open to all, sometimes to those only who comply with various ritual observances; or, again, there are various places according to the manner of death. It is conceived as a region of light and happiness; friends are reunited; hunger is unknown, and the souls enjoy an existence of hunting, fishing, and feasting.

In the Woodlarks all souls whose bodies have been tatued go to the island of *Watum* by way of a serpent bridge, and enjoy to the full all the pleasures of life, the women cultivating and cooking food for their idle lords (Thomson, *British N.G.*, 1892, p. 184; Haddon, *FL*, 1894, p. 318). In the western islands of Torres Straits the abode of the dead was in a mythic island called *Kibu*, where ghosts sat twittering on the tree-tops; but those of the best men, greatest warriors and skull-hunters, were better off (Haddon, *JAI* xix. [1890] 318). In the eastern islands the spirit went under the sea to *Beg*, and eventually to the island of *Boigu*, being conducted thither by Terer, the first man from whose body the skin was scraped off. Here every one was happy and bright, had plenty of food, and did no work. The death ceremonies comforted the mourners, and gave them assurance of immortality (Hunt, *JAI* xxviii. [1899] 8; *Rep. Cambridge Exp. to Torres St.*, Cambridge, vi. [1908] 45, 128, 252–3). The Elema tribes of the Papuan Gulf, New Guinea, thought that those who died fighting went to the sky-land of the god of war, and could also roam about and annoy their enemies. Various localities were assigned to those dying a natural death, while those who were murdered or killed by crocodiles or snakes became wandering spirits (Holmes, *JAI* xxxii. [1902] 428). Other tribes entertain different ideas. Some think that all spirits live in *Tauru*, a glorious place where the souls welcome the newcomer, and where hunger is unknown. A similar western paradise called *Raka*, the place of plenty, is believed in by the Motu-motu people; but here only those whose noses are pierced enter it (Chalmers, *Pioneering in N.G.*, 1888, p. 169). In other districts the soul, or *mōhe*, goes underground, and must cross a great water by a ladder. Here it meets a spirit which demands its earring and armband. If the soul has not these the ladder is tripped up, and the *mōhe* falls into the water, whence there is no return. Otherwise it is met by two *mōhe*, which conduct it to the subterranean villages where the ghosts dwell. They can re-visit their former home and bring good or ill luck (*Inter. AE*, xiii. 47).

Throughout Melanesia, while future life is a reflexion of life on earth, there is a general disposition to ascribe greater happiness to chiefs and warriors, and a greater amount of power to the disembodied spirits. But here also attention to ritual obtains a special reward, and there is an approximation to retribution. The place of the dead is an island (Solomon and Loyalty Islands) or underground (New Britain, Santa Cruz, New Hebrides, Fiji). Sometimes there are different places for different classes, or according to the manner of life or death, and in general all these regions of the dead are reached with difficulty.

The people in the north of New Britain believe that souls which have enough shell-money to offer to the god can enter a desirable paradise called *Tingenalabaran*, but those which have not are sent to a bleak region. The Sultkas of the south coast have a subterranean paradise, *Mlol*, to which those only who can prove their life to have been satisfactory are admitted (Pullen-Burry, *Trans. 3rd Cong. Hist. Rel.* i. 84).

In the Solomon Islands the island of the dead is easily reached by ghosts which have their noses pierced (Florida), or have their hands marked with a conventional design, lacking which they are annihilated (Ysabel). There are houses, gardens, and canoes in these island abodes; the ghosts bathe, and their laughter is heard. In some cases the common ghosts turn into white ants' nests and are eaten by more vigorous ghosts, who also at last undergo the same transformation (Codrington, *Melanesians*, Oxford, 1891, 256 ff.). Similar beliefs are held in other islands of the group.

An underground world is believed in from the Torres Group to Fiji: and its usual name from Torres Islands to New Hebrides is *Panoi*. The Banks Islanders think there are divisions in *Panoi* for different classes of ghosts, *e.g.* youths dying in the flower of their age inhabit a more pleasant region with flowers and scented plants in abundance; or, according to the manner of death, there are places set apart for the souls. Sometimes murderers, sorcerers, and adulterers are excluded from the better *Panoi*, a good place where ghosts enjoy life and live in harmony. *Panoi* contains villages, houses, and trees with red leaves, and is a beautiful place. A great and bright feast on earth is compared to the ordinary life there. Men dance, sing, and talk, but there is no fighting. Life is happy if empty; there is no pain, sickness, or work. In some islands ritual observances determine the nature of existence there—a man with unpierced ears cannot drink water, the untatued cannot eat good food (Codrington, 273–288). In Aneiteum (New Hebrides), the place of spirits, Umatmas, has two divisions, 'for good and for bad,' the bad being thieves, murderers, and liars. The former division is characterized by plenty of good food (Turner, 326).

In Fiji the way to the place of souls, *Mbulu*, was long and dangerous, and ritual and ceremonial observances decided the lot of the dead. Ghosts of bachelors were annihilated; all other ghosts had to be approved by Ndengei, great warriors especially gaining his favour. In *Mbulu* punishments were

awarded to those who displeased the gods, those who had not their ears bored or were not tatued, or had not slain an enemy. Those who lied about themselves were struck down; some were eaten by the gods. Hence there were divisions in *Mbulu*, and of these *Mburotu* was the most Elysian. Here scented groves and pleasant glades and an unclouded sky were found, and an abundance of all that was most desirable to a native. Its delights were such that the word was commonly used to describe any great joy. A native song says, 'Death is easy . . . death is rest' (Williams, *Fiji*, 1858, i. 243 ff.). Mention is also made of a paradise of the gods, to which certain mortals were admitted by privilege (*ib.* i. 114).

5. Africa.—An Elysium conception is but slightly developed among the peoples of Africa, partly because some tribes have a vague idea of a future life, some, like the Dinka and Bari, believing in utter extinction (Hollis, *The Masai*, Oxford, 1905, p. 307), partly because with many others the belief in transmigration and re-incarnation is very strong. The cult of ancestors is, however, general, and shows that some kind of future existence is commonly believed in, though it is not definitely outlined, and many profess ignorance of its nature. But as the spirits of the dead are so often the gods of the living, and are adored as great spirits, this must argue that their lot, or that of the more important of them, is better than on earth, though expression of this is rare. Where a future state is described, it is most usually a heavenly or subterranean place where all go, and where the distinctions of rank, etc., still continue.

Thus, among the Nilotic Negroes, the Ja-luo hold that the spirits go up to the sky (Johnston, *Uganda*, 1902, ii. 779). Among the Nandi it is held that all, good and bad, go underground (Hollis, *Trans. 3rd Cong. Hist. Rel.*, Oxford, 1908, i. 87). With the Gallas, wood that has been burning a little is put on the grave, and if it grows, this denotes that the spirit is happy in the other-world (Macdonald, *Africana*, 1882, i. 229). The general belief of the West African Negroes is in an underground shadow world where the king is still king, the slave a slave, and the conditions and occupations of earth are continued in a ghostly form. The sun shines there when it sets here, and there are mountains, forests, rivers, plants, animals, villages, etc. There are pleasures and pains, but every one there grows backward or forward into the prime of life, and there is no diminution of strength or bodily waste. Among the Yoruba-speaking peoples it is called *Ipo-oku*, 'The Land of the Dead'; among the Tshi, *Srahmandazi*, 'The Land of Ghosts'; and the general opinion of it is summed up in the proverb, 'One day in this world is worth a year in *Srahmandazi*' (Kingsley, *Travels in W.A.*, 1897, pp. 488, 578; Ellis, *Tshi-speaking Peoples*, 1887, p. 157 f., *Yoruba-speaking Peoples*, 1894, p. 127; Burton, *Dahome*, 1864, ii. 156). These ideas are also found among the Bantu tribes of W. Africa, though their notion of the locality of the spirit-world is vaguer—it is underground or all around. It is free from certain bodily limitations, and the rich or persons of rank form a special class of spirits, the *awiri*. Probably since contact with white men a belief has arisen in 'white man's land' beneath the sea, whither some of the dead go and find a happy future, becoming white (Nassau, *Fetichism in W.A.*, 1904, pp. 56 ff., 237; Kingsley, 519; *JAI* xiii. [1884] 475). Much the same may be said of the Eastern Bantus. All spirits live, but how employed or where no one knows (*JAI*, 1892–3, xxii. 116). The spirit-world is peopled in much the same way as this, but we hear in some tribes of Mulungu assigning their places to the dead, though there is no idea of retribution (but cf. Waitz, *Anthrop.*, Leipzig, 1860, ii. 425 [souls of good men go to Mulungu, among the Ba-Ngindo]), and that the spirits 'go on high.' Among the Bondei the souls go to Mlinga, a divine mountain, entering by a brass door. There is recognition beyond the grave, and the spirit lives with its dead relatives. Spirits are worshipped as gods, and have great influence on earthly affairs, while sometimes the ghost of a dead chief will have a mountain as his residence (Macdonald, i. 60, 67–9, 108, 297; Dale, *JAI* xxv. 232). A more definite Elysium conception appears with the Kimbunda of S.W. Africa, in whose *Kalunga*, or world of the dead, there are feasting, plenty of women, hunting and dancing, while life goes better than in this world (Magyar, cited by Tylor[3], ii. 77). The conceptions of the southern Bantus are also vague, though some hold that the spirit ascends to heaven or 'goes home' (Macdonald, *JAI* xx. [1891] 120–1). With the Zulus, while there is much doubt as to the position of the spirit-world, there are clear references to an underground region of spirits where Unkulunkulu is. Stories tell of visits paid by the living there, and of its landscapes like those of this world, its villages, cattle, etc. This belief is now much mingled with the idea that the *amatongo*, or spirits, appear on earth as snakes. Even in this the differences of rank are continued, chiefs appearing as poisonous, common people as harmless, snakes (Callaway, *Rel. of the Amazulu*, 1884, *passim*, *Nursery Tales . . . of the Zulus*, 1868, i. 316 ff.). The Basutos also locate the spirit-world underground. Some say that it has green valleys and immortal speckled cattle—an Elysium idea—but generally it is thought that the shades wander calmly and silently, without joy and without grief. There is no idea of retribution, though this may have existed formerly (Casalis, *Les Bassoutos*, Paris, 1859, pp. 261, 268).

The idea of rank, etc., determining the state of spirits is curiously held among the Masai. Souls of common people are annihilated, but those of the rich or medicine-men become sacred snakes, while spirits of certain great people go to heaven (Johnston, *op. cit.* ii. 832; Hollis, 307–8). Merker, however, states that the good are admitted to a paradise full of all beautiful and glorious things. Luxuriant grazing-grounds with cattle, alternate with seas, rivers, and cool groves, whose trees are hung with the rarest fruits. Souls live without trouble, pain, or labour, re-united to their departed relatives. Evil-doers are sent to a waterless waste (*ZE* xxxv. [1903] 735).

Retributive ideas are said to exist among some Negro tribes, though the evidence must be received with caution. Souls of good men ascend to heaven, sometimes by the Milky Way, the path of the ghosts, in the belief of the Krus, Scherbros, and Odschi, the evil being punished (Waitz, ii. 191). But Bosman's account of the beliefs of the Guinea Negroes on this subject shows what 'goodness' means here. There is a judgment of souls after death: the good, viz. those who have strictly observed ceremonial and religious laws, and thus have not offended the gods, are sent to a happy and pleasant Paradise; offending souls are slain or drowned (Pinkerton, *Voyages*, xvi. 401). Among the Agni also, souls of the good begin a new life analogous to this after death (*L'Anthropologie*, Paris, iv. [1893] 434), and this is said to be true of some of the tribes on the Upper Congo, who think that *Longa*, the nether world, is tenanted by souls of the good (Weeks, *FL* xii. [1901] 184). It is not improbable that a belief in a future judgment is taught in the Secret Societies of W. Africa.

6. North American Indians.—While the tribes of North America occasionally represented the future life as a mere copy of this, *e.g.* the Maricopas, the more general conception was that it opened out a richer, fuller, and happier state to all, or to warriors, men of rank, the rich, etc., or to the good; for more than among other savage races the American tribes had developed the idea of future retribution on ethical grounds. In some cases the division between good and bad shows a Christian colouring, and the native belief may simply have been that certain souls alone could enter the happy state, others being debarred, *i.e.* those who died a violent death, those who were too feeble to encounter the dangers of the soul-journey, cowards, or those for whom sufficient offerings had not been made at their tomb. But in other cases those who are debarred or are sent to a gloomy region are wicked, they have committed offences against tribal law, and are a plague to society, as among the Delawares, Blackfeet, and Ojibwas.

Where a state common to all was believed in, it was thought to continue all the pursuits of earthly life under absolutely untrammelled conditions. Hunting and fishing were pursued without difficulty, and always with success. There would be neither want nor sorrow. The woods, lakes, streams, and plains would not only be more beautiful, but would swarm with every desirable creature. The 'happy hunting grounds' were the natural paradise of hunting tribes, and there they dwelt with the chief divinity or 'great spirit' in supreme felicity. Many poetical and sensuous descriptions of this land are to be found in the myths of various tribes, but all things in it were as incorporeal as the spirit itself, 'the hunter and the deer a shade.' Generally it was thought to be in heaven, the Milky Way forming the way thither, as with the Clallams, some N. Californian tribes, the Iroquois, and the Winnibagoes (*NR* iii. 522; Macfie, *Vancouver Island*, 1865, p. 448; Morgan, *League of the Iroquois*, 1851, p. 176; Schoolcraft, *Ind. Tribes*, Philad., 1853–6, iv. 240). Or it was in the region of the rising sun, or on a mountain (the Mojaves, *NR* iii. 526). The Navahos thought it was below the earth, whence men had once come forth. There all things grew luxuriously, and the spirits enjoyed peace and plenty (*NR* iii. 528).

Among many tribes bravery in war as well as rank earned for men the abode of bliss, while the medicine-men taught that it was a recompense for success in life (Copeway, *Ojibwa Nation*, 1847, p. 32). Cowards and common people were debarred or might enter Elysium only after a long period of

suffering. With the Ahts, chiefs and warriors went to the beautiful heaven of Quawteaht, untroubled by storms and frost, revelling in sunshine and abundance of game. All others went to the subterranean kingdom of Chayher (Sproat, 209). The western paradise of the Ojibwas and the southern of the Chinooks were open only to brave hunters and warriors. The Ojibwas thought of it as a great village in a fine country, with continual amusements and dances, and plenty of food. War was unknown; the hunter obtained his prey without the fatigue of pursuit (Jones, *Ojebway Inds.*, 1861, p. 104). Chiefs and medicine-men among the Virginian tribes went to a western paradise of perpetual happiness, where they smoked, danced, and sang with their forefathers; all others were annihilated (Pinkerton, *Voyages*, xiii. 14, 41). The Natchez, the Tensas, and the Apalaches held that chiefs and warriors went to reside in the glorious land of the sun (Müller, *Amer. Urreligionen*, Basel, 1855, p. 66 ff.). Far more elaborate in such divisions was the eschatology of the ancient Mexicans, who assigned the dead to three regions. The emperor, nobles, and fallen warriors were borne eastwards to the paradise of Huitzilopochtli, where honeyed flowers and luscious fruits abounded in shady groves, and rich hunting parks awaited the happy spirit. They accompanied the sun daily in triumph to the zenith, and then returned to their blissful Elysium. Finally, they were transformed into birds with golden plumage. Women dying in childbed were also admitted to this paradise, and, dressed as warriors, escorted the sun from the zenith. An earthly paradise free from sorrow, and abounding in every kind of fruit and vegetable, was open to those dying of certain diseases, to the drowned, and to sacrificial victims. This was the perpetual summer land of Tlalocan. Mictlan, a gloomy underground or northern region, was assigned to all who died from any other cause (Reville, *Rel. of Mexico and Peru*, 1884; Sahagun, *Hist. Gen.*, *passim*).

In some of these instances bravery and cowardice determine the fate of the soul. This approaches to an ethical distinction according to the native moral standard, and doubtless underlies many of the instances usually cited of more strictly retributive justice. Thus, with the Nez Percés and some Haidah tribes, the wicked and those who had not died the warrior's death were sent for a time to a desolate region before being admitted to the land of light, the paradise of slain warriors in the heavens, with its gift of perpetual youth, its cedar and shell houses, its delicious fruits, its repose (*JAI* xxi. [1891] 17; Macfie, *Vancouver Is.* 457). Again, ritual goodness rather than ethical must often be understood, as among the Nicaraguans, whose paradise of slain warriors, the blissful abode of the gods in the East, was open also to those who had obeyed the gods (*NR* iii. 543). But sometimes offences against morality are particularly mentioned as debarring men from bliss. Women guilty of infanticide and murderers of a fellow-tribesman were excluded from the Blackfeet paradise (Richardson in Franklin, *Second Expedition*, London, 1828), while the thief and murderer among the Okinagans, cowards, adulterers, thieves, the greedy, the idle, and liars among the Ojibwas, liars and thieves among the Delawares, were excluded from the abode of bliss (*NR* iii. 519; Jones, 102-3; Brainerd, *Life and Journal*, Edin. 1908, p. 503). We hear also among the Chippewas of the soul being examined, those with whom good predominated being borne to the enchanted island paradise, while others sank for ever in the waters (Dunn, *Oregon*, 1844, p. 104). Such a discrimination between good and bad is found among the Eurocs, Yumas, Choctaws, Pawnees, New England tribes, and Mayas, and the character of their Elysium is described with much monotony of language.

To the Eurocs it is a region of bright rivers, sunny slopes, and green forests, beyond the earth, the chasm being crossed by a pole from which the wicked fall (*NR* iii. 524). The Yumas placed it in a happy valley hidden in the Colorado (*ib.* 527). The beautiful paradise of the Choctaws lay behind a dark river in the west (Catlin, *N. Am. Ind.* 1842, ii. 127). More unique was the Mayan paradise, where the good lay in tranquil repose under the beautiful *yaxche* tree, eating and drinking voluptuously (*NR* iii. 541). But most typical of the Indian paradise is the description found in an Algonquin myth of a hunter who went to the land of souls in the south to recover his bride. The path became ever more beautiful as he went on. He reached a lodge, where he had to leave his body; his soul bounded through the shadow-world and crossed the lake where the spirits of the wicked met their fate. Now he reached the happy island of souls where there was never cold or tempest, or any need to labour, for the air itself nourished the souls, and where, amid eternal sunshine, they wandered through the blissful fields (Schoolcraft, i. 321). See also AMERICA.

7. South American Indians.—Of the numerous tribes of S. America, taken as a whole, it is difficult to generalize concerning their ideas of a happy other-world. The earlier beliefs of some of the Christianized tribes have not been recorded. Certain tribes simply believed in the soul hovering round the grave, others in transmigration; others, like the Abipones, were ignorant of the soul's status after death (Dobrizhoffer, *Abipones*, 1822, ii. 75, 269). We can speak only of a number of tribes concerning whom information is not lacking. Of these it may be said that, while the other-world life continued the conditions and circumstances of life here, and though it may occasionally have been regarded as disagreeable (Müller, 286), yet it was more frequently looked forward to as being happier and pleasanter (Spilsbury, *Trans. 3rd Cong. Hist. of Rel.* i. 94). Some tribes believed in a general place for all the dead; others in a separate place for chiefs, men of rank, or brave warriors. Retributive conceptions had scarcely arisen even in the higher tribes, or, where they have been alleged, they may be traced to missionary influence. The journey to the other-world was one of great danger and difficulty; its situation lay in the sky, in the west, or on the earth's surface, or was underground.

Among the tribes for whom the future life was one of bare continuance of the present for all alike, in a region where they hunted, fished, and rejoined their forefathers, may be mentioned the Matacos and Muyscas (in a region underground [Baldrich, *Las Camarcos Virgenes*, Buenos Ayres, 1890, p. 12; Reclus, *Univ. Geog.* xviii. 173]), the Bakairi, Calino, Yaguas, Ucuapes, Mbocobi, and Arawaks (Koch, *Inter. AE*, xiii. [Supp.] 120, 121, 122; D'Orbigny, *Voy. dans l'Amer. mérid*, Paris, 1839, iv. pt. 1 ['L'Homme Américain'], 233; Reclus, xix. 112).

The other-world was conceived of by numerous tribes as a happy Elysium. In Hayti the Indians thought that the spirits had as their place of sojourn the valleys of the western part of the island, dwelling in the clefts of the rocks by day, and coming out at night to enjoy the delightful fruits of the *mamey* trees. They rejoiced in the shady and flowery arbours of these beautiful valleys (Müller, 174). The Puri Indians placed Paradise in a pleasant wood full of *sapucaja* trees and game, where the soul was happy in company of all the deceased (Spix and Martius, *Travels in Brazil*, 1824, ii. 250). Many of the tribes of Chili placed their paradise across the sea towards the setting sun, and mythically described it in terms of their ideas of the highest bliss (Pöppig, *Reise in Chili*, Leipzig, 1835, p. 393). The Patagonians located it in vast underground caverns, where their deities dwelt, and whither they went to live with them. Abundance of cattle and liquor was found there, and the dead enjoyed an eternity of drunkenness (Falkner, *Patagonia*, Hereford, 1774, pp. 142-3). More usually a heavenly or a western paradise awaited the Indian.

In this place of all sensuous delights enjoyed to the full, they would take pleasure in everything which they had desired or possessed on earth. It was endowed with glorious hunting grounds and fishing streams and rich forests. Or they fed on rich fruits, which required no toil or labour of cultivation. Life there was restful and peaceful, without suffering or grief, and with the added delights of drinking, feasting, and dancing. There they met all their dead relatives, and their wives existed in beauty and youthfulness. Such were the beliefs of the Guarayos, Guaranis, Chiriguanos, Araucanians, Yuracaris, Ottomaken, Apiaca, Warraus, Bahairi, Guajiro, Pampas tribes, and others (D'Orbigny, 109–110, 164, 337, 342, 347; Molina, *Chili*, Leipzig, 1791, p. 72; Castelnau, *Expédition dans les parties centrales de l'Amér.*, Paris, 1850, ii. 314; Schomburgk, *Reisen*, Leipzig, 1847, ii. 446; *Ausland*, 1865, p. 338). The Saliva Indians placed their paradise in the moon, and thought of it as a place without mosquitoes (Tylor[3], ii. 70).

A division according to rank is met with among the Guaycuras, who thought that chiefs and medicine-men hovered round the moon and went to regions of pleasure and enjoyment (Martius, *Zur Ethnog. Amer.*, Leipzig, 1867, i. 233). More usually bravery, as opposed to cowardice, merited the abode of bliss. Among the Chiriguanos, brave warriors and good fathers went to an earthly paradise full of delight and feasting, with abundance of women and *chicha*, where they devoted themselves to singing and dancing (Koch, *op. cit.* 119). The Caribs of the Antilles believed that spirits of brave warriors dwelt in pleasant islands like those of their own land, abounding in delicious fruits. There all their wishes were fulfilled; they feasted and danced, and had their enemies as their slaves. Cowards, on the other hand, would become slaves to the Arawaks. It was also believed that warriors went to the sun or became stars. Im Thurn says that the present Caribs of the mainland think of the spirits as remaining near their present dwellings, while some hope to become white men or go to Sky-land, a copy of this world, whence their ancestors came (*Indians of Guiana*, 1883, p. 359 ff.; Rochefort, *Isles Antilles*, Rotterdam, 1681, p. 430). Some of the Pampas tribes believed that in the heavenly abode of Pillau warriors enjoyed eternal drunkenness, broken only by great hunts, in which they slew so many ostriches that their feathers, falling down, formed the clouds (Reclus, *Prim. Folk*, n.d., 105). Goodness and virtue are sometimes expressly mentioned as meriting paradise, but on examination this proves to mean savage bravery. Thus the Tupinamba thought that after death those who had lived virtuously, *i.e.* who had avenged themselves on and eaten many enemies, would go behind high mountains, where they would dance in beautiful gardens with their ancestors (Lery, *Voyage fait en la Terre du Bresil*, La Rochelle, 1578, p. 262). So, too, among the Chibchas, good men were those who fell in war, and they, with women dying in childbed, enjoyed a blissful future (Koch, 128). In the same way may be interpreted the respective beliefs of the Yaier, that those who 'lived well' went to heaven; of the Yaruros, that the good went to a place where they enjoyed divine food; and of the Wazanos, that, while the souls of common people went to heaven, the good attained to a superior region, where they found beautiful women, rich hunting grounds, and continuous feasts, and did no work, but spent the night in merry dances (Koch, 127). Among the ancient Peruvians there was no distinction between good and evil beyond the grave. While the bulk of the people went to a dreary underground region, a heavenly paradise was the lot of the higher classes. The Incas went to the dwelling of the Sun, their father; nobles and great warriors were received in the heavenly world of Haman Pacta, where their happiness consisted in perfect freedom from evil, in repose and peace, and they were waited on by the wives and slaves who had been put to death with them (Müller, 402–3; Prescott, *Peru*, 1890, p. 42).

8. **Sky-land.**—Among most of the peoples whose conceptions of an abode of the blest have been discussed, there is also frequently found a belief in a happy world of other beings, often divine, above the sky. Man peopled the upper region, of which the sky seemed to be the floor, with the creatures of his imagination. Especially was this the case when his world of the dead was situated elsewhere. Thus the Zulus, believing in an under world of spirits, thought that above the blue sky, conceived as a rock, was a heavenly country, the abode of a remote powerful being and of a nation of heavenly men (Callaway, *op. cit.* 63, 117 ff., 393 ff., *Nursery Tales*, i. 152, 316). Again, as the sky seemed to rest on earth at the horizon, or on lofty mountains, or even on high trees, so in many myths all these form means by which Sky-land can be reached. Or it rests on pillars, or may be reached by a bridge, a ladder, a rope, etc. There is little doubt that these ideas survive in tales of the Jack and the Beanstalk cycle (see *CF* 432; BLEST, ABODE OF THE [Slavonic]; BRIDGE). Medicine-men often claim to visit that land, either by some of these means or by a bodily or spirit flight, just as they also claim the power of visiting the world of the dead. This is a very common belief in Australia (Spencer-Gillen[b], 629; Howitt, 388, 391). In one case, when the flowers withered because Baiamai left the earth, the *wireenuns* ascended a mountain and were carried to the sky, where they were allowed to carry off the fadeless flowers of the heaven-land (Parker, *More Aust. Legend. Tales*, 84).

Legends of culture-heroes ascending to the sky-land, and returning thence with the elements of civilization or performing other feats, are of frequent occurrence in the lower culture.

In a Melanesian instance, the hero reaches the upper world and teaches the Sun's children to make fire and cook (Codrington, 366). An earthly son of Tui Langa, king of the sky, went thither by a magic tree, according to a Fiji legend, and learnt there how to slay the local gods (*FLJ* v. 256). In a Polynesian story, Losi ascends to the sky and compels its people to give him shoots of *taro*, *'ava*, and the coco-tree, hitherto unknown on earth (Turner, 105). *Si Jura*, in a Dayak myth, climbs to the Pleiades by a magic tree, and learns the secret of rice cultivation (Ling Roth, *op. cit.* i. 307). In other cases, of which there are many variants, the hero ascends above the sky and captures the sun, compelling it to go more slowly in its course (*CF* 439 ff.; Turner, 200). There are also many American Indian tales of visits paid to the land of the Sun above the solid rocky vault of heaven (*19 RBEW* 252, 436, 440).

Other heroes visit Sky-land to obtain a wife, or to regain her, or to dwell with her there.

In Samoa, Lu ascended to Tangaloa's beautiful place of rest in the sky, and was given his daughter as wife (Turner, 13). In many tales, when a mortal has captured a daughter of the sky who has descended to earth, she sometimes returns thither; but he follows her and regains her, sometimes remaining there. Of this there are Maori and other Polynesian, Melanesian, and Malay versions (Grey, *Polynes. Myth.*, 1908, p. 42, Codrington, 397; Tylor, *Early Hist. of Mankind*,[3] 1875, 346), while the idea recurs in European and other variants of the Swan-maiden cycle. There are also several versions of the story of a hero going to the sky to dwell with his immortal wife, or with some other relative, usually then becoming immortal (Grey, *op. cit.* 58; Farrer, *Primitive Manners and Customs*, 1879, p. 256 [Algonquin]; Cole, *IA*, 1875 [Santal]; Brett, *Legends . . . of British Guiana*, n.d., 29).

These stories may be compared with another large group in which visits to the world of the dead are paid to obtain a boon, to regain a lost wife, etc., or to a vague under world or fairy region (*CF* 45, 438).

Other myths tell of an earlier Golden Age when gods and men dwelt together on earth or in heaven, or how the ascent to the sky was easily accomplished by some of the means already mentioned. But this at last came to an end, and the means of intercourse was broken off (see FALL, § ii. 3 and 18).

Thus the Eskimos, the Voguls, and the Hurons have myths of the peopling of the earth by a pair from heaven (Nansen, *op. cit.*

259 ff.; Lang[2], i. 181). Many myths of the Algonquin tribes tell of a woman cast out of heaven, from whom men are descended (Brinton, *American Hero-Myths*, Philad. 1882, p. 54). In other cases those who come to earth from the sky lose their immortality (*Tongan* [Mariner, ii. 115] *Cingalese* [Forbes-Leslie, *Early Races*, Edin. 1866, i. 177]; *Uganda* [Johnston, ii. 704]; *Fanti* [Smith, *Nouveau Voyage de Guinée*, 1744, ii. 176]), or can never return thither because of some accident (*Negroes* [Ratzel, ii. 354]; *Caribs*, etc. [Im Thurn, 377; Brett, 103, 107]). These are akin to another group, mainly S. African and American Indian, in which men ascend to earth from an under world (Casalis, 254, 261; *M* i. 225; Knortz, *Aus dem Wigwam*; *CF*, p. 447; *9 RBEW*, p. 16). This upper or under world is occasionally the paradise where men hope to go after death. Intercourse with the sky-land being broken off through the destruction of the means of ascent or descent is exemplified in myths from Australia, Polynesia, and Fernando Po (Spencer-Gillen[b], 628; Turner, 199; Kingsley, *op. cit.* 507). Cf. also a Kirghis legend of former intercourse with the people of a mountain, where fruit trees bear all the year round, flowers never wither, women are always beautiful and young, death, cold, and darkness are unknown, and all are happy, whereas men on earth are now miserable (Sven Hedin, *Through Asia*, 1898, i. 221). A funeral chant among the Basutos suggests the existence of a bright and happy sky-land, whither men cannot go (Casalis, 256).

9. Reviewing these primitive notions of a state of the blest, we see that, even where they suggest a reward for goodness, the delights of Paradise are mainly sensual, or at least sensuous. A suggestion of more spiritual conceptions may be seen, perhaps, in the thought that the blest now dwell with a god or gods, or in the poetical descriptions of the beauty of the land. But any true spiritual outlook is generally wanting, and the ethical conception of this Elysium as a reward for righteousness is not found in such religions as those of Mexico and Peru, where the belief in sin as an offence against the gods was comparatively well developed.

LITERATURE.—In addition to the works cited, see Tylor[3], chs. 12, 13; R. M. Dorman, *Origin of Primitive Superstitions*, Philadelphia, 1881: Koch, *Inter. AE*, Supplement, Leyden, xiii. [1900], 'Zum Animismus der Südamerikanischen Indianer'; E. L. Moon Conard, *RHR* xlii. [1900] 244 ff., 'Idées des Indiens Algonquins relatives à la vie d'outre-tombe.'

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Buddhist).—From an orthodox Buddhist point of view * it must be said that the only 'blessed' are the saints who have entered absolute nirvāṇa. Owing to their approximation to this goal, the epithet may be applied, by anticipation or metaphor, (1) to the saints who are to enter nirvāṇa at the end of this present life (*i.e.* who possess nirvāṇa-on-earth [see artt. ARHAT † and JĪVANMUKTA])—this is Little Vehicle; (2) to those who have taken the 'vow' of becoming Buddhas, and meantime enjoy the joy of 'giving' and of saving creatures—a joy more pleasing than is the savour of nirvāṇa itself (see art. BODHISATTVA)—that is Great Vehicle. Nevertheless, there is place in both Vehicles for categories or abodes of the Blessed.

I. Little Vehicle.—The 'heavens' of the Little Vehicle have been, for the greater part, adopted and adapted from Brāhmanic or Hindu belief. To understand the exact position of the Buddhist thinkers, the following is of importance.

The fundamental characteristic of the True Law, its historical and dogmatic ground and root, is the conviction (intuition or belief) that no 'existence' whatever can be *absolutely* happy. Such, it appears to the present writer, is the real significance of the Buddhist pessimism—a topic open from every side to serious mistakes (see art. PESSIMISM).

Like Aupanishadic Brahmans, Buddhists (*i.e.* Buddhist monks, *bhikṣus*, not laymen, *upāsakas*) aim at perfect and eternal happiness; they feel, or profess to feel, disgust for any sort of transitory happiness, and without consideration for sensual joys, here or hereafter, they press on the road (*mārga*, *pratipad*) that leads to nirvāṇa, to eternal refreshment. But there is certainly some sort of happiness in the world of becoming, in the 'wheel of transmigrations' (*bhavachakra*). The brute creation itself is not devoid of agreeable sensations; men are sometimes at ease; gods are by definition the possessors of bliss.

No adherent of the Buddhist teaching ventures to doubt the happiness and the power of the gods. Monks (*bhikṣus*) think that they have to strive for something far better than paradises (*svarga*); nevertheless, as is clear from Aśoka's lapidary sermons, as well as from many passages of the Pāli canon of Scriptures, Buddha and Buddhists (monks and laymen) lay great stress on the retribution of deeds in a further life. The Master commended the doing of good actions (in order to be re-born as a happy man or as a god), avoiding bad actions (in order to avoid unhappy human existences, animal births, or hell); and, for the wise, the avoiding of both good and bad actions: abstinence from desire and from action (the latter for producing and securing the former) being necessary to holiness, to nirvāṇa. Birth in heaven often appears as a progress towards emancipation, although, as will be seen, men alone, not gods, can enter the path of release.

It must be borne in mind that (1) human happiness is always mixed with suffering (as human birth is produced by mixed actions, 'black' and 'white'); (2) sensual pleasures always turn to suffering; (3) every pleasure is an obstacle to supreme beatitude, as it enforces clinging to existence. Therefore no one who has seen the truths (*i.e.* who has entered the stream of release, *srota-āpanna*) can strive after transitory and ambiguous rewards.

1. Amongst men, two categories are worth noticing: (*a*) the inhabitants of the Northern continent (Uttarakurudvīpa, Auttarakaurava [see art. HYPERBOREANS]); * (*b*) the 'wheel-kings,' † or universal monarchs (*Chakravartin*), who embody the Indian ideal of earthly sovereignty. Men indeed,—as it is forcibly said by the scholiasts,—but possessing supernatural faculties and powers, although they live on earth, they feel themselves at home in the atmospheric or heavenly regions. Their body is characterized by the 'marks' (*lakṣaṇa*) of the 'great beings' (*mahāpuruṣa*, 'great man,' 'great male'—a name of Viṣṇu); they conquer one, two, three, or the four continents, ‡ have successful wars with goblins of all kinds and even with gods, enjoy the possession of the 'seven treasures' (elephant-treasure, wife-treasure, etc.); they reign with justice, but not without kingly pride. Nevertheless, like ordinary men, they are susceptible of becoming disgusted with transitory life (although they live for centuries!) and of

* The reader is aware that this expression always involves subjective appreciation.

† Arhats are styled *visuddhideva*, 'purity-gods'; contrasted with kings, *sammutideva*, 'opinion-gods,' and gods, *upapattideva*, 'born gods' (*Vibhaṅga*, p. 422).

* The analogy between the Hyperboreans and the 'men of the Northern continent' has been pointed out by Sp. Hardy (*Manual of Budhism*, p. 14), who gives a brief description of this continent. We may observe that, amongst many characteristics (longevity, everlasting youth, no premature death, no death in embryonic state, living from the Desire-Tree, re-birth as god or as man, etc.), the Auttarakauravas are 'moral by nature' (*prakṛtiśīla*); they 'have all things in common, and have no private rights'; they do not commit bad actions (*akuśalakarmapatha*), but do not free themselves from 'thirst relative to agreeable objects' (*kāmāvacharī tṛṣṇā*); there is no 'restraint' (*saṁvara*), because there is no 'rule' (*śāsana*). Therefore there is no entrance on the Path of release; and Bodhisattvas are not born there (*Abhidharmakośavyākhyā*, *Āṭānāṭiya suttanta* [Grimblot, p. 335]; *Mahāvastu*, i. 103; Wassilieff, *Buddhismus*, p. 248).

† On the Chakravartins see *Mahāsudassanasutta*, tr. by Rhys Davids, *SBE* xi. 238; Senart, *Essai sur la légende du Buddha*; *Divyāvadāna*, pp. 210–224: the standard text (Chinese sources) is named by Takakusu, *JPTS*, 1905, p. 117. The Chakravartins have a place in the scholastic theory of the 'stages of a Bodhisattva' (see art. BODHISATTVA) [the *Śikṣāsamuchchaya* states that they 'save the beings' (p. 175, 10)]. W. Hopkins, like Ed. Hardy and others, believes that the idea of an universal monarch is post-Aśokan (*Great Epic of India*, New York, 1901, p. 396, n. 2).

‡ But, like Buddhas, two Chakravartins cannot coexist. Like Bodhisattvas, they enter their mother's womb with full consciousness.

entering the path of salvation.* Such is not the case with the Hyperboreans and the gods.

2. The various schools differ, however, on this last point,—conflicts of scholastic views are the crux of Buddhist dogma,—but the common opinion is that there is no *brahmacharya* ('chastity,' 'life of holiness') amongst gods.† Heavenly beings do not forget that they owe their actual 'promotion to godship' to former good deeds, and their 'morality' is therefore strongly established against sinful delusions.‡ But, being re-born for joy, they cannot, as it seems, fully or profitably realize the truth of suffering—which is the root of the Buddhist holiness. Gods, we say, are possessors of bliss, but (it is not an easy task to reconcile those contradictions) they know that their happiness will come to an end when the treasure of merits shall be exhausted; and they are therefore troubled by anxiety (*pariṇāmaduḥkhatā*) §—the more so that, owing to the mysterious law of retribution, a god may be re-born as a beast or as an inhabitant of hell (see art. KARMA).

Gods are of different kinds. Without attempting a general survey of the matter, we must distinguish: (1) Sensual heavens (*kāmadhātu*), where sexual pleasure exists. But sexual union, in the celestial spheres, is not what Buddhists call *grāmadharma*, 'rural practice,' 'secular practice.' Gods enjoy pleasure and beget by simple contact, touching the hands, looking or smiling at one another, etc.‖ On the cosmical disposition of these blissful realms, see art. COSMOLOGY (Buddhist). (2) Material heavens (*rūpadhātu*), inhabited by gods liberated from sexual enjoyment; sensations of taste and smell are also absent, sometimes consciousness too. (3) Non-material heavens (*arūpyadhātu*), with four stages of perfection; it is difficult to say if they ought to be understood as 'abodes' (since there is no matter) or 'subjective states' (since they are depicted as successive storeys). Their common characteristic seems to be the gradual loss of consciousness. Like the 'material heavens,' they are truly Buddhist combinations or fancies, being inhabited by saints who have not realized in the inferior stages the absolute freedom from thought and desire necessary to release, and who must wait for some centuries in the happy and transitory unconsciousness of the 'non-material' worlds, before merging into the happier and definitive freedom of nirvāṇa. Heavens above sensual realms—which have only been 'Buddhized' a little—are no more than prolonged trances, analogous, but for their limits, to the trances of the holy life (see art. DHYĀNA).

II. Great Vehicle.—The piety of the so-called 'new' Buddhism has evolved paradises very like the Christian or the Vaiṣṇavite abodes ¶ of the Blessed. The happiness is now of a purely spiritual nature (in contrast with the *svargas*, inhabited by sensual gods and nymphs), and essentially devotional (in contrast with the self-culture and unconscious blissfulness which are the chief elements of the 'orthodox' Buddhist meditations). Such a paradise is the *Tuṣita*-heaven (the realm inhabited by the gods *Tuṣitas*, 'the satisfied ones'), the regular abode of the future Buddhas of our world during their last existence but one. There reigned Śākyamuni, then named Śvetaketu, before his last birth; there now reigns and preaches Maitreya, the future saviour.* But, as a rule, 'paradises' are not a part of our world (*lokadhātu*), as is the *Tuṣita*, but special realms, ruled by excellent Buddhas who have at last realized their 'vow' of creating worlds free from suffering. Their number is, of course, infinite (see art. COSMOGONY [Buddhist]),† but in the 'compound of cosmos' which we inhabit (*sahālokadhātu*) the most celebrated are: (1) the paradise of the East, under the rule of the Buddha Bhaiṣajyaguru (the 'Master of remedies,' the 'Healing Teacher'); ‡ and especially (2) the 'Happy [universe],' *Sukhāvatī* [*lokadhātu*], of the West, where, from every quarter of the worlds, blissful creatures are born from lotuses before the Buddha Amitābha and the Bodhisattvas Mahāsthāmaprāpta and Avalokiteśvara (see art. AVALOKITEŚVARA). To be accurate, the 'Happy universe' is not an everlasting paradise. The Blessed who there enjoy the privilege of seeing the radiant body of the Buddha, and of hearing his preaching, are candidates for Buddhahood; Amitābha's heaven is a blissful purgatory and a school, not only a place of retribution. But, from a practical and historical point of view, the *Sukhāvatī*, as said before, is the exact counterpart of the Vaiṣṇavite paradise.§

We have few Indian documents dealing with the devotional practices arising from such a conception of everlasting life in Amitābha's presence. But Chinese and Japanese sources, ancient and modern,

* See *Mahāsudassanasutta*.

† See *Kathāvatthu*, i. 3, iii. 10; Rockhill, *Life of Buddha*, p. 191; Wassilieff, *Buddhismus*, pp. 247, 255; *Abhidharmakośa*; cf. *Milinda*, tr. by Rhys Davids, *SBE* xxxv. p. 31. A future Buddha is never re-born in one of the highest heavens (*Majjhima*, i. 82), as their inhabitants are 'fixed' (*niyata*) for the 'nirvāṇa of Arhats.' On the salvation of gods, cf. 'Vedânta,' *SBE* xxxviii. 457.

‡ Literally: 'The roots of merit cannot be broken, as it happens, for men,' because they are firm believers in *karma*.

§ On the 'suffering' peculiar to gods, see, for instance, Nāgārjuna's *Friendly Epistle*, tr. by Wenzel, *JPTS*, 1886, p. 27, and *Karuṇāpuṇḍarīka* (*BTS*), p. 24 ff.

‖ A good summary will be found in Sp. Hardy, *Manual*; Beal, *Catena*, p. 68. It is worth observing that such gods as the Thirty-three (a category of sensual gods inherited from Vedic times) have now for sovereign the mother of Śākyamuni, re-born as a male deity. It would be impious to suppose that his retinue indulge in sensual pleasures!

¶ Amongst Vaiṣṇavite paradises, the Cow-world (*goloka*) and the *Vaikuṇṭha*—a kingdom in the Northern Ocean (compare the Hyperboreans) or on the eastern peak of mount Meru (compare the heaven of Indra and the Thirty-three)—are more celebrated in later times than the *Śvetadvīpa*, 'the white island'—'a sort of Atlantis situated in the extreme North, beyond the Sea of Milk' (Barth, *Religions*, p. 193), well known from the *Mahābhārata*, inhabited by monotheistic saints very like the future Bodhisattvas of Amitābha's paradise. In all these peaceful abodes the Blessed enjoy the vision and the actual presence of their god, and the successive degrees or savours (*rasa*) of devotion, friendship, filial affection, ecstatic susceptibility (Barth, *op. cit.* p. 225). It is not difficult to be re-born there (see Barth, p. 228, and cf. artt. AVALOKITEŚVARA and MAHAYANA).

* Mention of Maitreya as the next Buddha, the Buddha to come, who will make many converts, whereas Śākyamuni had only a small retinue, occurs in the Pāli Canon of Scriptures (see Oldenberg's *Buddha*, 5th Germ. ed., p. 164)—a fact hitherto ignored. It is quite natural that Buddhists, *i.e.* 'orthodox Buddhists,' aspire to be born in his kingdom, before having the good fortune to hear his forthcoming announcement of the Law (5000 *Anno Buddhæ*). Both forms of Maitreya's worship are frequent in Chinese sources (Pilgrims; the later is canonic in ecclesiastical professions: 'to hear the preaching under the Dragon-Flower-Tree,' Chavannes, *JA*, 1908, i. 505), and, together with iconographic evidences (images of Maitreya; see Grünwedel-Burgess, *Buddhist Art*), show that special regard was paid to the Tuṣita heaven. See Julien, *Vie et voyages de Hiouen-Thsang*, p. 345 (wanting in Beal's *Records*, but see his *Buddhism in China*, p. 112, London, S.P.C.K. 1884); I-Tsing, *Religieux éminents*, tr. Chavannes, p. 72, Paris, 1894; Foucher, *Art gréco-bouddhique du Gandhâra*, i. 285 (tuṣitakāya = varabhavana = 'the best abode'), Paris, 1905.

† Every future Buddha aims at possessing (*i.e.* creating by his exertion) a Happy Universe, 'free from bad destinies,' *i.e.* inhabited by saints, gods, and men; see *Aṣṭasāhasrikā*, p. 362 (*apāyapariśuddhi*).

‡ See Edkins, *Chinese Buddhism*, p. 235 (London, 1880).

§ The earliest documents are the *Sukhāvatīvyūha*, the *Sūtra of Amitāyus* (*SBE*, vol. xlix.), and the *Saddharmapuṇḍarīka* (see art. AVALOKITEŚVARA, p. 258ᵇ note * and note ‡‡; also Beal, *Catena*, p. 378). Nāgārjuna (Nanjio, 1180, and Watters, *On Yuan Chwang*, ii. p. 205) and Aśvaghoṣa (Suzuki, *Awakening of Faith*, Chicago, 1900, p. 146) teach re-birth in Sukhāvatī. There is no reference to this paradise in the books of the Little Vehicle: the mention in *Mahāvastu*, iii. 462, 10, is from the colophon; see Rhys Davids, *JRAS*, 1898, p. 423. A Japanese picture is found in Grünwedel-Burgess, *Buddhist Art*, p. 176; see p. 195, l. 4, and Grünwedel, *Mythologie des Buddhismus* (Leipzig, 1900), p. 118. Sukhāvatī (also Sukhākara [*Lotus*, *SBE*, vol. xxi. ch. xxiv. 30]) has been compared with the Western paradises of the Brahmanic literature (Sukhā, Nimlocanī), by Max Müller (*SBE*, vol. xlix. p. xxii), and with the *Insulæ Fortunatæ* and the Gardens of the Hesperides, by Kern (*Lotus*, *loc. cit.*).

have much to say about Amitābha's sects, monks and laymen; the pious death of the adepts, led to the West by angels or Bodhisattvas; the prayers for the dead, etc.*

LITERATURE.—The literature is contained in the article.

LOUIS DE LA VALLÉE POUSSIN.

BLEST, ABODE OF THE (Celtic).—The Celtic doctrine of the future life is discussed elsewhere (see CELTS, § xvi.). This article deals with the Celtic belief in a happy Other-world, or Elysium, which, as will be seen, was not necessarily the abode of the dead.

1. Names of the Celtic Elysium.—These names are sometimes of a general character, sometimes they particularize the situation of this happy land. Of the former are Mag Mor, 'the Great Plain'; Mag Mell, 'the Pleasant Plain'; Tír n' Aill, 'the Other World'; Tír na nÓg, 'the Land of Youth'; Tír Sorcha, 'the Shining Land'; Tír na mBeo, 'the Land of the Living'; Tír Tairngiri, 'the Land of Promise' (perhaps a Christian derivative). Of the latter are Tír fa Tonn, 'Land under Waves,' I-Bresail, 'the Land of Bresal,' and 'the Isle of the Men of Falga,' which denote Elysium as an isle beyond the sea. Falga is an old name for the Isle of Man ('Rennes Dindsenchas,' *RCel* xv. 449), which was connected with the god Manannan, who appears as lord of the over-sea Elysium. If the Goidels occupied Britain before passing to Ireland, they may have regarded Man as '*par excellence* the Western Isle, the home of the Lord of the Other-world' (Meyer and Nutt, *Voyage of Bran*, London, 1895, i. 213). To this period may belong the tales of Cúchulainn's raid upon Falga (considered as the Other-world), which were afterwards carried to Ireland (see § 6*f*).

2. Various aspects of the Irish Celtic Elysium.—Some of these titles show that Elysium was regarded from different points of view; it was beyond the seas, or it was under the waves. But an examination of the tales which refer to it shows that there were at least two other aspects: it might be located in the *síd* or the hollow hills, or it might be a mysterious land revealing itself suddenly on the earth's surface and entered through a mist. Reserving a consideration of these different localities till later, we shall here summarize the more important tales in which the Other-world appears. These tales mainly describe the visit of mortals to that land. Some of them belong to the Mythological, some to the Cúchulainn, some to the Ossianic cycle. The MSS in which they are found are frequently among the earliest known to Irish palæography, but there is no doubt that many of the tales are of a greater antiquity, and that all of them, if not actually composed in pagan times, are based upon pagan ideas, upon story-germs current before the rise of Christianity.

(*a*) The *Island Elysium* conception is found in several tales, and is also current in existing folklore. The story of the 'Voyage of Bran' (found fragmentarily in the 11th cent. *Book of the Dun Cow* [=*LU*], and complete in 14th-16th cent. MSS [Meyer and Nutt, *Voy. of Bran*]) tells how Bran hears mysterious music and falls asleep. On waking he finds a silver branch with white blossoms. Next day, as he is sitting with his men, a mysterious woman appears singing the glory of the land over seas, its beauty, its freedom from pain and death, its music, its wonderful tree. It is one of thrice fifty islands to the west of Erin, and there she dwells with thousands of 'motley women.' Before she disappears, the branch leaps into her hand. The poem then describes Bran's sailing with his comrades, his meeting with Manannan mac Lir, crossing the sea in a chariot, his arrival at the Island of Joy where one of his men remained, his coming to the Land of Women, the welcome they received, the dreamlike lapse of time, the food and drink which had for each the taste he desired. Finally, it recounts their homesickness, the warning from the queen not to set foot on Erin, how one of them leapt ashore there and became a heap of ashes, how Bran from his boat told of his wanderings, and then disappeared for ever (the tale of 'Oisin in Tír na nÓg' [see FEINN CYCLE, § 5] has several points of resemblance to 'Bran,' especially in the fate which overtook Oisin when he set foot on Erin).

In the Cúchulainn cycle the story of 'Cúchulainn's Sickness' (found in *LU*) relates the temporary union of the hero with the goddess Fand, deserted by her consort Manannan. She will become his mistress if he will help her sister's husband Labraid against his enemies in Mag Mell. Cúchulainn's charioteer Laeg visits the place, and it is from his report that we learn the nature of the Other-world, where Labraid lives in an island frequented by troops of women, its different trees with marvellously nourishing fruits, its inexhaustible vat of mead. It is reached with magic speed in a boat of bronze. Thither goes Cúchulainn, vanquishes Labraid's enemies, and remains a month with Fand. Then he returns without hurt to Ireland, where he has arranged a meeting with Fand. At that meeting his wife Emer is present, and mortal and goddess strive to retain his love. The difficulty is solved by the sudden appearance of Manannan, for whom Fand's love returns (*LU* 43 ff.; Windisch, *Irische Texte*, Leipzig, 1880, i. 205 ff.; Leahy, *Heroic Romances*, London, 1905, i.; D'Arbois, *Cours de Litt. Celt.*, Paris, 1892, v. 170 f.). Here Labraid, Liban, and Fand, though dwellers in an island Elysium, are called *síd*-folk, *i.e.* they are of the *síd*, or Underworld. The two regions are partially confused, but not wholly, since Manannan is described as coming from his own land (*i.e.* the true island Elysium) to woo Fand. Apparently Labraid (who, though called chief of the *síde*, is described in terms which leave little doubt that he is a war-god) is at enmity with Manannan's hosts, who suffer defeat at Cúchulainn's hands.

In the Ossianic cycle, besides the story of Oisin (see above), there is a description of the Land of Promise over sea, where Diarmaid had been nurtured by Manannan himself, in the story of the 'Gilla Dacker' (see Joyce, *Old Celt. Romances*, London, 1894, 222).

Of greater importance is the tale called 'Echtra Condla' (*LU* 120ᵃ; Windisch, *Irische Gram.*, Leipzig, 1879, 120; D'Arbois, v. 384). Connla, son of Conn, king of Ireland (A.D. 122-157), is visited by a goddess from the immortal land of Mag Mell. Her people dwell in a *síd*, or mound, and are called *Aes síde*, 'men of the mound.' Thither she invites him to come, and departs leaving him an apple which supports him for a month without growing less. In a month she returns and tells Connla, who has been filled with desire of her, that the Immortals invite him to join them. She bids him step into her crystal boat and come with her to the Land of Joy where dwell only women. He does so, and in a moment disappears for ever from the sight of his father and his druid who has vainly tried to exercise his spells against the woman. Here again, we note a confusion between the Underground and the Over-sea Elysium.

(*b*) *Tír fa Tonn*, 'Land under Waves,' occurs with greatest distinctness in the tale of Laegaire mac Crimthainn (*Book of Lismore*, 15th cent., O'Grady, *Silva Gadelica*, 290). Fiachra of the

* See J. J. M. de Groot, *Sectarianism and Religious Persecution in China* (Amsterdam, 1904). The *Kāraṇḍavyūha* has some fine theories on the death of the pious (see art. ADIBUDDHA).

men of the *síd* appears among the men of Connaught assembled at Loch Naneane, and implores their help against his enemies, whose chief Goll has abducted his wife. Laegaire and 50 men dive into the Loch with him, and reach a wonderful land, with marvellous music, and where the rain is ale. They and the *síd*-folk attack the fort of Mag Mell, and defeat Goll. As reward they each obtain a woman of the *síde*, and remain in the land for a year. Then they yearn to return, but are warned not to descend from horseback on Erin. Arrived among their own people, they describe the wonders of Tír fa Tonn, and in spite of being implored to remain, they return thither, and are seen no more. Here, too, the Underworld and Tír fa Tonn are scarcely distinguished, and its divine hosts, as in the tale of Cúchulainn, are at war (see for another account of Tír fa Tonn, entered from a well on an island over-sea, the 'Gilla Dacker' in Joyce, 253).

(*c*) *The síd world* pure and simple is described in the Story of Mider and Etain, found in the 11th cent. MS *LU*. Mider, having discovered his divine consort Etain in her re-birth as a mortal, married to king Eochaid, appears to her and tries to regain her by describing Mag Mór, the great plain, the immortal land, its music, its beauty, its heady ale, its deathless folk, its eternal youth. Ultimately Etain, who has no recollection of this land, flies away with Mider, both in the form of birds. Eochaid's druid finally discovers Mider's underground *síd*. Eochaid captures it, and takes away his wife (*LU* 129; *Ir. Texte*, i. 113 ff.). This tale amply illustrates the belief that the gods, the Tuatha Dé Danann, were living in underground *síd*, in which they finally became the fairies of popular lore, to whose mounds, exactly like Mider's *síd*, mortals often paid visits. These *síd* were simply Elysium localized in definite places on Irish soil.

(*d*) 'The Adventures of Cormac mac Airt' (found in 14th and 15th cent. MSS, but probably connected with a tale of the same title mentioned in the old epic list) well describes the fourth conception of the Other-world. A divine visitant, with a branch bearing nine apples of gold which, when shaken, made sweetest music, appeared to Cormac. He at once asked for this branch whose music dispelled all sorrow, but for it he had to give up wife, son, and daughter. In a year he desired to see them, and set out to seek them. As he journeyed he found himself enveloped in a mist, through which he came to a house where a strange pair offered him hospitality. These proved to be Manannan and his consort. The god then brought in a pig, each quarter of which was cooked in the telling of a true tale. While the third quarter was cooking, Cormac told of the loss of his wife and children; whereupon Manannan, after sending Cormac to sleep, opened a door and they appeared. Finally he produced a cup which broke in pieces when a lie was told, but became whole again when a true word was spoken. To prove this, Manannan said that Cormac's wife had now a new husband. The cup fell in pieces. Then the goddess declared that Manannan had lied, and it was restored. Next morning all had disappeared, and Cormac and his family found themselves in his own palace with cup and branch by his side (D'Arbois, ii. 326; Windisch, *Ir. Texte*, iii. 1, 183). Cf. also 'Baile an Scail' (O'Curry, *MS Mat.*, Dublin, 1861, p. 388), where out of a mist a mysterious horseman appears to Conn and leads him to a palace in a plain where he reveals himself as the god Lug, and where appears also a woman called 'the Sovereignty of Erin.' Beside the palace is a golden tree. This magic mist, from which appears a supernatural being or which encloses a supernatural dwelling, recurs in many other tales, and it was in a mist that the Tuatha Dé Danann first appeared in Ireland.

3. Various aspects of the Brythonic Elysium.—A certain correspondence to these Goidelic beliefs is found in Brythonic story, but here the Elysium conception has been considerably influenced by later Christian ideas. The name given to Elysium is *Annwfn*, which means 'an abyss,' 'the state of the dead,' 'hell,' etc. (Silvan Evans, *Welsh Dict.* *s.v.*). But in the texts relating to Elysium, *Annwfn* does not bear any likeness to these meanings of the word, save in so far as it has been confused by redactors of the tales with the Christian hell, *uffern*. In these tales it appears as a region on the earth's surface or an over- or under-sea world, in which several of the characteristics of the Irish Elysium are found—a cauldron, a well of drink sweeter than wine, animals greatly desired by mortals, which they steal (see § 7), while it is of great beauty, and its people are not subject to death or disease. Hence the name *Annwfn* has probably taken the place of some earlier pagan name of Elysium.

(*a*) Annwfn in the tale of Pwyll, which forms the earliest reference to it in Welsh literature (Loth, *Mabinog.*, Paris, 1889, i. 27), is ruled by a king, Arawn, who is at war with his rival Hafgan, and obtains the assistance of Pwyll, who defeats Hafgan, by exchanging kingdoms with him for a year. It is a delightful land, where merriment and feasting on the choicest food and drink go on continually, and it has no subterranean character, but appears to be conceived of as a province adjoining Pwyll's kingdom.

(*b*) Annwfn is also the name of a Land under Waves or Over Sea, called also *Caer Sidi* ('the revolving castle,' cf. the *Ille Tournoiont* of the Graal romances, and the revolving house in Celtic saga and *Märchen*), about which are 'ocean's streams,' and which is reached by a long voyage. It is 'known to Manawydan (Manannan) and Pryderi,' just as the Irish Elysium was ruled by Manannan (Skene, *Four Ancient Books of Wales*, Edin. 1868, i. 276). Another 'Caer of Defence' is beneath 'the ocean's wave' (Skene, i. 285). Hence the two ideas were probably interchangeable. The people of this land are free from death and sickness, and in it is 'an abundant well, sweeter than white wine the drink in it' (Skene, i. 276). There also is a cauldron, 'the cauldron of the chief of Annwfn,' that is, of the lord of Elysium, like that of the Dagda, which is stolen away by Arthur and his men. A similar cauldron is the property of the people of a water-world in the *Mabinogion* (see § 6 *f*).

(*c*) Finally, the description of the mysterious island of Avallon, even though this was later identified with Glastonbury, whither Arthur was carried to be healed of his wounds, completes the identification with the Goidelic Elysium. No tempest, no excess of heat or cold, no noxious animal troubles it; it is blessed with eternal spring, and with fruit and flowers which require no husbandman's labour; it is the land of eternal youth unvisited by death or disease. It possesses a *regia virgo*, more beautiful than her beautiful maiden attendants; she cured Arthur of his wounds, hence she may be identified with the Morgen of other tales, while she and her maidens resemble the divine women of the Irish isle of women (Chrétien, *Erec*, 1933–1939; Geoffrey, *Vita Merlini*, 41; San Marte, *Geoffrey*, 425).

The identification of Avallon with Glastonbury is probably post-pagan (Loth, ii. 215, 264, 360), while the names applied to Glastonbury—Avallon, *Insula Pomonum*, *Insula vitrea*—may be primitive names of the island Elysium. William of Malmesbury (*de Ant. Glaston. Eccl.*) says that *Insula Pomonum* is a translation of a native name, *Insula Avalloniae*, which he connects with the Brythonic *avalla*, 'apples,' because Glastonig

found an apple tree there. The name might therefore have been connected with marvellous apple trees, similar to those of the Irish Elysium. But he also suggests that it may have been derived from a certain Avalloc, who lived there with his daughters. This Avalloc is evidently the same as the Rex Avallon (Avallach) to whose palace Arthur was brought and healed by the *regia virgo* (San Marte, 425). He may therefore have been a mythical lord of the Other-world, and his daughters would correspond to the maidens of the isle (see Rhys, *Arth. Legend*, 335). He also derives Glastonbury from an eponymous founder Glastenig, or from its native name Ynesuuitron ('Glass-island'). This name re-appears in the passage cited from Chrétien, in the form, 'l'isle de voirre.' Giraldus (*Spec. Eccles.* ii. 9) explains the name from the glassy waters which surrounded Glastonbury, but we may see in it an early name of Elysium (cf. Merlin's glass house, *Triads*, iii. 10; the glass fortress attacked by Arthur, *Merlin*, 680, and by the Milesians, Nennius, § 13; the glass bower of Etain (CELTS, § 5), and the glass mountains of Teutonicmy thology and folk-tale).

4. Origin of the Celtic Elysium conception.—Most mythologies tell of a Golden Age in the remote past, when men were happy and when the gods lived with them (see AGES OF THE WORLD, FALL). Man's imaginative faculties as well as his acute sense of the misery of his earthly existence may have led him to believe that this happy state still existed somewhere in distant space as did the Golden Age in distant time. Wherever it was, it held endless joys; it was in a special sense the land of the gods or of some gods; thither some favoured mortals might penetrate. This was the germ of the Elysium conception as we find it in many mythologies as well as the Celtic; but with the Celtic people, poetic, imaginative, sensuous, yet spiritual, it took forms of great beauty. In some mythologies this Elysium is simply the world of the dead; but it is extremely doubtful whether it is so in Celtic mythology. Perhaps the Celtic myth of man's early intercourse with the gods may have taken a twofold development. In the one instance the land to which he hoped to go after death was that lost land, conceived as a subterranean region. In the other it was no more recoverable; men would not go there after death; but favoured mortals might be invited thither during life. It was thus clearly distinguished from the land of the dead, however joyful that might be. But this question requires separate consideration (see § 5). In Ireland it was held that after the conquest of the Tuatha Dé Danann, the gods, by the Milesians, they had retired within the hills or mounds (*síd*). But it agrees with the more primitive aspects of Celtic religion, as an agricultural cult, to suppose that some at least of the divinities, the fruitful Earth-divinities, had their abode beneath the earth, which, as the home of the gods, would be conceived in the loftiest terms. Thence man had perhaps originally come, and thither he would return after death. To this extent, therefore, the Underworld of the Earth-divinities was also the place of the dead. The later association of the gods with hollow hills and mounds was but a continuation of the belief in this divine Underworld, only it seems obvious from the tales that these hollow hills, or *síd*, had become simply an Elysium state, not a state of the dead. These were, on the whole, still conceived as going to some region under the earth. There are no data to show when the conception of a distant Elysium arose among the Celts. It may have been first suggested to them, while still on the Continent, by the setting sun: far off there was also a divine land where the sun-god sank to a blissful rest. On reaching the coast it was inevitable that they should imagine this divine land to be over seas, in some happy island such as they saw on the horizon. That island might be still associated with the sun-god, but it was more naturally connected with the god of the sea. Hence the position of Manannan in these Elysium tales. The under-world Elysium and the over-sea Elysium were conceived in identical terms, and the same set of names applied indifferently to either. Perhaps the locating of Elysium in the *síd* may simply be due to the tendency to give a local habitation and a name to every mysterious region as time goes on. To this identity also may be assigned the mingling of the *síd*-folk with the over-sea Elysium in certain tales already noted.

The idea of a world beneath the waters is common to many mythologies, and, generally speaking, it owes its origin to the animistic belief that every part of nature has its indwelling spirits. Hence the spirits or gods of the waters were thought of as dwelling far below the surface under a divine king or chief. Tales of supernatural beings appearing out of the waters, the custom of throwing sacrifices therein, the belief that human beings were inveigled into the waters or could live with these beings beneath the waves, all are connected with this primitive animistic idea. Among the Celts, however, that water-world assumed the aspects of Elysium; it was a divine land like the over-sea Elysium. Hence in later story it became a fairy world. It is visited by mortals, who find there precisely the same sensuous joys as in the island paradise; it also has names in common with it. Tír fa Tonn is also Mag Mell. Hence in many popular tales it is hardly differentiated from the island Elysium; over-sea and under-waves have become practically synonymous. Hence, too, the belief that such water-worlds as the Irish I Bresail, or the Welsh fairy-lands, or sunken cities off the Breton coast, rise periodically to the surface and would remain there permanently, like an island Elysium, if some mortal could fulfil certain conditions (Girald. Camb. ii. 12; Hardiman, *Irish Min.*, London, 1831, i. 367; Rhys, *Celt. Folklore*, Oxford, 1901, i. 170; Sébillot, *Folk-lore de France*, Paris, 1904, ii. 56 ff.).

The Celtic belief in Tír fa Tonn is closely connected with the current belief in submerged towns or countries, which is perhaps found with greatest detail on the Breton coast. Here there are legends of several such towns, but most prominent are those which tell of the city of Is, which was submerged with all its people and still exists beneath the sea, where (or occasionally on the surface of the waves) it may still be seen. It was submerged as a punishment, because of the wickedness of its people or of Dahut, its king's daughter, who sometimes still seeks the love of mortals (Sébillot, ii. 41 ff.). Elsewhere in Celtic regions precisely similar legends are found, and the submersion is the result of a curse, or of the breaking of a tabu, or of neglect to cover a sacred well. The best example is that of the town covered by the waters of Lough Neagh (see Girald. Camb. *Top. Hib.* ii. 9; Rhys, *Celt. Folklore*; Kennedy, *Legend. Fictions*, London, 1866, 282). There is little doubt that one important fact lies behind these various legends, viz. the tradition of actual cataclysms or inroads of the sea, such as the Celts encountered on the coast of Holland. Once formed, it was inevitable that these legends should intermingle with those of the divine water-world.

The idea that the Other-world is on the same plane as this world, or temporarily locates itself there, and is hidden in a mist, is probably due to the belief in the magic power of the gods. One of the commonest pieces of druidic magic was the causing of a mist to effect concealment, and it was natural to believe that the gods could do the same. Behind that mist, for some definite purpose, the divine Elysium was temporarily located, with all its marvellous properties, as in the story of Cormac (and also in folk-tales where fairyland is thus revealed to mortals; see *RCel* vii. 289; Kennedy, 108, 179), or from such a mist supernatural beings frequently emerged to meet mortals. In such

cases the mist may simply have concealed the *síd* of the gods, from which the messenger emerged, or to which the mortal, misled by the mist, was introduced. Such appearances from a mist often occurred on a hill (Loth, *Mab.* i. 38; Campbell, *West Highland Tales*, Edin. 1890, Nos. 38, 52; *Scott. Celt. Rev.*, Paisley, 1885, i. 70). On the other hand, there may have been an existing belief that the divine world was invisibly co-extensive with this world, since in recent Welsh and Irish belief fairyland is on the same plane as this earth and interpenetrates it; men may interfere unwittingly with it, or have it suddenly revealed to them, or be carried into it and made invisible (Rhys, i. 230; Curtin, *Tales of the Fairies*, 158).

5. Was the Celtic Elysium the land of the dead?—In most of the tales Elysium is a land where there is neither grief nor death, a land of immortal youth and peace, filled with every kind of sensuous delight. In a few tales, however (the Mabinogi of Pwyll, Sick-bed of Cúchulainn, Laegaire mac Crimthainn, Doel Diarmaid, Diarmaid in Tír fa Tonn), while the sensuous delights are still the same, the inhabitants are at war with each other, invite the help of mortals, and are sometimes slain in battle. But in both these groups Elysium is the land of the gods, of supernatural beings, a land to which a few favoured mortals are admitted while still in life. It is never described as the world of the dead, nor do its people ever appear to be the dead. These two conceptions of Elysium, (1) a land of peace and deathlessness, (2) a land where war and death occur, may be both equally primitive. The second may simply have been formed by transferring to the divine world the actions of the world of mortals, as a direct result of anthropomorphism. It would also be on a parallel with the conception of the world of the dead, which was likewise a replica of the life of mortals in this world. But men may early have felt that the gods were not as themselves, that their land was a state of peace and immortality. Hence the creation of the legend of the peaceful Elysium. The two conceptions may have existed side by side, but apparently the more peaceful one found most favour with the people. Mr. Nutt (*Bran*, i. 159) thinks that the other conception may be due to Scandinavian influence acting on existing tales of the peaceful, deathless Elysium; but from the fact that the wars of divine beings occupy a prominent part in the mythological and Ossianic cycles of the Irish Celts, this is doubtful. Or again, the peaceful Elysium may have been the product of the Celts as an agricultural people, since it is 'a familiar, cultivated land,' where the fruits of the earth are produced without men's labour, where there are no violent storms or excess of heat or cold—precisely the fancies which would appeal to a toiling, agricultural people, while the more warlike Elysium may have been produced among the Celts as a warlike people, appealing to their warrior instincts. What is certain is that the inhabitants of Elysium are supernatural beings; chief among them are the well-known figures of Celtic mythology, but the others have every trace of divinity. D'Arbois, Rhys, and others, however, maintain that the Celtic Elysium is the world of the dead. Elsewhere will be found reasons for the belief that the *orbis alius* (Lucan, *Phar.* i. 457), whither the dead went, was not necessarily an island, but a subterranean region. Or, if it was an island, it was not the island Elysium (see CELTS, § xvi.).

D'Arbois' theory of Elysium as the state of the dead rests mainly upon a difficult passage in *Echtra Condla*, which is interpreted by him in a way which seems somewhat wide of its true meaning. The sense of the passage seems to be: 'The Ever Living Ones claim thee. Thou art a champion to Tethra's people. They see thee every day in the assemblies of thy fatherland, among thy familiar loved ones.' D'Arbois assumes that Tethra, the Fomorian king, is ruler of Elysium, and that after his defeat by the Tuatha Déa, he, like Cronus, took refuge in Elysium, where he now reigns as god of the dead; while by translating *ar-dot-chiat* ('they see thee,' 3rd plur. pres. ind.) 'On t'y verra,' he maintains that Connla, by going to Elysium, will be seen among the gatherings of his dead kinsfolk (D'Arbois, *Cours de Litt. Celt.* ii. 119, 192, vi. 197, 219, *Les Druides*, Paris, 1906, 121; *RCel* xxvi. 173). But it is impossible to take 'Thou art a champion to Tethra's people' as meaning that Tethra is a god of the dead. It appears to mean simply that Connla is a mighty warrior, one of those whom Tethra, a Fomorian war-god (*LU* 50*a*; Cormac, *Gloss. s.v.* 'Tethra'), would have approved, while 'Tethra's mighty men' used elsewhere ('Dialogue of the Sages,' *RCel* xxvi. 27 ff.) seems to be a conventional phrase for warriors. The rest of the goddess's words imply either that the immortals from afar, or Tethra's mighty men, see Connla in the assemblies of his fatherland in Erin, among his familiar friends. Dread death awaits them, she has just said, but the Immortals desire Connla to escape that by coming to Elysium. Her words do not imply that Connla will meet his dead ancestors there; moreover, if the dead went to Elysium, there would be little reason for inviting a mortal there while still alive. Thus this tale, like all other Elysium tales, gives no ground for the contention that Elysium is the place of the dead. Moreover, the rulers of Elysium are the Tuatha Déa or the *síd*-folk, never a Fomorian like Tethra. ('Tethra' is glossed as *muir*, 'sea,' by O'Cleary [Stokes' *Cormac*, *s.v.* 'Tethra'], and Cúchulainn speaks of the sea as 'the plain of Tethra' [*Arch. Rev.* i. 152], but we cannot infer from these that he was ruler of an over-sea Elysium, and the passages are probably derived from the association of the Fomorians with hostile sea-powers (see under CELTS, § v.).

D'Arbois' assumption that 'Spain' in Nennius' account of the invasions of Ireland (*Hist. Brit.* § 13), and in the Irish texts generally, means the land of the dead, and that it was introduced in place of some such title as Mag Mór or Mag Mell by 'the euhemerizing process of the Irish Christians' (ii. 85, 134, 231) is equally groundless. In other documents which have been subject to euhemerization these titles remain unchanged; nor is there any proof that a document, now lost according to D'Arbois, said that the invader came from or returned to Mag Mór. Once, indeed, Tailtiu is called daughter of Mag Mór, king of Spain (*Book of Leinster* [=*LL*] 8. 2); but here a person is intended. It is much more probable that there was a connexion between Ireland and Spain from early times, both racial and commercial (Reinach, *RCel* xxi. 18; Siret, *Les Premiers Ages du Metal dans le Sud-Est de l'Espagne*, Antwerp, 1887), while perhaps some of the Goidelic invaders reached Ireland from Spain or Gaul. This connexion, traditionally remembered, would be sufficient to account for these references to Spain. It was further supported by the fact that early maps and geographers made Ireland and Spain contiguous (Orosius, i. 2. 71); hence in an Irish tale Ireland is visible from a tower in Spain (*LL* 11. 2). The word 'Spain' was used vaguely, but it does not appear to have meant Elysium or the land of the dead.

6. Characteristics of the Celtic Elysium.—(*a*) Nothing can exceed the romantic beauty of this land as described in the tales, and in nearly every one this is insisted on by the messengers who come from it to mortals. The beauty of its landscapes,—hills, cliffs, valleys, sea and shore, lakes and rivers,—of its trees, of its inhabitants, of its birds, is obviously the product of the imagination of a people keenly alive to natural beauty. And borrowed from the delight which the Celt took in music is the recurring reference to the marvellous music which everywhere swells in Elysium. It sounds from birds on every tree, from the branches of the trees which lull to forgetfulness the favoured mortals invited thither, from marvellous stones, from the harps of divine musicians. In Elysium, as the visitant says to Bran, 'there is nothing rough or harsh, but sweet music striking on the ear.' Probably no other race than the Celtic has, in describing the joys of the other world, so spiritualized the sensuous joys of sight and hearing, or imagined anything so exquisitely beautiful.

(*b*) Certain of the tales which deal with an island Elysium make it evident that it was composed not of one but of several islands, 'thrice fifty' in number, according to the *Voyage of Bran*, though this may be a later conception. One of these is frequently described as 'the island of women' or 'of ever-living women,' though in some instances there appear to be other inhabitants also. These women give their favours to Bran and his men, or to Maelduin and his company ('Voyage of Maelduin,' *RCel* x. 63), and in both these cases the number of women exactly equals that of the mortal visitors. Similar 'islands of women' occur in *Märchen* still

current among Celtic peoples, and actual islands were or are still called by that name—Eigg in the W. Highlands (Martin, *West Isles*, London, 1716, 277), Groagez off the Breton coast (Sébillot, ii. 76). Similar islands of women are known to Chinese, Japanese, and Ainu folklore (Burton, *Thousand Nights*, Benares, 1885 ff., x. 239; Chamberlain, *Aino Folk Tales*, London, 1888, 38), to Greek mythology (Circe's and Calypso's islands, cf. the land of the Amazons), and to ancient Egyptian conceptions of the future life (Maspero, *Hist. anc. des peuples de l'Orient*, Paris, 1895, i. 183). They were also known elsewhere, and we may therefore assume that in making such an island a part of their Elysium, the Celts were simply making use of something common to universal folk-belief. It may, however, owe something to the memory of a time when women performed their rites in seclusion, a seclusion which is perhaps hinted at in the references to the mysterious nature of the island, its inaccessibility, and its disappearance once the mortals leave it; to these rites men may have been admitted by favour. We know that Celtic women performed such rites on islands (Strabo, IV. iv. 6; cf. Ploss, *Das Weib*, Leipzig, 1885, ii. 70, artt. BIRTH [Celtic]), and CELTS, xiii. I).

This may have originated the idea of an island of divine women as part of the Elysium belief, while it would also heighten the sensuous aspects of that Elysium. Love-making, in effect, had a considerable place in the Elysium tales. Its divine inhabitants sought the love of mortals, goddesses of men, gods of women (cf. the tales of Bran, Connla, Oisin, etc., of Manannan seeking the love of Tuag [*RCel* xvi. 152]; Mider, that of Etain). The mortal desired to visit Elysium because of the enticements of the divine visitant, regarded by later Christian redactors of the tales as a demon (see 'Cúchulainn's Sick-bed,' D'Arbois, v. 216). On the other hand, the love-making which goes on among the people of Elysium, even in documents edited by Christian scribes, is said to be 'without sin, without crime' (*Bran*, § 41).

(*c*) Besides their beauty, the characteristic of the inhabitants of Elysium which is emphasized in most of the tales is that they are immortal, or ever-living. Elysium is *Tír na mBéo*, 'the land of the living'; its people 'look for neither decay nor death'; they are eternally youthful. The general belief among primitive races is that death is an accident befalling men who were naturally immortal; hence freedom from that accident naturally characterizes the people of the divine world. But, as in many mythologies that immortality is more or less dependent on the eating or drinking of some food or drink of immortality, so it is in certain Celtic tales. Manannan, in the tale of Cormac, had immortal swine, which, killed one day, came to life the next; and with the flesh of these he is said to have conferred immortality on the Tuatha Dé Danann. This was also conferred by the drinking of Goibnui's ale, which either by itself or with the flesh of swine formed his immortal feast (O'Grady, *Silva Gadel.* ii. 385; O'Curry, *Atlantis*, iii. 389). Besides conferring immortality, the food of the Other-world was inexhaustible, and whoever ate it found it to have precisely that taste which he preferred. The fruit of certain trees of Elysium was also believed to confer immortality and other qualities. Cúchulainn's servant, Laeg, tells of 150 trees which he saw growing in Mag Mell; their nuts fed 300 people (D'Arbois, v. 170 ff.). The apple given by the goddess to Connla was inexhaustible, and he was still eating it with her when another favoured mortal visited Elysium—Teigue, son of Cian. 'When once they had partaken of it, nor age nor dimness could affect them' (D'Arbois, v. 384; O'Grady, ii. 385). Apples, crimson nuts, and rowan berries are specifically said to be the food of the gods in the 'Pursuit of Diarmaid and Grainne' (Joyce, 314). Through carelessness one of the berries was dropped on earth, and from it grew a tree, three of whose berries eaten by a man of a hundred years made him a young man. To keep mortals from touching it they set a Fomorian giant to guard it. With this may be compared the dragon-guarded rowan tree in the tale of Fraoch (Leahy, *Heroic Romances*, i. 36, with many variants elsewhere); its berries had the virtue of nine meals, added a year to a man's life, and healed the sick. At the source of all Irish rivers were supposed to grow hazel trees with crimson nuts, which fell into the water and were eaten by salmon. If these salmon were caught and eaten, the eater would obtain knowledge and wisdom (O'Curry, *Manners and Customs*, ii. 143). But the stories in which these hazels are mentioned show that they grew in Elysium, and their berries were the food of the gods, which a mortal might not eat without incurring danger (*RCel* xv. 457; Windisch, *Irische Texte*, iii. 213). In other cases the trees of Elysium are much more marvellous; they have silver branches (*Bran*); they have golden apples (*Cormac*); they produce wonderful music, which sometimes causes sleep and oblivion.

(*d*) As these various nuts and fruits were prized in Ireland as food, and in some cases, perhaps, were used to produce an intoxicant, it is obvious that they were, primarily, a magnified form of earthly trees. But all such trees were doubtless objects of a cult before their produce was generally eaten; they may have been totem trees, and their fruit eaten only occasionally and sacramentally. If so, this would explain why they grew in the Other-world, and why their fruit was the food of the gods. Whatever man eats or drinks is generally supposed to have been first used by the gods, like the Hindu *soma*. Miss Hull points out that, in some tales, the branch of a divine tree becomes a talisman leading the mortal to Elysium; in this resembling the golden bough plucked by Æneas before descending to the under world (*FL* xii. 931). But this is not the primary function of the tree. On the other hand, Mr. A. B. Cook is of opinion that the branch is derived from the branch borne by early Celtic kings of the wood or representatives of the Sun-god, while the tree is an imaginative form of the trees which incarnated a vegetation spirit (*FL* xvii. 158). But, again, it is the fruit of the trees as the food of the gods on which the greatest stress is laid in all the tales. When mortals eat it, it has the effect of conferring immortality upon them; in other words, it makes them of like nature with the gods, and this is doubtless derived from the primitive idea that the eating of food given by a stranger produces kinship with him. Hence to eat the food of gods, of ghosts, of fairies, binds the mortal to them, and he cannot leave their land. When Connla ate the apple, he desired to go to the Other-world, and could not leave it once he was there: he had become akin to its people. In the stories of Bran and Oisin, they are not said to have eaten the divine food, but the primitive form of the tales may have contained this incident, and it would explain why they could not set foot on earth unscathed.

(*e*) The inhabitants of Elysium are also invisible at will—a true mark of their divinity. They make themselves visible to one person only out of many present with him. Thus Connla alone sees the goddess, his father and the druid with him do not see her; and, when Manannan comes to recall Fand, he is invisible to Cúchulainn and those with him. This agrees with what Mider says to Etain:

'We behold, and are not beheld' (Windisch, i. 133).

(*f*) In most of the tales of Elysium, and in other stories about the gods, a magical cauldron has a prominent place, as it also has in tales of semi-historical personages. Such a vessel was the inexhaustible cauldron of the god Dagda, which came from Murias, probably some over-sea world (*RCel* xii. 57), or the vat of inexhaustible mead described in 'Cúchulainn's Sick-bed.' Whatever was put into such vessels satisfied every one, no matter how numerous the company might be (O'Donovan, *Battle of Mag Rath*, Dublin, 1892, 50). Such a cauldron was stolen by Cúchulainn from Mider, lord of the isle of Falga (the over-sea Elysium), along with several cows (*LL* 169*b*); and in what is perhaps another version of this tale he obtains an inexhaustible cauldron from the daughter of the king of Scath (Hull, *Cuch. Saga*, 284). Similarly, in the Welsh poem called 'The Spoils of Annwfn,' Arthur steals a cauldron from Annwfn; its rim was encrusted with pearls, voices issued from it, it was kept boiling by the breath of nine maidens, it would not boil a coward's food (Skene, *Four Ancient Books of Wales*, i. 265). In the Welsh story of Taliessin we learn how Tegid Voel and Cerridwen lived in the midst of lake Tegid (*i.e.* 'the Land under Waves'). Their son was so ugly that Cerridwen resolved to boil a cauldron of science and inspiration for him. For a year and a day it must boil till 'three drops of the grace of inspiration' were yielded by it. Gwion was set to stir it, and by accident obtained the inspiration himself (Guest's *Mabinogion*, London, 1838, iii. 321 f.). Finally, in the story of Branwen, daughter of Llyr, her brother Bran gave to the king of Ireland a cauldron into which if any slain man were thrown, he would be restored to life the next day. The cauldron had been given to Bran by two beings, a man and woman, who came out of a lake ('Land under Waves') (Loth's *Mabin.* i. 65). The three properties of the cauldron—inexhaustibility, inspiration, regeneration—may be summed up in one word, fertility; and it is significant that the god with whom such a cauldron is expressly associated, Dagda, should be a god of fertility (see, further, CELTS, § v.). But we have just seen it associated, directly or indirectly, with goddesses,—Cerridwen, Branwen, the woman of the lake,—and perhaps this may point to an earlier cult of fertility associated with goddesses, and later transferred to a god. The cauldron as a regenerator would be significantly connected with a goddess, since woman as the fruitful mother early suggested to man the idea of the fruitful Earth-mother, who was also frequently a goddess of love. Elton had already concluded that Branwen was a goddess of love (*Origins of English History*, London, 1882, p. 291). The cult of fertility was usually associated with orgiastic and indiscriminate love-making, and it is not impossible that the cauldron may have symbolized fertility, like the Hindu *yoni*. Again, the slaughter and cooking of animals were usually regarded as sacred acts in primitive life. The animals were cooked in enormous cauldrons, which were found as an invariable part of the furniture of every large Celtic house (Athen. iv. 34; Diod. Sic. v. 28; Joyce, *Soc. Hist.*, London, 1903, ii. 124). The quantities of meat which they contained may have suggested magical inexhaustibility to people to whom the cauldron was already a symbol of fertility. Thus the symbolic cauldron of a fertility cult was merged with the cauldron used in the religious slaughter and cooking of animal food. The cauldron was used in other ritual acts, sacrifice, divination, etc. (Strabo, vii. 2. 1, referring to the Cimri, but this may also have been a Celtic usage; *Brehon Laws*, i. 195; Jullian, *Recherches sur la rel. gaul.*, Bordeaux, 1903, 44). Like the food of men which became the food of the gods, the cauldron of this world became the marvellous cauldron of the other world; and, as it then became necessary to explain the presence of such cauldrons on earth, myths arose, telling of how they had been stolen from the divine land by mortals. In other cases, however, its place is taken by an equally magic vessel or cup stolen from supernatural beings by the heroes of the Feinn saga or the heroes of *Märchen*. Here, too, it may be noted that the Graal of Arthurian romance has affinities with the Celtic cauldron. In the 'Conte du Graal' of pseudo-Chrétien, a cup comes in of itself and serves all present with food. This is a simple conception of the Graal; in other poems its sacrosanct character is heightened, until at last it became the chalice in which Christ instituted the Holy Sacrament. But in certain of its qualities it presents an unmistakable likeness to the Celtic cauldron—it supplies the food which the eater prefers, it gives perpetual youth. There is little doubt that the Graal is simply a fusion of the pagan Celtic cauldron and the chalice of our Lord's blood (see Villemarqué, *Contes populaires des anciens Bretons*, Paris, 1842; Nutt, *Legend of the Holy Grail*, London, 1888).

(*g*) Sensuous as are many of these characteristics, they yet have a spiritual aspect which must not be overlooked. Thus the emphasis placed on the beauty of the land, its music, its rest, its peace, its oblivion, is more spiritual than sensual, while the dwelling of favoured mortals there with divine beings is suggestive of that union with the divine which is of the essence of all religion. Though some who are lured there seek to leave it, others do not return, while Cúchulainn's charioteer Laeg says that he would prefer it to the kingship of all Ireland (Windisch, i. 219), and his words are elsewhere re-echoed by Laegaire mac Crimthainn. On the whole, then, it may be said that, of whatever elements it was composed, the conception of the Celtic Elysium was the imaginative shaping of man's instinctive longing for peace and rest. He hardly expected to obtain these beyond the grave, for there life went on as here, although that future state was one which had no terrors for him. A few great personages might reach Elysium after death, as an obscure passage in Plutarch (*de Defectu Orac.* 18) may hint (see under CELTS, § xvi. 5), but it was shut to all save a few favoured mortals who might be carried there in life. And possibly the hope that he might be so favoured of the gods buoyed up the Celt as he dreamed over this distant Elysium.

7. The Celtic Elysium and the gifts of civilization.—In the opinion of the Celts, as of many other peoples, wisdom and culture belonged first of all to the gods, by whom they were given to, or from whom they were stolen by, man. Examples of this have already been found in the tales in which a mysterious cauldron is stolen from the Otherworld (§ 6). It is also hinted at in the tales of divine trees guarded from mortals, and in the belief in the hazels of wisdom which endowed mortals with supernatural wisdom and knowledge. But when men came to domesticate animals, it was believed in course of time that the knowledge of domestication or, more usually, the animals themselves had come from the gods; only, in this case, the animals were of a magical, supernatural character. Such a belief underlies the stories, already referred to, in which cows are stolen from their divine owners by Cúchulainn. In the tale of 'Nera's Adventures in the Other-world' (*RCel* x. 226), Nera obtains a wife and several kine from the *síd* of Cruachan; and similarly Tulchine, who took a wife from the Land of Promise, obtained

her favourite calf also by interceding with the goddess Morrigan (Stokes, *RCel* xvi. 62). In the *Mabinogion* (Loth, i. 122 ff.) the swine given to Pryderi by Arawn, king of Annwfn, and hitherto unknown to man, are stolen from him by Gwydion, Pryderi being the son of Pwyll, a temporary king of Annwfn (§ 3), and therefore, perhaps, originally one of the lords of Elysium. But though this raid was successful, the poem of 'The Spoils of Annwfn' says, 'Stout was the prison of Gweir in Caer Sidi, Through the spite of Pwyll and Pryderi, No one before him went into it.' Gweir is probably identical with Gwydion (Rhys, *Hib. Lect.* 250), and this poem may then refer to another version of the myth in which the hero was unsuccessful, and was detained a prisoner in Elysium, to which imprisonment the later blending of Annwfn with Hades gave a doleful character. In the *Triads* (Loth, ii. 215), Gweir is one of the three paramount prisoners of Britain. There is also reference in a late Welsh MS to a white roebuck and a puppy (in the *Triads* [Loth, ii. 259] a bitch, a roebuck, and a lapwing), which were stolen by Amathaon from Annwfn, and which led to the battle of Godeu between Arawn and Gwydion. In this battle Bran, fighting on the side of Arawn, could not be vanquished until Gwydion had guessed his name (*Myvyrian Arch.*, London, 1801, i. 167). The introduction of the name-tabu proves the story to be archaic. In some of these tales the animals are transferred to earth by a divine or semi-divine being, in whom we may see an early Celtic culture-hero. The tales themselves are attenuated forms of an earlier series of myths, which probably showed how all domestic animals were at first the property of the gods. An echo of these is still preserved in *Märchen* describing the theft of magical cattle from fairies. In the most primitive form of the myths the theft was doubtless from the under world of the gods of fertility, which was also connected with the place whither the dead went. But when the gods were also located in a distant Elysium, it was inevitable that some tales should tell how the theft was connected with that far-off land rather than with the land of under-earth divinities. But in neither case was the theft from gods of death, but from gods of life and fertility with whom all man's blessings were. So far as the Irish and Welsh tales are concerned, the thefts seem to be mainly from Elysium.

8. **The lords of Elysium.**—In Irish accounts of the *síd* world, the god Dagda appears to have the supremacy, which was wrested from him later by the Mac Oc. But in a probably later version we learn that, Dagda being dead, Bodb Dearg divided the *síd* among the gods, and Manannan gave them the gift of immortality (see CELTS). But in tales of the *síd* world, each owner of a *síd* is accounted lord of that particular *síd*, which for the time being eclipses all others. The one great under world of gods of fertility has now become a world of many underground *síd*. In Welsh tradition the lord of Annwfn, wherever it is situated, is Arawn, but his claims are contested by a rival. In Irish tradition Manannan mac Lir is associated with the over-sea world or with the 'Land of Promise,' while Elysium itself is called 'the land of Manannan' in the *Voyage of Bran*. Manannan was probably a god of the sea, and it was easy to associate the over-sea world, 'around which sea-horses (*i.e.* the waves, the god's mythic steeds) glisten,' with him. But, again, as this land lay towards the setting sun, and in some of its aspects may have been suggested by the glories of the sunset, the sun-god Lug was also associated with it. But he hardly takes the place of Manannan; he comes from Manannan's land, with Manannan's sons and armed with his weapons, to aid the gods, but Manannan still remains lord of Elysium (Joyce, *Old Celt. Romances*, 37).

9. **Elysium and Paradise.** — While the tales already dealt with are mainly re-mouldings of earlier pagan originals, which may have been handed down orally, or are based upon the materials of pagan belief, they have in many ways been influenced by Christian ideas, although their main incidents are purely pagan. But in another class of tales, which may have had pagan originals, the Elysium conception recurs, and finally ends in becoming the Christian paradise or Heaven. These are the *Imrama*, or 'Voyages,' of which that of Maelduin, found partly in the 11th cent. *Lebor na hUidre*, and in complete form in 14th to 16th cent. MSS, still moves in a pagan atmosphere. Here the voyage is undertaken for the purpose of revenge; but the travellers reach a number of strange islands unpeopled, or peopled by men and women, by animals, or by monsters. One island closely resembles the Isle of Women in the pagan Elysium. Besides the Isle of Laughter, found also in *Bran*, there is an Isle of Weeping, and in this we approach the idea of a place of penitence. Another island, guarded by a fiery rampart, is peopled by beautiful human beings feasting and singing—an approach to the Christian paradise. The Isles of Weeping and Laughter are also found in the *Imram hua Corra*, where also is the island of the Miller of Hell, mentioned simply as a miller in *Maelduin*. Thus, even in *Maelduin* the use of the pagan materials is indeterminate, and the Elysium conceptions have become vague. Elsewhere, as in the *Voyage of Snedgus and Mac Riagla*, the journey is undertaken as a pilgrimage, and the Christian atmosphere is more pronounced. One island has become a kind of intermediate state, and in it dwell Elijah and Enoch and a multitude of others 'without sin, without wickedness,' waiting for the day of judgment. Another island is nothing less than the Christian Heaven viewed from an ecclesiastical standpoint. Finally, in the *Voyage of Brandan* the pagan elements have practically disappeared: there is an island of Hell and an island which is the Christian paradise or Heaven. In these *Imrama*, the number of islands visited may be compared to the thrice fifty islands of *Bran*, whether this be a later conception of the pagan Elysium or not; the old idea of a mortal lured thither by a goddess has disappeared, and the voyage is undertaken for a specific purpose—revenge or a pilgrimage. Another series of tales, in which a visit is paid to Hell and Heaven in a vision (*Adamnan's Vision*, *The Tidings of Doomsday*, etc.), are purely Christian products, but it is remarkable that the joys of heaven are described in terms of the pagan Elysium. There is unimaginable beauty, music, absence of sickness, of pain, of death; there is no age, decay, or labour. The whole description of heaven has a sensuous, material aspect which reflects that of the old pagan stories. In the latter text there are two hells; besides heaven there is a place for the *boni non valde* which corresponds to the island where dwell Enoch and Elijah in the *Voyage of Snedgus*. The conception of this island, which is not heaven, may be borrowed directly from the pagan paradise. The connexion of the pagan Elysium with the Christian paradise is also seen in the title of *Tír Tairngiri*, 'the Land of Promise,' which is applied to the heavenly kingdom or to the land flowing with milk and honey, as in glosses (7th or 8th cent.) on He 6^{15}, where *regnum coelorum* is explained as *tír tairngiri*, or He 4^{4}, where Canaan is so called, and notably on 1 Co 10^{4}, where the heavenly land is called *tír tairngiri inna mbéo*, 'the land of promise of the living ones': thus apparently equalling it with the *tír na mbéo* of

'Connla's Voyage.' If *tír tairngiri* was not already a title of the pagan Elysium, it was now applied to it in several instances through the influence of this identification.

See Zimmer, 'Brendan's Meerfahrt,' *ZDA* xxxiii. The *Imrama* of Snedgus, Maelduin, and Ua Corra are edited and translated by Stokes in *RCel* ix., x., xiv. *Adamnan's Vision* is edited and translated by Stokes, Calcutta, 1866; cf. C. S. Boswell, *Irish Precursor of Dante*, London, 1908; the *Tidings of Doomsday* is in *RCel* iv. 243. Cf. also chs. 4 and 8 of Nutt's *Bran*.

10. Elysium in later folklore.—Most of the aspects of the pagan Elysium re-appear in folk belief almost unchanged. The under or *síd* world is now fairyland; mounds, forts, and raths are fairy-dwellings into which mortals are sometimes inveigled, and where all the characteristics of the earlier divine world are found—magic lapse of time, marvellous beauty, magical properties. Similarly a marvellous over-sea land is still a commonplace of Celtic *Märchen* and Celtic belief. Tír na nOg is still a living reality to the Celt. Within that fabled land are the mystic and magic things of folk-tale—the fountain of youth, healing balsams, life-giving fruits. It is peopled by marvellously beautiful women, or it is connected with fairy folk. Sometimes it is visible only to favoured persons, or it is sunk beneath the waves, and comes to the surface only at intervals. But in whatever form it is found, it is obviously linked on to the actual Elysium of the pagan Celtic world.

In the 11th cent. Irish documents, from which our knowledge of Elysium is mainly drawn, and which, of course, imply a remote antiquity for the material of the tales, the *síd* world is still the world of divine beings, though these are beginning to assume the traits of fairy folk. But probably among the people themselves the change had already been made, and the *síd* world was simply fairyland. In Wales the same change had early taken place, as is witnessed by the story of Elidorus enticed by two small people into a subterranean fairyland. This is fully told by Giraldus Cambrensis (*Itin. Camb.* i. 8). For the over-sea fairyland see J. F. Campbell, *Popular Tales of the West Highlands*, London, 1860–62; MacDougall, *Folk and Hero Tales*, London, 1891; Howells, *Cambrian Superstitions*, Tipton, 1831; Sébillot, *Folk-Lore de France*, Paris, 1904, ii.; Kennedy, *Legendary Fictions*, London, 1866; or any collection of Celtic *Märchen*.

LITERATURE.—Translations or epitomes of most of the texts relating to the Other-world will be found in Windisch and Stokes, *Irische Texte*, Leipzig, 1880–1900; D'Arbois de Jubainville, *Cours de Littérature Celt.* ii., Paris, 1884; S. H. O'Grady, *Silva Gadelica*, 1892; Joyce, *Old Celtic Romances*², London, 1894; A. Nutt and K. Meyer, *Voyage of Bran*, London, 1895; Rhys, *Celtic Heathendom*, London, 1888, *Arthurian Legend*, Oxford, 1891; A. H. Leahy, *Heroic Romances of Ireland*, London, 1905; E. Hull, 'The Idea of Hades in Irish Literature,' *FL* xviii. 1907.

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Greek and Roman).—i. Greek.—In the Homeric poems the gods alone are immortal. Nowhere in the older strata of the poems is immortality an attribute of man. Complete life for him exists only on earth and in the light of the sun, and only with the complete union of soul and body. When separated from the body, the soul passes out of this world into a shadowy, powerless existence, which is nowhere expressly stated to be eternal. The idea of an earthly paradise, *i.e.* an abode of bliss upon earth, where life is continued in full vigour without the sharp severance between soul and body which death requires, is an attempt to find a more comforting solution of the problem of an after-life. A solution so naive does not long remain an article of belief in Greece except among the ignorant vulgar. In the history of religion the idea is absorbed by the belief in immortality, which was soon fostered in Greece under the influence of imported mystical tenets and of philosophic systems founded upon them. The earthly bliss, which at best could be attained only by the favoured few, is transmuted into the heavenly bliss, which is promised after death to all who have lived uprightly. In the history of literature the idea survives as a beautiful fancy which is cherished by poets and often serves in later times as a basis for the romantic reconstructions of human society in which the Greeks found a melancholy consolation for some of the darkest periods in their national life.

1. *Homer, Hesiod, and the Epic cycle.*—In Homer, as the gods alone are immortal, so they alone can confer immortality. Their favourite heroes, always of divine descent, have such immortality conferred upon them by the drinking of nectar or the eating of ambrosia, and are thereupon translated either to heaven or to an earthly paradise such as the Elysian plain. The most striking instance of such an earthly translation is to be seen in *Od.* iv. 561, where Proteus prophesies to Menelaus:

'But it is not thy destiny, O Menelaus, *child of Zeus*, to die and meet thy fate in horse-pasturing Argos. The immortal gods will send thee to the Elysian plain and the verge of the world where fair-haired Rhadamanthys dwells, where life is easiest for man. No snow falls there, nor any violent storm, nor rain at any time; but Ocean ever sends forth the clear, shrill blast of the West wind to refresh mankind; *because thou hast Helen to wife and they count thee to be son-in-law to Zeus.*' (Cf. Eur. *Hel.* 1676 ff.).

Here it should be noted that Elysium is on earth and not in Hades. It is the counterpart of Olympus, the mountain-home of the gods, described in almost the same words in *Od.* vi. 43–45. Further, Menelaus is not beatified as a reward for his merits. Like Rhadamanthys, he is of kin to Zeus. The blissful existence in Elysium which is conferred by the gods upon their kin is an exceptional privilege, exactly parallel to the eternity of pain which they inflict upon their enemies in Erebos (*Od.* xi. 576 ff.). The conception of Elysium in Homer is poetical rather than religious. The heroes who have passed thither exert no influence upon the world of men that they have left behind. The gods transfer to them none of their own prerogatives save immortality. The conception is an extension of the other ideals of blissful, though mortal, existence that are found in Homer—chiefly in the *Odyssey*, which is permeated by a peaceful spirit characteristic of men who have enjoyed undisturbed quiet long enough to value it, and foreign to the martial temper of the *Iliad*. Of such ideals the most noteworthy are the idyllic lands of Phæacia (*Od.* vii. 81), of the island of Syrie, the home of Eumæus (*Od.* xv. 403), and idyllic peoples such as the Abioi (*Il.* xiii. 6) and Ethiopians (*Il.* i. 423).

This enchanting fancy of an earthly paradise became an integral part of Greek thought once it had been incorporated in the Homeric poems. The common people of Greece were accustomed to the idea of 'translation' in the worships of such heroes as Amphiaraos and Trophonios, who had passed, while yet alive, to a life below the earth. The 'translation' of heroes, so rare in Homer, is of common occurrence in the post-Homeric Epic. In the *Cypria*, Iphigeneia is rescued by Artemis, carried to the land of the Tauri and rendered immortal (Proclus in *Epicorum Graec. Frag.*, ed. Kinkel, p. 19). In the *Æthiopis*, Memnon is translated by his mother Eos to her home in the East and made immortal by Zeus at her request (*ib.* p. 33). In the same poem, Achilles is saved from death by Thetis and conveyed to the magic island of Leuke (*ib.* p. 34). In the *Telegoneia*, the latest of such Epics, Telegonus, the son of Odysseus and Circe, brings the bodies of Penelope, Odysseus, and Telemachus to his mother, who confers immortality upon them in her home in Ææa (*ib.* p. 58).

Thus far the idea of an earthly paradise is developed at the will of each particular poet. The fortunate heroes have no common home, but are transferred to magic lands which are alike in nothing else save that they are beyond mortal ken. The various strands of fancy are woven together into a consistent whole by Hesiod, in whose poems we meet with the expression 'The Isles of the Blest' for the first time. In *Op. et Di.* 170 ff., after

the description of the three races of Gold, of Silver, and of Bronze, follows a fourth race better than the race of Bronze—the heroes or demigods who fought at Thebes and at Troy. Of these, some died, others were settled by Zeus at the world's end in the Islands of the Blest, 'where the earth produces sweet fruit for them thrice in the year.' As in Homer, they are completely severed from the world of men, and have no influence upon it. In Hesiod, further, they are heroes of the past, their tale is numbered, and no accessions to their ranks can come from the fifth degenerate race that is now on earth.

2. Pindar is far removed from the simple theological standpoint of Homer and Hesiod, but he is far too great a poet and prophet to reject a beautiful religious idea. He renders it wider and deeper. Whether from personal convictions, which had grown upon him during his repeated visits to Sicily since 477, or from a desire to satisfy his Sicilian patrons such as Gelo, Hiero, and Theron, who were hierophants of chthonic worships, he accepts a number of the dogmas of Orphic and Pythagorean mysticism, among which he finds a place for the popular belief in the Islands of the Blest. Pindar, on the one hand, represents the traditional belief that a full immortality can come only from the continued union of soul with body, a union to be secured only by Divine intervention (*e.g.* Ganymede, *Ol.* i. 44, x. 104; Amphiaraos, *Ol.* vi. 14, *Nem.* ix. 24 ff.); but he has also absorbed the belief that the soul is no mere *Doppelgänger* of the body but is Divine in origin (frag. 131, 'the likeness of eternity is left: for that alone comes from Heaven'). It is immortal, but confined in a mortal body, owing to the 'ancient sin' (frag. 133, παλαιὸν πένθος). After the death of the body it is judged in Hades for its deeds on earth. The wicked are condemned to Tartarus; the good pass to the home of the pious (χῶρος εὐσεβῶν). Only after three lives of purity have been completed on earth (*Ol.* ii. 68 ff.) is the ancient sin atoned for. Thereupon, in the ninth year after its last arrival in Hades (see Rohde, *Psyche*[2], ii. 211), the soul ascends to the world above for the last time, to become incorporate in kings, heroes, and wise men. Such souls are then freed from the trammels of the earth and find a home in the Island of the Blest, where under the rule of Kronos they live in communion with the earlier heroes, such as Peleus, Cadmus, and Achilles (*Ol.* ii. 86; frag. 133). Here the life of bliss is no longer an earthly paradise in the earlier sense. The Island is in Ocean, it is true, but can be reached only through death and through lives of purity lived upon earth.

3. There are scattered references to the belief in its original form found in later writers. Cadmus and Harmonia are transferred to the Land of the Blest (μακάρων ἐς αἶαν), in Eur. *Bacch.* 1339 ff.; Achilles and Diomedes live in the Island of the Blest, according to the scholion on Harmodios (Bergk, *Carm. pop. fr.* 10). According to Plato (*Symp.* 179 E), Achilles is in the Isles of the Blest. Others find his home on the Elysian plain (Apoll. Rhod. *Arg.* iv. 811) or in Leuke (see below), where he has Medea to wife, according to Ibycus the melic poet of the 6th cent. (*schol.* Apoll. Rhod. iv. 814), or, according to others, Iphigeneia (Antoninus Liberalis, 37) or Helen (Pausanias, iii. 19. 11-13). For further references see Rohde, *Psyche*[2], ii. 369, note 2.

A naive belief that it was possible to discover these fortunate lands long continued. The most striking instance is the resolve of Sertorius to sail for the Atlantic isles in the search for happiness (Plut. *Sert.* 8. 9; Sallust, *Hist.* i. frag. 102, Maurenbrecher). Geographers often placed them in the unknown, and therefore mysterious, West, where (akin to them in idea) was the garden of the Hesperides, with its golden apples of immortality (cf. Wilamowitz-Moellendorff, *Herakles*[1], ii. 129; Eur. *Hippol.* 732 ff.). They are in West Africa, according to Strabo, i. 3, iii. 150, and Plin. *HN* vi. 202 ff. Others placed them in the centre of Libya (Herod. iii. 26) or in the Antipodes (cf. Serv. *Æn.* vi. 532). The home of Diomedes was found in the Tremiti islands in the Adriatic (Strabo, vi. 283, 284). Leuke, the isle of Achilles, was placed in the Euxine (Alcæus, *Fr.* 48[b]; Pind. *Nem.* iv. 49; Eur. *Andr.* 1232 ff., *Iph. T.* 420), at the mouth of the Danube (Paus. iii. 19. 11), and was counted as one of the Isles of the Blest (cf. Plin. *HN* iv. 93, 'Insula Achillea, eadem Leuce et Macaron dicta'). Similar legendary lands are placed near the Indian Ocean (cf. Aristophanes, *Av.* 144; Æsch. frag. 192, Nauck). For further attempts see Hesychius *s.v.* 'Lesbos,' and Suidas *s.v.* 'Rhodos.' A parody of the belief will be found in Lucian's *Vera Historia*, ii. 6 ff. The inscriptions containing references to the Elysian plain and the Isles of the Blest may be consulted most conveniently in G. Kaibel's *Epigrammata Graeca, ex lapidibus collecta*, Berlin, 1878. But here it is no question of earthly bliss. The Blessed Isles (*Ep.* 649. 2), the Elysian plain (*Ep.* 414. 8), the χῶρος εὐσεβέων (*Ins. Gr. mar. Æg.* i. 141), are not of this world, but only testify to a life beyond the grave to which the righteous can aspire. The Epigram on Regilla, the wife of Herodes Atticus (1046. 8), μεθ' ἡρώνησι νέμεται ἐν μακάρων νήσοισιν ἵνα Κρόνος ἐμβασιλεύει, is merely a literary adaptation of the older belief.

4. *The Romance writers.*—The best account of these will be found in Rohde's *Griechische Roman*[2], pp. 178-260). The political downfall of Greece, which began in the 4th cent. B.C., and the widespread disasters which accompanied it, led men to seek relief from the hopelessness of present affairs in the freedom of fanciful speculations. Social reformers, whether politicians or philosophers, embodied their ideas in sentimental romances—a branch of literature which developed naturally out of the old sagas (*e.g.* the tale of the Argonauts) and the stories of fabulous adventure and ethnographical curiosities which had long been popular in Greece. As early as Solon we find a comic description of a land of good things (Bergk, *Poetae Lyrici*[4], frag. 38). But the first serious philosophical romance comes from Plato, who portrays his ideal of earthly perfection in the State of 'Atlantis.' The ground-plan of this is sketched in the *Timaeus* (cf. esp. 20 D-25 E), and was to be completed in the *Critias*. Theopompus (*c.* 333 B.C.) made a similar attempt. In the eighth book of his *Philippica* he introduced a description of an ideal country called 'Meropis' with its cities *Machimos* and *Eusebes*—the first a town of warriors, the second the abode of peace and justice. A more philosophic work was 'The Hyperboreans' of Hecatæus of Abdera, a philosopher at the court of Ptolemy I., and a pupil of the sceptic Pyrrho. Pyrrho's philosophy was less a theory of doubt than a conviction that the whole world of things was unworkable, and that a calm indifference was the only feasible rule of conduct. His pupil's romance on the Hyperboreans, who live in the island of Helixoia, in the Northern Ocean, seems to have been prompted by similar views. Amometus, a contemporary of the first and second Ptolemys, travelled outside the range of native mythology, and based his romance of the Attacori (Plin. *HN* vi. 17, § 55) upon the Indian legend of the happy land of Uttarakuru, north of the Himalayas (cf. Lassen, *WZKM* ii. 63, 64). Euhemerus of Messana, the friend of king Cassander (*c.* 306 B.C.), finds his Utopia in the island of Panchaia in the Indian Ocean. Iambulus (of uncertain date, but earlier than the age of Augustus) finds an Island

of the Blest near the equator. The popularity of such romances is sufficiently shown by the travesty of them given by Lucian in his *Vera Historia*. Their influence extended beyond Greece, since the description of the Essenes in Josephus (*BJ* II. viii. 11) is held to show traces of Greek colour.

ii. Roman.—The idea of an earthly paradise was never native to Roman thought. A belief in immortality was always an integral part of the Roman religion. With the assurance of an after-life in the world of spirits, colourless though it might be, the practical Roman had no need of such a conception. Such references to the belief as are found in Latin literature are importations from the Greek: *e.g.* Plautus, *Trin.* 549: 'Fortunatorum memorant insulas, Quo cuncti qui aetatem egerint caste suam, Conveniant.' The beautiful description in Horace, *Epodes*, xvi. 39 ff., is suggested in all probability by the story of Sertorius mentioned above. See also STATE OF THE DEAD (Greek and Roman).

LITERATURE.—E. Rohde, *Psyche*², 2 vols., Freiburg, 1898, and *Der Griechische Roman*², Leipzig, 1900; L. Preller, *Griechische Mythologie*⁴, ed. C. Robert, Berlin, 1887-94; Dieterich, *Nekyia*, Leipzig, 1893.

F. W. HALL.

BLEST, ABODE OF THE (Hindu).—The Hindus believe that there was, and is still, a place of bliss on earth, a kind of earthly paradise, inaccessible to men, and far far away from our part of the earth. But the idea, frequent among many savage tribes and some civilized peoples, that the brave and the virtuous go to such a place on their decease, seems not to have been current in ancient India. For already in the Rigveda the abode of the dead who in life have done pious deeds is said to be in heaven above, and, according to the Atharvaveda, the wicked receive their punishment in the hell below.* And in later Sanskrit literature heavens were multiplied to such an extent that the souls of the deceased were amply provided for, and required no dwelling place on earth such as the Islands of the Blessed of the ancients. The Indian belief in a place of bliss cannot therefore have developed from an earlier one in a heaven on earth; but we shall postpone our inquiry into the probable origin of this belief till we have described it in all its details. We must, however, define this place of bliss more accurately as one believed to be still in existence, in order to distinguish it from the state of bliss which obtained in the Golden Age, when the whole earth, newly come into existence, was, as it were, all one abode of the Blessed.† In the Sanskrit epics, the Purāṇas, and the classical literature the *Uttarakurus* are regarded as the Blessed, and their land as an earthly paradise which is localized in the far North.

1. Site of Uttarakuru.—It will be convenient first to set forth the Pauranic opinion on the site of Uttarakuru, since it is the most explicit one. According to the Purāṇas, the earth, of which India forms part, is a circular island, or rather insular continent, of enormous dimensions, called Jambūdvīpa. There are six more such islands, Śākadvīpa etc., which, however, are not connected with our present subject. In the centre of Jambūdvīpa rises Mount Meru, 84,000 *yojanas* above the surface of the earth. The whole continent is divided by six parallel mountain ranges, running due east and west, three south of Meru and three north of it. The southernmost range is the Himālaya, and the segment of the disc of the earth lying to the south of it is Bharatavarṣa, or India, and some countries known to the Indians.

* A. Macdonell, 'Vedic Mythology' (in *Grundriss der Indo-arischen Philol. und Altertumskunde*), Strassburg, 1897, p. 167 ff.

† See art. AGES OF THE WORLD (Indian) in vol. i. p. 200 ff.

The counterpart of Bharatavarṣa, *i.e.* the segment to the north of the northernmost range, Śṛṅgin, is Uttarakuru. It may be mentioned that the other *varṣas*, or strips of land between the several mountain ranges, are also inhabited by fabulous people; the model of them all seems to have been the Uttarakurus. From the position of the country of the latter it is clear that they were regarded as the antipodes of men, if it be allowed to apply this term to an earth figured as a disc.

In the *Bhīṣma Parvan*, adhy. v. and vi., in a part of the *Mahābhārata* of a decidedly Pauranic character, we meet with a somewhat different description of the earth, called here Sudarśana instead of Jambūdvīpa. The number, arrangement, and names of the mountain ranges is the same as in the Purāṇas, but the names of some of the *varṣas* are different, and those of the two most northern ones are omitted. In viii. 10, however, the most northern segment is called Airāvata, not Uttarakuru, which, by the way, is also the case with the Jains; yet the excellence of the country and the happiness of the inhabitants of Airāvata are exactly like those of the Uttarakurus as described in a preceding chapter. In this account (vi. 13) the land of the Uttarakurus is stated to lie at the northern side of Meru, or near the centre of the disc of the earth. Round Meru, we are told, are grouped four *dvīpas*, lit. 'islands,' but, according to the commentary, countries surrounded by a broad river; these islands are Uttarakuru N., Bhadrāśva E., Jambūdvīpa S., Ketumāla W. Here we must distinguish, it seems, two accounts: the Pauranic account, which is made the basis of the description of the earth; and, combined with it, an older one, which places Meru in the ocean, and the four insular continents round it.* Here, too, Jambūdvīpa is the abode of men, and Uttarakuru that of the Siddhas.

What the present writer considers the earlier of these two accounts is actually the idea underlying the Buddhist system of geography. There Meru rises from the ocean, round it are seven concentric circular mountain ranges separated from each other by ring-shaped seas, and beyond them, in the vast ocean known to men, are four insular continents—Jambūdvīpa S., Pūrvavideha E., Uttarakuru N., and Aparagodāna W. Jambūdvīpa, the abode of men, is of a triangular shape, and Uttarakuru, the abode of the Blessed who live 1000 years, forms a square.†

The Jains, whose geography has been developed on the same lines as that of the Purāṇas,‡ also place the Uttarakurus near the centre of the Jambūdvīpa, between Gandhamādana and Mālyavat, two spurs of Mount Meru running N.W. and N.E.§

In such parts of the epics as do not yet exhibit the fully established system of Pauranic geography, the Uttarakurus are placed in the extreme North, in the borderland of the inhabited or known earth. In the *Digvijayaparvan* of the *Sabhāparvan* of the *Mahābhārata* (ii. 28), Arjuna's conquest of the northern countries is related. After having passed the Himālaya and the fabulous mountains Niṣkuṭa and Śvetaparvata, and having vanquished many mythical people, Arjuna reaches the north of the country Harivarṣa. There he is warned not to proceed further, because the region beyond

* The Purāṇas also mention those four countries, substituting, however, Bhārata for Jambūdvīpa, and likening them to the petals of a lotus whose pericarp is Mount Meru. Sometimes they seem to be regarded as countries in Ilāvṛta or the middle *varṣa*, sometimes as islands lying off the coast of Jambūdvīpa in the great ocean. The efforts of the Purāṇas to explain result in worse confusion.

§ *Tattvārthādhigama Sūtra*, ed. *Bibliotheca Indica*, Calcutta, 1903, Appendix, p. 28 f.

is that of the Uttarakurus: 'he that entereth it, if human, is sure to perish.' In the *Rāmāyaṇa* (iv. 43) we meet with a description of the North where the monkeys are despatched in search of Sītā. There many fabulous mountains and places, which do not form part of the Pauranic system of geography, are mentioned. In the North sun and moon cease to shed light, and even farther north live the Uttarakurus.* Their country is bounded by the Northern Ocean, in which rises Mount Somagiri, scarcely accessible even to gods.

Notwithstanding the prevalence of Pauranic geography during the classical period and some centuries before it, some faint knowledge of an actual tribe of Uttarakurus, somewhere on the slopes of the Himālayas, seems to have continued even then. Lassen † has drawn attention to some notices in the Epics and classical writers where the Uttarakurus are not regarded as a fabulous people. Important in this regard seems to be a passage in the *Vanaparvan* of the *Mahābhārata*, iii. 145, where the Uttarakurus are placed south of Kailāsa. Mr. Pargiter, commenting on a passage in the *Mārkaṇḍeya Purāṇa* ‡ where the (Uttara) Kurus are mentioned among the people 'who rest against the Mountains,' has the following note which sums up the whole question under discussion:

'They seem to have been the stock from which the Kurus of Madhyadeśa separated off, for the period when Dhṛtarāṣṭra and Paṇḍu were born is described as a Golden Age, in which both branches of the Kurus engaged in happy rivalry (Ādi-P. cix. 4387–46); but the wistful recollections of their ancient home idealized it afterwards into a blissful land, where fancy gave itself free scope (Rāmāy., Kiṣk. xliv. 82–115). They seem to have occupied the uppermost valley of the Indus near its sources, with Kailāsa lying beyond (Vana-P. cxlv. 71025–35); and fervid imagination also placed them close to Mount Meru on its north side (Bhīṣma-P. vi. 207–8, and vii. 254), or in the region Harivarṣa, and declared men could not enter their sacred land (Sabhā-P. xxvii. 1054–8). They are described as living in primitive happiness, and women had the utmost freedom there (722, 4719–23; and Rāmāy. *loc. cit.*).'

The first mention of the Uttarakurus is contained in the *Aitareya Brāhmaṇa*. In viii. 14 we read: 'hence all people living in northern countries, such as the Uttarakurus, Uttaramadras, are inaugurated for living without a king (*vairājyam*), and called Virāj, *i.e.* "without king."' § Here the Uttarakurus seem to be a real people, *i.e.* one with which the Indians, at the time of the *Aitareya Brāhmaṇa*, were actually acquainted, or, at least, of which they had some kind of positive knowledge; for the very name *Northern Kurus*, and the fact that they are mentioned jointly with the Northern Madras, proves that these peoples of the North were regarded as related by kinship to the well-known Indian tribes of the Kurus and Madras. But the Uttarakurus were already looked upon as superior beings, for in the same *Brāhmaṇa* (viii. 23) it is declared that Uttarakuru 'is the land of the gods, no mortal can conquer it.' ‖

It must be added that Ptolemy (vi. 16) mentions a mountain, people, and town of the name of *Ottorokorra*, which obviously stands for Uttarakuru; but he places Ottorokorra in Serica or China. Whatever may have been his reason for doing so, he apparently regarded them as a real, not a mythical people. And so did Pliny (vi. 20), who mentions them under the name of *Attacori*, and places them near the Phruri and Tochari. On the other hand, many fables seem to have been told of them. For Pliny says: 'de iis privatim condidit volumen Amometus, sicut Hecataeus de Hyperboreis.' Megasthenes seems to intend the Uttarakurus by his Hyperborei * who live 1000 years, for this is the length of life of the Uttarakurus according to the Buddhists.

2. Description of Uttarakuru.—The classical passages about the land and the inhabitants of Uttarakuru are *Rāmāyaṇa* iv. 43 and *Mahābhārata* vi. 7, of which we subjoin a translation:

In *Rāmāyaṇa* iv. 43 it is said that in the farthest North sun and moon at last cease to shine; and if you still proceed you come to the river Śailodā, whose water, according to the Bengal redaction of the text, turns into stone the man who touches it. 'On either bank of that river grow reeds, called *kichaka*, which carry the Blessed (*Siddhas*) to the opposite bank and back. There is Uttarakuru, the abode of the pious, watered by lakes with golden lotuses. There are rivers by thousands, full of leaves of the colour of sapphire and lapis lazuli, and the lakes, resplendent like the morning sun, are adorned by golden beds of red lotus. The country all round is covered with costly jewels and precious stones, with gay beds of blue lotuses of golden petals. Instead of sand, round pearls, costly jewels, and gold form the banks of the rivers, which are covered with trees of precious stones, trees of gold shining like fire. The trees always bear flowers and fruits, they swarm with birds, they are of a heavenly smell and touch, and yield all desires; other trees bring forth clothes of various shapes. [Here we omit four verses pronounced spurious by the Commentator.] All the inhabitants do pious deeds, all are given to love, all, dwelling together with their wives, have their desires fulfilled. There one always hears the sound of song and music mixed with gay laughter, pleasant to all creatures. There is none who does not rejoice, none whose desires are not fulfilled; and every day those pleasant qualities grow brighter.' The text of the Bengal redaction is much more detailed, and contains some additions which are out of place there, but on the whole it is in the same strain. Besides the items given above, there are mentioned rivers flowing with milk which form a deposit of boiled rice, and trees on which grow beautiful maidens hanging down from their branches.

The description of Uttarakuru in *Mahābhārata* vi. 7 runs thus in Protap Chandra Roy's translation: 'On the south of the Nīla mountain and the northern side of Meru are the sacred Northern Kurus, which are the residence of the Siddhas. The trees there bear sweet fruits, and are always covered with fruits and flowers. All the flowers (there) are fragrant, and the fruits of excellent taste. Some of the trees, again, yield fruits according to the will (of the plucker). There are, again, some other trees that are called milk-yielding. These always yield milk and six different kinds of food of the taste of Amṛta itself. Those trees also yield clothes, and in their fruits are ornaments (for the use of man). The entire land abounds with fine golden sands. A portion of the region there, extremely delightful, is seen to be possessed of the radiance of the ruby, or of the lapis lazuli, or other jewels and gems. All the seasons there are agreeable, and nowhere does the land become miry. The tanks are charming, delicious, and full of crystal water. The men born there are dropped from the world of the celestials. All are of pure birth, and all are handsome in appearance. There twins (of opposite sexes) are born, and the women resemble Apsaras in beauty. They drink the milk, sweet as *amṛta*, of those milk-yielding trees (already mentioned). And the twins born there (of opposite sexes) grow up equally. Both possessed of equal beauty, both endued with similar virtues, and both equally dressed, both grow up in love like a couple of *chakravākas*. The people of that country are free from illness, and are always cheerful. Ten thousand and ten hundred years they live, and never abandon one another. A class of birds called *bhāruṇḍa*, furnished with sharp beaks and possessed of great strength, take them up when dead and throw them into mountain caves. One more item must be added. In the following chapter it is narrated that on the south of Mount Meru there grows the gigantic Jambū tree Sudarśana, from which the name of *Jambūdvīpa* is derived. It touches the very skies, and bears fruits of 1115 cubits circumference. 'In falling upon the earth these fruits make a loud noise, and then pour out a silvery juice on the ground. That juice of the Jambū, becoming a river, and passing circuitously round Mount Meru, cometh to (the region of) the Northern Kurus. If the juice of that fruit is quaffed, it conduces to peace of mind. No thirst is felt ever after; decrepitude never weakens them.'

Most Purāṇas give no detailed descriptions of the Uttarakurus, for the number of fabulous peoples inhabiting the other *varṣas* beyond the Himālaya is very great in the Purāṇas, and all these peoples live in a state of happiness denied to the human race.† They were in some degree the equals of the Uttarakurus who, though still regarded as the blessed race, lost something of the interest originally attached to them. There is, however, a description of Uttarakuru in the *Mārkaṇḍeya Purāṇa* ‡ which is apparently based

* Even in later Pauranic myths we meet with the belief that the sun does not shine in the land of the Uttarakurus; *e.g.* Sañjñā, the wife of the Sun, escaped in the shape of a mare in order that her husband might not discover her (*Harivaṁśa*, 561 ff.; *Mārkaṇḍeya Purāṇa*, ch. 77).

‡ Tr. p. 339.

on that contained in the passage of the *Mahābhārata* given above; some details added to it are of no importance.

The principal points in the above accounts of the Uttarakurus seem to be the following. They are a race of superior beings, called *Siddhas*, neither gods nor men. Exempt from suffering, caused by illness or old age, through the juice of the miraculous Jambū tree, they lead a long life of happiness and sensual pleasures, and after death their corpses are removed by miraculous birds to mountain caves. Their country is situated far north, at the border of the known world, and it is made inaccessible to man either by its own virtues or by the petrifying river Śailodā which encircles it. To this picture the *Mahābhārata* adds some traits borrowed from the description of the Golden Age given in the Purāṇas.* For the Uttarakurus are said to feed on the juice of milk-yielding trees, and to be born as twins, of opposite sexes, who form a couple, just as was the case with primitive men in the first *kṛtayuga*. A similar tendency to ascribe to the Uttarakurus the condition of primitive mankind may be discovered in another passage of the *Mahābhārata*,† where it is stated that originally all women had sexual intercourse with whomsoever they pleased, and that this state of things still prevails in Uttarakuru.

Now assuming, as we are entitled to do, that there was in early times a race of Kurus, related to their famous namesakes in Madhyadeśa, but living outside the limits of India proper, it is easy to imagine how they came to be regarded as the Blessed and their country as a place of bliss. For people look with a kind of awe on neighbouring tribes of whom they have but slight knowledge, and they are wont to ascribe to them superior magical powers, as the Finns do to the Lapps; hence the Uttarakurus, probably, have come to be regarded as *Siddhas*, which term originally denotes one who has acquired *siddhi*, i.e. perfection or magical power, by means of *yoga*. But there was also another factor at work: almost everything connected with the Himālaya seems to partake, in some degree, of the sanctity and even divine character which the Hindus attribute to that gigantic mountain range. When, therefore, the Uttarakurus, whose memory was kept alive and heightened by the fame of their powerful relations, the Kurus of Madhyadeśa, came to be looked upon as superior to common men, their country, situated in the sacred Himālaya and hallowed by it, naturally was imagined as a kind of earthly paradise, full of wonders and free from ills, where the happiness of primitive mankind lingered on to the present day.

This theory of the origin of the belief discussed in this article appears to the present writer preferable to the older opinion, viz. that Uttarakuru was the original home of the Kurus of Madhyadeśa, and that 'the wistful recollections of it idealized it afterwards into a blissful land, where fancy gave itself free scope.' For the belief in question was not restricted to the Kurus, but was common to all Indians; and, besides, such recollections of their ancient home presuppose an intense love of their country, which seems inconsistent with the nature of half-nomadic tribes. At least no such recollections can be instanced from any other of the numerous Indian tribes who all, in some remote past, migrated to India from beyond its borders. See also STATE OF THE DEAD (Hindu).

BLEST, ABODE OF THE (Japanese).—1. The ancient native religion of Japan, Shinto, had little to say regarding a future life, and the old records or sacred books are practically silent on the subject. The clearest reference to the state of the dead occurs in the *Nihongi* (*Trans. Jap. Soc.* Supp. I. i. 296, London, 1896), where the dead Tamichi appears from his tomb as a serpent and kills his enemies. 'Therefore the men of that time said, "Although dead, Tamichi at last had his revenge. How can it be said that the dead have no knowledge?"' Shinto, in its later developments, has been influenced by Buddhism regarding the future state of the dead. The earlier texts frequently refer to an under world called *Yomi* ('darkness'), the Root-country (*Ne no kuni*), or Bottom-land (*Soko no kuni*). This neutral-tinted Hades is called 'a hideous and polluted land' (*Nihongi*, i. 24), and one prayer invokes protection against 'the unfriendly and savage beings of the Root-country' (Aston, *Shinto*, London, 1905, p. 187). But, though it is not stated to be the region of the dead, the word *yomi* appears to have been used metaphorically for the grave or the state of the dead. There are gods in Yomi, and some of them descended there after death, like Izanami, whom her husband, Izanagi, tried to rescue, according to a myth resembling that of Orpheus and Eurydice (Chamberlain, *Ko-ji-ki*, Yokohama, 1883, p. 36; *Nihongi*, i. 24; for other tales of descents to Yomi, see Aston, 106, 181; Joly, *Legend in Japanese Art*, London, 1908, p. 11). This myth may simply be a reflexion of the belief that mortals, when they died, went to Yomi. Native writers on Shinto have identified Yomi with the state or place of the dead (Dazai Jun [1680–1747], *Trans. Third Inter. Cong. Hist. Rel.*, Oxford, 1908, i. 163; Motoöri [1730–1801]; Aston, 55), but the question is obscure. Generally the gods of Yomi are divinities of death, disease, pestilence, and poverty, and in a *Norito*, or Ritual, offences are described as sent to Yomi by the god Ibuki-do nushi (Aston, 302). In later times, Yomi is regarded as a place of punishment, and is identified with the Buddhist Jigoku, or hell (Joly, 117; Aston, 54, 367).

2. Heaven.—As in most primitive forms of eschatology a difference is made between the future state of men of rank, power, and wealth, and that of the masses of the people, so it was probably in Japan. Izanagi, who was not immortal, after his futile attempt to regain Izanami, died, and went, according to one account, to an island; but, according to another, to heaven, and dwelt in the palace of the Sun. The 'plain of high heaven' is also the place where great men, heroes, mikados, and the like are said to go, there to dwell with the gods. This is in accordance with the later deification of men, whether living or dead (mikados, wise, virtuous, and heroic men), who would then be associated with the heavenly deities, as a class of lesser gods. Later Shintoism, adopting Chinese views of the soul, maintains that, at death, the *kon*, the positive spirit or *yang*, goes to heaven (Aston, 52). *Ame*, or heaven, where the gods dwell, is minutely described in the early records. It lay just over the earth, and was connected with it by the 'floating bridge of heaven' (perhaps the rainbow), and supported by a pillar, though the wind-gods are also described as the pillars of heaven. The tranquil river of heaven is the milky way, where the gods assemble. It has mountains, caves, valleys, streams, groves, fields, trees, and flowers, and all kinds of grain. The rock-cave of heaven, whither the sun-goddess on one occasion retired, is particularly referred to, as well as the rare jewels, the marvellous mirror, and the splendid robes hung on the sacred *sakaki*

tree to tempt her forth. The scenery of the 'plain of high heaven' is that of earth on a more beautiful and extensive scale. (For these details, see *Ko-ji-ki* and *Nihongi*.) Tales of mortals ascending to the sky and remaining there, either through magical powers or by divine favour, are common (Joly, 163, 295).

3. The Eternal Land.—*Toko-yo no kuni*, the Eternal Land, is sometimes spoken of as the place whither certain persons go after death, *e.g.* the god Sukunabikona and a brother of Jimmu, the first Mikado (Aston, 54, 117). This Eternal Land is sometimes identified with Korea or China. From it Tajima Mori brought a fragrant fruit, the orange. The land lay across the sea and took ten years to reach, and on his return he said, 'This Eternal Land is no other than the mysterious realm of gods and genii, to which mortals cannot attain' (*Nihongi*, i. 186–7). In a well-known popular tale the Eternal Land is identified with the palace beneath the waves of the Dragon King of the Sea.

Urashima, having rescued the king's daughter, went thither with her and remained for three years. At the end of that time he left, promising to return, and was given a box which his wife forbade him to open. Having reached his home, he found that over 300 years had elapsed and he was thought to be dead. Forgetting the injunction he opened the box, when a light puff of smoke came from it. This was his soul, and he fell dead (Joly, 382; Aston, 52).

The Eternal Land is also identified with Hōraisan, an island paradise of which Japanese legend and art have much to tell. Hōraisan is the land of everlasting life, where stands Fusan, the mountain of immortality. On it grows a wonderful tree with roots of silver, a trunk of gold, and fruits of rare jewels. The finest flowers and fruits, all unfading, grow there; eternal spring reigns; the air is always sweet, the sky always blue. The place is rarely found by mortals, though many have sought it, for it is visible only for a moment afar off.

One favourite story tells how Wasobiowe reached it after long voyaging and was met there by Jofuku, another mortal visitor, who had fled from a tyrannical emperor under pretence of seeking the herb of immortality, and had found life so pleasant in Hōraisan that he had no wish to return. Wasobiowe also remained there for two hundred years, which lapsed away as in a dream. All things remained as in a perpetual present; there was neither birth, sickness, decay, nor death. The island was peopled by wise men and beautiful women, the elect of the gods, and with them he passed the years with laughter, music, and song. But he tired of this unvarying sweetness and calm, and longed for death or escape. Finding no means of dying, for death was impossible there, he trained a giant stork to carry him, and at last fled away on its back. After many other wanderings he returned to Japan to tell of the wonders of Hōraisan (Brauns, *Jap. Märchen*, Leipzig, 1885, 146; Rinder, *Old-World Japan*, London, 1895, 79; Joly, 126, 239, 396).

4. Western Paradise of Japanese Buddhists.—Several influential sects of Buddhism in Japan, though their teaching is rejected by many other Japanese Buddhists, owe their popularity to their doctrine of the Western Paradise of Amida. This doctrine of Northern Buddhism was first introduced into Japan in definite form by the Jō-dō Shu, or 'Sect of the Pure Land,' and it is plainly expressed in one of the books of the Northern Buddhist canon, honoured and widely read by these sects, the *Hok-ke-kiō*, the Japanese name for the *Saddharma Puṇḍarīka*, an extremely rhetorical and imaginative work. The founder of the Jō-dō sect in Japan was the Buddhist saint, Hōnen (1133–1211), the fundamental tenet of his teaching being belief in the power of the saviour Amida, Lord of Sukhāvatī, the land of purity and bliss in the West. This teaching was based on that of the Chinese founder of the sect, Zendō. Entrance to the pure land of Amida after death was made to depend upon belief in, and repetition of, prayer to Amida; and this simple doctrine, easily understood, at once became popular. According to Hōnen,

'Perfect bliss Amita would not have till he knew that all who would invoke him might be saved. This is his primal vow. Every sentient being has the chance of being saved, since he is living in enlightenment. Whoever calls earnestly upon his name, will enter that realm of purity. Amita Buddha, as in a vision, he shall see coming to him, and at death he shall welcome him with all his saints; nor shall obstacles nor demons keep him back' (Anesaki, 'Hōnen, the Pietist Saint,' *Trans. Third Inter. Cong. Hist. of Rel.*, Oxford, 1908, i. 124 f.).

Even more emphatically is faith in Amida alone taught by the Shin-shiu, or 'True Sect,' which also holds out the reward of the Western Paradise, painting its delights in more attractive colours, while it teaches that not merely at death does Amida take the believer under his protection to conduct him to paradise, but even now, immediately upon his profession of belief. The Nichiren Sect, on the other hand, teaches that a man must work out his own salvation. Amida dwells in this blissful Western Paradise or Pure Land, called Sukhāvatī, as ruler of the blessed dead. In it, said Hōnen,

'There shall be no distinction, no regard to male or female, good or bad, exalted or lowly; none shall fail to have Pure Life, after having called, with complete desire, on Amita. Just as a great stone, if on a ship, may complete a voyage of myriads of miles over the great waters, and yet not sink; so we, though our sins are heavy as giant boulders, are borne to the other shore by Amita's primal vows, not sinking in the sea of birth and death' (Anesaki, i. 125).

The Pure Land is open to all who wish to be re-born there, and this blissful existence is thus made easy for all to whom the necessary discipline for the final attainment of Nirvāṇa presents endless difficulties, while it has taken the place of Nirvāṇa in practical thought. The Pure Land is thus described in the *Saddharma Puṇḍarīka*:

'There no women are to be found; there sexual intercourse is absolutely unknown; there the sons of Gina, on springing into existence by apparitional birth, are sitting in the undefiled cups of lotuses. And the Chief Amitābha himself is seated on a throne in the pure and nice cup of a lotus, and shines as the Sāla-king' (Kern, *SBE* xxi. 417).

The same work also states that any female, after reading and learning its twenty-second chapter ('Ancient Devotion')

'will, after disappearing from earth, be re-born in the world Sukhāvatī, where the Lord Amitāyas, the Tathāgata dwells, exists, lives, surrounded by a host of Bodhisattvas. There will he (who formerly was a female) appear seated on a throne consisting of the interior of a lotus; no affection, no hatred, no infatuation, no pride, no envy, no wrath, no malignity will vex him.' He becomes a Bodhisattva, his equal is not to be found in the world, including the gods, with the only exception of the Tathāgata (*ib.* 389 ff.; cf. 251–254).

Again, those who write and keep this Sutra 'shall, when they disappear from this world, be re-born in the company of the gods of paradise, and at that birth shall eighty-four thousand heavenly nymphs immediately come near them. Adorned with a high crown, they shall as angels dwell amongst those nymphs' (*ib.* 435).

Vivid descriptions of the Western Paradise abound in the larger and smaller *Sukhāvatīvyūha*, works which are of authority to the Pure Land and Shin-shiu sects (*SBE* xlix. pt. ii., Oxford, 1894). In the smaller work, birth in the Land of Bliss occurs if the name of Buddha Amitābha is merely repeated for a few nights before death; and it asserts that birth there is not a reward and result of good works in earthly life (*op. cit.* 98 f.). But in the larger work the doctrine of merit is not thus neglected. According to both works, the Happy or Blissful Land is a state where there is neither mental nor bodily pain, for pleasure is universal; the name of hell is unknown, and the length of life there is immeasurable. It is adorned with terraces, and enclosed on every side with the four gems, gold, silver, beryl, and crystal. It contains lotus lakes adorned with gems, on their banks grow trees of gems, in their waters float lotus flowers of various colours. There are great rivers of different kinds, with waters of different sweet odours, bearing up flowers of different perfumes and adorned with different gems. The dwellers there bathe in the waters, which rise exactly to the height they desire, and are exactly of the temperature they prefer. Exquisite music is

caused by the flowing of the rivers, by the trees and bells, by innumerable birds singing in concert. Every one born in that land is endowed with strength, dominion, and accumulation of virtue, and obtains dress, ornaments, gardens, palaces, and every enjoyment of touch, taste, smell, and sound. Whatever food they desire they enjoy without even tasting it. Or if they desire musical instruments, or ornaments, or a palace, these appear before them; and in such palaces they dwell and enjoy themselves, surrounded by myriads of Apsarases. Language and metaphor are exhausted in these two works to set forth the bliss of this glorious, fertile, and beautiful Paradise. Probably the original source of the conception of the Land of Bliss was the Brāhmanic teaching regarding the city of Varuna in the west, sometimes called *Sukhā*, or 'the Happy' (Max Müller, introd. *SBE* xlix. pt. ii. p. xxii). Many Japanese works have been composed on the Western Paradise of Amitābha.

See, further, Buddhist section of this article, p. 687[a].

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Persian).—The Persian tradition concerning an abode of the blest on earth has given rise to much confusion through its wide-spread interpretation as a Flood legend, an additional element of complication being the divergent theories regarding the original character of its hero, the Indo-Iranian Yama-Yima. In view of this confusion it seems best to give first, without comment, the data of the Avesta and Pahlavi literatures, then the spread of the belief to other religious systems and its possible parallel in Norse mythology, and finally to discuss the meaning of the legend.

1. Data of the Avesta, etc.—The earliest source for the Iranian legend of the abode of the blest on earth is the second part of *Vendīdād* ii., which falls into two parts, 1–20 treating of Yima and his Golden Age, and 21–43 devoted to Yima's *vara*, or enclosure, which will here be considered as constituting the abode of the blest.

This chapter may be summarized as follows (cf. also the analysis on the basis of textual criticism and the tr. by Geldner in Kuhn's *Zeitschrift*, xxv. 179–192). Yima was the first of mortals, excepting Zoroaster, to whom Ahura Mazda taught his religion (1–2); but on his confession that he was 'neither formed nor learned to remember and to sustain the faith,' Ahura Mazda urged him 'to further creatures, to increase creatures, and be the protector, guardian, and overseer of creatures,' to all of which Yima agreed, declaring that 'in my kingdom there shall be neither cold wind nor hot, neither disease nor death' (3–6). In the first 300 years of Yima's reign 'the earth was full of cattle small and great, of men, and dogs, and birds, and fires red and blazing,' so that he was compelled to go further south and enlarge the earth by a third (8–11). In 600 years he was forced to enlarge the earth by two-thirds, and in 900 years by three-thirds, still proceeding southward (12–20). Here ends the first section of the chapter. In the second part, which here concerns us more immediately, Ahura Mazda and the 'spiritual angels' meet Yima and the 'best men' in the holy region of Airyanam Vaējō, which may perhaps be identified with Azarbaijan (Jackson, *Zoroaster*, New York, 1899, pp. 193–197),* and here the Deity warns Yima (21–24) of the coming of terrible winters (on the translation of this difficult passage see Bartholomae, *Zum altiran. Wörterb.*, Strassburg, 1906, p. 98 f.). Yima is accordingly commanded to make a *vara* a *čarətu* (according to the tradition, 2 miles) square, which should serve as an abode for men and cattle, and in which should be running water in a course a *hāθra* (according to the tradition, 1 mile) long, with birds along its banks. To this *vara*, moreover, should be taken the germs of cattle, human beings, dogs, birds, fires, all animals, all plants, and all foods, and these germs should be in pairs (*miθwaire*) and undecaying 'all the time that these men shall be in the *varas*' (*varəfšva*, possibly, however, only a *plurale majestatis*); while no sort of deformity, disease, or iniquity should here be found (25–29). In the upper part of the *vara* were to be nine streets (*pərəθwō*), in the middle six, and in the lower three, the first containing 1000 germs of human beings, the second 600, and the lower 300; and the *vara* was also to have 'a shining door, having its own light on the inner side' (30) as well as 'houses, and a cellar, and a forecourt, and a bastian, and a circumvallation' (26). This *vara*, which was to be constructed by being 'stamped apart with the heels and dug asunder with the hands' (31), was accordingly made by Yima (32–38). The illumination of the *vara* was from 'lights self-determined and world-determined (*i.e.* eternal and transitory). Only once (each year) does one behold the setting and the rising stars, and moon, and sun; and they think that what is a year is (but) a day. When 40 years have elapsed, from two human beings are born two human beings, twins, both male and female; so (also) of them that are of animal kind. And these human beings, who are in the *vara* that Yima made, live with most happy life' (40–41). The religion of Ahura Mazda was brought to the *vara* by the bird Karshiptar (the spiritual lord of all birds and acquainted with speech; cf. *Būndahišn* xix. 16, xxiv. 11), and the temporal and spiritual lords are Urvataṭ-nara (one of the three earthly sons of Zoroaster and the head of the agricultural class; cf. *Būndahišn* xxix. 5, xxxii. 5) and Zoroaster himself (42–43).

The remaining Avesta material of relevance in the present connexion adds little to the main source just summarized. Airyanam Vaējō is described as the first country created by Ahura Mazda (*Vendīdād* i. 2), and in it, as a region pre-eminently holy, sacrifice was offered by Zoroaster (*Yašt* v. 104–106, ix. 25–27, xvii. 45–47; see also Jackson, *loc. cit.*), and even by Ahura Mazda (*Yašt* v. 17–19, xv. 2–4); and there are a number of allusions to the Golden Age of Yima's reign, though the first section of *Vendīdād* ii. shows that this Golden Age is a tradition separate originally from that of the *vara*, to which it forms a *quasi*-prelude (see *Yasna* ix. 4–5; *Yašt* ix. 8–11, xv. 15–16, xvii. 28–31, xix. 32–33; *Aogemadaēčā*, 94–95; cf. also the Pahlavi *Jāmāspjī-Nāmak*, ed. and tr. Modi, Bombay, 1903, p. 113 f.).

The Pahlavi literature adds considerable information to our knowledge of the Persian abode of the blest on earth. The account given in *Vendīdād* ii. is summed up briefly in *Dīnkarṭ* VII. i. 20–24. *Būndahišn* xxix. 14, states that '[the enclosure] formed by Yim is in the middle of Pārs, in Sruvā; thus, they say that what Yim formed is below Mount Yimakān' (see West, *SBE* v. 120, note 5, and Justi, *Bundehesh*, Leipzig, 1868, p. 143); but *Dīnā-ī Māīnōg-ī Khraṭ* lxvi. 15–19, says that 'the enclosure formed by Yim is constructed in Aīrān-vējō, below the earth'* (so also *Būndahišn* xxxii. 5, and the Persian *Rivāyat*, ed. and tr. Sachau, *JRAS*, 1868, p. 229 ff., esp. p. 253), adding that there men lived 300 years. The same treatise describes the blessedness of Airyanam Vaējō (xxiv. 17–35), where, despite the evils of many serpents and ten months of winter, men live 300 years, with one child every 40 years, keeping the primitive faith, and virtuous.

The real *crux* in the interpretation of the *vara* is constituted by the passages *Dāṭistān-ī Dēnīk* xxxvii. 94–95; *Dīnā-ī Māīnōg-ī Khraṭ* xxxvii. 27–31; *Bahman Yašt* iii. 55 (and its Persian paraphrase; cf. West, *SBE* v. p. lix); *Dīnkarṭ* VII. ix. 1–4, and *Jāmāspjī-Nāmak*, tr. Modi, p. 118.

The most complete of these passages, with which all the rest agree, is *Dāṭistān-ī Dēnīk* xxxvii. 94–95 (tr. West, *SBE* xviii. 109 f.): 'One (of the proofs of the ultimate triumph of Ahura Mazda over Ahriman) is this, that is, even that prodigious devastation of which it is declared that it happens through the rain of Malkōsh, when, through snow, immoderate cold, and the unproductiveness of the world, most mortals die; and even

* Airyanam Vaējō is also identified by Darmesteter (*Le Zend-Avesta*, Paris, 1892–93, ii. 5–6) with Arrān, the modern Karabagh in Trans-Caucasia, and by Marquart (*Ērānšahr*, Berlin, 1901, p. 155) with Chorasmia; but, as Bartholomae very pertinently remarks (*Altiran. Wörterb.*, Strassburg, 1904, col. 1314), 'es ist nicht zu bestimmen, wohin man es verlegt hat.'

* West (*SBE* xxiv. 109, note 8) takes this to imply 'that its position could no longer be discovered on earth.' The passage *Vendīdād* ii. 31–32 should, however, be considered in this connexion.

the things attainable by mortals are attended with threatenings of scarcity. Afterwards—as among the all-wise, preconcerted remedies of the beneficent spirit such a remedy was established that there is one of the species of lands that is called "the enclosure formed by Yim," through which, by orders issued by Yim, the splendid and rich in flocks, the son of Vivangha, the world is again filled—men of the best races, animals of good breeds, the loftiest trees, and most savoury foods, in that manner came back miraculously for the restoration of the world; which new men are substituted for the former created beings, which is an upraising of the dead.'

The tables of Zoroastrian chronology drawn up by West SBE xlvii. 28–31) show that the accession of Yima took place *anno ante religionem* 2717=3347 B.C., that he was slain *anno ante religionem* 2000=2630 B.C., and that the winter of Malkōsh (Avesta Mahrkūša) was to take place in the century *anno religionis* 1400–1500=A.D. 770–870, so that the *vara* of Yima would have lasted over 3500 years.

2. **In other religious systems.**—The legend of Yima's *vara* was borrowed by Mandæanism, and has also been claimed to exist in Judæo-Christian apocalyptic literature. In the former system, according to oral traditions collected by Petermann and Siouffi (Brandt, *Mandäische Religion*, Leipzig, 1889, p. 154), the earth, after the depopulating catastrophes of the end of the world, will be re-peopled from משוני כושטא, a mysterious and invisible, but transitory, locality upon the earth, where dwell perfectly righteous, religious, and happy men who die without pain. Other sources locate this mystic world either beyond the northern mountain range, or, as in the scanty and late allusions in the *Genzā* (r. 29, 18; 302, 18; 338 ult.–339, 5), regard it as floating in the clouds (Brandt, *op. cit.* pp. 37 f., 53, 60 f.). In this Mandæan משוני כושטא Brandt (*op. cit.* p. 154) sees, probably rightly, a reminiscence of Yima's *vara*. As regards the Judæo-Christian borrowing, it will be sufficient to refer to Böklen, *Verwandtschaft der jüd.-christl. mit der pars. Eschatologie*, Göttingen, 1902, pp. 136–144, who mentions Commodian's *Instructiones*, II. i. 20 ff., and *Carmen apologeticum*, 941 ff., the *Narratio Zosimi*, ch. 10, as well as the *Ethiopic Conflicts of the Holy Apostles*, even though it seems to the present writer that the resemblances here noted by Böklen are too general in character, and too near akin to what would naturally occur to one describing a place of ideal bliss, to be positively claimed as borrowed from Iranian belief. An analogue to the legend of Yima's *vara* has been sought, as common property of the Indo-Germanic peoples, by Rydberg (*Teutonic Mythology*, Eng. tr., London, 1906, pp. 306–390, esp. pp. 379–388) in Norse mythology. With the *vara* he compares the Norse *Jörð lifanda manna* ('earth of living men'), or *Ódáinsakr* ('acre of the not-dead'), a land either subterranean or on the surface of the earth, but in either case almost impossible for living men to reach. In this realm, which was ruled by Gudmund (Mimir) and enclosed by bulwarks that no disease, death, or age could surmount, and where none could die, men lived many generations (cf. also Meyer, *German. Mythol.*, Berlin, 1891, pp. 126 f., 134 f.). Furthermore, the final cataclysm will be preceded by the *fimbolvetr*, a three years' winter with no summer, during which Líf and Lífthrasir ('Life' and 'Immortality') conceal themselves in Hoddmimer's grove, whence, after all the rest of mankind have been destroyed, they will emerge and re-people the earth (Söderblom, *La Vie future d'après le mazdéisme*, Paris, 1901, pp. 204–221; de la Saussaye, *Religion of the Teutons*, 1902, p. 351 f.; see also below, p. 709 f.). While Christian elements have almost certainly been incorporated in this Norse account (de la Saussaye, *loc. cit.*; Meyer, *op. cit.* p. 163), and though it would be, in the present writer's opinion, a scarcely warranted assumption to suppose that the Norse and Iranian traditions form part of an Indo-Germanic religion, it may be, nevertheless, that the two legends of an earthly abode of the blest serve to illustrate each other. Arising independently and under different conditions, they might yet be parallel in their psychological development.

The most important question of parallelism, however, is with India. Yima, as is well known, is an Indo-Iranian figure, finding his counterpart in the Indian Yama (cf. Spiegel, *Arische Periode*, Leipzig, 1887, pp. 243–256). The original nature of Yama has been the subject of much speculation (cf. the data and references in Macdonell, *Vedic Mythology*, Strassburg, 1897, pp. 171–174); but, in the writer's opinion, it may be regarded as admitting of little doubt that, whatever theosophical and even astro-mythological attributes were given him, he was, primarily, as the *Atharvaveda* (XVIII. iii. 13) says, 'he who of mortals was the first to die' (*yo mamāra prathamo mārtyānām*). He is thus the king of the dead (*Rigveda*, IX. cxiii. 7 ff., X. 14), for whom 'may Yama there mete out abodes' (*'trā yamaḥ sādanā te minotu*, X. xviii. 13), 'there' obviously being his realm in 'the inmost recess of the sky' (*avarodhanaṁ divaḥ*, IX. xiii. 8). But this realm of 'King Yama' is not the *vara* of Yima, the one being celestial, and the other, as we have seen, terrestrial. The two have in common only the one point, that Yama-Yima is their king, the nexus evidently being that, to the Indian, Yama, as the first mortal, is king of all who later die; while, to the Iranian, Yima, as the primeval man, fittingly was king in the Golden Age, and so ruler of the abode of the blest as well.

The *vara* of Yima has, however, been brought into direct connexion with Indian legend by Reinaud (*Mémoire sur l'Inde*, Paris, 1849, pp. 346–350), who identifies it with the mythical city of Yamakoṭi ('Yama's Castle'), mentioned in late Sanskrit astronomical works. This material is summarized by al-Birūnī (*India*, tr. Sachau, London, 1888, i. 267 f.), who states, on the basis of the Hindu astronomers, that 'in the four cardinal directions with relation to this line [which divides the earth into dry and wet halves] there are four great cities: Yamakoṭi in the east, Romaka [Rūm, Byzantium] in the west, Laṅkā [usually identified with Ceylon] in the south, Siddhapura [a mythical "City of the Blest"] in the north. . . . When the sun rises over the line which passes both through Meru and Laṅkā, that moment is noon to Yamakoṭi, midnight to the Greeks, and evening to Siddhapura. . . . A man in Yamakoṭi observes one identical star rising above the western horizon, whilst a man in Rūm at the same time observes it rising above the eastern horizon.' Yamakoṭi is the antipodal point to Rūm (*ib.* pp. 272, 303), and 'is,' according to Ya'qub and al-Fazārī, 'the country where is the city Tāra [Reinaud would read Bārah (=Vāra) for Tāraḥ, *i.e.* بارہ for تارہ] within a sea. . . As *koṭi* means "castle" and Yama is the angel of death, the word reminds me of Kangdiz, which, according to the Persians, had been built by Kai Kā'ūs or Jam [Yima] in the most remote east, behind the sea, . . . for *diz* means in Persian "castle," as *koṭi* in the Indian language' (*ib.*, p. 303 f.). Kangdiz (the Kanha of *Yašt* v. 54) is, however, distinctly described as separate from Airān-vēj, so closely associated with the *vara* (*Būndahišn* xxix. 4 f., xxxii. 5; *Dinā-i Māīnōg-i Khraṭ* lxii. 12–15; *Sad Dar* x. 7), and as 'in the direction of the east, at many leagues from the bed of the wide-formed ocean towards that side' (*Būndahišn* xxix. 10). Hyde (*Hist. religionis veterum Persarum*, Oxford, 1700, p. 173) records, from a manuscript of the *Almagest*, a mythical city of Jamgard ('City of Yama=Yima') on the equator to the extreme east; and Abul Fidā describes Jamkūt, or, as the Persians called it, Jamgard, as on the equator, to the extreme east, and antipodal to the (classical) Islands of the Blest (Reinaud, p. 350). Yamakoṭi seems to the present writer to be a specifically Indian development. At all events, the data do not appear to him to warrant any real connexion or kinship between Yamakoṭi and Yima's *vara*—the location is too different, the chronological difficulties in any hypothesis of connexion are too great, and the development of Yama and Yima in India and Iran is too divergent from the Indo-Iranian period onward to render plausible the theory of actual relationship of the two mythical places, which, after all, can no more be localized than can the 'seacoast of Bohemia.'

3. **Meaning of the legend.**—The view is widely current that the story of Yima and his *vara* is a legend of the Deluge—a theory defended with much learning by Kohut (*ZDMG* xxv. 61–68), Usener (*Die Sintflutsagen*, Bonn, 1899, pp. 208–212), Geldner (Kuhn's *Zeitschrift*, *loc. cit.*), Winternitz ('Flutsagen des Alterthums und der Naturvölker,' in *Mittheilungen der anthropol. Gesellschaft in*

Wien, xxxi. 328 f.), Darmesteter (*op. cit.* ii. 19 f., iii. pp. lviii–lx), and Lindner ('Die iran. Flutsage,' in *Festgruss an Rudolf von Roth*, Stuttgart, 1893, pp. 213–216). This hypothesis is untenable, as has been shown by Bishop Casartelli (*Philosophy of the Mazdayasnian Religion under the Sassanids*, Eng. tr., Bombay, 1889, p. 198 f.), and especially by Söderblom (*op. cit.* pp. 167–222, where will be found a rich collection of parallels and full citation of authorities on both sides). Not only is the *vara* of Yima eschatological in purpose, and existing for centuries, but certain other chosen heroes, as Windischmann observes (*Zoroastr. Studien*, Berlin, 1863, pp. 244–249), are also immortal on this earth (*Bündahišn* xxix. 5 f.), though their domains do not constitute, merely because of their personal immortality, any abode of the blest.

The Iranian legend of Yima, who is far more real than his Indian counterpart, is, in the present writer's opinion, more primitive than the Vedic view itself, even though the Iranian records are, in their present form, of a late period, probably a round millennium posterior to those portions of the *Rigveda* which deal with the apotheosized Yama. The Iranian tradition may also be of more than eschatological significance, for it would seem to be a blending of two *motifs*, the Golden Age and the Abode of the Blest, plus a migration tradition of distinct value. The first two *motifs* have already been sufficiently discussed, but a brief note may be appended on the story as a migration legend. Airyanam Vaējō, the scene of the Golden Age of Yima (see above, p. 702^{b}), was, despite its sanctity and beauty, a land where, as the *Vendīdād* states (i. 3), 'there are ten winter months, two summer months. . . . There is the centre of winter, there the heart of winter.' From this region, according to *Vendīdād* ii., Yima, after 600 years, was forced by increase of population to go southward, and to repeat the process after 900 years. This can be explained only as the southward migration of the Iranians (very probably, indeed, of the Indo-Iranians), and it would seem as though the tradition which locates the *vara* in 'the middle of Pārs' marks this place as the centre of the Iranian peoples when they ceased their wandering. At the same time Airyanam Vaējō was retained in memory as the realm of the Golden Age, and in it, by a transfer of thought which would not be unnatural, was localized the *vara*, the abode of the blest. The migration thus suggested would serve to confirm the theory, now so generally held, of the wandering of the Indo-Iranian stock from the early home of the Indo-Germanic races in Europe through Armenia into north-western Persia, and so south through the mountain passes leading to the Panjāb. This wandering, too, accounts for the fame of Yima as a builder of cities, among them Sārū or Hāmadān, Ctesiphon, and the ruin still known as the Taḫt-i Jamšīd, or 'Throne of Jamshīd,' at Persepolis (Justi, *Iran. Namenbuch*, Marburg, 1895, p. 144; Windischmann, *op. cit.* p. 36; Mirkhond, *Hist. of the Early Kings of Persia*, tr. Shea, London, 1832, p. 104 f.; Jackson, *Persia Past and Present*, New York, 1906, p. 310).

LITERATURE.—This has been given in detail in the article.

LOUIS H. GRAY.

BLEST, ABODE OF THE (Semitic).—In the earliest period known to us the dead were all thought to go irrevocably into the under world, and to remain there perpetually. The life of the under world was most gloomy and unattractive, and it was shared alike by all, regardless of their conduct in this life. Among the Semites this view prevailed until within a century or two of the Christian era. While this conception was entertained, the 'blest' were believed to be those happy primitive men who had lived in the Golden Age, when there was no sin or misery, and when the gods had been on familiar terms with men. Men had then dwelt in the abode of the gods.

The earliest literary expression of this view is found in Gn 2 and 3, a part of the J document (9th cent. B.C.). Some of the material of this document is, however, far older, and reflects as its still recognizable original the picture of a primitive Semitic oasis in Arabia. The garden is the oasis. It is known to be the dwelling of deity by the striking contrast between its luxurious vegetable life and the surrounding desert. The tree of knowledge and of life grows in its midst. This is the palm.* God comes and walks there as in a park; there man and woman dwell without labour or suffering. God, men, and animals form one primitive community, and each talks with the others. Men have not yet begun to beget children or to wear clothing. In other words, the state of blessedness here pictured is thought to be anterior to the dawn of civilization. There are many reasons for believing that this conception is a half-distorted recollection from primitive Semitic days. It corresponds with the main features of that primitive Semitic civilization in which a cult peculiarly Semitic was evolved. Traces of this cult are found in every Semitic nation.† Some of the conceptions of this primitive paradise are also traceable in widely separated Semitic sources. The conceptions just described are found in the earlier stratum of the Biblical story (for there are two strata, one by J^1 and the other by J^2). This older stratum consists of Gn $2^{4b-9.\ 15-25}$ $3^{1-19.\ 21.\ 23}$. In this form of the narrative there was but one tree, and the only indication in this portion that the story had anything to do with Babylonia is the fact that the garden is called 'Eden,' a word evidently identical with *edennu*, the Bab. word for alluvial plain. In the portion afterward added by J^2 (Gn 2^{10-14} $3^{22.\ 24}$), the garden is definitely located in the region of Babylonia by the mention of the Tigris and Euphrates rivers.‡

Although the Babylonian literature thus far recovered contains no complete story parallel to this one, many of the elements of this narrative are found in Bab. poetry and art. Thus in the Gilgamesh epic there is a story of a primitive man, Eabani, who was made, like Adam, of a bit of earth or clay, and who lived a primitive life, without clothing, among the animals until he was enticed away by a woman (cf. *KB* vi. 121–129). The palm as the sacred tree appears in various forms, sometimes naturally drawn, and sometimes greatly conventionalized, in all periods of Bab. and Assyr. art, from archaic seals to late palace decorations. From Eridu, where there was a sacred palm tree, comes the story of Adapa, who was defrauded of food which would have made him like a god (cf. *KB* vi. 93–101). The cherubim, which in Genesis guard the entrance to Eden, have their counterpart in the winged lion and bull deities which in Mesopotamia guarded the entrance to palaces and temples. It is clear, therefore, that the elements of this primitive story were known in Babylonia. Perhaps the original story reached the Hebrews by way of that country,

* See Barton, *Semitic Origins*, 93–96.

† See Barton, *op. cit.* chs. iii.–vii.

‡ As to the identity of Gihon and Pison, views diverge. Delitzsch (*Wo lag das Paradies?*) identified these with two canals, one of which was near Babylon, holding that Cush was the Kassite country to the east of the Persian Gulf. Haupt (*Ueber Land und Meer*, 1894–1895, No. 15) identified the Pison with the Red Sea and the Gihon with the Nile, regarding Cush as Nubia. Hommel (*Aufsätze und Abhandlungen*, 326–340) identifies all the rivers except the Euphrates with wadys in Arabia. Gunkel holds all the rivers to be heavenly rivers suggested by the Milky Way (*Genesis*, p. 33).

for the primitive oasis is changed into a garden, the name of which is Babylonian.

It seems that a form of this story was naturalized at Tyre—a form in which Tyre, or the temple there, was regarded as Paradise. Our witness to this is the prophet Ezekiel (28^{12-17} $31^{8.9}$). As the story was preserved in Tyre, or at least as Ezekiel conceived it, Paradise was a garden, but it was situated on a mountain. Its tree was no longer a palm, but a cedar. In this garden were many precious stones, and, if we may connect with it Ezekiel's description of a holy mountain in ch. 47, a river flowed out of it. Ezekiel's picture modifies the primitive conception of the oasis still more than does the account in Genesis. It corresponds strikingly to the description of the sacred abode of Humbaba, the god of Elam, in the fifth tablet of the Gilgamesh epic. In connexion with that was a grove of sacred cedars. Out of the mountain on which it was situated a sacred river ran, and here divine voices were heard (cf. *KB* vi. 437, 441, 573). Cuneiform inscriptions recovered at Susa in recent years show that the sign for cedar tree was there a part of their deity's name. Probably this portion of the epic, or the story which lies behind it, had influenced the Tyrian conception of Paradise. This primitive paradise was thought by both Babylonians and Hebrews to have been lost by the dawn of civilization. In Genesis a serpent tempted woman to eat the fruit of the sacred tree, and she effectually tempted man. The motive is that they may become like gods, knowing good and evil. 'Knowing good and evil' in Dt 1^{39} is equivalent to having reached the age of puberty. The result of the sinful act of Adam and Eve is that they perceive that they are naked, *i.e.* become conscious of sex. Clothing is invented, and child-bearing begins.* It is clear, therefore, that this story connected the loss of the Golden Age with the dawning of the consciousness of sex. The Midrash Rabba, *Genesis*, § 20, holds that the serpent was an emblem of the sexual passion. Their sacred tree, the palm, was also bi-sexual, and its fertilization was a sacred act.† Whether the serpent and the tree were or were not consciously used because of symbolic significance, one element in the Biblical story—and it is the most important element—was the idea that primitive paradise was lost by the union of man and woman.‡ The story of Eabani, quoted above, shows that this conception was present in Babylonia also. Probably, therefore, this was the primitive Semitic view.

In Babylonia there was also another conception of the abode of the blest. It is found in a document much older than the J narrative, but it is culturally of a later origin than the story of Paradise. According to this conception the abode of the gods is an island in the sea. On this island Par-napishtim, the hero of the Bab. deluge, and his wife had been admitted to dwell, and thither Gilgamesh was permitted to make a journey, from which he returned. The road to this island was a long journey, in the course of which one came to a great pass in the mountains of *Mashu*. This was guarded by scorpion-men. After this pass came a long road of midnight darkness. At last one came out to a 'park of precious stones,' after which a bitter river had to be crossed. Next came the 'waters of death,' beyond which the divine island lay (*KB* vi. 211-229). It was formerly thought that the *Mashu* mountains were to be looked for in Arabia, as was the 'park of precious stones,' that the 'bitter river' was the Persian Gulf, that the 'waters of death' were the Arabian sea, and that the happy isle lay to the south-east of Babylonia (cf. *KB* vi. 467, 469. 473). Jensen, however, has proposed a different view. He now holds that the mountains of *Mashu* were the Lebanon and Anti-Lebanon ranges; that the 'park of precious stones' was on the Phœnician coast; the Mediterranean was the 'bitter river'; the 'waters of death' lay to the westward of the Straits of Gibraltar; and the abode of the gods was in the Atlantic Ocean (cf. *KB* vi. 575 ff. and *Gilgamesch-Epos in der Weltliteratur*, i. 24, 34, and Map ii.). This view has been accepted by Zimmern (*KAT*² 573 ff.). One strong reason in Jensen's mind for this view is his belief that the Gilgamesh epic is based on a sun myth, and the sun travels from east to west. Gilgamesh was told, it is true, when he was desirous of crossing the dreadful waters, that only Shamash (the sun) crossed them. In favour of Jensen's view, too, is the fact that Ezekiel speaks of a garden in which are precious stones at Tyre. This would correspond to Jensen's location of the 'park of precious stones.' The conception of the abode of the blest just outlined is intermediate between that embodied in the story of the Garden of Eden and that which is described below. The story of primitive Paradise held that man once had a blest abode with the gods on earth, but had lost it. The Par-napishtim and Gilgamesh stories hold that it is still possible that one or two ancient heroes may have attained the happy isle, and found a blest abode with the gods.

A third view as to the abode of the blest on earth developed among the Jews in the two centuries before Christ, in connexion with the Messianic hope. It was believed that the Messianic kingdom would be established, but the living Israelites to enjoy it were but few in comparison with the great host that had died. The author of Is 26, therefore, writing about B.C. 334, declared that departed Israelites should be raised from Sheol (Is 26^{19}) to share in this kingdom. This reversed the time-honoured conception with reference to the dead, and was by no means universally accepted, as Ps 88^{10} and 115^{17} show. It was, however, accepted by the author of Enoch 1-36, who wrote B.C. 200-170, and who thought that dead Israelites would be raised to enjoy a Messianic kingdom of peace and justice. This kingdom on the earth would in itself be an abode of the blest. Its capital was to be at Jerusalem (25^{5}). Those who attained it would enjoy lives like the patriarchs (25^{6}), or everlasting lives (5^{9}), though 'ever lasting' is elsewhere defined as five hundred years (10^{10}). (For later conceptions of the Messianic kingdom as an abode of the blest on earth, see MESSIAH and KINGDOM OF GOD.)

When the Messianic kingdom would come, however, was uncertain, and this writer accordingly conceived of another earthly abode for the blest until the resurrection should occur. In ch. 22 he gives an extended description of the under world. This he pictures as divided into four parts. One of these is for the very wicked, another for the less wicked, another for the good, and the last for the supremely good. There are thus thought to be two subterranean abodes of the blest in Sheol. All these dead, except the very wicked, are to be raised. Sheol is but a temporary abode for all except the most desperate; but while there the good enter in some degree upon their delights, and the wicked upon their torments. Although this elaborate

* See Jastrow, 'Adam and Eve in Babylonian Literature,' *AJSL* xv. 193-214; Barton, *Semitic Origins*, 93 ff.; and Whatham, 'The Outward Form of the Original Sin,' *Amer. Jour. of Rel. Psychology*, i. 268-287.

† Barton, *op. cit.* 78 ff., 92 ff.

‡ The word 'Paradise,' by which Eden is frequently called, is of Iranian origin. In Avesta it is *pairi-daêza*, 'encircling wall' (Vend. iii. 18). It passed into Neo-Babylonian, Aramaic, post-Exilic Hebrew, Neo-Hebrew, Armenian, Persian, Kurdish, Greek, and Arabic as a word for a park or splendid garden. In the OT it is found in Neh 2^{8}, Ca 4^{13}, Ec 2^{5}.

division of the under world into four parts is found in no later writer, the conception that the righteous, while waiting there, entered upon their anticipated enjoyments, appears in at least one later apocalypse (cf. 4 Ezr 7^{75-101}).* This abode of the blest was, however, temporary; they occupied it only while awaiting the resurrection. In later Judaism, the abode of the blest is thought to be in a Messianic kingdom of so supernatural a character that it can hardly be called earthly, and it is often thought to be in heaven, while in the Qur'ān Paradise has become altogether heavenly. The conceptions of the Jewish heavenly abode combine elements from the earthly Garden of Eden with elements taken from the sacred city, Jerusalem, while the Muhammadan Paradise is a transfigured oasis.

Amid the tangle of conceptions met with in Egypt, where myths from the different nomes mingled inextricably after having kept their separate existence for many centuries, four conceptions as to the abode of the blest can be traced. None of these preserves, like the primitive Semitic story of Paradise, the memory of a far-off oasis. The people of each nome seem to have thought that their god created the world and mankind, and all thought of man as having always lived by the Nile (cf. Maspero, *Dawn of Civilization*, 156 ff., and Steindorff, *Religion of the Ancient Egyptians*, 35 ff.). In Egypt, however, there was thought to have been a Golden Age, when the gods lived on familiar terms with men, and men were happy and blest. This age of gods and demi-gods corresponds in general to the Semitic traditions of Paradise. Two other conceptions place that abode of the blest on earth, while the third puts it in the heavens. We are concerned here only with the earthly abodes.

According to the earliest of these, the dead lived in the cemeteries, which were for the most part on the edge of the desert to the west of the Nile, and were veritable cities of the dead. There they formed communities by themselves, each ruled over by a special spirit or deity. Life here was lived under the same conditions and the same form as life in the land of the living. Each needed his body, which was preserved by mummifying, and each needed food, drink, and the various utensils which had been of use in life. Death had, however, petrified all—the child remained a child; the man, a man; the greybeard, a greybeard. The same organization existed there which existed among the living—the man ruled the wife, was served by servants, performed the same duties and engaged in the same recreations as when alive. For the most part the dead remained in the narrow confines of their own city, but by day they might leave their narrow house to roam over the earth. They were then subject to the same dangers of attack from enemies, poisonous snakes, scorpions, and crocodiles as when alive. The dead grudged the living their happiness, and at times came back to interfere with them. Their great opportunity was sickness, when special charms were needed to ward off their influence.†

This conception made no distinction between the good and the wicked dead. It regarded all as going to one place. It corresponds with the non-ethical conception of the early Semites, except that the abode of the dead was placed in the western desert instead of in the under world. Another Egyptian conception, also non-ethical, regarded the abode of the dead as in the under world. Beneath the flat earth lay another region called *Duat*. By day this region was dark and gloomy; but at night, when the sun had set upon the earth, this nether land was illuminated by its rays. Like Egypt, it was characterized by the flowing of a long river through its midst, on either bank of which were deep caverns in which the dead dwelt. When the sun arrived in this land at night, there was thought to be great rejoicing. 'The departed who are in their halls, in their caverns, praise the sun; their eyes are opened, their heart is full of felicity when they behold the sun; they shout for joy when his body is over them.'* It was only as the Osiris myth transformed early Egyptian ideas of eschatology that an ethical element was introduced, and an abode of the blest, as distinguished from the wicked, was conceived. The idea of its location was, however, indistinct. It was sometimes placed vaguely in the West, but was more often thought to be in heaven.

GEORGE A. BARTON.

BLEST, ABODE OF THE (Slavonic).—The ideas of the pagan Slavs concerning the state of the dead are known to us only from indirect testimony and from the evidence of surviving folk-belief. While some mediæval chroniclers deny that the Slavs had any conception of a future life (which is unlikely), others freely assert it, and there is no reason to doubt the existence of definite beliefs on the subject (see Schafarik, *Slav. Alterthümer*, Leipzig, 1843, i. 538; ANCESTOR-WORSHIP [Slavonic]). Three existing words denote the abode of the dead—*Nav*, *Raj*, and *Peklo*. The two last now denote heaven and hell respectively, but *Raj* evidently denoted originally a pagan paradise. *Nav* denotes the place of the dead in one chronicler, who says that 'Krok went into the *Nav*,' while the god of the dead, or Pluto, is called *Nya* by the Polish chronicler Dlugosz, who says that the people ask him to carry them after death 'in meliores inferni sedes.' *Nav* may have denoted the abode of the dead in its general aspect. *Peklo*, though it now means hell, seems originally to have denoted a subterranean place of warmth. *Raj* is still known as the eastern home of the sun beyond the ocean, perhaps an island, where the souls of little children dwell, playing among the trees and gathering golden fruits. Spirits not yet embodied and spirits after their disembodiment also live there. It is the place where birds and insects go in autumn, and there are stored the types and seeds of all things on earth. No winter or cold winds are known there. These are the reflexion of earlier pagan ideas of paradise. Folk-belief also speaks of the Isle *Buyán*, itself synonymous with *Raj*. It also is the home of the sun, as well as of the mythological personifications of nature powers, of mythical animals, *e.g.* the snake older than all snakes, and of the divine maiden Zaryā, who sits under a dripping oak. Here is also the magic stone Alatuir, referred to in many charms, from beneath which flow mystic rivers with healing powers. A

* See Steindorff, *op. cit.* p. 126 ff.

sacred city hidden beneath deep waters, reached by 'Baty's road,' and inhabited by the Holy Elders (the dead), is spoken of.

But there must also have existed ideas of a mountain abode of the dead or a heavenly paradise reached by a mountain of glass or iron, difficult to climb. The nail-clippings of the dead man, or bear's claws, were buried with him to enable him to climb it. Among the Poles exists the belief that lost souls must climb it as a punishment; when they have reached the summit, they slip down again (Grimm, ii. 836). According to some forms of this myth, the glass mountain crowned with a golden palace stands in the midst of a great orchard in the paradise of souls, and they ascend it by means of the bear's claws (Mannhardt, *Germ. Mythen*, Berlin, 1858, p. 330). The mountain recurs in Slavonic and other European folk-tales, in which the hero rescues a princess, or gains the hand of a fair being from its summit (*CF*, p. 442).

Certain folk-tales, peculiar to the Slavs, speak of a mysterious land above the sky, wherein dwell beings or animals of supernatural character and magic power, while in this land are great wealth, many magical objects, and abundance of food. Thus one story describes it as possessing a mill which gives out pie, cake, and a pot of stewed grain; another, a hut with walls of pancakes, benches of white bread, and a stove of buttered curds. In another the stove is garnished with sucking pigs, geese, and pies, and everything which the soul can desire. This sky-land is visited by mortals who climb up a magical bean- or pea-stalk, or a great oak, as in our Jack and the Bean-stalk tales, and generally the visit is resented (Ralston, *Russ. Folk-Tales*, London, 1873, p. 291 ff.; *CF*, p. 435). This upper world of riches and plenty is not said to be an abode of the dead, but the tales may have been derived from pagan conceptions of an Elysium in the sky, where the gods and the blessed dwelt. This is also suggested by the belief, still current, that the soul must make a journey after death, across the sea, on foot, or by the rainbow or the Milky Way, to the region of the dead. The two last are obvious survivals from pagan beliefs regarding a journey to a heavenly paradise.

Rites in honour of the dead, still in use, include chants of a purely pagan character, in which the souls, having eaten and drunk, are begged to return to heaven. In pagan times the burial rites were all-important, as, until they were completed, the dead could not start on their long journey. Existing funeral songs and tales show that the beliefs regarding the state of the dead were of different character, or were perhaps held simultaneously. The dead continue to dwell in the grave (an idea which passes over into the vampire belief [see VAMPIRE]), or wander round their old home, or exist in a separate region. But, whatever beliefs were held, the state of the dead was apparently of a sensuous character. Married people continued to dwell together, and to a dead bachelor a maiden was allotted to be his wife in the other world. In such a case she was formerly put to death (cf. Schrader, *Totenhochzeit*, Jena, 1904, and see above, p. 22 f.).

The belief in a happy eastern region of perpetual warmth and light beyond the ocean in the place whence the sun came was widely current among the Slavs. Such a belief is still found; and this region is sometimes thought to be tenanted by the Rakhmane, who abstained from flesh, and led a holy life. The Rakhmane are obviously the Brâhmans, and the traditions may be derived from apocryphal writings.

J. A. MACCULLOCH.

BLEST, ABODE OF THE (Teutonic).—
1. Introduction.—The hints supplied by myth, folk-belief, and occasional passages of existing texts, suggest that, in earlier times and probably for a long period, the state of the dead was not definitely formulated in Teutonic belief. The funeral *mobilier* as well as statements in the texts regarding burial shows that life after death continued the life on earth. The dead may have been supposed to dwell in the tomb, and the soul to flit in the air or to frequent the grave, while souls of warriors continued to fight in the air. Conceptions of a more permanent sort may, however, have arisen quite early and ultimately gained ground. When the dead were committed to the waves, this suggests that their abode was over-sea, and the passage in Procopius (*de Bello Goth.* iv. 20) about fishermen, subject to the Franks, rowing souls over by night to Brittia, may be a reminiscence of such a belief. But we find also a more general belief in the dead living in their barrows or burial-mounds, or in hills—they 'die into the hills.' There they feast in happiness, and occupy themselves with the good of their surviving kindred, and their presence in these howes, or hills, is a source of blessing to the neighbourhood (Vigfusson and Powell, *Corpus Poet. Boreale* [= *CPB*], Oxford, 1883, i. 415 ff.). Nor is it unlikely that some of the gods, *e.g.* Odin, had also their abode at first there, several mountains being sacred to Odin (Grimm, i. 152). Odin was especially the god of dead warriors, and their abode may at first have been with him in hills, since later tradition represents great heroes as slumbering in hills, sometimes, as in the case of King Charles, in the Odenberg, with Odin (Grimm, iii. 953 ff.). These heroes may represent the dead warriors of pagan belief, or the gods themselves considered as mountain-dwellers. Again, the souls of dead warriors are seen issuing from and returning to a mountain (*ib.* 954). Thus the warrior host in the mountain may be an earlier form of the warrior host in the heavenly Valhalla (Simrock, *Handb.* 189).

In the Elder and Younger Eddas the conceptions of Hel, the under world of the dead, and Valhalla, the warriors' heavenly abode, are met with. Both may have been developed from the belief that the dead lived a subterranean existence in the barrow or in hills. Hel, 'the hollow place,' would be an extension of the hollow hill or barrow, and a similar development of the under world from the grave is met with in Celtic belief (see CELTS), while the transition from a hill as the abode of warriors to a sky-Valhalla would easily be made, the sky being frequently supposed to rest on hills.

Vigfusson and Powell consider that the idea of Hel as the abode of the dead cannot be clearly reconciled with the early belief in the dead living in their barrows (*CPB* i. 420). Rydberg (*Teut. Mythol.*, London, 1889, p. 506) reconciles the two views by showing that, in Teutonic belief, man did not consist simply of body and soul, but of 'a combination of factors, which in death could be separated,' so that the dead could at the same time descend to Hel and inhabit the grave-mound. This is in accordance with primitive and even Egyptian ideas of man's personality, and of various regions or states for the different parts of his being after death. At the same time, the ideas of the barrow and of Hel seem rather to represent different strata of belief.

The subterranean region of Hel may at first have been considered as the abode of all the dead, not excluding warriors, even Balder going there when he was slain, and, as late as Widukind of Corvei, the poet exclaims after a battle, 'Where might there be a Hel so great as to contain such a multitude of the slain?' (Grimm, ii. 801). But side by side with this we find the idea, whether of later Viking origin or not, that warriors have a separate abode. They it was, perhaps, rather than all the dead, who were conceived as dwelling with Odin in the hill, or, as in the Edda, in the heavenly Valhalla.

2. Was Hel an abode of the blest?—Hel is usually

regarded as a dismal and gloomy abode; but it is only in the Younger Edda that this is definitely stated, and it is not improbable that the influence of Christian beliefs may be traced here. The references in this Edda are three in number, and they vary each from the other. All-father has given to man a soul which will live and never perish. Right-minded men will live with him in Víngólf; wicked men fare to Hel, and thence into Niflhel which is beneath in the ninth world (*Gylfaginning*, § 3). Víngólf is later described as the fair hall of goddesses, and it may be synonymous with Valhalla (§ 14; Grimm, ii. 820). Here the distinction is an ethical one, and Niflhel rather than Hel is the abode of the wicked. This corresponds, on the whole, with the description of the fate of men after the final catastrophe:

'Many abodes are there then good, and many bad: best is it to be in Gimlé in heaven with Surtr; and great store of good drink is there for them who drink with joy in the hall called Brímir; it stands also in heaven. That is also a good hall which stands on Nítha-fells wrought of red gold; it is called Sindri; in this hall shall abide good men and well-minded.' The wicked—murderers and perjurers—suffer fearful torments in Ná-strand (*Gylf.* § 52).

This description is borrowed from the Völuspa, where it is not clear whether it refers to a state of things after the catastrophe which two mysterious beings alone survive. The sibyl sings:

'I see a hall, brighter than the sun, shingled with gold, standing on Gimlé. The righteous shall dwell therein and live in bliss for ever. Northward on Niðavöllir stands a hall of gold for Sindri's people. On Okolnir stands another called Brimir, the giants' drinking-hall.' Ná-strand is here also the abode of the wicked (*CPB* i. 201; cf. ii. 627).

The third reference describes the goddess Hel as cast into Niflheim, with power over the nine worlds, and sharing those abodes of gloom and hunger with those who die of sickness or old age. Warriors, on the other hand, go to the blissful Valhalla (*Gylf.* § 34, 36 ff.). Here there is no ethical distinction.

The eschatological system set forth in Völuspa depends for its value on the views taken regarding that poem. Bugge's hypothesis of its dependence on Christian and classical sources is hardly tenable (*Studier over de nordiske Gude- og Heltesagns oprindelse*, tr. by Brenner, Munich, 1889). More probable is the view taken by Jónsson (*Den oldnorske og oldislandske Litteraturs Historie*, Copenhagen, 1894, 1901), that it is the product of a pagan poet using pagan myths, but, while combating Christianity, unconsciously writing under Christian influences. The better minds among the pagan Norse may already have felt their way to such eschatological ideas as he sets forth.

In the Elder Edda, *Vafthrúdnis-mál* and *Grímnis-mál* (*CPB* i. 67, 70) describe Valhalla, and the former says of Niflhel: 'hither die the men from Hel (a second death).' Thus Hel is not a place of punishment, though Niflhel may be. Nor is Hel definitely stated in the Elder Edda to be a place of gloom. Ná-strand and Niflhel, places of punishment, may thus be identical, and it is not impossible that the Younger Edda has confused Hel and Niflhel, while here and in the Völuspa Gimlé and the other halls of the righteous may be identical either with Valhalla or with Hel, considered as a place of bliss. In *Balder's Doom*, Odin rides through the under world along a road through grass-grown plains to the mighty hall of Hel, and finds there the walls decked with shields, the benches strewn with mail-coats, and the mead standing ready brewed for the hero (*CPB* i. 182). Nothing is said of the gloom of Hel here, or in the story of Hermódhr's visit there to rescue Balder, where he crosses a river over a golden bridge (*Gylf.* § 49). Again, since men die from Hel to Niflhel, it is obvious that the former is a better place than the latter. Niflhel is the Hel which is surrounded by fog and gloom; Hel itself therefore cannot be so surrounded. In *Skírnirs-mál*, Gerda is told that she will suffer misery within the Na-gates (corpse-gates), and will sit on Are's perch looking longingly Hel-wards (*CPB* i. 114)—a passage suggestive of Hel as a place of bliss. In *Sonatorrek* the poet describes his dead son as having entered 'the path of Bliss' and gone to 'the City of the Bees-ship' (*CPB* i. 278–9), or to 'the world of the gods' (God-heim). The references are obscure, but may point to the usual abode of the dead or Hel.

An examination of the passages referring to the Ash Yggdrasil and its roots is significant. In *Grímnis-mál* it is said that under one root dwells Hel, under a second the Frost-giants, under a third 'mennzkir menn' (mortal men, *CPB* i. 73). But in *Gylfaginning*, § 15, one root is with the Asa, and there is Urd's fountain; one is over where Ginunnga-gap was, and there is Mimir's spring; the third is over Niflheim, and under it is the fountain Hvergelmir. By an obvious misunderstanding, one root is placed with the Asa, *i.e.* in Heaven (cf. Simrock, 36). But, as all the roots are in the under world, this root may correspond to that which *Grímnis.* places in Hel, and here in consequence is Urd's fountain, guarded by the Norni, who sprinkle the tree with its holy water (*Gylf.* § 16; cf. *Völuspa*, *CPB* i. 195), so that it may not wither or rot. Urd is possibly the equivalent of the goddess Hel (Rydberg, 308; Simrock, 340). The third root is in Niflheim, the place of punishment; the second, in Ginunnga-gap, must be midway between the others. Beneath it is Mimir's spring of mead, giving inspiration, wisdom, and poetry. Mimir drinks it every day; from it Odin obtained wisdom; and with it the root is watered (*Gylf.* § 15, *CPB* ii. 623). Here, too, must be placed Mimir's or Hoddmimer's Grove, where two human beings, Líf and Lífthrasir, are hidden away during the Monster-winter which precedes Ragnarök. They are fed on the dews which drip from Yggdrasil, produced from its being watered by Urd's fountain. They alone survive the final catastrophe, and from them a new generation will spring to re-people the renewed earth (*Vafthr.*, *CPB* i. 67; *Gylf.* § 53). Hence these, rather than men on the surface of the earth, may be the 'mennzkir menn' dwelling under a root of the tree. Líf and Lífthrasir, progenitors of the new race which is to people the new earth, 'green and fair, whose fields increase with sowing,' while 'all sorrows shall be healed,' must be pure and sinless. But that forest-clad earth rising out of the deep may simply be Mimir's grove, the hidden and sinless paradise hitherto in the under world.

Hel may thus mean the whole under world, exclusive of Niflhel, and in this sense it appears by no means as a place of gloom. This is already suggested by the passages cited from the poems; but when we add to this the facts that in the under world are Mimir's fountain of immortal mead, his grove of sinless beings, afterwards to be the glorious renewed earth, Urd's fountain beneath the ever-green branches of the ash, its waters 'so holy that everything which comes into this spring becomes as white as the skin which lieth within and cleaveth to the egg-shell' (*Gylf.* 16), and that the hall of Hel is decked for Balder's coming and furnished with mead, the suggestion becomes well-nigh a certainty.

To Urd's well the gods ride over Bifröst bridge to a daily judgment (*Gylf.* § 15; cf. *Grímnis.*, *CPB* i. 73). According to *Gylf.* they ride upwards from Asgard to Heaven; but as Asgard is in Heaven, and, as we have seen, Urd's well is situated in the under world, they must ride downwards. This Thingstead is not that held in Asgard, and Rydberg (p. 330 ff.) has shown that the gods come down daily to judge the dead who arrive there daily, and appoint them their places in Valhalla, in Hel, or in Niflhel. From definite statements, we know what crimes were punished in the other world—offences against the gods and against kinsmen, murder, adultery, perjury. Thus among those who did not pass to Valhalla—those dying a natural or straw death, practisers of the

peaceful arts of life, women and children, all who had pleased the gods, all who had been true to the claims of kindred, all who had kept themselves free from those gross sins—must have been awarded the bliss of the under world. All such could, 'with a good will and without fear, await death,' knowing that their course of life would 'do them good when they are dead' (*Sonatorrek*, *CPB* i. 280; cf. i. 42, 279, ii. 628; *Gylf.* [Loke] § 50, 52). To them were allotted the blissful regions of the under world—the 'green realms of the gods' (*Hakonar-mál*, *CPB* i. 264; cf. Rydberg, 319), with their hidden grove, their holy fountains, their 'paths of bliss.' Probably, too, they were given a draught which made them forget sorrows and gave them strength, composed of the liquids of those fountains, and drunk from the horn whence Mimir quaffed the mead of his well (*CPB* i. 197; cf. the mead which awaits Balder, and the 'costly draughts' which the dead Helgi drinks, i. 143). The mysteriously engraved horn from which Grimhild makes Gudrun drink and forget her wrongs, may be a late reminiscence of this draught of oblivion. The draught was composed from Urd's strength, ice-cold sea water, and the liquor of the Son, and on the horn are engraved unreaped corn ears from 'the land of Hadding,' the under world (*CPB* i. 34). See, for this section, Rydberg, 218 ff.

3. Valhalla.—Though Valhalla may be 'simply a Wicking faith, lasting some three generations at most,' and opposed to the strong family affection of the Northern heathen (*CPB* i. Introd. ci, 421), yet it is also noted in old Teutonic belief, in the conception of dead warriors dwelling in Odin's mountain. Valhalla was one of the dwellings of Asgard, the heaven of the gods, situated in Gladsheimr 'where the gold-bright Valhalla towers' (*Grímnis.*, *CPB* i. 70). To it all brave warriors hoped to go, though later tradition suggests that warriors who had committed 'nithing' actions or lived wickedly were excluded (Rydberg, 349). They were conducted thither by the Valkyries, who also waited upon them there. Valhalla was entirely a warrior's paradise; its beatitude was not that of peace, but of war. There the dead warriors dwelt with Odin, who welcomed them, ordering the benches to be got ready, the goblets prepared, and the wine brought by the Valkyries (*Eiriks-mál*, *CPB* i. 260). Descriptions of Valhalla are found in *Grímnis-mál* and in the Younger Edda. It is raftered with spears, it is decked with shields, its benches are strewn with coats of mail. A wolf hangs before the western door, an eagle hovers over it. The goat Heiðrun bites at the branches of the tree Learad (perhaps Yggdrasil), and from her teats runs mead which fills a vat every day, enough to satisfy all the warriors. The hart Eikthirnir bites at the branches, and from her horns fall drops which form the rivers on earth. So great was Valhalla that it possessed five hundred and forty doors. Every day the warriors, fully armed, issued from the gates to amuse themselves in combat with each other, returning to feast and drink heavenly mead from the cups presented to them by the Valkyries. They ate the flesh of the boar Sæhrimni, which was sodden every day and became whole again at even. Beside Valhalla stood Vingólf, the Hall of Friends, the abode of the goddesses. Grimm (ii. 820) points out that Vingólf is, in one poem, used synonymously with Valhalla, while it is also the name given in the Younger Edda (*Gylf.* § 3) to the place where the good and right-minded shall dwell after death. With Odin is associated Freyja, whose dwelling is called Folk-vangr, and who chooses one half of the slain, Odin the other. Elsewhere, however, it is dead women who expect to join Freyja (*Egils saga*, ch. 78). With the goddess Gefjon, who resembles Freyja, dwelt all who died virgins (*Gylf.* § 35; for Valhalla, cf. § 36, 38 ff.; *Grímnis-mál*, *Eiriks-mál*, and *Hakonar-mál*, *CPB* i. 70 ff., 260, 262).

4. Elysium in folk-belief and saga.—The Glasberg, or glass mountain, of *Märchen* and poetry, which in Slavonic belief represents an earlier conception of a mountain paradise, may be derived from Slavonic sources, or may be a misunderstanding of *Gladsheim*, but it may also be a purely Teutonic belief, since the Norse *glērhiminn*, 'glass heaven,' is a paradise to which heroes ride (Grimm, ii. 820), and the mountain abode of the dead has already been met with. Beautiful subterranean meadows, reached through a well where Frau Holle dwells, also occur in *Märchen*, and are associated mainly with elves and kindred beings. Popular belief describes souls of the dying fluttering as butterflies or birds in these meadows (Grimm, ii. 829). These are doubtless reminiscences of the under world place of the dead, and with them may be compared the Rosengarten of mediæval poetry, now churchyards, now a kind of paradise. A series of more elaborate tales, analyzed by Rydberg, are certainly reminiscent of earlier pagan belief, and preserve many of the aspects of the under world already met with. In these travellers set out to seek *Ódáinsakr* or *Jörð lifanda manna*, the Land of Living Men, situated in one tale in the east, but more usually in the north, and apparently underground.

These tales in their present form belong to the period between the 12th and 14th cent., and are mainly found in Saxo and in the sagas. Gudmund is ruler of the Glittering Plains, situated in the north or Jötunheim; he and his men are heathen, and of a vast age. After his death he was worshipped by his people as a god. Ódáinsakr is situated in his land, and is 'so healthy that sickness and age depart, and no one ever dies there' (*Hervararsaga*, Rydberg, 210–11).

(*a*) In the Flatey-book (14th cent.) Helge Thoreson is described as journeying to the north, where, lost in a forest, he met twelve maidens, one of them being Gudmund's daughter, Ingeborg. With them he stayed three days, and on leaving was given chests of gold and silver. Next Yule night he was carried from his home by two men, re-appearing a year later with them. The strangers gave king Olaf two golden horns as a gift from Gudmund. They were filled with wine and given to the strangers to drink, the wine having been previously blessed by a bishop. The heathen messengers cast the horns away, and disappeared with Helge amidst great confusion. One year later Helge re-appeared with his eyes plucked out. He had spent many days happily in Gudmund's realm, but king Olaf's prayers had made it impossible for Gudmund and Ingeborg to keep him. The latter plucked his eyes out, lest any mortal maiden should fall in love with him (Saxo Grammaticus, *Danish History*, London, 1894, Introd. lxviii; Rydberg, 210).

(*b*) Saxo relates that king Gorm set out to seek a mysterious treasure land in the north ruled by king Geirröd in the under world. After passing through many dangers, they were met by Geirröd's brother Gudmund, who led them along a river till they reached a golden bridge. This he warned them not to cross, as the region beyond was not open to mortals. Continuing up the river, they reached Gudmund's hall, where, warned by their pilot Thorkill, they refused to touch food or drink lest their memory should be lost, and they should have to remain with Gudmund's people for ever. Gorm also refused Gudmund's daughter in marriage. But four of his men fell victims to the charms of the women of this land, and became imbeciles. Gorm also refused the delicious fruits of Gudmund's garden. The party were now conducted across the river, and reached Geirröd's realm, a foul and evil place, full of miserable folk, some of them punished by Thor. Finally, they reached a place where they saw cisterns of mead, a vast decorated horn, and other treasures. Some of the party seized these treasures, which changed to swords and serpents and slew them. In another place, other treasures, including a rich mantle, were seen. Thorkill himself seized the mantle, when the place rang with shrieks, and the party was attacked by its inhabitants. Only twenty of them returned to the river aud to Gudmund, who vainly tempted them to remain with him. They finally returned home in safety (Saxo, 344 ff.; Rydberg, 212).

(*c*) Saxo has also preserved the story of king Hadding. One winter's day he saw a woman rise out of the ground, with fresh herbs in her lap. Hadding desired to know where such plants could grow in winter. Wrapping him in her mantle, she drew him underground, through a region of fog and darkness, till they reached a river where spears and weapons were tossed about. On one side of it they met some noble beings, clad in rich robes.

Passing them, they reached a sunny region (the Glittering Plains), whence the woman had obtained the flowers. On the other side of the river, which was crossed by a bridge, were seen the souls of dead warriors playing at battle. Finally, they came to a mysterious place, surrounded by an impassable wall. This was the land of life. The woman wrung the neck of a bird and threw it over the wall, when it was at once restored to life (Saxo, 87; Rydberg, 216).

(*d*) A saga in Flatey-book tells of king Erik, who with a large company set out to seek Ódáinsakr in the far east. They finally reached a river, with a bridge guarded by a dragon. Erik and one of his men rushed at the dragon, and were swallowed by it. But they found themselves in a beautiful flowery plain, with rivers of honey, and full of sunlight. They travelled through, finding no inhabitants, and reached a tower suspended in the air, with a ladder leading up to it. They entered the tower, and found in it a room carpeted with velvet, a table with rich food in gold and silver dishes, and two beds. Convinced that they had reached Ódáinsakr, they ate and drank and slept. During his sleep Erik was visited by his guardian angel, who told him this was Ódáinsakr, or Jörð lifanda manna. This region lay near the Christian paradise, which was so glorious that, compared with it, Ódáinsakr seemed a desert. Here they were permitted to remain six days, and then they returned home.

Late as these stories are, they are yet so near to the pagan age of the north that, in spite of possible classical literary and Christian influences, they preserve much of the earlier eschatology. Ódáinsakr is clearly differentiated from the Christian paradise, while Gudmund and his people are pagan. The river with its golden bridge has already been met with in the pagan descriptions of the under world, and in these tales its further side seems to be tenanted by the souls of the dead, while in the Hadding story the dead warriors fighting suggest a reminiscence of Valhalla. The evil region in the story of Gorm may reflect the tortures of Niflhel, while the place with its cisterns of mead, the richly decorated horn, and the treasures, are reminiscent of the Eddaic descriptions of the blissful under world. Rydberg (228 ff.) also identifies Gudmund with Mimir, and shows reasons for believing that Ódáinsakr, within the Glittering Plains, the mysterious walled place in the Hadding story, and the tower in the Erik saga with its two beds, are the equivalents of Mimir's grove, where Líf and Lífthasir, progenitors of the new race of men, are preserved. To them would appropriately belong the title 'living men,' and to their hidden grove that of *Jörð lifanda manna*. 'In Gudmund's domain there is a splendid grove, an enclosed place, from which weaknesses, age, and death are banished—a Paradise of the peculiar kind that is not intended for the souls of the dead, but for certain *lifandi menn*, yet is inaccessible to people in general. In the myth concerning Mimir we also find such a grove' (Rydberg, 231). Thus, while this Elysian land of Gudmund's, with its deathless Ódáinsakr, is one of beauty and joy, to which daring mortals may penetrate and receive a welcome, it is closely connected with the realms of the dead—Hel, Valhalla, and Niflhel,—unlike the Celtic Elysium. Unlike the latter, too, it is not a land of the gods, but of a giant race, and is associated with Jötunheim; it is not an island Elysium, but a northern and subterranean one (cf. Nutt and Meyer, *Voyage of Bran*, 1895, i. 308; BLEST, ABODE OF THE [Celtic]). The idea that the food of this region is dangerous to mortals corresponds with the universal belief that to eat the food of the dead or of fairies is dangerous.

5. The divine Elysium.—In the Golden Age of the gods, before they lost their happy state through the Titan maids from Jötunheim, they dwelt in Iðavöllr, where they raised high places and temples, setting forges, fashioning treasures, shaping tongs, and making tools. 'They played at tables in the court and were happy, they lacked not gold' (*Völuspa*, *CPB* i. 194). But after the restoration they dwell in Iðavöllr once more, and it is said to be 'where Asgard was before' (*Völuspa*, *ib.* i. 201; *Gylf.* § 53).

J. A. MACCULLOCH.

BLINDNESS. — **1. Definitions.** — 'Blindness' signifies inability to see, or absence of the sense of sight; hence, figuratively, want of discernment, or defective intellectual, moral, or spiritual sight. 'Word-blindness' is an acquired condition in which a person loses the power of reading written or printed words, although he can see objects; thus the letters on a printed page can be seen but are not recognized. 'Mind-blindness' is an acquired condition in which objects can be seen, but fail to be recognized by the sense of sight. 'Half-blindness' is a condition in which there is loss of one-half of the field of vision of one eye, or more commonly of both eyes.

2. Causes of blindness.—Blindness may be due to lesions of the eye, of the conducting path from the retina to the brain, or of the brain itself.

(1) *The eyes.*—Blindness may result from a loss of transparency of the cornea (nebula, leucoma), of the lens (cataract), of the vitreous humour; from effusion of blood or pus into the anterior or posterior chambers; from occlusion of the pupil; from various affections of the choroid and retina; from changes following increased intra-ocular tension (glaucoma). Destructive inflammation of one eye, such as often follows injury, is apt to be followed by a similar inflammation of the other eye (sympathetic inflammation). Ophthalmia neonatorum, an infectious inflammation contracted during birth, is the chief cause of blindness in early childhood.

(2) *The conducting paths.*—Inflammation of the optic nerve (optic neuritis) is an important cause of blindness. It commonly ends in atrophy (white atrophy) of the optic disc or beginning of the nerve within the eye. Grey atrophy of the disc, also a cause of blindness, is a primary degenerative condition, not resulting from inflammation.

The optic nerves pass back from the eyes and meet at the optic chiasma, at the base of the brain, where a re-arrangement of their fibres takes place in such a way that the fibres from the outer half of each retina pass into the optic tract of the same side, while the fibres from the inner half of each retina pass into the optic tract of the opposite side. The result of this is that, while a lesion destroying the continuity of one optic nerve causes total blindness of the corresponding eye, a lesion of one optic tract results in blindness of the corresponding half of each retina. Thus destruction of the right optic tract causes blindness of the outer (right) half of the right retina, and of the inner (right) half of the left retina. Blindness of the right half of each retina results in blindness of the left half of the field of vision, and this condition is called left-sided half-blindness or hemianopsia.

(3) *The brain.*—The fibres of the optic tract pass into the occipital lobe of the brain, and destruction of the visual centre in either occipital lobe produces hemianopsia just as in the case of the optic tract. Destruction of both visual centres would cause double hemianopsia, that is to say, complete blindness. Lesions of the left occipital lobe, but not of the right, may also be attended, according to their extent, by 'word-blindness,' or 'mind-blindness'—conditions which have already been defined. This difference between the effect of lesions of the left and of the right side of the brain is simply an example of the general fact that all the speech functions (speaking, reading, writing) have their special centres in the left side of the brain only. Apart from affections of the special centres for vision, gross lesions in any part of the brain may cause blindness by setting up optic neuritis.

3. Statistics of blindness.—The proportion of blind among the general population is much greater in tropical than in temperate regions. In temper-

ate regions generally the proportion is about 1 in 1000. In civilized countries the proportion of blind shows a steady decrease in recent years. Thus in the United Kingdom in 1851, 1 person was blind in every 979. The proportion has now fallen to 1 in 1285. Owing to occupation there are more males than females afflicted with blindness.

The following statistics are taken from the census tables of 1901, and refer to England and Wales:

		Males.	Females.
Persons	32,507,843	15,728,613	16,779,230
Blind	25,317	13,136	12,181
" (1891) . . .	23,467	12,281	11,186
Blind from childhood .	4,621	2,468	2,153
" (1891) . .	4,005	2,194	1,811
Blind, Deaf and Dumb .	58	36	22
Blind and Dumb . .	23	14	9
Blind and Deaf . .	389	144	245

4. **Psychology of the blind.**—In comparing the blind with normal individuals, it must be remembered that the great majority of the blind lost their sight in adult life. In such persons we are not likely to find any special mental peculiarities, beyond their personal reactions to their misfortune. It is quite different when sight is lost in early childhood. The whole course of mental development must be profoundly modified in cases where the acquisition of knowledge, the training of the intellect, and the formation of tastes and habits must proceed without the faculty of vision playing any part in the process.

Perhaps one of the earliest peculiarities to be noticed in blind children is a tendency to bodily inaction. The blind child is often content to sit quite still for considerable periods of time, at an age when a normal child would not be still for an instant. The games of blind children are often lacking in animation. Of course there are many individual exceptions to this statement, but a tendency to inaction is general, and seems to be most marked in those whose blindness is total, so that the sense even of light is lacking. This sluggishness of body is usually ascribed to the absence of the stimulating effect of light. There is no doubt that light is a very powerful stimulus to the nervous system, and children who spend much time in imperfectly-lighted rooms are usually languid and feeble. Another factor in the case, however, may be the natural tendency of the guardians of a blind child to restrict its movements and anticipate its wants in case of its meeting with some injury if left to itself.

This tendency to muscular repose doubtless reacts upon the mental state. As an anonymous writer on this subject expresses it, the blind, as a class, are 'seldom characterized by that rapidity and intensity of mental action, that keenness of penetration, which pierces at once to the very heart of a matter,—that *vivida vis animi* which is the characteristic of the highest genius. Their intellects are in general cautious, calm, deliberative, slow, distinguished rather by soundness than by brilliancy. . . . The fact that their attachments are generally of a calm and equable kind, formed on judgment and "right reason" rather than upon those inexplicable attractions which so often bind others together; the infrequency with which they seem to give way to strong impulses of affection, and a certain want of geniality and expansiveness which has often been noted in them,—may also, no doubt, in fact be attributed to the same cause' (*National Review*, 1860, p. 92).

The blind depend upon the sense of touch to so large an extent for their knowledge of the outer world, that tactile sensibility becomes developed by constant practice to a very high degree of acuteness, and many astonishing things are related of the discriminative ability of some blind folks. Blind people have been able to play cards by means of small marks upon the cards which they were able to distinguish, but which escaped the eye and touch of those who saw. The sensibility of the fingers is greatly improved by practice, and blind people often take special care to keep the epidermis of the finger tips soft in order that their delicate susceptibility may be preserved. The lips and tip of the tongue, naturally more sensitive than the fingers, are often made use of by blind persons in cases where the fingers are unable to perceive sufficiently clearly. The skin of the face often becomes very sensitive to the proximity of solid bodies, and the tympanic membranes are credited with the power of rendering perceptible vibrations of the atmosphere too slight to be recognized as sound.

Mr. W. Hanks Levy, a blind writer, gives an interesting account of his own power of recognizing neighbouring objects. 'Whether within a house or in the open air,' he says, 'whether walking or standing still, I can tell, although quite blind, whether I am opposite an object, and can perceive whether it be tall or short, slender or bulky. I can also detect whether it be a solitary object or a continuous fence; whether it be a close fence or composed of open rails; and often whether it be a wooden fence, a brick or stone wall, or a quick-set hedge. I cannot usually perceive objects if much lower than my shoulder, but sometimes very low objects can be detected. . . . The only part of my body possessing this power is my face; this I have ascertained by suitable experiments. Stopping my ears does not interfere with it, but covering my face with a thick veil destroys it altogether' (*Blindness and the Blind*, London, 1872).

Some writers on the blind make the curious assertion that they have no sense of space, that they live only in time, that their little world is circumscribed by the narrow circle which they can span with their own arms. This assertion, however, seems to be altogether preposterous, and is sufficiently refuted by the facts quoted above from Mr. Levy. The delight blind people often take in travelling, especially with a companion who can describe the scenery passed by, is also opposed to the idea. Blind men may even enjoy mountaineering, and a blind man who had been to the top of Mont Blanc wrote to the papers recently stating that no one could have enjoyed the view more than he had done. There is no doubt, of course, that a blind man's conception of space must differ greatly from our own, but a conception of space derived from touch, from movement, and from sound, he certainly has.

Sounds, also, cannot fail to play an important part in giving to the blind a sense of the beyond; and where we think of an object getting smaller as it recedes in the distance, a blind man would think of the modification produced by distance in the sound. When a blind man is out walking, the variations and mutations of familiar sounds constitute a source of interest and pleasure. The distance of objects can often be gauged with wonderful accuracy, and a case is quoted of a blind gentleman who could practise archery with considerable expertness, his aim being directed by a bell placed behind the target.

Conversation is naturally a source of great pleasure to the blind, and, indeed, it means even more to them than to us, because they rely upon their auditory impressions to furnish that commentary upon the speaker's words which we find in the play of expression. It is a curious trait in the blind that they seem to take a special pleasure in descriptions of the visual appearance of things. In their conversation they make much use of visual imagery, and always speak of going to see places and things. No doubt the impressions from which they are necessarily for ever shut out have for that very reason a special attraction. A well-known teacher of the blind tells the writer that there is no subject in which his pupils manifest greater interest than the study of optics.

The general characteristic of the mind of the blind is rather curiously described as synthetical

by some writers, and as analytical by others. W. James, *e.g.*, writes (*Princ. of Psych.* ii. 203):

'The blind man's construction of real space differs from that of the seeing man most obviously in the larger part which synthesis plays in it, and the relative subordination of analysis. The seeing baby's eyes take in the whole room at once, and discriminative attention must arise in him before single objects are visually discerned. The blind child, on the contrary, must form his mental image of the room by the addition, piece to piece, of parts which he learns to know successively.'

On the other hand, M. Dufau speaks of the mind of the blind as characteristically analytical. 'If we compare the manner in which the seeing and the blind acquire a knowledge of some object, for example, a plant, we find that the former 'casts a glance upon it, envelops it with a look, and his task is done; he has a general idea of it with which he generally contents himself, because it is sufficient to enable him to recognize and to name the object. The blind man, on the contrary, is obliged to examine, to touch with the utmost care, the stalk, the branches, the leaves; to acquire, in short, a complete and detailed idea of the plant, without which it would be impossible for him to distinguish it from others. Thus it is that necessity makes analysis a habit to him, which retards his acquisition of knowledge, but at the same time renders it more positive and more certain' (Dufau, *Des Aveugles*, 1850, p. 48).

Although these two descriptions at first appear somewhat opposed to each other, it is obvious enough on consideration that both are true so far as they go. In building up his conception of the world about him, the blind man must analyze, and, having analyzed, he must put together. The two processes are carried out by him much more carefully and systematically than by the seeing, and the results are carefully pondered. It is doubtless owing to this natural tendency to analysis and re-construction that the blind owe their wonderful power of observation, and to the same tendency we may trace the fact that science seems to attract the educated blind much more strongly than imaginative literature or poetry.

Cases of blind persons recovering their sight in adult life are not numerous, and such as are known have naturally attracted a good deal of interest. This interest has to a great extent centred around what is known as Molyneux' problem. This was as follows:

'Suppose a man born blind, and now adult, and taught by his touch to distinguish between a cube and a sphere, . . . so as to tell, when he felt one and the other, which is the cube, which the sphere. Suppose then the cube and sphere placed on a table, and the blind man be made to see; query, whether by his sight, before he touched them, he could distinguish and tell which is the globe, which the cube?' (see Locke, *Essay*, II. ix. 8).

To this query Molyneux himself answered in the negative, and Locke agreed with him. A contrary opinion was expressed by Dr. Franz and Sir W. Hamilton, and the former had an opportunity not long afterwards of testing the soundness of his views. His patient when operated on was seventeen years of age, and he was familiar with geometrical figures. When some of the early confusion following the operation had passed off, he was shown a vertical and a horizontal line, and these he was able to name correctly; but on being asked to point out which was the horizontal line, he indicated the wrong one, afterwards correcting himself. This error evidently means that no association had yet been found between the senses of sight and touch. He was next shown an outline of a square, 6 inches in diameter, within which was a circle, and within this a triangle. He was asked to describe these figures, and after careful examination, he succeeded in doing so correctly.

A recent case of the same kind has been described by Dr. A. Maitland Ramsay of Glasgow. This was a young man of thirty, totally blind from birth, but able to distinguish day from night. For some days after the operation of removal of the lenses the patient appeared quite dazed, and could not realize that he was seeing. The size of everything in the ward seemed very much exaggerated, and on that account he had great difficulty in interpreting what he saw. When asked to distinguish between a ball and a brick, he looked at them attentively for a considerable time, his hands meanwhile moving nervously, as if he were trying to translate what he saw, by comparing it with an imaginary tactile impression, and then he named both correctly. He explained that he was so much in the habit of handling objects that he had come to have a 'notion in his mind' regarding the form of things.

5. The education and care of the blind.—The Jewish code contains special beneficent enactments regarding blind persons; such as, 'Thou shalt not . . . put a stumblingblock before the blind, but thou shalt fear thy God' (Lv 19^{14}). The idea, however, of making the care of the blind a public charge is quite modern, although as long ago as 1265 one institution for the blind was founded, the Hospice des Quinze Vingts, wherein St. Louis IX. provided for the needs of three hundred knights who had lost their eyesight in the Crusades.

The first idea of educating the blind by means of the sense of touch appears to have originated with Valentein Haüy, a native of Picardy, about the year 1783. Haüy's first pupil was a blind beggar, whom he paid to receive instruction. The practicability of teaching the blind to read from raised characters having been proved, public interest was aroused, and Haüy was able in 1785 to found the first 'School for the Young Blind.' Haüy afterwards visited St. Petersburg, at the invitation of the Government, to superintend the establishment in that city of a similar institution. The Liverpool School for the Blind was founded in 1791, and was followed two years later by the Edinburgh Blind Asylum, which became one of the most successful schools of the kind in the world. The success of these schools has led to the multiplication of such institutions all over the civilized world. The instruction given in most of them is of a mixed character, the pupils being taught to read from raised characters, and receiving lessons in the usual school subjects, while their future is kept in view, and instruction is provided in different trades, whereby they may maintain themselves in after life. A few schools provide an education of a more special kind, such as the Normal College and Academy for Music.

The method of teaching the blind to read has had an interesting evolution. Haüy originally made use of the script form of the Roman letter. Subsequently quite a number of forms of embossed type were introduced. The first of these was brought forward by James Gall, of Edinburgh, in 1827. He made use of the Roman letter, but for ease of recognition, all the curves were changed to angles. In this type there was published in 1834 the Gospel of St. John. The first Gospel was printed in raised type for the blind. Other modifications of the Roman letter were introduced by Howe, Alston, and Fry. Various stenographic and phonetic systems were also brought forward, but were discarded on the ground that they did not teach correct spelling.

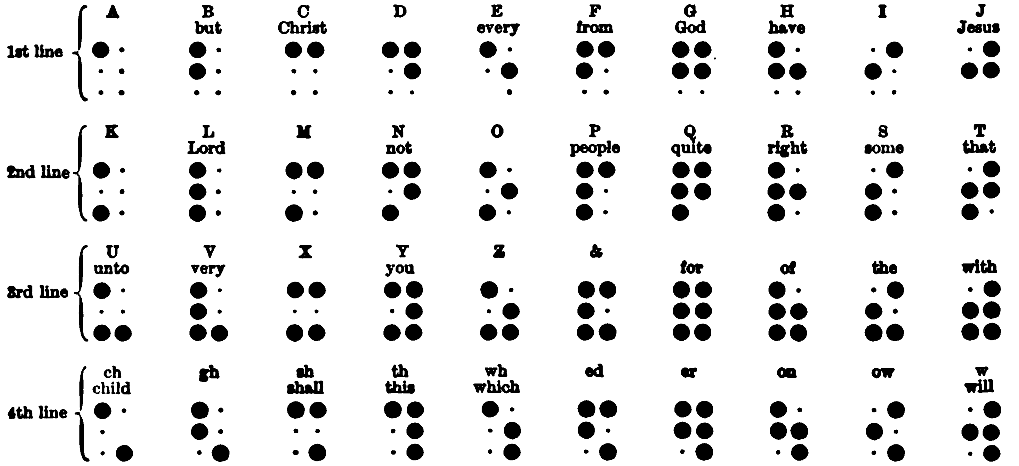
To get over the difficulty sometimes experienced in passing from one line to the next, Frere introduced his ingenious return line. The finger travels along one line from left to right and is then guided by an embossed curve to the line below, which is read from right to left. On this lower line the characters are printed in the reverse way, in order that the finger, moving in the reverse direction, may meet them in the same order as when reading from left to right.

Moon's type, which became very popular, is a modification of the Roman character, but arbitrary signs are also made use of. Frere's return line is adopted, but the characters are not reversed in the return lines. Moon's type is still made use of to some extent, and the Gospel which blind men may be seen reading in the streets is commonly printed in it. It has, however, two great drawbacks. Books printed in this type are very expensive; and they are very bulky. A single Gospel, for example, fills a large volume.

This multiplicity of types was naturally attended by many inconveniences. A blind man who learned to read one type could not read books published in another, and a book printed in any of the embossed types could obtain a circulation only among the blind who were acquainted with that type. Accordingly, a number of gentlemen founded The British and Foreign Blind Association, and set themselves to find and bring into general use the type best adapted to the needs of the blind. This

they found in none of the varieties to which we have referred. Their researches resulted in the introduction into England in 1868 of a type which had been invented by a blind Frenchman forty years before. This type, which is now in general use, is called the Braille, after Louis Braille, its inventor. The advantages claimed for it are: that the letters are easily recognized; that they can be written by the blind themselves in such a way as to be legible to themselves or other people who know the characters; that books can be printed in much smaller bulk and at a much smaller cost than in the case of other types for the blind.

The principle of the Braille system is very simple. The letters are formed of raised dots of which the maximum number is six, arranged in three pairs placed one above another—⠿ Any of these dots may be omitted, the letters of the alphabet, punctuation marks, and a number of other signs being formed by one, two, three or more of the dots variously arranged, as may be seen in the alphabet printed below. It will be noticed that neither of



Mr. J. W. M'Laren, of Edinburgh, recently invented a method whereby the printing of books in Braille type is greatly simplified, and the cost vastly reduced. The Braille Printing and Publishing Co., St. Giles Street, Edinburgh, was founded to print books by this new method, and for some time a magazine for the blind, the *Braille Weekly*, was published every Saturday at the price of one penny. Dr. John Brown's famous story, *Rab and his Friends*, printed by the new method, was issued at the price of sixpence. The story occupies fifty-two quarto pages. As books of this class naturally depend upon a very limited public for circulation, it would be a good thing if some central publishing company could not only stock all the books printed by this method, but control the class of books to be published, and prevent overlapping and the same book being printed by different people.

Writing in Braille characters is carried out by means of a writing frame. The paper is covered with a piece of brass containing a double row of oblong perforations. By means of a stylus, each letter is impressed upon the paper through one of the perforations. To read the writing the paper must be reversed, when the depressions produced by the stylus will be felt by the finger as raised dots.

When the blind wish to write so as to be read by the seeing, they may use a pencil and a guiding frame. Some blind persons who lost their sight in

The Braille Alphabet and some Contractions.

(The large dots represent the raised points of the Braille letters).

the two dots constituting the lowest pair is present in any of the characters of the upper line; each of the characters of the second line resembles the character immediately above it, plus one of the lowest dots; while the characters of the third line differ from those above only in the presence of both dots of the lowest pair. This arrangement obviously greatly reduces the difficulty of learning the symbols.

The Braille characters have also been adopted for the printing of music, so that a blind musician can learn a new piece of music by following the score with one hand while he plays the keys with the other.

A large number of standard works have now been published in the Braille type, and are sold at a moderate price. At the Edinburgh School for the Blind, a monthly magazine, *Hora Jucunda*, has been published since 1893. It was started and edited by Mr. W. H. Illingworth, a former head-master of the school. Each number contains sixty large pages of interesting and amusing matter, and a piece of music; and the price is one shilling. The British and Foreign Blind Association also publishes magazines in Braille.

adult life have become very expert at this kind of writing, but for those who have been blind from childhood there is no doubt that the best plan is to use a typewriter. Here the expense may be an objection, but this has been got over by Mr. Illingworth, who recommends for the purpose a cheap form of typewriter which costs only a few shillings. In this instrument the rubber type projects from the under surface of a revolving disc, and, by placing on the upper surface above each letter the corresponding character in Braille, the blind pupil can easily find the letter he needs, bring it into place, and print it on the paper. It will be noticed that, by using a typewriter, the blind scribe actually writes in a character with which he may not be acquainted, and is thus saved the trouble of learning two totally distinct alphabets. It is curious to recall the fact that the Braille type was violently opposed on the ground that the letters were entirely arbitrary symbols, as if the characters of the Roman or Greek alphabets were anything else. Obviously, it is no more confusing for the blind to call a couple of dots the letter *b* than it is for the French to call a cabbage a *chou*.

Arithmetic is taught to the blind by means of a

tablet containing rows of octagonal holes. A peg can be placed in any of these holes, in eight possible positions representing the numbers 1 to 8; to obtain 9 and 0, the peg is inverted and placed in positions 1 and 2. The two ends of the peg, of course, differ so as to be readily recognizable by touch.

A somewhat similar device is made use of for teaching algebra. Raised maps are used for geography, and models and natural objects are freely used for class purposes.

6. The care of young blind children.—When sight is lost in early childhood, a good deal can be done by judicious foresight to assist the teacher, when the child is old enough to go to school. Teachers of the blind complain that, when children come to them, they do not know how to use their hands; that they are lacking in confidence, and can do nothing for themselves; that their muscles are soft and weak; and that, in short, a great deal of time has to be given to exercises and gymnastics intended to train the muscles and the sense of touch before education, in the school sense, can be started. These faults depend very largely on the fact that the child's relatives, not unnaturally, have done everything for him. They have dressed him, washed him, and fed him. They have led him from place to place. They have perhaps never thought of giving him toys to play with. They have prevented him from going about by himself, for fear of accidents. In some cases they have even kept the child in bed for years, or taken him about only in a perambulator, in case he might hurt himself. Such treatment, although kindly meant, is really cruel to the child. The proper course of procedure is quite the opposite. The proper method of dealing with a young child who is blind may be expressed in a sentence: *Treat him exactly as if he could see.* The child should have toys to play with as soon as he can grasp. When he can creep about, he should be allowed to do so. He should be expected and encouraged to walk as soon as other infants. As soon as he can move about, he should be allowed to explore the room for himself, and discover the properties of the furniture it contains. While care should, of course, be taken to prevent any serious accidents (dangerous places such as stairs or fires being guarded), obstacles should not be taken out of the child's way, nor should he be warned if he is going to walk against something. No doubt, it is very difficult for any kindly person to see a blind child in the act of walking against a chair, without quickly stopping him or snatching the chair out of his way; but if the child is ever to gain confidence, and to be able to walk about freely without fear of running into walls and lamp-posts, he must learn by hard experience in his nursery days. So, also, as the child gets older, he should be encouraged to feed himself; to undress, and later to dress himself; to fold his clothes, and put them away; to put his toys away when he has finished playing with them, and to fetch them for himself when he wants them. He should be taught to use his hands in every possible way. Many of the kindergarten occupations are useful for this purpose, and the sorting and threading of beads is valuable as affording a training in sensitiveness to the finger tips. The handling of small beads is a useful preparation for the later study of Braille.

7. Advice to those likely to lose their sight.—When blindness occurs from disease in later years, the loss of sight is usually gradual, and, after it is known that ultimate blindness is inevitable, months, or even years, may elapse during which some sight remains. Persons so affected should be advised to set about training their other senses, and especially the sense of touch, without delay. The Braille alphabet can soon be learned, and, in practising reading, the sight which remains will be of great assistance. Braille writing should also be systematically practised. Various everyday tasks, such as dressing and undressing, should be practised with the eyes closed. When any real difficulty presents itself, of course, the eyes may be opened for a moment, but, as far as possible, the sufferer should try to accustom himself by degrees to the life he will before long have to live, so that, when the day of total darkness does come, it will not find him wholly unprepared.

W. B. DRUMMOND.

BLISS.—See BLESSEDNESS and BLEST (ABODE).

BLOOD.—I. Physiological and Psychological.—Blood consists of a fluid portion, known as plasma, and of corpuscles (white, red, and 'platelets'), the latter forming its nutritive element. 'Average blood may be regarded as consisting of $\frac{2}{3}$ plasma and $\frac{1}{3}$ corpuscles' (Huxley, *Physiology*, p. 105). The inner function of the blood has been compared by physiologists with the outer function of the air and food supply. 'It is absolutely essential to the life of every part of the body that it should be in such relation with a current of blood that matters can pass freely from the blood to it, and from it to the blood, by transudation through the walls of the vessels in which the blood is contained' (*ib.* p. 116). Thus, the blood is literally the vehicle of life throughout the organism, and this function is discharged by means of its constant circulation from the left lower cavity of the heart through the arteries, and back through the veins to its right upper cavity. The nourishment of the blood itself is derived by absorption from the food which enters the intestines; the venous blood is changed into arterial blood by absorption of oxygen through the lungs, this second or pulmonary circulation being maintained from the right lower cavity of the heart to its left upper cavity. It is evident that the true function of the blood could not be understood until its circulation was demonstrated, as was done by Harvey in his *Exercitatio*, published in 1628 (Foster, *History of Physiology*, 1901, p. 42). Of this circulation the ancient world was ignorant, and consequently of the precise ministry of the blood to life. Aristotle (B.C. 384–322) 'knew only of its direct passage from the heart to the extremities, and of its movement to the brain and return. . . . The brain, being the coldest organ of the body, performed the function, Aristotle supposed, of reducing and regulating the temperature of the blood' (Hammond, *Aristotle's Psychology*, p. 227 n.). Galen (A.D. 130–c. 210) taught that the liver converts food into crude blood, giving it the 'natural spirits.' In the heart, some of this blood is mixed with air drawn from the lungs, and by the innate heat of the heart is laden with 'vital spirits' (Foster, *op. cit.* p. 12 f.). This was the accepted doctrine for thirteen centuries, until the dawn of modern physiology. The pulmonary circulation was described by Servetus in 1546, and, probably in dependence on him, by Realdus Columbus in 1559 (*ib.* p. 30 f.); whilst Cæsalpinus, a little later, 'recognized that the

flow of blood to the tissues took place by the arteries and by the arteries alone, and that the return of the blood from the tissues took place by the veins and not by the arteries (*ib.* p. 35). Fabricius described the valves of the veins in 1574 (*ib.* p. 36). But his pupil, William Harvey, was 'the first to demonstrate the circulation of the blood. . . . The essential feature of Harvey's new view was that the blood through the body was the same blood, coursing again and again through the body, passing from arteries to veins in the tissues, and from veins to arteries through the lungs, heart, suffering changes in the substance and pores of the tissues, changes in the substance and pores of the lungs' (*ib.* p. 47). Thus, the long-established doctrine of 'spirits' was discredited, and the study of physiology separated from that of pseudo-psychology.

But primitive man did not need to wait for Harvey in order to be taught the significance of blood in relation to life. However ignorant he might be of the precise relation, common observation showed the dependence of life on the blood within the body of man or animal. Loss of blood meant loss of strength, and a man's life seemed to drain away with the blood from a mortal wound. Thus Homer can speak either of the soul (ψυχή, *Il.* xiv. 518) or of the blood (αἷμα, xvii. 86) as passing away through the inflicted wound (cf. Robinsohn, *Psychol. der Naturvölker*, p. 18; Gruppe, *Griech. Mythol. und Religionsgesch.* p. 728); the identity is affirmed explicitly, *e.g.*, amongst the Hebrews, in the phrase 'the blood is the life' (Dt 12^{23}, where 'life' is literally 'soul'); and even a thinker like Empedocles could regard blood as the seat of thought or perception (Rohde, *Psyche*[3], 1898, ii. 176; Burnet, *Early Greek Philosophy*[2], 1908, p. 288). For us, however, to repeat 'the blood is the life' means something quite different from the early usage, and the difference is of fundamental importance for the subject before us. By such a phrase we should imply that blood is essential to the living activity of the organism, and that life is not possible without blood. But primitive thought meant to assert that the life *is* the blood, and *vice versa*: when the blood left the body, *it carried the life with it*. Thus, in the Qur'ān, xcvi. 2, God is said to have created man from clotted blood; in Burma this is kept and eaten on special occasions (Elworthy, *Evil Eye*, 1895, p. 112). This is the explanation of the numerous customs that illustrate the perils and powers of blood for the ancient mind; this is the key to many important institutions. To the modern mind, blood which has left its organism is no more than any other fluid, except for a certain amount of sentiment, which may be itself an inheritance from the past; but for the ancient mind, blood, even when shed, was still perilous and potent, full of latent life, and capable of working on persons or things in contact with it. The illustration of these ideas belongs to the following sections; here it remains to show, by instances selected from a very large material, the nature of the idea of a blood-soul. The Arabs used the word for 'soul,' *nafs*, cognate with the Heb. *nephesh*, in the sense of blood. 'When a man dies a natural death, his life departs through the nostrils . . . but when he is slain in battle "his life flows on the spear point"' (Robertson Smith, *Rel. Sem.*[2] p. 40 n.). Belief in the blood-soul explains their custom of not washing the slain, and of burying the Muslim 'martyrs' in their blood, according to Muhammad's commands at Uhud (Wellhausen, *Reste arab. Heidentums*[2], p. 178, n. 3). Robinsohn quotes a remarkable story of an Arab newly-married man attacked, when with his wife, by an overpowering force. He thereupon killed her, smeared himself with her blood, and fought till he fell, by this means uniting her soul with his own (*op. cit.* p. 25). Similarly, we may read of the Australian initiation custom, after circumcision: 'The boy was lifted up, and standing above the two Thungallum men, allowed some of the blood to drip down on to their backs, thus establishing a special friendly relationship between himself and them' (Spencer-Gillen[b], p. 372; further examples collected by Frazer, *GB*[2] i. 356). Or we find that the Caribs 'sprinkle a male infant with its father's blood to give him his father's courage' (H. Spencer, *Sociology*, i. 116). We even find that amongst the West African natives the skeletons of Ashanti kings are washed with the blood of human victims (Ellis, *The Tshi-speaking Peoples*, p. 168)—doubtless to impart soul-life to the dead. Another group of examples shows us the use of blood as a substitute for life (Tylor, ii. 402), and the wide-spread avoidance of blood as food is by some peoples explicitly traced to the identity of the soul and the blood (examples collected in Frazer, *op. cit.* i. 353). So natural, indeed, is it among primitive people for death to come by blood-shedding that 'it is always held uncanny in Africa if a person dies without shedding blood' (Kingsley, *Travels in West Africa*, p. 524); in other words, the blood is the normal and visible soul. What may be the precise relation of this blood-soul to other ideas of soul, such as its identification with breath or shadow, is probably left quite indeterminate in most cases. Skeat cites a curious Malay belief which connects the blood-soul with the shadow-soul through a small snail. 'Among the grass in the shadow of a grazing animal these creatures are to be discovered, and if one of them is crushed, it will be found to be full of blood, which has been drawn in a mysterious way from the veins of the animal through its shadow' (*Malay Magic*, p. 306).

2. The perils of blood are a natural result of that idea of the blood-soul which has just been indicated —'the almost universal belief that blood is a fluid in which inheres mysterious potency, no less dangerous when misused than efficacious when properly employed' (Moore, *EBi*, art. 'Sacrifice,' § 43). It is with the former aspect that we are first concerned, and its most obvious example is that tabu on blood as food with which the OT makes us familiar; cf. 1 S 14^{32-35}, where we see that the blood, which is too perilous and mysterious to be man's food (Smend, *AT. Rel.-gesch.*[2] p. 142), must be offered on the sacred stone to Jahweh before man can eat the flesh with impunity. The prohibition of blood as food meets us, as a definite law, in Dt $12^{16.\ 23-25}$ 15^{23}; here it is not offered in sacrifice, but when animals are slain for ordinary food it is to be poured out on the ground; for the same prohibition in the Priestly Code, cf. Gn 9^4, Lv 3^{17} $7^{26.\ 27}$ 17 *passim*, 19^{26}. Frazer cites examples of the same tabu from the customs of Esthonians, American Indians, Romans, Arabs, and Papuans (i. 353). Further, the perils of blood are well illustrated in the precautions taken by many peoples in killing men or animals. It is not the actual killing, but the literal shedding of blood which constitutes the danger, since blood actually shed means mysterious soul-power let loose. Consequently, the actual shedding of blood in killing is to be avoided, if possible; this is probably the explanation of many curious methods of judicial execution (Kingsley, *Travels in West Africa*, p. 525; Frazer, i. 354 f.; Jevons, *Introd. Hist. Rel.* p. 73 f.) which in themselves might seem simply refinements of cruelty. To remind us that the peril is in the actual blood shed, not in any moral element of guilt incurred, we find the same unwillingness to shed blood in the case of animals amongst the Wanika and Damaras of Africa (Frazer, i. 357),

with the result that cattle are stoned to death or suffocated. Where blood is actually shed, various means are used to draw the charge of the shell, so to speak, before it can explode. One has been indicated above in the practice of putting the blood on a sacred stone or altar, and reference will be made to it again when the place of blood in sacrifice is considered (p. 719[a]). Another plan is to cover the blood with earth or dust; Doughty met with an example of this, interesting because the blood was the man's own: 'Thâhir, cupped in the head, neck, and back, felt lightened; he covered the blood with a little heap of dust, and one who came in asking, "What is this heap?" he answered, "Blood which I have buried"' (*Arabia Deserta*, i. 492). Or the blood may be sucked, or else deposited in some special place; both are illustrated by one of the Australian rites of sub-incision, in which the boy is made to suck the blood on the knife, whilst the blood from the wound falls on a piece of paper bark. 'The blood was taken in the paper bark to the boy's mother, who buried it in the bank of a water pool so as once more to ensure the growth of the lilies' (Spencer-Gillen[b], p. 368). In other circumstances, the blood that has been shed may require expiation (cf. Dt 21^{1-9}), and the blood-stain may be cleansed away by the use of other blood (Lang, *Myth, Ritual, and Religion*, i. 275). Finally, the perils of blood, already seen in the prohibition of blood as food, and in avoidance of or precautions in blood-shedding, find a third group of illustrations in the elaborate rules affecting the blood of menstruation and childbirth. The fear of women's blood in these cases, no doubt because regarded as specially mysterious and potent, is wide-spread amongst primitive peoples (examples in Frazer, i. 361). Elaborate care is taken by the Arunta and Ilpirra tribes of Australia, for example, to dispose of the blood of the first menstruation (Spencer-Gillen[a], p. 460). Crawley (*The Mystic Rose*, p. 212), whilst admitting that the obvious vehicle of contagion in such cases is blood, questions the truth of making this central in the tabu of women; and it is frequently true that various ideas operate and concentrate in one primitive custom. But none can doubt that the perils of blood are illustrated by the wide-spread tabu on women at certain times.

3. **The powers of blood** have been implied already in its perils. But the same ideas which make men ordinarily shrink from contact with blood may evidently cause them to resort to it on extraordinary occasions, as a specially potent means of influence. They are willing to accept the risk for the sake of the end in view. Only a few representative cases can be given here: further illustrations may be found in the chief works on anthropology, or in Strack's *Das Blut*, which gives many examples and copious references. One of the most obvious ways in which the psychical energy of blood can be assimilated is by drinking it. 'Blood may be given by young men to old men of any degree of relationship and at any time with a view to strengthening the latter' (Spencer-Gillen[a], p. 461). Amongst the same Australian peoples, blood may be given also to the members of an avenging expedition; to secure unity of purpose and to exclude treachery, it may even be forcibly administered to an outsider (p. 462); special meetings of reconciliation are also accompanied by blood-drinking (*ib.*). Many primitive peoples drink the blood of enemies in order to secure their strength (Crawley, *The Mystic Rose*, p. 102; Robertson Smith, *Kinship*[1], p. 284 [ed. S. A. Cook, p. 296]; Trumbull, *The Blood Covenant*, pp. 126-134). Sometimes the special purpose of blood-drinking is religious inspiration (Trumbull, *op. cit.* pp. 139-142), especially in connexion with a sacrifice, when the fresh blood of the victim is drunk (Frazer, *op. cit.* i. 133 f.). The result is frequently seen in the usual phenomena of possession. The religious idea underlying this practice will be discussed when blood-covenants (see § 4) in general have been considered; here it is sufficient to name this wide-spread practice in illustration of the powers of blood. Another way of imparting these powers is by external application of the blood. 'It is a very common thing for a young man to open a vein in his arm and allow the blood to sprinkle over the body of an older man, the idea being to strengthen the latter' (Spencer-Gillen[b], p. 598). Among some primitive peoples, the blood of relatives is allowed to fall on a corpse, probably with the idea of reviving it or imparting life to it (cf. Howitt, p. 451). From such use of blood to promote physical or psychical strength, it is an easy transition to the use of blood as medicine. For example, amongst the people just named, 'it is a very common practice to give both men and women blood to drink when they are ill' (Spencer-Gillen[b], p. 599). From the time of the Romans down to our own time, there has been a wide-spread belief that epilepsy could be cured by drinking blood (Robinsohn, *op. cit.* p. 27). An established cure for leprosy, from ancient Egypt down into the Middle Ages, was the blood-bath (Trumbull, *The Blood Covenant*, p. 116 f.). Many curious examples are collected by Strack (pp. 27 f. and 36-40) of these and similar customs. The patient may even be given his own blood to drink (*op. cit.* pp. 40-43). We find also cases approximating to the use of charms, like the Chinese custom, in times of pestilence, of writing sentences in human blood to be fastened on the door-posts for protection against disease (Trumbull, *The Threshold Covenant*, p. 71). Not only human but also animal blood occurs frequently in the primitive pharmacopœia (Strack, pp. 55-57). It is, of course, difficult to separate ancient medicine from ancient magic. In regard to the magical uses of blood, some belong to it in common with hair, nail-parings, etc., as having been in close connexion with the body: thus 'ancient Peruvian sorcerers destroyed their victims by acting on blood taken from them' (H. Spencer, *Sociology*, i. 264). The use of blood at the various totem ceremonies of Australia is midway between the magical and religious uses. But special mention must be made of the use made of the blood of menstruation for both medicinal and magical purposes (Strack, pp. 28-32)—a use we might expect in view of the perils specially attaching to this blood. The further powers of blood are illustrated throughout this article, in regard both to human and to superhuman relationships, and underlie innumerable blood-rites and blood-sacrifices. One of the most striking of these is the blood-baptism of Mithraism (*q.v.*). Here it remains only to point out the extension of the powers of blood to many blood-like things. The tabu on blood extends to many blood-coloured objects (Jevons, p. 67: 'The savage believes that the same terrible consequences—whatever they may be—which ensue on contact with blood, do actually and really follow on contact with things which by their colour . . . remind him thereof'). So, amongst West African natives, 'every spot where the earth is of a red colour is believed to be, or to have been, the place of abode of a Sasabonsum; and the red colour is supposed to be caused by the blood of the victims destroyed by him' (Ellis, *op. cit.* p. 35; cf. Tylor, i. 406). We may trace the same range of thought in the ideas attaching to the red heifer (Nu $19^{2ff.}$) or to the robin redbreast; and in the practice of smearing the body with red earth (Spencer-Gillen[a], p. 464). This last is probably a substitute for blood. For other

customs, especially the natural and frequent use of wine as the blood of the grape, cf. Trumbull, *The Blood Covenant*, p. 191 f.; Frazer, i. 359.

4. Blood-covenants. — The previous sections illustrate that primitive conception of blood on which all later ideas and institutions rest. We have now to notice some of the more important of these ethical and religious developments of the primitive idea. In the first place, there is the wide-spread practice of the blood-covenant between man and man. In its direct and primitive form, this is essentially the union of one life with another by actual exchange of blood, the exchange being made either by drinking or by transfusion. Many instances of this practice are collected by Trumbull in his elaborate monograph, *The Blood Covenant*; he draws examples from Africa, Asia, America, Europe, and Oceania, and claims that it is fundamental in all primitive life (p. 96). Certainly the practice is a natural development of the idea that blood is life. On its physical side, the practice is still retained in civilized communities in the medical operation of transfusion: 'men or dogs, bled to apparent death, may be at once and effectually revived by filling their veins with blood taken from another man or dog' (Huxley, *Physiol.* p. 117). The difference is that the primitive man did this, and still does it, not for physical only, but also for psychical ends, which he does not separate from the former. 'The inter-commingling of the blood of two organisms is, therefore, according to this view, equivalent to the inter-commingling of the lives, of the personalities, of the natures, thus brought together' (Trumbull, *op. cit.* p. 38). Both the primitive practice and the primitive idea may be modified in various directions. On the one hand, some substitute for blood, such as wine, may be introduced; on the other, the idea of life-union may appear in the weaker form of union in a particular oath or pledge (cf. Doughty, *Arabia Deserta*, ii. 41: 'sheykhly persons at Aneyza have told me that "el-Kahtân in el-Yémen do confirm their solemn swearing together by drinking human gore").' For a collection of such blood-oaths, cf. Strack, *Das Blut*, pp. 21–25. See, further, BROTHERHOOD (artificial).

5. Kinship. — It has seemed to many that the idea of union by blood through the blood-covenant is simply a particular case of the idea of union by blood as underlying kinship in general, the only difference being the substitution of artificial means for natural. Jevons, referring to the fact that Muslim women do not veil themselves in the presence of 'blood-brothers' any more than before other blood-relations, remarks: 'it faithfully preserves the primitive view that the blood-brotherhood thus established is not a relationship personal to the two parties alone, but extends to the whole of each clan: my brother is, or becomes, the brother of all my brethren; the blood which flows in the veins of either party to the blood-covenant flows in the veins of all his kin' (*op. cit.* p. 99; cf., however, p. 170). Benzinger, also referring to Semitic races, which so richly illustrate the ideas of blood, remarks: 'Relationship is participation in the common blood which flows with equal fulness in the veins of every member of that circle; on this idea rest all the rights and obligations between the individual and his clansmen' (*EBi*, col. 2672). Such an identity of kinship with blood-relationship is to us self-evident: the terms are convertible, for the life of the father and the life of the mother are combined in the child born from their physical union. But it is by no means so certain as is frequently assumed that the fundamental idea of kinship is blood-relationship. The whole range of birth ideas amongst primitive peoples often differs widely from our own. By various Australian tribes we find 'the idea firmly held that the child is not the direct result of intercourse, that it may come without this, which merely, as it were, prepares the mother for the reception and birth also of an already-formed spirit child who inhabits one of the local totem centres' (Spencer-Gillen[a], p. 265). In another part of the same country, a different view is held: 'The child comes from the man, and the woman only takes care of it' (Howitt, p. 255). Amongst the West Africans, 'the Awunas, an Eastern Ewe tribe, say that the lower jaw is the only part of the body which a child derives from its mother, all the rest being derived from the ancestral *luwoo* (the Tshi *kra*). The father furnishes nothing' (Ellis, *The Yoruba-speaking Peoples*, p. 131 n.). Westermarck (*Hum. Mar.* p. 106) cites from Carver the case of a North American tribe who ascribed the soul to the father and the body to the mother. These ideas, in their many varieties, at least remind us that the idea of blood-relationship has far less physiological support in the primitive mind than in our own. Further, we may ask whether the analysis of the idea of kinship into one of identity of blood is itself natural to the primitive mind, and does not belong to a somewhat later stage of development. Crawley argues that 'habitual proximity and contact is the strongest and most ordinary tie, and is earlier in thought than the tie of blood' (*The Mystic Rose*, p. 452); he further contends that 'the theory that the "blood covenant" and the similar marriage ceremony are intended to cause the blood of the tribe to flow in the veins of the new member is based on late legal fictions' (*ib.* p. 376). Westermarck, criticizing the hypothesis of an original promiscuity, shows reason to doubt that 'the denomination of children and the rules of succession really were in the first place dependent on ideas of consanguinity' (*op. cit.* p. 107). Even where blood-relationship is emphasized, as in Arabia, it may be significantly linked with parallel ideas, such as meal-communion. 'The Arabic community rests on a natural basis . . . those who belong together are connected in the first place through blood; in the second place, however, through the fact that they eat and drink, live and travel together; without this, blood would soon lose its power' (Wellhausen, *Reste arab. Heidentums*[2], p. 193). On the whole, it seems in accordance with primitive habits of thought to regard the idea of blood-relationship as a specialization of the general theory and practice of early kinship. See, further, BROTHERHOOD (artificial).

6. Blood-revenge. — At first sight it may seem difficult to explain the universal practice of blood-revenge, except from the standpoint of a primitive sense of the blood-tie underlying kinship. When the blood of a kinsman has been shed, it seems most natural to assume that the tie of blood impels his nearest relative to slay the slayer. But, in the light of what has been said, we may regard the motive which animates the avenger of blood as complex. There is, first, the fact that presents itself from the powers and perils of blood. Blood has been shed, perilous power has been liberated, and something has to be done if those in the vicinity are to escape the consequences. 'The principle that blood must be atoned for by blood has inspired in every part of the earth the endeavour to avenge a murdered kinsman' (Bastian, *Der Mensch in der Geschichte*, iii. 1; he collects many examples in pp. 2–36). There are, further, the natural obligations and feelings of those whose lives have been closely linked, which make a kinsman the most likely person to desire the 'wild justice' of revenge. The union of these two

motives, the psychical and the personal, as they may be called, issues in the familiar features of blood-responsibility, as presented in early forms of society. For example, amongst West African tribes, 'revenge, especially for bloodshed, is everywhere practised. It is a duty belonging first to the "ijawe" (blood-relative), next to the "ikaka" (family), next to the "etomba" (tribe). . . . Formerly it was indifferent who was killed in revenge, provided it was some member of the murderer's tribe. Naturally that tribe sought to retaliate, and the feud was carried back and forth, and would be finally settled only when an equal number had been killed on each side. . . . At present, blood is not always required, but formerly no money would have been accepted as a sufficient penalty' (Nassau, *Fetichism in West Africa*, pp. 19, 20). This example may be taken as the normal type. In course of time various modifications arose, tending to take vengeance out of the hands of the individual, and to put it in charge of the whole community, whilst various plans were adopted, such as the well-known 'cities of refuge' among the Hebrews, to differentiate the cases of wilful and accidental manslaughter (cf. Dt 19^6). The original entire lack of distinction between the two is significant of the attitude of the primitive mind to the whole matter; it is the actual shedding of blood that is in question, not the modern idea of abstract justice. The same attitude comes out even more significantly in the ideas held about blood-shedding in the case of animals. 'The primitive hunter who slays an animal believes himself exposed to the vengeance either of its disembodied spirit, or of all the other animals of the same species, whom he considers as knit together, like men, by the ties of kin and the obligations of the blood feud' (Frazer, ii. 389, where examples are given). Finally, we may see the whole principle which underlies blood-revenge well illustrated in some modern survivals. The following account is given by Curtiss from native information (*Primitive Semitic Religion To-day*, p. 191): 'In the neighbourhood of Nablus it is customary, when a reconciliation has been made between the murderer and the avenger of blood, for the murderer to kill a goat or a sheep. He then kneels before the avenger with a red handkerchief tied about his neck. Some of the blood of the animal slain is put on the palms of his hands. The avenger draws his sword and intimates that he could take his life from him, but that he gives it back to him.' See also BLOOD-FEUD.

7. **Blood and the spirit-world.**—In tracing the developments of the ideas of the powers and perils attaching to blood, as they are seen in blood-covenants, blood-relationship, and blood-revenge, we have considered those ideas as affecting the relation between man and man only. But it is evident, from the fact that the spirit-world is generally conceived on anthropomorphic lines, that this important group of ideas would be applied to the unseen world, and that blood would come to occupy an important place in religious as well as in social life. The remainder of this article is therefore concerned with the place of blood in religion. The natural starting-point is afforded by the thirst of departed souls for blood, of which the visit of Odysseus to Hades supplies the classical example (*Od.* xi. 34 f.): 'But when I had besought the tribes of the dead with vows and prayers, I took the sheep and cut their throats over the trench, and the dark blood flowed forth, and, lo, the spirits of the dead that be departed gathered them from out of Erebus. . . . I drew the sharp sword from my thigh and sat there, suffering not the strengthless heads of the dead to draw nigh the blood, ere I had word of Teiresias' (Butcher-Lang's tr., p. 173). This eagerness of the dead to revive their strength by drinking that blood which is life is the best explanation of the frequent practice of pouring blood into the grave or tomb by means of a tube or funnel (examples in Jevons, p. 51 f.), or of the various forms of blood-offering to the dead (p. 52 f.), which may take the form of more or less serious mutilations on the part of the mourners (p. 191). But other spirits than those of departed men are eager for blood on similar grounds. So we meet with belief in the vampire. 'Inasmuch as certain patients are seen becoming day by day, without apparent cause, thin, weak, and bloodless, savage animism is called upon to produce a satisfactory explanation, and does so in the doctrine that there exist certain demons which eat out the souls or hearts or suck the blood of their victims' (Tylor, ii. 191; he cites various examples, pp. 191–194; for some modern cases, cf. Strack, *Das Blut*, p. 65). As a particular example may be mentioned the Malay vampire known as the *Penanggalan*, 'which is believed to resemble a trunkless human head with the sac of the stomach attached to it, and which flies about seeking for an opportunity of sucking the blood of infants' (Skeat, *Malay Magic*, p. 320, cf. p. 328). But other temporarily or permanently disembodied spirits have the same tastes and powers. So the West African natives believe that witches live almost entirely on the blood which they suck from children at night (Kingsley, *Travels*, p. 490). It need hardly be said that the difficulty we feel in connecting an immaterial spirit with material blood does not exist for the primitive mind, which knows no such antithesis; indeed, spirits are sometimes thought to yield blood (Robinsohn, *op. cit.* p. 167).

From such general beliefs we may pass to the various practices by which the spirit-world is approached through blood. Perhaps the best and simplest example of contact with the spirit-world made by blood is afforded by its use in Australian totemistic ceremonies. In connexion with the Unjiamba flower-totem, the blood of one of the young men is sprinkled freely on a stone, which is supposed to represent a mass of Unjiamba flowers, after chants have been sung, 'the burden of which is a reiterated invitation to the Unjiamba tree to flower much, and to the blossoms to be full of honey' (Spencer-Gillen[a], p. 184). In connexion with the Okira or kangaroo-totem, a similar ceremony is performed to increase the number of kangaroos, after which the young men at once go out to hunt them (*ib.* p. 201). In this case, the stone 'represents the spot where a celebrated kangaroo of the Alcheringa (*q.v.*) went down into the earth, its spirit part remaining in the stone which arose to mark the place' (*ib.* p. 462). These blood ceremonies are specially instructive, because they show the potency of blood in making a vital connexion with the 'supernatural' world, quite apart from any of the theories of sacrifice developed at a later stage of religious thought. It is of importance to emphasize this, lest we misread primitive forms of 'sacrifice' such as that offered to the Yoruba god, Ogun, when a human victim is slain; 'the entrails are exposed before the image, and the body suspended from a tree. The victim is slain by having his head struck off upon the stool of Ogun, over which the blood is made to gush' (Ellis, *Yoruba-speaking Peoples*, p. 68). The relation of the blood to the god may be regarded as an extension of its relation to the departed spirit of a man; it is summed up in the address to one of the gods in the Egyptian pantheon: 'Hail, thou who dost consume blood' (*Book of the Dead*, cxxv. 13). In other cases, however, we meet with a less direct presentation of the blood to the deity. Thus Ellis

writes: 'In 1881 a slight earthquake shock threw down a portion of the wall of the king's residence in Coomassie. The king, Mensah, consulted the priests as to what should be done, and the latter declared that the damage was the act of Sasabonsum, and that the ruined portion must be rebuilt of mud (*swish*) moistened with the blood of virgins. Fifty young girls were accordingly slaughtered, and the wall was rebuilt with *swish* kneaded in their blood' (*The Tshi-speaking Peoples*, p. 36). This instance serves as a transitional case to a very large number of what may be called blood-beginnings. These are far too numerous to be noticed in any detail, but in general it may be said that primitive peoples begin anything new, a new work or building, a new relation, such as marriage, by the shedding of blood (cf. Trumbull, *The Threshold Covenant*, *passim*; Skeat, *Malay Magic*, 143, 232; and many books of travel, etc.). For example, to take the case of a single people, Doughty found such customs amongst the Arabs in connexion with new building, and the breaking of new soil: 'Malignity of the soil is . . . ascribed by the people of Arabia to the ground-demons, *jan*, *ahl el-ard*, or earth-folk. Therefore husbandmen in these parts use to sprinkle new break-land with the blood of a peace-offering: the like, when they build, they sprinkle upon the stones, lest by any evil accidents the workmen's lives should be endangered' (*Arabia Deserta*, i. 136; cf. ii. 100, of a new building; ii. 198, of a new well; i. 452, of new booty). It is of interest to find the old custom surviving even in modern Palestine. 'When the ground was broken for the railroad from Beirut to Damascus, ten sheep were placed in a row, their throats were cut, their blood flowed down upon the ground, and the flesh was given to the poor' (Curtiss, *Prim. Sem. Rel.* p. 184).

8. Sacrifice.—The important place of blood in man's connexion with the spiritual world is paralleled by its position in the sacrificial ritual of organized religion. The disposition of blood in the most primitive forms of sacrifice shows clearly its central significance, and no theory of sacrifice can be regarded as satisfactory which places blood at the circumference rather than at the centre. Moore, in his valuable article on 'Sacrifice' (*EBi*, col. 4217) summarizes his detailed survey of the OT system by saying: 'From first to last the utmost importance attaches to the disposition of the victim's blood. Indeed, it may be said that this is the one universal and indispensable constituent of sacrifice. . . . This use of sacrificial blood is older than the offering of part of the victim by fire, and is the necessary antecedent of the feast, its religious consecration. The offering or application of the blood cannot very well be regarded as a gift to God, or as a mere incident in the preparation for a communion meal.' It does not fall within the scope of the present article to offer a discussion of the rival theories of sacrifice (*q.v.*); but it may be pointed out that the argument of the previous sections, drawn from a wider field of anthropological evidence, fully supports the above statement. According to Tylor (ii. 375–410), 'sacrifice is a gift made to a deity as if he were a man. . . . The ruder conception that the deity takes and values the offering for itself, gives place on the one hand to the idea of mere homage expressed by a gift, and on the other to the negative view that the virtue lies in the worshipper depriving himself of something prized' (p. 376). That such views do arise in the history of sacrifice is, of course, undoubted, but there is grave reason to doubt whether they can be called in any sense a part of primitive culture. The gift-theory of sacrifice is criticized by Jevons on other grounds, as being of comparatively late application (*Introd. Hist. Rel.* pp. 223–225). Here we may note that the conception of blood as a gift itself involves some explanation of its selection, and forces us back to a more primitive standpoint. Amongst the Arabs, the chief form of sacrifice was the slaughtered animal (Wellhausen, *op. cit.* p. 114); and the genuine Arab ritual consists in pouring out the blood, or else smearing it on the sacred stone (p. 116). This special appropriation of the blood to the deity can be paralleled from many peoples. Thus the West Africans 'eat the meat of the sacrifice, that having nothing to do with the sacrifice to the spirits, which is the blood, for the blood is the life' (Kingsley, *Travels*, p. 451). 'In an expected great evil the gateway is sometimes sprinkled with the blood of a sacrificed goat or sheep. The flesh is not wasted; it is eaten by the villagers' (Nassau, *op. cit.* p. 93). The reason for this appropriation has been suggested in the previous sections of this article; it springs from the powers and perils of blood. On the one hand, we have already seen that blood is used as a vital link between man and the spirit-world—a usage with which various views of its precise potency might be connected; on the other hand, the very perils of blood, which so often cause its prohibition as food, and its tabu in other ways, suggest that the sacred stone will serve as a lightning-conductor does, by drawing off the latent peril. This view is practically that held by Moore in the article referred to: 'The common root of these diverse uses and restrictions is the almost universal belief that blood is a fluid in which inheres mysterious potency, no less dangerous when misused than efficacious when properly employed. In the outpouring of the blood at the sacrificial stone we may perhaps recognize the feeling that this is the safest disposition of it, as well as the belief of a somewhat more developed theology, that it belongs to the deity of right' (*EBi*, col. 4218). Such disposal of the blood, starting from a genuine and deep-rooted primitive motive, would form a nucleus round which the later usages and ideas would easily cluster. Ancient psychology draws no hard and fast line between the blood-soul of the animal and that of the man; totemistic ideas confirmed the identity of the man with the animal he offered, and the communion with the deity obtained by the blood which was the life would be a very real thing to the primitive worshipper. The later ideas of substitution depend on a deepening ethical experience; and they, too, equally with the idea of homage, can find a basis in the offered blood. All these are natural developments, interpreting the primitive rite anew to the needs of each age; nor do the perils and powers of blood become inoperative on human thought till men learn that the only perfect communion with God belongs to the perfectly obedient will, and that they who would worship the Father must worship in spirit and in truth. BLOOD-BROTHERHOOD.—See BROTHERHOOD (artificial).

BLOOD-COVENANT.—See BLOOD, p. 717.

BLOOD-FEUD.

BLOOD-FEUD (Primitive).—One of the most wide-spread phenomena of primitive, and even of comparatively advanced, jurisprudence is the blood-feud. This, while subject to the most manifold gradations, may be defined, in its typical aspect, as that principle of ethnological jurisprudence whereby an entire family (more rarely clan or tribe) is made liable to retaliation and reprisals in kind by another family (or clan or tribe) against which a member of the former family (or clan or tribe) has committed a deadly offence (generally murder, less commonly rape or abduction). It is, in other words, the *lex talionis* exercised between families (more rarely clans or tribes), often including those connected with them by any form of blood-covenant; it is communal vengeance, as distinguished from individual revenge. Its ultimate foundation is, indeed, personal retaliation; but, in proportion as the family develops, the principle of the blood-feud grows in importance, until it reaches its climax in the modern tenet that an entire government is bound to require punishment for injury done to one of its citizens by another nation or by a member or members thereof. On the other hand, just as in the latter case concessions or pecuniary compensation normally take the place of demanding life for life, so in relatively primitive jurisprudence, murder, rape, and other grave offences may frequently be commuted in various ways; the blood-feud is replaced by the *wergeld* (see below).

The essentially communal nature of the blood-feud carries with it the corollary that, among many peoples, one unprotected by ties of family, clan, or tribe may be injured in person or possessions without risk of blood-vengeance, unless he has received artificial kinship by some form of blood-covenant or enjoys the status of guest, which in itself constitutes in great measure a temporary *quasi*-adoption into the family (very rarely into the clan or tribe) of his host. This explains the fact that many peoples rob or kill strangers with impunity and without any sense of wrong-doing, although among themselves they may have the highest regard for the possessions and lives of their fellows, as among the Polynesians, where the property of strangers was held to belong to the gods of the land, so that it could be seized and the owners killed with impunity by those among whom the strangers in question had come (Mariner, *Tonga Islands*, London, 1818, i. 308; Mathias G . . ., *Lettres sur les îles Marquises*, Paris, 1843, p. 106).

The blood-feud is, among many peoples, a sacred obligation, to which the kinsmen of the murdered man are in duty bound, as among the African Bakawiri (Leuschner, in Steinmetz, *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien*, Berlin, 1903, p. 23). To such a degree is this concept carried that it is often believed that the soul of the murdered man finds no rest until blood-vengeance has been exacted, as among the Australians and Papuans (Kohler, in *ZVRW* vii. 363, 376), and the African Banaka, Bapuku, Diakite Sarrakolese, and Washambala (Steinmetz, *op. cit.* p. 51; Nicole, in Steinmetz, *op. cit.* p. 132; Lang, *ib.* p. 257). He who does not perform blood-vengeance when he should is despised, not as a coward, but as a recreant to the demands of religion and duty, as among the Negro Akka (Monrad, *Gemälde von der Küste von Guinea*, Weimar, 1824, p. 90 f.) and Felups (Park, *Reise in das Innere von Afrika*, Hamburg, 1779, p. 20), the South American Arawaks (Schomburgk, *Reise in Britisch Guiana*, Leipzig, 1847, i. 157), in Australia and New Guinea (Kohler, in *ZVRW* vii. 364, 376; Grey, *Journal of Two Expeditions in North-West and West Australia*, London, 1841, ii. 240), and in the Indonesian islands of Leti, Moa, and Lakor (Riedel, *De sluik- en kroesharige rassen tusschen Selebes en Papua*, The Hague, 1886, p. 370). In at least some cases the object of the blood-feud appears to have been sacrifice of the murderer or his kin to the *manes* of the victim, thus explaining the rule of the South American Tupi that the relatives of the murdered man should strangle the slayer on the very spot of his crime (Featherman, *Social History of the Races of Mankind*, London, 1887–90, iii. pt. 2, p. 340). This usage finds its antithetical parallel in the North American Indian adoption of the murderer in his victim's stead (see below, p. 722[b]). The women are often described as especially assiduous in demanding the inauguration of the blood-feud, as among the Iroquois, Florida Indians, Caribs, and Brazilians (Lafitau, *Mœurs des sauvages amériquains*, 16mo ed., Paris, 1724, iii. 149–151).

The degree of kinship involved in the duty of satisfying blood-vengeance varies widely. In its greatest extent any member of the family, clan, or tribe to which the murdered man belonged may kill any member of the family, clan, or tribe of the murderer, as in New Guinea, where the murderer himself is not killed (von Hasselt, in *ZE* viii. 193; cf. the Australian Dieri custom of killing the eldest brother of the offender rather than the offender himself [Howitt, p. 327]), and among the African Somali and Bakawiri (Haggenmacher, in *Petermann's Mittheilungen*, Erg. x. No. 47, p. 31; Leuschner, in Steinmetz, *op. cit.* p. 23). Elsewhere the feud may be restricted to totem-families, as among some Australians and the South American Goajiros (Kohler, in *ZVRW* vii. 364, 382). In its extremest form the blood-feud prevailed generally in Polynesia, especially in New Zealand (Angas, *Savage Life in Australia and New Zealand*, London, 1847, ii. 171; Thompson, *The Story of New Zealand*, London, 1859, i. 98). In Polynesia, if the offender escaped, his whole family paid the penalty in his stead (Wakefield, *Adventure in New Zealand*, London, 1845, ii. 108); in Tonga and Samoa, where wergeld was accepted only rarely, all kinsmen of the offender were killed if they could be found (Shortland, *Traditions and Superstitions of the New Zealanders*, London, 1854, p. 224); and in New Zealand the kinsmen of a murdered man often killed in revenge the first man on whom they chanced, whether friend or foe (Dieffenbach, *Travels in New Zealand*, London, 1843, ii. 127).

The blood-feud may, however, be restricted to certain members of the households of the murderer and the murdered—a system widely prevalent in Africa. Where the matriarchate is in force, only those related on the mother's side are involved, and where the patriarchal system has been developed, only those on the father's side. Accordingly, among the African Barea and Kunáma the son

avenges the death of a mother or uterine sister, the nephew his maternal uncle or aunt, and the maternal uncle his nephew or niece; but the son does not avenge his father, or the father his son. Among the Felups, on the other hand, as in Akkra, on the Gold Coast, the eldest son is the avenger of his father (Post, *Afrikan. Jurisprudenz*, Oldenburg, 1887, i. 61 f.). Similar rules prevail for the maternal side among the Goajiros and Australians (Kohler, in *ZVRW* vii. 382, 364; Bastian, in *ZE* vi. 305). If, however, the matriarchal and patriarchal systems are confused, these differentiations no longer hold, as among certain Brazilian tribes (Post, *Anfänge des Staats- und Rechstlebens*, Oldenburg, 1878, p. 182). An interesting sidelight on the primitive legal status of the wife is afforded by some of the laws of the blood-feud, which show whether she is regarded as having become the property of her husband or is held still to belong to her original family (cf. the twofold theory of the status of the individual in more highly developed polity, p. 723[b]). From the latter point of view she is avenged, among the Bakawiri and Washambala, by her own blood-kinsmen, not by her husband (Steinmetz, *op. cit.* p. 23; Lang, *ib.* p. 257), this being the reverse of Banaka, Bapuku, and pagan Bambara practice (*ib.* pp. 49, 89); while among the Diakite Sarrakolese of the French Sudan the husband may avenge his wife when duly authorized by the *ḳāḍī*, whereas if he does not request this privilege the duty devolves upon her kinsmen (Nicole, *ib.* p. 132). In West Africa the blood-feud 'is a duty belonging, first, to the "ijawe" (blood-relative), next to the "ikaka" (family), next to the "etomba" (tribe). The murdered man's own family takes the lead,—in case of a wife, her husband and his family, and the wife's family; sometimes the whole "ikaka"; finally, the "etomba"' (Nassau, *Fetichism in West Africa*, New York, 1904, p. 19). In the African Sansanding States the right of blood-revenge belongs to the agnates of the murdered man in the order of their inheritance (Fama Mademba, in Steinmetz, *op. cit.* p. 89). Among the African Washambala, the blood-feud, which they exact only for murder, is directed against the offender and his wife, while his children are enslaved and his property is plundered (Lang, *ib.* p. 256 f.); and among the American Shawnee, in case wergeld was refused and the murderer could not be seized, his nearest kinsman was slain in his stead by the kinsmen of the murdered man (Featherman, *op. cit.* iii. pt. 1, p. 183), this being a *quasi*-analogue to the Dieri practice of substitution, to which attention has already been drawn (for the very different principle of substituting the murderer for the victim, see below, p. 722).

An interesting example of what may be called a ceremonial blood-feud is afforded by the Australian *pinya* (the *atninga* of the Central Australians), a sort of *posse comitatus*, which may hunt down the murderer or (as already noted) his eldest brother. In lieu of actually killing a victim, however, the *pinya* may subject the murderer to a milder penalty. Thus, among the Mukjarawaint, in a case of blood-feud, a headman 'appointed a spot near at hand where the expiatory encounter should take place that afternoon, it being agreed that so soon as the offender had been struck by a spear the combat should cease. Then the offenders stood out, armed with shields, and received the spears thrown at them by the dead man's kindred, until at length one of them was wounded. The Headman of the Garchukas then threw a lighted piece of bark, which he held, into the air, and the fight ceased. If it had been continued there would have been a general fight between the two totems' (Howitt, p. 335). This practice is wide-spread in Australia (Howitt, p. 335 ff.).

Artificial kinship, as noted above (p. 720), is also frequently reckoned in satisfaction of the blood-feud. Thus, among the Polynesians, brothers artificially created by blood-covenant were bound to require blood-revenge if one was killed, even though he fell in battle, which normally abrogates the necessity of such vengeance (Ellis, *Polynesian Researches*[2], London, 1832, i. 290); and similar principles were observed among the Araucanian Pehuenche of South America (Post, *Grundlagen des Rechts*, Oldenburg, 1884, p. 69). The relation between host and guest often carries similar obligations with it, as among the African Barea and Kunáma (Munzinger, *Ostafr. Studien*, Schaffhausen, 1864, p. 477), as does that between patron and client, as among the Barea and Bogo (Munzinger, *op. cit.* p. 243, and *Ueber die Sitten und das Recht der Bogos*, Winterthur, 1859, p. 43); so that among the African Takue wergeld is readily accepted for a murdered kinsman, but blood-revenge is exacted for the killing of a guest or client (Munzinger, *Ostafr. Stud.* p. 208).

Certain limits are, however, normally observed in the blood-feud. Men in full vigour are usually alone concerned. Women are, for the most part, exempt, as are children and aged men, among the Indians of Brazil (Post, *Anfänge*, p. 175), although some peoples, as the Sudanese, spare children only until they are old enough to bear arms (Marno, *Reisen im Gebiete des blauen und weissen Nil*, Vienna, 1874, p. 200), the same practice prevailing among the Nissan Islanders of the Bismarck Archipelago (Sorge, in Steinmetz, *op. cit.* p. 418) and the Marshall Islanders (Senfft, *ib.* p. 449). Other tribes, as the Nuforese of New Guinea and the African Banaka and Bapuku, render even women and children liable (von Hasselt, in *ZE* viii. 93; Kohler, in *ZVRW* vii. 376; Steinmetz, *op. cit.* p. 49). In like fashion the Caribs mercilessly slaughtered children (Labat, *Voyage aux isles d'Amérique*, The Hague, 1724, ii. 109), and the South American Tupinimba even extended the blood-feud to the child begotten by a prisoner of war, who, before being killed, was made to consort for this very purpose with a woman of his captors' tribe, the offspring being brought up expressly for slaughter (Schmidt, in *ZVRW* xiii. 297, 317). Some peoples, as the Makassars, forbid blood-feud between those of different rank, the inferior being entitled only to blood-money (Wilken, *Het strafrecht bij de volken van het maleische ras*, The Hague, 1883, p. 7); while in the Sansanding States one superior in rank is not liable to blood-feud for the murder of his inferior, unless robbery was the motive for the offence (Fama Mademba, in Steinmetz, *op. cit.* p. 88 f.).

Within the family the blood-feud has no existence, punishment here being meted out by the authority of the head of the family—a principle also observed in the clan and tribe; although, as the sense of blood-kinship decays in the last two divisions, it naturally becomes increasingly difficult for an interclanal or intertribal blood-feud to arise.

The blood-feud is most generally begun, as has been noted, by murder, which may be entirely unintentional, as among the Australians, the Marshall Islanders, and in the Egyptian Sudan (Kohler, in *ZVRW* vii. 363, xiv. 443 f.; Marno, *op. cit.* p. 200), or committed in self-defence, as among the Bedawīn (Kohler, in *ZVRW* viii. 254), or committed even by a person irresponsible for his acts, as among the African Ondonga and the Nissan Islanders of the Bismarck Archipelago (Rautanan, in Steinmetz, *op. cit.* p. 341; Sorge, *ib.* p. 418). The wide-spread belief in magic as the cause of death frequently leads to inquiry of the sorcerer as to the identity of the murderer and the consequent object of the blood-feud, as in Africa (Post, *Afr. Jur.* ii. 145 ff.), among the Nissan Islanders (Sorge, in Steinmetz, *op. cit.* p. 418), and the Dieri of South-East Australia (Howitt, p. 326), and in Central Australia generally (Spencer-Gillen[a], p. 490). The Bagobo of South Mindanao even made the medicine-man liable to the blood-feud on the ground that he had failed to avert death from the murdered man

(Schadenberg, in *ZE* xvii. 12). But, as the feeling of blood-kinship diminishes, a distinction is drawn between murder and manslaughter, the former still requiring blood-vengeance, while atonement may be made for the latter by a lesser penalty, or the offence may be commuted by wergeld, as in the Sansanding States and among the Diakite Sarrakolese of the French Sudan, the Washambala (Fama Mademba, in Steinmetz, *op. cit.* p. 89; Nicole, *ib.* p. 132; Lang, *ib.* p. 257), the Narrinyeri of South-East Australia (Howitt, p. 341), and the Papuans (Kohler, in *ZVRW* xiv. 380 f.). In case of offences other than murder, primitive jurisprudence varies extremely. Among the African Barea and Kunáma, and in Akkra, mere bodily injury does not render the offender liable to the blood-feud (Munzinger, *Ostafr. Stud.* p. 502; Monrad, *op. cit.* p. 98), as it does, for instance, in Montenegro (Wesnitsch, in *ZVRW* ix. 54; Miklosich, *Blutrache bei den Slaven*, Vienna, 1887, p. 21), while the African Bogo regard such injury as shedding half the blood of the injured part, so that half the price of blood-revenge is required (Munzinger, *Bogos*, p. 81). Sexual offences, as infringing property rights (see art. ADULTERY), are sometimes subject to the blood-feud, notably adultery (Post, *Studien zur Entwicklungsgesch. des Familienrechts*, Oldenburg, 1889, pp. 355–359), fornication (the African Takue, Marea, and Beni-Amer [Munzinger, *Ostafr. Stud.* pp. 208, 245, 322]), and abduction (New Caledonians and Samoans [Post, *Anfänge*, p. 214]).

Since a true blood-feud is a family, clanal, or tribal affair, it can, properly speaking, be ended only by a solemn agreement between the families, clans, or tribes concerned; so that, if these will not consent to peace, the feud may persist for generations until one of the parties to it is annihilated, as among the Bagobo (Schadenberg, in *ZE* xvii. 28), the Manyuema and Balégga (Post, *Afr. Jur.* i. 84; cf. *Anfänge*, p. 175f., *Geschlechtsgenossenschaft der Urzeit*, Oldenburg, 1875, pp. 159 ff.), and the Malagasy islands of Nossi-Bé and Mayotte (Walter, in Steinmetz, *op. cit.* p. 391). A war of fourteen years' duration was waged between the North American Indian Passamaquoddies and Micmacs because, while the two tribes were visiting each other, the son of the Passamaquoddy chief became enraged and killed the son of the Micmac chief, who refused every offer of reconciliation, even the life of the boy murderer (Leland and Prince, *Kulóskap the Master*, New York, 1902, p. 25 f.). Sometimes, however, as among the Australians, a blood-feud is satisfied if the offender be merely wounded (cf. above, p. 721[a]; Howitt, pp. 336, 342; Kohler, in *ZVRW* vii. 365).

For a typical example of the termination of the blood-feud the ceremonies of the African Barea and Kunáma may be cited (Post, *Afr. Jur.* i. 67, his account being based on Munzinger, *Ostafr. Stud.* pp. 501 ff.). When a day has been fixed for the settlement of the feud, the murderer chooses a protector in the hostile village, to whom he sends durra to make beer. On the day appointed, all the villagers, except the family of the murdered man, go out to meet the murderer, whom they safeguard in their midst until he reaches the house of his victim. He enters the house and slaughters a barren cow to the *manes* of the murdered man, whose brother meanwhile grasps the cow's head. The murderer and his victim's brother then drink beer out of the same horn and eat meat from the same platter; each gouges out an eye of the slaughtered cow; and they exchange clothing so long as they sit together. The blood-price is then paid, and the murderer is escorted to his protector's house, while the family of his victim gives half the slaughtered cow as a feast to the village. The murderer must still shun the village for a year, but at the expiration of this time he again visits the kinsfolk of his victim, and is henceforth their closest kinsman and friend. In computing the blood-price, the number of those slain on each side is reckoned, and equality is secured by the payment of any difference in money or its equivalent, as among the Bogo and Somali of Africa (Munzinger, *Bogos*, p. 79; von der Decken, *Reisen in Ost-Afrika*, Leipzig, 1869–71, ii. 330) and the Bauro of the Solomon Islands (Post, *Anfänge*, p. 182), while under such circumstances the Maori returned the heads and booty which they had taken (*ib.* p. 183). The treaty is often still further strengthened by marriages between the two parties, as among the Bogo and Beni-Amer (Munzinger, *Bogos*, p. 82 f., *Ostafr. Stud.* p. 322). Among the Banaka and Bapuku the blood-feud can cease only when an equal number have been killed on each side (Steinmetz, *op. cit.* p. 49).

The true blood-feud in its primitive form excludes all possibility of commutation by money or its equivalent. This extreme form is, however, comparatively rare, even the African Ondonga, who kill man for man, woman for woman, and child for child, having a fully developed system of wergeld (Rautanan, in Steinmetz, *op. cit.* p. 341). With the decline of the sense of blood-kinship and the concomitant decay of early family law, commutation of blood-revenge becomes increasingly easy. Many peoples, like the Ondonga just mentioned, hold that murder may be punished either by blood-feud or by wergeld, at the option of the injured party, as among the Haidah of the Pacific coast (*NR* i. 168), the Papuans and Marshall Islanders (Kohler, in *ZVRW* vii. 376, xiv. 446), the Malays (*Tijdschrift voor Nederlandsch-Indië*, 1851, ii. 15), and the African Bogo, Tuareg, Galla, Bakawiri, and Diakite Sarrakolese (Munzinger, *Bogos*, p. 80; Duveyrier, *Les Touaregs du nord*, Paris, 1864, p. 428; Cecchi, *Fünf Jahre in Ostafrika*, Leipzig, 1888, p. 79; Leuschner, in Steinmetz, *op. cit.* p. 23; Nicole, *ib.* p. 132). In the Sansanding States in Africa the murderer, who may not be harmed by any but the avenger of blood, is alone exposed to the blood-feud, although both he and his agnates are liable for wergeld (Fama Mademba, in Steinmetz, *op. cit.* p. 89). Among the Nissan Islanders of the Bismarck Archipelago the somewhat curious rule is observed that, after blood-revenge has been exacted, the party executing it pays the other party a wergeld to secure final settlement of the feud, thus obviating a series of reprisals on both sides (Sorge, in Steinmetz, *op. cit.* p. 418). Elsewhere, as among the Bantu (Kohler, in *ZVRW* xv. 56), acceptance of proffered wergeld is compulsory.

The supersession of the blood-feud by the wergeld is lucidly exemplified by the usage prevailing among the American Iroquois and Algonquins, which may be summarized as follows from Lafitau (*op. cit.* ii. 185–193). The people of each 'cabin' (i.e. *hodensote*, or 'long house') exercised jurisdiction over their own members, so that, if one killed another belonging to the same 'long house,' the village assumed that the deed had been done for good and sufficient reasons, and that in any case it was none of their business. If, on the other hand, the murder was committed by a member of another 'long house,' village, tribe, or stock, all those who had been connected with the slain man united to 're-make the spirit' [*refaire l'esprit* (*c'est leur expression*)] for the kinsmen of the deceased, while at the same time every effort was exerted to save the murderer's life and to protect his kin against the vengeance of the kin of the murdered man. One of the chiefs now offered 60 presents [cf. the similar Huron custom recorded in 1636 by Lejeune (*Jesuit Relations and Allied Documents*, Cincinnati, 1896–1901, x. 215–223, cf. also xxxiii. 239–249), 'the least of which,' according to Lejeune, 'must be of the value of a new beaver robe']. The first nine of these, which were for the immediate kinsmen of the deceased, were the most costly, each often being 1000 beads of wampum; and the remainder, which were displayed on a pole, represented all that the dead man had used while alive. If blood-vengeance had been executed before this wergeld had been proffered, it was the avengers who were bound to offer these presents, while the kinsmen of the murderer were released from all liability. At an earlier time the Huron had not only exacted the giving of presents, but had also required the murderer to remain beneath the putrefying corpse of his victim (which was elevated on poles) as long as the kinsmen of the murdered man desired. If the presents were not acceptable, the murderer himself was given, in addition to the wergeld, to the kinsmen of his victim, whose place he was to take. Although he was occasionally rejected, he usually came to be regarded exactly as the man whom he had slain; and Lafitau also adds, though without vouching for the statement, that further south the murderer was required to marry the wife and adopt the children of the slain man, thus clearly showing the substitution-motive in lieu of the sacrifice-motive (cf. p. 720[b]) in blood-revenge—a principle occasionally observed by the Algonquin Abenaki (Featherman, *op. cit.* iii. pt. 1, p. 96). Sometimes a murderer was even adopted as a son by the mother of his victim (Tanner, *Mémoirs*, Paris, 1835, ii. 227).

Where the parties concerned have their own option as to whether the blood-feud shall be terminated by wergeld or some other means, outside authorities may not interfere, as among the

Araucanians and Greenland Eskimos (Post, *Anfänge*, p. 174), and the African Bogo, Barea, Kunáma, and Marea (Munzinger, *Bogos*, p. 79, *Ostafr. Stud.* pp. 499, 242), and Msalala (Desoignies, in Steinmetz, *op. cit.* p. 280); but, if reconciliation proves impossible, the blood-feud remains in force. The offender often flees, a certain amount of start frequently being allowed him, this being 3½ days among the Bedawīn (Post, *Studien*, p. 125; Kohler, in *ZVRW* viii. 253). He must then remain in exile, either until reconciliation has been effected, as among the Barea, Kunáma, and Teda (Munzinger, *Ostafr. Stud.* p. 501; Nachtigal, *Sahara und Sudan*, Berlin, 1879–89, i. 448), or until his offence has been outlawed by the lapse of a definite period of time, this being 5 years among the Felups (Bérenger-Féraud, *Les Peuples de la Sénégambie*, Paris, 1879, p. 293) and 1 year among the Californian Nishinam (Kohler, in *ZVRW* xii. 409). Here the blood-feud comes into immediate connexion with the jurisprudence governing the right of asylum (*q.v.*), but among some peoples, as many American Indian tribes, murder was the one and only offence that could never be outlawed (Loskiel, *Gesch. der Mission der evangel. Brüder unter den Indianern in Nord-Amerika*, Barby, 1789, p. 20; Morse, *Report to the Secretary of War on Indian Affairs*, New Haven, 1822, appendix, p. 99; Featherman, *op. cit.* iii. pt. 1, p. 440), so that the Creek harvest-festival in July or August brought amnesty for all offences except murder (Kohler, in *ZVRW* xii. 409).

By degrees the acceptance of proffered wergeld becomes compulsory, but if the offending party be unable to pay this, the blood-feud may, as primitive kinship-feeling decays, still be commuted in a variety of ways. Thus the offender may become the slave of the family, clan, or tribe that he has injured, as in Makassar, Saranglao, and Gorong (Wilken, *op. cit.* p. 24 f.; Riedel, *op. cit.* p. 156), and among the African Diagara (Hecquard, *Reise an der Küste und in das Innere von Westafrika*, Leipzig, 1854, p. 104); or he may become the slave of the chief of the tribe in question, as among the Malays of Menangkabau (Wilken, *op. cit.* p. 22); or of him who paid the blood-money, as in West Timor (Riedel, in *Deutsche geograph. Blätter*, x. 234). This form of punishment is also the penalty for many other offences (see SLAVERY). In Akkra, on the other hand, he who could not pay the wergeld was exposed to the extreme consequences of the blood-feud (Bosman, *Viaggio in Guinea*, Venice, 1752, ii. 91; Müller, *Die afr. auf der Goldküste gelegene Landschaft Fetu*, Hamburg, 1676, p. 116).

As soon as any mode of reconciliation or commutation becomes permissible between a murderer and the family, clan, or tribe of his victim, the decay of the blood-feud begins. It has already been seen that the commonest method of such reconciliation is by the payment of certain sums to the kinsfolk of the murdered man. Potent as is such wergeld in diminishing the scope and frequency of the blood-feud, other factors are still more powerful. With increasing civilization the predominance of the family and clan becomes less and less, while that of the tribe (and ultimately of the nation and State) becomes greater and greater. The blood-feud, which is at first absolutely essential if family is to be prevented from encroaching on family, is seen to be detrimental to the larger development of the embryo State, and measures of ever-increasing severity are taken to check and suppress the blood-feud, until at last it wholly disappears as a recognized institution. The struggle is, however, long and stubborn. The primitive State may hand the offender over to the kinsmen of his victim, that they may either execute blood-revenge or obtain reconciliation in any way they please, as among the Iroquois, Batak, Malays of Menangkabau, Pogghi Islanders, and African Bornu, Wadai, and Unyoro (Post, *Studien*, p. 128, *Anfänge*, p. 184); or the nearest kin of the murdered man may be appointed the official executioner of the murderer, as among the Galla (Cecchi, *op. cit.* p. 79) and Malays (Post, *Bausteine für eine allgemeine Rechtswissenschaft*, Oldenburg, 1880–81, i. 157), any anticipation of official sanction on the part of the avenger of blood being a punishable offence in the Sansanding States (Fama Mademba, in Steinmetz, *op. cit.* p. 89). In this way the place of the primitive avenger of blood is ultimately taken by a regular State executioner, as among the Malays of Nias (Wilken, *op. cit.* p. 22). Even in ancient Greece the State took cognizance of murder only when duly qualified kinsmen of the murdered man had lodged a formal complaint against the murderer.

Often there is a double system of punishment for murder and other grave offences—execution by officers of the State or blood-feud, as among the African Washambala (Lang, in Steinmetz, *op. cit.* p. 256); while, in case the system of commutation has come into effect, a certain amount of the wergeld may belong to the State, the remainder appertaining as damages to the kinsmen of the murdered man. On the other hand, the non-Muhammadans in the Sansanding States give the entire amount to the king, whereas Islāmitic law awards the whole wergeld to the injured family (Fama Mademba, in Steinmetz, *op. cit.* p. 89), thus showing in epitome the antithetical status of the individual as belonging, in the one case, to the State, and, in the other, to the family (cf. the twofold theory of the status of the wife, above, p. 721). A murderer may often escape the blood-feud by voluntarily surrendering himself to the State; but if he will not do this, the blood-feud is officially sanctioned. Increasing limitations are, however, imposed by the State. The blood-feud is restricted to a brief period: three days in Johor (Wilken, *op. cit.* p. 7), or *in flagrante delicto* among the Arabs of the Red Sea coast (Klemm, *Kulturgeschichte*, Leipzig, 1843–52, iv. 149); while, in Makassar, if a murderer succeeded in reaching the judge, he was safe from blood-feud, and had only to pay the wergeld (Wilken, *op. cit.* p. 6). Elsewhere, as in Johor, the avenger of blood must make formal declaration of his intention before the judge (Post, *Bausteine*, i. 150). An especially potent restriction on the blood-feud is found, as already noted, in the system of asylum; and finally, with the more perfect development of the State, aided by a higher concept of religion (though, as a matter of fact, Christianity alone has contributed to this end), the blood-feud itself becomes murder and a crime, instead of a sacred and praiseworthy duty, and so is suppressed and disappears, surviving only in such stagnant phases of civilization as are still revealed from time to time by Sicilian *vendettas* or the feuds of the 'mountain whites' of Kentucky and Tennessee.

LITERATURE.—Frauenstädt, *Blutrache und Totschlagsühne*, Leipzig, 1881; Kohler, *Zur Lehre von der Blutrache*, Würzburg, 1885; Steinmetz, *Ethnol. Studien zur ersten Entwicklung der Strafe*, Leyden, 1894, i. 361–406, and *Rechtsverhältnisse von eingeborenen Völkern in Afrika und Ozeanien*, Berlin, 1903; Post, *Geschlechtsgenossenschaft der Urzeit*, Oldenburg, 1875, p. 155 ff., *Ursprung des Rechts*, Oldenburg, 1879, p. 87 ff., *Anfänge des Staats- und Rechtslebens*, Oldenburg, 1878, p. 172 ff., *Bausteine für eine allgemeine Rechtswissenschaft auf vergleichend-ethnol. Basis*, Oldenburg, 1880–81, i. 142 ff., *Afr. Jurisprudenz*, Oldenburg, 1887, i. 57 ff., *Studien zur Entwicklungsgesch. des Familienrechts*, Oldenburg, 1889, pp. 133 ff., and *Grundriss der ethnol. Jurisprudenz*, Oldenburg, 1894–95, i. 226 ff., ii. 246 ff. On the last-named work the present art. is largely based. A large amount of source-material is contained in *ZVRW* (cf. the index to i.–xx., *s.v.* 'Blutrache,' and such artt. as Kohler's summary of the North American Indian blood-feud, xii. 405–411, and Schmidt's summary for South America, xiii. 315–318). Much

may also be gleaned from travels and such general works as Waitz-Gerland, *Anthropologie der Naturvölker*, 6 vols., Leipzig, 1860-77.

LOUIS H. GRAY.

BLOOD-FEUD (Aryan).—*Introduction.*—The institution of the blood-feud may still be traced among all Aryan peoples: first, as it exists up to the present day among the Afghans and the Albanians, in Corsica and Sardinia, and among the Southern Slavs; secondly, at least in the older tradition, where it is clearly preserved, among the Greeks, Teutons, Celts, and the Western and Eastern Slavs; thirdly, with only scanty traces, among the Indians of the Veda, the Iranians of the Avesta, and the Romans. Its primitive Aryan signification lies in the etymological correspondence of Av. *kaênâ*, 'punishment,' 'revenge' (New Pers. *kîn*, 'enmity,' 'hate,' 'anger') = Gr. ποινή, 'blood-revenge' and '*wergeld*.' Probably it may also be connected with Ir. *cáin* (from **coini-**) = 'emenda,' *i.e.* 'damni reparatio,' 'satisfactio de iure læso vel de iniuria illata.' The verb which underlies these substantives is Skr. *chi*, *cháyate*, 'punish,' 'avenge'; Av. *či*; Gr. τίνομαι, τίνυμαι, τίνω, 'obtain compensation,' 'punish,' 'give compensation.' Compare also τίω, 'estimate a value,' 'honour.' The following characteristic features of the primitive Aryan period may be established from the identity of customs among individual tribes.

1. The obligation of blood-revenge is always attached to definite circles of relationship, which may be designated family or clan. Within this circle the blood-feud descends first of all from father to son.

For the Celts, cf. Giraldus, *Cambriae Descriptio*, cap. 17: 'Genus super omnia diligunt, et damna sanguinis atque decoris acriter ulciscuntur: vindicis enim animi sunt et irae cruentae, nec solum novas et recentes iniurias, verum etiam veteres et antiquas velut instantes vindicare parati'; and Walter Map, *De nugis curialium*, Dist. ii. cap. 22, § 96 (*ap.* Walter, *Das alte Wales*, p. 135, note 1): 'Ut moris est, vadem se offert pro iuvene tota cognatio, et cavere iudicio sisti.'—For the Teutons, see Tac. *German.* cap. 21: 'Suscipere tam inimicitias seu patris seu propinqui quam amicitias necesse est: nec implacabiles durant. Luitur enim etiam homicidium certo armentorum ac pecorum numero, recipitque satisfactionem universa domus, utiliter in publicum, quia periculosiores sunt inimicitiae iuxta libertatem.'—For the Russians, cf. *Russkaja Pravda of Jaroslav Volodiměrič* (1018-1054): *Judicium Jaroslavi, filii Vladiměri*: 'Si interfecerit vir virum, ulciscatur frater fratrem, vel pater vel filius vel fratris filius vel sororis filius. Si vero nemo est, qui eum ulciscatur, solvendae sunt pro capite octoginta grivnae, si est principis vir,' etc. See below, p. 734a.

In Homer the sons and grandsons, father, brothers, and brothers' sons (ἀνεψιός) and the ἔται (ἔται) are mentioned as avengers of blood: the last-named is an expression which probably belongs to the pronoun-stem *sve-*, *svo-*, and so means much the same as the Latin *sui*. Once we find in place of ἔται the word ἀοσσητῆρες (*Odyss.* xxiii. 119), from ἀοσσέω, 'help.' This in turn is derived from a word corresponding with the Latin *socius* (**svekjo-s*), namely, ἀ-σϝοκ-jο-ς = **a-σσο-* (ἀ as in ἄ-λοχος, 'bedfellow'), which is perhaps connected with *sve-*, *svo-*, *suus*, but is also capable of another derivation (cf. Walde, *Lat. Etymol. Wörterbuch*, p. 579).

2. As a result of this obligation to blood-revenge, we find a state of feeling between two families or clans which among West Teutons is technically called in Old High German *fēhida*, Anglo-Sax. *fæhð*, Mid. Lat. *faida* (O.H.G. *fēch*, Anglo-Sax. *fâh*, from **poiko-s* = Ir. *oech*, 'enemy'); in the Slavonic languages, Old Slav. *vražida* (Old Slav. *vragŭ*, 'enemy,' Old Pruss. *wargs*, 'bad'). The opposite conception to this in the Germanic languages is O.H.G. *fridu*, Anglo-Sax. *friðu*, Old Nor. *friðr*, **pritu-* (Skr. *priyá-*, 'dear,' Goth. *frijôn*, 'love'); in the Slavonic, Russ. *mirŭ*, 'peace' (Skr. *mi-trá-*, 'friend,' Lith. *mý-limas*, 'beloved,' Russ. *mí-lyj*, 'dear'). Fundamentally, therefore, peace and friendship (*i.e.* on the old view, relationship; cf. Schrader, *Reallex.* *s.v.* 'Freund und Feind') are identical conceptions. The Goth. *gafriþôn* and the Russ. *primiriti* both mean 'to restore to a state of peace' (O.H.G. *fridu*, Russ. *mirŭ*), 'to reconcile.' It is characteristic that *mirŭ* had already in Old Russ. acquired the meaning of 'community,' for the community (the tribe) composed of various clans is, in normal conditions, a sphere of peace and friendship which can only for a longer or shorter period be interrupted or broken by the *faida* or *vražida*. Conversely, it may be suggested that the Greek εἰρήνη, 'peace,' is to be derived from εἴρη, 'assembly,' 'place of assembly,' and that this word (from **vervâ*) is to be connected with Old Russ. *vervi*, 'community.' It is the community so designated that, according to the *Russkaja Pravda* of the 13th cent., is liable in certain cases for the payment of the *wergeld*, and thus perpetuates the solidarity of the old clan. The Greek εἰρήνη would thus be the (normal) condition of peace reigning in the community.

According to this explanation of εἰρήνη, it must be admitted that the supposed initial *F* has not as yet been traced either in Homer or in the Greek dialects; but the latter are clearly influenced strongly by the Attic form of the word, which lacks the digamma. Moreover, **vervâ* (with prothetic vowel) may have become first *ἐ-ϝερϝη and then εἴρη.

Hence the present writer is inclined to believe that the conception of peace among the Aryan peoples originated primarily in view of the internal condition of the community (the tribe), and not with reference to external foes, with whom, indeed, in olden times there was no regular peace, but merely a cessation of hostilities (cf. Schrader, *Reallex.*, *s.v.* 'Krieg und Frieden'). On Latin *pax* and Goth. *gawairþi*, 'peace,' see below (4). On the punishment of offences occurring *within* the family or clan see ARYAN RELIGION, above, p. 50.

3. The blood-feud was especially occasioned by the murder of an individual belonging to another clan, and, in a secondary degree, by bodily injury or insult. It is noteworthy in numerous old Aryan codes of law that the killing of a thief caught red-handed or of an adulterer detected *in flagrando* was exempt from punishment, *i.e.* in the language of primitive times it did not occasion a blood-feud (cf. Schrader, *Sprachvergleichung und Urgeschichte*, ii.[3] 406, and ARYAN RELIGION, above, p. 50).

4. There existed among all Aryan peoples the possibility of buying off the blood-feud by means of a *wergeld*, and thereby bringing it to a peaceful conclusion.

For the Greeks, *e.g.*, cf. Homer, *Il.* ix. 631:

καὶ μέν τίς τε κασιγνήτοιο φονῆος
ποινὴν ἢ οὗ παιδὸς ἐδέξατο τεθνηῶτος·
καί ῥ' ὁ μὲν ἐν δήμῳ μένει αὐτοῦ, πόλλ' ἀποτίσας,
τοῦ δέ τ' ἐρητύεται κραδίη καὶ θυμὸς ἀγήνωρ,
ποινὴν δεξαμένου.

For the Teutons see the passage from Tacitus, *Germania*, quoted above, 'nec implacabiles durant,' etc.

Proof that this possibility existed even in the most primitive Aryan period is to be found in the identity between the Old Indian term for the *wergeld*, namely, *vâira-*, *vâira-dēya-*, *vâirayâtana-*, and the Anglo-Sax. *wěre*, Mid. H.G. *were* (*weragelt*)—both being related to Skr. *vīrá-*, Lat. *vir*, Goth. *wair*, 'man.' Here the Old Russ. *vira*, 'wergeld,' must be mentioned, though the views of philologists waver as to whether it was originally related to the Indian and German words or borrowed from the latter (cf. L. von Schröder, 'Indogerman. Wergeld,' *Festgruss an Roth*, p. 49). The most probable supposition is that the Skr. *vâira-*, Anglo-Sax. *wěre*, and Old Russ. *vira*, exhibit various stages of change of the radical vowel of the original Aryan term for 'wergeld.' Moreover, the above cited equation, Av. *kaênâ* = Gr. ποινή, no doubt indicates that in the primitive period, as among the Greeks, the custom existed of buying off blood-revenge by payment of a *wergeld*. Similarly, we find in Slavonic languages the above-mentioned *vražda*, 'hostility,' 'revenge,' used also to mean the compensation by which homicide was expiated. Cf. also Cymr. *galanas*,

* A star before a word signifies that the form does not occur but is inferred.

originally 'hostility' (*gâl*, 'foe'), and then 'wergeld'; and the Mid. Gr. φόνος, properly 'murder.' Lat. *pœna*, 'compensation,' and then 'punishment,' probably exhibits a borrowing from the Gr. ποινή.

At an early date prices or rates of *wergeld*, more or less fixed, must have been evolved. So in Old Indian sources (cf. Schrader, *Reallex.* p. 102) we find a hundred cows mentioned as the rate of compensation for a man (*vâiram*); and Tacitus also, in the passage already cited, says: 'luitur homicidium *certo* armentorum ac pecorum numero.' 'From the rates stated, the general underlying principle emerges that the *wergeld* of bondsman, freeman, and noble were in the following proportion of ½ : 1 : 2; that is, 75 – 150 – 300 shillings or oxen' (Müllenhoff, *Deutsche Altertumskunde*, iv. 327). For the rates among the Slavs see below, p. 734. What was demanded for the murdered, wounded, or insulted man by the clan, or by himself, constituted his 'value' or 'price,' and the recovery of this price by his friends and the recognition of the same by his foes constituted his 'honour.' This evolution of ideas is clearly stamped upon the languages that concern us. The Gr. τιμή, derived from τίνω mentioned above, signifies primarily 'revenge' (ἔβη Ἀγαμέμνονος εἵνεκα τιμῆς Ἴλιον εἰς εὔπωλον, Hom. *Od.* xiv. 70, 117); then 'indemnity for injury,' 'compensation' (ἄτιμος, like νήποινος, denotes a person who may be slain without need for compensation); then 'honour.' Precisely similar is the development in the meaning of *cěna*, a word common to the Slavonic languages. The word corresponds exactly to the Gr. ποινή (**qoinâ*), and thus signifies in the first instance 'revenge' and 'wergeld.' Then it takes over the meaning of 'price' and 'honour' (Old Slav. *cěniti* exactly answers to the Gr. τιμάω; so Schrader's *Reallex.* p. 835 f., and now Berneker, *Slav. Etym. Wörterbuch*, p. 124). In this connexion we find also the explanation of the hitherto unintelligible Gothic word *gawaírþi*, 'peace,' mentioned above. The word has nothing to do with *waírþan* (Germ. *werden*), but is connected with *waírþi*, 'value,' 'worth.' Consequently its proper meaning is 'general agreement about the worth or value of a person,' the union and the resulting state of peace between two clans. It is noteworthy also that the first instance of the word *paciscor*, which underlies the Lat. *pax*, 'peace,' occurs in that passage of the XII Tables (viii. 2) which is the clearest survival in Roman tradition of the system of blood-revenge which once prevailed in that quarter as well: 'Si membrum rupit, ni cum eo pacit (agree about the value), talio esto.'

Thus we see that two of the most important conceptions of civilization—peace and honour—are at least in part rooted in the ideas that centre in blood-revenge and its buying off by the *wergeld*.

5. Among most Aryan peoples we find it the custom for the murderer, after his bloody deed, to flee from the country for a longer or shorter period, presumably in order that in the interval the anger of the hostile clan might abate and the terms of reconciliation become easier. It still remains uncertain whether this custom is to be assumed as existing even in primitive times, when renunciation of tribal connexion was almost a matter of life and death (cf. Schrader's *Reallex.* p. 835).

6. The fighting out or the amicable settlement of the blood-feud is, as we have seen, from the beginning exclusively the affair of the two hostile clans. Notwithstanding, perhaps the realization of the danger incurred by the whole clan owing to feuds of long duration (cf. above, Tacitus, *Germ.* cap. 21: 'periculosiores sunt inimicitiae iuxta libertatem') may have at an early period ensured efforts upon the part of the race, in their assemblies under the direction of the king (Skr. *râj-* = Lat. *rex*, Ir. *rí*), towards the amicable settlement of clan feuds. A settlement of this description would naturally, even in primitive times, be accompanied by a long succession of solemn ceremonies. We have ample information on this point as regards especially the Slavonic world (see below, p. 734 f.). Everywhere in Europe two factors tended towards the restriction and ultimate eradication of the blood-feud: first, the *State*, that is, the absorption of the old clan and race-constitutions into the political composition of a State based on the principle of territory and no longer of consanguinity; and, secondly, the *Christian Church*, which offered sanctuary even to murderers. See art. ASYLUM.

LITERATURE.—The literature has been given in the article.

O. SCHRADER.

BLOOD-FEUD (Celtic).—1. Terminology.— The usual word in Old Irish is *fích* ('feud,' 'fight'), *fíchim* ('I fight'), cognate with Lat. *vinco*, etc. In the *Acallam na Senórach* (Windisch, *Ir. Texte*, Leipzig, 1880–1905, iv. pt. i. p. 47), we learn that at the feast of Tara, which lasted six weeks, *nech fala ná frithfala do thabairt* ('neither feud nor cross-feud to be given'). The Irish *fala* is for *fola*, gen. of *fuil* ('blood'), perhaps connected with Welsh *gweli*, Cornish *goly*, Breton *gouli* ('wound'); but cf. Henry, *Lex. bret.*, Rennes, 1900, p. 139. For 'vengeance,' 'revenge,' we have the Irish *dígal*, Welsh *dial* ('vindicta,' 'ultio'), Cornish *dial*. The Irish *éric* ('composition') is probably for **er-icca*, **per-yecca* ('full payment,' 'perfect cure' [d'Arbois de Jubainville, *Études sur le droit celtique* = *Cours de litt. celt.* vii., Paris, 1895, p. 88]). Finally, the Irish *díre* ('duty'), in *coirp-díre*, is the same as the Welsh *dirwy*, *dirui* ('mulcta'), *dír* ('necessary'), Irish *dír* ('just,' 'due,' etc.) [Stokes, *Urkelt. Sprachschatz*, Göttingen, 1894, p. 148].

2. History of the blood-feud among the Celts.— That the institution of the blood-feud was in existence among the early Celts is obvious from the numerous references to it in ancient Irish literature. One of the best known instances is found in the *Fotha Catha Cnucha* ('Cause of the Battle of Cnucha').

Cumall, the royal warrior of Ireland, carried off Murni, daughter of the druid Tadg, because her father had refused him permission to marry her. Tadg complains to Cond, supreme king of Ireland, who, according to the *Annals of Ireland by the Four Masters* (ed. O'Donovan, Dublin, 1848–51, i. 102–121), reigned from 122 to 157 A.D. Cond, furious at the insulting words of Tadg, sends soldiers to take possession of the girl. Cumall refuses to surrender Murni, and is killed by Goll, son of Morna. In attempting to avenge Cumall, Luchet succeeds only in wounding Goll in the eye. Goll kills Luchet; and, to quote the Irish, *is desin robói fích bunaid eter macou Morna ocus Find*, 'it is from that, then, that there was an hereditary feud between the sons of Morna (descendants of Goll) and Find (the son of Cumall).' Furthermore, after the death of Cumall, Tadg not only refuses to receive his daughter Murni, but orders her to be burned because she is pregnant. Accordingly she invokes the protection of Cond, and gives birth to a son, Find. When this son arrives at a suitable age, he offers to his grandfather, Tadg, the following: *cath no comrac oenfir . . . no lanéraic a athar do thabairt dó*, 'a battle or a duel or full *eric* (for the murder) of his father to be given to him.' Tadg accepts the last, and is obliged to give the castle and grounds in Almu to Find (*RCel* ii. 86, etc.).

Again, in the *Longes mac n-Usnig*, Conchobar, the great king of the first epic cycle—*i.e.* about the beginning of the Christian era (Hyde, *Lit. Hist. of Ireland*, London, 1899, p. 243)—has the three sons of Usnech treacherously murdered after having promised them protection. The three heroes, Fergus, Dubthach, and Cormac, who had guaranteed their safety, set to work to avenge their murder. First they murdered four of the immediate relatives of Conchobar, and, later, when attacked by him, killed three hundred of his men and their wives, and burned the royal palace at Emain. With 3000 men they sought refuge at the court of Ailill and Medb, king and queen of Connaught, and continued their feud against Conchobar for sixteen years (Windisch, *op. cit.* i. 75–77). Cinaeth hua Artacain, who died in 975 ('Annals of Tigernach,' *RCel* xvii. 259) had a more complete account of this story, which stated that Conchobar, in retaliation for the murder of his relatives, killed Gergenn, the son of Illad (Windisch, *op. cit.* ii. 2, p. 119). Numerous other

examples could be cited, such as *Aided Conroi*, in which the murder of Conroi is avenged by his sons (d'Arbois, *Epopée celtique en Irlande = Cours de litt. celt.* v., Paris, 1892, p. 327 f.); the death of Conchobar, where Mesgegra, king of Leinster, is avenged (O'Curry, *Lectures on the Manuscript Materials of Ancient Irish History*, Dublin, 1878, p. 637 f.); *The Voyage of Mail Duin*, in which the hero is taunted for not avenging his father's death (Stokes, *RCel* ix. 459, etc.), etc.

In the *Ancient Laws of Ireland*, some of which, such as the *Senchus Mór*, date as early as the 7th century (Hyde, *op. cit.* p. 589), we find murder classed under two heads—necessary murder (*marbad dethbire*), and unnecessary murder (*marbad indethbire*). Necessary murder is unpremeditated, or, if premeditated, is accomplished through duty of vengeance. Unnecessary murder is for motives of gain (*Anc. Laws*, iii. 68, ll. 12–14; iv. 248, ll. 25–26). In the case of the first, no composition, or *éric*, was required if the murder was the result of vengeance. According to the *Ancient Laws* (iv. 252–4), 'when the murder of a member of the *derbfine* (*i.e.* of any relative of the *geilfine* or *derbfine*) is to be avenged by the death of the murderer, the family of the murdered has a right to the *coirp-díre* ("body-price") and the *enech-lann* ("honour-price"); if, however, it has received this *éric* before exercising vengeance, it must, after taking vengeance, make full restitution of this price.' The duty of vengeance was imposed upon the nearest relatives of the victim—upon the *geilfine* and *derbfine* (d'Arbois, *Droit celtique*, p. 186). To understand these terms, we must remember that the Irish family was divided into four groups, consisting of seventeen persons in all: *geilfine*, *derbfine*, *iarfine*, and *indfine* (*Anc. Laws*, i. 282, ll. 23, 27; p. 272, l. 23). To the *geilfine* belonged the father, son, grandson, and brother of the murdered; while to the *derbfine*, besides the above five, were added the grandfather, paternal uncle, nephew (son of the brother), and cousin-german (cousin to the fourth degree in the paternal line). In addition to the above eight persons, three others could take vengeance on the murderer. These three were the foster-father, whose *dalta*, or pupil, was murdered; the adoptive father, whose *mac faosma*, or adopted son, was killed; and the (maternal) uncle, when the son of his sister (*mic mna*) was the victim of the murderer (*Anc. Laws*, iv. 244, ll. 20–22). So, in ancient Ireland, the blood-feud was fostered by the duty of vengeance. We have indications of its existence as late as the 16th cent., in the celebrated feuds between the chief Manus O'Donell and his son, between the Earl of Thomond and his uncles, etc. (Moore, *Hist. of Ireland*, London, 1835–46, ii. 367). As in Scotland, the most usual causes and consequences of the later feuds were the destruction of crops and the driving-away or houghing of cattle belonging to persons occupying lands to which others alleged a claim. One of the most celebrated cattle-raids in Irish literature is the *Táin Bó Cualnge*, or the Cattle-Raid of Cooley (ed. Windisch, Leipzig, 1905). Sir Walter Scott in his *Waverley* (ch. xv.) describes a similar expedition undertaken by twelve Highlanders.

In Wales, where, as the testimony of Giraldus of Cambray and Walter Map shows (see above, p. 724[a]), the blood-feud once flourished, the Roman conquest brought about the suppression of both the duty of vengeance and the payment of *éric* for murder. The *Lex Cornelia de sicariis* of Sulla (B.C. 81) and the laws of Caesar and Augustus (*Lex Julia de vi publica* and *de vi privata*) imposed severe penalties upon those who went about bearing arms with the intention to kill (Rein, *Das Criminalrecht der Römer*, Leipzig, 1844, pp. 409–14, 752, etc.). On this account, no doubt, the Welsh *dirui* or *dirwy* changed its meaning from *éric* ('composition') to '*mulcta*' ('fine paid to the State'). After the departure of the Romans, while the *éric* was re-established, the duty of vengeance failed to assume its former force. This was in part due to the fact that the *cenedl*, or clan, was already to some extent disintegrated as early as the 10th cent. (Rhys and Brynmor-Jones, *The Welsh People*, London, 1900, p. 196). The feuds between the clans were largely superseded by the warfare between the petty kingdoms. But that the duty of vengeance was not looked upon unfavourably is manifest from several statements in the Dimetian Code, which was probably redacted under Howel in the 10th cent. (Rhys, *op. cit.* p. 181).

According to this code, 'if there is in a *cenedl* an ecclesiastic or an idiot, he is neither to pay nor to receive any part of the *galanas* ("body-price")'; and 'no vengeance is to be exercised against any one of these for *galanas*, neither are they to avenge a relation that is killed.' Furthermore, if a *cenedl* 'commences paying the *galanas* of a person killed, and the whole be not paid, and if on that account one of such kindred stock (*cenedl*) be murdered, the *galanas* for that individual is not to be paid; neither is anything to be restored of what had been paid on account of the first.' Finally, if 'an innocent person is accused of murder and neglects to seek justice, and if he be killed on account of it, nothing is to be paid for him' (*Anc. Laws of Wales*, London, 1841, i. ch. i. p. 199 f.; cf. also ii. ch. viii. p. 214, etc., for cases in which the law 'exonerates the avenging').

But it was especially among the Scots that the blood-feud raged with ferocity. From the 12th cent., when the *sept* or clan first appears as a distinct feature in the social organization of Scotland (Skene, *Celtic Scotland*[2], Edinburgh, 1890, ii. 303), until the 17th cent., there was no cessation of clan-feuds. When there were no sweeping feuds involving the most prominent families, such as Huntly against Argyll, or Stewart against Hamilton, the minor chiefs were fighting among themselves (Lang, *Hist. of Scotland*, Edinburgh, 1902, ii. 541, etc.). The usual method was for a laird or yeoman to gather his henchmen and make a raid on some estate to which he alleged a claim, or for other reasons sometimes very insignificant. They would trample down the crops, hough the cattle, and drag the women about by their hair, killing all who might resist (Lang, *loc. cit.*). Such cases were most frequent. In fact, the volume of the Privy Council Register for 1613 contains no fewer than 42 feuds then running, not including those in the Highlands and Islands. Even ministers of the gospel were sometimes so swayed by their passions that they took part in these ferocities.

One of the most noted of these feuds was that of the Colquhouns and the Macgregors, which culminated in the battle of Glenfruin in 1602. According to Birrell's diary (2nd Oct. 1603), sixty widows of the slain Colquhouns rode on white horses before the king at Stirling, each bearing in her hand a pike upon which was displayed the bloody shirt of her dead husband. A long and deadly feud was that between the Scotts and Kerrs, of which Sir Walter Scott speaks in his *Lay of the Last Minstrel*. This feud began with the battle of Melrose in 1526. As a consequence, Sir Walter Scott was assassinated in the streets of Edinburgh in 1552. In order to staunch this feud, which was sapping the life-blood of these two great families, a bond or contract was made between them in Edinburgh on 23rd March 1564, in which they agreed to cease hostilities (Pitcairn, *Criminal Trials in Scotland*, Edinburgh, 1833, iii. 390, etc.). But it accomplished nothing, for the feud was still raging in 1596 (cf. also Campbell, *Clan Traditions*, London, 1895).

3. 'Éric,' or composition.—Cæsar attests the fact that the payment of *éric* was an established custom among the primitive Gauls. In speaking of the importance of the druids in ancient Gaul, he says: 'Nam fere de omnibus controversiis, publicis privatisque, constituunt; et, si quod est admissum facinus, si caedes facta, si de hereditate, si de finibus controversia est, iidem decernunt; praemia poenasque constituunt (*de Bell. Gall.* vi. 13). The earliest mention of this institution in Ireland is found in the *Confessio* of St. Patrick, where he says: 'censeo enim non minus quam pretium quindecim hominum distribui illis.' Tirechan, writing in the 7th cent., explains this statement of Patrick by adding 'animarum' after 'quindecim' (Stokes, *Tripartite Life*, London, 1887, ii. 310, 372). Furthermore, an Irish council of about the 7th

cent. decided that, in default of the family, the king himself might be held responsible for the payment of the *éric* (Wasserschleben, *Ir. Kanonensammlung*[2], Leipzig, 1885, p. 170).

In Ireland, the *éric* was divided into two classes: the *coirp-díre*, or 'body-price,' and the *enech-lann*, or 'honour-price' (or *log-eneich*, lit. 'face-price,' Breton, *enep-uuert*; cf. Ernault, *Gloss. moyen-bret.*, Paris, 1895, p. 794). The *coirp-díre* was exacted in the case of unnecessary murder, or in necessary murder when not prompted by vengeance. The *enech-lann* was exacted in the case of bodily injury, insult, etc., and would, therefore, be necessarily included in the *coirp-díre*. In regard to the latter, the family had the choice of surrendering the criminal as property (*in féronn*) to the family of the murdered, or of giving land for his crime (*Anc. Laws of Ireland*, iv. 246, ll. 25–26). But, continue the *Ancient Laws*, 'each one dies for his premeditated crimes when he has not found the *éric*' (iv. 250, ll. 16–17). Thus, in the case of unnecessary murder the criminal was the sole debtor. But in necessary murder the criminal and his *geilfine* were held responsible for the payment of the *éric*. In default of the *geilfine*, the other three groups of the family found themselves involved (*ib.* i. 260, ll. 1–3; p. 274, ll. 12–13). The *coirp-díre* was fixed, consisting of *secht cumula*, 'seven female slaves' (iii. 70, ll. 7–8). The criminal was obliged to pay the *aithgin* ('slave of restitution'), and his share both of the six other slaves and of the *enech-lann*. If his *geilfine* could not supply the rest, the *derbfine* would pay three-fourths, and the *iarfine* and *indfine*, one fourth, *i.e.* three-fourths of a fourth by the *iarfine* and one-fourth of a fourth by the *indfine* (*ib.* iii. 330, l. 710; p. 68, ll. 15–18). In the later history of Ireland, the *éric* for murder became more variable, and was paid in cattle or other property. It was continued as late as the beginning of the 17th cent., notwithstanding the efforts of the English to stamp it out (Hayne, 'Observation on the State of Ireland in 1600,' in the *Irish Eccles. Record*, Dec. 1887; for a more complete study of the *éric*, cf. d'Arbois, *Droit celtique*).

As the *coirp-díre* required the *enech-lann* in Ireland, so, in Wales, the murderer was obliged to pay both the *galanas* ('body-price') and the *saraad* ('disgrace- or honour-price'). The *galanas* varied according to the rank of the person killed. Thus the *penkenedl*, or clan-chief, was valued at 189 cows; an *uchelwr*, or high man, noble, at 126 cows; a *penteulu*, 'man with a family without office,' at 84 cows; and so on down to the *caeth*, 'slave of the island,' at 1 lb. of silver and 4 cows. The *galanas* of a woman was always one-half of that of a man (Rhys, *op. cit.* p. 228 f.). In regard to the payment of the *galanas*, one-third fell upon the murderer and his father and mother, he paying twice as much as his parents. Furthermore, if he had children liable to pay, he paid two-thirds of his own share, and his children one-third. The remaining two-thirds of the whole *galanas* was paid by the relatives on the father's and mother's side, the father's kinsmen paying two-thirds and the mother's one-third. In regard to receiving the *galanas*, one-third fell to the lord for exacting it; one-third to the father and mother and their children and the children of the murdered; and one-third to the other kinsmen in the proportion as described above (*Anc. Laws of Wales*, i. 227, ii. 199–200, etc.).

In Scotland, according to the *Leges inter Brettos et Scottos*, which were codified under David I. (1124–53), the worth of the king's person is valued at 1000 cows; of the king's son or earl, 150 cows; of the earl's son or thane, 100 cows; of the thane's son, 66⅔ cows; of the thane's grandson or *ogtiern*, 44 cows and 21⅓ pence; while the *carle* or *villein* was valued at 16 cows (Robertson, *Hist. of Scotland*, 3 vols., London, 1831, App. ii.; Lang, *op. cit.* i. 81; Skene, *op. cit.* iii. 218, etc.).

4. **Duel.**—The duel was often the means of obtaining justice among the Celts. The canonical collection referred to above attributes to St. Patrick two decisions prohibiting the debtor from resorting to arms to prevent a creditor from levying a distress (d'Arbois, *Droit celtique*, p. 45 f.). But the individual could engage in a duel only with the knowledge and consent of his family and his chief. If he fought without their consent and was killed, the victor would be obliged to pay full *éric* to his family, unless he could prove that the murdered man had provoked him to fight (*Anc. Laws*, iii. 302, ll. 1–3; p. 296, ll. 19–21). So, on the Border of Scotland, trial by combat served often as a proof of guilt or innocence; and Sir Walter Scott notes a feud between Thomas Musgrave and Lancelot Carleton which was settled in this manner in 1603 (*Lay of Last Minstrel*, Note x.).

LITERATURE.—The literature has been given fully in the course of the article. JOHN LAWRENCE GERIG.

BLOOD-FEUD (Greek).—Blood-feud, or blood-revenge, is a widely diffused custom of primitive society, of which some instances still survive, as in the Corsican vendetta, and of which numerous traces are to be found in history and literature. It arises, as a rule, through a violation of rights practised by a member of one family against a member of another (A. H. Post, *Familienrecht*, p. 134). The breach of rights may take widely different forms, but its normal instance is that of murder, or at any rate homicide, and to this attention is confined in the present article. The parties primarily involved in such a feud are, on the one hand, the nearest kinsman of the slain man, and, on the other, the slayer; but the responsibility extends beyond these to the circle sometimes of their families, in a wider or narrower sense, sometimes of their entire respective clans (cf. *e.g. EBi, s.v.* 'Goel,' col. 1745). In many cases revenge can be satisfied only with the death of the slayer, or of one of his kin, but in others reconciliation is effected on the basis of compensation in money or kind. In every case vengeance is felt as a sacred duty. Its aim is largely, no doubt, to maintain the honour and integrity of the family or clan, and so far it has an ethical rather than a religious significance. But it is probable that blood-revenge has in every case, at least originally, been regarded also as a duty towards the spirit of the slain, and, as the tendance of the dead implies the recognition of spiritual beings and readily passes into worship, the blood-feud has to this extent a religious basis. By the Greeks certainly, in historic no less than in pre-historic times, vengeance on the murderer was regarded as a duty to the slain, and one of a religious kind. And probably the chief interest of the subject before us is the clear light which it sheds upon a whole world of thought and feeling which is in marked contrast with generally current conceptions about Greek religion.

1. **Homer.**—In Homer there are abundant traces of the custom. We read of Orestes avenging his father (*Od.* iii. 306), though this is the less usual case of blood-feud *within* the family, and of the understood right and duty of any man to avenge a brother or a son (*Il.* ix. 632; *Od.* xxiv. 434). In one instance (*Od.* xv. 273) the responsibility for vengeance falls also on the slain man's ἔται, who are usually understood to be his clansmen. This view is supported by the facts that ἔται are distinguished from cousins (ἀνεψιοί) in *Il.* ix. 464, and that in Attic law the duty of prosecuting a

murderer passed in case of need to any member of the murdered man's phratry (Rohde, *Psyche*, p. 260–261 n.). When an act of homicide has been committed, under whatever circumstances,—for these do not seem to have affected the issue in the society which Homer depicts,—its author is sometimes represented as fleeing into a strange land, where he seeks the protection of a man of influence. So Patroclus finds refuge in the house of Peleus, and Lycophron in that of Ajax (*Il.* xxiii. 85, xv. 431). In other cases the feud is ended by means of a recompense, or ποινή, mutually agreed on by the two parties. That this often happened is shown by the passage (*Il.* ix. 632 ff.) where Ajax, after trying in vain to disarm the resentment of Achilles against Agamemnon, continues, 'Why, even from the murderer of a brother, or for his own dead son, a man accepts, it may be, a ransom, and so he (the murderer) stays in his own town, after paying a large fine' (Paley's tr.). Of what took place on such occasions we have a vivid picture in *Il.* xviii. 498 ff. There, in a scene upon Achilles' shield, the two parties to a blood-feud first engage in a wrangle as to whether the amount agreed on has actually been paid, and afterwards bring their quarrel before a council of elders, while in the midst are placed two golden talents, which, at least on one interpretation, represent the ποινή, or fine claimed.

Among all these references to the blood-feud in Homer, nothing, it will be seen, is said about the spirit of the slain man, while the settlement by means of a fine is obviously treated as a matter in which the living only are concerned. And this is in harmony with the general view, which the Homeric poems present to us, of the state of the dead. Where the blood-feud is animated by a desire to appease the dead man's spirit, the latter is conceived as a powerful being bent on revenge, able and also ready to wreak his vengeance on the kinsman who neglects his interests. But the faith described in Homer is of a different order. Its dead are strengthless beings, ineffectual shadows of the living. There is, however, good reason to believe that this was not the oldest Greek faith. Even in Homer we meet once and again with what seem to be outcrops from an earlier stratum of belief. Thus at the funeral of Patroclus (*Il.* xxiii. 138 ff.), the hair which Achilles lays in his dead friend's hand, the jars of honey and oil, the slaughter of beasts and captives, and the burning of these together with the corpse, the night-long pouring of wine upon the earth, and the oft-repeated call to Patroclus, together with many other features of the story, all point to a vivid belief in the reality and nearness of the departed spirit which contrasts sharply with the usual Homeric representation; while, as Rohde observes (*Psyche*², p. 17), the whole series of offerings belongs entirely to the class which we may regard as oldest, and which meets us later in numerous instances of Greek ritual observed in the worship of under-world powers. The offerings which, in *Od.* xi. 49 ff. (the 'Nekuia'), Odysseus promises to the departed spirits point in the same direction. But, if such was the earliest Greek conception, the deepest motive of the blood-feud, in the Homeric age weakened or lost sight of, may well have been the slain man's demand for vengeance. And that this was actually the case is indirectly proved by the fact that in Homer the consequences seem to be the same for unintentional as for intentional homicide. The equalization of these two, says J. H. Lipsius (*Das attische Recht und Rechtsverfahren*, Introduction, p. 7), affords clear proof that the fundamental aim of the blood-feud was not punitive justice, but satisfaction to the slain.

2. Classic age.—When now we turn to the classic age, this aspect of the blood-feud occupies the forefront of the picture. Vengeance on the homicide is primarily reparation offered to the dead, and as such it is a religious act.

(1) *Poetry.*—In Æschylus' *Eumenides*, Orestes is pursued by no earthly avenger of blood, but by the Erinyes, who are representatives at once of the dead and of the old religious order. At first, in all probability, they were nothing but offended ghosts, the angry spirits of the slain, and hints of this original character are to be found in Æschylus (cf. *e.g.* J. E. Harrison, *Prolegomena to the Study of Greek Religion*, p. 223 ff.). In the main, however, as seen in his pages, they are rather the personified curses that attend the shedding of kindred blood. The personality of the slain is merged in that of the malignant demons who act as the ministers of his revenge. The same natural shifting of ideas, and the same fundamental conception of the slain man's enmity, are seen in the use of the word προστρόπαιος, which in the sense of an avenging power is applied by the orator Antiphon at one time to the dead man's spirit, at another to his ghostly champion, as in the phrase ὁ προστρόπαιος τοῦ ἀποθανόντος (*Tetr.* 3, β, 8). Sometimes, as in Sophocles (*Trach.* 1202) or Euripides (*Iphig. in T.* 778), the outraged spirit is described by the epithet ἀραῖος, a dealer of curses.

(2) *History.*—So far we have been dealing chiefly with the fancies of poets. But the same view of a slain man's enmity, and of his satisfaction as a religious act, is met with when we turn to the practice of the law courts and examine the developments of the blood-feud in historic times. When the clan develops into the State, the blood-feud inevitably passes under its control and is regulated in accordance with its interests. Greece was no exception to this rule, and we have evidence of laws relating to homicide in various Greek States. But while in the case of other States our information is only fragmentary, the procedure at Athens, though obscure in some points, is illustrated by copious references, especially in Plato, Aristotle, and the Attic orators. To enter at all fully into the Attic process would carry us beyond the limits of this article. But it will be sufficient to note its salient points. In the first place, the legal process meant a mitigation of the unreasoning vengeance of the primitive blood-feud. We have seen that originally the circumstances which led to homicide were immaterial. Its law is sufficiently expressed in what the chorus in Æschylus (*Choeph.* 310 ff.) characterize as 'a thrice hoary saying': 'Blood-stroke for blood-stroke must be paid. Doer of wrong must suffer.' But from time immemorial Athens had separate courts for the trial of wilful murder, of accidental, and of justifiable homicide. The tribunal for the trial of murder in the strict sense was the Council of the Areopagus, which exercised that function right onwards from the time of Solon, or, according to others (*e.g.* C. W. C. Oman, *Hist. of Greece*, p. 111), from the dawn of the Athenian constitution. Furthermore, a law of Draco (*c.* 620 B.C.) enacted that vengeance in certain cases, including adultery, should not be followed by a legal penalty (Pausan. IX. xxxvi. 8). But if from one point of view the law mitigated, from another it restored, the rigour of the ancient blood-feud. It did so by forbidding the ποινή, or money settlement, of which we have seen examples in the laxer practice of the Homeric age (cf. *e.g.* Demosth. *Aristocrat.* 28). This is by no means always the case when blood-revenge passes out of the hands of private persons (cf. *e.g.* Grote, *Hist. of Greece*, i. 484). It might, indeed, be thought that this strictness in the Attic law was due to the supposed interest of the State, but the true explanation is doubtless to be found in the view

advanced by Rohde, among others, that the State regulated the murder suits on the basis of the old family blood-feud, and that its chief object was the satisfaction, not of the State, but of the invisible powers. These positions we shall now proceed to illustrate.

That the State process grew out of the blood-feud is first of all indicated by the fact that it was the nearest relatives of the murdered man, and only in special cases more distant kinsmen, on whom devolved both the right and the obligation to prosecute. It was a duty for whose neglect in the case of wilful murder a man might be himself arraigned by a fellow-citizen (G. F. Schömann, *Antiq. of Greece*, p. 471, Eng. tr.). And this naturally arose from the fact that the duty to prosecute was regarded as also a duty to the dead, and thus as a religious duty, the neglect of which brought pollution upon the State and involved the risk of dearths and other calamities. For we have in the next place to note that the thought of the murdered man's vengeful spirit, and of other ghostly powers who jealously watched over his interest, was a living force in Athens even in historical times, shaping the course of justice, and moving the ordinary man to superstitious fear. To take the latter point first, the thought of the dead spirit's claim was a force to which the orator knew how to appeal in capital trials. So the relatives are said by Antiphon *βοηθεῖν τῷ τεθνεῶτι*, 'to succour the dead' (*Or.* i. 31; *Tetr.* 1, *β*, 13), and sentence on the murderer is described by him as *τιμωρία τῷ ἀδικηθέντι*, 'vengeance to the wronged' (*Or.* v. 58, vi. 6). In one of his speeches, composed for a fictitious case, he makes his clients address the jury: *ἀντὶ τοῦ παθόντος ἐπισκήπτομεν ὑμῖν*, 'we implore you on behalf of the dead' (*Tetr.* 3, *γ*, 7). In the next place the sense of a religious duty to the dead is apparent in the several steps of the judicial procedure. It is the archon-basileus who presides at the trial for homicide, the magistrate who inherited the peculiarly religious duties of the kingship; again, at the outset of the process, both parties have to swear by the Erinyes and other under-world powers to the justice of their cause. And lastly, we may note the procedure enjoined by law in the case of one condemned to temporary exile for an act of unpremeditated homicide. When the period of his exile had elapsed, and when he had been formally reconciled to the relatives of the slain, he had still to undergo a ritual purification from the stain of bloodshed ere he could share in the worship either of the State or of the family, and he had to make expiatory offerings to the spirit of the dead.

It will be seen that the conceptions here regarded as underlying the blood-feud, which have been attributed to the earliest Greek age and which are clearly reflected in classic times, contrast sharply with the picture of the Homeric age which lies between. The problem presented by this contrast can scarcely be ignored in dealing with the blood-feud, but it is one on which we can here only touch. It can probably be best explained by the composite racial elements that went to the making of the Greek nation. It is, of course, to be supposed that the feebler conception of the spirit-world reflected in Homer's pages, and the more untroubled gladness in life, were an actual feature of the age in which he lived. But they were the characteristics of a conquering Achæan stock, and not of the earlier population. The latter, who had no great poets to express the spirit of their religion, still clung to their local cults, and thought of the dead as mysterious powers, able to bless or curse the living. Even Homer, as already seen, is not without trace of this earlier belief. A similar hint may be found in Hesiod, whose 'daemons' are the souls of the men who lived in the earliest or golden age (*Works and Days*, 121). And Porphyry (*de Abstin.* 4. 22) records how Draco enjoined the Athenians to honour the dead heroes of their country *according to the custom of their fathers*. The old faith never died, and at last, owing especially to the teaching of the Delphic oracle, its gloomier views about the under world became, as we have seen, a dominant force in religion, and helped to shape judicial procedure.

There was, indeed, in Greek religion another and very different world from this, a realm of serene piety, radiant with images of the Olympian gods. But beneath it, in an opposition which paganism could not fully overcome, was a world of gloom and misgiving, haunted by the thought of evil, and of powers whose law was justice untempered with mercy. Of that world the study of the blood-feud, and of its reflexion in the thought and practice of the classic age, affords us impressive examples.

I. F. BURNS.

BLOOD-FEUD (Hindu).—Indian legislation had early reached the stage in which the right of private war, and the obligations arising from the blood tie everywhere recognized among the Teutonic tribes, had been superseded by the view that repression of murder and violence was a function of the State. The peace-preserving power of the king had become predominant, and we have to go back to Vedic literature if we would meet with some slight traces of the *wergeld*, or composition, once paid as a compensation for manslaughter to the relatives of the victim. It appears that a hundred cows were considered in Vedic times the ordinary amount of the *wergeld* to be paid for killing a man. The somewhat obscure hints in the Vedic *Saṁhitās* may be supplemented by the more explicit statements contained in the *Dharmasūtras* of Baudhāyana and Āpastamba, where the fines to be paid for manslaughter are declared to have the removal of hostility for their object. Cows and other cattle were, no doubt, the earliest kind of money in India, and the payment of a hundred cows for manslaughter corresponds to the bride-price, which likewise consists of a hundred cows. Gradually, as the priestly influence made itself more felt, the compensation to be paid to the family came to be converted into a money present to the Brāhmans. This is the standpoint of the more recent lawbooks of Manu, Yājñavalkya, and others. At the same time, the kings took cognizance of all crimes committed in their kingdoms. Punishment was personified as the protector of all creatures, formed of Brahman's glory (Manu, vii. 14), and that king only was said to attain to paradise in whose dominion there existed neither murderer nor thief nor other offender (*Viṣṇu*, v. 196). Nevertheless, the ancient custom of blood-revenge did not become entirely extinct, and various instances of it are recorded down to comparatively

recent times. Thus in Kolhapur, before it came under British superintendence, murderers were sometimes compelled to make compensation to the family of the victim. Land thus given in compensation was called *khunkat*. In Kāthiāwār, various forms of blood-revenge were known to occur even in the 19th cent.; *e.g.* the avenger abandoned the village and acted in a hostile manner against the whole community (*baharvatia*). In Rājputāna, Prince Jait Sing received 26 *bighās* of land as a compensation, called *moond-kati* (blood-money), for the murder of some of his Rājputs. A landed proprietor in Mewār, whose father had been murdered, was given five villages belonging to the murderer. The inhabitants of certain border Districts in Gujarāt, between whom and their neighbours in Rājputāna an unceasing feud raged, used to have from time to time peaceable meetings with the latter, when the number of persons killed, women kidnapped, and cattle lifted on both sides, was ascertained, and a compensation in money paid for the surplus by the other party.

Magazine*, Westminster, 1893.

J. JOLLY.

BLOOD-FEUD (Muslim).—Among the Arabs, as among the other Semitic races, the blood-feud (*qawad*), retaliation (*qiṣāṣ*), vengeance (*thār*), is a general institution. Attested by pre-Islāmic documents, confirmed by the Qur'ān (ii. 173 and iv. 94), and codified by the jurists, it is a living custom among the Bedawīn, and is practised in its primitive form. We get this information from the observations collected in Syria by several authors, especially Burckhardt and Jaussen; and it is to them that we must go to study our subject. In the written Muslim law the blood-feud is only a chapter of criminal law.

A man is killed; he must be avenged. At first, it seems to be for religious reasons: a human being who has died without having accomplished, in peace or war, certain rites of passage, could never find peace in the grave; the dead man's blood 'cries,' in the form of an owl which disturbs the repose of his family, and which cannot be appeased except by another's blood. Then it seems also for economic reasons: the family and tribe of the dead man are weakened in comparison with the family and tribe of the murderer; the injured social group demands compensation.

Sometimes vengeance is immediate: a murder is committed in an encampment; it is known who the murderer is; the men rush on his tents, kill everybody they meet, slaughter the animals, and burn or break everything belonging to the murderer. But these immediate reprisals are often impossible, and then, it appears, some rites which are not very definitely stated take place. The nearest relative of the victim dips his shirt-sleeve (*reden*) in the spilt blood and hoists it up at the top of a lance. During a space of three days the avenger has no communication with anybody. The pre-Islāmic heroes used to subject themselves to various tabus at this time: Imru'l Qais took an oath to drink no wine, to eat no food, neither to wash nor to anoint his head, and to have nothing to do with women, until the day when his vengeance would be complete. It seems very probable that this was not altogether a voluntary tabu, because Duraid ibn as-Sama acted in the very same way.

Vengeance is taken, as a rule, by the nearest relative of the victim; but all the male members of his family to the fifth generation have the right of vengeance on the murderer and his relatives to the fifth generation.

The murderer, however, obtains the protection of his tribe or of an influential *shaikh*; and if the family of the victim, supported by their tribe, follow up their vengeance, they become involved in an everlasting war, made up of isolated murders and renewed vengeance. It is not often that a murderer is left alone at the mercy of his enemies. Sometimes, however, a *shaikh* will refuse to protect a man whose repeated assassinations are an annoyance to the tribe, or who has committed a murder in dishonourable circumstances. In such cases, the *shaikh* makes proclamation through the whole tribe that he 'shakes his mantle' (*infiraś 'abatih*) against him. The outlaw may then be slain with impunity by any one, even by a member of his own tribe. Sometimes a Bedawī proclaims the *infiraś 'abatih* on himself. He makes a tour through the whole tribe with a stick in his hand and a white flag flying from the top of it. Determined to avenge himself for a personal injury by a murder, he is trying in this way to take measures beforehand to restrict the consequences of his action to his own head.

As a rule, the murderer, being protected by his tribe, escapes the immediate vengeance of the family of his victim; but he remains none the less under a constant dread of it, which disturbs the life of his tribe as well as his own. After a few weeks, he sends a representative to the victim's family to make proposals. These are rejected, because the family are in honour bound to get the blood that is to satisfy the dead. Some months pass. The two tribes are tired of a situation that trammels all their social relations. An interview is arranged in the *shaikh's* tent, at which the representative (*wakīl*) of the murderer appears in supplication before the principal family-chiefs. On his knees, he avows three times that he has the victim 'at his house.' Then the victim's nearest relative declares himself ready to make peace, but only on condition of receiving an enormous ransom (*diya*) of young girls, camels, mares, sheep, money, arms, etc. The *wakīl* consents to everything, no matter how exaggerated and impossible of fulfilment the conditions enumerated by the avenger may be. Then the *shaikh* intervenes, and, calling on the names of various intercessors, asks for the reduction of the different elements of the *diya* in succession; the avenger consents to this more or less generously, and peace is concluded. Pardon (*'afu*) is, so to speak, exchanged for the *diya*. In certain tribes the *diya* always includes two young girls of the murderer's family or tribe; the avenger keeps them to himself, or gets them married at will. Lastly, peace is guaranteed by the nomination of two hostages (*kafīl*) for each side, and a white flag is hoisted on a stick. Sometimes they proceed to a final ceremony of burying the blood. When the family of the murderer are unable to pay the *diya*, they go into voluntary exile.

The amount of the *diya* is not usually the object of discussion except between tribes who live in close relations of kinship, or, at least, neighbourhood; for others there is a fixed amount (*mudda*). In ancient Arabia, the *diya* of a free man was a hundred camels, and that is the figure adopted by the *sunna*; the legal writings determine the lists of beasts to be chosen, in accordance with the ancient customs. For this *mudda*, which, in practice, can be applied only among nomads, has been substituted a sum of 1000 or 1200 drachmas, according to the country. Some people have preserved customary *muddas* which do not agree with the price fixed by the *sunna*: one allows fifty sheep and fifty *mejīdi*; others, a thousand piastres along with the murderer's weapon and some sheep, two or three hundred *mejīdi*, forty camels, etc.

The prescriptions of the Qur'ān (ii. 173), the

meaning of which, however, is difficult to settle, sanctioned a scale of values in accordance with the social importance of the victims—freemen, slaves, or infidels. Is it possible that Imru'l Qais, when claiming a hundred human lives for his father's blood, was conforming to an old *mudda* binding on chiefs? The *mudda* for a woman was fixed by the *sunna* at half of what was due for a man of the same social status. The Bedawī tribes of Syria, on the contrary, fix the *mudda* for a woman at four times that for a man: eight girls or their dowry, or sixty camels. For a pregnant woman, they add to her own *diya* the *diya* of the child.

The governments and jurists have set themselves to give a character of public right to private vengeance. The penalties are pronounced by a magistrate, according to written rules, in solemn forms of procedure in which the witnessing plays a preponderating part. Sentences are executed by public authority.

The modes of action are the same in the retaliation for wounds. This consists in inflicting a wound on the criminal identical with the wound he gave his victim. But here again the *diya* comes in; and the application by competent authority of the physical penalty or the money-fine is one of the most important matters of Arab criminal law.

GAUDEFROY-DEMOMBYNES.

BLOOD-FEUD (Roman).—That blood-feud existed in primitive times in Italy as elsewhere is certain both from analogy and from actual traces, but the latter are scanty compared with those found amongst the Greeks. The reason lies in the comparatively modern character of Roman civilization when it emerges into the light of history. Roman history is illustrated by no such authentic picture of a primitive age as is contained in Homer. And when we turn to the arrangements of Roman law, we find little or no such reflexion of primitive ideas relating to the blood-feud as in the law-courts of Athens. But both in law and tradition the traces, if not very abundant, are clear.

The legend recorded by Plutarch (*Rom.* 23, 24) about Titus Tatius and the envoys from Laurentum points unmistakably to the usage in question. Friends and kinsmen of Tatius slew the envoys when on their way to the king; and, on his refusing to deliver up the culprits, he was himself killed by the relatives of the murdered men. Soon afterwards the gods punished both Rome and Laurentum with a plague, which was stayed only when the murderers on both sides were surrendered and punished. The last statement suggests a public, indeed a legal execution, so that we may agree with the verdict of Mommsen (*Rom. Hist.* i. 158): 'This story looks very like a historical version of the abolition of blood-revenge.'

Another echo of the blood-feud comes to us in the tradition that Numa enjoined the offering of a ram (doubtless through the kinsmen to the *manes* of the slain) in cases of involuntary homicide. What Prof. Muirhead (*EBr*⁹ xx. 680*b*) calls 'a re-enactment in illustrative language' of the same law appears in the words which, according to Cicero, occurred in the XII. Tables, 'si telum manu fugit magis quam jecit, arietem subicito.' In this case the object clearly is to stay a legal prosecution; but the original object of such a law, and that as late perhaps as the time of Numa, must have been to impose a limit on the blood-feud in the case of accidental homicide, while still in the case of wilful murder suffering it to proceed unchecked (*EBr*⁹, *loc. cit.*). But a more direct reminiscence of the blood-feud is to be found in the part which the kinsman of a slain man was expected to take in the prosecution of the murderer. So stringent was the obligation to institute the trial, that failure to do so disqualified a man from inheriting any of the property of the deceased. Thus in Rome as in Athens, the judicial procedure reflects the family aspect of the original blood-feud. On the other hand, the legal treatment of homicide showed how completely among the Romans the claim of the State superseded that of the family to execute justice on the criminal. For homicide was dealt with, and that even earlier than the XII. Tables, as a breach of what the jurists called the public law, which dealt with offences against the State, while the private law dealt with matters directly affecting the interest of individuals.

A word may be added as to the earliest meaning of the word *poena*. It corresponds to the Greek ποινή, and occurs in a similar sense in the XII. Tables in the sentence 'si iniuriam faxit alteri, viginti quinque aeris poenae sunto.' *Poena* is here the equivalent in money of the revenge sought for, and it might be supposed to indicate the existence in earlier times of a manner of settling the blood-feud such as was customary in the Homeric age. That such a custom was also familiar to the Italians is from the nature of the case probable, but is not supported by the use of the word *poena*, which is simply borrowed from the Greek in the general sense of compensation. Moreover, the passage in the XII. Tables refers to compensation for personal injury, and has therefore no connexion with the blood-feud (for an interesting account of the relation between *poena* and ποινή see Karlowa, *Röm. Rechtsgeschichte*, ii. 790).

I. F. BURNS.

BLOOD-FEUD (Semitic).—The feeling of kinship is the basis of the tribal system of primitive Semitic societies; kinsmen are really 'brothers' through their participation in a common blood, and this social bond is enforced by the law of blood-revenge. Tribal blood has fallen to the earth with the killing of a member of the group. The necessity for revenge arises when any member has perished at the hand of one of another group; the sanctity of its blood has been invaded thereby. On the other hand, if one kinsman has slain another, it is not cause for blood-revenge; either he is outlawed, as Cain (Gn 4¹⁰ᶠᶠ·) from his kin (though here by Jahweh), or is put to death, originally without shedding of blood, by the whole kin, that it may rid itself of an impious member.

The custom was doubtless of a religious character. Its persistence may be taken to support this. The members are one kin with their god; they are of his blood. His rights are violated therefore by the murder of one of their number, and he requires of them that they seek vengeance, on pain of his displeasure and consequent withdrawal from communion with them, as signs of which they would interpret any physical calamities that might befall them. It is a sacred duty a man may not renounce. The voice of blood, too, cries out from the ground for vengeance. There is a familiar idea in Arab poetry that his spirit in the shape of a bird rises from the head of the unavenged and cries, 'Give me to drink' (viz. blood).

Only tribal life offers the necessary conditions for blood-revenge: (1) the solidarity of the tribe or family (a larger group than with us, which is explained later), in which each individual is answerable for the other; and (2) the autonomy of the tribe.

The religious motive is not always present, but

esprit de corps is so real that tribal honour is always alert in pursuit of vengeance. In many instances the slain man's kin retaliated till a manifold vengeance was obtained. The Song of Lamech (Gn 4[23f.]), that if Cain be avenged seven times Lamech shall be avenged seventy-seven times, may be taken as showing that the vendetta did not always stop at the person of the murderer. But the principle of blood-feud is 'a life for a life.'

A person who has shed other than kin-blood is not at all regarded as impious, for only the blood of kin is sacred. He has involved all his kinsmen in the consequences; but they, if possessed of true tribal instinct, will not yield him up to the avenger. Any member of the aggrieved group may retaliate upon any member of the other, and satisfaction be obtained. But such summary justice does not always conclude the matter, and retaliation may follow retaliation indefinitely.

1. **Responsibility within a narrower circle.**—The family, not in the minor dimensions that obtain with us, but embracing all the descendants of a great-great-grandfather, early began to enter as a unit into the reckoning, and family feeling, which eventually affected the structure of Semitic society, and gave it a set towards disintegration, assumed a first importance. Blood-revenge now becomes primarily the concern of the family, so that the nearest relative is he who should undertake it: the *gō'ēl*, therefore, in Israel. Among the Arabs the brother and the son in almost equal measure were obliged to avenge. The tribe (*ḥayy*) usually, however, in its narrower sense of an aggregate of families that move *en bloc* from place to place and bear the same name, assumes the duty only when the family cannot from its weakness obtain vengeance. This intention of asserting the honour of the tribe may draw into the field of battle the manslayer's tribe, and war may demand a heavy toll of lives. The passive solidarity of the tribe also weakened before this narrower principle of relationship; the avenger preferred to retaliate upon some person within the fifth degree of consanguinity—a usage still in force among the Bedawīn. Another consequence of this growth of the family-idea may be noted. Certain of these smaller social units, by reason of bravery or for other such cause, became a kind of aristocracy, and from this was chosen the chief of the tribe. Not every life was held to be compensation for one of this class; in early Arabia 'a nobleman for a nobleman' was the rule.

2. **Modifications.**—(1) *Protection.*—A man in fear of an avenger might flee for protection to a member or the chief of another tribe. Moses, *e.g.*, found refuge with Jethro (Ex 2[15ff.]). In Arabia, by taking food or drink with a tribesman, or even by pitching his tent so that 'tent-rope touches tent-rope,' the fugitive secures for himself his protection, and, especially in earlier times, that of the whole tribe. In pre-Islāmic times this relationship between protector and protected varied: it might be temporary or permanent and hereditary, or promise might be made to protect against a definite enemy, or all his enemies, or against death itself, *i.e.*, if the stranger were slain while under his protection, the host would undertake to pay blood-money to the next-of-kin. The *jār*, or protégé, ceases to be under any obligation to his own tribe, and enjoys the same rights as any member of that to which he is now attached. It is the proud boast of a tribe that it is always able to defend its refugees; a weaker, however, under fear of attack from a stronger, may refuse to admit one to protection, or may refer him elsewhere. Sometimes the protector claimed the right to dismiss a *jār* at will.

(2) *Asylum.*—In Arabia a manslayer was unmolested by his pursuer within certain sacred areas, pre-eminently the *ḥaram* of Mecca, within the tent, or if he pitched his tent over the grave of an ancestor. In ancient Israel the altar afforded shelter to any one who had shed blood, but by the later time of the Book of the Covenant it availed only the unintentional homicide. Certain cities of refuge were provided for in the later law-codes, and these also are further distinguished from the asylums of the Arabs in that they secured from violence only, and not from justice. See ASYLUM.

(3) *Holy Seasons.*—During the four holy months blood-revenge and war were prohibited by the Arabs.

(4) *Oracle.*—The authority of the oracle, communicated through the lot, may originally have had considerable influence. That of Hubal in Mecca was famous; questions requiring 'yes' or 'no' might be settled, and it might also decide who was to undertake vengeance.

(5) *Oath.*—Through the *qasāma*, or 'oath of purgation,' among the Arabs proof was supplied where otherwise none could be offered. Helpers, usually fifty in number, in the oath must swear to the innocence of one accused of murder, or to his blood-guiltiness. The helpers need not have been eye-witnesses. The proper application of the *qasāma*, however, was when a man was found slain. The nearest community had to swear they were not the murderers. In Israel the nearest community professed its innocence through its elders, and made atonement for the blood which had been shed by laying the guilt upon an animal (Dt 21[1-9]), for it was a fearful thought to the Hebrew that blood should go unavenged (Job 16[18]).

(6) *Blood-wit.*—The principle of commuting the right of blood-revenge by a fine, which has been recognized by many peoples (Greek ποινή, Saxon *wergeld*), has not been universal among the Semites. The acceptance of a surrogate was forbidden to the Hebrews (Nu 35[31])—a fact which is evidence of the increasing sense of personal worth under the growing social order. Arabs, with a fine instinct of tribal honour, reckoned it dishonourable to compromise in any degree the blood of a kinsman, but the consciousness of weakness might recommend such a course to a tribe. The material advantages to be gained by its acceptance also exercised some influence. Many tribes required, as a condition of such compromise, that the offender or a near relative should enter the tent of the avenger and place his life at his disposal, thus acknowledging the latter's ability to avenge if he wished. A person of repute, either an outsider or a member of one of the two tribes seeking a settlement, may be called in to arbitrate, but his authority is only moral. Certain tribes had a fixed tariff: that of a hundred female camels was common, is still in force among some Bedawīn, and was renewed by the Wahhābīs. But haggling is frequent. The *wergeld* may be paid by the manslayer; but often it exceeds his resources, and his near relatives or his friends may contribute, or an assessment may be levied on the whole tribe, or the chief may be called on; for, whereas in early time the booty was divided equally, a fourth came to be set aside later into a kind of State-treasury under him for the entertainment of guests, the support of widows and orphans, and the payment of blood-money. The recipients were the nearest relatives of the murdered man—the brother and the son, therefore, whose duty it had been to avenge him. If a *jār* were killed, his relatives, and not his protector, received the *wergeld*.

With the passage from nomadic to agricultural, settled life, local connexion begins to oust genea-

logical, the regional grouping gradually weakens the feeling of blood-community, and revenge for the slaying of kin, which is opposed to nomad custom, becomes possible (Gn 27^{41}, 2 S 14^{7}). Laws of social justice arise, and impartial tribunals of State-life are instituted which remove the infliction of penalties out of the individual's hands, and distinguish between murder and homicide. In Babylonia, courts for the punishment of offences were early set up; the *jus talionis*, but not blood-revenge, was admitted. The code of Ḫammurabi makes exception in favour of unintentional homicide (§ 207 f.). In course of time, after their settlement in Canaan, the Israelites lost their tribal organization, and during their subsequent history the laws of vengeance passed beyond the primitive state of blood-feud and acquired an ethical character. Their law-codes represent an intermediate stage between the nomadic custom of direct vengeance and the criminal proceedings of developed State-life. All three make the distinction (not found in Homer, though made later when the community took into its hands the right of the avenger), between murder and homicide, and provide for the unintentional homicide lest he should fall a victim to the avenger's hasty passion; he is secure from the *gō'ēl* at any altar of Jahweh (Ex $21^{13f.}$), or at the Cities of Refuge (Dt $19^{2ff.}$, Nu $35^{14ff.}$). Ancient custom is preserved in this, that the avenger, and not the State, must take the initiative in protecting the interests of the aggrieved by bringing the case before the elders (Deut.), or the congregation (P), and must carry out the death penalty. The Deuteronomic code indicates the growth of individual responsibility in stating that the criminal alone is responsible for his misdeeds (Dt 24^{16}). The *gō'ēl* was known in Israel certainly down to the time of David (2 S 14^{11}). To Jahwism is due much of the credit for modifying this custom, though it did not abolish it. Jahweh came to be regarded as the *gō'ēl* who had redeemed Israel from bondage, to whom blood cried out, and who avenged it through His representatives with the people, viz. elders, kings, and priests.

In Syria the Syro-Roman law-book of the 5th cent. A.D. (§ 74, Paris Manuscript) forbids the avenger to kill the manslayer, and requires that the accuser hand over the guilty person to the authorities.

Muḥammad found the principles of blood-revenge too deeply rooted to be overthrown, and it gained recognition under his theocratic régime (*Qur.* xvii. 35). The religious community had both active and passive solidarity, being obliged to avenge one of its members slain and to protect a Muslim manslayer against the unbeliever. Further, he made the manslayer alone responsible for his deed, and distinguished between murder, fatal assault, and unintentional homicide. In the case of the first the *talio* was allowed, but blood-money could be accepted; in the others it must be accepted (Ibn Hišām, pp. 341–343, 821, ed. Wüstenfeld; al-Wāqidī, 338, ed. Wellhausen). But the modern Bedawī has preserved the nomadic institutions of the tribal system and the blood-feud from the transforming influence Islām would otherwise have exercised. With him the laws of vengeance for murder and homicide are the same. There is no need to regard the blood-feud as an altogether barbarous practice with nothing beneficent. Travellers in the peninsula claim that it is a salutary institution which has prevented tribes from exterminating each other, that it stays the plunderer's hand from shedding blood, and permits the traveller to risk himself in the desert. It is likely to remain as long as nomad life is regulated by custom.

A. H. HARLEY.

BLOOD-FEUD (Slavonic).—Among Slavonic peoples the institution of the blood-feud may still be traced in good authorities, throughout all its history, alike when it was in full force and in the varying stages of its gradual decay.

1. Slavonic terminology.—The art. BLOOD-FEUD (Aryan) has already discussed the three expressions —Old Slav. *vražĭda*, not only 'enmity,' 'blood-revenge,' but also 'compensation,' 'fine'; Old Russ. *vira*, 'wergeld,' then 'State-compensation'; and *mirŭ*, 'peace.' Here should be added Old Slav. *glava*, properly 'head,' and *krŭvĭ*, properly 'blood'—words which are used in numerous Slavonic tongues to signify the manslaughter (deed of blood) which is to be avenged by the blood-feud. The Russian expression for 'revenge' is *mĭstĭ*, *mestĭ*, *mĭstitĭ*, *mstitĭ*, which may be assigned to the same category as Latin *mūto*, from **moito*,* 'change' (cf. in Sicilian Gr. *μοῖτος*, 'retaliation'), or perhaps also may be compared with Gr. *μῖσος*, 'hatred' (*μισεῖν*, 'hate,' **mits*-). An interesting designation of inter-tribal conflict is to be found in the Polish word *walka* (Czech *válka*, 'war,' White Russ. *valka*, 'struggle'). It is perhaps possible that the Lat. *ulciscor*, 'I avenge,' hitherto unexplained, should be connected with it (cf. Walde, *Lat. Etymol. Wörterbuch*). Finally, mention should be made of the Servian *vjera* (Old Slav. *vĕra*, cf. Lat. *vērus*), 'truce,' properly the pledge given to the hostile clan to undertake no hostile action against them during a specified period (Mid. Lat. *treuga*).

2. Instances of the blood-feud among particular Slavonic peoples (principally based on Miklosich, *loc. cit. infra*).—The latest survival of the blood-feud in full vigour was among the *Southern Slavs*, where it persisted longest in *Dalmatia* and *Montenegro*. In the last named it was not till the year 1855 that it was rooted out by the stringent measures taken by Prince Danilo. Till that date the blood-feud was looked on as the sole means of preserving order and justice. Its characteristics may be described as follows: Blood-revenge is resorted to in cases of murder, wounding, and insult, and is considered a religious and sacred duty to the murdered man. It is especially the women who give the stimulus to vengeance. The mother lays the infant in the cradle to sleep upon the blood-stained shirt of the murdered father, and, as the boy grows up, she ever and anon presents this ghastly object to his view. Every male member of the clan is under the obligation to avenge (*bratstvo*, properly 'brotherhood,' cf. Gr. *φρήτρη*, *φρατρία*, *φράτηρ*, 'brother'): first the eldest son; if there are no sons, the brother. If the man to be hunted down by the blood-feud dies, his liability is inherited by his nearest relative, so that sometimes it is the sons and grandsons who finally fight out the quarrels of their fathers and grandfathers. The chief object is to slay the murderer, or, if this is not possible, his next-of-kin—his brother, father, son, and so forth. Blood-feud also occurs inside the clan—a later and degenerate type of revenge. The woman, and, strangely enough, the man who has been taken under protection by a woman, are inviolable. In the earliest times the man flees after the murder to another district, or at least avoids meeting the hostile clan in the church or elsewhere. During the peril of war the clan-feud is allowed to rest; but, according to Rovinskij

* A star before a word signifies that the form does not occur, but is inferred.

(*op. cit. infra*, 63), it may happen that a clan living in deadly enmity with another clan forms an alliance with a national foe (the Turks or Arnaut): '*pleme* ("tribe" composed of several *bratstva*) and *rod* ("relationship") in this instance are rated higher than nationality and religious faith.' It is only by an expiation which includes the payment of the price of blood and a humiliating ceremony on the part of the guilty man (see below) that the blood-feud comes to a bloodless end. The duty of revenge extends to the whole clan; it is only the clan and not individual members of it that can conclude peace. In the assemblies of the people (*sbor, skupština*) a question often discussed is that of the settlement of feuds of many years' standing which threaten the general peace. On the expiation of the offence hostility is forgotten, and a man's honour is not wounded by virtue of his act of expiation. On the other hand, the law of Prince Danilo, mentioned above, decrees that the murderer cannot buy his pardon by any blood-payment, but is to be shot; if he flees, his property is to be confiscated; he is banished from the country, and, if in spite of this he returns, he may be killed with impunity by any Montenegrin.

When we turn to the *West Slavs*, it is in *Poland* that we find the longest persistence of the institutions of the blood-feud in full vigour. Even in the 14th cent. the Polish nobility (*šljachta*) was divided into a vast number of family-societies and brotherhoods for war which made use of an escutcheon common to all, and had a common battle-cry (*proclama*). These societies were based on an actual or symbolical relationship. The cohesion between members with one and the same escutcheon was exemplified: (1) in the right of the relatives of a murdered man to enforce the blood-payment from the murderer; (2) in the right to redeem patrimonial estates belonging to the family if they had been sold to a stranger without the express consent of the relatives of the seller (cf. Rovinskij, p. 141 note). But there is historical evidence of the existence of these family feuds (*walka*, see above) not only among the noble families, but also among the peasant classes subject to them.

Finally, in the case of the *East Slavs*, the *Russians*, we have at our disposal evidence very old and weighty, but, it must be admitted, very obscure in details.

The oldest and weightiest authorities are as follows: (1) *Chronica Nestoris*, ed. Fr. Miklosich, cap. xlv.: 'vivebat Vladimêrus (980–1015) in timore dei. Et multiplicata sunt homicidia, et dixerunt episcopi Vladimêro: ecce, multiplicati sunt homicidae, cur non punis (*kazniti*, used of the State penalty) eos? Ille vero dixit eis: timeo peccatum (*grěchŭ*, "sin": Vlad., like the people of Montenegro, holds the blood-feud to be a religious obligation). Illi vero dixerunt ei: tu constitutus es a deo ut punias malos et ut diligas bonos, oportet te punire homicidam, sed cum inquisitione (*sŭ ispytomŭ*, "by investigation"). Vladimêrus vero sublatis compositionibus (*otvergŭ viry*, "abolished the wergeld") coepit punire homicidas. Et dixerunt episcopi et seniores: bella multa, at si compositio (*vira*) permansura est, in armis et in equis fiat. Et dixit Vladimêrus: ita fiat. Et vivebat Vladimêrus secundum institutionem (*po ustrojenniu*, "according to the constitution") patris et avi.'—(2) *Russkaja Pravda of Jaroslav Volodiměrič* (1018–1054), cf. p. 724a, above. *Judicium Jaroslavi, filii Vladiměri*: 'Si interfecerit vir virum, ulciscatur (*mĭstiti*) frater fratrem vel pater vel filius vel fratris filius vel sororis filius. Si vero nemo est, qui eum ulciscatur, solvendae sunt pro capite octoginta grivnae, si est principis vel tiunus principis ("official"): si vero est russus vel satelles principis vel mercator vel *jabeshnikŭ* (also an official) vel *tiunus boljari* (*boyar* official) vel *mečnikŭ* ("sword-wearer") vel *izgoj* (a man attached to no class or rank) vel *slovennikŭ*, quadraginta grivnae solvendae sunt.'—(3) The *Pravda* of the 13th cent. (*ap.* Ewers, *Das älteste Recht der Russen*, p. 314): 'After Jaroslav, his sons Isjaslav, Swjatoslav, Wsewolod, and their men, namely, Koenjatschko, Perenjeg, Nikifor, now came to an agreement and did away with the custom of head for head (*oshložiša ubijenie za golovu*; for the meaning of *golova* see above), replacing it by permission to buy off the penalty by martens (*kunami*, i.e. with marten-skins): but every other ordinance of Jaroslav was confirmed by his sons.' 'If any one kills a prince's man in an assault with violence, and the manslayer (*golovnikŭ*) is not discovered, then a *wergeld* of 80 *grivnae* is to be paid by the district (*vervĭ*) in which the head of the murdered man is lying: on the other hand, if the victim is one of the (common) people (*ljudinŭ*), then 40 *grivnae*.'

The development of the custom, apart from special points, is on the whole clear. Until Vladimir's time there undoubtedly reigned a system of unrestricted blood-revenge in Russia, just as there did in Montenegro down to the time of Prince Danilo. Under the pressure of the clergy, Vladimir attempted to proceed against the murderer by means of State penalties (*kazna*), but he soon returned to the customs of his ancestors. The later chronicler did not see clearly the almost unmistakable meaning of this. Jaroslav was the first to impose a restriction upon blood-revenge by limiting it to certain spheres of kinship; and, if these could not produce an avenger, a compensation (*vira*, the old term for the *wergeld*, though the expression does not actually occur in this passage) of 80 or 40 *grivnae* was exacted — no doubt to the advantage of the princely exchequer. The sons of Jaroslav completed their father's work by enacting that every deed of blood might be redeemed by the payment of marten-skins, though it is not clear who received the skins — the Prince, the injured man, or both. If the murderer was unknown, the district (*vervĭ*, see above) in which the head of the murdered man was found was responsible for the *virnoje* (formed from *vira*)—an arrangement which still clearly recalls the joint liability of the clan with regard to the *wergeld* (see above). From the various rates of penalty mentioned in the above and other passages of the *Russkaja Pravda*, the calculation has been held to be justified (cf. L. von Schröder, *Festgruss an Roth*, p. 50) that the *wergeld* for the murder of a free Russian (*ogniščaninŭ*, 'householder') would come to about the value of a hundred cows, and that in this respect, too, the customs of ancient India (see above, pp. 725, 729) and of ancient Russia coincided. But it must be admitted that the ground on which such a calculation is based is very insecure. (For the most ancient evidence for the existence of blood-revenge on Slavonic soil, see Mauricius, *Strateg.* xi. 5; cf. ARYAN RELIGION, above, p. 51a.)

3. Expiatory usages at the amicable settlement of a blood-feud.—When the hostility between two clans was to be terminated by payment of the *wergeld*, there was also a long series of solemn ceremonies of expiation, about which we have ample information for the Slavonic and especially the South Slavonic world (cf. Miklosich, *op. cit.* 176 f.). The *Archiv f. slav. Philologie*, xiv. 141 ff., contains a detailed account (not yet embodied in the work of Miklosich) of a ceremony of expiation among the South Dalmatian Slavs. Its characteristic features are as follows:

The two clans of the Bojkovići and Tujkovići in the extreme south of Dalmatia, where the blood-feud remains a living force down to the present day, have been on hostile terms for years, because in the year 1877 Ivo Bojković in a quarrel shot Stoj, a member of the Zeci family (of the clan of the Tujkovići). The murderer has long been dead, but there are two sons, Jovo Bojković and Jovo Zec, who now (in the year 1890) are sufficiently grown up to be able to fight out their fathers' quarrel. Matters, however, do not come to that pass. After long protracted negotiations the Bojkovići are induced to admit themselves to be in the wrong and to allow Jovo Zec the right of choosing twenty-four arbitrators (*Dobri-ljudi*, 'good people'). These lay down the following conditions of peace: Jovo Bojković is to pay Jovo Zec and his brother Niko a little over a hundred sequins as the price of blood for the murdered man. Here we must add (according to Jovanović, 'Montenegrinische Rechtsgeschichte,' in *Ztschr. f. vergleich. Rechtswissenschaft*, xv. 134) that the price of the victim is decided by the number of 'bleedings,' and that twelve 'bleedings' (estimated, as a rule, at twelve sequins) constitute a deathblow. Further, the arbitrators stipulate that Jovo Bojković shall provide a meal for Jovo Zec and his party up to the number of three hundred and offer him twelve 'sponsorships,' *i.e.* send him twelve children, to whom Zec and his people are to stand as godfathers or sponsors. Moreover, twelve great and twelve small 'brotherhoods' (*pobratimstvo*, 'artificial relationship') are to be established

between the two parties; and, lastly, the instrument of death is to be surrendered to Jovo Zec according to the established customs. The twenty-seventh of August is the day appointed for the fulfilment of all these provisions. The ceremonies to be performed on this day take place partly in front of the house of Zec, but chiefly in the common place of assembly. Above all, it is before or in the house of Zec that the matter of the twelve sponsorships is concluded. The women of the Bojkovići, conducted by two of the arbitrators, appear with cradles on their heads containing the children, and now twelve men of the family of Zec take up the position of godfather to these. A secondary object of the presence of the women may have been (see Jovanović, *op. cit.*) to touch the heart of the chieftain of the hostile clan by their weeping and wailing. The programme of that part of the expiation which is carried out in the common place of assembly is far more extensive. First, both parties take their stand, like two hostile armies, at a distance of about a hundred metres from each other. 'After a short, silent pause, a small group appears on the side of the Bojkovići. The son of the murderer, dressed in a white shirt, barefooted and without a cap, creeps forward on all fours, carrying across his neck a long musket, the instrument of death, which two arbitrators, also without head-covering, hold by its two ends. Thereupon Zec runs quickly to meet them in order to cut the humiliating spectacle short. He approaches Bojković rapidly to raise him to his feet, while at the same time the latter kisses his feet, chest, and arms.'

The formation of the stipulated twenty-four brotherhoods is followed by the banquet, with the guests seated in a strictly regulated order; but Jovo Zec and the twelve men who have assumed the duties of sponsor touch neither food nor drink—to show that the reconciliation is not yet quite complete. It is not until the end of the meal that the payment of the debt is made in coins carefully wrapped in paper and laid on a dish. But still the arbitrators declare that the payment is not yet complete, and, amid the deep wails of the women, the Bojkovići must gradually place all their costly weapons on a large metal dish in front of Zec. At length Zec summons his new kinsman, and says: 'I give back to thee everything (in the first instance the weapons are meant): may the death of my father be pardoned to thee, and all that has happened be forgotten; in future may there be between us brotherhood, peace, and love! I will not retain thy blood-money, nor will I take from the table the white rags (the money wrapped in paper), I return to thee this also.' In this instance, then (though of course not in all), the whole material side of the blood-expiation evinces itself as only a symbolic action. Especially with regard to the weapons there was no doubt a certainty from the first that they would be given back. At the close of the proceedings one of the arbitrators mounts the table and reads the decision of the twenty-four judges aloud; he then hands it over to Zec, who in turn gives it to Bojković.

LITERATURE.—F. Miklosich, 'Die Blutrache bei den Slaven,' *Denkschriften der kais. Ak. der Wissensch.* philos.-hist. Kl. xxxvi. 1, Vienna, 1887 (with copious bibliography); cf. also Rovinskij (Russ.), 'Montenegro Past and Present,' ii., *Sbornik of the St. Petersburg Acad. of Sciences*, 1897, vol. lxiii. (cf. esp. chs. 1 and 2, *passim*). Rovinskij is also our authority for the foregoing description of the South Dalmatian expiation, of which he was an eye-witness. See, further, S. Ciszewski (Polish), *Wróżda i Pojednanie* ('Blood-feud and Duel'), Warsaw, 1900 (also contains an extensive bibliography).

O. SCHRADER.

BLOOD-FEUD (Teutonic).—Early Teutonic law made no provision for punishment in the modern sense of the word. The function of avenging crime belonged to the kindred of the person wronged, or else the tribe expelled the criminal from their league of peace, and declared him an outlaw, thereby depriving him of the common right of protection in life and property. 'Feud' is the name given to the hostile relations between two individuals, families, or tribes. The special case of the blood-feud emerged when any member of the social group was culpably slain or robbed of his honour. Here the cult of the dead came into play. It was a common superstition among the Teutons that the murdered man would find no rest, and would appear as a *genganger*, 'one who walks again,'* so long as his death was not avenged. If the slayer was caught red-handed, he might be put to death forthwith; but if he escaped for the time, it was frequently required that the sentence of outlawry should be pronounced in name of the tribe before the aggrieved family set forth to track the culprit. But, just as the kindred of the person killed held together for a common purpose, so did that of the criminal; and accordingly cases of individual blood-revenge often developed into family feuds, of which numerous instances are furnished by the Norwegian-Icelandic sources. Not infrequently these feuds ended in an act of combined incendiarism and massacre. The slayer was surprised in his own house by a night attack; his enemies surrounded the building with combustible materials, and set the whole on fire, so that he and his entire household perished in the flames. The extent to which the blood-feud might become a conflict between families is shown by the fact that sometimes one of the near relatives of the actual slayer was forced to fill the place of the latter as the object of retribution. As a rule, indeed, the policy of vengeance was not only carried out, but actually planned, by the tribe as a whole. The tribe also chose the leader or champion of the feud, and this step was at once followed by the public proclamation of the vendetta. The blood-feud was at length superseded by the imposition of a fine upon the guilty party, and in a case of killing this was known as the *wergeld*, or 'man-money,' by which the slayer redeemed himself from the sentence of outlawry. The completion of this expiatory compact was followed by the reconciliation of the warring groups, and the proclamation of the oath of peace which closed the feud. Many of the Teutonic peoples, however, and especially the Norse and North German tribes, maintained the practice of the blood-feud for certain crimes even after the principle of compensation had been introduced, and, indeed, till far on in the Middle Ages. This was particularly the case where the honour of a female of the tribe had been violated by adultery or rape. It was the introduction of the Roman penal code which in the end dislodged popular belief in the policy of the feud.

E. MOGK.

BOASTING.—Boasting is too extended and assertive a human failing to require defining. In quality it is simple, and appears even to require simplicity of character, of the type set forth in Proverbs, in which to flourish. Nevertheless, it has a history and a literature of its own; it is an interesting and instructive psychological phenomenon; it has grave moral aspects and extensive moral ramifications; it has a bearing on religion strangely subtle for a defect of character which is apparently so direct and blatant.

1. Historical.—That boasting began early, continued late, and drew attention to itself among all races in all times, language alone would suffice to prove. Few languages are satisfied with terms merely descriptive, unless—like Lat. *glorior*, Ger. *prahlen*, or Eng. 'self-glorification'—they be large-sounding, resonant words. Most languages are more concrete and figurative. Loudness of speech produces the Heb. הלל, Gr. καυχάομαι, and probably our 'brag'; and spaciousness of speech the Gr. μεγαλαυχέω, and our 'tall-talk.' To good lungs is added the noisiest of musical instruments, 'to blow one's own trumpet,' and Fr. *fanfaronnade*. The idea

of scattering words at large seems to have produced the Lat. *jacto*, as well as our slang expression 'throwing the hatchet.' The names of persons with special gifts in this direction have been annexed, as Gr. ἀλαζών, a 'landlouper,' and Fr. *gasconnade*. Most of these words suggest that, at some period of their history, they have passed through the stage of being slang, and it is still slang which is busy coining words to express new gifts and new developments in boasting. John Bull, judging by his reputation in Europe, had small need of assistance; yet, as an artist both in the thing itself and the power to describe it, he is thought to have been outstripped by his cousin Jonathan. As the result of their partnership, no language is richer than English, so that we have almost as many terms for a boaster as Arabic for a lion. 'Spread-eagle,' 'bounder,' 'cock-a-hoop,' and others equally forcible and picturesque, show that boasting still exists and flourishes, and still attracts attention.

Nor is language the only record of boasting. There may be few matters of our civilization in which it had no hand, but on *dress* in particular its influence is perennial. The motives of comfort and decency are still only superinduced upon the primitive motive of display. That is only a visual boast—an assertion of our own superiority and the resources we can command, though, when the display was in war-paint, the braggadocio was less diluted. The boast which clothes itself in satin is more complex than that which wears only scalps, but at bottom it may be still the old naked assertion of power to subject other people, and it may be at the same sacrifice of better things. This more subtle combination of boasting with other elements constitutes its whole subsequent history.

A still greater triumph than dress boasting can claim. Without undue use of its own gifts, it may claim to have created *literature*. One of the most ancient jewels embedded in the OT is the Song of Lamech (Gn 4[23f.]), which is nothing but sheer, blatant bragging. Lamech, by the skill of his son Tubal-cain, is the first of men equipped with a slaughtering tool. He brandishes his weapon and calls on his womenkind to attend to him—a fundamental and primitive element in self-glorification:

'Adah and Zillah, hear my voice;
Ye wives of Lamech, hearken unto my speech:
For I slay a man for wounding me,
And a young man for bruising me:
If Cain shall be avenged sevenfold,
Truly Lamech seventy and sevenfold.'

This is the beginning of songs, and it contains all the primitive elements of boasting—arming of the male, bluffing of one's foes, joy in seeing oneself reflected in the mirror of one's own praise. Then what are the Babylonian and Assyrian, and in scarcely a less degree the Egyptian, monuments, if not boasting? A devout ascription to the god does not hinder it from being very human bragging, even to the extent of developing into what much boasting has been since—namely, lies. When it is truth, it is carefully edited truth. The same primitive motives for boasting as appear in the war-paint of the savage and the Song of Lamech, unblushingly and loudly proclaim themselves on the monuments. The refrain is always, 'I am an irresistible, death-dealing person, good to follow, terrible to oppose.'

Perhaps all conquest is simply a boast in this power to destroy. Hence the justification of Pascal's saying, that Alexander might be excused for swaggering about the world conquering, on account of his youth, but a middle-aged person like Cæsar ought to have had more sense. In any case the ancient motives are still modern, for they never were stronger than in Napoleon, some of whose despatches have scarce more reserve than an Assyrian monument.
